zilian "ietica" (Marcgr. pl. 16), in Peru "camote" (C. P.), a word according to Humboldt of Mexican origin, in Quichua "apichu," in the Quito dialect "cumar" (Markh. p. 234), and cultivated from early times : * — "boiled roots to eat not unlike chestnuts in taste" were offered to Columbus by the natives of Cuba (F. Columb. 28, or in the words of Gomara 16) "batatas que son rayzes dulces," and some of these roots were carried by Columbus to Spain. Westward, *B. edulis* was observed by myself under cultivation on Metia, Taheiti, the Hawaiian, Samoan, and Tongan Islands, not only the American variety, but other varieties unknown in America : also on the Samoan Islands and New Zealand, a slender-rooted kind that according to New Zealand tradition was brought from those islands at an early period. *B. edulis* was said to be cultivated on one of the outer Feejeean islets ; and on Taheiti, the Tongan, Samoan, and Feejeean Islands, I remarked seemingly the same species springing up spontaneously, usually as a weed in cultivated ground, but distinguished by the natives and its root not used. By Oviedo, *B. edulis* was introduced into Spain (A. Dec.) ; roots were seen there by Clusius hist. ii. 77, and the living plant is described by Monardes, and Lobel ; was observed by Hasselquist in Palestine ; by Clot-Bey, recently introduced into Egypt ; by Grant, under cultivation from Egypt to Zanzibar : by myself, the American variety on Zanzibar, also in the markets of Mocha, Muscat, and Bombay. By European colonists also, was carried Westward across the Pacific to the Philippines, observed there by P. A. Mozo, Blanco, and myself, called "camoti" in Tagalo, and several varieties distinguished by the natives ; to the Moluccas by the same route (Rumph. v. 368) ; to Japan, called there "imo" or "kara imo" (Thunb.) ; to China, called there "hoan-xy," and to Anam (Lour.) : to Burmah, called there "ka-zwon" (Mason) : to Hindustan, observed by Rheede vii. pl. 50 in Malabar, called there "kappa-kalenga," and in Telinga "grasugada" or "chillagada" (Drury),

* *Anona muricata* of the West Indies and neighbouring portion of Tropical America. The *sour-sop* is a small tree, called in Carib "alacalyoua" (Desc.), and known from early times : — the "guanabano" was observed by Oviedo nat. hyst. 63 and hist. gen. viii. pl. 17 frequent on the islands and in Tierra firme, bearing fruit like pine-cones ; "guanavana" fruit, by Cieza de Leon xxvii to lxxi from the Cauca valley throughout Lower Peru ; by myself, large and depressed as though by its own weight in resting along a branch, in market at Lima : *A. muricata* was observed by P. Brown, Swartz, and Macfadyen, wild throughout the West Indies ; by Merian pl. 14 in Surinam, wild there according to Splitgerber but growing around plantations. By European colonists, was carried to Southern Brazil, where according to Martius it tends to escape from cultivation : to the opposite African coast, cultivated at Sierra Leone (fl. Nigr.) : to Ceylon (Burm., and R. Brown) ; to Hindustan, "in gardens Bombay" (Graham), and sparingly cultivated in Madras (Drur.) ; to Burmah (Mason) : to Java, where its fruit is held in estimation (Graham) ; and in French colonies is called "corossol" or "cachiman" (A. Dec.).

Passiflora quadrangularis of the West Indies. The fruit called "grenadilles" known to the ancient Mexicans, — according to Humboldt iv. 9 : the "granadilla" delicious and fragrant seen by Cieza de Leon xxviii on the Upper Cauca, described in a letter from Peru to Monardes in 1578, is clearly the highly-esteemed fruit sold under the same name at Lima, but I did not meet with the plant producing it. *P. quadrangularis* was observed by Jacquin am. pl. 143 in the woods of Jamaica (Pers.) ; is cultivated in certain French settlements for the sake of its root, which is "powerfully narcotic," or according to Martius "emetic," and its fruit "is a common article in a Brazilian desert" (Lindl.). By European colonists, was carried to Hindustan (ms. note to Graham) ; and to Burmah (Mason).

Tacsonia sp. of the South American Andes. — The "grenadilles" of Humboldt are however described by him as the fruit of different species of *Passiflora* and *Tacsonia*. The species of *Tacsonia* are I think confined to South America, to the Andes from Bogota throughout Peru.

Chrysophyllum cainito of Tropical America. The *star-apple* or "caymito" cultivated from time immemorial in the West Indies, — but nowhere found decidedly wild (A. Dec.) : "caymito" fruit was seen by Cieza de Leon xli to lxxi at Puerto Viejo and farther South in Lower Peru : *C. cainito* is described by Oviedo gen. hist. viii. 3 ; is termed "cainito folio subtus aureo" by Plumier x. pl. 60 : was observed by Sloane ii. 170 on Jamaica, not indigenous, but sowing itself and extending beyond cultivated ground ; by Jacquin am. 52, in other parts of the West Indies : is known to occur in Caraccas and as far as Peru (Humb. and Kunth iii. 236). By French colonists, is called "caimitier" or "cainitier," but from the slight value of its fruit has seldom been transported beyond the American continent (A. Dec.) ; was observed by Mason "exotic" in Burmah.

Lucuma cainito of the Eastern declivity of the Peruvian Andes. Another Sapotaceous tree called "cainito" (A. Dec.), its fruit of superior quality known from early times, and possibly the "caymito" in question : — *L. cainito* was observed by Ruiz and Pavon iii. pl. 240 on the Peruvian Andes (Pers.) ; and according to A. Decandolle extending into Brazil.

in the environs of Bombay "rattaloo" or "sukur-kund" or "sukurid-kind" (Graham), and known to be very generally cultivated throughout Hindustan as far as Scinde (Roxb., and Burnes). The *white sweet-potato*, its roots really tuberous and not fusiform nor pointed, may prove a distinct species; it is the kind generally cultivated on the Hawaiian Islands, was observed by Blanco on the Philippines, and according to Mason is applied by the Burmese to wounds with poisoned arrows.

Physalis Peruviana of Tropical America. The *cape gooseberry* or *cherry tomato*, called in Carib "sousourou-scourou" (Desc.), in Tagalo "potocan" (Blanco); and carried to the islands of the Pacific as early possibly as this date: — observed by myself on the Hawaiian, Taheitian, Samoan, Tongan, and Feejeean Islands, and New Zealand, occurring as a weed only and everywhere neglected by the natives: by Blanco, on the Philippines; by Mason v. 455, "exotic" in Burmah; by Roxburgh, in Hindustan; by Graham, "cultivated in gardens" in the environs of Bombay, and "a plant very much resembling this" seemingly "wild on the banks of the Yena and other moist places Mahableshwur." Eastward, the "cerezilla" fruit was seen by Cieza de Leon xlvj at Puerto Viejo, North of Guayaquil; P. Peruviana by Feuillee iii. 51, and Ruiz and Pavon, in Peru; by myself, on dried-up portions of the river-bed near Lima, and in a similar locality North of Valparaiso; by Descourtiz, in the West Indies. By European colonists, was carried to Southeast Australia, observed by myself already naturalized, and about 1830 to Southwest Australia by James Drummond (A. Dec.); to the Mauritius Islands (Boj.); to St. Helena and Madeira, observed by myself; to Northeast America, where I found it cultivated in our Middle States. Transported to Europe, is described by Morison xiii. pl. 3, has become naturalized in Southern Spain (Boiss. voy. ii. 436, and Dun.), and apparently the same species in Sicily (Guss. i. 270, and A. Dec.).

"1274, May 7th to July 17th" (Alst., and Nicol.), Fourteenth general ecclesiastical Council. Assembled at Lyons; the Byzantine emperor Michael VIII. and other Greeks being present. The "Greek and Latin churches were re-united." Rodolph of Hapsburg was confirmed as emperor of Germany and Italy. The mendicant Orders of monks were reduced to four; twenty-three being abolished. Bowing or "bending the knee" at the name of Jesus, was instituted. And laws were made on the future election of popes.

"1275 A. D." (ann. Jap., and art de verif.), abdication of Kame-jamma in favour of his eldest son Gouda or Go-ou-da, now ninetyeth daïro of Japan.

"The same year = 'te-yeou,' 1st year of Ti-hien" or Koung-tsoung, of the Soung or Twenty-first dynasty — (Chinese chron. table).

"May 26th" (Nicol.), a synod at Constantinople. Joannes Veccus was elected patriarch of Constantinople.

"The same year" (Nicol.), a synod at Lunden. The interdict imposed on Denmark for nine years, was removed.

"The same year" (Lubke and Lutrow), in Germany, the cathedral at Regensburg commenced. — The building was finished "in 1618."

"In or about this year (= 674 A. H., comm. June 26th," Hadji-Khalfa, Gildem., and De Sacy chrest.), Kaswini writing. He speaks of "Gava" (Java), and the Chinese exchanging their wares there; sailing no farther West, on account as they allege of the diversity of religions and the distance.

Also of "Sarandib" (Ceylon) containing a footprint of "Adam the father of us all:" of many Magians (Parsees) residing on the island and Muslims associated with them; and of the burning of the widow of the native king with the corpse of her dead husband. Of the island of "Salameth in the Indian Sea," where there are fishes that ascend trees (*Inabas scandens*).

And of Mansura, a city on the Indus founded by the second Abbassid khalif for the seat of government of the Muslim prefects.

"1276 A. D. = 'king-yen,' 1st year of Touan-tsoung, of the Soung" or Twenty-first dynasty — (Chinese chron. table).

Thea laxa? of Japan. "Some six centuries ago" (Jap. centen. comm. 106), the tea plant found "growing in the province of Suriga," to all appearance indigenous, — and its qualities "led to its cultivation." *T. laxa* was observed in Japan by Kaempfer pl. 606, but is regarded as not distinct from *T. bohea* (Pers.).

"The same year" (Malay ann., Raffles x., and Crawford vii. 11), Sekander Shah succeeded at Malaca by Mahomed Shah. Who adopted the Mohammedan religion, and took possession of the islands of Lingga and Bintan.

"Feb. 21st" (Alst., and Nicol.), Gregorius X. succeeded by cardinal Peter de Tarentaise or Innocentius V., a scholastic theologian. "July 11th," by cardinal Ottobone di Fresco or Hadrianus V., who died "Aug. 16th" without having been "consecrated pope or ordained a priest." And "Sept. 13th," by cardinal Joao Pedro of Portugal, now Joannes XXI., thirty-first pope. Edward ruling England.

"1277, about April" (Nicol.), a synod at Constantinople, and a profession of faith "made, conformable to that of the church of Rome." Another synod "July 16th," and the opponents of the union of the two churches excommunicated.

"Nov. 25th" (Alst., and Nicol.), Joannes XXI. succeeded by cardinal John Gaetan Orsini, thirty-second pope.

"Towards the end of the Thirteenth century" (Spreng.), Pier Crescenzo writing.

"The same year" (art de verif.), Beybars succeeded by Barakah-Khan, fifth Memluk sultan of Egypt.

"The same year" (Steinschneid. iii. 27), date of the Toledo manuscript of the Hebrew bible: — now registered as "cod. Rossi 782."

"1278 A. D. = 'tsiang-hing,' 1st year of Tiping, of the Soung" or Twenty-first dynasty — (Chinese chron. table).

"April 9th" (Nicol.), a synod at Compiègne. "Against the chapters of cathedrals, who assumed the right of imposing an interdict on towns for the preservation of their liberties."

"The same year" (Blair), Ottogor king of Bohemia defeated and slain in battle by the army of Rodolph of Hapsburg.

"The same year" (Marc. Pol. 149), in China, two churches built at "Cinghianfu" by Marsarchis, a Nestorian Christian appointed governor of that city. — A Nestorian church was seen by Marco Polo in Quinsai; and another on his way there at "Cascar" (Cashgar) in Central Asia.

In a tract published in this year (. . .), *gunpowder* described by Roger Bacon. But according to Pouchet, the composition is "first mentioned" by Albertus Magnus mirab. mund.; and is also described by Marcus Græcus. Having been long known in China, the manufacture may have been brought from that country: — but the application to casting projectiles in warfare, appears to have been made in Europe. Cannon were used in 1346 in the battle at Crecy (Pouchet); and "harquebuses" or portable fire-arms, are mentioned by the traveller Brocquière.

The continuance of the *Greek language* in certain parts of Italy, shown by the following words of Roger Bacon comp. stud. phil. vi., "Nor would it be much, for the sake of the great advantage of learning Greek, to go to Italy, where the clergy and the people in many places are purely Greek." — I was informed at Naples, of a district at the Southeastern extreme of Italy, where Greek is to this day spoken.

Magnifying lenses also described by Roger Bacon. — Jordanus de Rivalto in "1305," speaks of *spectacles* having been invented "twenty years" before: and a manuscript of "1298" mentions "occhiali" (Pouchet).

Roger Bacon further speaks of the possibility of making an instrument for walking in safety at the bottom of the water, the *diving-bell*: and mentions *bismuth* and *manganese*; and an inextinguishable fire, regarded by Jourdan as *phosphorus* (Pouchet).

"1279 A. D." (Chinese chron. table, and Pauth. 350), end of the Soung dynasty, Ti-ping being the last native Chinese emperor. Khoubilai-Khan now ruler of all China.*

"May 4th" (Nicol.), a synod at Beziers. The archbishop of Narbonne deputed to proceed "to the next parliament in France, To complain of the encroachment of the secular over the ecclesiastical power." Also, a synod at Avignon "May 17th." "Against the usurpation of ecclesiastical property, violence committed against the clergy, and contempt of excommunications."

"November" (Blair), in England, the passage of Mortmain act; making estates inalienable.

"The same year" (art de verif.). Barakah-Khan succeeded by Salamesch; and before the close of the year, by Kalaoon, seventh Memluk sultan of Egypt. Kalaoon proved almost the only Muslim ruler of Egypt who founded charitable institutions (Wilk. theb. and eg.): and during his reign, a great impulse was given to the erection of buildings of every description in Cairo (Clot-Bey xv. 30). A coin issued at Aleppo by Kalaoon, is figured in Marcel p. 168.

The Big mound, near New Madrid on the Mississippi, found to contain a chamber which "seems

* *Lagerstroemia Indica* of the mountains of Southeastern China. The "pe-ge-hong" that followed the court to Peking, — according to the description by Cibot (mem. Chin. iii.), is this flowering shrub: — the "pe-ge-hong" is also mentioned by the author of the Fong-ouen-tsi-kouan, and came "from the mountains of Fou-kien." In Japan, *L. Indica* was seen by Cleyer iii. 5, 6 (Spreng.). Kaempfer v. p. 855; and by Thunberg, growing in the open air, and called "sibi" and "fakudsitkva" and "fakusinda." The shrub occurs also in CochinChina (Pers.): according to Mason, is "exotic" in Burmah; and is admitted to be also exotic in . . . (Rumph. vii. pl. 28), and Hindustan (Roxb., Wight, and Graham). From Europe, was introduced into the greenhouses of North America, where it has become frequent.

to have been built by putting up poles, like rafters * in the roof of a house," with human bones on the floor, also a pipe, and earthen jars, some surmounted by the figure of a human head, while others in neighbouring mounds had a long narrow neck (G. C. Swallow in rep. Peabody mus. 1875).

"1280 A. D." (Wilk. theb. and eg.), the "morostan" or *hospital* at Cairo, founded by Kalaoon. The building is attached to his mosque and tomb.

"April" (Nicol.), a synod at Bourges. The clergy were forbidden "to exercise many trades therein enumerated."

"The same year" (Pauth. 359, in 1281 according to Kaempfer, compare Marc. Pol. 159), unsuccessful expedition of Khoubilai-Khan against "Zipungu" or Japan. — The abundance of *gold* in Japan, is mentioned by Marco Polo; who further describes both the Japanese and Chinese idols as many-handed (and therefore Braminical, contrary to the general impression).

"1281, Feb. 22d" (Alst., and Nicol.), Nicolaus III. succeeded by cardinal Simon de Brie, now Martinus II., thirty-third pope.

"December" (Nicol.), a synod at Paris. Complaint made "of *religious mendicants*, who preached and heard confessions."

"In this year" (Mason in beng. asiat. soc. xxxvii), the "red city of Toungoo founded by a Karen jointly with two Burmans."

"1282, A. D." (Pauth. 360), arrival in China of an ambassador from the "kingdom of Kulang;" bringing to Khoubilai-Khan "precious stones," and "black apes" (. . .).

"March 30th, Easter day" (Alst., and Blair), "Sicilian Vespers:" the massacre of all the French residing in Sicily, "eight thousand" in number; Peter III. ruling Arragon and Naples. — The discontinuance in most parts of Europe of a beautiful religious rite may have some connexion; the "Oraciones" witnessed by myself only in Peru.

"Dec. 11th" (Blair), prince Lewellyn of Wales defeated and slain in battle by the army of king Edward: — in the following year, Wales united to England.

"The same year" (Nicol.), a synod at Saintes. Complaint made by the bishop, "That the bodies of excommunicated persons were interred in the churchyards."

"1283, January" (Nicol.), a synod at Constantinople. The patriarch Joannes Veccus "condemned by the schismatics." And in another synod "on the morrow of Easter," all the bishops "concerned in the union of the two churches were condemned."

"The same year" (Alst.), Michael VIII. succeeded by his son Andronicus II. Palæologus, sixty-second Byzantine emperor.

Journeying Eastward, Marco Polo 21. describes Turkey *carpets* as "le souran tapis dou monde e li plus biaux." — The pieces exported from Hindustan under the name of "Persian rugs," I was assured by Arabs at Muscat, are "brought from Constantinople."

The "rat de faraoon" mentioned by Marco Polo 69. and 216. as eaten in Tartary, is clearly the *brown rat*, *Mus decumanus*: — well known to be eaten by the Chinese of the present day. Eastward

* *Ulmus fulva* of Northeast America. The *slippery elm*. some of the above rafters "probably of elm" — (G. C. Swall.): the Narragansets informed R. Williams of a tribe "between three and four hundred miles west" who lived on the bark of trees (hist. coll. iii. 209): *U. fulva* has been observed by myself from Lat. 47° on the Lower St. Lawrence to 42° in Western New England; by Pursh, from Canada to Pennsylvania; according to A. Gray, is "common from Western New England to Wisconsin and Kentucky," and has "tough reddish wood, and a very mucilaginous inner bark;" was observed by Michaux on the Alleghanies (Pers.), by F. A. Michaux in Canada and the United States, but not in the maritime portion of Carolina and Georgia; by Chapman, in "rich woods, West Florida, and northward;" by Darby 77, to 31° in Louisiana; by Beck, near the mouth of the Missouri; and by Say on Long's Exp., as far as 49° on Red river of Lake Winnipeg.

Arundinaria macrosperma of Carolina and the Lower Mississippi. The *North American reed* or *cane*, growing in widely-extended beds or tracts called *canebrakes*, and from early times furnishing arrows: a lathing of split cane was placed on the above rafters — (G. C. Swall.): West of the mouths of the Mississippi, Cabeza de Vaca found the arrows of the natives of hard cane (transl. B. Smith); and those on the Roanoke according to Hariot were of "arundine" (De Bry i.): *A. macrosperma* is known to grow along the Atlantic as far as Lat. 37° (A. Gray); was observed by Schweinitz in 36°; by Chapman, from "Florida to North Carolina;" by N. A. Ware, in Florida, and is known to grow as far as 29°; by Michaux, on the Mississippi (Pers.); by myself, on the Kentucky shore of the Lower Ohio; by Nuttall, from about Lat. 39°, from Sandy river in Ohio and Kaskaskias on the Mississippi to the Arkansas above Verdigris, L'eau Bleu on Red river, and the Gulf; by E. James, on the Canadian branch of the Upper Arkansas; its absence from the Missouri was remarked by Baldwin.

from China, *M. decumanus* was aboriginally though perhaps unintentionally introduced throughout the islands of the Pacific; left behind in some instances after the disappearance of human inhabitants, as on Gardner's and Enderby's coral-islands in the Phoenix Group. At a comparatively modern period, *M. decumanus* was introduced into Greece and Europe; was seen in Egypt by Baumgarten iii. 5, and so far as I could judge without close examination, by myself. By European colonists, was unintentionally carried across the Atlantic to Northeast America, where it has become frequent.

At "Cascar" (Cashgar) in Central Asia, Marco Polo 51 and 152 found "hermites, abaii et monester ascz de lor foi" (Lamaism, or perhaps pure Buddhism); and though so far North, "banbaxe" or cotton was cultivated. He also speaks of "Kesimur" (Cashmere); and of (the lofty table-land of) "Pamier."

In the North, Marco Polo 213 and 71 mentions "Rosie" (Russia), and islands in that direction where "jerfaus" or *falcons* are procured (Iceland). But the country North of the "Altai" as far as the ocean, is described as subject to the Great Khan, and inhabited by "sauvaje jens" called "Mecri;" who "ne ont blef ne vin" have neither corn nor wine, live on animal food, "chavauchent les cerf" use the *reindeer* for horses, and follow the usages and customs of the Tartars. He also mentions the great traffic in *furs* in that region, the *black fox*; "gibellines" (*Mustela zibellina*) the *sable*; the "*crmin*" (*Mustela erminea*); "orses toutes blanches" the white or *Polar bear* (*Ursus maritimus*); and even *doz-sledges* (hardly in use nearer than Kamtschatka).

On reaching China, Marco Polo 85 found at Canbalu (Peking) a great *bell* sounding at night to confine the citizens to their houses. Black stones, "*pieres noires qe se cavent des montaignes*" (*coal*) used for fuel. From Canbalu, a great canal leading South. And in other Chinese cities, many sagacious merchants, and men of all professions, philosophers, naturalists, "grant filosofe e grant mire naturel qe mout stuent bien nature" (l. c. 102, 148, and 151).

By government, *paper-money* was issued, redeemable for special purposes in uncoined silver and gold. While in other countries of Central and Southeastern Asia, Marco Polo 96 and 118 found "porcelaine blanche celle qe se trovent en la mer" cowries (*Cypræa monetas*) used for money, in addition to silver and gold. — Cowries for money are mentioned also by Ebn-Arabschah in his history of Timour (De Sacy chrest. note to Makriz).

Calamus rudentum of Tropical Eastern Asia. The common *rattan*, and clearly the split "canne" of which the rope for towing vessels on the river "Quian" was made, according to Marco Polo 147: — Chinese near Macao making ropes of split rattan are mentioned by G. Bennet wand. (Royle); "rattan cables," by Dampier; and the cable of Chinese junks was observed by myself to consist of rattans twisted together: the living *C. rudentum* is termed "*pulma juncus albens*" by Rumphius v. pl. 53; and was observed by Loureiro 260 in Anam. Westward, by Graham "in gardens" only near Bombay: boxes and bales of merchandise secured with rattans may have been brought at an early period to Egypt, but in Europe these stems continued so little known that one is figured by C. Bauhin (ed. Matthioli. 58).

"1285, Apr. 2d" (Alst. and Nicol.), Martinus II. succeeded by cardinal Giacomo Savelli, now Honorius IV., thirty-fourth pope.

"The same year" (rudim. chron. Lond.), in England, the court of king's bench instituted. And the abbey church of Westminster completed.

"The same year" (Alst.), end of the chronicle of Martinus Polus.

"1286 A. D." (Nicol.), a synod at Naumburg. Against "those who imprisoned bishops and clerks."

"In this year" (Humb. cosm. v.), *charts*, *astrolabes*, and the *compass* mentioned by Raimundus Lullius maravill. orb. as in use among the Barcelonians. — He died "in 1315" (Pouchet).

"July 8th" (Nicol.), a synod at Ravenna. The practice introduced by the laity of inviting jongleurs and *buffoons* at weddings or when knighted, was condemned.

"The same year" (Pauth.), by the mandarins of Fou-kien, the ships visiting one of the ports of Southern China stated to have come from "more than ninety foreign kingdoms."

"In this year (=685 A. H.) of Ferisht. Elph.). Bulbun succeeded by his grandson Kei Kobad, now tenth sultan of Delhi.

The Persian poet Saadi writing. — He died "in 1291."

Tulipæ Gesneriana of the Uralian plains. Called in Britain *tulip*, by old writers "tulipan" the Turkish word for turban, in Persian "dubend" (Prior), in Hindustanee "lala" or "shaqaik" (D'roz.); the "tulipe" of the gardens is mentioned by Saadi — (Babour-nameh, and Klapr. mem. ii. 155): *T. Gesneriana* was observed by Pallas trav. i. 384 abounding on the Yaik; was brought from Constantinople in or about 1554 (Balbin., and Beckm.) probably by Busbecke, and became at once a favourite garden flower throughout Europe; is described by Camerarius; was observed by Rauwolf under cultivation on Lebanon; is known to occur seemingly wild in Thrace, Cappadocia, and Russia (Pers., and Spreng.); and Hindustanee names indicate its presence in Northern Hindustan. By European colonists, was carried to Northeast America, where it continues in gardens.

"In this year" (Way pref. pr. pm.), the most highly esteemed of medieval dictionaries, the catholicon or summa of Johannes Januensis de Balbis completed. — The work is quoted by Galfridus pr. pm., and was first printed "in 1460."

Teucrium scorodonia of Europe and the adjoining portion of Asia. Called in Britain *wood-sage* (Prior), in which we recognize the ΣΑΛΓΙΑ ΣΙΛΒΕΣΤΡΙΣ of Johannes Januensis cath., — identified by Galfridus pr. pm. with the "ambrosia," and translated "wylde sawge" in the *Ortus vocab.*: *T. scorodonia* is termed "chamædrys fruticosa sylvestris melissæ folio" by Tournefort inst. 205, "t. sylvestre" by Lamarck fl. fr.; and is known to grow in woods throughout middle Europe as far as Britain (Pers., and Curt. lond. v. pl. 40). Eastward, was observed by Sibthorp, and Chaubard, in the Peloponnesus.

"About this time" (Klapr. chrest. p. vii and 249), Aisin Gioro elected chief by Tungusi tribes associating along the Sounggari above its confluence with the Amour. The new nation received the name of "Mandchou."

Tombs covered at great expense with large stones, not uncommon in Daouria, are claimed by the Tungusi* as those of their ancestors — (Pall. trav. iv. 342). The Tungusi are further described by Pallas as having the face broader and more flattened than the Mongols, but their language manners and costume much resembling those of the Bouriates Mongols; their hair black and long, with very little beard.

Rhododendron chrysanthum of the mountains of East Siberia as far as Kamtschatka. A low shrub called by the Tartars "schei" tea, by the Koibales "kaschkara," by the Cossacks on the Upper Yenisei "sabyrna-trawa," in Daouria by both natives and Russians "tchernogriff" or "kelarsk" (Pall.), and from early times employed medicinally: — observed by Steller, its leaves intoxicating a tame deer, and employed in consequence by his Russian servants to intoxicate themselves; observed also by Gmelin iv. pl. 54 in East Siberia; by Sokolof, on the high mountains of Daouria; by Pallas iv. 532 and fl. i. pl. 30, on the mountains along the Upper Yenisei. Its medicinal properties are commended by Koelpin (Lindl.).

"In this year" (mission to Ava p. 79), ten Chinese envoys murdered at the Burmese court for insisting on wearing boots in the royal presence.

"1287 A. D." (Marco Polo, and Pauth. 360), Nayan commanding in Eastern Tartary, and who had been baptized a Christian, conspiring against his relative Khoubilai-Khan, and defeated by him in battle.

"March 18th" (Nicol.), a synod at Wurtzburg. "A levy of the tenth penny on all ecclesiastical property" was obtained by the pope.

"The same year" (Lubke and Lutrow), in Sweden, the cathedral at Upsal commenced; under a French architect, Estienne de Bonneuil.

"1288 A. D." (art de verif.), Gouda succeeded by Fusimi, cousin of "Fikakusa," and now dairo of Japan.

"Feb. 15th" (Nicol.), Honorius IV. succeeded by cardinal Jeronimo, now Nicolaus IV., thirty-fifth pope. Philip IV. le Bel ruling France; and Margaret?, Scotland. — Under the pontificate of Nicolaus IV., "the commencement of the year at Rome was fixed at Easter."

Simeon de Cordo Januensis, physician to pope Nicolaus IV., at this time writing. He had visited Sicily and the Greek islands — (Spreng., and Pouchet).

Pimpinella dissecta of Western Europe. The ΣΑΧΙΦΡΑΓΙΑ distinguished from the ΠΙΜΠΙΝΕΛΛΑ by Simeon de Cordo, differing according to a proverb in having no hairs, — mentioned also by Matthæus Sylvaticus pand. 573 f. 162 (Spreng.), may be compared: the "saxifraga" of the drug-shops is described by Ruel iii. 85 as smoother than the "pampinule:" *P. dissecta* is described by Dodoens p. 315 (Spreng.); is known to grow in woods from Paris to the Mediterranean (Retz obs. iii. pl. 2, Thuill. and Thore), according to Lindley, the medicinal "effects as in *P. saxifraga*"

Pimpinella magna of Western Europe. Much resembling the preceding. — but regarded as distinct: described by Miller, and Linnæus: observed by Scopoli in Carniolia; known to grow from Denmark to the Mediterranean (fl. Dan. pl. 1155, Engl. bot. pl. 408, Jacq. austr. pl. 396), and

* *Ribes procumbens* of Daouria. Called there "mochovaia smorodina," known from early times, — and observed by Pallas iv. 362.

Pyrus baccata of East Siberia. Called beyond Lake Baical "iablotchki," its fruit resembling a little apple and known from early times, — observed by Pallas iv. 142 abounding on the Selenga; known to grow also on the Schilka river of Daouria (Pers.).

Ulmus microphylla of East Siberia. A small tree called beyond Lake Baical "ilimovnik," and known from early times, — observed by Pallas iv. 143 abounding on the Selenga.

according to Lindley as far as "the Levant," its medicinal properties "similar in effect to *P. saxifraga*."

Potentilla recta of Europe and the adjoining portion of Asia. The seven-leaved **QUINQUEFOLIUM** of Simeon de Cordo of Genoa — is referred here by Sprengel: *P. recta* is termed "pentaphyllum maius" by Brunfels ii. 33. "quinquefolium rectum luteum" by Tournefort inst. 297; was observed by Sibthorp, and Gittard in Southern Greece; and is known to occur along walls and on the margin of cultivated ground in middle Europe (Jacq. austr. pl. 383, Crantz, Lam. fl. fr., Lap., and Pers.).

Imperatoria ostruthium of Northern Europe, and about mountains farther South. Called in Britain *master-wort* (Prior): the **OSTRUTUM** of Simeon Januensis — is referred here by Rhodius comm. Scrib. Larg. 10: *I. ostruthium* is described by Anguillara p. 211: was received from Ferrante Imperato of Naples by C. Bauhin pin. iv. 1; is termed "i. major" by Tournefort inst. 317; and is known to grow along the base of the Alps from France to Austria, and in "moist meadows and woods" as far as the Baltic and Sweden (Pers., Koch, Fries, and Lindl.); but in Britain is regarded as not certainly indigenous (Blackw. pl. 279, Engl. bot. pl. 1380, Wats., and A. Dec.). Eastward, the "kumënokarnavathin" of Maximus Planudes morb. may be compared: *I. ostruthium* was observed by Sibthorp in waste places on Cyprus. By European colonists, was carried to Madeira (); to Iceland (Wats.); and to Newfoundland, where it was observed by Pilaye (Dec.). According to Burnett, and Lindley, the umbels are flattish "eight or ten inches wide," and the root "acid and bitter, it is used as a masticatory in toothache, and many writers speak well of it as a febrifuge." (See *Saponaria officinalis*.)

Blechnum boreale of Western Europe. Called in Britain *hard fern* from the rigid texture of the frond (Prior): the **CITRIUM** of Simeon Januensis — is referred here by Manardus: *B. boreale* is termed "waldt asplenon" by Tragus i. pl. 188, as observed by him in the woods of Germany; is known to grow also as far as Britain.

"Nov. 11th" (Nicol.), a synod at Salzburg. "Forbidding the bishops to render homage to the lay lord of the province."

"In this year (= 687 A. H." of Ferisht., Elph.), Kei Kobad succeeded by Jelal-u-din, a Khilji "seventy" years of age and now eleventh sultan of Delhi.

"1289 A. D." (Garc de la Vega), rebellion of the Chancas, the first in Peruvian history: the Chancas defeated in battle at Yuhuar-Pampa near Cuzco, and abdication of the fleeing Yahuarhuacac in favour of his son Ripac or Huira-cocha or Viracocha, now eighth Inca of Peru.* — Viracocha added a province to the empire; and constructed a canal one hundred and twenty leagues long, to irrigate the province of Chinchasuyu. The mummy of Viracocha, "that of a very old man" (Markham edit. Ciez. p. li), and those of four other Incas were seen by G. de la Vega in 1560 in an apartment at Cuzco.

"1290 A. D." (art de verif.), Kalaoon succeeded by Khalyi, eighth Memluk sultan of Egypt.

"In this year" (Way ed. Pr. pm 267), the Jews totally expelled from England by Edward I. In Italy (Lubke and Lutrow), building of the cathedral at Orvieto.

The same year = "1216 an. jav.," date of a Javan inscription in which "the descendants of Prabu" are mentioned — (according to the translation in Raffles append. 9).

"1291, May 19th" (Blair), the city of Ptolemais re-taken by sultan . . . the finishing blow to the crusades.

"The same year" (Alst.), a synod in London. A decree, That no one should give estates to the priesthood, nor the priesthood be allowed to purchase without the king's consent.

"1292, March 17th" (Nicol.), a synod at Bremen. "Against those who imprisoned bishops."

"The same year" (Nicol.), a synod at Chichester. A statute, Forbidding "the depasturing of cattle in churchyards."

"In this year (= 691 A. H." of Ferisht., Elph.), invasion of the Punjab by Mogul Tartars repelled by sultan Jelal-u-din. On this occasion, "three thousand" of the enemy joined his standard, soon after embraced the Mahometan religion, and a place in the suburbs of Delhi was assigned for their residence — to the present day called Moghulpura.

"1293 A. D." (art de verif.), Khalyi succeeded by Beydarah; and after a single day, by Naser, tenth Memluk sultan of Egypt. Besides his mosque and tomb at Cairo, Naser built bridges, fountains, academies, and other works of public utility. A copper coin issued by him, is figured in Marcel p. 172.

* *Portiera hygrometrica* of Western Peru. A rigid Zygothylloid bush, closing its leaflets on the approach of rain, and called in Peru "turucasa," employed medicinally from early times, — its properties being similar to those of guaiacum (Lindl.): observed by Ruiz and Pavon prodr. pl. 9 among rubbish in sunny situations in Peru (Pers.); and according to Lindley extending into Chili.

"From this year" (Blair), "a regular succession of English parliaments."

About this time, or according to some writers, four centuries earlier (Blair), the "motion of trepidation" or the *variation of the sun's declination*, discovered by the Arabian astronomer Thebit-ben-Corah.

The following plants known from early times to the natives of Florida, *Platanthera ciliaris* their "rattle snake's master," the root employed both internally and externally.

Of the fragments of pottery, arrow-heads, and other implements of stone and bone in the rubbish-heaps of Florida, some as early probably as this date.*

Quercus virens of Carolina and the Lower Mississippi. The *live oak*, a large tree growing in the vicinity of the sea, known to the natives from early times: — "evergreen oaks" were seen by Cabeza de Vaca on the North shore of the Mexican Gulf: *Q. virens* was observed by Catesby i. pl. 16, and Elliot, in Carolina; by F. A. Michaux, from Lat. 37° to 30° and along the Gulf to and beyond the mouths of the Mississippi; by Darby, not North of 30° 23' on the Lower Mississippi, nor West of the Sabine; by N. A. Ware, and Chapman, in Florida; and by Bartram, as far as 28°. Its timber is highly valued for ship-building.

Yucca aloifolia of the seashore from North Carolina to Florida and Vera Cruz. The generic name aboriginal, — but the plant called by colonists *Spanish bayonet* (A. Gray): *Y. aloifolia* is known to grow near Vera Cruz and on Jamaica (Pers.); was observed by Baldwin at 29° in Florida; by

* *Andromeda (Leucothoe) acuminata* of Carolina and Florida. A shrub with a hollow stem, from early times "used by the natives for making their pipe-stems" — (Pursh): observed by Bartram catal., and Michaux, in Florida; by Walter, and Elliot, in Carolina; by Schweinitz, and Curtis, as far North as 36°

Zamia pumila of Florida. The *coontie* is a low palmetto-like plant, its trunk yielding the "kun-ti hat-ki" white bread, prepared by the Seminoles from early times — (Fontaneda transl. B. Smith, and Laudonn.): *Z. pumila* was observed by Baldwin, and N. A. Ware, commencing at Lat. 30°; by Chapman, in "low grounds South Florida," and *Florida arrow root* procured from its trunk; is known to grow also in Domingo (Pers.). Transported to Europe, is described by the younger Linnæus, and Jacquin rar. iii. pl. 635. The *Zamia* of the Bahamas, furnishing according to Lindley "one of the best kinds of arrow root," may be compared.

Smilax pseudo-china of Carolina and Florida. Called on the Roanoke "tsinaw" (Hariot), and from early times bread made by the natives from its tuberous rootstock; also in Florida, the "kun-ti tsah-ti" red bread of the Seminoles — (B. Smith edit. Fontan): *S. pseudo-china* was observed by Sloane i. pl. 143 on Jamaica (Pers.); by Chapman, in "woods and thickets, Florida, and Northward;" by Walter 245, and Elliot, as far as the Santee; and the "tsinaw" of the Roanoke is described by Hariot as the root of a briar similar to china-root used for making bread (De Bry i. 17). Transported to Europe, is described by Plukenet alm. pl. 110 (Lindl.).

Pachyma cocos of the alluvial Atlantic border of North America. The *tuckaho* is a large hard-crusted fungus growing underground in sandy pine-barrens; and a root like the truffle and sweet, eaten from early times by the Seminoles, — is mentioned by Fontaneda: the "okeenauk," a round root as large as a man's head, found by Hariot eaten crude by the natives on the Roanoke (De Bry i), may also be compared: and the "tockowhough" of the natives on James river is enumerated by Strachey: *P. cocos* is described by Schweinitz, as observed by him in Carolina; and is known to grow as far North as 40° in peninsular New Jersey.

Pinus tæda of Carolina and the Lower Mississippi. The *loblolly* or *old-field pine*, a lofty tree, known to the natives from early times, — and probably the "pines" seen by Cabeza de Vaca on the North shore of the Mexican Gulf: "abies" large and lofty for masts of ships, were seen by Hariot on the Roanoke: *P. tæda* was observed by F. A. Michaux from Lat. 38° throughout the maritime portion of North Carolina; by Pursh, from Virginia to Florida; by Elliot, in South Carolina and Georgia; by Chapman, in Florida, having "valuable but sparingly resinous wood;" by Darby, on Pearl river, and to Lat. 30° on the Mississippi.

Sabal Adansonii of Carolina and the Lower Mississippi. The *dwarf palmetto*, known to the natives from early times; — clearly the "dwarf palmettos like those of Castile" seen by Cabeza de Vaca on the North shore of the Mexican Gulf, and the "palmitoes upon low palm trees like those of Andaluzia" seen by De Soto in Florida: *S. Adansonii* is termed "chamærops acaulis" by Michaux i. 207; was observed by Elliot on the sea-islands of Carolina and Georgia; by N. A. Ware, in Florida; by Chapman, "in the lower districts, Florida to North Carolina," its "stem short, buried in the earth;" by Nuttall, not North of 33° on the Mississippi; and by Darby, in Opelousas. Transported to Europe, is described by Guernsent soc. philom. lxvii. pl. 25, and Jacquin hort. iii. pl. 8 (Pers.).

Chapman, in "sands along the coast, Florida to North Carolina," its palm-like trunk "four to eight feet high." Transported to England, its introduction is recorded by Gerarde; the plant is described also by Parkinson, C. Commelyn, and Dillehius *elth.* pl. 324; was observed by Clot-Bey in Egypt, under cultivation by European residents; and has recently been introduced into Hindustan (Lush and Graham).

In this year (= "Jan. 8th, 1305 — 2d — 11 years" in *litt.*, Yule *cath.* 197), arrival at Peking of the first Catholic missionary, John of Montecorvino. He was treated with great respect, — built churches, and remained until his death in 1328 (= "1336 — 8 years" in *litt.* *emb.* Chin, Yule 314).

"Towards the close of the Thirteenth century" (Pouchet), the earliest treatise on *hunting* issued. — The "Livre du roi Modus" followed, written in the first part of the Fourteenth century.

"1294, March 9th" (Nicol.), a synod at Saumur. A statute, Prohibiting "the imposition of pecuniary penalties in confession."

"July 5th" (Alst. and Nicol.), Nicolaus IV. succeeded by Peter de Morone or Celestinus V. : who, abdicating and retiring into a monastery, was succeeded "Dec. 24th" by cardinal Benedict Gaetano, now Bonifacius VIII., thirty-seventh pope. Adolphus of Nassau ruling Germany and Italy; and John Baliol, Scotland.

"In this year (= 693 A. H." of Ferisht., *Elph.*), Ala-u-din, nephew of sultan Jelal-u-din, proceeding Southward with an army "about seven hundred miles" unexpectedly fell upon Deogiri (Dowlatabad), defeated the Mahratta king Ramdeo, and compelled a ransom and cession of territory.

From China returning by sea, Marco Polo 166 visited "Cianba" (Tsiompa); and Java, where the Muslims had introduced their religion. He also speaks of the Greater Java (Sumatra?), regarded by mariners as "the largest island" in the world; of "Necuveran" (Nicobar Islands) where the people go naked and have no king; of "Angaman" (Andaman Islands); and of the "Cariaines which is spread over Ava" (the earliest historical notice of the *Karens*, according to Mason in *beng. as. soc.* vii.).

On reaching "Seilan" (Ceylon), Marco Polo 178 found "Adam's Peak" of the Saracens called "the monument of Sergamon Boream" by the Idolaters. In Hindustan, he saw peacocks "d'aure façon qe ne sunt les autres" (*Pavo cristatus*): and ascertained, That ships from China came to "Melibar;" and merchandise was carried thence Westward to Alexandria (l. c. 157, 183).

On Arab authority, the home of the legendary bird "ruc" is placed by Marco Polo 191 on "Madagascar" (evidence, that the fossil *gigantic bird-eggs* occurring there were already known). This island and "Zanghibar" were the principal seat of the trade in *elephants' teeth* (brought of course from Interior Africa). The people of the former island were Muslim, and of the latter, all Idolaters (a statement which seems to imply, that the Arabs had not as yet occupied Zanzibar). — Continuing his return Westward, Marco Polo reached Europe in "1295."

"The same year" (Yule *cath.* i. 87), date of an inscription on Java by Uttungadewa, claiming to be sovereign over the whole island, having subjected "five kings." About this time an envoy from Khoubilai demanding homage and tribute insulted and sent back: — an avenging expedition by the Chinese was repelled (Yule, and Odoric 21).

"1295 A. D. = 'youan-tching,' 1st year of" Timour-Khan or "Tching-tsoung, of the Youan" or Twenty-second dynasty — (Chinese *chron. table*).

"July 19th (= 695, Ramzan 17" of Ferisht., *Elph.*), Jelal-u-din succeeded by his nephew Ala-u-din, now twelfth sultan of Delhi. — One of his maxims was, That religion has no connection with civil government.

"The same year" (. . . *rudim. chron.* Lond.), *letters of marque* first granted to privateers. By Edward king of England, against the Portuguese.

1296 A. D. (= "1221 an. jav." Raffles x.), in Java, Raden Tanduran son of Munding Wangi and lawful heir finding himself excluded from the government, left New Pajajaran and proceeding Eastward founded Majapahit. Here he was joined by adherents enough to establish a rival kingdom, — and war ensued with his half-brother Chiong Wanara.

"In this year" (Lubke and Lutrow), the cathedral at Florence commenced.

"In this year" (*transl. in mel. Remus.* iii. 102), visit of a Chinese official to Tchín-la or Cambodia.* He found there men versed in astronomy, who predicted eclipses both of the sun and moon,

* *Nageia Japonica* of Japan. Called there "yamamomo," and furnishing perhaps the wooden combs enumerated by the Chinese official as imported into Cambodia from China: — its wood used in Japan for making these implements (*Thumb. trav.*): and its bark, in the process of dyeing (*Jap. centen. comm.* 31 and 80): *N. Japonica* is described also by Kaempfer *amoen.* v. pl. 874.

Cymbidium striatum of Japan. The "jone appelé lan" enumerated by the Chinese official as

but by a different method from the Chinese. Of three religions, Buddhism was the most flourishing; the other two are described as peculiar. The natives did not bury their dead, but exposed them to beasts and birds of prey; the custom of burning the dead being confined to the descendants of Chinese emigrants.

Soja hispida of Japan. Enumerated by the Chinese official 141 as unknown in Cambodia: — "miso" beans are mentioned in 1444 in the annals of the Japanese emperors (transl. Tits. and Klaproth); were observed by Kaempfer v. 837, and Thunberg, under frequent cultivation near Nagasaki and elsewhere; are known to be made into the condiment called "soia" (Pers.) in English *soy*; also into a white porridge in general use among the Chinese and called by them "teu hu" or "tauhu" (Loureir.). Westward, *S. hispida* was observed by Mason in Burmah; by Roxburgh, and Graham, in the gardens of Hindustan. Transported to Europe, is described by Jacquin rar. pl. 145.

Garcinia elliptica of the Siamese countries. One of the two trees yielding *gamboge* and called in Burmah "tha-nat-dau" (Mason): the "kiang-hoang" resin found according to the Chinese official among trees in Cambodia — is referred by Remusat to the "hoang-kiang" or gamboge: the "ossa-reh-rewund" rhubarb-juice of Persian medical writers, is also referred here by Royle: *G. elliptica*, described by Wallich, is regarded by Mason as probably a species growing South of the Tavoy river in Burmah and ascertained by him to yield gamboge. In Europe, gamboge was first made known by Clusius, who "in 1603" received specimens by the way of Amsterdam from China (Pereir.): its use as a pigment and medicine has since become general, and specimens were seen by Rouyer in the drug-shops of Egypt.

Urtica (*Boehmeria*) *nivea* of Subtropical China and Japan. *China-grass* or *nettle-hemp* is called in Bengal "kunkhoora," in Assam "rheea" (Royle), in Burmah "gwon" (Mason), and in Malay "ramee" (. . .): the "tchu" was unknown in Cambodia when visited by the Chinese official; — the "tchou-ma" of the Imperial treatise on Agriculture lxxviii. 3 is referred here by Stanislas Julien, is mentioned also in the Nong-tching-tsiouen-chou general treatise on Agriculture: *B. nivea* is described by Rumphius v. pl. 79; was observed by Loureiro in Anam and China, often cultivated;

unknown in Cambodia, — is referred here by Remusat. *C. striatum* was observed by Thunberg pl. 9 in Japan.

Nephelium litchi of Cambodia and the Philippines. A tree called in Tagalo "alpai" or "alipai" or "alupai" or "lechias" (Blanco); and the "li-tchi" fruit of Cambodia was found by the Chinese official agreeing in shape with that of China but sour: — the "plums" met with on the Philippines by Mendoza are referred to the li-tchi by Navarrete, who found trees wild on the Batam mountains near Manila, the fruit inferior to that produced in China, where it is accounted "queen of fruits;" *N. litchi* was observed by Blanco wild on the Philippines, and a variety resembling that of China growing on mountains; by Loureiro, in Anam; by Nieuhoff, Osbeck, and Sonnerat pl. 129, in these or the neighbouring countries. By European colonists, was carried to Burmah, where according to Mason v. 448 the trees "bore their first fruit last year;" to Bengal, where it has been successfully cultivated (Mason); to the environs of Bombay, observed "in gardens" by Graham; to Zanzibar, brought it was said in "an American ship from Sumatra," the trees at the time of my visit bearing fruit.

Citrus torosa of the Philippines. The *double-leaved citron* is called in Burmah "shouk pouk" (Mason), in Tagalo "suha" (Blanco); and the orange of Cambodia was found by the Chinese official agreeing in shape with that of China (*C. aurantium*) but sour: — *C. torosa* was observed by Blanco frequent in woods on the Philippines, the petiole wider than the leaf, the fruit exceedingly acid and not eaten, one variety called "colobot" used by the natives in bathing; was observed also in the environs of Manila by Mr. Rich; by Mason v. 453 to 760 "exotic" in Burmah, cultivated as far North as Tavoy Lat. 14°, its fruit small, one variety "with a smooth, and another with a rough skin." Eastward from the Philippines, a "wild orange suitable for making lemonade" was observed by Labillardiere on Waygiou (near New Guinea); *C. torosa* was observed by myself on the Feejeean and Samoan Islands, aboriginally introduced and now naturalized, a low tree with orange-like fruit, but two-thirds of the diameter rind, the contained pulp intensely acid and found by Mr. Rich used by the natives in "washing their hair," the leaves in drying separate from the stem and also become disjointed.

Jasminum arborescens of Tropical Eastern Asia. A small tree with large white fragrant flowers called in the environs of Bombay "koond" (Graham); and the "jasmin des Indes" enumerated by the Chinese official among the fragrant flowers worn by the king of Cambodia, — may be compared: *J. arborescens* is termed "nyctanthes grandiflora" by Loureiro, as observed by him in Anam. Westward, is described by Roxburgh i. 95; was observed by Lush in the vicinity of Bombay, at "Dapoo-ree, introduced from China" (Graham).

by Mac Gowan, around the "base of hills from Cochinchina to Yellow river" (Royle fibr.); by Kaempfer, and Thunberg, growing abundantly in Southern Japan; by Blanco, frequent in Northern Luzon; is known to occur on Celebes and Borneo, and its fibres are exported from Sumatra; according to Masoh v. 519, is "exotic" in Burmah, cultivated around Ava and recently in Tavoy; was observed by Roxburgh, Royle, and Wight, under cultivation in Hindustan, the fibres according to Lankester "second to none in strength and beauty" are "used throughout the East for making textile fabrics" (Drur.). Transported to Europe, was thence according to Clot-Bey introduced by the way of France into Egypt, where it is now successfully cultivated.

"1297 A. D." (Nicol.), a synod at Constantinople. Respecting an anathema pronounced by the patriarch Athanasius against the emperor.

"In this year (= 697 A. H." of Ferisht, Elph.), by Sultan Ala-u-din of Delhi, Guzerat conquered, and now placed under Muslim government.

"The same year" (rudim. chron. Lond.), in England, king Edward compelled to a solemn confirmation of Magna Charta; with the addition, That no *tax* shall be levied without the consent of the knights, citizens, and burgesses, assembled in parliament. Regarded as the origin of the present constitution of parliament.

"1298 A. D." (Blair), on the Asiatic side of the Bosphorus in Bithynia, the Greek armies defeated by Osman or Othman. Regarded as the beginning of the Turkish empire; a new phase in the progress of the Muslims.

"Before the close of the 13th century (= a *patrum memoria* of Petrarch, Major edit. Bethenc.), Lancerote, one of the Canary Islands, visited by Lancelote Malocello, a Genoese. A castle said to have been built by him — continued extant in the days of Bethencourt 32.

Plocama pendula of the Canary Islands. A. Rubiaceous plant called in Guanche "balo" (Webb), and known from early times. — Transported to Europe, described by Aiton i. 292, and Gmelin syst. 390 (Pers.).

Buphthalmum . . . *sp.* of the Canary Islands. Called there "joriada" (Webb), and known from early times. B. sericeum, with a tree-like trunk, — is known to grow on Teneriffe (Pers.): and from transported specimens is described by the younger Linnæus.

Canarina campanula of the Canary Islands. A sort of bell-flower called in Guanche "bica-caro" (Webb), and known from early times. — Transported to Europe, is described by Plukenet alm. pl. 276, and Linnæus.

Visnea mocanera of the Canary Islands. Called in Guanche "mocan" (Webb), and known from early times: — growing in mountain woods (Pers.). From transported specimens, described by Linnæus the younger, and Jussieu.

Convolvulus floridus of the Canary Islands. A shrubby prostrate species full of beautiful flowers, called in Guanche "guaydil" (Webb), and known from early times: — growing on the rocks of Teneriffe (Pers.). Transported to Europe, is described by Linnæus the younger, and Jacquin pl. 34.

Digitalis Canariensis of the Canary Islands. Called there "nota (gnota)," and known from early times — (Webb). Received from the Canaries (Pers.), is described by Plukenet alm. pl. 525, Commelyn hort. ii. pl. 53, and Linnæus.

Cucurum pulverulentum of the Canary Islands. Called in Guanche "orixama" (Webb), and known from early times: — growing on Teneriffe (Pers.). Transported to Europe, described by Linnæus, and Ventenat hort. cels. pl. 77.

"1299 A. D." (art de verif.). Fusimi succeeded by his son Fusimi II. or Go-Fusimi, now at the age of eleven dairo of Japan.

"The same year" (Nicol.), a synod at Constantinople. Convened by the emperor Andronicus II., To annul the marriage of his nephew. The marriage was notwithstanding declared valid.

Corchorus capsularis of Tropical Eastern Asia. An annual erect plant eaten as a potherb like *C. olitorius*, and having the same Sanscrit name "putta," called in Bengalee "put" (Royle) or "ghinalita pat" (Drur.), in Tagalo "pasao na bilog" (Blanco); and the *καψικον*, so called according to Actuarius from its involved capsules, and employed by him medicinally — (Ruel ii. 5), may be compared: *C. capsularis* was seen in Hindustan by Rumphius v. pl. 78; by Graham, "common in Bombay, springing up in gardens and cultivated grounds," by Nimmo farther North and South "in both Concans;" by Wight, in other parts of the peninsula; and by Roxburgh, and Royle, extensively cultivated especially in Bengal for its fibres called *jute*, of which gunny bags are made. Farther East, by Mason v. 521 "a common weed" in Burmah, enumerated as indigenous; is known to be cultivated in China; and was observed by Blanco on the Philippines. Transported to Europe, is described by Plukenet alm. pl. 255.

"1300 A. D." (Alst., and Nicol.), the "jubilæum" instituted by pope Bonifacius VIII. Commencing the year "at Christmas, which custom was followed by nearly all his successors in the Fourteenth century" (see above).

"As early as this date" (German archæologists, and Bryan dict. paint.), *playing-cards* in use in Europe.

"In or about this year" (Velasco, and Markh. edit. G. de la Vega ii. p. 348), Carán succeeded by Duchicala now twelfth scyri of Quito.

One hundred and sixty-eighth generation. Jan. 1st, 1301, onward mostly beyond youth: the Persian writer Munsur Mohammed wr. 1300 (Ainsl.): the Jewish writers, Isaac Israeli ben Joseph, Jacob ben Machir, Esthori Parchi, Isaac Lattas ben Jehuda, Kalonymos, Benjamin ben Jehuda: the Greek writers, Manuel Philes, Nicephorus Callistus d. after 1327, Thomas Magister d. 1310, Pachy-meses d. after 1310, Maximus Planudes d. after 1327: Marsilius Patavinus, Dante: Nicolaus Alexandrinus; Bernard de Gordon; Ermengaud Blasius; the scholastic theologians, J. Duns Scotus, Augustinus de Ancona, Alanus, Petrus Aureolus, Antonius Andreæ, Durandus a. s. Portiano, Hervæus Natalis, and Franciscus Mayronis: the botanists, Albertus de Saxonia, and Petrus Apono d. 1314 (Pouch.): the painter Giotto d. 1336.

"The same year" (Schouw. xii.), a lava-stream issuing on the isle of Ischia in the bay of Naples.

"In or about this year" (Steinschneid. ii. 12), short dissertations by various celebrated Christian writers, translated into Hebrew by Jehuda ben Moses of Rome; to show his brethren, "That the Christian nation is not destitute of all true science."

"In this year (= 5th of the 'ta-tě' of the Yuan dynasty," geogr. Chin. transl. Klapp.), a military government together with a naval station established on Tan-lo or Quelpaerts Island.

"1302 A. D." (art de verif.), abdication of Fusimi II. in favour of Nidsio II. or Go-Nidsio, eldest son of Gouda, and now dairo of Japan.

"Apr. 10th" (Nicol.), a synod at Paris. Convened by Philip IV. le Bel, who had imprisoned the bishop of Pamiers; On a Bull "in favour of that prelate" sent by pope Bonifacius VIII.

"Oct. 30th" (Nicol.), a synod at Rome. Philip IV. le Bel was threatened by the pope. And the decretal "Unam Sanctam" was composed; tending to prove, "That the pope possesses the right of appointing, correcting, and deposing sovereigns."

"1303, March 12th" (Nicol.), a synod at Paris: and the pope "accused of heresy, simony, and other crimes." In another synod "June 13th," the accusation was repeated; and "before September," upwards of "seven hundred acts of appeal, consent, and adhesion, from ecclesiastical bodies, bishops, and others" were obtained by Philip IV. le Bel.

"In this year" (Markham edit. note p. 92), the city of Sultanieh in Persia founded by Mohammed Khodah Bundah, of the house of Jenghiz and the first Persian ruler of the sect of Ali.

Periploca Græca of the Tauro-Caspian countries. A woody-stemmed climber called in Greece "galaxitha" (Sibth.), by the Russians "svidina," and known from early times, — observed by Sokolof along the Kouma within sight of Caucasus (Pall. trav. v. 218); by Sibthorp, in hedges in Bithynia and on mount Athos; is known to occur also in Syria (Pers.). Transported West, is described by Gesner, Matthioli, Lobel, Camerarius, C. Bauhin, and Tournefort inst. 93. Was observed by Osbeck on the seashore near Canton; and clearly by European colonists was carried to Northeast America, where escaping from cultivation it has been observed by myself seemingly wild near Salem, and according to A. Gray also "near Rochester" N. Y.

"Aug. 16th (= 3d moharram A. H. 733" of Abul Fazl, Orient. transl. lond.), the fortress of Chaitur captured by sultan Ala-ad-din of Delhi. "The non-military inhabitants having refrained from taking any share in the defence, were permitted to remain secure from slaughter." Ferishta places the event in "A. H. 703" = 1303 (Elph.).

"Oct. 22d" (Nicol.), Bonifacius VIII. succeeded by cardinal Nicolas Bocasi, now Benedictus X., thirty-eighth pope. Albertus of Austria ruling Germany and Italy. The dispute with Philip IV. le Bel, was amicably terminated by pope Benedictus X.

"1304 A. D." (Crawfurd vii. 11), the island of Ternate visited by Javanese and Malays to procure *cloves*, and many of them settle there.

"1305, June 15th" (Alst., and Nicol.), after an interval of "eleven months," Benedictus X. succeeded by Bertrand de Goth archbishop of Bordeaux, now Clemens V., thirty-ninth pope.

"Sept. 15th to Oct. 5th" (Nicol.), a synod in London. Convened by king Edward, "To consider the means of establishing a lasting peace between England and Scotland."

The writings of Arnoldus de Villanova condemned to be burned by the Inquisition at Tarragona, but accepted and praised by pope Clemens V. — (Pouchet). Arnoldus died "in 1312."

Dianthus carthusianorum of Europe and the adjoining portion of Asia. A *pink* included in the *tunica herba* of Arnoldus, — and others (Fuchs., and Caesalpinus vi. 44): *D. carthusianorum* is described by Brunfels ii. 58, and Fuchsius pl. 352 (Spreng); is termed "caryophyllus sylvestris vulgaris" by Tournefort inst. 333; and is known to grow from 55° in Russia as far as France, but not in the more humid climate of Scandinavia and Britain (Vill., All., Scop., and A. Dec.); was observed by Sibthorp around Constantinople and on the Bithynian Olympus; by D'Urville, in the

Crimea; and is known to grow from Caucasus to the mouth of the Ural (C. A. Mey., Sokoloff, and Ledeb.).

Dianthus superbis of middle Europe. Called in Germany "wild negele," and included in the "tunica herba" of Arnoldus, — and others (Fuchs. pl. 353, and Spreng. comm. D. iv. 1): known to grow from Denmark throughout middle Europe (fl. Dan. pl. 578, Lam. fl. fr., and Pers.).

Solidago virgaurea of Northern climates. Called in Britain *golden-rod* (Prior), and the *virga aurea* of Arnoldus — is referred here by Dalechamp and others: *S. virgaurea* is termed "*virga aurea latifolia serrata*" by Tournefort inst. 484; is known to grow throughout middle and Northern Europe as far as Lapland (flor. Dan. pl. 603, Engl. bot. pl. 301, and Wats.). Eastward, was observed by Sibthorp on the Bithynian Olympus and in the environs of Smyrna; by Hasselquist, on the Mediterranean border of Egypt; is known to grow on Caucasus (Bieb.) and throughout Siberia (Wats.); was observed by Thunberg in Japan, called "tojakf" or "senbli" or "senbuli" and used medicinally. Farther East, is known to grow in Ilaska (Wats.) and throughout Canada; was observed by Colmeister in Labrador (Pursh), and by myself along the Lower St. Lawrence and on the White mountains.

"1306 A. D. (= 706 A. H." of Ferisht., Elph.), by sultan Ala-u-din, Malik Cafur sent with an army against Deogiri (Dowlatabad) and the Mahratta king Ram Deo, in the course which the Caves of Ellora are first mentioned. Ram Deo came out of his fortress, accompanied Cafur to Delhi where he was received with favour, and returned loaded with honours.

"In this year" (Humb. cosm. iv.), the triangular configuration of Southern Africa* represented in the map of the world by Marino Sanuto Torsello, — also in the Genoese Portulano Mediceo "1351," the Planisferio de la Palatina "1417," and the Mappa-mondo of Fra Mauro Camaldolese "1457-9," known therefore in Europe "178" years before the actual circumnavigation by B. Diaz in "May 1487." (The information probably obtained from Arab navigators on the Indian Ocean).

"In this year" (F. Mason ii. 26), in Burmah, Magadu or Wayarau king of Martaban, assassinated. He was succeeded by his brother Krunglau: — during whose reign of four years, the city of Maulmain is first mentioned.

* *Cestrum venenatum* of Austral Africa. A large woody bush; — said to be employed by the Hottentots to destroy wild beasts by impregnating baits of flesh with its juice; a decoction of the bark reduced to the thickness of jelly, used by them to envenom their arrows (Thunb. fl. 193, and Lindl.).

Brunsvigia toxicaria of Austral Africa. An Amaryllis-like plant; — the viscid juice of the bulbs a dangerous poison, one of the ingredients used by the Bushmen to envenom their arrows, and supposed to add most powerfully to the activity of the poison (Patters. trav. pl. 1, Thunb. trav., and Lindl.). As transported to Europe, the plant is described by Ker bot. reg. pl. 567, and Aiton i. 405.

Sideroxylum toxiferum of Austral Africa. Besides the venom of serpents, a third plant whose juice is used by the Hottentots for poisoning arrows — (Thunb. trav. iii. 1).

Curtisia faginea of Austral Africa. Employed by the Hottentots for the shaft of their javelins, which are pointed with iron — (Thunb. iii. 4, and Soland.).

Cyperus textilis of Austral Africa. Fine mats made of rushes, and principally of this plant, by the Hottentots — (Thunb.).

Restio dichotomus of Austral Africa. Employed by the Hottentots for making brooms and thatching dwellings — (Thunb.). From transported specimens, described by Linnæus, and Rottboell pl. 2.

Roridula dentata of Austral Africa. Placed in dwellings for the purpose of catching flies — (Thunb.): described also by Burmann. And from transported specimens, by Linnæus.

Among the woods suitable for making implements, *Canonia*, *Trichulia Capensis*, *Curtisia*, *Olea verrucosa*, *O. Capensis*, *Gardenia Thunbergia*, *G. Rothmannia*, *Royena villosa*, *Virgilia Capensis*, *Protea grandiflora*, *P. barbata*, *Brabejum stellatifolium*, and *Ilex crocea*, — are enumerated by Thunberg.

Mimosa Capensis of Austral Africa. Furnishing charcoal — (Thunb.).

Caroxylon salsola of Austral Africa. An irregular leafless shrub six feet high, growing throughout the Karro, and used as a substitute for soap — (Thunb., and Pers.). From transported specimens, described by the younger Linnæus suppl. 173.

Carissa arduina of Austral Africa. A thorny shrub called "gatagay," the berries said to be eaten by the Hottentots, — the root also eaten in Austral Africa (Thunb.). Carried to Hindustan in 1837 by A. N. Shaw (Graham): and as transported to Europe, described by Miller pl. 300, and Linnæus.

Umbellif. incert. of Austral Africa. An Umbelliferous plant called "gli" by the Hottentots, who obtain from the root, mixing honey, a sort of mead that induces intoxication — (Thunb.).

Euphorbia genistoides of Austral Africa. When eaten, induces retention of urine — (Thunb.). From transported specimens, the plant is described by Linnæus.

"1307 A. D." (Blair), beginning of the association of the Swiss cantons.

"The same year" (Nicol.), a synod at Sis in Armenia. "To cement the union between the churches of Armenia and Rome."

"The same year" (Alst.), end of the chronicle of Siffridus Presbyter.

"1308 A. D. (ann. Jap., and art de verif.), Nidsio II. succeeded by Fannasono, younger brother of Fusimi II., and now ninety-fourth daïro of Japan.

"The same year = 'tchi-ta,' 1st year of Wou-tsoung, of the Youan" or Twenty-second dynasty (Chinese chron. table). By order of Wou-tsoung, the Hiao-king of Confucius, a treatise on filial piety, was translated into the Mongul language — (Pauth.).

The power of the Lamas and *Lamaism* increasing in China: a religion "founded on the idea of the continued incarnation of Budha in the person of the Grand lama" — (Remusat, and Pauth. p. 367 and 378). In regard to the forms of the religion, Huc and Gabet found the Budhists coinciding with the Catholics in the "crosier, mitre, dalmatica, cope or pluvial, double-choired liturgy, psalmody, exorcisms, censer, benedictions, rosary, ecclesiastical celibate, spiritual retreats, worship of saints, fasts, processions, holy water." (H. Yule in soc. Hakl.).

"The same year" (Alst., Blair, and Nicol.), removal of the French pope Clement V. from Rome to Avignon in France. And Albertus of Austria succeeded by Henricus VII., as emperor of Germany and Italy. — Avignon continued the seat of the papacy "seventy" years

"In this year" (Danish chron., and Relat. du Groenl. 205), fearful thunder in Greenland and a church called Skalholt burned by lightning, the storm accompanied with "broken rocks" and great quantities of ashes (the result apparently of some volcanic eruption).

"1309 A. D." (Wilford as. res. ix. 178), end of the Vansavali, a list of the kings of Guzerat.

The aboriginals of Virginia "conceived not to have inhabited" the low country below the falls of James river "much more than three hundred years" (Strachey 33): and some of the fragments of pottery, as well as arrow-heads and other implements of stone or bone contained in rubbish-heaps on tributaries of the Chesapeake and Delaware, as early probably as this date.*

* *Liriodendron tulipifera* of Northeast America. The *tulip-tree*, improperly called "poplar" or "white poplar," known to the natives from early times: — the "white-poplar" was seen by Strachey on James river. *L. tulipifera* is known to grow from the Connecticut river and 41° on Lake Champlain (F. A. Mx., and Eat.). Westward and Southward; has been observed by myself along the Atlantic as far as 39°; by Catesby i. pl. 48, in South Carolina, and by Chapman in "low grounds Florida," though according to F. A. Michaux rare in the maritime portion of Carolina, Georgia and Florida: by myself abounding on the Ohio and Wabash; by Nuttall, not on the Arkansas nor lower down the Mississippi than 35°; but was seen by Darby on the Washita and at Baton Rouge. Transported to Europe, is described by Hermann lugd. 613 (Spreng), Trew, and Miller; and by European colonists, was carried to Madeira (A. Dec.).

Podophyllum peltatum of Northeast America. The *may-apple* is a vernal woodland herb, its fruit eaten from early times: — "certaine ground aples a pleasant fruite" were seen by Newport on James river; and the "mandrake" is enumerated by Josselyn 2d voy. 77 as "very rare" and "found in the woods about Pascataway:" *P. peltatum* is known to grow as far as 44° along the Atlantic and 45° on the St. Lawrence (Hook.); has been observed by myself from 43° to 38°; by Elliot, in South Carolina; by Chapman, in "Florida and northward;" by Nuttall, on the Arkansas; by Beck, near St. Louis; and was received by Hooker from Lake Huron. Transported to Europe, is described by Trew pl. 29.

Sanguinaria Canadensis of Northeast America. The *bloodroot*, another vernal woodland herb, is sometimes called by the Virginia natives "puccoon" (Clayt.), but "musquaspenne" — as heard by Strachey, who describes its root as of the bigness of a finger and red as blood, withering in drying to almost nothing, but used by the natives on James river to paint mats and other articles: *S. Canadensis* is known to grow "throughout Canada" (Hook.), from at least 47°; has been observed by myself along the Atlantic from 43° to 38°; by Schweinitz, at 36°; by Catesby i. pl. 24, and Elliot, in South Carolina; by Michaux, from Canada to Florida; by Chapman, in "Florida and northward," and by Croom as far as 30° 30'; by Nuttall, on the Arkansas, and by E. James at the lead mines of Missouri. Transported to Europe, is termed "chelidonium maximum Canadense" by Cornuti 212.

Batschia canescens of the Ohio and its tributaries. The *puccoon*, called by the natives on James river "pocones," "a small roote that groweth in the mountaines," dried and used medicinally as well as to paint their heads and garments — (Strachey): *B. canescens* is termed "*anchusa floribus sparsis caule glabro*" by Gronovius p. 24 as seen by Clayton in Virginia; was observed by Michaux on the Tennessee; by Elliot, in the upper district of Carolina; by Nuttall, and Pitcher, on the Arkansas; and according to A. Gray grows from Western New York to Kentucky and Wisconsin.

Batschia Carolinensis of Northeast America. An allied species — not known to be used for

Robinia pseudacacia of the tributaries of the Mississippi, from the Alleghanies Westward. The *American locust*, a tree known to the natives from early times, and perhaps in some instances planted by them:—Strachey on James river met with a “kind of low tree” bearing a “cod-like pease,”

dyeing; observed by myself from Lat. 40° along the Atlantic, but full “thirty miles” from the sea, as remarked by Elliot in Carolina; is known to grow in Virginia (A. Gray); was observed by Walter, and Michaux, in Carolina; by Chapman, in “dry pine barrens, Florida to South Carolina;” by Nuttall in Arkansas; and according to A. Gray, grows in “dry woods, Michigan to Wisconsin.” From transported specimens, is described by Morison iii. 11. 28. 4. and J. F. Gmelin syst. ii. 315.

Carya amara of Northeast America. The *bitter-nut hickory* known to the natives from early times:—a kind of “walnut” with “fruit little, thin-shelled, and the kernel bitter,” was seen by Strachey on James river: C. amara, by myself from the Merrimack Westward; by F. A. Michaux from 45° in Vermont throughout Ohio and Illinois; by A. Gray, “common” (in central New York); by Pursh, from New England to Maryland and the Alleghanies; by Elliot, in South Carolina; by Chapman, in “Florida, and northward;” by Darby, on Pearl river in Louisiana; and by Nuttall, on the Arkansas.

Carya tomentosa of Northeast America. The *hickory*, known to the natives from early times:—“walnut” growing on the Hudson and “good for fuel,” is enumerated by the remonstrants against Stuyvesant: C. tomentosa was observed by F. A. Michaux from Lat. 43° on the Atlantic throughout Kentucky and Tennessee to Upper Carolina and Georgia: by myself, to 39°; by Pursh, in Virginia; by Croom, near Newbern; by Elliot, in South Carolina; by Chapman, in “rich soil, Florida, and northward;” by Darby 178, at 31° on Pearl river in Louisiana; by Nuttall on the Arkansas; and by Baldwin, as far as 39° on the Missouri.

Carya alba of Northeast America. The *shell-bark hickory*, a tree with scaling bark, its nuts eaten by the natives, and oil obtained from them to season their aliments — (F. A. Mx.): “two kinds of nuts that will yield oil,” were seen by Hariot on the Roanoke (De Bry i.); a kind of “walnut” with hard shell, meat sweet, of which the Indians make oil, was seen by Strachey on James river: C. alba was observed by F. A. Michaux from 43° on the Atlantic throughout the Ohio States to South Carolina; by myself, from 43° to 39°; by Michaux, in Lower Virginia; by Schweinitz, at 36°; by Elliot, in the upper country of Carolina; by Chapman, “in the upper districts, Georgia, and northward;” by Short, in Kentucky; and by Nuttall, on the Arkansas. Notwithstanding the demand for its nuts, its cultivation does not appear to have been attempted.

Carya sulcata of Northeast America. The *hard-nut hickory*, its bark also scaling, and its nuts eaten by the natives from early times:—is perhaps one of the “two kinds” of oil-yielding nuts seen by Hariot on the Roanoke (De Bry i.): a third kind of “walnut,” as the last, exceeding hard shell, and passing sweet kernel, was seen by Strachey on James river: C. sulcata, by F. A. Michaux from Lat. 40° rare along the Atlantic, throughout the Ohio States; by Pursh, on the Alleghanies; by Croom, around Newbern; by Elliot, rare in the low country of Carolina; and according to A. Gray, grows in “rich woods, Pennsylvania to Illinois and Kentucky, nuts nearly as sweet as in the last.”

Carya glabra of Northeast America. The *pinut hickory*, known to the natives from early times:—included doubtless in the “walnut of different sizes in great abundance” on the Hudson, mentioned by the remonstrants against Stuyvesant: “smalnuts” were seen by Higgeson near Salem; “walnut,” the nuts “smooth” and “some three-cornered, all of them but thinly replenished with kernels,” by Josselyn in Eastern New England: C. glabra, by myself from the Saco and Lat. 46° near Montreal Westward and Southward; by F. A. Michaux, from 43° on the Atlantic to Georgia and throughout the Ohio States; by Pursh, in Virginia; by Croom, around Newbern; by Elliot, in South Carolina; by Chapman, in “woods, Florida, and northward;” by Darby, in Louisiana North of 31°; by Nuttall, on the Arkansas; by Baldwin, at 39° on the Missouri; its wood according to A. Gray “very tough and valuable,” and its “exceedingly tough sprouts used as *hickory withes*.”

Polygala senega of Northeast America. The *seneca snakeroot*, called by the natives “senega,” and from early times the root used against the bite of the rattle-snake — (Kalm trav. iii. 5. and Forst. cat.): P. senega is known to grow from the border of New England (A. Gray) Westward and Southward; was received by Hooker from the Saskatchewan Lat. 50°; by A. Gray, from Wisconsin; was observed by Short in Kentucky; by Pursh, in Canada and on the Alleghanies; by Conrad, at 40° on the Delaware; by Schweinitz, at 36°; by Elliot, on the Alleghanies of Carolina; and according to Chapman, grows in Tennessee. From transported specimens, is described by Linnæus amæn. ac. ii. pl. 2.

Apios tuberosa of Northeast America. A Leguminous vine called by the natives “hopnis” (Forst. cat.), and its tubers eaten from early times:—the “openawk,” round roots strung together, some as large or larger than a walnut, growing in marshy places and good for food when cooked, were

and supposed by his party to be the "locust:" *R. pseudacacia* is known to be indigenous among the Alleghanies from Lat. 40° (F. A. Mx.) to Carolina (Ell.); was observed by F. A. Michaux, and myself, indigenous along the Ohio; by Darby, as far as Natchitoches on Red river; by E. James, on

seen by Hariot on the Roanoke (De Bry i.); "ground nuts," by Newport on James river; "ground-nuts," by Gosnold on Elizabeth Island, and according to a Latin poem and one in English attributed to Bradford, proved a resource to the Plymouth colonists during the famine a year after their arrival: *A. tuberosa* was received by Hooker from Lat. 47° on the Lower St. Lawrence; was observed by myself along the Atlantic from 43° to 39°; by Michaux, from Virginia to Carolina and Illinois; by Croom, near Newbern; by Elliot, in South Carolina; by N. A. Ware, in West Florida; by Bartram, as far as 28°; by Chapman, in "swamps, Florida to Mississippi, and northward;" by Nuttall, on the Arkansas; by Long's Expedition, on the Platte. Transported to Europe, is described by Cornuti pl. 76.

Cerasus serotina of Northeast America. The *rum cherry* or *American black cherry* is a large tree known to the natives from early times, and its fruit eaten: — "cherry-trees" were seen by Newport on James river; "wild cherries" are enumerated by the remonstrants against Stuyvesant as growing on the Hudson; and wild cherries "blackish red when ripe and of a harsh taste," by Josselyn rar. 60 in New England, who further states that "transplanted and manured they grow exceeding fair:" near the sea, *C. serotina* has been observed by myself only in the cultivated state; but was found by F. A. Michaux in Maine, and is known to grow on the Mississippi as far as St. Peter's river 45° (Long's Exp. ii. 222); was observed by A. Gray in "woods, common" (in central New York); by F. A. Michaux, on the Genessee, and abounding in Ohio, Illinois, Kentucky, and Tennessee; by Chapman, in "woods, Florida to Mississippi, and northward;" by Darby, in Opelousas; and by Nuttall, on the Arkansas. Transported to Europe, is described by Miller, and Ehrhart iii. 20.

Opuntia vulgaris of the alluvial Atlantic border of North America. The *prickly pear*, known to the natives from early times, and its fruit eaten: the "metaquesunnauk" of the natives on the Roanoke — is described by Hariot as an elegant fruit of the shape and almost as large as our "piro-rum," red without and within, growing on a plant whose leaves are full of prickles (De Bry i.): "prickle peare," the same as seen on Bermuda, was found by Strachey on James river: and "Spanish figs which grow out of the leaves" are mentioned by the remonstrants against Stuyvesant: *O. vulgaris* is known to grow from Nantucket (A. Gray) and 42° on the Hudson throughout peninsular New Jersey (C. P.); was observed by Nuttall from New Jersey to Florida; by Elliot, in South Carolina; by Chapman, in "dry sandy soil, Florida and northward, near the coast." Transported to Europe, is described by Io. Robin pl. 7.

Nyssa multiflora of Northeast America. The *black gum* or *upland tupelo*, a tree known to the natives from early times: — known to grow from Lat. 41° along the Atlantic (Torr.); observed by Marshall, F. A. Michaux, and myself, from Lat. 40°; by F. A. Michaux, in Georgia, Tennessee, and Kentucky; by Elliot, in South Carolina; by Chapman, in "rich upland woods, Florida to Mississippi, and northward;" by Darby 117, to 31° in Louisiana.

Nyssa biflora of Northeast America. The *swamp tupelo*, known to the natives from early times: the "wenomesippaguash" of the Narragansets — is referred by R. Williams to the "vine tree;" and "the horne bound tree that to be cloven scornes" was observed by W. Wood "growing with broad-spread arms, the vines twist their curling branches about them, which vines afford great store of grapes" (*V. labrusca*): *N. biflora* has been observed by myself along the Atlantic from 43° 30' to 41°; by F. A. Michaux, from the lower part of New Hampshire to Pennsylvania; by Pursh, in Virginia and Carolina; by Elliot, in South Carolina; by Chapman, in "swamps, Florida to North Carolina, and westward;" by Nuttall, in Lat. 34° on the Arkansas, and by E. James as far as the Canadian branch.

Viburnum dentatum of Northeast America. The *arrow-wood* is a large shrub, known from early times: the "smale elderne" by the Indian fletchers sought, — observed near Plymouth by W. Wood i. 5, is referred here by Tuckerman: *V. dentatum* is known to grow from Lat. 47° on the Chaudière (Hook.); has been observed by myself along the Atlantic as far as 39°; by Schweinitz, at 36°; by Pursh, from the mountains of New York to Carolina; by Elliot, on the mountains of Carolina; by Baldwin, as far as 31°; by Chapman, in "rich damp soil, West Florida to Mississippi, and northward;" by Short, in Kentucky; and according to the fl. Mex. seen by Decandolle, grows within the bounds of Mexico.

Vaccinium stamineum of Northeast America. The *deerberry* known from early times: the "rawcomenes" of the natives on James river, — described by Strachey as "like our goose-berries," and the "goosberyes" seen there by Newport, are referred here by Forster cat.: *V. stamineum* is

the Canadian branch of the Upper Arkansas. Beyond these limits, though known to Chapman only from "the upper districts," was seen by Baldwin at St. Mary's, by Croom as far as $30^{\circ} 30'$, and is now cultivated throughout our Atlantic States. Transported to Europe, is described by Duhamel; was seen by Forskal in gardens at Constantinople, by Clot-Bey in the gardens of Egypt.

known to grow in Michigan, and along the Atlantic from Lat. $43^{\circ} 30'$ (A. Gray): was observed by myself from 41° to 39° ; by Schweinitz, at 36° ; by Elliot, in South Carolina; by Michaux, from Pennsylvania to Florida; by Chapman, in "Florida, and northward;" by Croom, as far as $30^{\circ} 30'$; and by Baldwin to 30° ; by Short, in Kentucky; by Darby 153 in Louisiana; by Humboldt and Bonpland, at Real del monte, 1420, in Mexico (Steud., and Kunth).

Vaccinium (Gaylussacia) dumosa of Northeast America. The *hairy huckleberry*, having inferior hairy fruit, eaten by the natives from early times: — known to grow along the coast from $43^{\circ} 30'$ (A. Gray): observed by myself from $42^{\circ} 30'$, in bogs near Salem, throughout peninsular New Jersey to 38° in the Delaware peninsula; by Michaux, from Virginia to Florida; by Elliot, in South Carolina; by Baldwin, in Florida (Collins); by Chapman, "Florida to Mississippi, and northward." Transported to Europe, is described by Andrews pl. 112, and Aiton.

Diospyros Virginiana of Northeast America. The "piakmine" or *persimmon* called by the Louisiana natives "ougouffé" — (Bossu trav. 349): loaves made of the substance of prunes "like unto bricques, also plumes of the making and bigness of nuts and have three or four stones in them," were seen by De Soto on the Mississippi (soc. Hakl); "mespilorum genus," by Le Moyne in Florida; "mespila" unfit to eat until soft and tender "rutilo colore," by Harriot on the Roanoke (De Bry i.); "pessenmins," by Strachey on James river; and "medlars" on the Hudson, by the remonstrants against the policy of Stuyvesant: D. Virginiana is known to grow from about $41^{\circ} 30'$ in New England (F. A. Mx., and A. Gray) and on the Mississippi (Long's Exp.); was observed by F. A. Michaux throughout the Southern and Western States; by Elliot, in South Carolina; by Croom as far as $30^{\circ} 30'$; by Bartram to 28° ; by Chapman, "Florida to Mississippi, and northward;" by Nuttall, on the Arkansas, and var. "pubescens;" by E. James, as far as the junction of the Canadian.

Ipomoea pandurata of Northeast America. Called by the natives "mechameck" (Lindl.), and known from early times: — the "galbanum mechoacon otherwise called rubarbum album" was employed medicinally by Dr. Bohun on the James river in the time of Strachey 31: I. pandurata was observed by Torrey as far North as 41° on the Atlantic; by Michaux, in Virginia (Pers.); by Elliot, in South Carolina; by Baldwin, as far as Matanzas in Florida; by Chapman, "Florida to Mississippi;" by Nuttall, on the Arkansas; by Short, in Kentucky; and was received by A. Gray from Illinois. The powdered root "requires to be given in larger doses than jalap" (Lindl.).

Collinsonia Canadensis of Northeast America. The *rich-weed* or *horse-balm*, from early times used by the natives against the bite of the rattle-snake — (Kalm trav. i 197, and Forst. cat.): C. Canadensis has been observed by myself along the Atlantic from 43° ; by Bartram, at 40° ; by Schweinitz, at 36° ; by Pursh, from Canada to Carolina (Benth.); by Nuttall, on the summit of Table mountain in North Carolina; by Elliot, on the mountains of Carolina; by Chapman, "Florida to Mississippi, and northward;" by Short, near Lexington in Kentucky; by A. Gray, as far as Michigan. From transported specimens, is described by Linnæus.

Laurus (Benzoin) odoriferum of Northeast America. The *spice-bush* or *fever-bush*, known to the natives from early times: — "a precious gem called wine benjamin, that they say is excellent for perfumes," procured according to Higgeson from "trees" growing near Salem: B. odoriferum has been observed by myself along the Atlantic from 43° to 38° ; by Schweinitz, at 36° ; by Elliot, in South Carolina; by Michaux, from Canada to Florida; by Baldwin, as far as 31° ; by Chapman, "Florida, and northward," a "shrub six to ten feet high;" by Short, in Kentucky; by Long's Exp., on the Mississippi as far as 41° ; and by Nuttall, on the Arkansas. Transported to Europe, is described by Plukenet alm. pl. 139, and Commelyn hort. pl. 97.

Morus rubra of Northeast America. The *red mulberry*, known to the natives from early times: — "mulberrie trees" were observed by De Soto frequent on the route to Apalache; "mulberry-trees," by Strachey on James river, planted around native dwellings, and said to grow naturally in some parts of the country in groves; and "mulberries" on the Hudson, are enumerated by the remonstrants against Stuyvesant: M. rubra was observed by F. A. Michaux from Lat. 45° on the Connecticut river and Lake Champlain Westward and Southward throughout Ohio, Kentucky, and Tennessee, but rare in the lower portion of our Southern States; by Schweinitz, at 36° ; by Chapman, in "rich woods, Florida, and northward;" by N. A. Ware, in Florida and Opelousas; by Long's Expedition, on the Mississippi as far as 41° ; by Nuttall, and Picher, on the Arkansas, and by E. James on the Lower Canadian. From transported specimens, is described by Linnæus.

Castanea pumila of Northeast America. The *chinquapin*, called "chechniquamins" by the

Fragaria Virginiana of Northeast America. A *strawberry* called by the New England natives "wuttahimneash," and from early times bruised with meal in a mortar and made into bread, — further described by R. Williams (hist. coll. iii. 221) as "the wonder of all the fruits growing naturally" in

natives on James river, — growing according to Strachey on little trees and very like small acorns: according to Newport, "little sweete nutts like acorns, a verve good fruite," and again "certaine sweet thynn-shelled nutts" (archæol. am. iv. 42): "castaneæ" were seen by Le Moyne in Florida: *C. pumila* has been observed by myself along the Atlantic from 40° 30'; by F. A. Michaux, from 40° to Florida, West Tennessee, and Louisiana; by Schweinitz, at 36°; by Catesby i. pl. 9, and Elliot, in South Carolina; by Chapman, "Florida, and northward;" by Baldwin, as far as 31°, by Croom to 30° 30'; by Darby, in Opelousas; by Nuttall, on the Arkansas, and by E. James on the Canadian branch.

Castanea Americana of Northeast America. The *American chestnut*, called by the Narragansets "wompimish," and canoes sometimes made of its trunk (R. Will. 18), its nuts also dried in a peculiar manner so as to preserve them for a dainty all the year — (Gookin coll. 3): "chesnuts" were seen by De Soto among the mountains; "castaneorum quantitas," by Hariot on the Roanoke (De Bry i.); and "chesnuts," by Higgeson near Salem in New England: *C. Americana*, by myself along the Atlantic from 44° to 38°; by Schweinitz, at 36°; by Elliot, in the middle district of Carolina; by Chapman, in "West Florida, and northward;" by F. A. Michaux, on the Alleghanies of Carolina and Cumberland mountains of Tennessee; and by Short, in Kentucky.

Corylus Americana of Northeast America. The *American hazel* used for bows from early times: — "avellane" were seen by Verrazzanus on the coast towards the mouth of the Hudson; "corylus" of which bows were made by the natives, by Hariot on the Roanoke (De Bry i.); "filberds," by Higgeson near Salem; and "hazle-nuts" on the Hudson, by the remonstrants against Stuyvesant: *C. Americana*, by Michaux from Canada to Florida; by myself along the Atlantic from 43° to 40°; by Schweinitz at 36°; by Elliot, in the upper district of Carolina and Georgia; by Chapman, in "West Florida, and northward," its branches "tough and flexible;" by Short, in Kentucky; by myself, on the Wabash; and by Nuttall, on the Arkansas.

Myrica cerifera of Northeast America. The *wax-myrtle* or *bayberry*, perhaps one of the three kinds of berries yielding oil to the natives on the Roanoke (Hariot); among the Nantucket natives, the "medomhumar" punishment for boys consisted in filling their nostrils with water in which the woody portion of its root had been steeped — (Z. Macy in hist. coll. iii. 159): the "myrtle" was seen by W. Wood i. 5 near Plymouth; *M. cerifera*, by Lapylaie in Newfoundland; by myself, along the Atlantic from 45° to 42°; and was received by A. Gray from Lake Erie. From transported specimens, described by Linnæus.

Myrica Carolinensis of Carolina and the Lower Mississippi. — Possibly the oil-yielding berry seen by Hariot on the Roanoke (De Bry i.): observed by myself along the Atlantic from 39° in the Delaware peninsula; by Schweinitz, at 36° near Fayette; by Elliot, in South Carolina; by Chapman, "mostly near the coast, Florida, and northward;" and by Nuttall, in Arkansas.

Orontium aquaticum of Northeast America. An Araceous aquatic sometimes called *golden club* (A. Gray): clearly the "sacquennumner" of the Roanoke, growing in stagnant water, its berries like caparis but a little larger and requiring eight or nine hours cooking (Har. in De Bry i. 19); and "ocoughtanamins" of James river, "growing in watry valleis and very much like unto capers," and which are poisonous unless boiled "nere halfe a daie" — (Strachey): *O. aquaticum* is known to grow from Lat. 42° in Massachusetts (A. Gray) and on the Hudson (Eat.); was observed by myself to 39°; by Elliot, in South Carolina; by N. A. Ware in Florida, and by Croom on the Ocklockony; by Chapman, in "ponds and slow-flowing streams, Florida, and northward;" but was not seen by Nuttall West of the Alleghanies. From transported specimens, is described by Linnæus.

Sagittaria variabilis of North America. The *American arrow-head*, called by the natives in Northwest America "wappatoo" (R. Brown jun.), in Northeast America "katniss," and its root extensively eaten — (Kalm trav. ii. 97, and Forst. cat.): *S. variabilis* has been observed by myself along the Atlantic from 43° to 40°; by Pursh, from Pennsylvania to Carolina; by Schweinitz, at 36°; by Elliot, in South Carolina; by Chapman, "Florida, and northward;" by Short, in Kentucky; by Nuttall, on the Arkansas; by E. James, at the sources of the Platte; by Drummond, to 54° on the Saskatchewan; and in Northwest America, its name "wappatoo" was found by R. Brown jun. transferred by the natives to the newly-introduced potato.

Zizania aquatica of Northeast America. The *Indian rice* is a subaquatic reedy grass, its seeds from early times collected and eaten: — "genus arundinis" bearing grain that resembles rye or wheat and is boiled and eaten, was seen by Hariot on the Roanoke (De Bry i. 19); and "nattourne" growing as our bents in meadows, its seed not unlike rye but much smaller, by Strachey on James

New England, abounding especially "in some parts where the natives have planted" (abandoned clearings exposed to the sun): "strawberyes" were seen by Newport on James river; and "fraga" as large and sweet as in English gardens, by Hariot on the Roanoke (De Bry i.): F. Virginiana is known to grow on Newfoundland and throughout Canada to Slave Lake Lat. 62° (Hook.); was observed by myself along the Atlantic from 45° to 39°; by Pursh, from Canada to Carolina; by Elliot, in the Upper district of Carolina and Georgia; by Chapman, in "rich woods, Florida to Mississippi, and northward;" by Croom, as far as 30° 30'; and by Beck, near the mouth of the Missouri. Transported to Europe before 1613, is described by Besler hort. 7 f. 8 (Spreng.), has since become abundantly cultivated, furnishing the most approved garden varieties; is probably the species enumerated by Clot-Bey as recently introduced and successfully cultivated in Egypt.

Sassafras officinale of Northeast America. The *sassafras* tree, called by the Narragansetts "sasaunckapamuck" (R. Will. 16), and known from early times: — "sassafras" was seen by Amadas and Barlow on Roanoke island; "saxefras" wood was one of the earliest articles of commerce with New England (J. Smith n. e. trials), and a voyage to procure some was made in 1603 by Pring: S. officinale has been observed by myself along the Atlantic from 43° to 38°; by Schweinitz, at 36°; by Catesby i. pl. 55, and Elliot, in South Carolina; by Chapman, in "Florida, and northward;" by Croom, as far as 30° 30'; by F. A. Michaux, from 43° to Florida, and throughout the Ohio States to the Missouri; by Long's Expedition, as far up the Mississippi as 43°; by E. James, at the junction of the Canadian and Arkansas; and was seen by Hernandez at Mechoacan Lat. 20° in Mexico. Transported from Florida to Europe, became known "in 1571" to Monardes pl.: the imported bark and wood continue to be employed medicinally (Lindl.); and "sassafra" wood, imported by the way of Greece, was found by Forskal mat. med. in the drug-shops of Egypt.

Quercus alba of Northeast America. The *white oak*: dried acorns of the "mangummenauk" macerated in water for food by the natives on the Roanoke (Har.); acorns dried and boiled for food by the Narragansetts (R. Will. key 16); and "white-oak acorns" boiled for oil by the natives of New England — (Joss. rar. 47): Q. alba was also seen in New England by W. Wood i. 5, and Higgeson; by F. A. Michaux, from the Lower Kennebec and 46° in Canada to Illinois, and along the Atlantic to 28°; by myself, from 43° 30' to 38°; by Elliot, in South Carolina; by Chapman, in "damp woods, Florida to Mississippi, and northward;" by Darby, on the Washita river; by Nuttall, on the Arkansas; by E. James on its Canadian branch; and by Long's Expedition, as far as 48° on Rainy Lake. (See *Acer rubrum*).

Juniperus Virginiana of Northeast America. The *red cedar* or *American savin*, called by the Narragansetts "mishquawtuck" — (R. Will. key 16): "savins" were seen by Cabeza de Vaca on the North shore of the Mexican Gulf; "cedrus," by Hariot on the Roanoke (De Bry i.); the "cedar tree" by W. Wood in New England, not "very high" and its wood "more desired for ornament than substance, being of colour red and white, like eugh, smelling as sweet as juniper:" J. Virginiana is known to grow from Lat. 45° in New England (Kalm) and 50° on Lake Winnipeg (Long's Exp. ii. 81); has been observed by myself from 43° 30' along the Atlantic to 38°; by Elliot, in South Carolina and Georgia; by Chapman, "Florida, and northward;" by Bartram, as far as 28°; by F. A. Michaux, from 44° in New England to Cape Florida, St. Bernard's Bay, and in the Western States; by Darby, near Natchitoches; by Nuttall, on the Arkansas; by E. James, at the sources of the Arkansas as far as the Rocky mountains.

"1310 A. D." (Blair), the island of Rhodes captured by the Knights of St. John; and made the residence of this monastic Order.

"The same year" (Nicol.), synods at Paris, Mayence, Senlis, Ravenna, and Salamanca. On the accusations against knights Templars, some of whom were found guilty.

The same year = "718 H. j.," inscribed in Palestine on the great tower at Ramleh: completed (according to Mejr-el-Din, Kitt. cycl. bibl.) in this year by sultan Naser.

"In this year" (Humb. cosm. ii., Klaproth gives 1294), the Persian writer Rashid-eddin com-

river: *Z. aquatica* was observed in Fox river of Lake Huron by Marquette in 1673; and is known to form beds in inundated situations from "Lat. 50°" on the Winnipeg River (Mackenz. and Long's Exp. ii. 111) along the Mississippi and its tributaries; was observed by Nuttall along the Arkansas; by Short in Kentucky; by myself, from the St. Lawrence near Quebec to 39° along the Atlantic; by Elliot, in South Carolina; by Chapin, in "Florida, and northward;" and was received from Florida by Pursh.

Cypripedium acaule of Northeast America. The *moccasin flower* of the natives, from early times in great esteem for decking their hair — (Catesby, and Cutl. p. 486): C. acaule was observed by myself from 48° on the Lower St. Lawrence to 38° in the Delaware peninsula; by Croom, near Newbern; by Elliot, only in the Upper district of Carolina; and by Short, in Kentucky.

posing his history of the rulers of Cathay. Japan is described under the name of "Djemen kou" (Klapr. note to ann. Jap.).

Raschid-eddin speaks of "a kind of stone" in China "which is used instead of fire-wood" — (Yule cath. 261), obviously mineral *coal*.

"In this year (= 710 A. H.) of Ferisht., Elph.), Cafur sent against the Belal raja of Carnata. Marching by Deogiri (Dowlatabad) he captured Dwara Samudra the capital, put an end to the dynasty of Belal, and reduced the territory as far as the seacoast, where he built a mosque at Adam's Bridge opposite Ceylon. — The mosque continued standing in the days of Ferishta.

"1311, Oct. 16th" (Alst., and Nicol.), Fifteenth general ecclesiastical Council. Assembled at Vienne in France. Among other acts, The oaths of princes were declared to be "non subjectionis sed fidelitatis, not of subjection but of fidelity." — In a second session "Apr. 3d," the Order of knights Templars was suppressed by the pope, "reserving to the church the disposal of their persons and possessions."

Franciscus of Piedmont may have been at this time writing. He quotes Arnaldus, Asirnius, Gualterius, and Egidius.

Scabiosa arvensis of Europe and the adjoining portion of Asia. Called in Greece "kōuphōlanōn," in Britain with other species *scabious*, in medieval Latin "scabiosa" (Prior), in France "scabieuse" (Nugent), in which we recognize the SCABIOSE of Franciscus Pedemontium f. 241, — Urbanus (Trag.), and J. J. de Manliis, regarded as a remedy for all who are "raudig" or "grindig" itchy or mangy (Brunswyck, and Prior): *S. arvensis* is termed "s. pratensis hirsuta quæ officinarum" by Tournefort inst. 465; and is known to grow in meads and cultivated ground throughout middle Europe as far as Britain (Curt. lond. iv. pl. 13, and Pers.). Eastward, was observed by Forskal, Sibthorp, and Chaubard, abounding from Constantinople to the Peloponnesus.

"1312 A. D. = 'hoang-tsing,' 1st year of Jin-tsoung II., of the Youan" or Twenty-second dynasty (Chinese chron. table). Among other reforms in government, Jin-tsoung II. prohibited the appointment of eunuchs to political station. He also re-established the "Tribunal of historians;" taking great pains to collect and preserve historical documents.

"In this year" (Auger., and Spreng.), Vitalis de Furno, author of a treatise on *Materia Medica*, appointed cardinal by pope Clemens V.

"1313 A. D." (Skeat ed. Piers' Plowm. 118), by pope Clemens V., first public sale of Indulgences.

"In this year" (Blair), the Order of knights Templars having been suppressed, as above stated, the Grand master Molay with several of the knights burned alive at Paris.

"The same year" (S. F. Haven in archæol. Amer. iv. 259), in England, in competition with the long-established "German" company called "Merchants of the Steelyard," a home company incorporated, under the name of "Merchants of the Staple."

"1314, May 7th" (Nicol.), a synod at Paris. An article, Forbidding "ecclesiastical judges to use vague and general citations."

"1315, October" (Nicol.), a synod at Senlis. The bishop of Chalons, imprisoned by Louis X. on suspicion of being accessory to the death of Philip IV. le Bel, was released and his possessions restored.

Thlaspi bursa-pastoris of Europe and Northern Asia. Called in Britain *shepherd's-purse* (Prior), in Italy "borsa pastore" (Lenz), in which we recognize the *bursam pastoris* of the Liber Saladini, — and J. Jacobi de Manliis: *T. bursa-pastoris* is termed "bursa-pastoris major folio sinuato" by Tournefort inst. 216, and is known to occur as a weed in Italy and throughout middle and Northern Europe as far as Lapland and Iceland (fl. Dan. pl. 729, Hook., and Wats.). Eastward, seems figured in the Vienna manuscript of Dioscorides 38 (Cockayne, and myself); was observed by Sibthorp, Chaubard, and Fraas, frequent in Greece and on the Greek islands and called "tzourkas" or "tragia." Farther South, was observed by Hasselquist in Palestine; and is known to occur in Abyssinia (Rich.). Farther East, is known to occur in Persia, Nepaul, and throughout Siberia to Daouria and Kamtchatka (Don, Dec., and Ledeb.); was observed by Wight in Tropical Hindustan; and by Thunberg in Japan, frequent on the margin of fields and along roads and called "neko no samsin." By European colonists, was carried across the Atlantic to Northeast America, where it has become naturalized and a frequent weed throughout our Atlantic States as far as Florida (Chapm.), following the fur traders Northward as far as Great Bear Lake (Hook.), and Westward as observed by myself to the trading-posts of Colville and Fort Nisqually in Oregon: also by European colonists was carried to the Straits of Magellan and Chili (Dec., and Beechey); to Austral Africa, and to the Mauritius Islands (Harv., and A. Dec.).

"1316 A. D." (Nicol.), a synod at Adena in Armenia. The decrees of the synod of Sis, For the re-union of the churches of Armenia and Rome, were confirmed.

"Aug. 7th" (Alst., and Nicol.), after an interval of "two years," Clemens V. succeeded by car-

dinal James d'Euse, now Joannes XXII., fortieth pope. Louis II. Bavarus ruling Germany and Italy; Edward II., England; Robert, Scotland; and in France, Louis X. succeeded by Philip V.

"Dec. 19th (= 716 A. H., Shawal 6" of Ferisht., Elph.), death of sultan Ala-u-din of Delhi. He was succeeded

"1317, March 22 (= 717 A. H. Moharrem 7" of Ferisht., Elph.) by his third son Mobarik Khilji, now thirteenth sultan of Delhi.

"June 1st" (according to an Arabic inscription on the walls, Leps. eg. and sin. p. 232), after a victory of Naser over the infidels, opening of a mosque at Old Dongola.

"In this year" (Remus. iv. 172), the Wen-hian-thoung-khao, a historical encyclopedic work by Ma-touan-lin,* offered to and approved by the emperor Jin-tsoung. — It was published "in 1321," and the author died soon afterwards.

"In this year," Matthæus Sylvaticus (according to his own statement) at Salerno writing his Pandectæ: dedicated by him to Robert king of Sicily.

Serratula tinctoria of Europe and the adjoining portion of Asia. A saw-wort called in Germany "sichelkraut" (Grieb) or "sichelmoren" (Trag.); and the *Crithamus agrestis* of Matthæus Sylvaticus pand., — is referred here by Tragus ii. 32: *S. tinctoria* is termed "jacea nemorensis quæ serratula vulgo" by Tournefort inst. 444; is known to grow from Denmark throughout middle Europe (fl. Dan. pl. 281, and engl. bot. pl. 33), its juice affording a yellow dye (Pers.); was observed by Sestini in the environs of Constantinople (Sibth.).

Lysimachia dubia of the East Mediterranean countries. The *persicaria minor* of Matthæus Sylvaticus, — described by Caesalpinus vi. 65 as having leaves like those of "lysimachie purpureæ" and flowers purple and whitish, may be compared: *L. dubia* is termed "l. spicata purpurea minor" by Buxbaum i. pl. 33; was observed by Sibthorp on the marshy shores of the Nicæan Lake; and according to Persoon the petals are connivent.

Thesium linophyllum of Europe and the adjoining portion of Asia. Called in Britain *bastard toad-flax* (Prior), and the *Linaria* of the Pandectæ, — and *Ortus Sanitatis* 261, may be compared: *T. linophyllum* is termed "anonymos lini folio" by Clusius hist. i. 324, "*linaria montana flosculis albicanibus*" by C. Bauhin pin. 213, and known to grow throughout middle Europe (Tourn. inst. 509, engl. bot. pl. 247, and Hayne): observed by Linnæus as far as Scania and Smoland; by Sibthorp, and Chaubard, from the Peloponnesus to the Greek islands.

"In this year" (Rawdon Brown, and Major edit. Zen. p. 4), the first name on the List of commanders on voyages from Venice to Flanders, — continued "down to 1533," and preserved in the Venetian archives.

"In this year" (Major edit. Bethenc. p. xii), by a treaty, Denis king of Portugal securing a Genoese, Emmanuele Pezagno, as hereditary admiral of his fleet, he and his successors to make unfailing provision of twenty experienced Genoese captains to command the king's galleys.

"1318 A. D. (= 718 A. H." of Ferisht., Elph.), Harpal, the insurgent Mahratta chief, defeated in the Deccan and captured by sultan Mobarik. Who also sending an army under Khusrû, a converted Hindu, conquered Malabar.†

"1319 A. D. (= 1979th of Synmu," art de verif.), abdication of Fannasono in favour of Daigo II. or Go-Daigo, younger brother of Nidsio II., and now dairo of Japan.

"1320 A. D." (Alst.), at Frankfort, an assembly of the principal men of the Empire, Louis II. Bavarus being present. "Against the insolence of the pope."

"The same year" (Alst. p. 307), the Turks, crossing the Hellespont, first enter Europe.

"1321 A. D. = 'tchi-tchi,' 1st year of Yng-tsoung II., of the Youan" or Twenty-second dynasty — (Chinese chron. table).

* *Aucuba Japonica* of Central Asia. A spotted-leaved shrub called in China "tsing-mou" or "thsing-mou" green-wood (Rem.); but the "tsing-mou" found according to Ma-touan-lin in Ki-pin (Cophene) and Po-sse — (Persia), is regarded by Remusat mel. iii. 211 to 251 as not certainly belonging here: *A. Japonica* was observed by Thunberg planted for ornament in Japan. Transported to Europe, is described by Lamarck ill. pl. 759; and from Europe was carried to Northeast America, where it continues in greenhouses.

Rhus sylvestris of Eastern Asia and Japan. The *wild wax tree*, perhaps the "arbres a cire" abounding according to Ma-touan-lin in the country of the An-thsai — (Asii or Asiani according to Remusat mel. iii. 239): *R. sylvestris* is known to grow in Japan (Jap. centen. comm. 50).

† *Bragantia Wallichii* of Western Hindustan. An Aristolochioid shrub three to four feet high called in Malabar "albam" (Drur.); in which we recognize the "albam" of the Malabar proverb "As soon as albam root enters the body poison leaves," — mentioned by Bartolomeo: *B. Wallichii* was observed by Rheede vi. pl. 28 in Malabar; by Nimmo, in "S. Concan, rare" (Graham 250) nearly as far as Bombay; by Wight, and Drury, as far as Travancore and Wynnad.

"In the time of Yng-tsoung and of Chun," 1321 to 1367 A. D. (topog. Cant., and Pauth. p. 473), commerce was twice interrupted, and after a year, re-opened. A decision, That foreign nations should bring a tribute every three years. The regulations at Canton were made extremely severe. Ships bringing tribute, were compelled to discharge cargo and wait through the harvest. And "a hundred and twenty-two houses were built for the accommodation of foreigners."

"March 24th (= 721 A. H. Rabi-ul-awal" of Ferisht., Elph.), sultan Mobarik and all the Khilji family put to death. "Aug. 22d (= 721 A. H. Rejeb 30" of Ferisht.), the usurper Khusru succeeded by Gheias-u-din Toghlak, now fourteenth sultan of Delhi. — He built at Delhi the fort of Toghlakabad, remarkable for its massive grandeur.

"In this year (= 721 A. H.,) Gildem.), the geographical work of Abulfada completed. He speaks of Malabar, where according to a traveller's account, from the abundance of water and creeping plants the whole face of the country is green (a circumstance that seemed extraordinary to one brought up in the Desert): of the city of Kandahar "built by Alexander:" and of "Lauhaur" (Lahore) also called "Lahaver," described in the Allubal as a great city of India, and the birthplace of many learned men. — He died "in 1331" (Pouchet).

1322 A. D. = "1247 an. jav." (Raffles x.), supposed date of the treaty of partition between Raden Tanduran and his half-brother Chiong Wanara; dividing Java by a line running due South from a stone column placed at Tugu. — After the death of the half-brother, the kingdom soon became united, with the seat of government now at Majapahit. The stone column at Tugu, a few miles West of Semarang, continued standing when Raffles was writing.

"April 1st" (acta sanct., and rec. voy. et mem. p. 7), four Franciscan missionaries on their way to Cathay (China) driven by a storm to Tana (near the site of Bombay), and put to death by the Muslim ruler of the country. Their companion, a Dominican named Jordanus Catalani, absent on a visit to Paroco (Baroach), returned and with the aid of a resident Genoese the bodies were transported to Supera (Sefer or Sefarah el Hend) and buried in a church. — In a letter dated "Jan. 1323," Jordanus gives an account of the affair, having perhaps by this time reached his destination Columbum or Palumbum (Palembang in Sumatra). He describes his residence as situated in India Major, the pole star only two fingers breadth above the horizon, the sun for six months casting a shadow South, and the days and nights not exceeding each other a full hour at any season. "April 9th 1330," he was appointed bishop of Columbum by pope Joannes XXII.

He describes the ships sailing to Cathay as very large (Chinese junks); while those built in India Major were sown together with thread from a certain herb, and though of good size were not decked. A portion of that India was called Champa, where *elephants* are used for all kinds of work, supplying the place of horses, mules, donkeys, and camels.

He had heard of the existence on a very great island of *homines parvulini* pigmy men, no larger than a boy three or four years old but all shaggy like a goat, living in the forest and rarely met with: — clearly the *Borneo orang*, *Pithecus satyrus*.

The *avis ad modum milvi* having according to Jordanus mirab. the head white and the body above and beneath *tota rubea*, snatching fish from the hands of the fishermen, — is clearly the *Bramin kite*, *Haliæetus Ponticerianus*.

Jordanus had heard of a third India (Madagascar and Equatorial Africa), where the huge bird called *roc* is found, also animals *ad modum cattii* producing the finest of known perfumes (*civet*), and others *ad modum asini* but with transverse stripes black and white and very beautiful (*Burchell's Zebra*, *Equus Burchellii*).

While passing through Babylonia, *fuit visa tortuca* carrying upon its back five men (*Galapagos tortoise*, *Testudo*).

Inga xylocarpa of Tropical Hindustan and Burmah. The *iron-wood* is called in the environs of Bombay "jamba" (Graham), in Telinga "conda-tangheroo" (Drur.); and the tree "harder than all, which the strongest arrows can scarcely pierce" seen by Jordanus in Hindustan, — may be compared: *I. xylocarpa* was observed by Graham on the Ghaut and the "hilly parts of the Concan:" by Roxburgh cor. pl. 100, and Wight, in other parts of Hindustan, its wood used by the natives for plough-heads and for knees and crooked timbers in shipbuilding. Farther East, was observed by Mason, v. 529, abounding in Burmah "from Mergui to Toungoo" and called "pyen ka-do," its trunk "thirty and forty feet without a branch" by "eight and nine" in circumference, the wood extremely durable but so hard that workmen "are reluctant to try their tools on it at any price."

Entada scandens of wooded Tropical shores from Hindustan to the Polynesian islands. A woody vine called in the environs of Bombay "garbee" or "gardul" (Graham), in Burmah "kungnyen" (Mason), in which we recognize the *CAROBIDE* of stupendous size seen by Jordanus mirab. in India Minor: — *E. scandens* was observed in Hindustan by Rheede viii. pl. 32 and ix. pl. 77, Roxburgh, Wight; by Graham, "along the range of Ghauts" running "over the highest trees," the stem found by Gibson in one instance "full six feet in circumference," and the seeds employed by the

natives as "antifebrile." Farther East, the seeds were found by Mason v. p. 503 employed for the same purpose by the natives of Burmah; but according to Rumphius v. pl. 4, are roasted and eaten like chestnuts in Sumatra and Java. Eastward from the Malayan archipelago, its huge pods dangling from tree-tops were occasionally observed by myself along the shore of the Feejeean and Samoan groups of islands. By Polynesian or possibly European colonists, was carried to the West Indies, no Carib name being given by Descourtilz notwithstanding that the pods furnish food "servent de nourriture."

Cinnamomum Loureirii of the mountains of Cochinchina. Called in China "kio kui," in Japan "ni-kei" (Lindl.): the cinnamon tree is enumerated by Jordanus mirab. as large, growing in India Major and producing fruit and flowers after the manner of cloves *garriophyllorum*:—*cassia-buds*, said to be unexpanded flowers of a *Cinnamomum*, are further described by H. Yule as bearing some resemblance to cloves; and *flowers of cassia* according to Lindley are the product of *C. Loureirii*; described by Loureiro as growing on the lofty mountains Westward toward Laos, the old and young branches equally worthless, but the middle sized shoots furnishing bark about a line thick, superior to that of Ceylon and sold at a much higher price.

"In this year" (Crawfurd vii. 11), Javanese and Arabs visiting Ternate in great numbers and settling there.

"1323 A. D." (De Wailly pl. ix. 2), inscriptions of this date presenting the following form of the letter J.

Hardly earlier than this year, Odoric of Friuli, a Franciscan, arriving at Tana (near the site of Bombay). Taking the bones of the four murdered missionaries, he proceeded by sea to Coromandel, Sumatra, Java, and deposited them at Zayton in China, where were two houses of friars minor.—After spending "three years" in Northern China before "1328," he returned to Venice, and died "in January 1331" (Yule cath. i. 6).

He mentions the *sumpil* or tube for blowing poisoned darts,—used by the natives of Southern Borneo, Celebes, and the Moluccas (Yule i. 90).

The *goose* domesticated in China (*Anser cygnoides*?) is described by Odoric 29 as having "a bone on the top of its head about the size of an egg." Fishing with domesticated *cormorants* (*Phalacrocorax carbo*) is also mentioned; and the *silk fowl* (a variety covered with wool-like down).

Amomum cardamomum of the mountainous parts of Java, Sumatra, and as far as Burmah. A. Scitamineseous plant producing the *round cardamoms* of commerce (Nees) or "amomum verum" of the old apothecaries (J. E. Smith): the "melegetæ" growing according to Odoric on Java—(Yule i. 88) may be compared: A. *cardamomum* is described by Rumphius v. pl. 65; and was observed by Mason indigenous in Burmah. Westward, according to Lindley, is "commonly cultivated in gardens in" Hindustan, its "seeds agreeably aromatic." Transported to Europe, is described by Blackwell pl. 584 and 585.

Rhapis arundinacea of . The "cassan" canes of Odoric 22, growing on Panten or Thalamasyn (Borneo) and "along the ground like what we call dog's grass" (*Cynodon dactylon*), "and at each of their knots they send out roots, and in such wise extend themselves for a good mile in length," the stems in thickness "much about the same as the canes in our Frank countries,"—may be compared with the *ground rattan* (see Royle fibr. Ind.). From transported specimens, *R. arundinacea* is described by Aiton (Steud.).

"1324 A. D. = 'tai-ting,' 1st year of Tai-ting-ti" or Tai-ting II. (Chinese chron. table), beginning of the Sixty-seventh cycle.

"Nov. 21st" (Nicol), a synod at Toulouse. A canon, Forbidding "clerks to shave oftener than once a month."

"1325 A. D." (Clavig. i. 112 to 123, Humb. ; and Holmes suppl.), the Aztecs at a lake where they settled, building a temple, and around it "huts of reeds and rushes;" the beginning of the city of Mexico.

The following plants known to the Creeks from early times,* "toonau" *Amaryllis atamasco*, its

* *Sisyrinchium anceps* of Northeast America. The *blue-eyed grass*, considered by the Creeks "an infallible emmenagogue" and "used by the Cherokees as an emetic"—(Baldw. reliq. 60). Transported to Europe is described by Plukenet amalth. 61. 2 (Spreng.), received by Dillenius elth. pl. 41 from Bermuda, termed "*s. angustifolium*" by Miller, "*s. gramineum*" by Curtis, has also reached without human intervention the Western shore of Ireland, found wild at a single point (A. Dec.). At its home in North America, has been observed by myself from 45° to 40° along the Atlantic, in sunny situations, and especially in grass-grown clearings; by Pursh, from Canada to Carolina; by Schweinitz, as far as 36° in Upper Carolina; by N. A. Ware, and Chapman, in Florida; by Nuttall, in Pennsylvania and on the Arkansas; and by E. James, along the Missouri and Platte.

bulbous root eaten in times of scarcity; "micco hoyenejau" dwarf willow *Salix tristis*, their "king physic" or "great medecine," the root bruised in a watery infusion as a tonic, becoming emetic when used freely; *Agave Virginica*, one of the two plants called "rattle-snake's master;" *Aesculus Paawia*, used to intoxicate fish; "luchau loobe thlucco" large turtle liver, *Asarum Virginicum*.

Of fragments of pottery, arrow-heads, and other implements of stone or bone, found in rubbish-heaps from the Roanoke to and beyond the Lower Mississippi, some as early probably as this date.*

* *Nelumbium luteum* of Carolina and the Lower Mississippi. The *American water-lotus* is called from its hard smooth seeds *water-chinquapin*. Fruit like a bean, from early times of the highest value among the natives West of the mouths of the Mississippi and employed as a medicine, — as on the visit of Cabeza de Vaca: *N. luteum* is regarded by A. Gray as perhaps introduced by the natives into certain detached localities in our Atlantic States as far as Connecticut and Lake Ontario; but was observed by Elliot in South Carolina; by N. A. Ware, in Florida; by Chapman, "near Tallahassee, and northward and westward, not common;" by Nuttall, on the Arkansas; by E. James, on the Arkansas and Lower Missouri; by Short, in Kentucky; and by Michaux, in Illinois.

Nuphar advena of North America. The *spatter-dock* or *yellow water-lily* known from early times to the natives, and its roots cooked and eaten: — West of the mouths of the Mississippi, Cabeza de Vaca found the natives obliged to get roots from below the water, and one or two other kinds of roots eaten, but poor food, requiring two days roasting: in New England, Josselyn rar. 44 found roots of the "water-lily with yellow flowers" after long boiling eaten by the natives: *N. advena* is known to grow from Lat. 51° in Newfoundland (Lapylae) and 56° in Central North America to the Gulf; was observed by myself along the Atlantic from about 44° to 38°; by Elliot, in South Carolina; by Chapman, "common;" by Drummond, near Jacksonville in Lower Louisiana; by Short in Kentucky; by Nuttall, on the Arkansas; and by myself, not far from Puget Sound. In Northern New England, moose-deer, while searching with head under water for these roots, were killed by the natives (Jossel. rar. 44).

Gordonia lasianthus of Carolina and the Lower Mississippi. A flowering Camellioid tree, thirty to fifty feet high, called *lob'olly bay*; and the "tree of peace" of the natives of Louisiana — is identified by Bossu 349 with the "white bays" bearing a "white flower like a tulip:" *G. lasianthus* was observed by Catesby i. pl. 44 in Carolina; by Chapman, "Florida to North Carolina, and westward;" and is known to grow in swamps in the alluvial district along the sea from Lat. 37° (Pursh) to the Mississippi (A. F. Mx.).

Hypericum corymbosum of Northeast America. Among simples valued above gold by the natives of Louisiana, "excellent oil for healing" — was made of "St. John's wort" (Bossu 353 to 355): a "St. John's wort" is enumerated by Josselyn 44 in 1670 as peculiar to North America: *H. corymbosum* was received by Hooker from Lake Huron at Lat. 47° on the Lower St. Lawrence; was observed by myself along the Atlantic from 45° to 38°; by Walter, Michaux, and Elliot, as far as 33° in South Carolina; by Beck, near St. Louis on the Mississippi; and by Nuttall, and Pitcher, on the Arkansas. (Compare *H. prolificum*).

Ilex cassine of Carolina and the Lower Mississippi. The *yaupon* is a large shrub, its leaves from early times used as tea: — West of the mouths of the Mississippi, Cabeza de Vaca found the Cutalchiches drinking a tea from the leaves of a tree like an oak (transl. B. Smith): in West Florida, "a decoction of it" called "liquor of valour" drank by the natives (Bossu, and Forst. cat.): and among the Creeks, a strong decoction termed "black drink" taken at the opening of their councils, acting according to Lindley "as a mild emetic:" *I. cassine* is termed "cassine vera Floridanorum" as seen by Catesby ii. pl. 57 in South Florida; was observed by Baldwin in Lat. 30°; by Chapman, in "light sandy soil along the coast, Florida to North Carolina;" by Walter, and Elliot, in South Carolina, and is known to grow as far as Lat. 37° (Bart.); Westward, was observed by E. James on the Washita river; by H. Little, in the delta of the Mississippi. Transported to Europe, is described by Plukenet pl. 376, and Miller dict. pl. 83.

Rubus trivialis of Carolina and the Lower Mississippi. — West of the mouths of the Mississippi, Cabeza de Vaca found the natives living on *blackberries* for a month in the spring — (transl. B. Smith): *R. trivialis* is known to grow along the Atlantic as far as Lat. 37° (Pursh); was observed by myself from the mouth of Cape Fear river to 33°; by Walter, Michaux, and Elliot, to and beyond the Santee; by Chapman, in "dry sandy soil, Florida to North Carolina, and westward;" by Croom, as far as 30° 30'; by H. Little, in the delta of the Mississippi; and by Nuttall, on the Arkansas.

Passiflora incarnata of Carolina and Florida. A *passion-flower* known to the natives from early times: the "maracock" vine bearing "a good sommer cooling fruit" of "the bignes of a queen apple, and hath manie azurine or blew karnels, like as a pomegranet" — observed by Strachey in the cultivated fields of the natives on James river, is referred here by Bennet: *P. incarnata* was

Juglans nigra of Northeast America. The *black walnut* is a large tree, known to the natives from early times: — West of the mouths of the Mississippi, Cabeza de Vaca found natives coming to eat walnuts, of the size of those of Galicia (transl. B. Smith): the “black walnutt” with which ships are laden, was seen by Strachley in 1610 on James river: *J. nigra*, though comparatively rare along the Atlantic, has been observed by myself from nearly 41° to 38°: by Schweinitz, in 36°; by Elliot, in the Upper country of Carolina, rare along the seacoast; by Chapman, in “Florida, and northward;” by N. A. Ware, from Indian river and Alachua to Opelousas; is known to abound in rich woods from Lat. 43° on the Genessee Westward (F. A. Mx.); was observed on Long’s Expedition i. 339 very little beyond 43° on the Mississippi; by Nuttall, in 38° in Arkansas; by E. James, on the Canadian branch of the Upper Arkansas; and a walnut was seen by Pike ap. 22 at Carracal in Lat. 30°. Black walnut timber is highly valued, much resembles mahogany, and has become a very general substitute for cabinet furniture.

Celtis Occidentalis of Northeast America. The *hackberry* or *sugarberry* is a tree, known to the natives from early times and its fruit eaten: — West of the mouths of the Mississippi, Cabeza de Vaca found the natives seeking the fruit of certain trees which is like a pea* (transl. B. Smith): *C. Occidentalis* has been observed by myself along the Atlantic from Lat. 43° to 39°; by Tradescant, in Virginia; by Elliot, on the sea-islands of South Carolina; by Baldwin, as far as 31°, also on Bermuda; by Chapman, in “rich soil, Georgia, and northward;” by F. A. Michaux, in our Middle, Southern, and Western States; by Long’s Expedition ii. 36, on the Red river of the North as far as 49°. Transported to Europe in 1656 (Ait.), is described by Miller dict. pl. 88, and Scopoli ii. 100 (Pers.); and was observed by Clot-Bey in the gardens of Egypt.

“In this year (= 725 A. H.” of Ferisht, Elph.), Gheis-u-din Toghlak succeeded by his son Mohammed Toghlak, now fifteenth sultan of Delhi. — He patronized literature, founded hospitals and almshouses, and acknowledged the Investiture of the caliph in Egypt.

“In this year (= 725 A. H.” of Makrizi, De Sacy, and Gildem. p. 39), Ibrahim commanding a ship from Calicut, weary of the impositions inflicted on merchants by a Yemen chief, entered the Red Sea and proceeded direct to Djidda; where he was honorably treated. — Others following his example, Aden hitherto the stopping-place for vessels declined, and Djidda became the seat of commerce with India.

Euphorbia officinarum of Tropical Arabia and Africa. A cactiform *spurge* called in Yemen “schörur” (Forsk.), its stems congested in a tuft a foot high, and its milky juice from early times employed by the Arabs as cathartic: — observed by Forskal p. 94 at Djibla among the mountains of Yemen. Transported to Europe, is described by Commelyn hort. i. pl. 11, and Blackwell pl. 340 (Pers., and Lindl.).

observed by Nuttall in 38° in the Delaware peninsula; by Pursh, in Virginia and Carolina; by Elliot, in South Carolina; by Chapman, “in open or cultivated ground, common;” by Croom, as far as 30° 30' in Florida; by Baldwin, on Bermuda: Westward, by Pitcher on the Arkansas; and was received by Muhlenberg from Tennessee. Transported to Europe, is described by I. Robin 3, and Jacquin rar. pl. 187 (Pers.).

* *Celtis Mississippensis* of the Lower Mississippi. Possibly the species in question, — and that seen by Darby 119 at 31° in Louisiana: *C. Mississippensis* is described by Bosc; was observed by Nuttall on the Mississippi, Red river, and Arkansas, and termed “*c. integrifolia*,” by Chapman, as far East as Apalachicola, but “perhaps introduced;” and was received by A. Gray from West Kentucky. “*C. crassifolia*,” its leaves serrate but also having a long tapering point, was observed by F. A. Michaux on the Ohio and in Tennessee, and by Nuttall on the Arkansas.

Persca Carolinensis of the alluvial Atlantic border of North America. The *red bay* is a tree called by the natives on the Roanoke “ascopo,” and known from early times, — described by Hariot as like a bay tree and with the bark hot and acrid (De Bry i. 8): “*lauri*” were observed by Verrazanus on the coast in Lat. 34°; by J. le Moyne, in East Florida; and by Cabeza de Vaca, on the North shore of the Mexican gulf: *P. Carolinensis* is known to grow as far as 38° in the Delaware peninsula (A. Gray); was observed by Catesby i. pl. 63, and Elliot, in South Carolina; by F. A. Michaux, from Lower Virginia to Florida and the Mississippi; by Chapman, in “rich shady woods, Florida to North Carolina,” and a shrubby variety with larger flowers in “pine-barren swamps;” by Croom, as far as 30° 30'; and by Darby, in Opelousas.

Zizania miliacea of Carolina and the Lower Mississippi. An aquatic reed-like grass, known from early times: — West of the mouths of the Mississippi, Cabeza de Vaca found a kind of small grain ground by the natives with walnuts: *Z. miliacea* is described by Michaux; was observed by Elliot in South Carolina; by Chapman, in “deep marshes and ponds, Florida, and northward,” the “staminate and pistillate spikelets intermixed;” by H. Little, in the delta of the Mississippi; by Nuttall, in Salt river of Arkansas and as far as 35°.

"1326 A. D." (Alst. p. 226), in Asia Minor, Othman succeeded by his son Orchan, second Turkish sultan. The captured city of Bursa became Orchan's seat of government.

Cufic and Arabic inscriptions on tombs around Oufa, of princes anterior to the Russian occupation: and not far from Verkoturja, ruins of an ancient Tchoud or Tartar fortress — (Pall. trav. ii. 11 and 377).

Polygonum undulatum of the Uralian plains. Called by the Russians "kizlez" or "kapousta," by the Baschkirs "kamouslouk" and eaten by them from early times — (Pall. trav. ii. 33); observed by Gmelin fl. iii. pl. 10 in Siberia; by Pallas, beyond Oufa, the stems before flowering agreeably acid.

Valeriana phu of Eastern Europe and the adjoining portion of Asia. Called in the Baschkir country "zemlianoï ladan" ground-incense, and from early times employed medicinally — (Pall.): described by Valerius Cordus f. 3, and Blackwell pl. 250; known to grow as far West as the Upper Rhine and Silesia (Pers.); observed by Pallas ii. 136 on the East side of the Ural mountains.

Adonis Volgensis of the Uralian plains. Called by peasants "starodoubka," and used medicinally from early times, — observed by Pallas i. to ii. 26 on the Lower Volga, and becoming more frequent Eastward beyond the Yaik.

Lilium martagon of West Siberia. Called "sarana," and from early times its root collected and eaten by the Baschkirs, — observed by Pallas ii. 185 to 239 on the route to and around Ekaterinbourg; by Jacquin pl. 351 as far West as Austria, and by Sibthorp on the mountains of Greece (but not found by others, Fraas). Farther West, is described by Dodoens p. 201, and C. Bauhin pin. 87; is termed "martagum" by Camerarius ep. 571 (Schmiedel ed. Gesn. i. p. 90), "l. floribus reflexis montanum flore rubente" by Tournefort inst. 370; has become naturalized in Italy, and on the mountains of Sicily and France (Fée, and Lenz), in various parts of middle Europe as far as Sweden, and within about three centuries in Britain (Engl. bot. pl. 2799, Pers., Fries, and A. Dec.).

Allium nutans of the Uralian plains. Called in the Baschkir country "lisoun" (Pall.), and known from early times: — observed by Gmelin i. pl. 12 in Siberia; by Pallas trav. ii. 408, in the grassy country near Tcheliabinsk.

"Sept. 22d" (Blair), an army brought by queen Isabella into England, against her husband Edward II. — Who, in "January" following, was deposed by parliament, and was succeeded by his son Edward III.

"1327, Jan. 20th" (Skeat ed. Piers Pl.), in England Edward II. deposed, and on the "25th" succeeded by Edward III.

"In this year" (Ideler, and E. A. Soph.), Maximus Planudes writing.

Artemia squamata of the East Mediterranean countries. An Umbelliferous annual: the *σέλινον ἀνθηθών* prescribed by Maximus Planudes morb. mat. — may be compared: *A. squamata* is termed "thapsia orientalis anethi folio semine eleganter crenato" by Tournefort cor. 22; was observed by Rauwolf on Lebanon (Pers.); by Sibthorp, in the Peloponnesus and along the river Limyrum in Lycia; and the scarious fruit-margin is described by Persoon as "lobatoalata magna."

"1328 A. D. = 1st year of the 'tchi-ho' of Tai-ting-ti, and 1st year of the 'thian-li' of his successor Wen-tsoung II." (Chinese chron. table). The Grand lama on a visit from Tibet, was received with the highest honours in the palace of Wen-tsoung II. an act condemned by Chinese historians.

"The same year" (Alst.), Andronicus II. succeeded by Andronicus III., sixty-third Byzantine emperor.

The sect of Bathenians not extinct: Ebn Batuta 5 and 9 finding in Syria "Ismailiah," who "act as arrows" for sultan Naser. Farther South, he describes the inhabitants of Hali in Yemen as aboriginal Arabs, "and their sultan of the tribe Beni Kenana."

From Aden continuing South, Ebn Batuta 9 reached Makdashu in Equatorial Eastern Africa; Mambasa, "abounding in *bananas*, lemons, and citrons;" and Kulwa (Keelwa). But from a remark on leaving, he does not appear to have seen *cocoa palms* on the African coast.

Chionanthus? *sp.* of Eastern Equatorial Africa. A *wild olive* called there "meesoo" (Grant); and the "jammoon" having fruit "like an olive with a stone except that exceedingly sweet" observed by Ebn Batuta at Mambasa on the East African coast, — may be compared: the "meesoo" was observed by Grant "in low moist ground" from about 6° 30' S. to "3° 15' N." on the Nile, a "handsome lofty tall-trunked tree," with "edible, large pea-sized, one-stoned drupes in clusters." (See *Olea?* dioica.)

"1329, December" (Nicol.), a synod at Paris. "To determine the limits of the royal and ecclesiastical jurisdictions."

"1330 A. D." (Nicol.), a synod at Lambeth. An article, Forbidding "the appointment of any *hermit* without the permission of the bishop of the diocese."

As early as this year (see Pallas trav. iv. 88), the Samoyedes dwelling along the Arctic shore

of Siberia from the vicinity of the White Sea to the Yenisei,* having come according to their own account from the East. — Soujef found them resembling the Tungusi and having coarse black hair with very little beard (Mongolians), keeping *reindeer*, but living by hunting, and sometimes fishing; having "tadib" magicians, called in at funerals; but any one pronouncing the name of a dead man becomes the mortal enemy of the whole family, though the name is preserved and given to a child of the second or third generation. Each Samoyede has an idol in his tent; and the women bury the placenta in some by-place, beyond the reach of beasts of prey.

Polygonum viviparum of the Arctic region and mountains farther South. Called in Sweden "mortog" or "swingras" (Linn.), its root from early times collected in summer by the Samoyedes, and eaten with the flesh of reindeer and wild game — (Gmelin): the plant is mentioned by Matthioli 674 (Spreng.); is termed "bistorta minima" by Bauhin hist. iii. 539, "b. alpina media et minor" by C. Bauhin pin. 192, and Tournefort inst. 511, is known to grow from Lapland "to 56°" at or near the sea-level and farther South on the mountains of middle Europe (fl. Dan. pl. 13, Engl. bot. pl. 669, Pers., and Wats.), also in Russia and Siberia (Amm., and Pall.): was observed by Rudbeck the younger, and Linnæus, in Lapland and Sweden; by Haller, and Decandolle, on the mountains of Switzerland; by Sibthorp, on the mountains of the Peloponnesus; by Bieberstein, on mount Alwar in Armenia; by Pallas, at Lake Baical; by Gmelin, throughout Siberia to Kamtchatka. Westward, by Sabine from Spitzbergen to Greenland (Hook.); is known to grow on Melville Island in Arctic America (Wats.); was observed by . . . in Labrador (Pursh); by Oakes and myself, on the alpine portion of the White mountains; by E. James, on the Rocky mountains; by Mertens, at Norfolk Sound on the Pacific; and according to A. Gray, grows as far South as the "shore of Lake Superior."

"The same year" (Nicol.), in a synod at Kherna in Armenia, Obedience was promised by the Armenian church to the pope.

The Piana affluent of the Volga (according to Pallas trav. i. 76) received its name at the time of the wars between the Russians and the Mordouan princes; and a ruined intrenchment opposite Lopatina probably belongs to the same period. — He found the Mordouans nearly all converted to Christianity, and differing from the Russians only in language and the dress of the women.

Adonis vernalis of the Uralian plains. Yellow-flowered, and from early times employed in dyeing by the Mordouans, Tchouvaches, and Tartars, — (Pall. trav. i. 94 to iii. 26): observed by Pallas i. 94 to iii. 26 on the Volga and in West Siberia; by Crantz in Austria, and known to grow as far West as France (Mill. dict. pl. 14, Pers., and Steud.).

Rubus saxatilis of Northern climates. Called by the Mordouans "eidalopart," and from early times used medicinally, — observed by Pallas i. 110 at 55° on the Volga and Ural; by Bieberstein, on Caucasus. Westward, by Clusius 116; is known to grow from Switzerland to Britain (Smith fl. 345), Denmark (fl. Dan. pl. 134), and Lapland (Wats.); was observed by Hooker on Iceland; by Michaux, from Hudson's Bay to the seashore of Canada; by Pursh, from Canada to the mountains of New York and Virginia; by Bigelow, in the environs of Boston (Dec.); by Torrey as far as 41° on the Hudson; by myself, from 46° near Montreal to 40° along the Atlantic; and was received by A. Gray from Wisconsin.

Stellaria dichotoma of the Uralian plains. Called by the Mordouans "souti-aat," and from early times employed medicinally in decoction — (Pall. trav. i. 110): known to grow also in Siberia (Smith ined. pl. 14).

Acer tartaricum of the Uralian plains. A shrub called at Samara "neclenn," known from early times, — and observed on the Lower Volga by Pallas trav. i. 234.

Anemone (Pulsatilla) patens of the Uralian plains. Called at Samara on the Volga "odnome-setschnik" throughout Siberia "vetrenitza" wind-flower (Pall.), and from early times used in dyeing, — observed by Pallas i. 225 to iii. 25 from the Volga to the Irtych, vernal and fugacious; known to grow Westward as far as Silesia (Pers.).

Anemone sylvestris of the Uralian plains. Called on the Lower Volga "ovetschié kounichko," and known from early times, — observed by Pallas i. 257 abundant and forming streaks on the plains.

* *Arctostaphylos alpina* of the Arctic region and mountain-summits farther South. A dwarf shrub called by the Russians at the mouth of the Obi "amprick," known from early times, — and observed by Soujef (Pall. trav. iv. 34): observed by Gmelin on the mountains of Verchoturia, Olecmense, and at Ochotsk; by Baumgarten i. 365, on the mountains of Transylvania; and known to grow in Lapland (Wats.), Finland and Sweden (Fries), Scotland (Lightf. pl. 11), on the Swiss Alps, and on the Pyrenees (Clus. pann. 77, Dec., and A. Dec.). Westward, was observed by Hooker on Iceland; by Parry, at Five-hawser Bay; by Lapylaie, on Newfoundland; by Oakes, on the White mountains; was received by A. Gray from mount Katahdin; is known to grow on the Rocky mountains (Wats.); and was observed by Chamisso on Unalascha.

Spiræa crenata of the Uralian plains. A handsome shrub called at Samara "tavolga," known from early times, — and observed on the Lower Volga by Pallas i. 235: known to grow as far West as Hungary (Pers.).

Bunias Orientalis of the Uralian plains. A tall Cruciferous plant called on the Lower Volga "dikaia retka," and from early times its stem eaten crude, — observed by Pallas i. 276 frequent throughout; by Gmelin iii. pl. 57, in Siberia; known to be frequent also about Caucasus and through Southern Russia as far as Transylvania (A. Dec.), Livonia and Lithuania (Ledeb.), Galicia (Zawadski), and Northeastern Germany (Koch, and Rohl). Was received by Linnæus from Russia, but "in 1779" was found by Retz fl. scand. 128 springing up spontaneously in Scandinavia; "in 1819" had become frequent in Sweden, Norway, and Denmark (fl. Dan. pl. . .), and "in 1820" a pernicious weed at Upsal that could not be extirpated (Wahlenb.): in Belgium, after being cultivated became naturalized "before 1827" (Lestib.); was observed by Lejeune "in 1824" in clefts of rocks near Limbourg, Dison, and other places, "exotic and naturalized;" and from at least "1827," when mentioned by Chevalier as seemingly naturalized, has become clearly naturalized around Paris (Mut., and Cosson).

Hieracium Sibericum of the Uralian plains. Called on the Lower Volga "skerda," by Baschkirs "chaké," and from early times its stem eaten crude, — observed by Pallas i. 276 to ii. 28 frequent there as far as Oufa; by Gmelin ii. pl. 10, in Siberia (Pers.).

Lychnis Chalcodonica of the Uralian plains. The scarlet *lychnis* is called on the Lower Volga "dikoé mouilo" or "koukouschkino," or simply "koukouts" soap, from foaming in water so as to be used like soap, — observed there by Pallas trav. i. 282 to 299. Transported to Europe, is termed "flos constantinopolitanus" by Dodoens . . . , and Lobel hist. 183; is described also by Dalechamp pl. 820, Gerarde, and Parkinson; has become a favourite garden flower, known even in Japan (Thunb.). By European colonists, was carried to Northeast America, where it continues in gardens.

Hedysarum grandiflorum of the Uralian plains. A beautiful species, known from early times, — observed by Pallas iii. 490 abundant on the Lower Volga, becoming rare on the Irtych. Termed "astragalus grandiflorus" by Linnæus (Steud.).

Trifolium spadicum of Sweden and Germany. Resembling *T. agrarium*, but the flowers ferruginous; employed medicinally by the Mordouans — (Pall. trav. i. 110): termed "t. pratense flore rufescente" by Vaillant paris 196, but hardly known beyond the limits of Sweden and Germany (Smith in Sibth.): observed by Linnæus in mountain meads as far as Upsal; by Schreber pl. (Pers.), probably in Germany.

Centaurea jacea of middle Europe and the adjoining portion of Asia. Called in Sweden "knap-par" or "hattar" or "gohlschjadra," and from early times used for dyeing wool yellow (Linn.), and by the Mordouans medicinally — (Pall. i. 110): termed "jacea nigra pratensis latifolia" by C. Bauhin pin. 271, and known to occur in meads and fallow ground throughout middle Europe (fl. Dan. pl. 519, Engl. bot. pl. 1678, and Pers.): observed by Linnæus in Sweden, frequent in fallow ground and sunny meads as far as Scania; by Sibthorp, on mount Athos.

"1332 A. D. (= 1992d of Synmu," art de verif.), civil war and resignation of the daïro Daigo II. in favour of Kouo-gien; who received a visit from the cubo Takaudsi; — but at the end of two years, re-established Daigo II. in office.

As early perhaps as this year (Pall. trav. iv. 51), a fortified city of the Ostiaks in existence at Langivach on the Lower Obi, — but Soujef found there only a single but inhabited "iourten." The Ostiaks, one of the first people of Siberia with whom the Russians came in contact, are a nation of fishermen along the Lower Volga, mostly having reddish or blond hair (White Race), dwelling in villages along the river from three hundred versts below Tobolsk to the gulf, but having *dog-sledges* for travel in winter, herds also of *reindeer* belonging to the more wealthy. Soujef found the Ostiaks simple-minded, timid, full of prejudices, and very uncleanly in their mode of living; they practise *tattooing*, and burn a dried fungus on the skin as a substitute for *moxa*; have hereditary chiefs, not much regarded after the Russian conquest; also schamans or priest-sorcerers; perform religious rites to the dead, and to certain mountains and trees; and the idol most venerated by them and the Samoyedes near the Obi is in the Voksarskoï country "seventy versts" North of Obdorsk and "67°," is composed of two persons, male and female, and is carefully concealed from the Russians.

Empetrum nigrum of Arctic and Subarctic climates. A diminutive spreading shrub having the alpine or Arctic aspect, though extending into lower latitudes, called in Britain *crow berry* or *crake berry* from the Danish "krake bær" (Prior), in Sweden "krak-ris" or "krakling" or "skraken" or "lopperis" (Linn.), by the Russians at the mouth of the Obi "vodæniza" and by the Siberians "schikscha" (Soujef), and known from early times: — termed "erica baccifera" by Clusius pan. 29, "e. b. procumbens nigra" by C. Bauhin pin. 436, and known to grow in Arctic and Subarctic Europe and Asia, and on the mountains of Switzerland (Petiv. 72, fl. dan. pl. 975, Engl. bot. pl. 526, and Pers.): observed by Scheffer, and Linnæus, frequent in cold sterile places in Lapland and Sweden;

grows according to Watson in perhaps every county in Scotland; according to A. Decandolle, at the altitude of "7500 feet" on the mountains of Switzerland; was observed by Savi on the Appenines; by Bieberstein, on the upper portion of Caucasus; by Soujef, at the mouth of the Obi (Pall. trav. iv. 34); by Gmelin, from the Yenisei to Kamtchatka; by Chamisso, in Kamtchatka, at Bering's Straits, and on Unalaska. Westward, by Hooker on Iceland; is known to grow in Greenland as far as 71° (Wats.); was observed by Parry in Arctic America; by Michaux, on the seashore of Canada; by myself, on the Lower St. Lawrence and near the sea-level along the Atlantic as far as 45° on Mount Desert, also on the alpine portion of the White mountains; and was brought by Long's Second Expedition from the country around the sources of the Mississippi.

"1333 A. D. = 'youan-toung,' 1st year of Chun-ti III., of the Youan" or Twenty-second dynasty — (Chinese chron. table).

"Sept. 12th" (Ebn B. 12 to 14, and Yule cath. 404). Ebn Batuta after returning to Egypt, crossing the Mediterranean and Black Sea, journeying near the "mountains of the Russians, Christians with red hair and blue eyes ugly and perfidious," and as far North as Bulgar on the Wolga, where he heard of *dog-sledges* used in the "Land of darkness forty days" distant, accompanying sultan Mohammed Uzlek to Astrachan, proceeding thence to Bokhara and the city of Balkh "since its destruction by Jenghiz Khan remaining in ruins," arriving at the Indus. He continued on to Kabul, the Punjab Desert, and reached Delhi while the sultan was engaged in re-peopling it (his attempt to transfer the inhabitants and seat of government to Dowlatabad having failed, according to Elphinstone).

One hundred and sixty-ninth generation. May 1st, 1334, onward mostly beyond youth: the Persian writer Sultan Aly of Korassan wr. 1334 (Ainsl.): the Jewish writers, Abraham de Kaslar, Bongodas Cohen, Emanuel ben Jacob, Aaron ben Elia, Levi ben Gerson, Moses Narboni, Joseph ben David Jewani, Immanuel of Rome, Matatja ben Moses: the Arab writer Ebn Khaldun: the Greek writers, Matthaeus Blastaris d. 1335, Armenopulus d. after 1350, Nicephorus Gregoras d. after 1359, Nicolaus Cabasilas, Gregorius Palamas d. after 1351, Barlaam, Nilus of Rhodes, Leontius Pilatus, Petrus Bertrandus, Landulphus Carthusianus, Simon de Cassia, Richardus Radulphus, Astesanus Astensis, John Cenobarba, Guy de Chauliac: the scholastic theologians, William Occam, Monaldus Dalmata, Nicolaus de Lyra, Pelagius Alvarus, Petrus Paludanus, Guido Carmelita, Adamus Goddani, Joannes de Bacone, Thomas Argentinensis, Richardus Armachanus, Nicolaus de Gorram, Alphonsus Vargas, Robertus Holcot, and Gregorius Ariminensis; Jean de Roquetaillade (Pouchet): the botanist Bartholomew Glanville: the painter Stefano il Fiorentino d. 1350.

"Dec. 20th" (Alst., and Nicol.), Joannes XXII. succeeded by James Fournier, now Benedictus XI., forty-first pope.

"The same year" (Crawford vii. 11), the island of Machian conquered by the people of Ternate.

"In the first half of the Fourteenth century" (Pouchet), the composition of *potter's varnish* first described by Pierre le bon de Lombardie.

"1337 A. D. (= 1997th of Synmu," art de verif.), Daigo II. succeeded by Quo-mio, younger brother of Kouo-gien, and now dairo of Japan. — He reigned two years, or according to other accounts "twelve."

"Beginning of June" (Blair), the first *comet* whose course is described with astronomical exactness, Nicephorus Gregoras being the observer. (Enumerated by J. R. Hind, and Humboldt cosm. i. 1, among those whose *orbit* is known from Chinese observations.)

"1338 A. D." (Crawf. vii. 11), in Java, building of the magnificent Buddhist temple of Boro Budur.

"In this year" (Yule cath. 313), arrival of envoys bearing a letter from the Chinese emperor to the pope, requesting his blessing and the frequent exchange of messengers. In his reply dated Oct. 31st in the "fourth" year of his papacy, Benedict XI. commences, We although unworthy "locum Dei tenemus in terris." He appointed legates in return, including John de' Marignolli, — who reached the court of Uzlek on the Volga "in 1339," Armalec in Central Asia "in 1340," and Pekin in China "in 1342" (an event noted also in the Chinese annals). After remaining "three years," John de' Marignolli proceeded South through China, and embarking at Zayton not earlier than "Dec. 26th 1346," returned by sea, by the way of the island of Saba South of the Equator, and Ceylon.

"1339 A. D." (Alst.), at Spires, an assembly of electors, dukes, bishops, counts, and the most learned in divine and human affairs; convened by the emperor Louis II. Bavarus. Against the tyranny of the pope.

"In this year" (Yule cath. 281), through unprofitable dealings with Edward III. of England failure of the Bardi of Florence, having extensive commercial relations with the Eastern countries. Pegolotti, a factor in their employ, writing commercial directions, especially in regard to Constantinople and the trade overland between the Black Sea and China.

Laurus caryophyllus of Anam. The imported *fistuchi di gherofani* mentioned by

Pegolotti — (Yule cath. 305) may be compared: clove twigs, such as are imported into the Arab countries, were seen by Ebn Batuta in the Malayan archipelago; and *L. caryophyllus*, by Loureiro i. 308 growing in Anam. The "canelle giroflée," clove-cinnamon, is said in Trevoux dict. to be the inner bark of the "noix giroflée," a tree of Madagascar (Yule 473).

"1340 A. D. (= 741 A. H." of Ferisht, Elph.), the Muslim Empire in Hindustan having reached its farthest limits, Bengal about this time revolted under a Muslim officer, and was never again subdued. Coromandel almost immediately followed, and with equal success; — and four years later, Telingana and Carnata.

"About June 23d" (Blair), near Helvoetsluys, the French defeated in *naval combat* with Edward III. of England.

In this year (= "14th of Edward III.," Fabyan, chron. lond. 57, and Skeat ed. P. Plowm.), nobles coined, the beginning of "the series of *English* gold coins." — They "continued the only gold coin till the angels of Edward IV., 1465."

"The same year" (Nicol.), a synod at Saltzburg. A priest was degraded.

"In this year" (Garc. de la Vega), Viracocha succeeded by Pachacutec, now ninth Inca of Peru. — He reigned "fifty, or according to some sixty years" (addit. art de verif.).

Many sayings of the Inca Pachacutec have been preserved, and among them, that "He who attempts to count the stars, not even knowing how to count the marks and knots of the quipus, ought to be held in derision" — (Blas Valera, and G. de la Vega vi. 36).

Bombax (Eriodendron) anfractuosum of Eastern Equatorial America. A large tree called in Brazilian "zaamonna" (Piso), and known from early times: * — observed in Brazil by Piso; by Jacquin am. pl. 176, and Descourtilz, in the West Indies, but no Carib name given, and according to Macfadyen i. 93 is readily propagated by stakes placed in the ground. By European colonists was carried Westward across the Pacific to the Philippines, where it has become well known and is called in Pampango "bulac castila," in Tagalo "boboi," in Bisaya "doldol," to the neighbouring islands (Rumph. i. pl. 80); to Burmah, "exotic" but "often planted, and the floss" on the seed preferred to that of the indigenous cotton-trees (*Salmalia*); to Hindustan, called in Bengalee "shwet-shimool," in Tamil "elavum," in Malabar "pania" or "paniala," in Telinga "poor," in Hindustanee "huttian" (Drur.), observed by Rheede iii. pl. 50 in Malabar, by Ainslie, Roxburgh, Wight, and Drury, in other parts of the peninsula, by Graham "in gardens Bombay," but according to Auld seemingly "wild in Kandesh" and called "shameula;" to Eastern Equatorial Africa, observed by myself planted on Zanzibar, by Grant in "7° 27' S. and 2° N." on the Nile, and called "meesoffeee."

Copaifera Jacquinii of the West Indies. An Amyroid tree yielding *copaiva balsam*, known from early times: — observed in the West Indies by Jacquin am. pl. 86, and Descourtilz, but no Carib name given. The imported drug according to Lindley is "an acrid, bitter, nauseous liquid resin with stimu-

* *Ionidium poaya* of the unwooded portion of Interior Brazil. Suffruticose and very shaggy, its root from early times taken as emetic: — observed by A. Saint-Hilaire rem. 308 in the Western parts of Minas Geraes and elsewhere, its roots substituted for true ipecacuanha, and called "poaya do campo" (Lindl.).

Ionidium brevicaule of Brazil. An allied species from early times used for an emetic; — the powdered bark of the root is rubbed up with sugar and milk: observed by Martius med. pl. 8 (Lindl.).

Ionidium urticifolium of Brazil. Also from early times used for an emetic: — observed by Martius med. pl. 4 and 9 (Lindl.).

Cassia hirsuta of Brazil. Called there "fedegoço" (Lindl.), and known from early times: — observed by Martius. From transported specimens, described by the younger Linnæus suppl. 231 (Pers.).

Cassia falcata of Brazil. Known there from early times: — observed by Martius (Lindl.). From transported specimens, described by Linnæus hort. cliff. 159 (Pers.).

Acacia niopo of Eastern Equatorial America. A tree called "niopo" by the Guahibos of the Orinoko, "parica" by the Muras and other tribes on the Upper Amazon (Spruce); and from early times its seeds roasted, pulverized, and used as stimulant narcotic snuff: — observed by R. Spruce (Mark. edit. Ciez. p. 341).

Peperomia peltata of Tropical America. Called in Brazil "caa-peba" broad-leaf (Lindl.), and from early times used medicinally; — its fruit in decoction as a powerful diuretic (Dietr., and Mart.).

Peperomia umbellata of Tropical America. Called in Minas Geraes "caapeba," in Southern Brazil "periparaba" (Lindl.), and from early times its roots used medicinally: — observed in Brazil by Martius trav. ii. 93; by Plumier pl. 73, and Swartz, in the West Indies (Pers.); described also by Humboldt and Bonpland n. g. i. 59.

lant, diuretic, and cathartic properties," and according to Hayne is furnished by various species: "balsamum copaivæ" was seen by Forskal mat. med. in the drug-shops of Egypt.

Copaifera multijuga of Eastern Equatorial America. A forest-tree, perhaps the "copan" of the Brazilians — seen by Lerijs 202, and referred to this tribe by Sprengel: the copaiva tree was observed by Nieuhoff in Brazil, wild and very lofty; and according to Schomburgk (note to Raleigh) grows also in the Guayana forest. *C. multijuga* according to Hayne furnishes the *copaiva balsam* exported from Para (Lindl.).

Copaifera coriacea of Interior Brazil along the Southern Tropic. Known from early times, — and observed by Martius in the province of S. Paul (Lindl.).

Copaifera Langsdorffii of Interior Brazil along the Southern Tropic. Known from early times, — growing in the same district (Desf. in mem. mus. vii. 376) with the last species, and both according to Martius furnishing the *copaivæ balsam* of Brazil (Lindl.).

Anacardium occidentale of Eastern Equatorial America. The *cashew-nut* is a large Terebinthoid tree called in Brazilian "aca-iou" — according to Lerijs 205, who found difficulty in distinguishing it among high trees; grows wild according to Piso 57 in Northern Brazil, and much used by the natives; wild also in Guayana (Aubl. 392): but South of Lat. 13° was found by A. Saint-Hilaire nowhere indigenous, by myself, only under cultivation: in the West Indies was observed by Jacquin am. 124 and Descourtilz, but no Carib name given, is probably only planted, as also in Nicaragua, Panama, and Guyaquil, and was not seen wild in the portion of America traversed by Humboldt and Bonpland (A. Dec.). By European colonists was carried Westward across the Pacific to the Philippines, called in Tagalo "casoi," in Ylocano "ballogo," and its fruit sold in market (Blanco); to the neighbouring islands, its Malay name derived from the American (A. Dec.) and the tree observed by Rumphius i. 177 on Amboyna and Celebes; to Java, cultivated there (Blume); to Burmah, "exotic" and called there "thee-ho tha yet" (Mason); to Hindustan, having no Sanscrit name (Roxb., and Pidd.) but called in Bengalee "hijli-badam," in Tamil "mundiri-marum," in Malabar "paranki-mava" or "kappa-mavakum," in Telinga "munta-mamidi" or "jidi-mamidi," in Hindustanee "kaju" (Drur.), was observed by C. Acosta in 1578 in gardens at Cochin, by Rheede iii. pl. 54 in Malabar, by Roxburgh, Wight, and Drury, from Chittagong to Trichinopoly, by Graham as far as Bombay; to Eastern Equatorial Africa (Lour., and myself): also by European colonists was carried across the Atlantic to the islands of Fernando Po and S. Thomas (fl. nigr. 288); and in French is called "pommier d'aca-jou" (A. Dec.). From transported specimens, is termed "anacardium indis familiaris" by Ruellius i. 37; is mentioned also by C. Stephanus: nuts brought from Brazil to Lisbon were seen by Clusius; were found by Rouyer imported by the way of Europe into Egypt.

Ipomoea operculata of Brazil. Called there "jeticucu" (Piso), and from early times employed medicinally: — observed in Brazil by Piso 93, and Martius. Said by Guibourt to furnish a part of the *mechoacan* of commerce (Lindl.).

"1341 A. D." (Alst.), Andronicus III. succeeded by Joannes V. Palaeologus, sixty-fourth Byzantine emperor. And in this year (Alst. p. 307), Mysia and Thrace devastated by the Turks.

"The same year (= 742 Hej.)" Pall. trav. i. 192, date of the latest Arabic inscriptions in the cemetery of the ruined city of Bulgari. on the Lower Volga.

Cirsium heterophyllum of Europe and the adjoining portion of Asia. A thistle called in Sweden, "borstar" or "gullborste" or "brundborste" (Linn.), and known from early times: — termed "cirsium singulari capitulo magno s. incanum varie dissectum" by C. Bauhin pin. 377, "cirsium singulari capitulo squamato vel incanum alterum" by Tournefort inst. 447, and known to grow in meads throughout Northern and middle Europe (Engl. bot. pl. 675, Lapeyr. in act. toul. i. pl. 19, and Pers.): observed by Linnæus in Lapland and Sweden, in depressed situations in meads; by Haller pl. 21, in Switzerland; by Allioni pl. 34, in Piedmont; by Sibthorp, in the environs of Constantinople *

* *Cirsium oleraceum* of Northern Europe and Asia. A thistle, its leaves from early times cooked and eaten by the Russians — (St. Bielke, and Linn.): termed "carduus pratensis" by Lobel ic. ii. 11, "cnicus pratensis latifolius" by C. Bauhin pin. 376: observed by Linnæus in Sweden, in moist places in the open ground of Scania.

Galium boreale of Subarctic climates. Called in Finland "mattara," and from early times its root used there for dyeing wool — (Lin. fl. lapp.): observed by Linnæus very rare in Lapland, but frequent throughout Sweden; by Pallas trav. i. 45, on the Volga below Moscow, but not East of the Ural; known to grow as far South as Germany (Poll.), France (Lam. fl. fr., and Pers.), and Switzerland (Wats.). Westward, was observed by Hooker on Iceland, and received from Canada from 68° to Niagara Falls; was observed by Darlington as far as 40° near Westchester, Penn.; by Pursh, near Wilksbarre and along the Lakes; by Drummond, at 54° on the Saskatchewan; by Nuttall, at the Southern sources of the Columbia; and by Mertens, at Norfolk Sound on the Pacific.

Cytisus supinus of the Uralian plains. Called on the Volga "raketnik" (Pall.), and from early times valued there as excellent feed for sheep, — observed by Pallas i. 30 nearly as far West as Moscow; by Jacquin i. pl. 20, on the sunny hills of Pannonia and Austria; known to grow also in Siberia (Pers.).

Silene Tartarica of the Uralian plains. Known from early times: — observed by Pallas along the Volga nearly as far West as Moscow; described also by Linnæus, and known to grow as far as Tartary (Pers.).

Cineraria palustris of Northern Europe and the adjoining portion of Asia. Called on the Volga "vipadaschnaiatrava," and from early times bruised with oil and applied medicinally, — observed by Pallas as far South as the forest of Mouron; by Linnæus, in Scania in Sweden; and is known to grow as far as Denmark (fl. Dan. pl. 573).

Salix arenaria of Northern Europe and the adjoining portion of Asia. Its bark from early times used in tanning *Russia leather*, — as witnessed by Pallas i. 70 at Arsamas on the Volga: *S. arenaria* was observed by Wahlenberg in Lapland; by Lightfoot, in Scotland; by Haller pl. 14, on the mountains of Switzerland; and is known to grow in Denmark (fl. Dan. pl. 197).

Iris Siberica of the Uralian plains. Called in Russian "boubentschik" (Pall.), and known from early times: — observed by Pallas trav. i. 52 along the Volga; known to grow also in Siberia, and as far West as Austria and Germany (Jacq. fl. pl. 3, Roth, Moench, Pers., and Steud.).

Bidens tripartita of Europe and Northern Asia. Called in Britain *bur marigold* (Prior), at Constantinople "agriō katēphithia" (Forsk., and Sibth.), in Russian "tckerjoda," and from early times used on the Volga in dyeing — (Pall. trav. i. 95): the "verbena supina" of Tragus 211 is referred here by Sprengel: *B. tripartita* is described also by Ray syn. 187, and Thuillier 422; is termed "b. foliis tripartito divisis" by Tournefort inst. 462; is known to occur in Britain and throughout middle Europe (Curt. lond. iv. pl. 57, Roth, and Pers.); was observed by Brotero in Northern Portugal; by Forskal, and Sibthorp, around Constantinople and Smyrna; by Bieberstein, along the Taurian mountains; by Gmelin, on the Tobol river in Siberia; and is known to grow in Dahuria: the whole plant according to Lindley "acrid and when chewed excites salivation powerfully." Notwithstanding its North American aspect, is given as distinct from *B. frondosa*.

Stipa pennata of the Uralian plains. A plumed grass called by Russians "rovouil-trava," and known from early times, — observed by Pallas i. 262 frequent in barren soil on the Lower Volga. Westward, is termed "gramen spicatum aristis pennatis" by Tournefort inst. 518; was observed by Sibthorp, and Gittard, from mount Athos to Cyprus and the Peloponnesus; and is known to grow as far as Germany and Sweden (Pers.).

Lycopodium complanatum of Northern Europe and America. Called in Sweden "jœmna," and from early times used to dye wool yellow (Linn.); on the Volga, in dyeing generally — (Pall. trav. i. 93): termed "muscus terrestris ramosus pulcher" by Bauhin hist. iii. 757, "sabina sylvestris" by Tillands pl. 69, observed by him, and Linnæus, abounding in Sweden, though seemingly unknown in other parts of Europe. Westward, was received by Dillenius musc. pl. 59 from America (Linn.); was observed by myself frequent in the forest from 45° to 40° along the Atlantic; by A. Gray, "common" in central New York, in one form extending "far northward;" grows according to Chapman in our Southern States, in "woods along the Alleghanies."

"The same year" (art de verif.), Naser succeeded by Abubekr; and after "forty days," by Koutchouk, twelfth Memluk sultan of Egypt.

"July 1st" (Boccaccio, Webb, and Major edit. Bethenc.), under instructions from Alphonso IV. of Portugal, sailing of Angiolino del Tegghia for the Canary Islands, commonly called the "Rediscovered." According to the Genoese pilot Nicoloso de Recco, in proceeding from island to island the land was full of "goats, sheep, and wild hogs," and "inhabited by naked men and women" dwelling in cabins "made with much skill of square stones." On one island, the sailors found a chapel or temple containing only the stone statue of "a man with a ball in his hand," naked with the exception of "an apron of palm-leaves;" but in general they were afraid to land, and on no island did they venture far from the shore. The natives communicated from island to island only by swimming, and of those swimming out to the boats, four "were taken on board and afterwards carried away." These four were "courageous and very intelligent" beardless young men, with "handsome faces," and "long light hair" veiling their bodies to the waist; they "were uncircumcised," and wore only "a sort of apron" forming "an effectual covering," that of the chief consisting of palm-leaves hanging from a cord, that of the others of reed fibres "painted in yellow and red:" their language was unknown, but "was soft, and their pronunciation rapid and animated like Italian;" they sang very sweetly, and danced almost as well as Frenchmen; they were gay and merry, and "much more civilized than many Spaniards;" showed "remarkable faithfulness and honesty," knew nothing of "sabres," nor of the use of "gold and silver money." "Marriage was observed among them, and the married wore aprons," but "the maidens went quite naked."

"1342, May 7th" (Alst., and Nicol.), Benedictus XI. succeeded by cardinal Peter Roger, now Clemens VI., forty-second pope.

"The same year" (Nicol.), a synod at Saumur. A canon, Forbidding "the holding of pleas in churches or their vestibules."

"The same year" (Blair), in England, "knights and burgesses first sit together in the same house of parliament."

Ranunculus bulbosus of Europe and the adjoining portion of Asia. Called in Britain with allied species *king-cob* or *king-cup* or *gold-cup* or *butter-cup* or *crowfoot* (Prior), in which we recognize the *PES CORVI* identified in gloss. Sloane v. f. 45 with the *ramys fote* having a yellow flower and "a knobe in the rote" — (Cockayne): *R. bulbosus* is described by Valerius Cordus f. 121, Fuchsius, Urzedowa (Spreng.), and Lobel pl. 667; is termed "*r. pratensis radice verticilli modo rotunda*" by Tournefort inst. 289; and is known to grow in France and throughout middle Europe as far as Denmark (fl. Dan. pl. 551. and Pers.). Eastward, was observed by Sibthorp, and Chaubard, from the Peloponnesus to Constantinople. By European colonists, was carried to Northeast America, where it has become naturalized, occurring in Newfoundland, Canada (Hook.), but as yet according to A. Gray "very abundant only in E. New England, seldom found in the interior." The plant according to Lindley is "exceedingly acrid, raising blisters and producing extensive inflammation" but "not affecting all persons alike."

Osmunda regalis of Northern Climates. Called in Britain *osmund* or *osmund the waterman* or *flowering fern*, by Brunswyck "*osmundi*," in the *Ortus Sanitatis* 294 "*os mundi*," and in a Vocabulary in Mayer and Wright p. 139 "*bon-wurt*" (Prior): the *dichefern* of gloss. Sloane v. f. 40 — is referred here by Cockayne: *O. regalis* is termed "*o. vulgaris et palustris*" by Tournefort inst. 547; and is known to grow in wet ground throughout middle and Northern Europe (Engl. bot. pl. 209, and Lindl.). Eastward, was observed by Sibthorp on mount Athos and around Constantinople. Farther East, was observed by Nuttall along the Arkansas; and by myself in our Atlantic States from Lat. 43° to 38°.

"July 22d" from Delhi, Ebn Batuta 17 to 19 proceeded South to Kalyur, having a fortress on the top of a high mountain (hill-fort at Gwalior): Dawlatabad, "one of the greatest and strongest forts in India:" Goa, and Malabar, where "no one travels on beasts of burden, but nobles are carried by men" (*palanquins*): Hili, the termination of the voyage of ships of China, after touching only at "Kalicut and Kawan," near the point of the peninsula.* — After waiting until Spring, Ebn Batuta was left behind, and being unwilling to return to Delhi, proceeded after a while to the Maldiv Islands (Yule cath. 416).

At the Maldiv Islands, "*wada*" or *cowries* (*Cypræa monetas*) were used instead of coin; and were exported to Bengal. The islanders had been converted (from Christianity, see Abu Zeid) to Islamism by Abu'l Barakat, a Mognelinc (or Barbary Arab).

"The same year" (art de verif.), Koutchouk succeeded by Schahabeddin; and before the close of the year, by Emadeddin, fourteenth Memluk sultan of Egypt.

"1344 A. D." (art de verif.), Emadeddin succeeded by Schaban-Kamel, fifteenth Memluk sultan of Egypt.

"August" (Ebn B. 21, and Yule cath. 422), Ebn Batuta leaving the Maldiv Islands for Ceylon. He next proceeded to the neighbouring portion of Hindustan, — and sailing Eastward in a Chinese "junk," some of which are large enough to contain "a thousand men," was captured by "infidel Hindus" in "twelve war-vessels," and carried to Bengal. But at length, he reached Java and the city of Shumutrah; where the Muslim king "gave permission to go to China, a thing he is not always prepared to grant, and put him on board a junk."

"1344 or 1345 A. D." (Nicol.), a synod in Armenia. On the errors of the Armenian church.

"1345 A. D." (Nicol. brit. nav., and Humb. cosm. v.), at the outfit of the George, the royal ship of king Edward III., "sixteen *hour-glasses*" were purchased in Flanders.

About the close of the year, Ebn Batuta arriving at Zaitun in China, where he re-joined the Embassy. In all the provinces of China, Ebn Batuta 18 to 23 found a town for the Muslims, who are made much of by the Tartar emperors; and at El Khansa, he found Jews, Christians, and "Turks who worship the sun" (Parsees). *Paper-money* was in use: and if anything was not entered in the register of all the goods in a vessel, the vessel and freightage were forfeited. The Chinese

* *Dolichos Sinensis* of the Malayan Archipelago. In Hindustan called "choulee" or "hurrea lobeh" or "suffeed lobeh;" the "*Iubia*" seen there by Ebn Batuta — may be compared: *D. Sinensis* was observed in Hindustan by Rheede viii. pl. 41, Roxburgh, Wight, and is enumerated by Graham as "commonly cultivated" in the region around Bombay. Farther East, is described by Blanco as well known in the Philippines, and called in Tagalo "quibal."

were in general "the richest people in the world;" and China was "the best and safest country for travellers." At the city of Fanjanfur, he met a townsman from Tangiers, whose brother he afterwards saw in Sudan. — Returning by sea to Sumatra and the West, Ebn Batuta arrived at Zafar (Dhofar in Southern Arabia) in April or May 1347; and continuing on by the way of Maskit El Torayat (Muscat), Hormuz, Saman, reached the city of Saba (in Interior Arabia) after an absence in all of "twenty years."

"1346 A. D." (art de verif.), Schaban-Kamel succeeded by Zeyneddin, sixteenth Memluk sultan of Egypt.

"Aug." (Humb. cosm.), the West coast of Africa as far along the Desert as Rio de Ouro N. Lat. 23° 40', visited by the Catalan navigator Don Jaime Ferrer: — Cape "Bugeder" (Bojador) is laid down in the Catalan map "of 1375" (Major pr. Henr. 47).

"In this year" (Ibn Batut., and Major pr. Henr. 48), death at Timbuctoo "of Abu-Ishac-es-Sahili," a famous poet of Granada. — His tomb continued in after times "one of the curiosities of Timbuctoo." The stone mosque and royal palace, "the only two remarkable buildings in the city," were built by "an experienced architect of Granada" (Leo Afr.).

"Aug. 26th" (Blair), the French defeated by Edward III. at Cressy: "perhaps the first battle in which cannon were used" (Pouchet moy. age). — In the following year, Calais was captured by the English.

Maundeville on his journey found the king of Hungary very powerful, holding Slavonia, a great part of Comania and Bulgaria, "and the realm of Russia a great part" to the border of Prussia.

Continuing Eastward, Maundeville 15 mentions the burning of widows in Hindustan; devotees wounding themselves with knives, and others prostrating themselves to be crushed under the car of a huge idol.

In the Malayan Archipelago, Maundeville mentions cannibals, and an isle where the people "make marks on their faces with a hot iron" (*Papuans*). Houses built of large reeds (*bamboo*): and people having "thin and long beards" seldom of more than "fifty hairs" (*Malayans*). He also mentions in another country, men letting the nails of their fingers grow, as a sign of nobility, while the women "bind their feet so tight that they may not grow half as nature would" (*Chinese*).

Maundeville 18 maintains, That the Earth is "of a round form;" and "that if a man found passages by ships, he might go by ship all round the world above and beneath," and always "find men, lands, and isles."

"1347 A. D." (Nicol.), a synod at Constantinople. The patriarch Joannes of Apri was deposed.

"The same year" (art de verif.), Zeyneddin succeeded by Hassan seventeenth Memluk sultan of Egypt. A gold coin issued by Hassan, is figured in Marcel p. 174. The large mosque and tomb built by him, is "the finest edifice" in Cairo (Wilk. theb. and eg.).

"The same year" (Rafn, and Major), a voyage from Greenland to Markland: — the account, written "nine" years afterwards, speaks of Markland as still known and visited; the latest notice of the country in the Icelandic records.

"In this year (= 748 A. H." of Ferisht., Elph.), revolt in the Deccan and the insurgent chiefs shut up in the fortress of Dowlatabad. Before reducing the place, Mohammed Toghlak was called away by fighting in Guzerat; when the people of the Deccan rose behind him, and their revolt in the end proved successful, their leader Hasan Gangu becoming head of the new dynasty of Bahmani; — that reigned "one hundred and seventy-one years."

"1348 A. D." (Alst., and Blair), *pestilence* throughout Europe, carrying off nearly "a fourth part of its inhabitants:" extending to Denmark and Norway (Relat. du Groenl. 210): beginning in England "May 31st" — (Skeat ed. Piers Pl.) and ending "Sept. 29th, 1349;" called the *black death* and "occasioned" Boccaccio's Decamerone.

"1349 A. D. (= 2009th of Synmu," art de verif.), accession of Siukouo, now dairo of Japan.*

The "Book of Nature," an encyclopædic work of Conrad of Meyenberg, a priest in this year at Regensburg (Humb. cosm.).

* *Camellia drupifera* of Anam. Apparently the "Camellia" from whose seeds "a very fine oil is extracted," and "either flavored or unflavored is used" in Japan "for the hair or for pomades" — (Jap. centen. comm. 57). *C. drupifera* was observed by Loureiro in Anam, the oil from its seeds fragrant, and used for various purposes by the natives (Pers.).

Perilla ocymoides of Japan. A Labiate plant yielding an oil that, "chiefly on account of its drying qualities, is used either alone or with other pigments, for painting, coating, or varnishing; its applications are numerous and most important, — such as, for instance, for umbrellas, water-proof cloth and coats, made of paper, for paper imitations of leather, for mixing with lacquer, and for many other purposes" (Jap. centen. comm. 57). Transported to Europe, *P. ocymoides* is described by Arduino ii. pl. 13, and Linnæus (Pers.).

"Apr. 23d" (Blair), the "Order of the garter" instituted as a mark of distinction by Edward III. of England.

"In this year" (Major edit. Zen. p. lxx and 53), Ivar Bardsen, a Greenland and procurator of Gardá, one of those sent by the governor to expel the Skrellings (Esquimaux) from the West Bygd, separated from the Eastern portion of the colony by an uninhabited tract of "twelve nautical miles." They "found no man either Christian or heathen, but only some cattle and sheep running wild."

Fruits large as certain "eble" apples and of excellent flavour according to Ivar Bardsen grow on the mountains and plains of Greenland — (*Oxyccoccus palustris*). The other wild fruits known to grow in Greenland are *Vaccinium uliginosum*, *V. vitis-Idaea*, and *Cornus Suecica*.

"Middle of the Fourteenth century" (Bataillard). *Gypsies* already in Wallachia, and held there as slaves. — Spreading from Moldavia into Hungary, they received the protection of king Sigismund "in 1417," and became known in Europe. In Wallachia (Paspatis in Amer. Orient. soc. vii.), the Gypsies continued in the state of slavery until 1837; and in Moldavia, until 1844.

"1350 A. D." (Pallegoix, and Mason iii. 68), beginning of the chronicles of the Siamese; who separating from Cambodia, now become an independent nation.*

"In this year" (Klapr. note to San-kokf), A-y succeeded by Zai-to, of the Sio or Chang family, and now king of the Loo Choo Islands; † the "ninth" of the Tame-tomo dynasty. — His family continues reigning to the present day.

"The same year" (Crawford vii. 11), the king of Ternate instructed by an Arab adventurer in the Arabic language and in ship-building.

From early times (De Morga 205, and 285 to 342), small vessels from Borneo in the Southwest monsoon visiting Luzon, bringing among other articles "*fine camphor* which is produced in that island" (Dryobalanops), "sago," and "*tibors* and large and small jars, glazed black, very fine, of much durability and use." "Amongst the natives" on Luzon are to be found "large jars of very ancient earthenware, of a dark colour" and unknown origin, but having "marks and seals;" these jars are sold at a high price to the Japanese, who have found out that tea "does not keep or last except in these jars:" "old earthen-ware, of unknown origin, imported from Manilla or Siam, etc., was highly valued" in Japan — (Jap. centen. comm. 108). Boyle 93 found among the Dyaks of Borneo the best quality of tiber jars called "gusih" valued at "fifteen hundred to three thousand dollars, the second kind four hundred dollars" (note to Stanley edit. De Morga 285).

The city of Manila probably therefore in existence.‡

As early possibly as this date (see addit. art de verif.), by the Inca Pachacutec, conquest of the

* *Blumea grandis* of the Siamese countries. "An impure *camphor*" made by the people of Tavoy from the "pung-ma-theing" weed, as early perhaps as this date: — Mason v. p. 483 further states, that the weed "grows six to eight feet high," and abounds throughout Burmah, springing up wherever the forest is removed; is described by Wallich; but "O'Riley was the first" to refine the product, and manufacture an article pronounced by competent judges identical in all its properties with Chinese camphor.

† *Rhus succedanea* of the Loo Choo Islands. The *wax tree*, called in China "niu-tching" (Camp.), originally imported from the Loo Choo Islands — (according to Jap. centen. comm. 56), but at present cultivated all over Japan, as well as in China (Campion addit. Stan. Jul): "the art of *candle-making* is said to have been introduced from Loo Choo" into Japan "towards the end of the Sixteenth century:" *R. succedanea* was observed in Japan by Thunberg. Transported to Europe, is termed "*toxicodendrum altissimum*" by Miller.

The *wax insect* (. . .) became known in China and was first placed on *R. succedanea* under the Youen dynasty (Nong-tching-tsiouen-chou, Li-chi-tchin, Siu-kouang-ki, and Campion add. Stan. Jul. industr. chin.).

Ligustrum ibota of Japan. A *wax insect* feeding on it "very much like or perhaps identical with the Chinese *pela*," — secreting "lumps of a slightly transparent white wax of a crystalline construction, and a very high melting point," but "of little industrial importance, not being abundant" (Jap. centen. comm. 57).

Cinnamomum pedunculatum of Japan. A tree "yielding a kind of vegetable tallow," — but at present "seldom cultivated," on account of its evergreen foliage casting "too much shadow" on "plants cultivated underneath" (Jap. centen. comm. 56): observed in Japan by Thunberg 177 (Pers.).

‡ *Ixora manila* of the Philippines. A shrub or small tree, growing among the mangroves, and called in Tagalo "nilar" or "nilad" (Blanco); and giving its name to the new city, "manilad" signifying a place where this tree abounds: — observed by Blanco.

valleys of Pachacamac, Rimac so named from a speaking statue, Chancay, and Huaman; all under the rule of Cuysmancu, who submitted to the conditions of peace.*

Among other objects of worship was "the fox, which they respected for his cunning and sagacity" — (G. de la Vega vi. 30).

"1351 A. D." (Gaubil, and Pauth. p. 373), by Chun-ti III., extensive works undertaken to change the course of Hoang-ho river.

"In this year" (Major pr. H. 34), the "Isola de la Legname" (Madeira), "Porto Santo," "Isola deserte," and the Azores, on a map made by a Genoese, — and now in Florence.

"March 20th (= 752 A. H. Moharram 21" of Ferishtah, as. res. vii. 175, and Elph.), Mohammed Toghlaq succeeded by Firuz Toghlaq now sixteenth sultan of Delhi. — In "1356," he received embassies from Bengal and the Deccan, thus acknowledging their independence.

"About five hundred years ago" (Campbell, and Royle fibr.), the art of making *paper* introduced from China into Nepal: † — "many of the books in Nepal written on this paper are of considerable age" (Drur.).

"1352 A. D. (= 2012th of Synmu," art de verif.), Siukouo succeeded by Kouo-gen II. or Go-Kouo-gen, now daïro of Japan.

"The same year" (Pauth. 374), in China, remarkable *earthquake* at a city of Chen-si, continuing a "hundred days:" discovery of "five hundred bows, nine to ten feet long," and of a pattern unknown to antiquity. And in the same year, beginning of the rebellion of Tai-tsou against Chun-ti III.

"The same year" (Alst. p. 307, and Blair), the Turks entering Macedonia in numbers and disturbing the country, first establish themselves in Europe.

"Dec. 18th" (Alst., and Nicol.), Clemens VI. succeeded by cardinal Stephen Aubert, now Innocentius VI., forty-third pope. Charles IV. ruling Germany and Italy; and John II., France.

"The same year," Ebn Batuta journeying from Sigilmasa South across the Sahara. At Abu Latin, the first district of Sudan, the sister's son is the heir; a custom witnessed by him "only among the infidel Hindus of Malabar." Thence, after "ten days," he reached the village of Zaghari, "large and inhabited by black merchants" (*Barabra*), together with "a number of Whites of the Ibazia sect of heretics;" and next, the town of Karsanju on the "great river" (Niger). Thence the river flows to Kabara; Zaga (Sego), the inhabitants of which were the first to embrace Islamism; Tambactu, and Kawkaw, both of which places he visited; Muli, "the extreme district of Mali; and Yuwi, "the greatest district of Sudan," where white persons are killed if they attempt to enter. At Mali (Melli of Leo Africanus, and Denham), high trees and rain water were abundant. — Returning Northward, Ebn Batuta visited Bardama, Nakda, the *copper* mines, the territories of: Hakar where the inhabitants are Berbers, and next reached Sigilmasa.

1354 A. D. (= "3d year of Kouo-gen II.," art de verif.), visit of the cubo Takaushi to Kouo-gen II.

1355 A. D. (= "4th year of Kouo-gen II.," art de verif.), the cubo Takaushi sent by Kouo-gen II. to quiet disturbances.

"The same year" (Alst. p. 397), at Rome, Charles IV. crowned emperor by two legates from the pope: after having promised to depart immediately afterwards from Rome and Italy.

"In this year" (Spreng.), Jacobus de Dondis, according to his own account, writing.

Cnidium apioides of central Europe. The *Siler montanum* of Jacobus de Dondis — is referred here by Sprengel: *C. apioides* is described by Tilli hort. pis. pl. 39; is termed "laserpitium silaifolium" by Murray (Steud.); was observed by Villars in Dauphiné; and is known to grow in rough stony places in Carniolia and Austria (Jacq. austr. app. pl. 44).

"1356, May 16th to 24th" (Nicol.), a synod in London. "A tenth of the revenues of the clergy" granted to the king for one year.

"Sept. 19th" (Blair), the French defeated at Poitiers and their king John taken prisoner, by Edward the Black prince.

* *Salix Humboldtiana* of Western Peru. The *Peruvian willow*, a tree with ascending branches, in the distance readily mistaken for *Populus fastigiata*: the great fortress built by the Incas in the Guarco valley contains "willow beams" — according to Markham edit. Ciez. p. 259: *S. Humboldtiana* was observed by myself everywhere planted for ornament in Lower Peru. From transported specimens, is described by Willdenow (Steud.).

† *Daphne papyracea* of the Himalayan mountains. The "setburosa" or *Nepal paper-shrub* may have been at once used: — it is termed "d. cannabina" by Wallich, "d. odora" by Don fl. Nep. 68; is known to grow in Khasia, Silhet, and Nepal, in oak forests and on the most exposed parts of the most snow-covered mountains throughout the province of Kumaon. and the paper prepared from it is in great request for records in the country around, being "almost as durable as leather" (Campb., Murray in as. res., and Drur.).

Rosa multiflora of Japan and China. Climbing with diminutive flowers; and the "eglantine" described by English writers of the Fourteenth century as a trellis shrub, — termed "eglatere" by Chaucer fl. and l. 3, and according to Gerarde and other early herbalists having white flowers (Prior), may be compared: *R. multiflora* is described by Duhamel, Poiret, and Curtis bot. mag. pl. 1059. Eastward, was observed by Lush under cultivation at Dapoorree near Bombay (Graham); by Thunberg, in Japan. By European colonists was carried to Northeast America, where it continues in gardens.

"1357 A. D." (Alst. p. 226), Orchan succeeded by his son Murad or Amurath, third Turkish sultan.

1359 A. D. (= 1355 + "4 years," art de verif.), Takaudsi succeeded by his son Josisaki, now cubo of Japan; to whom the title of dai-seogun was confirmed by Kouo-gen II., — and subsequently, to his successor Joosimitz.

"In or about this year" (Nicholaus Brigan coll., and Way appen. pr. pm.), the Campus Florum vocabulary * compiled at Miram vallem; a place much frequented by devout monks.

Carex arenaria of Northern Europe and Asia. Called in Britain with other rigid species *stare* or *starr*, in Denmark "stär" or "stär-gräs" (Prior), in Iceland a rigid kind "stör" (Ihre, and Way), in which we recognize the "stare" or "cegge" identified by Galfridus pr. pm. with the CÆRIX of the C. F. vocabulary — (Way): *C. arenaria* is described by Micheli pl. 33. f. 4; is known to grow in drifting sand from the Mediterranean and the Atlantic shore of France as far as Sweden (Pers., and Wats.); was observed on Iceland by Hooker.

Carex paludosa of Northern Europe and Asia. — The "segge" or "star of the fen" of Galfridus pr. pm., may be compared: *C. paludosa* is described by Goodenough; is termed "c. rigens" by Thuillier; and is known to grow in marshes throughout middle Europe (Curt lond. iv. pl. 61, and Pers.). Eastward, was observed by Sibthorp in marshes around Constantinople.

Tremella nostoc of Europe and Northern Asia. Called in Britain *star-shot* or *star-jelly*, and the ASSUB of the C. F. vocabulary, — identified by Galfridus pr. pm. with "sterre slyme," is referred here by Way: *T. nostoc* is termed "t. terrestris sinuosa pinguis et fugax" by Dillenius musc. pl. 10; and is known to make its appearance after rain throughout Western Europe (Engl. bot. pl. 460). Eastward, was observed by Sibthorp in Greece, on the island of Zacynthus.

"The same year" (De Wailly pl. ix. 4), the colon (:) used in manuscripts of this date.

"1360 A. D." (Hakl., and Churchill coll.), Nicholas of Linn, a friar and astronomer, sailing to "the most Northern islands of the world; where leaving his company he travelled alone, and made draughts of all those northern parts, which at his return he presented to king Edward III." — Four other voyages were made "into those parts" by Nicholas of Linn.

"1361 A. D." (art de verif.). Hassan succeeded by Mohammed El-Mansur, eighteenth Memluk sultan of Egypt. A gold coin issued at Cairo by Mohammed El-Mansur, is figured in Marcel p. 174.

"The same year" (Siguenz., Cavig. giving 1353), Acamapitzin elected king by the Aztecs: the beginning of the Mexican empire. †

* *Saxifraga aizoides* of Arctic and Subarctic climates. With other species called in Britain *saxifrage* (Prior), and perhaps included in the SAXIFRAGIUM or SAXIFRAGIA of the C. F. vocabulary, — identified by Galfridus pr. pm. with the "saxifrage herbe:" *S. aizoides* is described by Linnaeus; is known to grow on the Pyrenees and mountains of Switzerland and middle Europe, and from Scotland and Ireland throughout Northern Europe to Lapland, Spitzbergen, and Iceland (Smith brit. i. p. 432, Pers., Hook., Dec., and Wats.). Farther West, was observed by Parry on Igloodik in the Arctic Sea; is known to grow at Lat. 64° in central North America, and farther South on the Rocky mountains (Hook.), in Labrador and Newfoundland (Pursh), in Northern Michigan and on Willoughby mountain in Vermont, ceasing at about 43° 30' "near Oneida Lake" (A. Gray).

Alnus incana of Subarctic climates. Called in Britain *hoary alder* or in the North *eller* (Way), and the "oryelle tre" identified by Galfridus pr. pm. with the ALNUS of the C. F. vocabulary, — may be compared: *A. incana* is termed "a. folio incano" by Parkinson p. 1409; and is known to grow from France throughout Northern Europe (Pers.). Eastward, was observed by Chamisso in Kamtschatka and on the opposite American coast at Kotzebue's Sound, by Mertens at Norfolk Sound; farther East, is known to grow from Wisconsin to New England and on the Alleghanies in Pennsylvania (Pursh, A. F. Mx., Nutt., and A. Gray); has been observed by myself from Lat. 48° on the Lower St. Lawrence along the Atlantic ceasing at about Lat. 41° 30' beyond Boston.

† *Piqueria trinervia* of Mexico. A small Ageratum-like herb called in Mexican "xoxonitztal" or "yoloxilitic" (Lindl.), and from early times used as a remedy in intermittent fevers: — observed by Moçino and Sessé on rocks near Santa Rosa de la Sierra, Xalapa, and many other parts; and according to Steudel was known to Ruiz in Peru. Transported to Europe, is described by Jacquin ecl. i. pl. 48, and Cavanilles iii. pl. 235 (Pers.).

"1362 A. D." (Blair), by Edward III. in his fiftieth year, as a favour to his people, law-pleadings changed from French to English.

"September" (Alst., and Nicol.), Innocentius VI. succeeded by William de Grimoard de Beauvoir abbot and lord, now Urbanus V., forty-fourth pope.

"In or about this year" (Way ed. pr. pm. 318), the Vision of Piers Plowman composed. — A revision was made by the author "in 1377," and a second revision "between 1380 and 1390," (Skeat ed.).

"1363 A. D." (Alst. p. 307), Joannes V. made tributary to the Turkish sultan; whose consent from this time became indispensable to the inauguration of Byzantine emperors.

"The same year" (art de verif.), Mohammed El-Mansur succeeded by Schaban-Aschraf, nineteenth Memluk sultan of Egypt. A coin issued by Schaban-Aschraf, is figured in Marcel p. 175.

"1364 A. D." (Alst. p. 234 and 375), in the presence of the cardinals and pope, an oration by Nicolaus Orem, Against the corruptions of the priesthood. In France, John succeeded as king by Charles V.: who wrote against the tyranny and rapacity of the popes, and caused the scriptures to be translated into French.

One hundred and seventieth generation. Sept. 1st, 1367, onward mostly beyond youth: the Persian writers, Aly Ben Hussen of Bokhara wr. 1368, Abd al Cuvvy Ben Shedad wr. 1376 (Ainsl.): the Arab writer El-Demiri d. 1405 (Pouchet): the Greek writer Catacuzenus d. 1375: Joannes Taulerius, Joannes Rusbrochius; Matthew of Westminster; Froissart; Nicholas Flamel: the scholastic theologians, Henricus de Hassia, and Marsilius ab Ingen: the Italian poets, Petrarch, and Boccaccio: the naturalists, Gaston Phoebus d. 1391, Corbichon (Pouch.): the botanists, Conradus de Megenberg, John Bray, John Arden: the painter Stefanone d. 1390.

"In this year" (Humb. cosm. ii.), the Azores Islands, previously discovered by the Normans, represented on Picignano's map of the world.

"The same year (= ann. Saca 1290," C. Mackenzie as. res. ix. p. 270), date of a Jain inscription at Belligola, under the reign of Bucca-rama.

"1368 A. D. = 'houng-wou,' 1st year of" Tchou-youan-tchang, now "Tai-tsou IV., head of the new dynasty of the Ming" (Chinese chron. table). The power of the *Lamas* now disappeared from China.

"1369 A. D." (Maunder), at Paris, the Bastille, a fortress and prison, commenced by Charles V. — The structure was completed in "1383."

"In this year (= 2d of the houng-wou," geogr. Chin. transl. Klapp. p. 37), tribute and his submission sent by Tchhang king of Corea to the Chinese emperor; who confirmed him in his title of king.

"In the first years of his reign" (Pauth. 388, and 398), Tai-tsou IV. received ambassadors from "forty" different foreign kingdoms; including besides Corea, Japan, the island of Formosa, "iles de l'Australie," Sien-lo or Siang, bringing a letter written in golden characters; and from another country, bringing a *lion*, said to be the first one seen in China.

"1370 A. D." (Alst. p. 375, and others), John Wiclef, translator of the bible into English, now writing openly against the pope. The papal authority from this time began to be directed against individual members of the church.

In this year (= "3d year houng-wou of Tai-tsou," Remus. mel. iii. 89), arrival in China of Kouotching, ambassador from Cambodia.

"In this year" (Velasco, and Markh.), Duchicala succeeded by Atauchi Duchicala, now thirteenth scyri of Quito.

"Dec. 30th" (Nicol.), Urbanus V. succeeded by cardinal Peter Roger the younger or Gregorius XI., forty-fifth pope.

Interments in the cave of Gruta das mumias, about twenty miles from Juiz de Fora in Southern Brazil (Hartt in am. nat. 1875), as early perhaps as this date.*

* *Gossypium Brasiliense* of Tropical America. One of the bodies wrapped in a hammock of coarse cotton threads, united "at intervals of a foot or more by transverse threads:" — the hammocks "ini" or "inni" seen by Lerijs "in 1556" in Brazil were made of cotton thread, sometimes like a net, sometimes woven into a close cloth; the same name for hammock is given by Stade, but could not be found by Hartt in the Tupi, Maués, nor Mundrucu vocabularies: *G. Brasiliense* was observed by Macfadyen i. 72 on Jamaica, both wild and cultivated (A. Dec.).

Cecropia sp. of Southern Brazil. The burial urns covered outside with a sort of basket-work of the bast of "embauba tinga" — (Glaziou and Hartt).

Astrocaryum tucum of Southern Brazil. A palm, and one of the bodies wrapped in a hammock made of its fibres — (Glaziou, and Hartt), a material perhaps no longer used for this purpose.

Geonoma pinnatifrons of Eastern Equatorial America. A palm, and fragments of its pinnules found around one of the bodies — (Glaziou, and Hartt): *G. pinnatifrons* is known to grow as far as Caraccas (Pers.). From transported specimens, is described by Willdenow.

"1371 A. D. (= 4th year houn-g-wou of Tai-tsou," Remus. mel. iii. 89), a letter and tribute sent to China by Hou-eul-na, king of Cambodia.

"In this year" (Vincent's ed. Haydn). David II. son of Robert Bruce succeeded by Robert II., of the Stuart family, and now king of Scotland.

Carduus nutans of Europe and the adjoining portion of Asia. Called in Greece "gaitharagkathō" (Sibth.), in Britain *musk thistle* or *Scotch thistle*, and usually regarded as the badge of Scotland in the national arms (Prior); the "thistle," the badge of the Stewart clan* — (Vincent's ed. Haydn), is first mentioned as the badge of Scotland in a poem by Dunbar in 1503 (Pinkert.): *C. nutans* is described by Tournefort inst. 440; and is known to grow in France and throughout middle Europe as far as Denmark (fl. Dan. pl. 675, and Pers.). Eastward, was observed by Sibthorp, and Chaubard, in fallow ground in the Peloponnesus. By European colonists, was carried to Northeast America, where it has been found by Porter in "fields near Harrisburg, Penn." (A. Gray).

Onopordum acanthium of Europe. Called in Germany "eselsdistel," in Italy "scardiccione" (Lenz), in Britain on the Eastern Border *Scotch thistle* (G. Johnston, and Prior), and an allied species in Greece "gaitharagkathō" (Sibth.): possibly therefore the "thistle" in question: — *O. acanthium* is described by Tragus f. 324. and Dodoens 721 (Spreng.); is termed "*carduus tomentosus acanthi folio vulgaris*" by Tournefort inst. 441; was observed by Scopoli in Carniolia (Steud.); and is known to grow in Italy and throughout middle Europe as far as Denmark (flor. Dan. pl. 909, and Pers.). Eastward, was observed by Sibthorp in waste ground in Greece, but extremely rare. By European colonists, was carried to Northeast America, where it continues along roadsides and to all appearance naturalized on the seashore of New England.

"1372 A. D." (Blair), the English defeated in *naval combat* by the Spanish admiral Boccanegra.

"The same year" (ann. Jap., and art de verif.). Kouo-gen II. succeeded by his kinsman Jensu II. or Go-Jensu or Go-yen-yo, now one hundredth dairo of Japan.

"1373 A. D." (Pauth. 395), in China, edict of Tai-tsou IV., prohibiting women from becoming "kou-tseu" or bonzesses before the age of "forty."

"In this year" (= 6th year houn-g-wou of Tai-tsou," Remus. mel. iii. 92), tribute sent to China from Cambodia.

"1374 A. D." (Humb. cosm. v.), the Catalanian map, containing the mountain lake of Issikul on the Northern slope of the Thian-shan: — a lake lately for the first time visited by Russian travellers.

As early perhaps as this year, a fortified temple built by the Calmuk prince Ablai on the Upper Irtych. — The ruins, situated South of the Russian frontier, were visited by Sokolof, who found among them human figures with "ten faces and seven arms" (Braminical), and remnants of Mongol and Tangout writings on paper and birch bark.

Calamagrostis arundinacea of Northern Europe and Asia. A grass called in Sweden "pip-hwen" (Linn.), and from early times woven by the Calmuks into mats for covering their dwellings — (Gmel.): termed "*gramen avenaceum montanum panicula angusta e dilutissimo fusco albicante et papposa*" by Scheuchzer hist. 507 (Linn.); observed by Linnæus in Lapland and Sweden; by Roth i. 33 in Germany; and by Gmelin in Siberia.

* *Rubus chamæmorus* of Subarctic climates. Called in Britain *knot-berry* or *cloud-berry* (Prior), and the "cloud-berry bush" enumerated as the badge of the M'Farlane clan — (Vincent's ed. Haydn) may be compared: *R. chamæmorus* is described by Gerard p. 1368; is known to grow from the mountains of Scotland, Bohemia, and Silesia, throughout Northern Europe as far as Lapland and Iceland (Lightf. pl. 13, Pers., Hook., and Wats.). Eastward, is known to grow on the Ural mountains and throughout Siberia as far as Kamtchatka (Gmel., and Pall.). Farther East, on Unalascha and from Bering's Straits along the shore of the Arctic Sea, and Southward to Lat. 52° at Lake Winnipeg (Hook., and Drumm.), Hudson Bay (Mx.), Newfoundland (Lapyl.), the Lower St. Lawrence (observed by myself), the mountains of New England (Pursh, and A. Gray), and along the Atlantic ceasing at about Lat. 44° (Josselyn).

Scirpus cæspitosus of Arctic climates. Called in Britain *deer's hair* (Prior): the "deer-grass" enumerated as the badge of the M'Kenzie clan — (Vincent's ed. Haydn) may be compared: *S. cæspitosus* is described by Linnæus; and is known to grow on the Pyrenees, Alps of Switzerland, and mountains of Northern Europe as far as Lapland and Iceland (Pers., and Dec.). Eastward, is known to grow in Northern Asia (Wats.). Farther East, in British America and Greenland (Wats.), also on the alpine summits of the Adirondacks and mountains of Maine (A. Gray), and observed by myself on the White mountains.

Lycopodium dendroideus of Northern Europe and Asia. Called in Britain *fir-moss* (Prior), and the "fir-clubmoss" enumerated as the badge of the M'Rae clan — (Vincent's ed. Haydn): *L. dendroideus* is described by Linnæus; and is known to grow throughout Northern Europe.

Glycyrrhiza asperima of the Uralian plains. Growing in the most arid parts of the Desert towards the South, and from early times its leaves used by Calmuks as a substitute for tea — (Pall. trav. i. 513 to 767).

Phlomis tuberosa of the Uralian plains. Called by the Calmuks "bodmon sok" (Pall.), and from early times its root cooked and eaten by the Calmuks; — observed by Buxbaum cent. i. pl. 6, and Pallas i. 235 to 513 as far West as the Lower Volga. Probably by European colonists carried to Northeast America, observed by Hadley and Dewey on the "shore of Lake Ontario near Rochester" (A. Gray).

Saxifraga crassifolia of the Altaian mountains. Called "badan," and from early times its leaves used by the Mongols and Bouriates as a substitute for tea — (Klapr., and Ainsl. mat. ind. i. 1. 228); according to Pallas iii. 271, used especially for this purpose when commerce with China was interrupted for some years, and called throughout Siberia "Tschargirskoï-tchai" from the source of commercial supply: *S. crassifolia* was observed by Gmelin pl. 66, and Pallas, on the Altaian mountains.

Hedysarum fruticosum of the Mongolian plains. A clustered shrub from early times valued as affording feed for horses: — observed by Gmelin iv. pl. 22 in Siberia; by Pallas iv. 367 to 717, frequent on sandy hills on the Upper Selenga and at Chailassutu in Daouria.

Caragana pygmaea of the Mongolian plains. Called on the Upper Selenga "zolotarnik," known from early times, — observed by Pallas iv. 370.

Caragana spinosa of the Mongolian plains. A thorny bush called by the Mongols "altaganah" (Pall.), and known from early times: — observed by Laxman on the Upper Yenisei; by Pallas iv. 397 to 716, on the Selenga, said to abound around Pekin, and suitable for hedges.

Campanula lilifolia of the Mongolian plains. Called by the Saigak Tartars "sondjællass" (Pall.), and its root eaten from early times: — observed by Gmelin iii. pl. 26 in Tartary and Siberia; by Pallas iv. 502, on the Upper Yenisei.

Cirsium serratuloides of Siberia. Called in Greece "agriözöhös" (Forsk.), by the Saigak Tartars "epschoek" (Pall.), and its root eaten from early times: — observed by Gmelin ii. pl. 22 and 23 in Siberia; by Pallas iv. pl. 502, on the Upper Yenisei. Westward, is termed "*cirsium angustifolium non laciniatum*" by Tournefort inst. 447; was observed by Forskal, and Sibthorp, near Belgrad in the environs of Constantinople; and is known to occur as far as Switzerland and Montpellier (Jacq. austr. pl. 127, and Pers.).

Potentilla rupestris of Europe and Northern Asia. Called by the Mongols and Bouriates "khal-talsa," and from early times used as a substitute for tea — (Klapr., and Ainsl. mat. ind. i. 1. 228); also in Siberia, where it is called "polevoï-tchai" prairie tea, and was observed by Pallas iii. 395. Westward, is termed "*quinquefolium fragiferum*" by C. Bauhin pin. 326, "*fragaria rupestris*" by Scopoli, and is known to grow as far as France and Britain (Jacq. austr. pl. 114, Lam. fl. fr., and Smith fl. brit.).

Artemisia tanacetifolia of the Uralian plains. Called by the Katschintzi Tartars "irven," and from early times employed in perfuming and consecrating annually a black stallion to "Tous" or the Evil one, — observed by Pallas iii. 433 on barren mountains on the Upper Obi; by Allioni pl. 10, and Villars iii. 248, as far West as the mountains of Piedmont and Dauphiny (Pers.).

Leonurus lanatus of the Mongolian plains. Called on the Upper Yenisei "gremiasscha" (Pall.), and used medicinally from early times: — observed by Gmelin iii. pl. 54 in Siberia; by Pallas iii. 441, near Abakansk on the Upper Yenisei.

Caragana arborescens of the Mongolian plains. A bush called by the Mongols "altaganah," and known from early times, — observed by Pallas iv. 145 frequent on the Selenga.

Stipa capillata of the Mongolian and Uralian plains. A grass called by the Mongols "chilgona," and from early times valued as feed for cattle, — observed by Pallas iv. 144 in a plain bearing its name on the Selenga. Westward, by Sibthorp around Constantinople, and is known to occur as far as Germany and France (Scheuchz. gram. pl. 3, and Lam. fl. fr.).

Iris dichotoma of Daouria. Called by the Mongols "chaittschi," and its root used from early times against toothache, — observed by Messerschmid (Amm. 103 n. 135), and Pallas iv. 333 to 685, in Daouria.

Rhamnus erythroxylum of East Siberia. Called by the Mongols "iaschihi," and from early times its wood used for niches for their divinities, — observed by Pallas iv. 367 on the Selenga.

Lilium pomponium of Eastern Asia. Called by the Saigak Tartars "akschep," and the month of June "aktschep-ai" by the Beltires from being the season when the root is chiefly collected for food, — observed by Pallas iii. 431 and iv. 274 to 501 from the Upper Yenisei to Daouria; by Cleyer ii. 9. 76. f. 20, in China or Japan (Spreng.). Westward, is described by Clusius (Spreng.), Miller pl. 65, and Knorr del. i. pl. 4.

"1375 A. D." (Nicol.), the Turkish sultan Murad menacing Italy; a synod at Winuwski, To extend aid to the pope.

As early as 1376 A. D. (= "twenty-six years ago" in lett. Anton. Zen.), four fishing-boats driven by a storm "more than a thousand miles Westward from Frislanda" (the Faeroe Islands) to an island called Estotiland (Iceland?), the inhabitants very intelligent and "possess all the arts like ourselves," derived it is believed from former intercourse with our people, for "he saw Latin books" which they of the present generation do not understand, but "have their own language and letters: "their "foreign intercourse is with Greenland, whence they import *furs*, *brimstone*, and *pitch*." — The fisherman and his companions brought knowledge of the *compass*, and after a stay of "five years" were sent "with twelve boats to the southwards to a country which they called Drogio: "here most of the party were massacred, the remainder saving themselves through knowledge "of taking fish with nets; " * but the report spreading excited jealousy, and they were passed from tribe to tribe during "thirteen years" through the hands of "more than five and twenty chiefs. for they were continually fighting amongst themselves" (compare the uniformity of stitch in the fish-nets of Europeans and the American and Polynesian tribes). The fisherman describes the country as very great "and as it were a new world; the people are very rude and uncultivated, for they all go naked and suffer cruelly from the cold, nor have they the sense to clothe themselves with the skins of the animals which they take in hunting: they have no kind of metal: they live by hunting, and carry lances of wood sharpened at the point: they have bows, the strings of which are made of beasts' skins: they are very fierce, and have deadly fights amongst each other, and eat one another's flesh: they have chieftains and certain laws among themselves, but differing in the different tribes: the farther you go south-westwards, however, the more refinement you meet with, because the climate is more temperate," and "in those parts they have some knowledge and use of gold and silver" (copper?). Leaving his companions, who were unwilling to make the attempt, the fisherman escaped "through the woods," and "passing from one chief to another," his former acquaintances, "after a long time" reached "Drogio, where he spent three years." At length boats arrived from Estotiland; in which he took passage, and trading in company became rich enough to fit "out a vessel of his own," and "returned to Frislanda."

"In the reign of Edward III." (Major pr. H. 55, and Galvan.) an Englishman named Robert Machim having run away with a woman and embarked for Spain, the ship was driven by a storm to an unknown island (Madeira); and Machim with others landing, were abandoned. The woman dying,

* *Apocynum cannabinum* of Northeast America. Called by the colonists *Indian hemp*, by the natives on the Lower Mississippi "enequen" (Alvarad.): probably the material used by the fishermen in teaching the natives how to make fish-nets: — natives wearing a covering of *Tillandsia* moss interwoven with cords of "canape silvestra" were seen by Verrazanus at 34° on the Atlantic: "cannabis" growing wild, by Hariot on the Roanoke (De Bry i. 8): "hemp," by Newport on James river: fishing-nets of "chanure" growing in their own country, by Jacques Cartier in the Bay of St. Lawrence, in the possession of natives from the South: and fish-lines "of their owne hempe" and strong sturgeon-nets, according to W. Wood ii. 16, were made by the natives near Plymouth: *A. cannabinum* was observed by Oakes from Lat. 42° 30' along the Atlantic; by myself, frequent in peninsular New Jersey, upright, three feet or more high, and the flowers greenish; by Baldwin, as far as Matanzas in Florida; by Chapman, in "dry or damp soil, Florida, and northward;" by Beck, near the mouth of the Missouri. Transported to Europe, is described by Morison xv. pl. 3 (Pers.).

Apocynum hypericifolium of Northeast America. An allied species with small pearly-white flowers, — observed by myself at 44° on the Pemigewasset, in two forms, upright three feet high, and the other form depressed; known to grow throughout Canada as far as 54° on the Saskatchewan (Drumm., and Hook.). Transported to Europe, is described by Aiton, and Jacquin hort. iii. pl. 66 (Pers.).

Apocynum androsæmifolium of Northeast America. The *American dogbane*, known to the natives from early times: — of the "two kinds of herbes" growing around Salem and said to be "good to make cordage," the "very sweet" flowers observed by Higgeson (hist. coll. i. 121) clearly belong to this species: *A. androsæmifolium* is known to grow from Hudson's Bay and 54° on the Saskatchewan throughout Canada (Hook., and Drumm.); has been observed by myself along the Atlantic to 38°; by Pursh, from Canada to Carolina (Ell.); by Chapman, in "rich soil, North Carolina, and northward."

Asclepias incarnata of Northeast America. Also called by the colonists *Indian hemp*, and said to have been used by the natives for bow-strings, — "the fibres of the bark are strong and capable of being wrought into a fine soft thread, but it is very difficult to separate the bark" (Cutl. p. 424): *A. incarnata* was observed by myself frequent on the marshy borders of streams from 43° to 38° along the Atlantic; by Schweinitz, at 36° in Upper Carolina; by Chapman, in Upper Georgia; by Michaux, in Illinois; by Beck, on the Mississippi at St. Louis; and by E. James, on the Platte.

a chapel was erected for her tomb, bearing an inscription; — and Machim and his companions having made “a boate all of a tree, the trees being there of a great compasse about,” went to sea and were drifted upon the African coast “without saile or oar.” The Moors “tooke it for a miracle, and presented him” to their king; who in turn “sent him and his companie unto the king of Castile,” Henry III. of Spain reigning “in 1393.” The news brought by Machim, and by “the ship wherein he went” to the island, “moued many of France and of Castile to goe and discover it.”

Laurus Indica of Madeira. Probably the tree “of great compasse about” whose trunk was made into a boat: — Cadamosto found fine timber on Madeira, and elegant tables exported by the Portuguese: *L. Indica* was observed by myself, a large tree in the Madeira forest. Transported to Europe, is described by Plukenet alm. pl. 304, and Seba ii. pl. 84.

“1377, Jan. 17th” (Alst., and Blair), the Italians exhibiting signs of defection, the seat of the papacy removed from Avignon back to Rome by Gregorius XI.

“Feb.” (Skeat ed. Piers Plowm.), jubilee in England, Edward III. having “attained the fiftieth year of his reign.” He died “June 21st.” and was succeeded by Richard II.

“The same year” (art de verif.), Schaban-Aschraf succeeded by Ali El-Mansur, twentieth Memluk sultan of Egypt.

“The same year” (Crawford vii. 11), among the kings of the Moluccas the first rank acquired by the king of Ternate Kamala Pulu, — who after a long and prosperous reign established the succession in his own direct line.*

“1378, Apr. 9th” (Nicol.), Gregorius XI. succeeded by archbishop Bartholemew Prignano, now Urbanus VI., forty-sixth pope. Richard II. ruling England; Robert II., Scotland; and in this year (Alst.), Carolus IV. succeeded by his son Wenceslaus, as emperor of Germany and Italy.

“In this year” (Humb. cosm. i. 1), a comet recorded in the Chinese table. — (Halley’s comet, see A. D. 1456).

“1379 A. D. (= 12th year houng-wou of Tai-tsou,” Remus. mel. iii. 92), an ambassador and tribute sent to China by Thsan-tha-kan-wou-tche-the-tha-tchi, king of Cambodia.

“1380 A. D.” (Skeat ed. P. Plow., quart. rev. for 1870), the translation of the New Testament into English by John de Wycliffe completed. Assisted by his friend Nicholas of Hereford, he continued the work, — and finished the translation of the Old Testament before his death “in 1384.”

“In this year (= 13th year houng-wou of Tai-tsou,” Remus. iii. 92), tribute sent to China from Cambodia.

“In or about this year” (Markham edit. Ciez. p. 269), after the conquest of the Huanca nation by Capac Yupanqui, brother of the Inca Pachacutec, the inhabitants of the district of Caxamarca induced partly by conquest and partly by conciliation to come under the rule of the Incas.

“1381, June” (Blair, and Skeat), insurrection in England, led by Watt Tyler.

“The same year” (art de verif.), Ali El-Mansur succeeded by Hadgi Saleh, twenty-first Memluk sultan of Egypt.

“1382, May” (Nicol.), a synod in London; and “Nov. 18th,” one at Oxford. Against the Wicleffites or Lollards.

“In this year” (Bontier 40, and Major edit. Bethenc.), Francisco Lopez in sailing from Seville to Galicia driven by a storm to the Great Canary Island, where he and twelve companions were amicably received, — but at the end of “seven years,” were put to death from mistrust of the information they had sent to the Land of the Christians.

“The same year” (art de verif.), Hadgi Saleh deposed; and succeeded by Barkook. — Some years later, Hadgi Saleh was recalled to the throne, and soon afterwards put to death. In him, the Bahrite dynasty became extinct.

* *Cinnamomum culilawan* of the Moluccas. A tree furnishing the genuine *culilawan bark*, from early times employed medicinally by the natives — (the so-called “culilawan bark” of commerce being a mixture of Indian barks): *C. culilawan* is known to grow on Amboyna, but not beyond on the Papuan islands, nor Westward as far as Java (Blume rum. pl. 9 and 10, and Lindl.). From transported specimens, is described by Linnæus sp. 530.

Cinnamomum rubrum of the Moluccas. A middle-sized tree growing with the preceding, — and its bark similar and hardly inferior (Blume rum. pl. 11, and Lindl.).

Cinnamomum xanthoneuron of the Moluccas and Papuan islands. A tree furnishing clove-scented bark — of great fragrance, extremely like and confounded with Massoy bark, but losing its quality by time (Blume rum. pl. 13, and Lindl.).

Cinnamomum sintoc of the mountains of Southern Hindustan and Java. A tree eighty feet high, its aromatic bark known from early times: — *C. sintoc* was observed by Blume rumph. xxx. pl. 12 on the higher mountains of Java, its bark according to Lindley very like “the true culilawan” but less agreeable, having “a strong odour of nutmegs” and “not so purely that of cloves.”

Barkook, head of the Borgite Memluk dynasty, introduced some changes in the administration of government. Besides a college built by Barkook; the canal Bahr Scherkieh leading through the middle of the Labyrinth, (according to Lepsius eg. and sin. 94) is also attributed to him.

A mosque and tomb were built by Barkook: from this date (Wilck. theb. and eg. 307), — the tombs of the Borgite Memluk kings are outside and Eastward from Cairo, being the mosque-like buildings so conspicuous in the Desert.

"1383 A. D." (ann. Jap., and art de verif.), Jentsu II. succeeded by his eldest son Gokomatz, now one hundred and first daïro of Japan.

"In this year (= 16th year houn-g-wou of Tai-tsou," Remus. mel. iii. 92), officials sent to Cambodia, authorized to confer titles on the king, and examine the passports of Chinese travellers.

"Not earlier than this date" (Tyrwhitt, and Way ed. pr. pm., Skeat gives "about 1387"), Chaucer writing his Canterbury Tales.

Dianthus plumarius of Switzerland and the region around. The *piggessnie* of Chaucer c. t. 3268, — referred by Prior to one or more species of *pink*, may be compared: *D. plumarius* has been long cultivated in Britain, and since the time of Ray, and Dillenius, has been found growing spontaneously in the South (Wats., and Bab.). Except in the cultivated state, is unknown in France and Westward, occurring however in Italy and Austria (Hall. helvet. 897, Koch, and A. Dec.).

"1384 A. D. = 17th year of the 'houn-g-wou' of Tai-tsou IV" (Chinese chron. table), beginning of the Sixty-eighth cycle.

"The same year" (Alst.), Joannes V. succeeded by Andronicus IV.; by consent of the Turks, sixty-fifth Byzantine emperor.

"1385 A. D." (Lubke and Lutrow), victory gained by king Juan of Portugal at Aljaruta. In commemoration, he built the church of Batalha near Lisbon.

"In this year" (J. R. Hind, and Humb. cosm. i. 1), a comet whose orbit is known from Chinese observations.

"In this year" (Spreng. hist. med. vii. 7), Joannes de Dondis, a son of Jacobus, writing the Herbolario, a botanical work. — He died in "1395."

"1386 A. D." (Lubke and Lutrow), the cathedral at Milan commenced: — finished "in 1807."

"In the time of the Inca Pachacutec" (Markham edit. Ciez. p. 242), Chimú-chanchu ruling the Yuncas in the valley of Chimú. After a long war with the Inca's son Yupanqui, Chimú-chanchu consented to abandon his own idols, "figures of fish and other animals," and "worship the sun." The remains of the city of Chimú — between Truxillo and the sea, "cover a space of three quarters of a league, exclusive of the great squares," and among the ruins is a palace built of stone and adobes "fifty yards high" (Rivero antiq. Peruv.).

"In this year (= 19th year houn-g-wou of Tai-tsou," Remus. mel. iii. 93), Lieou-min, Thang-king, and other Chinese officials sent to Cambodia with porcelain vases for the king as a recompense.

"1387 A. D." (Klapr. mem. i. 351), the Pheng hou Islands or Pescadores, between China and Formosa, ravaged and their inhabitants removed by the Chinese.

"The same year (= 20th houn-g-wou of Tai-tsou," Remus. mel. iii. 93), on the return of Thang-king and his companions, an ambassador with tribute, consisting of "fifty-nine" elephants and "sixty thousand pounds" of perfumes, sent to China by Thsan-liei-phao-pi-sie-kan-phou-tche, king of Cambodia.

"Nov. 16th" (Markham p. xxxvii), after the submission of Ispahan, a tumult excited by an inconsiderate youth: Timour in consequence ordered a general massacre of the inhabitants. He next marched to Shiraz, and had there a complimentary interview with the poet Hafiz, — who died "two years afterwards."

"In this year" (Alst.), Andronicus IV. succeeded by Manuel II.; by consent of the Turks, sixty-sixth Byzantine emperor.

"The same year" (Alst. p. 216), marriage of Sigismund son of the emperor Carolus IV., leading to his becoming king of Hungary.

"The same year" (Nicol.), a synod at Mayence. Thirty-six heretics were condemned to be burned.

"1388 A. D." (Alst. p. 226), Murad succeeded by Bajazet, fourth Turkish sultan.

"Oct. 23d (= 790 A. H. Ramzan 3" of Ferishtah, as. res. vii. 175, and Elph.), Firuz Toghlak succeeded by Gheias-u-din Toghlak II., now seventeenth sultan of Delhi.

"Nov. 10th" (Nicol.), a synod at Palermo. "For the reformation of the clergy."

In this year (= "1313 an. jav.," Raffles), Mulana Ibrahim an Arab missionary having established himself with other Mohammedans at Loran in Java, arrival there of his cousin the raja of Chermen in Sabrang bringing a daughter whom he proposed to present in marriage to king Angka Wijaya. After founding a mosque the raja made a visit to Majapahit, and returning to Loran his daughter with other relatives within a few days sickened and died and he hastily left the island. Mulana Ibrahim

remained in charge of the tombs, and the Mohammedans acquired foothold. — The tombs of the princess and three of her relatives continue to be pointed out.

In this year (= "21st year houn-g-wou of Tai-tsou," Remus. iii. 94) tribute of perfumes and "twenty-eight" elephants with their attendants sent to China from Cambodia.

"1389, Feb. (= 792 A. H., Zi Haj" of Ferisht., Elph.), Gheias-u-din Toghlak II. succeeded by Abubekr Toghlak, now eighteenth sultan of Delhi.

"In this year" (Relation du Groenl. 211), queen Margaret having united Norway and Denmark, and Henry bishop of Garde assisting in the assembly of the states in Denmark: certain merchants, accused of going to Greenland without leave and taking the queen's taxes, escaped punishment by making oath that they were driven there by a storm and brought away only purchased merchandise. — The affair however tended greatly to discourage intercourse with Greenland. Sweden was also united with Norway and Denmark by queen Margaret.

"Nov. 2d" (Alst., and Nicol.), Urbanus VI. succeeded by cardinal Peter Tomacelli, now Bonifacius IX., forty-seventh pope. Charles V. ruling France.

"In this year (= 22d year houn-g-wou of Tai-tsou," Remus. iii. 94), tribute thrice sent to China from Cambodia.

"The same year" (Clavig, and Humb. atl. pict.), Acamapitzin succeeded by Huitzilhuatl, second Mexican emperor.*

Hibiscus sabdariffa of Mexico. The *roselle* is a large annual, called in Mexican "quauhxicolt" — (Hern.): was observed by Descourtillz growing naturally in the West Indies, but by Swartz, and Macfadyen, only under cultivation. Transported to Europe is termed "sabdariffa" (the Turkish name according to Drury) by Lobel hist., "alcea americana" by Clusius rar. iv. 14. Said to grow also naturally in Guinea (Desc): observed by Grant on the Upper Nile, cultivated in Unyoro 2° N. and Ugani 3° for its seeds, bark, and leaves, its seeds roasted and eaten by the Wagani, its bark making beautiful but short cordage, and its leaves eaten as "spinage in the Land of the Moon, called there 'tocos'was.'" Farther East, is clearly an introduced plant in Hindustan, is called in Malabar "polechee," in Bengalee "mesta" (Drur.); was observed by Wight, and Graham, under cultivation, "jellies, tarts, etc. are made of the calyxes and capsules freed from the seeds," and according to Drury is planted for its fibre in Rajahmundry; by Mason, "exotic" in Burmah but "very widely diffused" and called "them-bau-khyen-boung," its "sour calyx" making "a fine flavoured jelly, and preserve, which is a good substitute for cranberries."

"In this year" (geogr. Chin. transl. Klapp. 37), Tchhang king of Corea dethroned by one of his guards Li-tchhing-kouei, and succeeded by Yao of the Wang family.†

"1390, August (= 793 A. H. Ramzan" of Ferisht., Elph.), Abubekr Toghlak succeeded by Nasir-u-din Toghlak, now nineteenth sultan of Delhi.

"In this year (= 23d year houn-g-wou of Tai-tsou," Remus. iii. 94), tribute sent to China from Cambodia.

"In or about this year (Tourn. trav. ii. 386), at the demand of Bajazet, cadis established at Constantinople, to adjudicate in cases arising between the Greeks and Turks.

"1391 A. D." (Giles six engl. chron.), a license to visit Rome obtained by Ricardus of Cirencester, after forty-one years service as a monk in the Benedictine monastery of St. Peter, Westminster.

"1392 A. D." (geogr. Chin. transl. Klapp. p. 37), Yao dethroned by Li-tchhing-kouei, who under the name of Tan now established himself king of Corea. He sent an embassy to the emperor of China, who restored the title Tchao-sian, which Corea bore when ruled by the Wang dynasty. "At this time" (Dallet p. xiii), the use of the Chinese calendar and Chronology was imposed on the

* *Hoitzia coccinea* of Mexico. With other species called "huitziltzin" (Pers.), and from early times: — known to grow here and there in Mexico, and frequent near Guanajuato (Cav. vi. pl. 365, and Lam. ill.).

Helonias frigida of the alpine summits of the mountains of Mexico. Called "savoeja," and from early times known to be poisonous: — growing on the alpine portion of Orizaba; "horses that eat it become stupified" (Schlecht. in Linn. vi. 46, and Lindl.).

† *Ginkgo biloba* of Japan. In Corea, besides the grave of Khi-tsu, a grove according to the traditionary account planted by Khi-tsu, consisting of trees having the trunk of the fir with elm-like leaves that are eaten in times of scarcity. *G. biloba* was observed by Thunberg in Japan, and is enumerated by him among the plants furnishing oil for eating and burning. Westward, a large tree, referred to the Juan dynasty, was seen by Bunge near the temple of Tan-dshe-ssy in Northern China (acad. petersb. 1835). Transported to Northeast America, a tree has continued in flourishing condition in Boston more than forty years.

Coreans : Tan or Li-tan removed the Seat of government to Han-iang or Seoul, — and his dynasty, called Tsi-tsen, continues to the present day.

"In this year" (Moomin, and Royle antiq. hind. med.), the Ikhtiarat Buddee, the earliest Persian work on medicines or *Materia Medica*, completed.

"June 17th" (Nicol.), a synod at Prague. Secular judges were "forbidden to hinder criminals condemned to death from receiving the Eucharist, if they wished it."

"1393 A. D." (Alst. p. 307, see also Talvi ii. 3), Macedonia, Thessaly, Thrace, and the principal part of Bulgaria and Mysia, conquered by the Turks under Bajazet.

"In or about this year" (Skeat ed. Piers Plowm.), Gower writing his *Confessio Amantis*.

Gentiana campestris of Europe and the adjoining portion of Asia. Included perhaps in the medicinal *balde moyne* of Gower, — identified by Galfridus pr. pm. with the "genciana," and the latter described as an "herbe" in Roy. ms. 18. a. vi (Way) : *C. campestris* is described by Linnæus ; is known to grow in Italy ("g. c. neapolitana" of Froel.), and throughout middle Europe as far as Denmark (All., Roth fl. g., Pers., Engl. bot. pl. 237, and fl. Dan. pl. 367) ; and according to Lindley is "a substitute for the officinal *Gentian*."

"1394 A. D. (= 796 A. H. of Ferisht.), Elph.), Nasir-u-din Toghlak succeeded by his son Humayun, and after "forty-five days" by a younger son Mahmud, a minor now twenty-first sultan of Delhi, — and as it proved the last

"In this year" (Pauth 398 and 405), a map of the Chinese empire completed and presented to Tai tsou IV. By a census, the population of China found to consist of "60,545,000 persons."

In or about this year, and in "July" (Major edit. Zen. p. xliii and 12), voyage of Nicolo Zeno from the Shetland Islands to Greenland. He describes the canoes of the Esquimaux, and the hot spring utilized by the monks for heating and culinary purposes, and for watering small gardens covered over in winter wherein were raised the "flowers and fruits and herbs" of more southern climates. — "Not being accustomed to such severe cold," Nicolo "fell ill, and a little while after returned to Frislanda" (the Faeroe Islands), "where he died." His brother Antonio had been with him in Frislanda "four years" remained there "ten years" longer, returned to Venice, and was dead "in 1406" (Marco Barbaro, and Zurla).

1395 A. D. = "1320 an. jav." (Raffles x.) inscribed at Majapahit on the tomb of Dara Wati princess of Champa, the date perhaps of her arrival in Java to become the wife of king Angka Wijaya. — The site of her tomb proves that she died before the destruction of the city.

"Feb. 4th" (Nicol.), assembling at Paris of the First national synod of France. "On the means of ending the schism in the church."

"The same year" (Blair), Sigismund king of Hungary defeated at Nicopolis by the Turks under Bajazet.

"In this year" (Klapr. mem. ii. 159), first embassy from the Loo Choo Islands to China. Sent by king Tchoung-chan, who received in return hereditary titles.

"1397 A. D. = 30th year of Tai-tsou IV." (Pauth. 399), publication of the *Ta-ming-lin*, a "general code of the laws of the Chinese empire under the Ta-ming dynasty."

"When Pachacutec was very old" (Salcam. edit. Markh. 97), news came to Cuzco "that a ship had been seen on the sea;" — and "after another year, a youth entered the city with a great book, which he gave to the old Inca and then disappeared."

"1398 A. D. = 1st year of Kian-wen-ti III., of the Ming" dynasty, "the restorer of the literati" — (Chinese chron. table).

"May 22d" (Nicol.), assembling at Paris of the Second national synod of France. And in a second session "July," those present resolved to withdraw their obedience from the anti-pope Benedictus at Avignon.

"Dec. 17th" (Elph.), Delhi captured and destroyed by the Mogul Tartars under Timur or Tamerlane, who was now publicly proclaimed emperor of India. — He quitted India "about the 10th of March 1399."

"1399 A. D." (art de verif.), Barkook succeeded by Faradj, twenty-third Memluk sultan of Egypt.

"The same year" (Desvergers, and Marcel), Egypt threatened by the Tartars under Tamerlane : who proceeded to overrun Syria and Asia Minor, and defeated the Turks ; thus indirectly saving the Greek or Byzantine empire.

"The same year" (Alst. p. 397), the pope rendering himself sole and absolute master of the city of Rome and changing the form of administration.

"1400 A. D." (Garc. de la Vega), Pachacutec succeeded by his son Yupanqui, tenth Inca of Peru. Who commenced the great fortress at Cuzco, after a plan left by his father.

"In the time of the Incas" (G. de la Veg. ii. 24), herbalists very famous, and among the plants employed by them were probably "chacasoconche" bark (. . .), "chenchelcoma" (*Salvia oppositiflora*), "chinapaya" (. . .), "chucumpa" (*Justicia sericea*), "huarituru" (*Valeriana coarctata*),

"llamap-flaui" (*Negretia inflexa*), "masca" (. . .); "matecllu" a water plant with leaves used for sore eyes, described by G. de la Vega ii. 25 as a foot long with one round leaf at the end, eaten raw and having a pleasant taste (. . .); "chilca" for rheumatism *Baccharis scandens*, "mohomoho" seed? of a plant (. . .), "parhataquia" (*Molina prostrata*), "panqui" (*Gunnera scabra*), and "tasta" the buds used for wounds (*Stereoxylon patens*), — all contained in the wallet of a modern chirihuanu or herb-doctor (Markh. note to ii. 24).

Krameria triandra of the Peruvian Andes. Called in Quichua "ractania" (Markh.), its astrigent root from early times used to strengthen and clean the teeth — (G. de la Vega ii. 25), also contained in the wallet of the above-mentioned chirihuanu: *K. triandra* was observed by Ruiz and Pavon i. pl. 93 in sandy situations on the declivities of the Andes. Its imported root, called *ratanhy root*, is used for medicinal purposes besides tooth-powder (Lindl.).

From the "taruca" (*Cervus Antisiensis* of high forests skirting the Andes) and other quadrupeds, *bezooars* obtained by the Peruvians in early times, — but not within the memory of G. de la Vega viii. 17.

Yupanqui "established the twelve months of the year, giving a name to each, and ordaining the ceremonies that were to be observed in each;" the first month called "hauca" and "Llusque" commencing "in the middle of May, a few days more or less, on the first day of the moon." He also built "the houses and temple* of Quisuar-cancha" at Cuzco — (C. de Molina edit. Markh. p. 11).

Tumebamba, in about 2° 20' S., became the favourite residence of Yupanqui, the remarkable temples † there were commenced by him, — and according to the natives were continued or completed by his successors Tupac, and Huayna Capac. The last-named Inca was residing here when news came of the arrival of Pizarro and his "thirteen companions" on the coast (Ciez. xlv).

Apparently as far back as the end of the Fourteenth century, "chinampas" or floating gardens first constructed on the lake surrounding the city of Mexico (Humb. iii. 8).

One hundred and seventy-first generation. Jan. 1st, 1401, onward mostly beyond youth: the Jewish writers, Rabbi Lipmann, Jacob Levi: the Arab writers, Khalil Dhaheri, Makrizi d. 1442, El-Schebi (Pouchet): the Greek writers, Manuel Chrysoloras d. 1415, Joannes Cananus d. 1422: Paulus Bergensis; John of Tornamira, Vincentius Ferrerius: the medical writers, Manfredus de Monte Imperiali, Saladin d'Asculo: the scholastic theologians, Joannes Capreolus, Thomas Valdensis, Joannes Gerson, and Augustinus de Roma: the botanist Christoph. de Honestis.

"The same year" (Lubke and Lutrow), in Spain, the cathedral at Seville commenced. — It was "finished within a century."

In the days of the Flemish painters Hubert and John van Eyck (Bryan dict. paint.), Bruges the most commercial and flourishing city of Europe.

"About the beginning of the fifteenth century" (Cogolludo, and Gayangos edit. 5th lett. Cortes p. 50), Mayapan the capital city of Yucatan captured and destroyed, the reigning dynasty overthrown, and the Itzaes from the South taking possession of the territories adjoining the lake.

* *Buddleia incana* of the Peruvian Andes. A small tree called "quisuar" (Markh.), furnishing the name of the above-mentioned temple: — *B. incana* was observed by Ruiz and Pavon i. pl. 80 along the banks of streams in Peru (Pers.).

Erythroxylon coca of the Peruvian Andes. The *coca* shrub wild to all appearance "near Cuchero and on the summit of Cerro de San Cristobal" (Poeppig), but cultivated from early times and its leaves used as a masticatory: llamas young and old were sacrificed and baskets of "coca" offered in the first month — (C. de Mol.): coca leaves were found by Hieronymus Benzoni "1542 to 1556" (Spreng.) constantly in the mouths of the Peruvians; also by J. Acosta; "in 1583," a revenue of "500,000 pesos duros" was derived from them by the government of Potosi (Lindl.); "cachos growing only on the mountains of Peru" was known to Monardes; the abundant production of coca "in the province of Jungas" is described by J. Jussieu (Lam., and A. Dec.); its cultivation, by Weddell; and its use was witnessed by myself, principally in the mining districts on the Andes.

Cantua uniflora of the Western slope of the Peruvian Andes. Called "cantut," and a portion of Cuzco called "Cantut pata" as early perhaps as this date: the beautiful flowers also woven in the garlands of novices or young knights — (G. de la Veg. vii. 1): *C. uniflora* was observed by Ruiz and Pavon in "sepibus" enclosures in Peru.

A second flower, the "chihuayhua," yellow and pink-like, intermingled in the garlands of the young knights.

A leaf of the "uñay huayna" always young, also interwoven — (G. de la Veg. vi. 27).

† *Stipa ychu* of the Peruvian Andes. A grass furnishing the remarkable enduring thatched roofs of these temples (Ciez.), and that of the circular building called "sondor-huasi" at Azangaro, — examined by Markham edit. p. 166: *S. ychu* was observed by Humboldt and Bonpland on the Peruvian Andes, and is described by Kunth.

"1402 A. D." (Abyss. chron., and M. Russel 250), Theodorus succeeded by Isaac, now king of Abyssinia. — During his reign of fifteen years, the great reservoir supplying every house in Axum with water, constructed by the abuna Samuel.

"May 1st" (Bont. i, and Major edit. Bethenc.), Jean de Bethencour, a Norman knight, having conceived the project of converting and conquering the Canary Islands, frequented for the purpose of carrying away the inhabitants as slaves, and taking with him his two chaplains Jean le Verrier and Pierre Bontier, sailing from Rochelle. After visiting Spain, where he was brought before the king's Council on a charge of piracy but was released, he sailed from Cadiz; and arriving at Lancerote "in July," was allowed to build a fort, which he named Rubicon. Passing over to the neighbouring island of Fuerteventura, he left his associate Gadifer de la Salle in general charge and returned to Spain. — He here offered homage to Henry III. for the government of the Canary Islands; the king, although he had never heard of them, granted the desired supplies, and even the privilege of coining money. Bethencourt returned to the islands in the autumn, and on "Thursday, Feb. 20th, 1404," the pagan king of Lancerote begged and received baptism, together with the name of Louis. "June 25th," an unsuccessful attack was made on the island of Grand Canary. "January, 1405," with the aid of converted natives and after much fighting, the two kings of Fuerteventura at their own request received baptism. Bethencourt now proceeded to France, and brought back a large number of emigrants; was again defeated on Grand Canary; but removed the inhabitants of the island of Ferro, and settled French in their place, and took final leave "Dec. 15th," Palma and the two largest and most populous islands, Grand Canary and Teneriffe, remaining unsubdued.

Euphorbia Canariensis of the Canary Islands and neighbouring portion of Africa, as far as the mountains of Yemen. A large cactiform *spurge* called in Yemen "kassas" or "kassar" (Forsk.); and the beautiful tree observed by Bontier 70 frequent on Fuerteventura, having branches as large as a man's arm full of milk of great medicinal value "en maniere de baulme," — is referred here by Major edit. p. 134: *E. Canariensis* is known to grow on the Canary Islands (Linn., Pers., and Lindl.). Eastward, was observed by Forskal from Djobla to Taæes on the mountains of Yemen, its milky juice taken as a purgative. Transported to Europe, the plant is described by Commelyn hort. ii. pl. 104, and Blackwell pl. 340.

Euphorbia piscatoria of the Canary Islands. A shrubby species of *spurge* called on Palma "higerilla" (Von Buch); used probably by the "fishermen" of Grand Canary: the brushwood useful for fuel and kind of wood called "hyguerres" seen by Bontier 69 to 71 on Lancerote, — may also be compared. The juice of *E. piscatoria* is used on the Canaries for capturing fish, by poisoning the water (Major edit. Bethenc. p. 131). The plant, transported to Europe, is described by Aiton ii. 137.

"1403 A. D. = 'young-lo,' 1st year of Tching-tsou-wen-ti" or Tching-tsou, "of the Ming" or Twenty-third dynasty — (Chinese chron. table, and Pauth.).

"In the 1st year young-lo" (topog. Cant.), the king of the Si-yang-koue or Nation of the Western Ocean (Orissa?) sent an ambassador; — and three years afterwards, another with tribute. In return, the emperor wrote, appointing him king of Kou-li, and sent him a seal of silver. In the fifth year, the emperor ordered one of his eunuchs to send silk for his officers.

"In this year (= 1st year young-lo," Remus. iii. 94), Tsian-pin-hing, Wang-tchhou, and other Chinese officials sent to Cambodia to publish the investiture granted to the prince of that country: whose dominion extended over certain districts where the people were entirely naked and ridiculed persons wearing clothes.

"The same year" (Alst. p. 226), after an interval of "six years," Bajazet succeeded by his son Suliman, fifth Turkish sultan.

"The same year" (Blas Valera, in G. de la Vega ii. 6), the initial point from which "the years of the last sun were reckoned" by "the people of Mexico and Peru." "All the gods that were worshipped, when the Spaniards first arrived in that land, were made and set up after the renewing of the sun in the last age: and according to Gomara, each sun of these people contains eight hundred and sixty years, though according to the account of the Mexicans themselves it was much less."

Of *musical instruments* in use among the ancient Peruvians, the "pincullu" (flute), "chhichiles" and chanares (timbrels and bells), huancar (a drum), tinya (a guitar of five or six chords), queppa (a trumpet), ccuyvi (a whistle), huayllaca (a flageolet), and chayna (another kind of coarse flute) — are enumerated by Rivero (Markh. edit. G. de la Vega i. p. 192).

"1404, May 31st" (edit. Markham 82). Ruy Gonzalez de Clavijo, ambassador from Henry III. of Spain, passing mount Ararat on his way to the court of Timour. He reached Samarcand on "Monday Sept. 8th," was received with honour, but Timour falling dangerously ill, was dismissed by the attendants "Nov. 18th," and set out on his return on the "21st." On "Thursday, the 25th of December, being Christmas day, which ended the year of our Lord 1405," he left the great city of Baubartel in Khorassan, — on "Saturday Feb. 21st" slept at Sanga, and on "Saturday the last day of February" reached Tabreez.

Triticum villosum of the East Mediterranean and Tauro-Caspian countries. Called in Greece "agriōsēkali" (Sibth.), and the "great quantities of rye" seen by Clavijo among ruins at the base of Ararat, growing "as if it had been sown by man, but it was useless and did not come to grain,"—may be compared: *T. villosum* is termed "gramen spicatum secalinum glumis villosis in aristas longissimas desinentibus" by Tournefort inst. 518, "*secale villosum*" by Linnæus; is known to grow along the Taurian mountains (Bieb.); was observed by Sibthorp, and Chaubard, on Crete and the Peloponnesus; by Schleicher, as far as Switzerland (Pers., and Steud.).

"Oct. 17th" (Alst., and Nicol.), Bonifacius IX. succeeded by cardinal Cosmo de Migliori, now Innocentius VII., forty-eighth pope. Rupertus Palatinus ruling Germany and Italy; Henry IV., England; and Robert III., Scotland.

"Oct. 21st" (Nicol.), a synod at Paris. Eight articles were "made, For the conservation of the privileges of the church during the Schism."

"In this year (= 2d year young-lo," Remus. iii. 95), An ambassador with tribute sent to China by Thsan-liei-pho-pi-ya, king of Cambodia; also three of his own subjects, in exchange for three Chinese deserters who could not be found. The men were sent back to Cambodia by the Chinese emperor.

"1405 A. D. (= 3d year young-lo," Remus. iii. 95), Chinese officials sent to Cambodia to attend the obsequies of the king, and instal his eldest son Thsan-liei-tchao-phing-ya as successor.

"Feb. 17th" (Markham p. 1, and 187), death of Timour. His son Shah Rokh, governor of Khorassan,—became sultan at Samarcand "in 1408," and continued to rule in peace and order until his own death "in 1446."

"1406, on the feast of St. Martin" (Nicol.), a synod at Paris of all the clergy of France, "For the termination of the Schism." Obedience was withdrawn from the antipope Benedictus.

"Nov. 30th" (Nicol.), Innocentius VII. succeeded by cardinal Angelo Corrario, now Gregorius XII., unanimously elected forty-ninth pope. James ruling Scotland.

"In or about this year" (Danish chron., and Relat. du Groenl. 212), bishop Andrew sent from Drontheim to Greenland for tidings of bishop Henry, or to succeed him if he were not living:—but neither of the two bishops were afterwards heard of.

The provinces of Caxas and Huancabamba, South of Loxa, conquered by the Inca Yuquanqui. A fortress, temple, and other extensive buildings were erected,—remains of which were seen by Cieza de Leon lviii.

"1408, Apr. 28th" (Nicol.), a synod at Rheims. "On the means of remedying the disorders caused by the Schism, and on discipline."

"Aug. 11th to Nov. 5th" (Nicol.), Third national synod of France: in session at Paris. The bearers of a Bull from the antipope Benedictus were ignominiously punished, and deputies were named for a general synod at Pisa.

"In this year (= 6th year young-lo," Remus. iii. 96), tribute sent to China from Cambodia.

1409 A. D. = "1334 an. jav., Rabiulawal 12th, Monday" (Raffles x.), death of the Arab missionary Mulana Ibrahim. (The date probably taken from his tomb at Gresik in Java.)

"Jan. 14th" (Nicol.), a synod at Oxford. Rules were made "for the preachers and professors of the universities, on account of the new opinions of" Wiclef.

"March 25th to Aug. 7th" (Alst., and Nicol.), a general synod at Pisa: convened by the cardinals. The two rival popes not making their appearance, were declared deposed; and on the "15th or 26th of June," cardinal Peter of Candia or Alexander V. was elected their successor by the cardinals of both parties. The proceedings however were not recognized by the two popes in office, and before the close of the session, Gregorius XII. in a synod near Udine pronounced the election "null and sacrilegious."

Translating the Scriptures into the languages of the people, condemned by pope Alexander V.; who further in a special edict forbade explaining them in English (Alst. p. 397).

"The same year" (Way pref. pr. pm. xxxv), among the books of Charles V. of France, his prayer-book contains the dot over the letter i—(Silvestre), the latest important improvement in Typography.

"The same year (= 1331 Saca," Colebrooke as. res. ix. 438), date of an inscription on copper, apparently a grant of land from Bucca Raja II., third in succession from the first king of that name.

"In this year" (Finn Magnussen, and Major edit. Zen. p. lxxv), Andreas, last bishop of Greenland, officiating in the cathedral at Gardar.

"1410 A. D." (Alst.), Suliman succeeded by his brother Muse Gilibi, sixth Turkish sultan.

"May 17th" (Alst., and Nicol.), Alexander V. succeeded by cardinal Balthasar Cossa or Joannes XXIII., fifty-first pope. In opposition to Gregorius XII.

The "*Imago mundi*," an encyclopædic work by Petrus de Alliaco, in this year bishop of Cambray (Humb. cosm.).

"The same year" (Clavig., and Humb. atl. pict.), Huitziluhuitl succeeded by Chimalpopoca, third Mexican emperor.*

"1411 A. D." (voyag. Belg.), from Riga journeying through Courland, Guillebert de Lannoy met with Christians who retained the practice of *burning the dead*, with accompanying superstitious observances. At Novogorod, women were sold in the market. In Lithuania, through the efforts of the Teutonic military Order of monks, the people had already adopted Christianity; Witholt being duke. — Returning after ten years absence, he found Witholt leagued with the followers of Huss, in opposition to the church of Rome.

"1412 A. D. (= 815 A. H." of Ferisht., Elph.), Mozaffer Shah succeeded by Ahmed Shah, now second Muslim king of Guzerat (remarkable among the States of Hindustan for being a naval power).

"In this year" (art de verif.), Faradj succeeded by Shekh Mahmoudi; who partly through the interference of the spiritual khalif Mostain, now became twenty-fourth Memluk sultan. Shekh Mahmoudi (according to Wilkinson theb. and eg. p. 555) coined the moaiudee as a substitute for the para.

The mosque Moaiud, one of the principal ones in Cairo, was built by Shekh Mahmoudi (Wilk. theb. and eg.).

Melilotus Indica of the plains of Hindustan. Brought to Egypt as early probably as this date: — observed there by Forskal, and Delile, growing around Cairo, Alexandria, and Rosetta, and called "rekrak" or "nafal." Farther North, observed by D'Urville, and Bory, on the Greek islands and in the Peloponnesus; and Westward, described by Plukenet alm. pl. 45; was observed by Sibthorp in Sicily; by Desfontaines, and Schousboe, in Algeria and Morocco; and is known to grow spontaneously in Southern France, and even in Britain (All., Dec. fl. fr., Pers., and Wats.). Eastward from Egypt, was observed by Roxburgh, and Wight, in Hindustan, and according to Graham "on pasture grounds etc. appears in the cold season." From Europe, was carried by colonists to Northeast America, where it has been found growing spontaneously (Torr., and A. Dec.). "*M. parviflora*, *sulcata*," and "*Mauritanica*," are regarded as probably not distinct.

Melilotus Italica, regarded as distinct, — is described by Commelyn hort pl. 29; is termed "*m. italica folliculis rotundis*" by Tournefort inst. 407; was observed in Italy by Tenore, and by Desfontaines ii. 192 in Barbary. Eastward, was observed by Sibthorp, Chaubard, and Fraas, in the Peloponnesus and the environs of Athens; and by Bieberstein, along the Taurian mountains.

"From the end of the year to June 18th" following (Nicol.), a synod in Rome. Against the writings of Wiclef.

"1413 A. D." (Alst.), Muse Gilibi succeeded by his brother Mohammed, seventh Turkish sultan.

"The same year (= 2073d of Synmu," art de verif.), Gokomatz succeeded by his son Seokouo, now daïro of Japan.†

"1414, Nov. 16th" (Alst., and Nicol.), "Seventeenth general ecclesiastical Council. Convened at Constance. "Deputies and lay doctors" were allowed a deliberative voice: — and in a second session, "March 3d" following, the pope solemnly published his act of cession; "May 29th," Joannes XXIII. was deposed; and "July 4th," Gregorius XII. abdicated. "July 6th," a decree, "That faith is not to be kept with heretics," and John Huss condemned to be burned. "July 26th, 1417," Benedictus was declared deposed, but refused to submit to the authority of the Council; and "Nov. 11th" in the "forty-first" session, a new pope was elected; the Council ending "Apr. 22d, 1418."

In this year (= "12th year young-lo," Remus iii. 96), tribute sent to China from Cambodia. Complaint was made of invasions by the Anamese, repeatedly interrupting communication, and a Chinese official returned with the envoys bearing an order to the king of Anam to cease hostilities.

* *Cissampelos pareira* of "the West India Islands and Spanish Main." The "*pareira brava*" or *velvet-leaf* is a twining Menispermoid plant; its root from early times used medicinally, — being "a well-known tonic, and diuretic" (Lindl.): *C. pareira* was observed in the West Indies by Alcedo, Plumier pl. 93, Swartz pl. 10, and Descourtilz. By European colonists was carried across the Pacific to the Philippines, continues according to Blanco hardly known but is called in Ylocano "*cuscusipa*," at Agoos "*calaad*," at Batangas "*calacalamyan*," and on Cebu "*batangbatang*;" to Hindustan, where it is called in Hindustanee "*dukh-nirbisee*" (Drur.), and has become "common in hedges" from Bombay to Rajmahal and Nepaul (Roxb., Royle, and Graham).

† *Celastrus alatus* of Japan. A shrub well-known there, and from early times offers of marriage made by affixing a branch to the house of the damsel's parents — (Jap. mann. 179): *C. alatus* was observed in Japan by Thunberg 98 (Pers.).

1415 A. D. (Markham p. liii), Ibrahim Meerza, son of Shah Rokh, appointed governor of Shiraz in Persia. He encouraged Literature, caused Ali of Yezd to write the life of Timour, — built a famous "medrassa" or college, and after a reign of "twenty years" died "in 1435."

"In this year" (Bethune edit. Galvan.), Ceuta in Morocco captured by John, king of Portugal, assisted (according to Walsingham) by the English — The captured city "was afterwards annexed to Spain."

"1416 A. D." (Alst. p. 375), archdeacon Nicolaus Clemangis writing, on the corrupt state of the church. Jerome of Prague burned alive at Constance.

"1417 A. D." (Alst.), Manuel succeeded by his brother Joannes VII., by consent of the Turks sixty-seventh Byzantine emperor.

"The same year" (Churchill coll.), under instructions from prince Henry of Portugal, two small vessels pass cape Nao, "N. Lat. 28° 15'," on the African coast. "Sixty leagues" beyond, at cape Bojador, difficulties were experienced, and the vessels returned to Portugal.

"Nov. 11th" (Alst., and Nicol.), Joannes XXII^d. succeeded by cardinal Otho Colonna or Martinus III., in the Council at Constance elected fifty-second pope. Sigismund ruling Hungary, Germany, and Italy; and Henry V., England.

"In this year (= 15th year young-lo," Remus. iii. 97), tribute sent to China from Cambodia.

"1418 A. D." (Galvan., and Churchill coll.), John Gonzalez Zarco and Tristam Vaz Teixeyra in a vessel sent by prince Henry of Portugal, driven out of their course Westward as far as a small island previously unknown, which they called "Porto Santo."

"In or about this year (= about thirty years before 1448" in lett. of pope Nicholas V., Major edit. Zen. p. lxvi), "some heathens from the neighbouring coasts came upon" the Greenland settlements "with a fleet, and laid waste the country and its holy buildings with fire and sword, sparing nothing but the small distant parishes, which they were prevented from reaching by the intervening mountains and precipices. The inhabitants of both sexes they carried away into slavery."

The Dighton inscription and other sculptures and stone relics of the aboriginals of New England, as old or older than this date. — The earliest copy of this inscription, so far as known, is by Rev. Samuel Danforth.

Acer rubrum of Northeast America. The *red maple* in Eastern New England known from early times to the natives,* — "the rottenest maple-wood" according to Josselyn rar. 47 "burnt to ashes,"

* *Vitis labrusca* of Northeast America. The *fox grape* known to the natives from early times : — of two kinds of "vitis" seen by Hariot on the Roanoke, one bore acerb grapes large as the English (De Bry i. 9) : vines twisting "their curling branches about" the "broad-spread arms" of the "horne bound tree" (*Nyssia biflora*) and bearing "great store of grapes," were seen by W. Wood in Eastern Massachusetts; "vines," by Higgeson, growing "up and downe in the woods" around Salem; and grapes growing "in swamps and low wet grounds" and having "a taste of gunpowder," by Josselyn as far as 43° 30' : *V. labrusca* is described by Plumier sp. pl. 259 (Pers.); has been observed by myself from 43° near Monadnock to 39°, often within the margin of swamps; by A. Gray, "common" in Central New York; by Michaux, from Pennsylvania to Florida; by Elliot, in South Carolina; by Baldwin, as far as 30° in Florida; by Chapman, in "river-swamps, Mississippi to North Carolina;" and by Short, in Kentucky. According to A. Gray, "improved by cultivation it has given rise to the *Isabella grape*."

Viola pubescens of Northeast America. A *yellow violet*, its bruised leaves from early times applied by the natives "to boils and painful swellings for the purpose of easing the pain and producing supuration" — (Cutl. p. 485) : *V. pubescens* was received by Hooker from the Rocky mountains throughout Canada; was observed by myself from 46° on the St. Lawrence to 40° on the Delaware; by Schweinitz at 36° in Upper Carolina; by E. James at Council Bluffs on the Missouri; by Nuttall, on the Arkansas.

Vitis æstivalis of Northeast America. The *summer grape* or *chicken grape* known to the natives from early times : — a "smaller kinde of grape, which groweth on the islands, which is sooner ripe," is enumerated by W. Wood i. 5 : *V. æstivalis* has been observed by myself along the Atlantic from 42° 30' to 39°; by Eaton, at 42° on the Hudson; by A. Gray, "common" in Central New York, the "berries pleasant;" by Michaux, from Virginia to Carolina; by Elliot, in South Carolina; and by Beck, near St. Louis on the Mississippi. Under cultivation, clearly the origin of the *Elsinborough* and other small delicately-flavoured varieties.

Impatiens biflora of Northeast America. The *snap-weed* or *touch-me-not* known to the natives from early times : — used according to Josselyn pl. 43 by the New England natives "for aches, being bruised between two stones, and laid to, cold : " was received by Hooker from Bear Lake Lat. 66°; was observed by Lapylae at 49° in Newfoundland; by myself, along the Atlantic from 45° to 39°;

making "a strong lye" wherein to "boyl their white-oak acorns until the oyl swim on the top:" the "knottie maple" was seen around Massachusetts Bay by W. Wood i. 5: *A. rubrum*, by F. A. Michaux from 48° to 30° and throughout our Western States to the Lower Mississippi; by myself,

by Walter, and Elliot, in South Carolina; by Chapman, in "shady swamps, Florida and northward;" by Short, in Kentucky. Transported to Europe before "1822," has become naturalized along the Thames (J. S. Mill, Newm., Wats., Eng. bot. suppl. pl. 2794, and A. Dec.).

Rhus typhina of Northeast America. The *staghorn sumach*, so named from its stout velvety twigs, is a large shrub known to the natives from early times: — "sumach" according to Josselyn rar. 60 was boiled by the New England natives and the drink taken "for colds:" the "diars shumach" was seen by W. Wood i. 5 in Plymouth colony; "sumacke trees, they are good for dying and tanning of leather," were found by Higgeson frequent around Salem (hist. coll. i. 119); and "rhus coriaria" was seen by Hariot on the Roanoke (De Bry i): *R. typhina* was observed on Long's Expedition at the Lake of the Woods Lat. 49°; was received by Hooker from 47° on the Lower St. Lawrence; was observed by Michaux from Canada to Pennsylvania; by myself, along the Atlantic from 45° to 39°; by Chapman, "Mississippi to North Carolina, and northward;" by Riddel, in Kentucky (Short); and by Nuttall, on the Arkansas.

Rhus radicans of North America. A shrub climbing by rootlets, called by the colonists *poison ivy*, and its juice said to have been used in prior times by the natives "in staining the hardest substances a deep and permanent black," — in the days of Cutler p. 423-8 employed by "country people" in making ink: *R. radicans* is known to grow throughout Canada to the Saskatchewan and Northwest America (Hook.); has been observed by myself from 45° to 38° along the Atlantic; by Elliot, in South Carolina; by Baldwin, on Bermuda; by Croom, as far as 30° 30' in Florida; by Chapman, "Florida to Mississippi, and northward;" by Nuttall, and Pitcher, on the Arkansas; and by E. James, on the Rocky mountains at its source. Transported to Europe, is termed "*edera trifolia Canadensis*" by Cornuti pl. 97, is described also by Barrelier pl. 228, and has become naturalized in two localities in France.

Vernopanthus Canadensis of Northeast America. A Celastroid deciduous shrub, its berries from early times eaten by the natives: "figues" called "absconda" — were seen by Cartier in the canoes of natives who had come from a distance to Chaleur Bay to catch mackerel, subsequently also on his voyage up the St. Lawrence: "a small shrub which is very common, growing sometimes to the height of elder, bearing a berry like in shape to the fruit of the white thorn, of a pale yellow colour at first, then red, when it is ripe of a deep purple, of a delicate aromaticall tast, somewhat stiptick," was seen by Josselyn 2d voy. 72 in New England: *N. Canadensis* was observed by Lapylae from 51° in Newfoundland; by Michaux, from Hudson Bay throughout Canada; by myself, from 48° on the Lower St. Lawrence to 42° along the Atlantic; by Nuttall, to 40° in New Jersey; and according to A. Gray, grows on the Alleghanies of Virginia and as far as Wisconsin.

Amelanchier botryapium of North America. The *shad bush* or *june berry*, its fruit called in Canada "poires," in Maine *sweet pears* (C. P.), and from early times its berries dried and eaten by the natives: — doubtless the "poires" seen by Cartier in Chaleur Bay, in the canoes of a distant tribe of natives: "a small pleasant fruite called a peare," was seen by John Mason in Newfoundland: *A. botryapium* is known to grow on Newfoundland, and throughout Canada to at least 61° on the Mackenzie river, also on the Rocky mountains and along the Columbia river (Hook.); was observed by myself from 48° on the Lower St. Lawrence to 38° along the Atlantic; by Pursh, from Canada to Carolina; by Elliot, rare in the Low country of South Carolina; by Chapman, "Florida to Mississippi, and northward;" by Nuttall, along the Arkansas; by Drummond, to 54° on the Saskatchewan; by myself, at Fort Okanagan on the Columbia, the berries highly prized by the inmates; and according to R. Brown jun., they are dried and stored by the natives of Northwest America.

Amelanchier oligocarpa of Northeast America. Possibly distinct, having narrow leaves, broad petals, and its two to four-flowered racemes often only axillary: — termed "*mespilus canadensis oligocarpa*" by Michaux; growing according to A. Gray in "cold and deep mountain swamps, northward;" observed by myself on the subalpine portion of the White mountains; but found by Collins in New Jersey.

Adenorachis arbutifolia of Northeast America. The *choke-berry*: clearly the huckleberries "attitash of a binding nature" of the New England natives. — mentioned by R. Williams: Strachey met with a "small tree like mirtle at James Towne," its fruit having "a taste with the mirtle but much more bynding:" *A. arbutifolia* is known to grow on Newfoundland and throughout Canada to the Saskatchewan (Hook.); was observed by Michaux from Hudson Bay to Virginia and the mountains of Carolina; by myself, from 47° to 41° along the Atlantic; by Elliot, on the mountains of Carolina; and by Short, in Kentucky. The variety or species with reddish and more austere fruit, seems more

along the Atlantic from 45° to 38°, growing on the moist upland as well as in swamps; by Elliot, in South Carolina; by Baldwin, Croom, and Chapman, as far as 30° in Florida; by Darby, on Pearl river; by Nuttall, on the Arkansas and Upper Missouri; by Long's Expedition, to 49° on Red river

Southern in its range, was observed by Michaux in Virginia and Carolina, by Schweinitz at 36°, by Nuttall in Georgia, by N. A. Ware in Florida, by Baldwin as far as 31°; and this or both by Chapman in "swamps, Florida to Mississippi, and northward."

Cerasus Virginiana of North America. The *choke cherry*, an arborescent shrub called by the New England natives "quussuckomineanug" (R. Williams), and known from early times: — "red" cherries "which grow on clusters like grapes," are "much smaller than our English cherry," and "so furre the mouth that the tongue will cleave to the roof," were seen by W. Wood i. 5 near Plymouth: *C. Virginiana* is known to grow on Newfoundland and throughout Canada to 62°, the Rocky mountains, and beyond (Hook.); has been observed by myself from 46° on the St. Lawrence to nearly 41° on the Atlantic; by Elliot, on the mountains of South Carolina; by Chapman, in "light sandy soil, Georgia and northward." Transported "from Virginia" to Europe, is described by Linnæus, and is termed "p. rubra" by Aiton (Pers.).

Prunus Americana of Northeast America. The *Canada plum* from early times planted by the New England natives, and doubtless the dried "prunes" called "honesta" — seen by Cartier in Chaleur Bay, in the canoes of a distant tribe of natives: "plumbs," "black and yellow, about the bigness of damsons, of a reasonable good taste," were seen by W. Wood in Eastern Massachusetts: *P. Americana* is termed "p. hyemalis" by Michaux, its fruit being edible in winter (Pers.); was observed by Pursh along the Chaudiere and on the Alleghanies of Virginia and Carolina; by myself, only under cultivation in New England; but by A. Gray, on "river-banks, common" in Central New York, its fruit "yellow, orange, or red," and "pleasant-tasted, but with a tough and acerb skin;" by Darlington, in Southern Pennsylvania; by Elliot, in Carolina; and by Chapman, in "woods, Florida to Mississippi, and northward."

Prunus maritima of Northeast America. The *beach plum*, included perhaps in the dried "prunes" — seen by Cartier in the canoes of a distant tribe of natives; probably the "prune" seen by Varrazzanus in approaching the Latitude of "41° 40';" and clearly the "black" plums seen by W. Wood in Eastern Massachusetts: *P. maritima* has been observed by myself on the seashore from 43° to 39°; by Michaux, on the seashore from New England to Virginia (Pers.); by Pursh, on the seashore from New Jersey to Carolina.

Rubus strigosus of North America. The *American raspberry*, its fruit from early times eaten by the natives; — clearly the "franboysses" seen by Cartier around Chaleur Bay, and the "abundance of raspberries" seen by John Mason on Newfoundland: *R. strigosus* was observed by Michaux in Canada and on the mountains of Pennsylvania (Pers.); by Pursh, as far as the Alleghanies of Virginia; by myself, from 47° on the Lower St. Lawrence to 39° along the Atlantic; by Nuttall, along the Lakes of the St. Lawrence; and according to Hooker, grows on Newfoundland and throughout Canada to the Saskatchewan and the Columbia river.

Rubus Occidentalis of North America. The *thimbleberry* or *black raspberry*, its fruit from early times eaten by the natives: — *R. Occidentalis* was observed by Michaux in Canada and on the Alleghanies to Carolina; by myself, from 45° to 40° along the Atlantic; by Schweinitz, at 36° in Upper Carolina; by Chapman, "along the mountains, Georgia and northward;" by Short, in Kentucky; by Nuttall, on the Arkansas; and according to Hooker, grows from Quebec to the Rocky mountains and the shores of the Pacific. Transported to Europe, is described by Dillenius elth. pl. 287, and Linnæus.

Hamamelis Virginica of North America. A large shrub called by the colonists *witch hazel*, and from early times its bark applied by the natives "to painful tumors and external inflammations" — (Cutl. p. 412): *H. Virginica* was received by Hooker from the river-isle of Orleans at 47°; was observed by myself from 43° to 38° along the Atlantic; by Catesby app. 2, in Virginia; by Elliot, in South Carolina; by Baldwin, and N. A. Ware, in Florida; by Chapman, "Florida to Mississippi;" by Short, in Kentucky; and was received from "Mississippi" by Muhlenberg.

Aralia racemosa of Northeast America. A large straggling woodland herb, aromatic and called by the colonists *spikenard* (A. Gray), "said to have been much used" by the natives in former times "for medical purposes" — (Cutl. p. 432): was observed by Michaux in Canada and on the Alleghanies; by myself, from 43° along the Atlantic; by Conrad, and Darlington, at 40°; by Elliot, on the Alleghanies of Carolina; by Chapman, on those of Georgia; by Short, in Kentucky; by E. James, along the base of the Rocky mountains; and was received by Hooker from the Saskatchewan. Transported to Europe, is termed "*racemosa Canadensis*" by Cornuti pl. 75, is described also by Morison i. pl. 2. f. 9.

Aralia nudicaulis of Northeast America. A woodland herb called by the colonists *sarsaparilla*,

of Lake Winnipeg; and according to Hooker, grows as far as the sources of the Columbia on the Rocky mountains. Transported to Europe, is described by Hermann par. 1 (Spreng.), and Miller. Its ornamental wood has become well known in commerce.

Oxycoccus macrocarpon of Northeast America. The *American cranberry* called by the Narragansetts "sasemineash,"—known to R. Williams as "another sharp cooling fruit, growing in fresh waters all the winter, excellent in conserve against fevers:"* *O. macrocarpon* is also distinctly

and on the roots it is said that in former times the natives would subsist "for a long time in their war and hunting excursions"—(Cutl. p. 432): *A. nudicaulis* was received by Hooker from the Rocky mountains and 64° throughout Canada; was observed by E. James along the base of the Rocky mountains; by Lapylaie, on Newfoundland; by myself, as far as 42° along the Atlantic; by Darlington, at 40°; by Pursh, on the Alleghanies of North Carolina (Ell., and Chapm.). Transported to Europe, is described by Plukenet alm. pl. 138. f. 5.

Vaccinium corymbosum of Northeast America. The *tall blueberry*, its fruit doubtless included among the "sky-coloured bill-berries" dried by the New England natives,—enumerated by Josselyn rar. 60: *V. corymbosum* has been observed by myself along the Atlantic from 44° to 38°; by Pursh, from Canada to Virginia; by Elliot, in South Carolina; by Chapman, on "margins of ponds and swamps, Florida, and northward;" by Croom, as far as 30° 30'; by Baldwin to 30°; and by Short, in Kentucky. From transported specimens, described by Linnæus.

Vaccinium fuscatum, possibly a distinct species, its leaves more pubescent and fruit black, though similar in flavour, has been observed by myself accompanying the preceding as far at least as 39°

Vaccinium vacillans of Northeast America. The *green-bark blueberry*, only a foot or two high, its fruit inferior, but doubtless included among the "sky-coloured bill-berries" dried by the New England natives—(Joss. rar. 60): observed by myself along the Atlantic from 44° to 38°; by Schweinitz, at 36°; by Pursh, from Virginia to Carolina (Ell.). From transported specimens, described by Solander (A. Gray).

Vaccinium Pennsylvanicum of Northeast America. The *dwarf or low blueberry*, its fruit doubtless included among the dried "sky-coloured bill-berries"—(Joss. rar. 60): *V. Pennsylvanicum* is known to grow in Labrador (Pers.); was observed by Lapylaie in Newfoundland; by myself, along the Atlantic to nearly 41°; by Pursh, from New England to Virginia; by Michaux, in Georgia (Ell.). From transported specimens, described by Lamuck.

Vaccinium (Gaylussacia) frondosa of Northeast America. The *dangleberry or blue huckleberry*, doubtless included among the "sky coloured bill-berries" dried by the New England natives—(Joss. rar. 60): *G. frondosa* has been observed by myself along the Atlantic from 43° to 38°; by Schweinitz, at 36°; by Pursh, from New Jersey to Carolina; by Elliot, in South Carolina; by Baldwin, as far as 31°; by Chapman, in "low ground, Florida to Mississippi, and northward;" by Short, in Kentucky. From transported specimens, described by Linnæus.

Vaccinium (Gaylussacia) resinosa of Northeast America. The *huckleberry*, known from early times: the "attitaash" of the Narragansetts consisted of "whortleberries" of "diverse sorts," some "sweet like currants," and these when dried called "sautiaash," beat to powder and mingled "with their parched meal" made "a delicate dish" (R. Will.); the "sa'té" of the Abnaki on the Penobscot "frais sans etre secs, lorsqu'ils s't secs, sikisa'tar,"—are enumerated by Rasle dict. "hurtleberies" were seen by Newport on James river, and "hurts" by Strachey: *G. resinosa* has been observed by myself along the Atlantic from Lat. 44° to 38°; by Schweinitz, at 36°; by Pursh, from Canada to Carolina; by Elliot, on the mountains of Carolina and Georgia; and by Short, in Kentucky. Transported to Europe, is described by Wengenheim amer. pl. 30. and Aiton ii. 12 (Pers.).

* *Viburnum oxycoccus* of Canada. The *tree-cranberry* brought from the Northward and planted, may prove the "wuchipquameneash" of the Narragansetts,—described by R. Williams as "a kind of sharp fruit like a barberry in taste:" *V. oxycoccus* is termed "*v. trilobum*" by Marshall, "*v. opulus pimina*" by Michaux (Steud.); was observed by Pursh from Canada to the mountains of New York and New Jersey; by myself, from 47° 30' on the Lower St. Lawrence to about 45° in Northern New England; by Long's Expedition, from Lake Superior to Pembina; by Drummond, to Fort Cumberland, 54°; and according to Hooker, grows as far as the Arctic Circle, Rocky mountains, and the Columbia river. Continues to be sometimes cultivated for its acid edible fruit. Transported to Europe, is termed "*v. opulus Americanum*" by Aiton (Steud.).

Specularia perfoliata of North America. Brought perhaps by the natives to New England,—as it often occurs as a weed in cultivated ground: observed by myself from 43° to 40° along the Atlantic, and introduced with cultivation at the mission-station on the Kookoskoo in Oregon; by Beck, at St. Louis on the Mississippi; by Michaux i. 108, in cultivated ground (Pers.); by Elliot, in "cultivated ground" in South Carolina; by Baldwin, and Croom, as far as "Fort George" in Florida;

described by Josselyn, its berries being much used both by natives and colonists: was observed by Lapylaie in Newfoundland, ceasing at 49°; by myself, in bogs and marshes from 47° on the Lower St. Lawrence to beyond 42°; by Pursh, from Canada to the mountains of Virginia; by Chapman, in

by Chapman, in "fields, Florida to Mississippi;" was received by Kunth from Xalapa 750 and the mountains of Mexico; and according to Nuttall has been found in Peru. Transported to Europe, is described by Morison 5. pl. 2 f. 23 (Pers.).

Rumex altissimus of Northeast America. A species of *water dock*, its root from early times used by the natives "with great success in cleansing foul ulcers," — further observed by Cutler p. 436 "in muddy bottom brooks, not common;" by myself on the marshy borders of streams from 48° on the Lower St. Lawrence to 42° along the Atlantic; by Mead, at Peekskill N. Y.; and according to A. Gray, grows as far as "Illinois and westward."

Cornus sericea of North America. A large shrub called by the natives in Maine by a name signifying "squaw-bush" (Williamson i. 125), in Central New York "kinnikinnik" (A. Gray); and from early times, fish-nets made of its twigs, and its inner bark approved as a substitute for tobacco, as far even as the Columbia river — (R. Brown jun., and Tuckerm. in archæol. Am. iv. 191): observed by Pursh from Canada to Carolina; by myself, around Monadnock and on the margin of Wenham swamp, the berries blue; by A. Gray, in "wet places, common" in Central New York; by Schweinitz, at 36° in Upper Carolina; by Elliot, on the Alleghanies of South Carolina; by Chapman, in "low woods, Florida to Mississippi, and northward;" by Darby 205, in Opelousas; by Pitcher, on the Arkansas; by Beck, at 40° in Illinois; and by Douglas, on the Columbia river (Hook.). Medicinal properties are attributed to this shrub in the American edition of Rees cycl.

Juglans cinerea of Northeast America. The *butternut*, called by the Narragansetts "wussoquat," and from early times, "excellent oil, good for many uses but especially for the anointing of their heads," procured from "these walnuts" (R. Will. key 16), for seasoning their aliments (according to F. A. Michaux): "noyers" called "quaheya" and "noix" called "daheya," — were seen by Cartier around Chaleur Bay and along the St. Lawrence: *J. cinerea*, according to Kalm, ceases not far North of Quebec; has been observed by myself from 47° 30' to 42° along the Atlantic; by others, as far as 40°; by A. Gray, "common" in Central New York; by Pursh, as far as Virginia; by Schweinitz at 36° in Upper Carolina; by F. A. Michaux, in Kentucky; by Long's Expedition ii. 114 to 235, not North of 48° beyond Lake Superior; by Baldwin, at 39° on the Missouri; by Nuttall, along the Arkansas; by Darby, a single tree at 31° in Opelousas. Sometimes planted for ornament. "Of the chips" according to R. Williams, "the bark taken off, some English in the country make excellent beer, both for taste, strength, colour, and inoffensive opening operation."

Alnus glauca of Northeast America. The *speckled alder*: "alder-bark chewed fasting" applied to wounds by the New England natives, — and by the first colonists to wounds, bruises, and burns (Joss. 49): *A. glauca* has been observed by myself from 47° on the Lower St. Lawrence to 41° 30'; by Nuttall, at Cambridge near Boston; by Pursh, in New England and on the mountains of Pennsylvania; by F. A. Michaux, not uncommon in New Hampshire, Vermont, and Massachusetts, rare in the Middle States, and wanting in the Southern; according to A. Gray, is "the common alder northward from New England to Wisconsin."

Alnus undulata of Canada. A shrub somewhat lower than the preceding, possibly included in the chewed "alder-bark" applied to wounds by the natives — (Joss. 49): observed by Lapylaie at 52° on Newfoundland; by Michaux, in Canada (Steud.): by myself, from 47° 30' on the Lower St. Lawrence to 44° on the White mountains. Transported to Europe, is termed "*b. crispa*" by Aiton (Pers.).

Alnus serrulata of Northeast America. The *smooth alder*, probably included in the "alder-bark chewed fasting" applied to wounds by the New England natives — (Joss. 49): "alnis" were seen by W. Morell near Plymouth; the "alder" on the Hudson, by the remonstrants against Stuyvesant; *A. serrulata*, by myself from 42° 30' near Boston to 38° in the Delaware peninsula; by Schweinitz, at 36°; by Elliot, in South Carolina; by Chapman, on "banks of streams, Florida, and northward;" by F. A. Michaux, in the Northern, Middle, and Western States; and according to A. Gray, is "the common alder from Southern New England to Wisconsin, Kentucky, and southward."

Betula lenta of Northeast America. "Birch white and black: the bark of birch" used by the New England natives for bruises and wounds, "boyled very tender and stamp't betwixt two stones to a plaister, and the decoction thereof poured into the wound" — (Joss. rar. 51): *B. lenta*, called *black birch* or *cherry birch*, was observed by Lapylaie in Newfoundland only in the South; by F. A. Michaux, from Nova Scotia and Maine to Maryland, and on the Alleghanies to Georgia, but not seen in Kentucky nor Tennessee; by myself along the Atlantic to 42°, and by others as far as 40°; by Schweinitz at 36° in Upper Carolina; and according to A. Gray, grows from "New England to Ohio and north-

"cold mossy swamps, North Carolina, and northward;" by Darby 153, on the Mermentou river in Louisiana; and according to A. Gray, grows from "Pennsylvania to Wisconsin. and northward." Under cultivation, has extended beyond its natural limits, and has become a well-known article of commerce; is now cultivated to some extent in Britain (A. Dec. 674 and 730).

ward," its "twigs and foliage spicy-aromatic, timber rose-coloured, fine-grained, valuable for cabinet work." Transported to Europe, is termed "*b. nigra*" by Duroi (Steud.).

Betula populifolia of Northeast America. The *poplar-leaved birch*, a small tapering tree with tremulous foliage and white-skinned bark, possibly the "white" birch included with the preceding — by Josselyn rar. 51: *B. populifolia* was observed by myself along the Atlantic from 45° to 40°; by Pursh, from Canada to Pennsylvania; by F. A. Michaux, not South of Virginia; by Nuttall, in Arkansas. Transported to Europe, is described by Aiton, Duroi, Ehrhart, and Wangenheim pl. 29 (Pers., and Steud.).

Polyporus *sp.* of North America. A large and hard fungus projecting from the bark of trees: "*spunk*, an excrescence growing out of black birch," used by the New England natives "for touch-wood," and to "help the sciatica or gout of the hip, or any great ach, burning the patient with it in two or three places upon the thigh and upon certain veins" — (Joss. rar. 52: compare the moxa of the Chinese). The dried fungus continues to be employed in striking fire by woodmen and hunters.

Asarum Canadense of Northeast America. The *wild ginger* (so named from similarity in flavour) employed against toothache by the Narragansetts, — in the words of R. Williams key 7, "a certain root dried, not much unlike our ginger:" *A. Canadense* was received by myself from Lat. 47° on the Lower St. Lawrence, and observed in 43° in the mountain woods of New England; was observed by Michaux in Canada (Pers.); by Pursh, from Canada to Carolina; by Schweinitz, at 36°; by Elliot, in South Carolina; by Chapman, on the "mountains of North Carolina, and northward;" by Short, near Lexington in Kentucky; and by Nuttall, on the Arkansas. Transported to Europe, is described by Cornuti pl. 25.

Pinus rigida of Northeast America. The *pitch pine*, its wood "cloven in two little slices something thin" the only "candles" used by the New England natives, — and Higgeson found them adopted by the first colonists (hist. coll. 1. 122): the account is confirmed by W. Wood, and Josselyn voy. 66 and rar. 62, where the "firre-tree or pitch-tree" is also mentioned: *P. rigida* was observed by F. A. Michaux from 44° in New England to the Alleghanies, but not in the Western States, nor in the maritime portion of the Southern States; by A. Gray, as far as Western New York; by myself, along the Atlantic from 44° to 39°; by Pursh, to Virginia; by Schweinitz, at 36°; by Elliot, on the mountains of Carolina, rare in the low country

Arum (Arisæma) triphyllum of Northeast America. A woodland plant called by the colonists *Indian turnip*, and "the shredded roots and berries" said to have been boiled by the natives "with their venison" — (Cutl. p. 487): "dragons, their leaves differ from all the kinds with us, they come up in June," were seen by Josselyn in New England: *A. triphyllum* according to Hooker is frequent in Canada; by myself, from 47° to 40° along the Atlantic; by Pursh, from Canada to Carolina; by Croom, near Newbern; by Elliot, in South Carolina; by Chapman, in "Florida, and northward;" by Baldwin, as far as 29°; by Short, in Kentucky; and by Nuttall, along the Arkansas. Transported to Europe, is described by the brothers Bauhin (Tuckerm. in arch. am. iv), and Plukenet alm. pl. 77.

Symplocarpus foetidus of Northeast America. From its large clustered leaves called by the colonists *skunk cabbage*, and its dried root said to have been employed by the natives against asthma — (Cutl. p. 207): *S. foetidus* is figured by Josselyn; is termed "*pothos foetidus*" by Michaux (Chapm.); was observed by myself frequent in swamps from 43° to 40° along the Atlantic; by Catesby, in Virginia; by Schweinitz, as far as 36° in Upper Carolina; by A. Gray, "common" in Central New York; but was not seen by Nuttall West of the Alleghanies. Transported to Europe, is termed "*dracontium foetidum*" by Linnæus (Steud.).

Medeola Virginia of Northeast America. Called by the colonists *Indian cucumber*, and its roots "esculent and of an agreeable taste" from early times eaten by the natives — (Cutl. p. 437): *M. Virginia* was received by myself from Quebec, and observed as far as 40° along the Atlantic; by Clayton, in Virginia; by Schweinitz, at 36° in Upper Carolina; by Elliot, in South Carolina; by Chapman, in "Middle Florida;" by Short, in Kentucky; by Nuttall, "near Morgantown" in North Carolina, and on the Arkansas, and termed "*gyromia*." Transported to Europe, is described by Plukenet alm. pl. 328. f. 4.

Allium Canadense of North America. The *American garlic*, its root from early times eaten by the natives in Northwest America (R. Brown jun.), probably the "wild leekes" much eaten by the New England natives "with their fish" — (Joss. rar. 54): "*allia*" little differing from the English,

Strobus Americanus of North America. The *white pine*, the loftiest tree of New England, known to the natives from early times: "the bark of board-pine, first boyled tender and beat to a playster betwixt two stones," applied by them to burns and scalds (Joss. 61); and the "cowaw-esuck" of the Narragansetts — is translated "pine, young pine" by R. Williams: "tall firre" were seen by Capt. George Weymouth on the Kennebec in 1605 (and hence the name *Weymouth pine* given in England to the imported deals): "of these stately high-growne trees, ten miles together, close by the river-side," were seen by W. Wood i. 5. in Eastern Massachusetts: *S. Americanus* was observed by Lapylaie only on the Southern portion of Newfoundland; by F. A. Michaux, from 49° in Canada to Nova Scotia and Lat. 43°, and on the Alleghanies to their termination; by myself, from 48° on the Lower St. Lawrence to about 41° along the Atlantic; by Schweinitz, in Wilkes County in North Carolina; by Chapman, "on the mountains of Georgia and North Carolina;" by N. A. Ware, somewhat beyond the Southwestern termination of the Alleghanies; by Long's Expedition ii. 129, from 42° on Lake Michigan to 49° on Rainy Lake; by Drummond, on the Saskatchewan (Hook.) and as far as 53° on the West side of the Rocky mountains; and by myself, on the mount Rainier ridge. Its easily-worked timber and tall trunks for masts, are well known in commerce.

Abies nigra of Northeast America. The *black spruce* known to the natives from early times: — "abeti" were seen by Verrazzanus at the Northern termination of his voyage; "pruches," by Cartier around Chaleur Bay and along the St. Lawrence; "spruce," by Weymouth on the Kennebec; by Josselyn 63, farther South, "a goodly tree, of which they make masts for ships, and sail-yards:" *A. nigra*, according to Hooker, ceases with *Betula papyracea* at Lat. 65°; was observed by Drummond at 54° near the Rocky mountains; by E. James, on the Rocky mountains at the sources of the Arkansas; by F. A. Michaux, from Newfoundland and 53° in Canada to 44°, and scattered trees in swamps near New York and Philadelphia; by myself, from 48° to 42°; by Chapman, on "high mountains of North Carolina, and northward." Spruce spars have become well known in commerce.

Abies Canadensis of Northeast America. The *hemlock spruce* from early times known in New England; the natives after dropping "a strong decoction of alder-bark" on a burn, "playstered it with" bark of the "hemlock-tree, boyled soft and stamp't betwixt two stones till it was as thin as brown paper" — (Joss. 62): "iffs" or "yfs" were seen by Cartier around Chaleur Bay and along

were seen by Hariot on the Roanoke (De Bry i.); and "plots of onions an acre or more in low marshes" along James river, by Strachey: *A. Canadense* was observed by Kalm trav. iii. 79 in Canada; by Pursh, from Canada to Carolina; by myself along the Atlantic from 43° to 40°; by Schweinitz, at 36° in Upper Carolina; by Baldwin, to 31°; by Chapman, on "banks of rivers, Florida, and northward;" by Short, in Kentucky; and by Nuttall, on the Arkansas.

Veratrum viride of North America. The *American false-hellebore*, clearly the "white hellibore" whose powdered root was applied by the New England natives to wounds and "aches," — an example followed by the colonists, and the plant further observed by Josselyn voy. 60 and rar. 43 growing "in deep black mould and wet, in such abundance that you may in a small compass gather whole cart-loads:" *V. viride* was observed by myself from 47° 30' on the Lower St. Lawrence to 40° along the Atlantic; by Pursh, from Canada to the Alleghanies of Carolina; by Chapman, in "mountain meadows, Georgia, and northward;" by A. Gray, "common" in Central New York; by Drummond, to 53° on the Rocky mountains; and by Mertens, "*v. album*" around Norfolk Sound.

Eriophorum Virginicum of Northeast America. A tall *cotton-rush* with long grassy leaves, probably the "kind of silk grass" of which the New England natives sometimes made baskets — (Gookin coll. 3): *E. Virginicum* was observed by Michaux from Canada to Carolina; by Pursh, to Georgia; by myself, from 46° to 39° along the Atlantic; by Elliot, in South Carolina, rare along the seacoast; by Chapman, in "bogs and swamps, Florida, and northward;" by A. Gray, "common" in Central New York.

Cyperus filiculmis of Northeast America. The "vimine gramineo nux subterranea suavis" eaten by the New England natives — (Rev. Wm. Morrell), may be compared: *C. filiculmis* was received by Vahl from Carolina; by Muhlenberg, from New England and the upper district of Georgia; was observed by myself along the Atlantic from 43° to 38°; by A. Gray, in "dry sterile soil, common, especially southward," culms "from hard tuberiferous rootstocks;" by Elliot, as far as Beaufort; by Chapman, in "dry sandy soil, Florida, and northward." The root is not known to be esculent.

Cyperus phymatodes of Northeast America. Possibly the plant in question: — observed by Muhlenberg in Pennsylvania; by Baldwin, in Delaware and East Florida; by Schweinitz near Salem in North Carolina; by Elliot, in South Carolina; by Chapman, in "sandy soil near the coast, Florida, and northward;" by Short, in Kentucky; and according to A. Gray, grows from "Vermont to Michigan, Illinois, and common southward," "tubers small, at the end of very slender rootstocks." These tubers are not known to be edible.

the St. Lawrence; and "ewe" trees, by Hudson in ascending the river that bears his name: *A. Canadensis* was observed by F. A. Michaux from Lat. 51° throughout New Brunswick and Nova Scotia, and on the Alleghanies of our Southern States; by myself, from 46° to 40° along the Atlantic; by Schweinitz, near Germanton in North Carolina; by Chapman, on "high mountains of North Carolina, and northward;" by Short, in Kentucky; by Long's Expedition ii. 81, as far as 50° on Lake Winnipeg; by E. James, at the sources of the Arkansas on the Rocky mountains; and by Drummond, to 53° on the West side of these mountains. The bark for tanning has become well known in commerce.

Larix Americana of Subarctic America. The *hackmatack* or *American larch*, its bark sometimes substituted in making plasters by the New England natives — (Joss. 62): the "lereckhout" is enumerated by J. Mason among the trees of Newfoundland: *L. Americana* was observed by Herzberg in Labrador as far as 57° (Meyer); by Richardson, at Point Lake: by F. A. Michaux, from Lake Mistassins to the Alleghanies in Virginia; by myself, from 47° to 42° along the Atlantic; by Torrey as far as 41° on the Hudson; by Pursh, in Pennsylvania; by Long's Expedition ii. 81, to 50° on Lake Winnipeg; by Drummond, to 54° near the Rocky mountains; by myself on the mount Ranier ridge; and by Georgi, along the Pacific opposite Kamtchatka. The timber is highly valued for ship-building, but is not plentiful.

Cupressus thuioides of Northeast America. The *white cedar* from early times known to the natives around Massachusetts Bay, their light canoes "made of birch rindes and sowed together with the rootes of white cedar-trees" — (Johns. wond. prov. 8): "cipressi" were seen by Varrazzanus after leaving the opening and before reaching $41^{\circ} 40'$: "cipres," by Higgeson near Salem (hist. coll. i. 117 to 125); and the "mournfull cypres tree" of Massachusetts Bay, is distinguished by W. Wood i. 5 from the "cedar" with red wood: *C. thuioides* has been observed by myself in bogs, forming "cedar-swamps" along the Atlantic from 43° to 38° ; by Croom, as far as Newbern; by F. A. Michaux, not South of the Santee; by Chapman, in "swamps, Florida, and northward;" by Sheppard, in Canada; and according to A. Gray grows from "Eastern Massachusetts to Ohio;" according to Hooker, as far as Fort Cumberland, Lat. 54° . Its "light durable wood" well known in commerce.

Eragrostis capillaris of Northeast America. An annual autumnal grass, possibly introduced into New England by the aboriginal tribes: * — observed by myself in sunny situations in the environs of Salem, chiefly about cultivated ground; by Pursh, from Canada to Florida; by A. Gray, in "sandy dry soil and fields, common, especially southward;" by Chapman, in "dry uncultivated fields, Florida, and northward;" was received by Kunth from North America, Hayti, Jamaica, and Chili. Transported to Europe, is described by Morison viii pl. 6, is termed "gramen paniculatum virginianum locustis minimis" by Tournefort inst. 522, and observed by Sibthorp "in Bithynia" in Asia Minor.

"1419 A. D. (= 17th year young-lo," Remus. iii. 97). an epistle in letters of gold accompanying elephants and productions of the country sent to China by Thsan-liei-tchao-phing-ya, king of Cambodia.

"1420 A. D." (Alst.), Joannes VII. succeeded by Joannes VIII., by consent of the Turks, sixty-eighth Byzantine emperor.

"June" (Major pr. H. 58), returning to Porto Santo, Zarco discovered a dark line towards the South-west, and supposing it to be fog resting on forests, sailed in that direction and re-discovered the island of Madeira. He found the tomb and wooden cross left by Machin's party, but no signs of inhabitants. Continuing along the coast, he entered with his sloops "a little creek sheltered by a rock," and "disturbed the repose of a troop of sea wolves" (*seals*), "which fled into a cavern at the

* *Eragrostis tenuis* of Northeast America. An autumnal grass distinguished from the preceding by more numerous florets and long hairs in the axils of branches of the panicle, but possibly also introduced into New England by the aboriginal tribes: — observed by myself in the same situations with the preceding in the environs of Salem, and as far as Philadelphia; by Curtis, in North Carolina; by Elliot, at Greenville in South Carolina; by Nuttall, on the Arkansas, and termed "poa trichodes;" and according to A. Gray, grows in "sandy soil, Illinois, Virginia? and southward." From transported specimens, is termed "e. Geyeri" by Steudel.

Juncus tenuis of Northeast America. A rush possibly also carried North of its natural limits by the aboriginal tribes: — termed "j. bicornis" by Michaux, as observed in Carolina and Georgia; observed by myself from 43° to 38° along the Atlantic, frequent in grass-grown clearings and especially along roadsides; by Elliot, in South Carolina; by Chapman, in "Florida, and northward;" by Short, in Kentucky; by Nuttall, and Pitcher, in Arkansas. Transported to Europe, is described by Rostk. pl. i, has been found on Clova mountain (Wats.), and according to Hooker in other parts of Europe.

foot of the rock, which was their dwelling-place;" and which received the name of "Camara dos lobos:" — the Camara dos lobos visited by myself is clearly an artificial excavation, like a mill-slucice tunneled along the base of a precipice with windows at intervals.

"1421 A. D." (art de verif.), Shekh Mahmoudi succeeded by Ahmed El-Mozaffer; after some months, by Seifeddin Tattar; and before the close of the year, by Mohammed Saleh, twenty-seventh Memluk sultan of Egypt.

"The same year" (voyag. Belg.), by the kings of England, France, and the duke of Burgundy, Guillebert de Lannoy sent as "ambassador" for the purpose of ascertaining the condition of Syria and Egypt. Journeying by land, the king of Poland added letters of recommendation to the Turkish sultan, formerly an ally in warring against Hungary. Before reaching the frontier, the sultan's death induced Lannoy to turn Eastward, and under the protection of the duke of Lithuania, travel among the Tartars of the Lower Dnieper. He maintained throughout the character of "ambassador;" and from the Crimea, proceeded by sea. Ambassadors had previously been sent by European potentates only to Christian and friendly nations; and Lannoy's mission is therefore regarded as the beginning of *diplomacy*. — The political relation of Lannoy is further illustrated, by the duke of Burgundy sending him seven years afterwards to the king of Bohemia and the duke of Austria, To negotiate respecting the followers of Huss in Hungary.

"The same year" (Alst.), Mohammed succeeded by his son Murad II., eighth Turkish sultan.

Thlaspi arvense of Europe and Northern Asia. Called in Britain *Mithridate mustard*, being one of the seventy-two ingredients of a Mithridatic theriaca which gave rise to "the tales so popular in the middle ages of sorcerers eating poisons," — and "was used as a vermifuge, and retained" till about a hundred years ago in the London Pharmacopeia (Prior): *T. arvense* is described by Gerarde p. 206; is termed "*t. arvense siliquis latis*" by Tournefort inst. 212; is known to occur in Italy and throughout middle Europe (Pers., and A. Dec.), but is regarded by Watson as exotic in Britain and introduced. Eastward, was observed by Sibthorp at the base of mount Hæmus and around Constantinople; and is known to occur in the Tauro-Caspian countries (A. Dec.), and as far as Yesso in Northern Japan (Siebold). By European colonists, was carried to Northeast America, where it was observed by myself at Tadousac on the Lower St. Lawrence; is known to occur also within the limits of the United States (Beck., and Torrey).

Filago Gallica of Europe and the adjoining portion of Asia. With other species called in Britain *hoarwort*, and the "horworte" of ms. Bodley, or "horwort" of gloss. Arundel 42, — is referred here by Cockayne: *F. Gallica* is described by Morison vii. pl. 11; is termed "*f. vulgaris tenuissimo folio erecta*" by Tournefort inst. 454; and is known to grow in gravelly soil throughout middle Europe (Lam. fl. fr., and Pers.); but in Britain, where it was observed in cultivated ground by Ray p. 181, and has since made its appearance in other localities, is regarded by Watson as exotic (A. Dec.). Eastward, was observed by Sibthorp, and Chaubard, frequent from the Peloponnesus to the Greek islands.

"1422 A. D." (art de verif.), Mohammed Saleh succeeded by Barsebay El-Aschraf, twenty-eighth Memluk sultan of Egypt. The mosque bearing his name at Cairo, was built by Barsebay El-Aschraf: who also carried on war in the Mediterranean against the Franks or Europeans.

Celastrus edulis of Tropical Arabia. Prior to the introduction of coffee, the use of "cafta" or "kat" established in Yemen by Ali Schadheli ben Omar — (Fakhr-eddin Mekki, Abd-alkader, and De Sacy chrest.): *C. edulis*, a tree called "gat" or "kat," was observed by Forskal in Yemen, cultivated in the same gardens with coffee, and various virtues attributed to the leaves which are eaten with avidity by the Arabs: the use of "kat" as a masticatory was witnessed by myself at Mocha, fresh branches being brought every morning from the mountains.

"The same year" (voyag. Belg.), in Egypt, Lannoy found *circumcision* practised among the Jacobite Christians or the Copts. And at Cairo, met with merchants of Hindustan, and even a patriarch from that country.

"The same year" (= 1460 of the era of Cæsar, Major pr. H. 66), the Christian era for "all public ordinances" adopted by king John of Portugal.

"The same year" (Clavig., and Humb. atl. pict.), end of the reign of Chimalpopoca. — He was succeeded in the following year by Itzcoatl, fourth Mexican emperor.

"In this year" (= 825 A. H.) of Ferisht, Elph.), Firuz succeeded by Ahmed, now ninth Bahmani king of the Deccan.

"1423 A. D." (Nicol.), a synod at Treves; and another, at Sienna. Against heretics.

"1425 A. D. = 'houng-hi,' 1st year of Jin-tsoung-tchang-ti" or Jin-tsoung III., "of the Ming" or twenty-third dynasty — (Chinese chron. table, and Pauth.).

As early perhaps as this date (G. de la Veg. vii), under the direction of the Inca Yupanqui, Chili conquered by the Peruvian general Chinchiruca; and the bounds of the empire extended Southward from Atacama to Copayapu eighty leagues, thence to Cuquimpu eighty, thence to Chili fifty-five,

thence about fifty to the river Maulli in "S. Lat. 34° 30'." According however to Molina, the limit was somewhat farther North at the river Rapel; where the remains of a Peruvian fortress are extant.

Wintera Chilensis of Chili. Arborescent, called in Chilian "boighe," and from early times held sacred by the Araucanians,*—who carry branches in religious ceremonies (Feuill., and Molin.): observed by myself in mountain-ravines back of Valparaiso, not exceeding the dimensions of a large shrub, and clearly distinct from the Fuegian species; may prove however the species known to grow on the mountains of Peru and New Grenada (Linn. f. suppl. 269, and Humb. and Bonpl. i. pl. 58). Doubtless furnishes a portion of the *Winter's bark* of druggists, imported into Brazil under the name of "casca d'anta" and much used against colic, known also in Europe "as an aromatic tonic," warm and pungent (Lindl.).

"1426 A. D. = 'hiouan-te,' 1st year of Hiouan-tsoung-tchang-ti," or Hiouan-tsoung II. or Siouan-tsoung II., "of the Ming" or Twenty-third dynasty — (Chinese chron. table, and Pauth.).

"In this year" (Burm. hist., and Mason 27), Mukka, son of Theha and king of Pegu, taking the title of Dhamma-raza. He made munificent offerings to the pagoda at Rangoon.

1427 A. D. (= "six years" before the visit of Brocquière), conquest of Servia by the Turks. — Brocquière found the Servians belonging to "the Greek church."

"1428 A. D." (Burm. hist., and Mason 65), the king of Toungoo, in alliance with the king of Pegu and Talaing forces, warring against the Burmese. They captured Prome at this time the capital of the Burman empire.

"Oct. 12th" (Blair), beginning of the siege of Orleans; the first blow to English power in France. Joan d'Arc having distinguished herself as a warrior in the defence of the city, — after two years was taken prisoner by an officer of the duke of Burgundy, was sold to the English, and burned (Brocq., and T. Wright).

"1429 A. D." (ann. Jap., & art. de verif.), Seokouo or Seo-kwo succeeded by Gofunnazo, now "one hundred and third" (or omitting those who reigned twice, one hundred and first) daïro of Japan.†

"The same year" (Nicol.), a synod at Riga. Deputies were "sent to the pope, To complain of the oppression of that church."

The city of Sibir, at the junction of the Sibirka and Irtych, probably at this time in existence. — Muller and Gmelin on visiting the site, "twenty-three versts" from Tobolsk, found only an old ruined wall (Pall. trav. ii. 525).

Paeonia anomala of Siberia. Called on the Obi "mariin koren" (Pall.), and from early times employed medicinally: — observed by Gmelin fl. iv. pl. 72 in Siberia; by Pallas trav. ii. 345 on the Vagran tributary of the Obi.

Ferula Siberica of the Uralian plains. Called by the Russians on the Upper Irtych "oukrop" (Pall.), and known from early times: — observed by Pallas ii. 545 near Jamyschewa, flowering in June; by Sokolof, in sands between the Volga and Yaik, ripe seeds on the dried stems in July.

Sedum spinosum of the Uralian plains. Called on the Irtych "repki," its leaves agreeably acid, and from early times eaten crude — (Pall.): observed by Gmelin iv. pl. 67 in Siberia; by Pallas i. to iii. 123 from the Lower Volga to and beyond Omsk.

Caragana halodendron of the Uralian plains. A thorny bush called by the Russians on the Upper Irtych "ternevnik" (Pall.), and known from early times: — observed by Gmelin iv. 15 n. 19 in Siberia; by Pallas iii. 153 to 489 in arid saline plains from the Ural mountains to the Upper Irtych near Jamyschewa

Populus balsamifera of Siberia. A "superb tree" called by the Russians on the Irtych "kaiderevo" (Pall.), and known from early times: — observed by Pallas iii. 190 along the Irtych river-bank to the Altaian mountains. The *balm-of-Gilead*, termed "p. latifolia" by Moench, "p. candicans" by Aiton, known in America before Catesby i. pl. 34, and Marshall, and planted near dwellings from "N. New England to Wisconsin and Kentucky" (A. Gray), may be compared.

* *Araucaria imbricata* of Southern Chili and Araucania. A lofty Coniferous tree, its large cones from early times supplying the natives with a great part of their food, a single tree sometimes producing enough to maintain eighteen persons for a year — (geogr. plant. lond tract soc.): observed by Molina, and Pavon diss. bot. 9. Transported to Europe, is described by Lamarck pl. 328; and from Europe was carried to Northeast America, where it continues in greenhouses.

† *Taxus verticillata* of Japan. The "make" of the mythological history of Japan, — is referred here by Klaproth (introd. ann. Jap.): *T. verticillata* was observed in Japan by Thunberg.

Erianthus Japonicus of Japan. The "asi" of the mythological history of Japan, — is referred here by Klaproth (introd. ann. Jap.): *E. Japonicus* was observed by Thunberg, Houttuyn pl. 89, and Siebold in Japan, abundant, covering the mountains from "fifteen hundred to five thousand feet" and as far North as the island of Yeso. In Chinese, the grass is called "wei" (Klapr.).

Allium obliquum of Siberia. From early times cultivated on the Tobol as a substitute for garlic, — observed wild there by Pallas iii. 55; also in Siberia by Gmelin i. pl. 9.

Allium angulosum of Siberia. Called on the Upper Yenisei “mischei-tschesnok” mouse-garlic, and from early times collected and salted for winter use, — observed by Pallas iv. 426; and in Siberia by Gmelin i. pl. 14. Westward, is described by Bauhin hist. ii. pl. 564; and is known to occur in Germany (Jacq. austr. v. pl. 423, and Pers.).

Potentilla fruticosa of Northern climates. A shrub three feet high called in Siberia “Kouril-skoï-tchai” Kurile tea, and its leaves from early times used by the peasants and Tartars as a substitute for tea,* — observed by Pallas iii. 394 to . . . around Lake Baical; by Gmelin, throughout Siberia; by Bieberstein, on mount Alwar in Armenia; and known to grow from Sweden to Ireland and Switzerland (Engl. bot. pl. 88, and Wats.). Westward, was observed by Lapylaie in Newfoundland; by myself, along the Atlantic as far as 42°, abounding especially on the hills of Western Massachusetts; by Torrey, as far as 41° on the Hudson; by Pursh, from Canada to the mountains of New York and New Jersey; by Lewis and Clark, and E. James, on the Rocky mountains; and was received by Hooker from Bear Lake river and Kotzebue Sound.

“March 1st to April 23d” (Nicol.), a synod at Paris. Rules were made, On “the celebration of Sunday;” the expenses of banns of marriage; and prohibiting the “Feast of fools,” an absurd ceremony “established in the church of Paris about the end of the Twelfth century.”

“In this year (= 833 A. H.” of Ferisht., Elph.), by Ahmed Shah of Guzerat, expedition by sea to recover the coast-islands of Bombay and Salsette, seized by the Bahmani king in attempting to subdue the Concan. The Bahmani king was driven out, but remained hostile.

1430 A. D. (= “1355 an. jav.,” Raffles x.), birth of Raden Paku or Sunan Giri, son of the daughter of the chief of Balambangan by the Arab missionary Mulana Ishak also called Mulana Alul Islam. The child was conveyed to Gresik in Java and placed under the charge of Niai Gedi Pinatoh, a woman of rank banished from Kamboja to whom refuge had been granted by the Javan king.

“In this year” (Velasco, and Markh.), Atauchi Duchicala succeeded by Hualcopo Duchicala, now fourteenth scyri of Quito.

“The same year” (Colebrooke as. res. vii. p. —), Vrihaspati surnamed Mucuta commenting on the *Amara-cosha*.

Strychnos colubrina of Southern Hindustan. Called in Telinga “naga musadi,” in Bengalee “koochila-luta” (Lindl.), and included perhaps by the commentator on the *Amara-cosha* — (see W. Jones as. res. iv. p. 128): *S. colubrina* is described by Rumphius ii. pl. 37; was observed in Hindustan by Rheede viii. pl. 24, and Roxburgh; by Graham, “a large scandent shrub by means of tendrils” found by Nimmo in the Southern Concan: the wood of its root is considered an infallible remedy for the bite of the naga or cobra de capella and of every other venomous snake, is therefore the most esteemed kind of *lignum colubrinum*, and brings such high prices among the natives as rarely to find its way to Europe (Roxb., and Lindl.).

“1431, March 3d to 6th” (Alst., and Nicol.), Martinus III. succeeded by cardinal Gabriel Condulmier, now Eugenius IV., fifty-third pope. Charles VII. . . ruling France; and Henry VI., England.

“July 23d” (Nicol.), “Eighteenth general ecclesiastical Council.” Convened at Basle. The kinsmen of the pope and cardinals were excluded from the cardinalship. The festival of the Conception and Visitation was ordained. And the Council continued in session “eleven years, nine months, and seventeen days” (Alst.).

“In this year” (see Galvan.), Spain and Portugal disputing the possession of the Canary Islands, the controversy was decided by pope Eugenius IV. in favour of Spain.

“The same year” (Martin Behaim in voyag. Belg., and Major pr. H. 131), under instructions from prince Henry of Portugal, Gonzalo Velho Cabral re-discovering Formigas, and as the birds there made no attempts to escape, named it the “Hawks” or Azores — (a condition of things witnessed by myself on uninhabited islands). In “1432” a second island was re-discovered and named Santa Maria: and “in 1449” (Galvan.), Alfonso V. gave license to his uncle prince Henry to people the Azores, “which were long before discovered.”

* *Pyrola uniflora* of Northern climates. Called around Lake Baical “killereka,” and from early times used medicinally and as a substitute for tea — (Pall. iv. 409): observed by Gmelin throughout Siberia; by Pallas, in woods around Lake Baical; by Chamisso, in East Siberia. Westward, is described by C. Bauhin pin. 191; is known to grow on the Pyrenees and mountains of Switzerland, and from Flanders (Dec.) to Lapland (Engl. bot. pl. 146, fl. Dan. pl. 8, and Wats.). Farther West, in Greenland (Wats.); was observed by Lapylaie on Newfoundland; by myself, in deep shade from 48° on the Lower St. Lawrence to 42° along the Atlantic; by Pursh, from Canada to New York State; was received by A. Gray from Pennsylvania and Lake Superior; and was observed by Mertens at Norfolk Sound.

1432 A. D. (see T. Wright), near Damascus, Brocquière fell in with a "Moor who had ridden a camel from Cairo in eight days," bringing an order for the arrest of all Catalanians and Genoese in Damascus and throughout Syria; a ship having been captured by the prince of Tarentum. At the close of the year, returning through Asia Minor, — Brocquière found the Byzantine dominions confined to Constantinople, a castle three leagues North, and a small city in Greece called Salubria; the emperor paying tribute to the Turks, and under obligations to return fugitive slaves. While the Turkish sultan drew from Greece "thirty thousand men" annually; being "two fifths," or according to other estimates "three fourths" of his whole army.

"1433 A. D." (Brocq, and T. Wright), through a stratagem, Albania regained by Scanderbeg. — Who for several years maintained himself, defeating the Turkish armies sent against him.

"August" (Galvan.), John succeeded by his son Duarte or Edward, now king of Portugal.

"1434 A. D." (Blair), Cosmo de Medici duke of Florence, recalled from banishment. The beginning of the rise of the Medici family.

One hundred and seventy-second generation. May 1st, 1434, onward mostly beyond youth: the Greek writers, Michael Ducas nepos d. 1462, Gemistus d. about 1441, Georgius Codinus, Gennadius Georgius Scholarius d. 1459: Quintus Aemilianus, Flavius Blondus, Johannes Aventinus, Laurentius Valla, Laurentius Justinianus patriarcha Venetum, Leonard Aretin; Poggio; Antonio Cermisone, Bernhardus Senensis, Alphonsus Tonstadius, Antoninus Florentinus; Anton. Guainerius (Spreng.): the scholastic theologians, Joannes de Capistrano, Joannes Bassolius, Joannes de Turrecremata, and Nicolaus de Cusa: the botanist, Ortolfus de Bavaria Heydenberger: the painters, Fra. Giovanni called Angelico d. 1445, Masaccio d. 1443.

"The same year" (Galvan., Churchill coll., and Major pr. H. 69), under instructions from prince Henry of Portugal to disregard the statements of seamen who "have no knowledge of the *needle* or the *sailing chart*," Gil Eannes doubled Cape Bojador; and landing beyond, found no signs of inhabitants, but brought back "some plants that he had gathered, which were such as were called in Portugal St. Mary's roses" (*Rosmarinus officinalis*).

"1435 A. D." (Galvan., and Major pr. H. 69), Gil Eannes again sent out "in his *barque*," together with Affonso Gonsalves Baldaya in a "varinel, or vessel with oars:" fifty leagues beyond Cape Bojador, they entered a bay which they called "Angra do Ruivos" bay of gurnards, from the numbers of those fish; and on landing, found "traces of men and camels." — On reporting to prince Henry, Baldaya was sent back, taking two horses in his varinel, and "a hundred and twenty leagues" beyond Cape Bojador entered an estuary (afterwards called "Rio d'Ouro"): two lads "of about seventeen" were sent along the shore on the horses, and after "seven leagues" came "upon a group of nineteen men" armed only with azagays, who retired to a heap of stones, and "fought till evening warned the" lads to return to the vessel; in the morning, Baldaya visited the spot, but the natives "had decamped, leaving the greater portion of their poor property behind:" *seals* were seen to the number of some "five thousand," and the vessel was loaded with their skins. Continuing "fifty leagues" farther to a rocky galley-like headland, Baldaya was unable to capture a native, but procured some fishing-nets "made of the bark of a tree of such a texture" that "it could be woven excellently well" (*Adansonia*).

In or about 1435 A. D. (= "1360 an. jav.," Raffles x), arrival at Majapahit of ambassadors from Panjar Masin. In return, the king of Java sent one of his sons Chakra Nagara to be chief, accompanied by many vessels carrying followers and troops. Besides Burni (Borneo), other conquests by the Javan admiral Ratu Peng'ging are enumerated, as Makasar, Goa, Banda, Sembawa, Endé, Timor, Ternaté, Sulu, Siram (Ceram), and Manila. He was now sent to subdue Palembang.

In the Avadana Purana mention is made of the city of Surparaka ("Sippara" of Ptolemy or Sipeler on one of the mouths of the Krichna) precious stones of the Deccan (Golconda), silks, Buddhist assemblies, diligence in reading, and Kasyapa is named as having lived in old times.

Santalum . . . *sp.* of the Malayan archipelago. The "Gosircha tchandana," the grove held in the name of king Tchakravartin and reached by a sea-voyage, — is regarded by Burnouf as possibly from Sandalwood Island: santal of "Mekasiry" (Macassar) is mentioned by Abul Fazl (Gladw. ayeen akbery i. 92, and Burnouf introd. 255 to 619).

"In the years siouan-te and king-thai (= 1426 to 1435," Remus. iii. 97), ambassadors sent to China from Cambodia, — but afterwards they did not come regularly.

1436 A. D., the Javan admiral having subdued Palembang in Sumatra, Aria Damar son of king Angka Wijaya sent there as chief as early possibly as this date. He was accompanied by the Chinese princess; — and here in Palembang, her two sons Raden Patah and his half-brother Raden Husen were born.

"The same year = 'tching-toung,' 1st year of Yng-tsoung-joui-ti" or Yng-tsoung III., "of the Ming" or Twenty-third dynasty (Chinese chron. table, and Pauth.).

"Apr. 13th, Friday" (Blair), Paris re-captured by the French from English possession.

"In this year" (Humb. cosm. ii. and v.), map by Andrea Bianco, on which the *magnetic variation* is noted.

"The same year" (Clavig., and Humb. atl. pict.), Itzcoatl succeeded by Motezuma-Ilhuicamina or Montezuma, fifth Mexican emperor.

1437 A. D. = "1362 an. jav." (Raffles ix.), date of an inscription on a deg-hop among the ruins at Suku on Java.

"In this year" (Markham p. liii), Ulugh Beg, sultan of Samarcand, writing his Astronomical Tables. Among other instruments in his observatory was a *quadrant* whose radius equalled "the height of the dome of St. Sophia."

"1438, Jan. 10th" (Nicol.), a synod at Ferrara. In concert with the Council of Basle, which continued in session. Preliminary action was taken, For the re-union of the Greek and Latin churches (see Alst.).

"During Lent" (Nicol.), by the electors assembled at Frankfort, Albert II. of Austria chosen "king of the Romans;" succeeding Sigismund as emperor of Germany and Italy.

"July 7th" (Nicol.), in a numerous assembly or synod at Bourges, *Pragmatic sanction* composed. A celebrated rule, Making the authority of the general Councils "superior to that of the pope."

"The same year" (art de verif.), Barsebay El-Aschraf succeeded by Djemaleddin Yusuf; and before the close of the year, by Djakmak, thirtieth Memluk sultan of Egypt.

"In this year" (Stanley edit. Barb. 9 and 23), Josafa Barbaro at Tana on the river Tana (Don) witnessing the passage Westward of a horde or army of Tartars, led by Naurus and Chezimameth or Little Mahomet against Vlumahumeth Can or the Great Mahomet, at this time "in the champaigns towards Russia." On another occasion, Barbaro received a present of "eight sklaves of the nation of Rossia."

Laserpitium trilobum of the Uralian plains. Called on the Lower Volga "gladich" (Pall.); and the "baltracan" described by Barbaro 102 as having the smell of rather musty oranges, its stem single hollow thicker than one's finger and more than a "braccio" high, leaf like rape, seed like fennel but larger, pungent but pleasant taste and when in season broken as far as the soft part, can be eaten without salt, the water also in which the leaves are boiled drank as wine and very refreshing, the plant met with also between Albania and Croatia and at Terrarsa in Padovana, — may be compared: *L. trilobum* was observed by Pallas trav. i. 276 frequent on the Lower Volga, the young stems eaten crude; was observed also by Baumgarten in Transylvania, by Waldstein and Kitaibel in Hungary, and is termed "*l. carniolicum*" by Bernhardi (Steud.). From transported specimens, is described by Plukenet phyt. 223, and Linnæus (Pers.).

"The same year" (Rosse), the art of *printing*, though practised in China for some centuries, independently invented in Europe by Laurence Koster; who issued a printed tract entitled "*Speculum humanæ salvationis*." — Six years afterwards, the improvement of movable types was effected by Guttenberg and Faust. And after eight years more, a further improvement was made by Schœffer, in the casting of types in metal.

The same year = "1363 an. jav." (Raffles ix.), date of an inscription "in characters which appear to have some connection with the modern Javan," discovered at Kwali on Java.

"1439 A. D." (Garc. de la Vega), Yupanqui succeeded by his son Tupac Yupanqui, now eleventh Inca of Peru. He continued the great fortress at Cuzco, commenced by his father.

Tupac Yupanqui did not believe that the sun lives and "is the maker of all things," for "many things are made when the Sun is absent;" it "is like a tethered beast that always makes the same round," yet notwithstanding so many revolutions "is never tired;" whereas were it living and free, it "would visit other parts of the Heaven" — (Blas Valera, and G. de la Vega viii. 8).

He also said, That "ambition and avarice prevent a man from knowing how to moderate either his own actions or those of others."

The same year, Aria Damar having resided "about three years" at Palembang, arrival there of Raden Rachmat, son of an Arab priest and the elder sister of the princess of Champa. After "two months" stay, Rachmat proceeded on his voyage to Java, and on reaching Majapahit was kindly received by his relative the princess, and was permitted by king Angka Wijaya to form an establishment at Ampel with the free exercise of his religion.

"Feb. 29th" (Nicol.), a general synod or council convened at Florence; being a continuation of the synod of Ferrara. The re-union of the Greek and Latin churches consummated; the patriarch of Constantinople dying immediately after signing it. — But at the end of two years (Alst.), the Greeks returned to their religious dogmas and ceremonies.

"Nov. 17th" (Alst., and Nicol.), by the Council of Basle, continuing in session, pope Eugenius IV. declared deposed, and Felix elected his successor. Felix, being excluded from Rome, made Lausanne his residence.

"The same year" (Crawfurd vii. 11), in Java, Hindu temples constructed at Sukuh in the mountain of Lawuh.

Hardly later than this year (), after residing while a young man in Damascus, and proceeding thence to Hindustan, Ceylon, and Sumatra, Nicolo Conti, leaving on his right Andamania inhabited by cannibals, arriving at Ava. — He continued Eastward to Xeythona, and at a month's distance from the continent reached the Greater Java (Borneo). He describes *running a muck*, the prevalence of *cock-fighting*, and birds without feet whose skin and tail are "used as ornaments for the head" (*paradise birds* from New Guinea): fifteen days Eastward from the two Javas are two other islands, Sandai on which *nutmings* grow, and Bandan which alone produces *cloves*; *parrots* of three kinds are also found on Bandan, "some with red feathers and a yellow beak, and some parti-coloured, which are called 'nori,' that is brilliant" (*lories*), and "some white" which are called "cachi" (*cockatoos*). Returning, he sailed "westward" to "Ciampa abounding in *aloes wood*," thence to Melibaria and Calicut, and after spending two months on Sechutera, yielding *Socotrine aloes* and "for the most part inhabited by Nestorian Christians," he proceeded up the Red Sea and reached Venice in 1444 after twenty-five years absence.

The *Galeopithecus* or flying-cat is described by Nicolo Conti.

Durio zibethinus of the Eastern Equatorial portion of the Malayan archipelago. The fetid but much celebrated *durien* is called in Burmah "du-yeen" (Mason); and is clearly the green fruit called "duriano," having five fruits within and in taste varying like that of cheese, seen by Nicolo Conti on Sumatra: * — *D. zibethinus* is described by Rumphius i. pl. 29; was observed by Navarrete growing on Borneo and Celebes, but not as far as Manilla; by Dampier, on Mindanao; by myself, on Sulu; by Mason v. 447, a cultivated "exotic" in Burmah. Westward, by Roxburgh iii. 399, in Hindustan; but has only recently been introduced into the environs of Bombay (Nimmo. and Graham), and into Zanzibar, observed by myself on the imaum's plantation. Accounts of this fruit had reached Europe as early as 1640, the "durion" being mentioned by Parkinson.

Santalum ka-ra-mai of Burmah. Probably included in the "*white sandal wood*" seen by Nicolo Conti at Panconia: — *S. ka-ra-mai* was observed in Burmah by Mason.

"1440. Aug. 26th to Sept. 11th" (Nicol.), another synod at Bourges. The bishops with Charles VII. of France refused to recognize the Council of Ferrara, or to abolish "Pragmatic sanction."

"In this year," Galfridus de Lynn, according to his own account, writing his *Promptorium parvulorum*, an English-Latin dictionary.

Galeobdolon luteum of Europe and the adjoining portion of Asia. Called in Britain *yellow dead-nettle* or *yellow archangel* (Prior), and probably included in the "archangel" or "defe nettle" of Galfridus pr. pm., — and "archangelica" or "blind netele" of gloss. Harl. 3388 (Cockayne): *G. luteum* is described by Caesalpinus xi. 31 (Spreng.); is termed "g. sive urtica iners flore luteo" by Tournefort inst. 185, "cardiaca sylvatica" by Lamarck fl. fr.; and is known to grow in wooded mountainous situations throughout middle Europe as far as Britain (Hoffm. germ., Pers., and Engl. bot. pl. 787). Eastward, was observed by Sibthorp in woods on mount Hæmus and around Constantinople.

"1441 A. D." (Galvan., Churchill coll., and Major pr. H. 89), under instructions from prince Henry, Antam Gonsalves at the above-mentioned estuary procuring the "skins and oil of seacalves" (*seals*). Having completed his cargo, "he took nine sailors inland and succeeded in capturing two natives;" but on the following day as he was about leaving, he was joined by Nuño Tristan in an armed caravel bringing a Moor to act as interpreter: a second incursion was planned, which resulted in the capture of "ten natives;" of whom the chief only "was able to converse with the interpreter,

* *Castanea Martabanica* of the mountains of Burmah. A *chestnut tree* in common with the Juglans called "theet-kya" (Mason), and probably the "chesnuts" seen by Nicolo Conti at the city of Panconia: — *C. Martabanica* was observed in Burmah by Wallich; by Mason v. 398 to 456, "indigenous," growing "on the uplands" and sometimes "nearly down to the sea shore," the fruit "sold in bazar" but inferior in quality to the European chestnut.

Castanea tribuloides of the mountains of Burmah. Distinguished as the "wet-theet-khya" *hog-chestnut* (Mason); and included perhaps in the "chesnuts" seen by Nicolo Conti at Panconia: — *C. tribuloides* was observed by Mason v. 463 "indigenous" and undescribed.

Pandanus hsat-thwa-gyee of Burmah. A stemmed palm-like *screw-pine*, affording perhaps the "pine-apples" seen by Nicolo Conti at Panconia: — *P. hsat-thwa-gyee* was observed by Mason v. 521 in Burmah, "very abundant" and "usually growing near the sea," the sails of "many of the Burmese boats" made of its "large narrow leaves sewed together," and its fruit "used by the Karens to kackle their thread."

the rest spoke the language of the Azanegues or Tawny Moors" (Barabra Race); the interpreter going on shore "was detained prisoner, after having in vain tried to negotiate with the natives," and Gonsalves sailed for Portugal. Tristam, after repairing his vessel, continued beyond the Gallée rock to a cape which from its whiteness he called Cape Branco, and returned.

A concession was now obtained from the pope "in perpetuity to the crown of Portugal of whatever lands might be discovered beyond Cape Bojador to the Indies inclusive." The Bull issued — was subsequently confirmed by the popes Nicholas V. and Sixtus IV.

"1442 A. D." (Churchill coll., Galvano giving "1443," see Major pr. H. 91), the captive chief, wishing to return and offering a ransom, was sent back under Gonsalves; and "handsomely dressed in clothes which the prince had given him," was set on shore: at the end of a week, "a Moor on a white camel appeared with full a hundred slaves," out of which "ten negroes of both sexes were given up in exchange for the two boys," besides "a great number of ostrich eggs," a leathern buckler, and "a small quantity of gold dust:" the estuary in consequence received the name of "Rio d'Ouro."

In this year, in Java, Raden Paku "twelve years of age" resigned by his nurse Niai Gedi Pinateth to the charge of Raden Rachmet. Who brought him up in the Mohammedan religion.

"The same year" (Webb in archæol. Brit. xxi, and R. H. Major in soc. Hakl.), Abd-er-Razzak, envoy from Shah Rokh, arriving at Ormuz; a great commercial city, where "merchants from the seven climates of the world" assemble, "from Egypt, Syria, Anatolia, etc.," men "of all religions, even infidels, who traffic in perfect liberty, and to whom justice is equally administered." He was detained in "May" at Kariat (near Muscat), and thence proceeded to Calicut, — and at the "end of April" in the following year reached the city of Vijanagar in Southern Hindustan. Returning, he reached Ormuz "April 22d, 1444," was sent on embassy into Ghilan "in 1446," and died at Herat "in 1482."

Rosa Indica of China. The *China rose* probably included among the "roses of all kinds" under cultivation seen by Abd-er-Razzak on approaching Vijanagar, sold in the bazaar sweet-smelling and in constant succession, and regarded by inhabitants "quite as necessary as food:" — *R. Indica* was observed by Graham in the environs of Bombay "common in every garden and in flower all the year;" by Roxburgh, in Bengal; by Mason, "exotic" in Burmah; and is known to be indigenous in China (Pers.). Transported to Europe, is termed "*r. rubra Malabathrum*" by Cornuti p. 121, who states that it grows more fragrant with age; is described also by Petiver pl. 35; and from Europe was carried to Northeast America, where it continues in greenhouses.

Rosa microphylla of China. Small-leaved with pale-red flowers; and possibly among the roses seen by Abd-er-Razzak: — observed by Graham "common in gardens" at Bombay, and known to be a "native of China." Transported to Europe, is described by Don ii. 581, and in bot. mag. pl. 3490 (Grah.).

Rosa Sinica of China. The *Bengal rose*, probably among those seen by Abd-er-Razzak: — observed by Lush in the Bombay district at Dapooree; by Mason, "exotic" in Burmah; and known to be indigenous in China (Linn.). Transported to Europe, is termed "*r. Bengalensis*" by Persoon, "*r. semperflorens*" by Curtis mag. pl. 284, the flowers red (Pers., and Steud.).

Rosa glandulifera of Hindustan. White-flowered and called in the environs of Bombay "shewatee goolah" (Graham); possibly among the roses seen by Abd-er-Razzak: — described by Roxburgh ii. 515; and observed by Law near Bombay, "common in gardens at Belgaum, where it is in flower all the year" (Graham).

"1443 A. D." (Churchill coll., and Major pr. H. 93), under instructions from prince Henry, Nuño Tristan passing Cape Branco: "twenty-five miles beyond," in the Bay of Arguin, a small island was discovered from which "twenty-five canoes put out," each containing three or four natives entirely naked and paddling with their feet; the canoes were pursued and "fifteen" of the natives captured, and after visiting another islet, resorted to by multitudes of herons and other birds for breeding, Tristan "returned the same year with his booty" to Portugal. — On the first-named islet, the fortress of Arguin was built "in 1448."

"In this year (= 847 A. H.) of Ferisht., Elph.), Ahmed Shah succeeded by Mohammed Shah, now third Muslim king of Guzerat.

"In this year" (San-kokf transl. Klapp.), the Southern portion of Yeso conquered by the Japanese general Nobou-firo.* — His descendants have continued princes there to the present day, and the district is called Matsmaye.

* *Euphorbia Sieboldiana* of Yeso and the neighbouring countries. Called "ikatsuka," or by the Japanese "kansui," — and enumerated by Siebold as medicinal.

Lonicera brachypoda of Yeso and the neighbouring countries. Called "sui kadsura" by the Japanese, — and enumerated by Siebold as medicinal.

Lapathum sp. of Yeso and the neighbouring countries. Called by the Japanese "ma daiwo," — and enumerated by Siebold as medicinal.

Rheum sp. of Yeso and the neighbouring countries. Called "sjunaba," or by the Japanese "stakamaro;" — enumerated by Siebold as medicinal.

The year of the Ainos of Yeso beginning not in the Japanese manner, but apparently in that of Europeans, — which according to Rinsifée (author of the San-kokf) would be an astonishing fact.

Among useful plants growing on Yeso, *Menyanthes trifoliata* called "midsugasiba" by the Japanese, medicinal; *Coptis trifolia* called "mitsuba woren" by the Japanese, medicinal; *Acorus calamus* called "sjob" by the Japanese, medicinal; and *Scirpus maritimus* called "kasasuge" by the Japanese, for straw hats.

"In this year" (Burm. hist., and Mason 51), the Chinese invading Ava repelled by king Bhuren-Narapadi, also called Dupeyoundayaka.

1444 A. D. (= "16th year of Gofunnazo," art de verif.), in Japan, the title "sei-seogun" conferred on Josijmassa by the dairo Gofunnazo.

The shiogun Yoshi-masa instituted the Cha-no-yu, small parties of friends for tea-drinking, "and framed certain rules concerning the etiquette to be observed on such occasions, in order to avoid all excitement, and to bring people into as intimate relations with one another as possible" — (Jap. c. c. 107).

"The same year = 9th year of the 'tching-toung' of Yng-tsong III." (Chinese chron. table), beginning of the Sixty-ninth cycle.*

"The same year" (Alst. p. 216, and Blair), at Varna, Ladislaus king of Hungary defeated by the Turks.

"In this year" (Spreng. hist. med. vii. 8), Bartholom. Montagnana writing a portion of his Consultations. — He died in "1460."

"The same year" (Alst.), Joannes VIII. succeeded by his brother Constantinus XII., by consent of the Turks sixty-ninth Byzantine emperor; — and as it proved, the last.

In this year (Major ind. voy. p. lx), on the return of Nicolo de' Conti, an account of his travel committed to writing by Poggio Bracciolini, secretary to pope Eugenius IV. "About the same time, some men came to the pope from Æthiopia upon matters regarding the faith" — (Major 34).

The wild animal hunted for food, described by the Abyssinian legates as having "horns three cubits in length and spiral from the top," — is regarded by Major as probably the koodoo antelope, *Strepsiceros kudu*.

Luffa pentandra of Eastern Equatorial Africa. Called in Burmah "tha-bwot" (Mason), in the environs of Bombay "gosalee toorai" (Graham); and the vegetable resembling cucumbers, mentioned by the Abyssinian legates, — may be compared: *L. pentandra* is enumerated as seen by Grant in Equatorial Africa. Eastward, was observed by Rheede viii. pl. 8 in Malabar; by Graham, "cultivated" around Bombay, its fruit "one to three feet long;" by Roxburgh, Wight, and Stewart punj., in other parts of Hindustan (Drur.); by Mason, "exotic" in Burmah and considered by the natives "a delicious vegetable;" is described also by Rumphius v. pl. 147.

Musa? ensete of Abyssinia and Central Africa. A huge herbaceous plant called in Abyssinia "ensete" (Bruce); and the tree described by the legates as "of the height of a man, and in girth as much as a man can embrace with his arms, with many layers of bark" between which fruit like chest-nuts is deposited, when pounded made into very sweet white bread, the leaves "one to two cubits in length," — may be compared: *M. ? ensete* was observed by Bruce frequent in the moist warm parts of Abyssinia, large plantations in Maitsha and Goutto "almost exclusive of anything else" forming "the food of the Galla," its "stem" for "several feet in height" eaten "with milk and butter" is "the best of all food, wholesome, nourishing, and easily digested" (Grev.). Apparently the same plant was seen by Grant fruitless and wild outside a plantain-grove under the Equator, and smaller ones among rocks at "3° 15' N." on the Nile, the leaves huge, and the seeds strung by the Waganda into necklaces, charms, and tiaras; no other uses known to his companions.

Poa Abyssinica of Abyssinia. A kind of grain called there "teff" (Bruce); and the "corn and wine" described by the legates as abundant, — may be compared: *P. Abyssinica* was observed by Bruce cultivated throughout and affording "the common bread of the country," from which fermented with water "is prepared a kind of beer in general request by the Abyssinians" (Grev.). Transported to Europe, *P. Abyssinica* is described by Aiton, and Jacquin rar. i. pl. 17.

* *Scaevola lebelia* of the coral-strand of the Indian and Pacific oceans. A shrub called in Tagalo and Bisaya "boto" or "bocaboc" or "panabolong" or "pangangtolon," in Zambales "linog," and its pith cut into "rice-paper" by the Bisayas and Chinese (Blanco) as early probably as this date. — Eastward, *S. lebelia* was observed by myself throughout the Pacific, chiefly on coral-reefs and islands: by J. D. Hooker, on the Galapagos Islands; and is known to grow in the West Indies (Jacq. amer.) as far as "South Florida" (Chapm.) and the Bahamas (Catesby i. pl. 79). Eastward from the Philippines, is described by Rumphius iv. pl. 54; was observed by Rheede iv. pl. 50, and Roxburgh, in Hindustan; by Graham, in "gardens Bombay;" and is known to grow on the seashore of Australia and "Afrique intertropicale" (A. Dec.).

"In this year" (Major pr. H. 131), the Azores Island seen by a runaway negro slave from the highest mountain on Santa Maria visited by Cabral and named St. Michael: — Terceira was discovered "before 1450," and from this island San Jorge and Graciosa are in sight: Fayal and Pica were discovered "before 1466."

"In this year" (Galvan., Churchill coll., and Major pr. H. 95), by permission of prince Henry, Lançarote "having fitted out six caravels" sailed to the Arguin islets, and chiefly there procured "about two hundred captives," of "every variety of colour from nearly white to the deepest black." Returning to Portugal, the captives "very soon became Christians, and were treated with great kindness by their" masters, and "some of the young girls were adopted by noble ladies."

"1445 A. D." (Major pr. H. 95), under instructions from prince Henry, Antam Gonsalves revisiting the Rio d'Ouro: "an old Moor returned voluntarily," "wishing to see prince Henry," and João Fernandes "by his own desire was left behind."

The people were found by Fernandes to be "shepherds, who wandered with their cattle wherever they could find pasture: the fodder was scanty, the land desert and sandy, with no trees except small ones, such as figueras do inferno" (*cactiform Euphorbia*), "thorn-trees" (*Balanites Aegyptiaca*), "and a few palms" (*Hyphaene* ?); "there were very few flowers: all the water was from wells, except a very few running streams: the people were called Alarves, Azanegues, and Berbers; they were Mohammedans; their language, written and spoken, differed from those of other Moors; they waged war with the negroes, and took a great number prisoners;" "their camels were very numerous, and could travel fifty leagues in a day, and they had plenty of cattle in spite of the thinness of the pasture." At the invitation of two horsemen, who "mounted him on a camel," he journeyed Southward several days to the chief, Ahude Maymon, who with his family and "retinue were about one hundred and fifty in number," and was hospitably entertained: "their principal food was milk and sometimes a little meat with seeds of wild herbs gathered on the mountains; *wheat* was considered a luxury; for many months they and their horses and dogs lived entirely on milk; those on the sea-shore ate nothing but fish, mostly raw or dried;" their merchandise, besides slaves and "*gold* from the negro country, consisted of wool, butter, cheese, *dates* which they imported, amber, *civet*, gum anime, oil and skins of sea-wolves" (*seals*). At the end of "seven months," Fernandes was discovered on the shore South of Arguin Island and taken off by Antam Gonsalves.

"In this year" (Major pr. H. 96), Diniz Dias, furnished by prince Henry with a caravel and determined to sail farther than his predecessors, passing the mouth of the Senegal, "which separates the Azanegues or Tawny Moors" (Barabra) "from the Jallofs, the first real Blacks" (negroes): coasting along, "the caravel caused great astonishment among the natives, till at length four" approached "in a canoe; but when they found it contained men," fled with such speed that they could not be overtaken: Diniz continued to (the termination of the Desert in) a remarkable headland which he called Cape Verde, and landing, set up a wooden cross (Galvan.).

"Aug. 10th" (Major pr. H. 102), sailing of a fleet of "six-and-twenty caravels," to punish a massacre by the natives of Tider (South of the Arguin islets): the village, about which were "a few cotton-trees" (*Gossypium*), was destroyed, the natives soon put to flight, and "fifty-seven" of them captured. The object of the Expedition accomplished, six caravels under Gomes Pires proceeded Southward, passing the "two palm-trees" (. . .) "twenty leagues" before reaching the Senegal, and continuing to Cape Verde; where the natives proved numerous and hostile, using arrows of reeds or charred wood, "with long iron heads" tipped "with vegetable poison."

Adansonia digitata of Equatorial Africa. On an island near were "many large *baobab* trees," one of them measuring "a hundred and eight palms" around the trunk — (Major); and subsequently, one was found by Cadamosto at the mouth of the Senegal "one hundred and twelve feet" around the trunk (Drur.): in ascending the Nile, the first baobab was found by Lepsius eg. and sin. 166 "beyond Kamlin" in about 15°; the fruit brought down the river under the name of "habhab" is described by Alpinus pl. 67, Forskal p. xlix, and Delile, as used medicinally: at Zanzibar, the tree appeared to me introduced, the natives using the shell of the fruit for water-buckets, but young stocks were springing up spontaneously. Eastward, has long been introduced into Hindustan, though so far as observed by myself not attaining there unusual dimensions; its fruit used by the fishermen of Guzerat as floats for their nets, used also "medicinally by the natives, who like the Africans esteem it cooling, the leaves are eaten with their food, and are said to restrain excessive perspiration" (Bombay med. trans. i. 18, and Graham); a few trees were generally found by Gibson "at places where the Musselmén have been." The bark according to Drury "furnishes indestructible cordage, and a coarse thread used for cloth and ropes."

Cape Verde had already been passed by Alvaro Fernandes; five negroes came on board there, and were kindly treated; but when "they reached the shore they encouraged other natives to make an attack, and six boats put out with thirty-five or forty men in them prepared for fighting;" two negroes were captured. Alvaro Fernandes continued South to a cape where were many standing

dead trunks of palms, and therefore received the name of Cape of Masts; but he was again unable to open friendly intercourse with the natives.

Elais Guineensis of Western Equatorial Africa. Possibly the palm in question; — wine called "mignol," from a palm like to but differing from that which produces the date, was found by Cadamosto South of the Senegal, also a saffron-coloured oil whose origin he was unable to ascertain: the latter is referred by Major pr. H. 109-52 to *palm-oil*, which continues to be exported in large quantities for lubricating and the manufacture of soap and candles (lond. tract soc.). Through European colonists, *E. Guineensis* was carried across the Atlantic (Pers.), observed by Aublet 975 in Cayenne; by Descourtiz, under cultivation in the West Indies though having a Carib name "aouara." Transported to Europe, is termed "*palma spinosa*" by Miller (Willd.).

"In this year" (Burm. hist., and Mason 51), the Chinese invading Ava, again demanding the rendition of Thonganbua, Shan chief of Mogaung: the king was persuaded to surrender him.

"1446 A. D." (Major pr. H. 110), Nuño Tristan, passing the Cape of Masts as far as the mouth of a very large river (Gambia), where he anchored: ascending the river in "boats with two-and-twenty men," he with all but two of his party were killed by the poisoned arrows of the natives.

"In this year" (Major 112), Alvaro Fernandes on his Second voyage continuing beyond Cape Verde "a hundred and ten leagues" to "a point of sand in front of a great bay;" but from a previous wound in attempting to open communication with the natives, decided to return.

"In this year" (Major 114), nine caravels "sixty leagues beyond Cape Verde" entering the Rio Grande: Stevam Affonso, one of the commanders, landing and following some tracks found "plantations of cotton-trees" (*Gossypium*) "and rice, and other trees of various kinds;" but entering a wood, his party was attacked, "seven of the foremost" wounded, of whom "five fell dead," and Affonso with the remainder escaped with difficulty. The caravels on their way back procured "eight-and-forty natives" near Arguin.

"To this year" (according to Azurara) "there had been fifty-one caravels to these parts," going "four hundred and fifty leagues beyond the Cape" (Bojador): the coast running "southward with many points, which the prince caused to be added to the sailing chart."

"The same year" (art de verif. contin.), by the emperor Motezuma Ilhuicamina, building of a dike nine miles long to protect the city of Mexico against inundation.

Tagetes erecta of Mexico. A garden-flower improperly called *African marigold*, having a Mexican name, — and observed in Mexico by Hernandez v. pl. 29. Transported to Europe, is termed "*tanacetum peruvianum*" by Valerius Cordus (Beckm.), is described also by Fuchs pl. 57, Matthioli, Dodoens, and Cæsalpinus; was observed by Forskal in gardens at Constantinople; by him, and Delile, in the gardens of Egypt, called there "qatyfeh;" by Forskal, under cultivation in Yemen and called "randjes" or "naufar," but growing spontaneously around Hadie; by Roxburgh, and Graham in Hindustan, its flowers "sold in the bazars, and worn by women in their hair," met with by myself among temple-offerings; by Blanco, in gardens on the Philippines, yellow-flowered, and called in Tagalo "amarillo." *T. patula* or the *French marigold*, also known to have come from Mexico (Pers. and Spreng.), is described by Tragus 923, is termed "*t. flore fulvo maculato*" by Dillenius elth. pl. 279; has become frequent in the gardens of Europe and Northeast America; was observed by Roxburgh in Hindustan, by Graham "common in every garden" and called "gool jafree," naturalized according to Law about Belgaum, its flowers sold for the same purposes in the bazaars; by Thunberg, under cultivation in Japan and called "korei kikf" or "tsjosen so" or "koo woo soo"

Lantana camara of Tropical America. A yellow-flowered Verbenaceous shrub called in Mexican "cayolizan" or "tepocan," — and observed in Mexico by Hernandez 66; by Descourtiz in the West Indies, but no Carib name given; and the "camara," by Marcgraf and Piso pl. 177 in Brazil. Transported to Europe, is described by Plukenet alm. pl. 114, Dillenius elth. pl. 56, and has become well known in greenhouses; was observed by Clot-Bey in the gardens of Egypt; by Lush, and Graham, in the environs of Bombay "introduced from Bengal."

Mirabilis Jalapa of Mexico. The garden-flower called *four o'clock*, and falsely *marvel of Peru*, long known in Mexico: * — is termed "*mirabilis mexican.*" by Hernandez v. 47, and was observed by

* *Quamoclit pennata* of Mexico. The *cypress-rue* (resembling *Taxodium distichum* in its foliage) or the "*quamoclit*" — was observed on the Voyage of the Sulphur abounding and at least spontaneous in Mexico, along the Pacific (Benth. 133, and A. Dec.): is known to occur also seemingly wild around Para, at the mouth of the Amazons (Chois.), but in the West Indies no Carib name is given by Descourtiz: is cultivated for ornament in our Southern States, and was observed by Chapman "spontaneous near gardens." By European colonists, was carried Westward across the Pacific to the Philippines, where according to Blanco it is called in Tagalo "agoho" (the name of the Casu-

him, and Berlandier, growing wild; by Sloane, and Maycock, wild also on Jamaica and Barbadoes (A. Dec.). The plant appears to have at once arrested the attention of Catholics; was observed by myself in 1841, one of the few objects of cultivation at the Missions around the Bay of San Francisco. By European colonists, was carried Westward across the Pacific to the Philippines, is called in Tagalo "guilalas" or "oracion," its flowers being open at the time of Oracion and closing in the morning (Blanco); to Amboyna (Rumph. viii. 41), Timor (Span.), and Java (Blume); to Japan, called "keso" or "foosen" or "kinfokva," and a white cosmetic from its seeds used for the complexion by women (Kaempfer, and Thunb.); to China and Anam (Lour.); to Burmah, called there "myae-zu" (Mason); to Ceylon, naturalized (Moon, and Gardn.); to Malabar, called there "andi maleri" (Rheede x. pl. 75); to other parts of Hindustan (Ainsl., Pidd., and Wall.), observed by Graham as far as Bombay, "common in every garden and in flower all the year," and called "gool bajee" or "gool abbass;" to Yemen, observed by Forskal both cultivated and springing up spontaneously, and called "uard el læjl" or "zahr el læjl;" to Egypt, observed by Hasselquist, Forskal, and Delile, its name "yimani" indicating the route of introduction. Transported across the Atlantic to Europe, is termed "magnæ admirationis herba peruviana" by Lobel; is described also by Tabernæmontanus, Clusius, and C. Bauhin; soon became a favourite flower, and was observed by Forskal in gardens at Constantinople: by European colonists also, was carried to Northeast America, where it continues in gardens; and to the Mauritius Islands, observed by Bojer becoming naturalized.

Mirabilis dichotoma of Mexico. Known from early times, — cultivated with and often confounded with the preceding: received from America by Choisy (Dec. prodr. xiii. 2 p. 428). Transported to Europe, is described by Clusius hist. ii. 90 (Pers.): and by European colonists was carried to Pulo-Penang in the Malayan archipelago, and Taheiti.

"1447, March 6th" (Alst., and Nicol.), Felix abdicating, Eugenius IV. succeeded by cardinal Thomas de Sarzana, now Nicolaus V., fifty-fourth pope. Fredericus III. ruling Germany and Italy; and James II., Scotland.

"1448 A. D." (Relat. du Groenl. 212), accession of the Oldenbourg family and of Christian as king of Denmark. He made a pilgrimage to Rome, and obtained permission to establish an Academy at Copenhagen.

"In this year" (Major edit. Bethenc. p. xxvii), under instructions from prince Henry of Portugal, Gomez Eannes de Azurara compiling an account of the conquest of Guinea. He describes four of the Canary Islands as remaining unsubdued: the people of Grand Canary were intelligent, "very active and powerful; their only weapons were a short club," and stones; "most of them went entirely naked, but some wore petticoats of palm leaves; they made no account of the precious metals, but set a high value on iron, which they worked with stones and made into fishing-hooks; they even used stones for shaving;" "they kindled fire by rubbing one stick against another;" "held it an abomination to kill animals, and employed Christian captives as butchers." The people of Gomera "had no clothing, no houses;" "spent their time chiefly in singing and dancing," and "made their sisters' sons their heirs." The people of Teneriffe "passed their lives in huts and caves; their chief occupation was war, and they fought with lances of pine-wood, made like great darts, very sharp, and hardened in the fire; there were eight or nine tribes, each" having a king, who when he died was kept unburied until the death of his successor. The people of Palma fought with spears "pointed with sharp horn," and "at the other end they also put another piece of horn, but not so sharp" (see Levit?); "they had no knowledge of God, nor any faith whatever."

"To the period of Azurara's completing his chronicle" (Major pr. H. 119), "nine hundred and twenty-seven souls had been taken" from the West African coast "to Portugal."

In or about this year (= 1648 — "200 yrs" of Flacourt præf. and i. 46), the art of writing brought to Madagascar by Zafe-Casimanbou, Arabs from the Red Sea, sent (according to their own account) by the "caliph of Mecca." These Arabs settled in the Southeastern portion of Madagascar, taught Arabic and the Koran, intermarried with the natives, and at length obtained the government of one or two provinces. The language of Madagascar is the same throughout the island; but in applying the Arabic alphabet, some of the letters are pronounced differently.

Anomum angustifolium of Madagascar. Called there "longouze" (Flac.), and affording the *Madagascar* or *great cardamoms* — or the "meleghetta" praised by Andrea Corsali (Yule cath. i. 89):

arina); to other parts of the Malayan Archipelago (Rumph. v. pl. 155); to Burmah, observed by Mason "exotic" and called "myat-læ-nee;" to Hindustan, where it has acquired a Sanscrit name (Roxb., and Pidd.), was observed by Rheede xi. pl. 60 in Malabar, by Graham "common in gardens" as far as Bombay; and to the Mauritius Islands (Boj.). Transported to Europe, is termed "gelsemium rubrum" by Cæsalpinus 184; "quamoclit" or "quamochlit" or "jasminum americanum" by Clusius post. pl. 8; is described also by Camerarius hort. 135, Columna aq. pl. 72, and C. Bauhin.

observed by Flacourt i. 36. 26 extremely abundant on the Northern portion of the island, and identified by him with the "cardamomum maius" of European drug-shops; observed also on Madagascar by Sonnerat ii. pl. 137 (Pers.). By European colonists, was carried to the Mauritius Islands, observed under cultivation there by Bojer. The seeds according to J. E. Smith have none of the vehement hot acrid taste of grains-of-paradise (Lindl.).

Laëa gummifera of Madagascar. A woody Apocynous vine called "voua-héné," — observed by Bojer around Tamatave in the extensive forest along Ivoudrou river, yielding *caoutchouc* abundantly. By European colonists, the plant carried to the Mauritius Islands and cultivated there: and from transported specimens, described by Poirét enc. suppl. v. 409 (Boj., and Lindl.).

"1449 A. D. (Churchill coll.), Gonsalo Vello visiting the Azores, found no inhabitants; but discovered the statue of a man on horseback, pointing with his right hand West, and some characters not understood carved on the rock beneath. — Since ascertained to be one of the islands presenting some general resemblance to such a statue (Humb.).

"The same year" (Alst.), end of the chronicle of Matthæus Palmerius.

"Towards the middle of the 15th century" (biogr. univ. and O. S. 148), Cuba at Salerno, where he had a greenhouse, writing the *Ortus Sanitatis*. — The edition of 1485 is enumerated by Sprengel as the "third."

Cassia sophora of Tropical Asia. Called in Egypt "soffeyr;" in which we recognize the "suffire" of the *Ortus Sanitatis* 334, — and "sophera" of Honorius Bellus (Spreng.): *C. sophora* was observed by A. pinus, Forskal, and Delile, in the gardens of Egypt; and farther South, by Browne in Darfour. Eastward, by Rheede ii. pl. 52 in Malabar; by Graham "common in uncultivated places during the rains" as far as Bombay; by Roxburgh, as far as Bengal; by Burmann pl. 98, in Ceylon; by Mason, indigenous in Burmah.

Veronica hederifolia of Europe and the adjoining portion of Asia. Called in Britain *henbit* or *morgeline* from the French, in medieval Latin "mors gallinæ" (Prior): the "morsus gallinæ" is mentioned in the *Ortus Sanitatis* 301: — *V. hederifolia* is termed "*v. cymbalaria folio verna*" by Tournefort inst. 145; and is known to occur in waste and cultivated ground throughout middle Europe. Eastward, was observed by Sibthorp from the Peloponnesus to Cyprus and Constantinople. By European colonists, was carried to Northeast America, where it continues in "shaded places, Long Island to Pennsylvania, scarce" (A. Gray).

Lamium amplexicaule of Europe and Northern Asia. Called in Britain *dead-nettle* (Prior), in Japan "mogura" or "irakusa" (Thunb.), and the "urtica mortua" of the *Ortus Sanitatis* — may be compared: *L. amplexicaule* is termed "*l. folio caulem ambiente minus*" by Tournefort inst. 184; and is known to grow in Barbary, the Canaries, and throughout middle Europe as far as Moscow and Sweden (Munby, Benth., and Fries). Eastward, was observed by Sibthorp, and Chaubard, in Southern Greece; by Delile, in cultivated ground at Damietta in Egypt; is known to grow around Caucasus, in Siberia as far as Lake Baikal, in Persia, Cabul, and throughout the whole range of the Himalaya mountains (Ledeb., and Benth.); was observed by Thunberg in Japan, frequent in cultivated ground. By European colonists was carried to Northeast America, where it continues to grow in waste places, and (according to Hooker, and A. Decandolle) from Canada to Louisiana.

"In this year" (Burm. hist., and Mason 51), Bhuren-Narapadi still reigning in Ava, unsuccessful attempt by the Chinese to capture Monhyin and Mogaung.

"1450 A. D. = 1st year of King-ti," acting Chinese emperor; his brother Yng-tsong III. having been taken prisoner in Tartary.

"In this year" (Remus. trav. C. Zeno 5), Giausa or Jehan Shah, king of Persia, defeated and dethroned by Hassan Beg; who from this time was called Uzun Hassan (the tall king, transl. Grey).

"1451, Feb. 8th" (Nicol.), a synod at Saltzburg. On the reformation of the monasteries of that province.

"In this year" (ann. Jap. transl. Tits., and San-kokf transl. Klapp.), first arrival in Japan of people of the Loo Choo Islands. — They have continued to come to the present day for purposes of traffic.

"In this year (= 855 A. H." of Ferisht., Elph.), Mohammed Shah succeeded by Kutb Shah, now fourth Muslim king of Guzerat.

"1452 A. D." (Alst. p. 226 and 307), Murad II. succeeded by his son Mohammed II., ninth Turkish sultan. Who before the close of the year captured and laid waste Athens.

"On the day of Pentecost" (Nicol.), a synod at Magdeburg. "For the reformation of the canons regular."

"In this year (= 3d year king-thai," Remus. iii. 97 to 99), an ambassador with tribute sent to China from Cambodia.

"1453 A. D." (Blair), English power in France terminated by the battle at Castillon.

"The same year" (art de verif.), Djakmak succeeded by Othman El-Mansur; and before the close of the year, by Ynal, thirty-second Memluk sultan of Egypt.

"In this year" (Burm. hist., and Mason 27), Hattiraza with the title of Byanya reigning in Pegu.

"The same year" (Alst. p. 307), Constantinople captured by the Turks under Mohammed II. End of the Greek or Byzantine empire.

1454 A. D. (= "45 years after the death of Mulana Ibrahim," Raffles x.), in Java, death of Niai Gedi Pinatch of Kamboja. (The date probably taken from her tomb at Gresik.)

"1455, March 28th" (Major pr. H. 139 and edit. Bethenc. p. xxxiii), in a galley fitted out by prince Henry and Vicente Dias appointed sailing captain, Vicente Cadamosto arriving at Madeira: there were now four settlements on the island, including one at Camara dos lobos, eight hundred armed men, and sawmills at the mouths of the principal streams.

Continuing his voyage, Cadamosto touched at the Canary Islands and found Grand Canary, Tenerife, and Palma as yet unsubdued: there "were plenty of men of arms to defend them, and the mountain heights were difficult of access." They "went naked, except some few who wore goats'-skins," and "painted their bodies with the juice of herbs, green, red, and yellow, producing beautiful devices;" "were wonderfully strong and active, could take enormous leaps, and throw with great strength and skill;" "had no fixed religion, but some worshipped the sun, some the moon, and others the planets;" and "when one of their chiefs came into possession of his estate," some self-devoted victim would offer "to die in honour of the festival," and would throw "himself from a great height into the valley."

After discovering the Cape Verde Islands and visiting the mouth of the Senegal, Cadamosto proceeded South to the "Gambra;" but the natives proving hostile, returned. — On a subsequent voyage, leaving in the "beginning of May," he went ten miles up the "Gambra," and found some of the natives professing the Mahommedan religion.

Psophocarpus tetragonolobus of Equatorial Africa. Kidney beans of the finest quality observed by Cadamosto in Senegal, big as our long hazel nuts, speckled with variegated colours, in shape broad low and of a lively red, some of them are white and beautiful (lond. coll. voy. 1789): the "botor" — is also described by Adanson (Steud.). Eastward, *P. tetragonolobus* was observed by Bojer naturalized along the margin of cultivated ground in the Mauritius Islands, and called "pois carrés:" by Graham, "commonly cultivated in gardens" at Bombay, and called "chandaree" or "charputtee," or in English *chevaux de frize bean*; observed also by Roxburgh, and Wight, in other parts of Hindustan. Farther East, enumerated by Mason v. p. 466 as "exotic" in Burmah, called "pai-myeet," and the young pods "eaten like French beans:" described by Rumphius v. pl. 133: observed by Blanco in the Philippines, called in Tagalo "calamismis," and the pods eaten both by natives and Europeans.

"Apr. 8th" (Alst. and Nicol.), Nicolaus V. succeeded by cardinal Alphonso Borgia, now Calixtus III, fifty-fifth pope.

"The same year" (Blair), in England, civil war. Henry VI. defeated and taken prisoner at St. Albans, in the first battle between the "Houses of York and Lancaster."

Helleborus viridis of the mountains of middle Europe. Called in Britain *green hellebore* (Prior), and introduced from the neighbouring continent as early perhaps as this date, — no instance of its spontaneous growth being known to Gerarde p. 825: a century later, localities are mentioned by Ray p. 271, and the plant has since become naturalized (Bromf. and Wats.): *H. viridis* is known to occur also in Normandy and Holland (Hard., and prodr. fl. Bat.), and wild on the mountains of Austria (Jacq. austr. pl. 106, and Pers.), as far according to A. Decandolle g. b. p. 759 as Greece. By European colonists, was carried to Northeast America, where it has escaped from cultivation on "Long Island" near New York (A. Gray). "Said by Stevenson and Churchill to be the best substitute for *H. Orientalis*, though less active," but according to Pereira "rarely or never employed" (Lindl.).

"1456 A. D." (J. R. Hind, and Humb. cosm. i. 1), the first comet whose orbit has been calculated solely from European observations. It is called "Halley's comet," and through its period of revolution = "74, 91 to 77, 58 yrs" is found to be identical with the comet of 1378 in the Chinese table, — making "nine" known returns down to 1835.

"In this year" (H. H. Wils. dram. hind. i. p. xxii), accession of Praud'ha or Pratapa Deva as king of Vijayanagar. — He reigned until "1477."

By his desire, Kallinatha wrote a comment on the Sangita-Ratnakara of Sarngi-Deva, a treatise on singing and dancing and dramatic literature — (H. H. Wils.).

"1457 A. D. = 'thian-chun,' the empire recovered by Yng-tsoung III." (Chinese chron. table).

In or about this year, arrival in Java of the two sons of the Chinese princess: Raden Patah "twenty" years old, and his half-brother Husen "eighteen." Raden Patah did not proceed to the court at Majapahit, but remained incognito at Ampel in communion with Raden Rachmat.

As early perhaps as this year (see addit. art de verif.), expedition of the Inca Tupac Yupanqui Northward against the provinces of Chinchasuyu.*

"1458 A. D." (Galvan.), the city of Alcaçer in Africa captured by Alfonso V. of Portugal.

"In this year" (Alst. p. 217), books from the sacking of Athens and Constantinople, purchased throughout the Turkish empire by the king of Hungary Matthias Hunniades Corvinus, and brought to Buda. — Sixty-eight years later, when Buda was captured by the Turks, the Library disappeared, and was said to have been "burned," but (according to the gazettes) has recently been discovered uninjured in Constantinople.

"About this time" (Spreng.), Joann. Jacob de Manliis writing.

Archangelica officinalis of Northern Europe. A large umbelliferous plant called in Britain *archangel*, in medieval Latin "archangelica" (Park., Nemn., and Prior), in Germany "angelick" or "brustwurtzel" (Tragus); described by J. J. de Manliis — (Spreng.), Tragus i. 140, and termed "a. sativa" by Miller: known to grow in "watery places" from Lapland throughout Northern Europe as far as France and Switzerland (fl. Dan. pl. 206, Pers., and A. Dec.): its large fleshy pungently aromatic root extolled by the Laplanders "not only as food but medicine," the stems "roasted in hot ashes" eaten in coughs and pectoral disorders, and the flowers boiled in milk to the consistence of an extract used also medicinally (Stev. and Church): its roots leaves and seeds "are certainly good aromatic tonics" (Lindl.).

Asperula tinctoria of Europe and the adjoining portion of Asia. The "spargula" or "rubea tinctorum minor" of J. J. de Manliis — may be compared: *A. tinctoria* is described by Tabernæmontanus pl. 433; is termed "a. rubeola" by Lamarck fl. Fr.; is known to grow from Sweden throughout middle Europe and in Siberia, the root red (Pers.); was observed by Scopoli in Carniolia; by Sibthorp, around Constantinople; by Pallas trav. i. 95, used in dyeing on the Volga.

Galium Anglicum of middle and Western Europe. The "purpurea" kind of "lappago" mentioned by J. J. de Manliis — (Trag. i. 167) may be compared: *G. Anglicum* is termed "g. parisiense tenuifolium flore atropurpureo?" by Tournefort, "g. rubrum" by Pollich; is described also by Ray iii. pl. 9, and Hudson; and is known to grow from Britain to Spain and Switzerland (Brot., Bertol., Lam., and Pers.).

Scabiosa succisa of middle and Western Europe. Called in Britain *devil's bit* (Prior), in Saxon "ffendis bitt" (gl. Bodl. 178, and Cockayne), in Germany "teufels abbiss." in the *Ortus Sanitatis* 261 and by Braunsweig "morsus diaboli" and "jacea nigra" (Trag.), and figured by J. J. de Manliis p. 173 — (Spreng.): described also by Brunfels; and known to grow in moist situations throughout middle Europe as far as the Pyrenees (Curt. lond. pl. 10, Pers., Lapeyr., and A. Dec.).

Inula oculus-Christi of Europe and the adjoining portion of Asia. Called in Greece "agriōs-karpē" (Sibth.); and the "oculus Christi" of J. J. de Manliis — is referred here by Sprengel and others: *I. oculus Christi* is described by Clusius hist. ii. 20, is termed "aster pannonicus lanuginosus luteus" by Tournefort inst. 482, is known to grow in mountainous situations in France and Germany (Jacq. austr. pl. 223, and Pers.); was observed by Sibthorp in the Peloponnesus.

Melittis melissophyllum of Europe and the adjoining portion of Asia. Called in Germany "hertzkraut" or "pfaffenkraut" or "immenblatt" (Trag.): and the "ocymum citratum" of J. J. de Manliis — is referred here by Tragus i. pl. 3: *M. melissophyllum* is termed "melissa humilis latifolia maximo flore purpurascens" by Tournefort inst. 193; is known to grow from Britain throughout middle Europe (Engl. bot. pl. 557, Lam. fl. fr., and Jacq. austr. pl. 26); was observed by Sibthorp, and Chaubard, on mount Athos and the mountains of the Peloponnesus.

Hieracium auricula of Europe and the adjoining portion of Asia. Called in Germany "gros meüsor" or from the hairs "pilosella" (Trag.); and the *PILOSELLA* of J. J. de Manliis, eaten

* *Persea gratissima* of Eastern Equatorial America. The *avocado* called "palta" (Velasq. dict.), in Carib "aouaca" (Desc.), in Mexican "ahuaca quavhül" (Hern.); and Palta, one of the provinces in question, produced the delicious fruit of the same name — (addit. art de verif.): the "perales" is described by Oviedo nat. hyst. 72 as "a tree of Tierra Firme:" *P. gratissima* was observed by Hernandez 89 both cultivated and wild in Mexico; by Sloane ii. pl. 222, in the West Indies, introduced according to Jacquin obs. i. 38 from the neighbouring continent; and is known as a forest-tree in the wilds of Caripe in Cumana, and on the Lower Amazons (Nees 129). Transported to Spain, is described in 1601 by Clusius rar. i. 3; also by European colonists was carried in 1758 (Aubl.) to the Mauritius Islands, where it continues much cultivated, to the Malayan archipelago after the time of Rumphius (A. Dec.); and recently to the environs of Bombay (Graham).

crude, — may be compared: *H. auricula* was observed by Tragus i. pl. 92 in Germany, its distilled water employed medicinally; is termed “*h. pilosellæ folio erectum minus*” by Tournefort inst. 471; is known to grow from Denmark throughout middle Europe (fl. Dan. pl. 1044, Engl. bot. pl. 2368, and Pers.); was observed by Sibthorp near Constantinople and on the mountains of Greece.

Gratiola officinalis of Europe and the adjoining portion of Asia. A species of *water-hyssop* called in France “*gratiolle*” (Nugent); described by J. J. de Manliis, — Baptista Sardus, and Anguilara 268 (Spreng.); termed “*gratiola quibusdam gratia dei*” by Matthioli, “*digitalis minima gratiola dicta*” by Tournefort inst. 165; seems unknown in Britain, though growing in moist situations from Denmark and 58° in Russia to the Pyrenees (fl. Dan. pl. 363, Fries, and A. Dec.) Sardinia (Moris) and Italy (Bertol.); was observed by Sibthorp, and Gittard, from the Peloponnesus to Asia Minor; by Grisebach, in Thrace; and is known to grow as far as Turcomania and the Altaian mountains (Ledeb.).

Equisetum hyemale of Northern climates. Called in Britain *scouring rush* or *shave-grass*, in Holland “*schaaf-stroo*” (Prior), in Germany “*schaffthew*” (Trag.), in France “*prêle*” (Nugent); and the “*cauda caballina*” used by turners for polishing cups is mentioned by J. J. de Manliis: — *E. hyemale* is described by Tragus ii. pl. 46, Ruel iii. 97, and W. Coles (Eng. bot. pl. 915); is termed “*e. foliis nudum non ramosum*” by Tournefort inst. 533; is known to grow in watery places from Britain throughout middle Europe and the adjoining portion of Asia; was observed by Sibthorp on the Bithynian Olympus. Westward, has been observed by myself from 43° in New England; by A. Gray, “common” in Central New York and “especially northward;” by Nuttall, along the Ohio, Missouri, and Arkansas rivers.

Equisetum palustre of Europe and the adjoining portion of Asia. Called in Germany “*klein schaffthew*” (Trag.), and another “*tornatila aliquando asprella aliquando troxia*” is mentioned by J. J. de Manliis: — *E. palustre* was observed by Tragus ii. 47 in Germany, used also for scouring cooking utensils; is termed “*e. palustre brevioribus setis*” by Tournefort inst. 533; is known to grow from Britain throughout middle Europe (Engl. bot. pl. 2021); and was observed by Sibthorp, and Bory, from the Peloponnesus to Constantinople.

“Aug. 19th or 27th” (Alst., and Nicol.), Calixtus III. succeeded by cardinal Æneas Silvii Piccolomini, now Pius II., fifty-sixth pope. He had written against the errors of the papacy, maintaining the superiority of the general Councils; but on being himself made pope, claimed the reverse. Pius II. also wrote history.

“In this year” (Klapr. note to San Kokf), in Japan, the city of Yedo founded by Oo-da-do-kwan.

“1459 A. D. (= 863 A. H.) of Ferisht., Elph), Kutb Shah succeeded by Daud Shah, and after “one week” by Mahmud Shah Begarra, — who proved one of the greatest of the kings of Guzarat and reigned “fifty-two” years.

“1460 A. D.” (Churchill coll.), Peter de Cintra and Suero de Costa sailed along the African coast as far as the place named by them “*Serra Leona*.”

Pterocarpus erinaceus of Senegambia. A tree forty to fifty feet high in the woods of the Gambia and in Senegal and called “*wegne*,” the branches when wounded yielding “a red juice” that hardens on exposure into “the real original gum *kino* of the shops” — (Lindl.). From transported specimens, the tree is described by Lamarck pl. 602.

Sterculia (Southwellia) tragacantha of Western Equatorial Africa. Yielding the African gum tragacanth; — and according to Lindley (bot. reg. pl. 1353, and flor. med.), “known at Sierra Leone as the *tragacanth tree*,” from the similarity of the gum “copiously exuded by it when wounded.” Eastward, other species of *Southwellia* occur in Burmah; where also, according to Mason v. p. 487, there are several trees of the *Sterculia* tribe that “produce an exudation similar to tragacanth” (see *S. urens*).

“In this year” (Velasco, and Markh), the forces of Quito defeated by the Inca Tupac Yupanqui: who appointed new governors, and returned in triumph to Cuzco.

“1461 A. D.” (Galvan.), by order of Alfonso V. of Portugal, the castle of Arguin built, and the government assigned to Soeiro Mendez.

“In this year” (art de verif.), Ynal succeeded by Achmed Abu'l-Fetah, whose name occurs on a coin figured in Marcel 185; and before the close of the year by Koschkadam, a Greek by birth, and now thirty-fourth sultan of Egypt.

“In this year” (Grey transl. C. Zeno 9), Trebizond, under David, the last of the Comneni, captured by the Turks: his niece, a Christian, was the wife of Hassan Beg, king of Persia.

“The same year” (Alst. p. 307), the Peloponnesus invaded by the Turks under Mohammed II. — Who returned three years afterwards, with a large army.

Dianthus barbatus of Eastern Europe. Called in France “*oeillet*,” and hence in Britain *willie* or *william* or from its fragrance *sweet-william* (Prior), in Greece “*δουσσούβια*” (Forsk.); cultivated as early probably as this date: — the “*ocellum*” from its odour called “*garyophyllum*” is described

by Ruel ii. 149: *D. barbatus* is termed "lychnis monachorum hort." by Gesner 266 (Spreng.); is a well known garden-flower throughout Europe, and was observed by Forskal in gardens at Constantinople; is said to grow wild in Carniola and Germany (Scop., and Pers.). By European colonists, was carried to Northeast America, where it continues a favourite in gardens. The "tol-me-neer" of Lyte ii. 7, or "tolmeiner" or "colmenier" of other English herbalists, is a variety (Prior).

Silene armeria of Europe and the adjoining portion of Asia. An annual called in Greece "luh-nōēithēs", (Sibth.), and known from early times: — termed "lychnis viscosa purpurea latifolia lævis" by Tournefort inst. 335, and known to grow in sunny situations from Denmark throughout middle Europe (fl. Dan. pl. 559, Engl. bot. pl. 1378, and Lam. fl. fr.): observed by Sibthorp from the Peloponnesus to mount Athos. By European colonists was carried to Northeast America, observed by A. Gray "escaped from gardens to waste places, rare."

Lathyrus aphaca of middle Asia. Called in Greece "pnigia" or "mpavōulia" (Fraas) or "agri-ōvavōuli" or "agriōlathōuri" (Sibth.), and known there as early probably as this date: — observed by Sibthorp, Chaubard, and Fraas, frequent in grain-fields from the Peloponnesus throughout the Greek islands; by Delile, about Cairo; by S. Th. Gmelin trav., around the Caspian; and by Wallich, under cultivation in Hindustan (Wight and Arn.). Westward from Greece, is described by Dodoens p. 545, and Lobel ii. pl. 70; is termed "aphaca" by Tournefort inst. 399, "l. segetum" by Lamarck fl. fr.; was observed by Lenz in Italy, by Brotero in Portugal, and has become a common "field-plant" as far as Britain (Pers., and Lindl.). Its seeds according to Lindley "are served sometimes at table" while "young and tender," but "if eaten abundantly in the ripe state" are "narcotic, producing excessive headach."

Trifolium stellatum of the Mediterranean countries. Annual, called in Greece "alaphra" (Sibth.), and known from early times: — observed by Forskal, Sibthorp, and Chaubard, from Crete and the Peloponnesus to Cyprus and Constantinople. Westward, is described by Tournefort inst. 405; and is known to grow along fields and waysides in Carniola, Italy, Sicily, and Southern France (Sturm, and Pers.). In Britain (Engl. bot. pl. 1545), is clearly exotic, but has established itself near ballast-heaps at Shoreham (Wats. cyb. i. 297, and A. Dec.).

Galium tricornis of the Tauro-Caspian countries. Called in Greece "kōlugitha" (Sibth.), and known from early times: — termed "aparine semine lævi" by Tournefort inst. 114, "galium spurium" by Hudson, "valantia triflora" by Lamarck fl. fr., "v. tricornis" by Roth, and Bieb. (Steud.); and known to occur in cultivated ground throughout middle and Southern Europe (Pers., and A. Dec.): was already in Britain in the days of Ray (Engl. bot. pl. 1641); was observed by Vaillant pl. 4 near Paris; by Gussone in Sicily; by Moris in Sardinia; but "in 1847" continued unknown in Algeria (Munby). Eastward, was observed by Sibthorp in cultivated ground on Zacynthus and in continental Greece; by Grisebach, in meads in Thrace; and is to all appearance wild at Baku and on the Talysh mountains (Hohen., and C. A. Mey.).

Valeriana (Centranthus) rubra of the Mediterranean countries. Called in Greece "analatōs" (Sibth.), and known from early times: — described by Morison vii. pl. 14, and Tournefort inst. 131, and known to grow on the Atlas mountains (Pers.): was observed by Sibthorp, and Chaubard, on the mountains of the Peloponnesus. In Britain, has been long cultivated, and Ray's silence may be from his considering it an outcast from gardens; "in 1805" the plant was found by J. E. Smith seemingly wild in chalk-pits in Kent, and is at present more or less naturalized in twenty to twenty five counties (Wats., Bromf., and A. Dec.): probably naturalized also on the neighbouring portion of the continent, where according to Persoon it occurs in waste places.

Sherardia arvensis of Europe and the adjoining portion of Asia. Called in Sweden "sherard's ort" (Linn.), in Greece "prōbatōhōrtōn" or "spērōhōrtōn" (Sibth.), and known from early times: — observed by Sibthorp, and Chaubard, frequent in vineyards and cultivated ground from the Peloponnesus throughout the Greek islands. Westward, is termed "rubia parva flore cæruleo se spargens" by Bauhin hist. iii. 719, and is known to occur in cultivated ground throughout middle Europe (C. Bauhin pin. 334, Tourn. inst. 114, fl. Dan. pl. 439, Curt. lond. v. pl. 13, and Pers.).

Leontodon hispidum of Europe and the adjoining portion of Asia. Called in Greece "papathōula" (Sibth.), and known from early times: — termed "hieracium caule aphylo hirsutum" by Bauhin hist. ii. 1037, "dens leonis foliis hirsutis et asperis" by Tournefort inst. 468, and known to grow in meads throughout middle Europe (C. Bauhin pin. 127, Vail. act. 1721, Curt. lond. v. pl. 56, and Pers.): observed by Linnæus in Sweden, frequent as far as Scania; by Sibthorp, and Chaubard, from the Peloponnesus to mount Athos.

Conyza candida of the Mediterranean countries. Called on Crete "psullōhōrtōn" (Sibth.), and known from early times: — described by Anguillara 286 (Spreng.), termed "c. verbasci foliis serratis" by Tournefort inst. 455, and known to grow on Crete and the islands of the Adriatic (Barr. rar. pl. 217, Wulfen, and Pers.): observed by Sibthorp, and Chaubard, in stony places from Crete to the Peloponnesus; by Boccone vi. pl. 31, in Sicily.

Carduus tenuiflorus of Europe and the adjoining portion of Asia. A *thistle* called in Greece "phithagkathōs" (Fraas), and known from early times:—observed by Sibthorp, and Fraas, frequent in Greece and on the Greek islands. Westward, is termed "c. acanthoides" by Tournefort inst. 440; and is known to occur along roadsides and in waste ground as far as Britain (Curt. lond. vi. pl. 55, and Pers.).

Specularia speculum of Europe and the adjoining portion of Asia. An annual called in Greece "agria gōulia" (Sibth.), and known from early times:—described by Dodoens pempt. 168 f., termed "c. arvensis erecta" by Tournefort inst. 112, and known to occur in cultivated ground throughout Europe (A. Dec. 523 and 759): observed by Forskal in meads near Marseilles; by Sibthorp, and Chaubard, frequent in vineyards and cultivated ground from the Peloponnesus to the Greek islands.

Euphorbia palustris of Europe and the adjoining portion of Asia. A spurge called in Greece "phlōmōs" (Sibth.), in Sweden "wargmiolk" (Linn.), and from early times employed medicinally:—termed "tithymalus palustris fruticosus" by C. Bauhin pin. 292, and Tournefort inst. 87, "t. maximus oelandicus" by Rudbeck hort. 109, and known to grow from Sweden to the Mediterranean (Bulliard fr. pl. 87, and Pers.): observed by Rudbeck, and Linnæus, in marshy meads in Sweden, its root sold in the drug-shops under the name of "esulæ rad."; by Sibthorp, growing in the marshes of Greece and the Greek islands.

Sternbergia lutea of the Mediterranean countries. Called in Greece "agriō krinō" or "agriō lalēs" (Sibth.) as early probably as this date:—observed there and on the Greek islands by Sibthorp, and Chaubard, said to tint the mountains yellow late in the autumn: known to grow also in Thrace (Pers.). Westward, termed "colchicum luteum majus" by C. Bauhin pin. 60; "lilio-narcissus luteus autumnalis major" by Tournefort inst. 386; and known to grow in Italy and Spain (Pers.).

Ophrys apifera of Europe and the adjoining portion of Asia. Called in Britain *bee-flower* or *bee-orchis* (Prior), in Greece "sarkinōvōtani" (Sibth.), and known from early times:—described by Fuchsius 559 (Spreng.); termed "orchis fucum referens major foliis superioribus candidis et purpurascens" by Tournefort inst. 433, and known to grow from Britain throughout middle Europe (Engl. bot. pl. 383, and Pers.): was observed by Tenore in Italy; by Sibthorp, and Chaubard, frequent in the Peloponnesus.

Ophrys tenthredinifera of the Mediterranean countries. Called on Cyprus "kōris" (Sibth.), and known from early times:—termed "orchis orientalis calyptra purpurea petalo inferiori atro-purpureo scuto ferri equini forma" by Tournefort cor. 30; and observed by Sibthorp and Chaubard, from the Peloponnesus to Constantinople. Westward, was observed by Tenore in Italy; by Desfontaines ii. 320 in Barbary.

Allium rotundaum of the Mediterranean countries. A kind of wild leek called on Cyprus "agriō prasōn" (Sibth.), and known from early times:—described by Clusius hist. i. pl. 195, termed "a. montanum capite rotundo" by Tournefort inst. 384, and known to grow in Southern Europe (Pers.): observed by Sibthorp on Cyprus.

Allium subhirsutum of the Mediterranean countries. Called in Greece "lukōrtha" or "agriō prasōn" (Sibth.), and known from early times:—termed "moly" by Montigiano (Targ.), mentioned also by Matthioli comm. 544 (Spreng.); observed by Sibthorp, and Chaubard, frequent in Greece from the Peloponnesus to Crete and Cyprus; by — in Egypt. Westward, is termed "a. angustifolium umbellatum flore albo etiam flore carneo" by Tournefort inst. 385, and is known to grow in Italy and Spain (Pers.).

Allium chamae-moly of the Mediterranean countries. Called in Greece "kalamōlōghē" (Sibth.), and known from early times:—observed by Sibthorp on Zacynthus. Westward, described by Columna ecphr. pl. 326, termed "a. humilioris folio gramineo" by Tournefort inst. 385, and known to grow in Spain (Pers.): was observed by Desfontaines i. 288 in Algeria, by Cavanilles iii. pl. 207 in Spain.

Lycoperdon bovista of Northern climates. Called in Britain *fuss-balls* or *fist-balls* or *bull-fist*, in France "vesse," in medieval Latin "bovista"—(Prior), in Greece "alēpōpōurthi" (Sibth.): L. bovista is termed "l. vulgare" by Tournefort inst. 563; and is known to grow in Italy and throughout middle and Northern Europe (Bulliard herb. fr. pl. 447, and Lenz). Eastward, was observed by Sibthorp frequent in the Peloponnesus.

After continual eruptions for seven or eight years and "fourteen years before the invasion of Huayna Capac son of the Inca Tupac Yupanqui" (tradition among the natives of the highlands of Quito, Humb. cosm. v.), falling in of the dome of Capac-Urcu, a volcano previously higher than Chimborazo.

"1462 A. D." (G. de la Vega), the hill of Potosi examined for silver by the Inca Huayna Capac, but the search interrupted by subterranean noises (interpreted as prohibitory words).

"In this year" (Talvi ii. 1), by Ivan Vasilievitch III. often called Ivan I., the Russians delivered from the bondage of the Tartars. He also "united Novogorod with his own principedom of Moscow."

Carex vesicaria of Europe and Northern Asia. A large and conspicuous sedge called in Sweden "blase-starr" or "Lappske-starr," in Lapland "kappmocksuini," and from early times the dried leaves placed by the Laplanders in their shoes against cold in winter and perspiration in summer — (Linn.): is termed "gramen cyperoides angustifolium spicis longis erectis" by C. Bauhin pin. 6 and theatr. 84. "g. c. majus præcox spicis turgidis teretibus flavescentibus" by Morison iii. 8. pl. 12; and is known to grow from Lapland to Ireland, Switzerland, Russia, and Siberia (fl. Dan. pl. 647. Leers pl. 16, Pers., and Wats.), also on Caucasus (Bieb.): was observed by Linnæus frequent in moist places in Lapland and Sweden; by Decandolle, in France; by Savi, in Etruria; and by Desfontaines, in Barbary. Westward, by Hooker in Iceland; and according to J. Carey, grows in "Northern New England? and northward."

Geranium sylvaticum of Europe and the adjoining portion of Asia. Called in Sweden "Abrams-rot," in Lapland "gibber-gras" (Linn.), and known from early times: — termed "g. secunda batrachoides" by Clusius pann. pl. 418, "g. batrachoides folio aconiti" by C. Bauhin pin. 317, and Tournefort inst. 266, and known to grow from Lapland and Russia throughout middle Europe (Ray hist. 1062, Engl. bot. pl. 121, and Pers.), also in North Africa (Wats.): observed by Hooker in Iceland; by Linnæus, in Lapland and Sweden; by Sibthorp, in the environs of Constantinople; by Bieberstein, on Caucasus.*

"The same year" (Alst. p. 450), end of the historical work on the Turks by Laonicus Chalcondyles of Athens. — He died "about 1463."

"The same year" (Blair), a *printed volume* first issued in Europe; the Vulgate Bible.

Angelica sylvestris of Europe and the adjoining portion of Asia. Called in Britain as in medieval Latin *angelica* (Prior); and the Saxon "lingwort" — is referred here by Bailey (Cockayne): *A. sylvestris* is described by Brunswick as a remedy against the plague; is named according to Fuchsius 126 from the sweet odour of its root and its great power over poisons; is described also by Ruel iii. 52, Tragus, and Dodoens pempt. pl. 315; is termed "imperatoria pratensis major" by Tournefort inst. 317; is known to grow in the environs of Naples (Guss., and A. Dec.), and throughout middle Europe as far as Britain (Crantz, Pers., and Engl. bot. pl. 1128). Eastward, was observed by Sibthorp, and Chaubard, from the Peloponnesus to mount Athos and the Bithynian Olympus; by Pallas trav. i. 276, on the Lower Volga, the young stem eaten crude by the natives. "*Angelica*" root was observed by Forskal mat. med. in the drug-shops of Egypt.

Lycopsis arvensis of Europe and the adjoining portion of Asia. The Saxon "oxtongue" — is referred here by Cockayne: *L. arvensis* is described by Parkinson, and Ray p. 224, and is regarded as introduced into Britain (A. Dec.); is known to occur also in Italy (Bertol.) and from the base of the Pyrenees chiefly in cultivated ground throughout middle and Northern Europe as far as Lapland (fl. Lapp. 77, fl. Dan. pl. 435, Pers., Noulet, and Laterr.). Eastward, was observed by Gittard in the Peloponnesus (Chaub.); and is known to occur throughout Russia, and as far as Caucasus (Bieb., and A. Dec.). By European colonists, was carried to Northeast America, where it continues to occur sparingly in waste and cultivated ground from New England to Virginia (A. Gray, and myself).

Hyacinthus (I. graphis) nutans of Europe and the adjoining portion of Asia. Called in Scotland *hare-bell*, in Britain *blue-bell* (Prior), and the Saxon "bluebells" — is referred here by Cockayne: *A. nutans* is described by Clusius hist. i. p. 177, and Parkinson par.; is known to grow in Italy, Spain, and throughout middle Europe as far as Britain (Blackw. pl. 61, Thuil., Engl. bot. pl. 377, and Pers.). Eastward, is known to grow in the Tauro-Caspian countries (Bieb., and Steud.).†

* *Mulgedium? alpinum* of Subarctic Europe and Asia and mountains farther South. Called in Sweden "tota" or "tolta," in Lapland "jerja," and from early times its stems peeled and eaten crude by the Laplanders — (Linn.): termed "sonchus cæruleus" by Camerarius epit. 281, "s. lævis lacinatus cæruleus vel s. alpinus cæruleus" by C. Bauhin pin. 124, and known to grow on the mountains of Northern Europe and of Switzerland (Bauh. hist. ii. 1006, fl. Dan. pl. 182, Smith brit. ii. 815, Pers., and Wats.): observed by Linnæus on the flanks of the mountains of Lapland, frequent in shaded situations and often as tall as a man; by Pallas, on the Ural.

Mulgedium? Sibericum of Subarctic climates. From early times the weather prognosticated by the closing of its flowers — (Linn.): termed "lactuca salicis folio flore cæruleo" by Amman 211; received by Linnæus from Northern Sweden, Lapland, and Finland; and observed by Gmelin ii. pl. 3 in Siberia. Farther East, according to Hooker, grows from 66° to the mouth of the Columbia and Lake Huron.

† *Campanula rotundifolia* of Subarctic climates. The *blue-bell* of Scotland (Prior) so-called as early probably as this date: — *C. rotundifolia* is described by Lobel pl. 321; is termed "*c. minor rotundifolia vulgaris*" by Tournefort inst. 111; is known to grow on the mountains of Switzerland, and from France throughout Northern Europe as far as Lapland and Iceland (All., Lam. fl. fr., Pers.,

"1463 A. D." (see Galvan.) death of prince Henry of Portugal, through whose maritime enterprises the African coast was made known from Cape Non to Sierra Leone "in 8° N."

"In this year" (Velasco, and Markh.), Hualcopo Duchicala succeeded by his son Cacha, now fifteenh scyri of Quito.

"In this year" (Barrow, see Major 2d edit. Columb. p. xxvii), under orders from Alfonso V. of Portugal, John Vaz Costa Cortereal accompanied by Alvaro Martens Homem exploring the Northern Seas. They discovered Newfoundland; and on their return touching at Terceira found the captaincy vacant, and solicited the appointment: — their commission is "dated in Evora, 2nd April, 1464."

1464 A. D., in Java, Raden Patah after marrying the grand-daughter of Raden Rachmat and before the birth of a child proceeded Westward from Ampel to establish himself where he should find the sweet-scented grass called "bintara." This grass was observed growing on a few dry spots in an extensive swamp, and the new city was accordingly called Bintara.

"Aug. 31st" (Alst., and Nicol.), Pius II. succeeded by cardinal Peter Barbo, now Paulus II., fifty-seventh pope. Louis XI. ruling France; Edward IV., England; and James III., Scotland.

The tale of "The Wright's chaste wife" written in the reign of Edward IV. — (All., and Cockayne).

Paris quadrifolia of Europe and Northern Asia. Called in Britain *four-leaved grass* or *trulove* from the Danish "trolovet" betrothed, or *herb paris* from the medieval Latin "herba paris" of a pair (Prior), in which we recognize the herb "truelove" of the Wright's chaste wife — (Cockayne): *P. quadrifolia* is described by Fuchsius p. 87 (Spreng.); and is known to grow from the Mediterranean throughout middle and Northern Europe as far as Lapland and Iceland (fl. Dan. pl. 139, Pers., Hook., and Wats.). Eastward, is known to grow throughout Siberia (Wats.), and as far as the Japanese islands of Yesso and Nippon (Thunb., and Sieb.).

"In or about this year" (Rees cycl., and Pouchet), *decimals* (the invention of George Purbach, "b. 1423"), substituted by Joannes Muller called Regiomontanus for the sexagesimal division of the Circle in his Table of sines. Regiomontanus also according to Pouchet first used *clocks* in astronomical observations.

"The same year" (Clavig., and Humb. atl. pict.), Motezuma-IIhuicamina succeeded by Axajacatl, sixth Mexican emperor.

The disease *syphilis* among the Aitians and other American tribes from early times, as appears from legends — collected by F. Roman Pane 6 (F. Columb. 62 and 74). In Europe, syphilis continued unknown in the days of Chaucer c. t., and was brought from America by companions of Columbus, according to the direct testimony of Oviedo nat. hyst. 75 and gen. hist. ii. 14: the "new disease" according to Ruellius i. 45 made its first appearance in Spain; and according to Alsted 310, was "brought in 1495 into Germany" by soldiers returning from the war in France.

Guaicum officinale of the West Indies. A Zygophylloid tree yielding the gum-resin *guaicum*, called in Aitian "guayacan" (Ovied.), and from early times used as a remedy in syphilis: — the "guayacan" tree was observed by Oviedo nat. hyst. 75 on Hayti and the other islands, but not on the main land: *G. officinale* by Sloane ii. pl. 222, and Macfadyen, on Jamaica; by Swartz obs. 168, also in the West Indies, its "wood excessively hard and compact" (Lindl.). The drug *guaicum* was procured by Gonsalvo Ferrand from the natives of Hayti and brought to Europe "in 1508" (Pereir. mat. med.); is mentioned also by Monardez, Ruellius i. 45, Valerius Cordus, and Dalechamp annot. Diosc.; is "stimulant and tonic," continues to be "employed as a diaphoretic and alterative" (Lindl.); and was found by Forskal mat. med. well known in the drug-shops of Egypt.

Hemia salicifolia of Mexico. A Lythraceous herb called in Mexican "hanchinol" (Lindl.), and from early times regarded as a specific in venereal disorders, — acting as "a powerful sudorific and diuretic:" observed by Humboldt and Bonpland u. g. vi. 192 growing on the volcano of Jorullo.

Snilax sarsaparilla of the Eastern declivity of the Mexican table-land. Its root the original *sarsaparilla*, a remedy derived from the American tribes and called in Mexico "zarzaparilla" (Schiede), growing — according to Humboldt iii. 8 in the province of Vera Cruz: "*S. medica*" was observed by Schiede on the Eastern slope of the mountains, and was told that its roots are gathered all the year long, dried in the sun, tied in bundles, and carried to Vera Cruz for export: off the Western or Pacific coast of Mexico, a ship laden with "salsaperilla" was captured by Drake (Nuno da

Hoffm. germ., fl. Dan. pl. 825, Linn. lap., and Hook.). Eastward, was observed by Sibthorp in the Peloponnesus and on mount Athos; and is known to grow throughout Siberia (Gmel., and Pall.). Farther East, is known to grow in Alaska (Wats.), on the Rocky mountains (E. James), at Cumberland House Lat. 54° in central North America (Drumm.), on the shore of Lakes Superior and Huron (A. Gray), in Greenland (Wats.) and Newfoundland (Lapyl.), ceasing along the Atlantic in about Lat. 42° (Pursh, and myself).

Silua in soc. Hackl.). "Sarsaparilla from Mexico" is mentioned by Monardez, the drug first becoming known in Europe "in 1530" (Pereir.); is described by Matthioli 838 (Spreng.); was found by Alpinus used medicinally in Egypt, and according to Forskal mat. med. is called there "sabarina" or "oschbe," and is imported by way of Europe. (See *S. siphilitica*.)

Smilax officinalis of Colombia, from Guayaquil to the Magdalena. Called by the natives "sarzaparilla" (Humb.) from "sarsa" bramble and "parilla" vine (Markh.), and doubtless used by the natives around Guayaquil as early as this date: — *S. officinalis* was observed growing there by Cieza de Leon LV., who regards it as better and more efficacious than any found in other "parts of the Indies;" by Humboldt and Bonpland, collected by the natives on the Magdalena and sent in great quantities to Mompox and Carthagena, thence to Jamaica and Cadiz; suspected by Pereira to be the so-called "*Jamaica sarsaparilla*, the best and most valuable kind in market." South of the Magdalena, "*S. purhampuy*" of the Eastern declivity of the Peruvian Andes, highly extolled by Ruiz, is regarded by Lindley as perhaps not distinct.

1465 A. D. (= "1390 an. jav.," Raffles x.), in Java, before the completion of a mosque with eight columns at Bintara, death of Raden Rachmat after delivering into the hands of Raden Paku a pusaka kris received from the prince of Majapahit. — The name of the new city was afterwards changed to Demak, and the mosque continued standing when Raffles was writing in "1816."

"The same year = 'tching-hoa,' 1st year of Tchun-ti, or Hien-tsoung-tchun-ti," or Hien-tsoung II., "of the Ming" or Twenty-third dynasty (Chinese chron. table). He established an inquisitorial tribunal of eunuchs, with orders to put to death all persons suspected of rebellion — (Pauth.).

"The same year (= 2125th of Synmu," art de verif.), Gofunnazo succeeded by his son Go-Tsutsi-Mikaddo, now dairo of Japan.

"The same year" (Crawford vii. 11), Marhum reigning on Ternate.† — He partially adopted the Mohammedan religion.

"1466 A. D." (Blair), the second *printed volume* issued in Europe, Cicero de officiis. Books now becoming more accessible, — a *Revival of literature* among European nations, and the languages of the people coming more into use in writing.

"The same year" (Martin Behaim in voyag. Belg., and Major pr. H. 134), the uninhabited Azores islands, Fayal and Pico, given by Alfonso V. to his sister the duchess of Burgundy, and colonized by Belgians saved from famine.

* *Aralia nudicaulis* of Northeast America. Called *wild sarsaparilla* (A. Gray), its root said to be used by the Crees in venereal, and its bruised bark from early times applied by them to recent wounds — (Hook., and R. Brown jun.): probably the kind of "sarsaparilla" gathered at Fort Pop-ham on the Sachadehock: "two" kinds of "sarsaparilla" are enumerated by Josselyn rar. 59 as growing in New England, one "not above a foot in height, without thorns:" *A. nudicaulis* was observed by Lapylae in Newfoundland; by Michaux, in Canada and on the Alleghany mountains; by myself, a frequent woodland plant throughout New England; and may grow along the Atlantic as far as 40° N. (Barton), and on the mountains to Carolina (Pursh). Westward, was observed by E. James along the base of the Rocky mountains; and is known to grow from Lake Huron to 64° N. (Hook.). Transported to Europe, is described by Plukenet alm. pl. 138. (See *Smilax glauca*.)

Stillingia sylvatica of Carolina and Florida. From early times employed by the natives against syphilis — (Forst. note to Bossu p. 8).

Echinopanax horridum of Northwest America. From early times, employed in venereal by the natives — (R. Brown jun.): observed by myself, frequent between the mount Rainier ridge and the Pacific; by Mertens, around Norfolk Sound; known to grow also at Nootka, Sitka, and on the island of Kodiak (Dec.); and received by Hooker from the Rocky mountains and California.

Berberis aquifolium of Northwest America. A pinnate-leaved barberry, from early times employed by the natives in venereal — (R. Brown jun.): observed by E. James on the Rocky mountains at the sources of the Arkansas; by Lewis and Clarke, at the rapids of the Columbia: by myself, frequent on Puget Sound; according to Hooker, grows from 40° to 49° along the Pacific, and inland to the sources of the Columbia in 52°; was received by Decandolle from Nootka.

Betula sp. of Northwest America. A species of *birch*, from early times employed by the natives in venereal — (R. Brown jun.).

Abies Douglassii of Northwest America. A tall *spruce*, its wood from early times used by the natives for fuel, also the leaves in infusion in venereal — (R. Brown jun.): observed by Douglass on the Columbia; by myself, frequent from the mount Rainier ridge to the Pacific.

† *Capparis baduoca* of the Ladrones or Marian Islands. A rough-stemmed shrub, six feet or more high, brought to the Philippines as early possibly as this date: — well known at Parañaque, according to Blanco, and substituted for the capers of commerce. Westward, was observed by Rheede vi. pl. 57 in Malabar (Pers.).

"At this time" (Stanley edit. C. Correa p. xxxvii), Negro slaves so abundant in Portugal that Rosmihal and Blathner a Hungarian prince, having requested two of them, Alfonso V. replied, "Those are trifles which do not require the asking."

"1467 A. D." (art de verif.), Koschkadam succeeded by Belbay; and before the close of the year, by Timar Bogha, thirty-sixth Memluk sultan of Egypt.

Solanum Aethiopicum of Tropical Eastern Asia? Called in Egypt "bydingan el-qoutah" cup eggplant, or "tiffah dahaby" golden apple, or "tiffah el-heb" love apple (Del.); and the Egyptian "pëlimôn," — translated "malus silvestris" by Kircher 177, may be compared: *S. Aethiopicum* was received by Dodoens pempt. iii. 4. pl. 32 under the name of "malum Aethiopicum" from Spain, supposed to have been brought there from Aethiopia; is termed "lycopersicum æthiopicum" by Miller (Steud.). Eastward, was observed by Loureiro in Anam. By European colonists, was carried to Northeast America, observed by myself under cultivation in our middle States, mistaken for a variety of *S. melongena*. (See *S. miniatum*.)

One hundred and seventy-third generation. Sept. 1st, 1467, onward mostly beyond youth: the Persian writer Mahmud Ben Mohammed wr. 1496 (Ainsl.): the Jewish writers, Elia Bashiatschi, the astronomer R. Elias Misrachi, Abraham Zacuto ben Samuel: the Arab writers, Abu'lbaka Bedri, Ebn Shohné: the Greek writers, Georgius Trapezuntius d. 1486, Georgius Gemistus Pletho, Georgius Protosincellus, Georgius Phrantzes d. 1477, Constantinus Lascaris d. about 1494, Emmanuel Georgilas d. 1498, Stephanus Sachlekes, Constantinus d. 1500: Conradus Celtes, Angelus Politianus, Jacob Wimpeling, Marsilius Ficinus, Baptista Platina, M. A. C. Sabellicus, Joannes Nauclerus, Philippus Bergomensis, J. Picus Mirandola, Rudolphus Agricola, Nanni or Annius of Viterbo; Francis Philolphus; John Wesselus; Bessarion; Thomas a Kempis; Joannes Argyropulus; Georgius Merula; Antonius Rosellus, Ambrosius Camaldulensis, Pacificus, Angelus Clavasius, Baptista Trovamala: the scholastic theologians, Dionysius Carthusianus, and Gabriel Biel: Bernard de Trevisé d. 1490 (Pouchet): the botanists, Johannes Tollat von Vochenberg, Georgius Valla Placentinus: the painters, Andrea Mantegna d. 1505.

"1468 A. D." (art de verif.), Timar Bogha succeeded by Kayt-Bay, thirty-seventh Memluk sultan of Egypt. Who built at Cairo the small but remarkable mosque that bears his name (Clot-Bey xv. 2).

Coffea Arabica of Equatorial Africa. Called in Abyssinia "boun" (A. Rich.), the berries long known there as edible, and for making the beverage introduced into or established in Aden by the mufti Mohammed Dhabhani, — who died in 1471 (= "875 hej." of Abd-alkader, De Sacy chrest. arab.): drinking "kahwa" or *coffee* reached Egypt about the close of the century ("901 to 910 hej.") through Arabs from Yemen performing religious services in a mosque at Cairo, where Schehab-eddin ben Abd-algaffar according to his own account partook of the new preparation: the first attempt to suppress the use was made in 1511 (= "917 hej.") under the authority of Khair-beg pasha and mohtesib of Mecca; and only in 1555 (= "962 hej." of geogr. Turc) did coffee become known in Constantinople and Greece: the berries and beverage were both seen in Syria by Rauwolf. The shrub was doubtless soon introduced into Yemen, where its cultivation became of importance, and was observed on the mountains by Forskal: living stocks were even seen in Egypt by Alpinus, and a recent attempt there at cultivation is mentioned by Clot-Bey. *C. Arabica* is known to grow wild in Abyssinia and throughout Equatorial Africa to Sierra Leone and Monrovia on the Western coast (Ritter, Vogel, and Hook. fl. nigr.). By European colonists, was carried prior to 1690 from Arabia to Batavia in the Malayan archipelago; in 1717, to the Mauritius Islands; in 1718, to Surinam in Tropical America; and according to Meyen, has become naturalized on the Corcovado mountain near Rio Janeiro (Schouw 18, and A. Dec.).

"1469 A. D." (Galvan.), by Alfonso V. of Portugal, the trade of "Guine" leased for five years to Fernam Gomez for a sum of money, with the condition "that euey yeere he should discouer an hundred leagues."

"In this year" (Dallet p. cxxvii), accession of Sieng-tsong, now king of Corea.

"1470 A. D." (Alst. p. 308), invasion of Styria and Carinthia by the Turks under Mohammed II.; and some thousands of the inhabitants carried away captive.

"In this year" (Galvan.), Arzila and Tanger in Africa captured by Alfonso V. of Portugal.

"The same year" (art de verif. contin., see also Humb. atl. pict.), death of Nézahualcojotl, king of Acolhuacan at Tezcuco. He had composed in Aztec an elegy on the destruction of the city of Azcapozalco, also one on the instability of human greatness, and sixty hymns to the Supreme Being.

"In this year" (Talvi ii. 1, and Major p. lxxv), Athanasius Nikitin of Tver in Russia, after passing his first Easter in Nain, his second in Mazanderan, his third at Ormuz, arriving in Western Hindustan, — where he passed his fourth and fifth Easter. His sixth was passed at Muscat, and he reached home "in 1474."

Hedyotis umbellata of Tropical Hindustan. The *chay* or *Indian madder*, a small suffruticose plant called in Telinga "cheri-velloo" (Lindl.), in Tamil "saya" or "emboorel cheddie" or "rami-

seram vayr" from growing plentifully on that island (Drur.), is probably one of the "colour plants" seen by Nikitin in the country around Calicut: * — *H. umbellata* was observed by Graham "common in the Concans" as far as Bombay, its "root used in dyeing red, purple, and brown orange;" by N. L. Burmann ind. 37, Ainslie, Roxburgh, Wight, and Simmonds, as far as Coromandel, cultivated besides extensively, but on Ceylon "the wild plant" considered preferable (Drur.); is known to occur also on Java (Lindl.). By European colonists, was carried to Mexico (Lindl.).

Phaseolus aconitifolius of Hindustan. Called in Yemen "gotn" (Forsk.), in the environs of Bombay "mut" (Graham), in Hindustanee "dal" (Badg.); and the "dalon" produced according to Nikitin in Cambay, — is referred here by Badger edit. Varthem. p. 107: *P. aconitifolius* was received by Jacquin obs. pl. 52 from Tranquebar (Pers.); was observed by Roxburgh, and Wight, in peninsular Hindustan as far as Bengal; by Graham, "cultivated in the Deccan and Gozerat;" by Forskal p. 214, cultivated in Yemen for cattle-feed. Transported to Europe, is described by the younger Linnæus, and is termed "*dolichos dissectus*" by Lamarck (Steud.: compare *Cajanus flavus*).

Curcuma amada of Tropical Hindustan. The *mango ginger* is called in Bengalee "amada" (Lindl.), in the environs of Bombay "kajula gauree" (Graham), and is probably one of the "aromatic roots" † seen by Nikitin in the country around Calicut: — *C. amada* is termed "tommon manga" by

* *Morinda umbellata* of Tropical Eastern Asia. A woody climber called in Tamil "noonamarum," in Telinga "moolooghoodoo," on the Deccan "chota-alka" (Drur.); and probably one of the "colour plants" in question, — a permanent yellow dye being obtained from its root: *M. umbellata* was observed by Rheede vii. pl. 27 in Malabar; by Nimmo, in "S. Concan" (Graham), nearly as far as Bombay; by Ainslie, Roxburgh, Wight, and Drury, as far as Travancore and Courtallum. Farther East, by Loureiro in Anam, a red dye obtained by the addition of sappan-wood, according to Simmonds brilliant and very permanent.

Morinda tomentosa of Southern Hindustan. A shrub called in Malabar "munjenatie" (Drur.); and probably among the "colour plants" in question, — its wood known to take an excellent polish, and a dye procured from it: — *M. tomentosa* was observed by Gibson "at a village below Poorundher Fort in the Deccan" (Graham); by Buchanan, and Wight, in other parts of the peninsula; and by Drury, "common in Travancore."

Wrightia tomentosa of Tropical Hindustan and Burmah. A small Apocynoid tree, abounding in yellow milky juice, and probably among the "colour plants" in question: *W. tomentosa* was observed by Rheede ix. pl. 3 in Malabar; by Nimmo, in "the hilly parts of the Concan" (Graham), to and beyond Bombay; by Roxburgh, and Wight, as far as the Circars, cloths dyed in its juice preserving "their colour for two years as bright and as fresh as at first" (Drur.); by Mason, in Burmah.

Cuscuta reflexa of Hindustan. Called in the environs of Bombay "akas pawan" or "amurvel" (Graham); and possibly among the "colour plants" in question, — being used medicinally, and occasionally in dyeing: *C. reflexa* was observed by Powell in the Punjab; by Vaupell, "common in Guzerat on hedges and bushes by the roadside," by Nimmo, and Graham, in "the Concans" and "on trees at Mahableshwur;" by Roxburgh cor. ii. pl. 104, as far as Silhet (Drur.).

Phyllanthus multiflorus of Tropical Hindustan. A straggling shrub climbing where obtaining the support of bushes, called in Tamil "poola vayr puttay," in Telinga "nella-pooroogoodoo," in Malabar "katou niruri" (Drur.); and possibly among the "colour plants" in question, — its roots sold in bazaars for medicinal use, and the bark for dyeing reddish brown: *P. multiflorus* was observed by Rheede x. pl. 27 in Malabar; by Graham, "water courses and other shady moist places in the Concans" to and beyond Bombay; by Ainslie, Roxburgh, and Wight, as far as Coromandel and Bengal.

† *Alpinia allughas* of Tropical Hindustan and Burmah. A Scitamineous herb called in the environs of Bombay "taraka" (Graham): and probably one of the "aromatic roots" in question, — being employed medicinally: — observed by Rheede xi. pl. 14 in Malabar; by Nimmo, in "S. Concan" (Graham), nearly as far as Bombay; by Retz, Ainslie, and Simmonds, in other parts of Hindustan, yielding "an inferior sort of *galingal*" (Drur.); was received by Linnæus fl. zeyl. from Ceylon (Steud.); and was observed by Mason in Burmah.

Zingiber zerumbet of Tropical Eastern Asia and the Malayan archipelago. A species of *wild ginger* called in the environs of Bombay "booteh" or "mahaburree booteh" (Graham), in Bengalee "butch" or "mahaburee-butch" (Lindl.), in Anam "ngai xanh" or "ngai mat tloi" (Lour.); and probably one of the "aromatic roots" in question: — *Z. zerumbet* was observed by Loureiro 3 in Anam, both wild and cultivated, not edible, but applied externally in contusions and pain in the limbs; is termed "lampujum" by Rumphius viii. pl. 64; was observed by Blume rare in moist situations on Java; by Blanco, on the Philippines, employed medicinally by the natives; by myself, in the Malayan

Rumphius v. p. 169; was observed by Roxburgh in Bengal (Lindl.), its root "used as a carminative and stomachic" (Drury); by Nimmo, in "the Concans and Guzerat," the "fresh roots smelling like green mangoes" (Graham).

Zingiber cassumanar of Tropical Eastern Asia and the Malayan archipelago. The *cassumanar*, called in Sanscrit "vuna ardrukum," in Bengalee and Hindustanee "bun ada," in Telinga "karpush-poo" (Lindl.), probably among the "aromatic roots" in question: — *Z. cassumanar* was observed by Graham "in gardens Bombay," and found by Nimmo "wild in the Concans," by Koenig, and Roxburgh as. res. xi. pl. 7, as far as Bahar, Bengal, and Coromandel; by Blume, on the opposing portion of Java; and is described by Rumphius v. pl. 65. The imported root according to Lindley "once in great repute" in "hysteric epileptic and paralytic disorders, but now out of use."

"1471, Aug. 9th" (Alst., and Nicol.), Paulus II. succeeded by cardinal Francis d' Albescola della Rovere, now Sixtus IV., fifty-eighth pope. — Sixtus IV. engaged in war, imposed on Naples the yearly tribute of a white horse and trappings, and is supposed to be the first pope who "placed his effigy on the coins struck in his states."

"In this year" (Galvan.), in fulfilment of the Fernam Gomez lease, John de Santarem and John Descour sailed along the coast as far as Mina in "5° N."

"In this year" (Barbar. 37, and Remus. trav. C. Zeno II), arrival at Venice of Azimamet, Morat, Nicolo, and Chefarsa, four ambassadors sent by the Persian king Hassan Beg to induce the Venetians to send a fleet against the Turks. Other European powers declining to co-operate, Caterino Zeno was elected ambassador, and departed to reside at the Persian court.

"1472 A. D." (Galvan.), Fernando da Poo discovered the outlying island, called after him Fernando Po.

"About this time" (Galvan.), the neighbouring islands of St. Thomas and Principe, situated under the Equator, and the main land of Benin as far as Cape St. Catharine "in 3° S." discovered by Sequeira, a servant of the king.

archipelago naturalized, but seemingly wild in great abundance on the basal portion of the mountains of the Feejeean, Samoan, and Hawaiian Islands, its presence on Tongatabu, a low coral-island, indicating introduction by the natives. Westward from Anam, was observed by Mason indigenous in Burmah; by Roxburgh cor. iii. pl. 201, wild in woods about Calcutta (Lindl.); by Rheede xi. pl. 13, in Malabar; by Graham, and Nimmo, "wild in the Concan" as far as Bombay. The imported roots were formerly sold in the drug-shops of Europe under the name of *rad. zerumbeth*, but are no longer used (Lindl.); and the transported plant is described by Blackwell pl. 402, and Miller ii. pl. 25.

Kaempferia galanga of Tropical Eastern Asia. Stemless with leaves spreading flat on the ground, called in Sanscrit "chundra-moolika" (Lindl.), in the environs of Bombay "chundra mulika" or "chanda mula" (Graham), in Tamil "katsjolum" (Drur.); and probably among the "aromatic roots" in question, — its root used medicinally and as a perfume: *K. galanga* was observed by Rheede xi. pl. 41 in Malabar; by Nimmo, in "S. Concan" (Graham) nearly as far as Bombay; by Burmann pl. 13, on Ceylon; by Kaempfer am. pl. 902, Retz, Roxburgh, and Wight, as far as Bengal, and besides "much cultivated in gardens" (Drur.); "said to be very common on the mountainous districts beyond Chittagong," and brought by the mountaineers to the markets of Bengal; observed by Mason indigenous in Burmah and called "kha-mung," the roots for their perfume worn by Karen females, also put with clothes, and used "to a small extent medicinally;" by Loureiro i. 12, in Anam.

Kaempferia rotunda of Tropical Eastern Asia. Flowering while the plant is leafless, and called in Tagalo "dusog" or "dusod" or "dusu" or "guisol," in Bisaya and Pampango "guisol" or "cusol" or "dusul" (Blanco), in Burmah "myœ-ban-touk" (Mason), in Bengalee and Hindustanee "bhoo-champa" or "bhooi-champa," in Sanscrit "bhoo chumpuca" (Lindl.); and probably among the "aromatic roots" in question, — the root and whole plant being employed medicinally: *K. rotunda* was observed by Rheede xi. pl. 9 in Malabar; by Graham, "in gardens" at Bombay; by Ainslie, Roxburgh, Wight, and Drury, cultivated all over Hindustan for the beauty and fragrance of its flowers, but nowhere wild. Farther East, was observed by Mason in Burmah, enumerated as indigenous; by Blanco, under cultivation on the Philippines and the root used medicinally by the natives.

Curculigo orchioides of Tropical Eastern Asia and the Malayan archipelago. A stemless grass-leaved Hypoxid plant called in Bengalee "tamoolie" or "telnoor moodol," in Tamil "nelapannay," in Telinga "nala-tatta-gudda," in Hindustanee "niahmooslie" (Drur.), in the environs of Bombay "mooslee kund" (Graham); and possibly among the "aromatic roots" in question, — its root being employed medicinally: *C. orchioides* was observed by Rheede xii. pl. 59 in Malabar; by Nimmo, in "the Concans" (Graham), to and beyond Bombay; by Ainslie, Roxburgh, and Drury, in the "peninsula everywhere" as far as Travancore; by myself, as far as Singapore; and by Rumphius vi. pl. 54, on Amboyna (Pers.).

As early as this year (see addit. art de verif.), the Quito district invaded by Huayna Capac, sent by his father the Inca Tupac Yupanqui. — After "three years" resistance, the country was subdued: great buildings were erected by the Inca and his son, which the natives called Quito, "whence the city took its name" (Ciez. xl).

By means of a system of posts at intervals of half a league, *verbal messages* were transmitted by runners in "eight days" from Quito to Cuzco, a distance of "six hundred leagues" — (Ciez. xli, and xlii).

"1473 A. D." (Alst. p. 308, and C. Zeno 16), the Persian king having crossed the Euphrates, finally defeated by the Turks under Mohammed II.; and compelled to retire.

"The same year (Nicol.), a synod at Madrid. "To remedy the ignorance of the Spanish clergy, scarcely one of whom understood Latin."

"The same year" (Blair), the study of the Greek language brought into France by Gregoras Tiphernas.

"1474 A. D." (Stanley edit. Barb. 50 and 69), returning with a Persian ambassador, Josafa Barbaro arriving at the court of the Persian king Assambei or Hassan Beg. — He remained in Persia "five years."

"In this year" (Burm. hist., and Mason 27), Ooparaza with the title of Dharmawatie reigning in Pegu.

"In or about 1475 A. D. (= 1400 an. jav., Raffles ix to xi, Crawford gives 1478) in Java, capture and destruction of Majapahit by Muslim converts under prince Raden Patah. The seat of government was now removed to Demak, Mohammedanism becoming the established religion.

"In or about 1475 A. D." (Garc. de la Vega, the addit. art de verif. giving "1523 — his 42d year" = 1482), Tupac Yupanqui succeeded by his son Huayna Capac, now twelfth Inca of Peru.

Huayna Capac went beyond his father, and declared, That the sun must have a "Lord more powerful than himself, who orders him to make this journey, day by day, without resting." The new saying of the Inca was regarded by the natives as "of evil omen, as well as his freedom in gazing at the Sun" — (Acosta, and G. de la Vega ix 10).

"1476 A. D." (Alst., and Blair), in Switzerland, the invading Burgundians under Charles the Bold defeated.

"In this year" (Humb., and Major 2d edit. Columb. p. xxix), John Szkolny, a Polish pilot in the service of Christian II. of Denmark, visiting Greenland. He is said to have seen a country beyond.

Parnassia palustris of Subarctic climates. Called in Britain *grass of Parnassus* (Prior), in Sweden "slotter-blomster" or "harnacker" or "flenort" or "hwit-wisil" or "hiarteblad" (Linn.), and from early times employed medicinally, and sold in drug-shops under the name of "hepaticæ albæ:" — termed "gramen parnassium" by Dodoens pempt. 564. "p. palustris et vulgaris" by Tournefort inst. 246, and known to grow from Lapland throughout middle Europe (C. Bauhin pin. 309, fl. Dan. pl. 584, Engl. bot. pl. 84, and Pers.), and even in North Africa (Wats.): was observed by Linnæus in Sweden, abounding in moist meads; by Sibthorp, on the Bithynian Olympus; by Bieberstein, on the subalpine portion of Caucasus; by Pallas, between the Yenisei and Lake Baical. Westward, by Hooker in Iceland; by Drummond, at 54° near Fort Cumberland on the Saskatchewan; grows according to A. Gray on the "shore of Lake Superior, Upper Michigan, and northward;" according to Hooker, in Labrador, Newfoundland, and throughout Canada to the Arctic Circle and Rocky mountains; was observed by Chamisso from Escholtz Bay to Bering's Straits (Schlecht.).

Dianthus armeria of Europe and the adjoining portion of Asia. Called in Britain *maiden* or *Depiford pink* (Prior), in Gothland "sarons blomster" (Linn.), and known from early times: — termed "armeria sylvestris altera" by Lobel pl. 448, "viola barbata angustifolia" by Dalechamp 810, "cariophyllus barbatus sylvestris" by C. Bauhin pin. 208, and Tournefort inst. 333, and known to grow in barren soil from Sweden throughout middle Europe (fl. Dan. pl. 230, Engl. bot. pl. 317, and Pers.): observed by Linnæus in Sweden, in cultivated as well as sterile soil as far as Scania; by Sibthorp, in Greece. By European colonists, was carried to Northeast America; observed by myself in the environs of Salem, Mass., and according to A. Gray occurs also in Pennsylvania.

Lepidium campestre of Europe and the adjoining portion of Asia. Called in Sweden "konung Salomons ljusstake" or by the Ostrogoths "stillfro" (Linn.), and known from early times: — termed "t. latifolium" by Fuchsius 306, "t. arvense vaccariæ incano folio majus" by C. Bauhin pin. 106, "t. vulgatus" by Tournefort inst. 212, described also by Anguillara 171, and known to occur in cultivated and fallow ground throughout middle Europe (Curt. lond. v. pl. 45, and Pers.): observed by Hooker in Iceland; by Linnæus in Sweden; by Sibthorp, around Constantinople; and by Bieberstein, along the Taurian mountains. By European colonists, was carried to Northeast America, where it occurs in "fields, sparing from Massachusetts to Delaware" (A. Gray).

Geranium sanguineum of Europe and the adjoining portion of Asia. Called in Sweden "orm-

gras" (Linn.), and known from early times: — termed "g. septimum hæmatodes" by Clusius hist. ii. 202, "g. s. maximo flore" by C. Bauhin pin. 318, and Tourn. inst. 267, and known to grow throughout middle Europe (fl. Dan. 1107, Engl. bot. pl. 272, and Pers.): observed by Linnæus in Sweden; by Sibthorp, and Chaubard, from the Peloponnesus to mount Hæmus and Constantinople.

Orobis vernus of middle Europe and the adjoining portion of Asia. Called in Sweden by the Ostrogoths "krakarter," and from early times furnishing the "orobi farina" of the drug-shops — (Linn.): termed "o. sylvaticus vernus" by Thalius herc. pl. 6, "o. pannonicus primus" by Clusius hist. ii. 230, "o. s. purpureus vernus" by C. Bauhin pin. 351, and Tournefort inst. 393, and known to grow in woods throughout middle Europe (Pers.): observed by Linnæus in Sweden; by Sibthorp, on mount Athos and the Bithynian Olympus.

Orobis niger of Europe and the adjoining portion of Asia. Called in Sweden "wipp-arter" (Linn.), and known from early times: — termed "astragaloides" by Dodoens pempt. 551, "o. pannonicus secunda" by Clusius hist. ii. 230, "o. sylvaticus vicie foliis" by C. Bauhin pin. 352, and Tournefort inst. 393, and known to grow throughout middle Europe (Rivin. tetr. pl. 60, fl. Dan. pl. 1170, and Pers.): observed by Linnæus in Sweden, its root sweet and the plant turning black in drying; by Sibthorp, and Chaubard, from the Peloponnesus to mount Hæmus and Constantinople.

Vicia sepium of Europe and the adjoining portion of Asia. Called in Sweden "tranarter" (Linn.), and known from early times: — mentioned by Fuchsius 110, and Matthioli: termed "v. s. perennis" by Bauhin hist. ii. 313, "v. s. folio rotundiore acuto semine nigro" by Tournefort inst. 397, and known to occur in hedges throughout middle Europe (C. Bauhin pin. 345, Rivin. tetr. 56, fl. Dan. pl. 699, Engl. bot. pl. 1515, and Pers.): observed by Linnæus in Sweden, in hedges and shaded situations; by Sibthorp, in woods on Cyprus.

Viola hirta of Europe and the adjoining portion of Asia. A vernal species called in Sweden "buske-fioler" (Linn.), and known from early times: — termed "viola" by Brunfels pl. 137, "v. martia major hirsuta inodora" by Morison ii. 5. pl. 35, and known to grow throughout middle Europe (Ray hist. 1051, Curt. lond. i. pl. 64, fl. Dan. pl. 618, and Pers.): observed by Linnæus in Sweden; by Sibthorp, on mount Athos.

Lithospermum arvense of Eastern Europe and the adjoining portion of Asia. Called in Sweden "hoorletta" or "sminckrot" (Linn.), and its root from early times used by Northern maidens to paint their faces: — termed "anchusa arvensis minor facie milii solis" by Tabernæmontanus pl. 849, "lithospermum arvense radice rubra" by C. Bauhin pin. 258, "echioides flore albo" by Rivinus mon. 9; was already in Britain in the Sixteenth century (Park. theatr. 433), but as in Italy, Sicily, and Algeria, only in cultivated ground (Tourn. inst. 134, and A. Dec.): was observed by Linnæus in rye fields as far as Lapland; by Sibthorp, Chaubard, Fraas, Reut. and Margot, frequent in cultivated ground in Greece, but no native name given; by Grisebach, to all appearance wild in Thrace, as probably in the Crimea and on the Talysh mountains (Bieb., Mey., and Hohen); was observed by Thunberg in Japan. By European colonists was carried to Northeast America, occurring according to A. Gray on "sandy banks and road-sides, New England to Pennsylvania and Michigan;" according to Chapman in "cultivated grounds and waste places, Florida, and northward."

Campanula glomerata of Europe and the adjoining portion of Asia. Called in Sweden "mosis-roser" (Linn.), and known from early times: * — termed "cervicaria minor" by Dodoens pempt. 164,

* *Linnæa borealis* of Subarctic climates. Called in Sweden "windgras" or "benwarksgras" or "torrworksgras" or "klagras" or "hwita klacker," in Norway "norrislegras," and from early times used medicinally — (Linn.): termed "obolaria" by Siegesbeck prim. 79, "campanula serpyllifolia" by Bauhin hist. ii. 816, "nummularia norwegica repens folio dentato floribus geminis" by Petiver mus. 787, and known to grow from Lapland throughout Northern Europe and Siberia as far as the Altaian mountains (fl. Dan. pl. 3, Pers., Dec., and Wats.), also on the mountains of Switzerland (Scheuch, alp. 131 to 454, Hall. helv. 608, Seguiet veron. i. 182, and A. Dec.): was observed by Rudbeck, Celsius, and Linnæus, in Lapland and Sweden; is known to grow in Scotland (Dec.), and in Mecklenbourg in Prussia (A. Dec.). Westward, according to Decandolle, grows in Newfoundland, Canada, and as far as Unalaska; according to Hooker, from the Arctic Circle to the Columbia and Kotzebue Sound; according to Watson, on the Aleutian Islands; was observed by Mertens at Norfolk Sound; by Nuttall, along Lake Huron; by Pursh, from Wiscasset in Maine to the mountains of New York and Pennsylvania; by myself, from 45° to 42° along the Atlantic, but according to A. Gray, grows in New Jersey and along the Alleghanies as far as Maryland.

Sparganium natans of Subarctic climates. Called in Smoland "flotgræs," and from early times sought for by cattle and horses, and regarded as indicating the presence of fishes — (Linn.): was observed by Linnæus only in Smoland, Norland, and the woody portion of Lapland, growing outside of other aquatic plants in water more than six feet deep; by Hudson, in Britain (Steud.); and is

"trachelium minus" by Clusius hist. ii. 171, "c. pratensis flore conglomerato" by C. Bauhin pin. 94, and Tournefort inst. 110, and known to grow throughout middle Europe (Engl. bot. pl. 90, and Pers.): observed by Linnæus as far as Scania in Sweden; by Allioni pl. 39, on mount Baldo in Piedmont; by

known to grow in Ireland, Russia, and Switzerland (Engl. bot. pl. 273, and Wats.). Westward, was observed by Hooker on Iceland; by myself, in a weedy lake abounding in fish not far from Monadnock mountain in Jaffrey, growing in deep water, the leaves half an inch or more in width; by Nuttall, in Massachusetts; by A. Gray, in Central New York; and is known to grow as far as Alaska (Wats.).

Juncus bulbosus of Northern Europe and Asia. A rush called in Sweden "stubb-togh" (Linn.), and known from early times: — termed "gramen junceum junci sparsa panicula" by Morison iii. 8. pl. 9, "j. compressus" by Jacquin, and known to grow from Sweden to Switzerland (fl. Dan. pl. 431, Hall. helv. 254, and Pers.), and as far as the Taurian mountains (Bieb.): observed by Linnæus in Sweden, forming patches in moist pasture-land and even near dwellings; by Decandoile, in France. Westward, by Hooker in Iceland. (See J. Gerardi).

Carex panicea of Northern Europe and Asia. Called in Sweden "hirss-starr" (Linn.), and known from early times: — termed "gramen cyperoides gracile alterum glomeratis torulis spatio distantibus" by Morison iii. 8. pl. 12; described also by Plukenet alm. pl. 91, Scheuchzer 431, Ray hist. 1293, and Micheli pl. 32 (Linn.): known to grow from Iceland and Lapland to Switzerland, Russia, and Northern Asia (Pers., and Wats.); and observed by Rudbeck i. pl. 31, and Linnæus, in Lapland and Sweden. Probably by European colonists was carried to Northeast America, observed by H. Little near Boston; but according to J. Carey, occurs from "New England to Wisconsin, and south-westward."

Agrostis canina of Europe and the adjoining portion of Asia. Called in Sweden "brun-hwen" (Linn.), and known from early times: — termed "gramen supinum caninum paniculatum folio varians" by C. Bauhin pin. 1 and theatr. 12 (Linn.), and known to grow in meads throughout middle Europe (Scheuch. hist. 141, Smith brit. 78, and Pers.), from Russia and Ireland to Switzerland (Wats.); observed by Linnæus frequent in moist meads in Sweden. Westward, is known to grow in Iceland (Wats.); and according to Watson, and A. Gray, has been introduced into Northeast America.

Airopsis præcox of Northern and middle Europe. A diminutive grass called in Sweden "wartat" (Linn.), and known from early times: — termed "gramen parvum præcox panicula laxa canescente" by Plukenet phyt. pl. 33, and Ray angl. iii. pl. 22, "g. minimum spica brevi habitiore nostrum" by Scheuchzer hist. 219 (Linn.); known to grow from Denmark throughout middle Europe (fl. Dan. pl. 383, Smith angl. i. 87, and Pers.) as far as Switzerland (Wats.); observed by Linnæus in Sweden, in depressed sandy situations subject to inundation in Scania. By European colonists, was carried to Northeast America, observed by Pursh in the outskirts of Philadelphia, and according to A. Gray occurs in "sandy fields, New Jersey to Virginia, rare."

Arrhenatherum avenaceum of Northern and middle Europe. An oat-like grass called in Sweden "knyl-hafre" (Linn.), and known from early times: — termed "gramen avenaceum elatius juba longa splendente" by Morison iii. 8 pl. 7, and Scheuchzer hist. 239, and "avena elatior" by Linnæus: known to grow in meads throughout Northern and middle Europe (Schreb., Leers, and Pers.); was observed by Linnæus in Sweden as far as Lapland, sometimes in gardens. By European colonists, was carried to Northeast America, observed by myself in cultivated and fallow ground near Salem, Mass.; by Torrey, in the environs of New York city; by Curtis, in North Carolina (Chapm.); by Baldwin, in the Western part of Georgia (Ell.); and according to A. Gray has become naturalized.

Lycopodium clavatum of Northern climates. A club-moss called in Sweden "ralf mossa" or "wisp-mossa" or "kalfwerfwor" or "mattegras," and from early times used for making mats, blistering bread, and sold in the drug-shops under the name of "musci clavati," its seeds as "lycopodii" — (Linn.): described by Valerius Cordus 111 (Spreng.); termed "muscus terrestris clavatus" by C. Bauhin pin. 360, "lycopodium vulgare pilosum anfragosum et repens" by Dillenius musc. pl. 58, and known to grow throughout Northern Europe (. . .): observed by Tillands pl. 143, and Linnæus, in Lapland and Sweden. Westward, by myself in New England, as far as 42° along the Atlantic; according to A. Gray, is "common northward" from central New York; and according to Chapman, grows on the "mountains of North Carolina."

Lycopodium annotinum of Northern climates. Called by the Westrogoths "ref-gras" (Linn.), and known from early times: — termed "muscus terrestris repens clavis singularibus foliosis erectis" by Plukenet alm. pl. 258, and known to grow in woods throughout Northern Europe (Moris. iii. 15. pl. 5, Dill. musc. pl. 63): observed by Linnæus in Sweden. Westward, by myself from 47° 30' on the Lower St. Lawrence to the base of the White mountains and of Monadnock; by Oakes, and

Sibthorp, on mount Athos. By European colonists, was carried to Northeast America, where it seems naturalized in the immediate vicinity of Salem, Mass.

Sedum rupestre of Europe and the adjoining portion of Asia. Called in Sweden "bergknoppar" (Linn.), and known from early times: — termed "s. minus luteum folio acuto" by Tournefort inst. 263, "s. m. a rupe S. Vincentii" by Ray angl. iii. 270, and known to grow on rocks from Sweden to the Mediterranean (Engl. bot. pl. 170, and Pers.): was observed by Hooker in Iceland; by Linnæus, on calcareous rocks in Sweden; by Sibthorp, and Chaubard, on rocks from Crete and the Peloponnesus to Parnassus.

Sedum sexangulare of Europe and the adjoining portion of Asia. Called in Sweden "kantknoppar" (Linn.), and known from early times: — termed "s. minimum luteum non acre" by Bauhin hist. iii. 695, "stenegrop" by Petiver 42. f. 9, and known to grow in arid situations and on walls from Sweden to the Mediterranean (Pers.): observed by Linnæus in Sweden, intermingled with s. acre, but the leaves not acrid. In Britain (Curt. lond. iv. pl. 33) is regarded by Watson, and Bromfield, as probably not indigenous (A. Dec.).

Ajuga pyramidalis of middle Europe and the adjoining portion of Asia. Called in Sweden "kiaringruka" or "miolkgubbar," and from early times used medicinally and sold in drug-shops under the name of "consolidæ mediæ" — (Linn.): termed "consolidæ media genevensis" by Bauhin hist. iii. 432, "phyllochnos" by Renealmi 125, "bugula sylvestris villosa flore cæruleo" by Tournefort inst. 209, and known to grow from Sweden to the Pyrenees and mountains of Switzerland (fl. Dan. pl. 185, Engl. bot. pl. 1270, Pers., and Benth.): observed by Linnæus in Sweden; by Sibthorp, on mount Hæmus; and by Meyer, on Caucasus. By European colonists, was carried to Greenland (Wats.).

Melanpyrum cristatum of middle Europe and the adjoining portion of Asia. Called in Sweden "ænggubbar" or "korsort" (Linn.), and known from early times: — termed "m. c. flore albo et purpureo" by Bauhin hist. iii. 440, and Tourn. inst. 173, and known to grow from Sweden throughout middle Europe (fl. Dan. pl. 1104, Engl. bot. pl. 41, and Pers.): observed by Linnæus in Sweden, frequent in meads in sterile soil; by Sibthorp, around Constantinople.

Globularia vulgaris of Europe and the adjoining portion of Asia. Called in Sweden "bergskrabba" (Linn.), and known from early times: — termed "aphyllanthus Anguillaræ" by Camerarius hort. pl. 7, "globularia" by Clusius hist. ii. 6: was known to Lobel adv. nov. 200 as "rare" and growing in Finland, Germany, and Italy; but has since become more abundant in central Europe (Pers., and A. Dec.): was observed by Linnæus in rocky situations exposed to the sun from Gothland to Oeland; by Sibthorp, on the Bithynian Olympus and as far as Smyrna.

Myosotis arvensis of Europe and the adjoining portion of Asia. Called in Sweden "forgat mig ei" (Linn.), and known from early times: — termed "echium scorpioides arvense" by C. Bauhin pin. 254, "m. hirsuta arvensis major" by Linnæus, and known to grow from Lapland throughout middle Europe (Dill. giss. 55, and Boerh. lugd. i. 190): observed by Tillands, and Linnæus, frequent in arid meads in Lapland and Sweden; by Chaubard, in cultivated ground in the Peloponnesus. By European colonists was carried to Northeast America, observed by A. Gray in "fields etc., not very common," its flowers "small, blue, rarely white."

Ornithogalum luteum of Europe and the adjoining portion of Asia. Called in Sweden by the Ostrogoths "wafferdagslok," and from early times known as a weed in gardens, and its bulbs eaten in times of scarcity — (Linn.): termed "bulbus sylvestris" by Dodoens pempt. 222, "pyrrhochiton" by Renealmi pl. 90, "o. luteum" by C. Bauhin pin. 71, and known to grow in meads and woods throughout middle Europe (fl. Dan. pl. 612, and Pers.): observed by Chaubard in the Peloponnesus.

Ornithogalum minimum of Europe and the adjoining portion of Asia. From early times intermingled with the preceding: — termed "o. pannonicum luteo flore" by Clusius hist. i. 189, "o. luteum minus" by C. Bauhin pin. 71, and known to occur throughout middle Europe: observed by Linnæus rarer than the preceding species, but occurring especially in the kitchen-gardens of Upland. "O. minus" of Linnæus was observed by Chaubard in the Peloponnesus.

Russell, as far as 42° 30' along the Atlantic (Robinson); by A. Gray, "common northward" from central New York.

Isoetes lacustris of Northern climates. An aquatic called in Britain *quillwort* (Prior), in Sweden "braksnagras," uprooted by Cyprinus brama and hence omens drawn from early times — (Linn.): termed "subularia lacustris sive calamistrum herba aquatico-alpina" by Ray angl. i. pl. 216, and known to grow in shallow water at the bottom of lakes and rivers throughout middle Europe (Dill. musc. pl. 80): observed by Celsius, P. Osbeck, and Linnæus, in the lakes and rivers of Sweden. Westward, was observed by Conrad near Philadelphia, and specimens shown me; according to A. Gray, is "not rare northward" of central New York, New England specimens agreeing well with European; was received by Hooker from the Saskatchewan.

Orchis militaris of Europe and the adjoining portion of Asia. Called in Britain *military orchis* (Prior), in different parts of Sweden "gulltoppor" or "Johannis nycklar" (Linn.), and known from early times: — termed "o. maslatifolia" by Fuchsius 554, "cynosorchis latifolia hianthe cucullo major" by C. Bauhin pin. 80, and known to grow in meads throughout middle Europe (Tourn. inst. 432, Jacq. rar. pl. 598, Rudb. elys. ii. pl. 185, and Pers.): observed by Linnæus in Gothland and Oeland; by Herbert, in England (A. Dec.), by Vaillant pl. 31, in the environs of Paris; by Haller pl. 28, in Switzerland; and by Sibthorp, in the environs of Constantinople.

Orchis nigra of Northern Europe and mountains farther South. Called in Switzerland "jalousie," in Jemtia in Sweden "brunkulla," and its flowers used there from early times to colour ardent spirits — (Linn.): the plant is termed "o. palmata angustifolia alpina nigro flore" by C. Bauhin pin. 86, and Tournefort inst. 430 "satyrium foliis linearibus" by Royer lugd. 14, "s. nigrum" by Linnæus: is known to grow in Denmark and on the mountains of middle Europe (Jacq. austr. pl. 368, and Pers.): was observed by Rudbeck elys. ii. pl. 217, and Linnæus, in Sweden; by Haller pl. 27, on the Alps of Switzerland; by Sibthorp, on the mountains of the Peloponnesus.

Ophrys muscifera of Europe and the adjoining portion of Asia. Called in Britain *fly orchis* (Prior), in Sweden "flugblöster" (Linn.), and known from early times: — termed "orchis myodes prima floribus muscam exprimens" by Lobel pl. 381: described also by Dodoens . 237 (Spreng.), C. Bauhin pin. 83, and Tournefort inst. 434, and known to grow throughout middle Europe (Engl. bot. pl. 64, Vaill. pl. 31, and Pers.): observed by Linnæus as far as Oeland; by Haller pl. 24, in Switzerland; by Sibthorp, and Chaubard, in the Peloponnesus.

Luzula pilosa of Northern climates. A leafy rush called in Sweden "il-togh" (Linn.), and known from early times: — termed "gramen nemorosum hirsutum latifolium majus" by C. Bauhin pin. 7 and theatr. 101, "j. nemorosus latifolius major" by Tournefort inst. 246, and known to grow from Lapland to the Mediterranean (Curt. lond. ii. pl. 19, Hoffm. germ. 168, Pers., and Wats.): observed by Rudbeck elys. i. pl. 63, and Linnæus, in Lapland and Sweden: by Decandolle, in France; by Savi, in Etruria; by Desfontaines, on the Atlas mountains (A. Dec.): by Sibthorp, and Chaubard, from the Peloponnesus to Constantinople; by Thunberg, in Japan. Westward, by Hooker in Iceland; is known to grow also in Greenland and Labrador (Wats.), and as far as the Saskatchewan (Hook.); according to A. Gray, is "common northward;" is attributed by Muhlenberg to Pennsylvania, and by Chapman to the "mountains of North Carolina."

Juncus squarrosus of Europe and the adjoining portion of Asia. A leafless rush called in Sweden "borst-togh" (Linn.), known there from early times as indicating turfy and sterile soil: — termed "gramen juncum foliis et spica junci" by C. Bauhin pin. 5 and theatr. 78, "j. montanus palustris" by Tournefort inst. 247, and known to grow from Lapland throughout middle Europe (fl. Dan. pl. 430, Engl. bot. pl. 933, and Pers.): was observed by Hooker in Iceland; by Linnæus, in Lapland and Sweden; by Loesel, in Prussia; by Sestini, in the environs of Constantinople (Sibth.).

Juncus articulatus of Europe and Northern Asia. A rush called in Sweden "ryll-togh" (Linn.), and known from early times: — termed "gramen juncum folio articulato aquaticum" by C. Bauhin pin. 5 and prodr. 12, "j. foliis articulosis floribus umbellatis" by Tournefort inst. 247, and known to grow in watery places from Lapland throughout middle Europe (Engl. bot. pl. 238, and Pers.): was observed by Linnæus along the margin of rivers and lakes in Lapland and Sweden; by Sibthorp, frequent in wet places along rills on the Greek islands; by Gmelin, in Russia and throughout Siberia. Westward, by Hooker in Iceland; but probably by European colonists carried to New England, observed by myself along roadsides in Western Massachusetts; and according to A. Gray, occurs in "wet places, Rhode Island to Lake Huron, and northward, the genuine European form received from Olney and Sartwell. "J. lamprocarpus," described by Ehrhart, figured in Engl. bot. pl. 2143, and observed by Chaubard in the Peloponnesus, is by some writers regarded as not distinct.

Carex muricata of Europe and Northern Asia. Called in Sweden "pigg-starr" (Linn.), and known from early times: — termed "gramen nemorosum spicis parvis asperis" by C. Bauhin pin. 7 and theatr. 100, "carex spicis brevibus echinatis sessilibus distinctis" by Haller 245; and known to grow throughout middle Europe (Ray hist. 1298, Scheuchz. 485 pl. 11, and Pers.), also along the Taurian mountains (Bieb.), and in Siberia (Wats.): was observed by Linnæus in Sweden and especially in Norland; by Brotero, near Beira in Portugal; by Desfontaines, in Barbary. Westward, by Hooker in Iceland; but probably by European colonists was carried to Northeast America, was observed by Pursh in the State of New York; and according to J. Carey, occurs in "fields, Massachusetts (introduced?), Ohio, and Kentucky, rare."

Carex pillescens of Europe and the adjoining portion of Asia. Called in Sweden "blek-starr" (Linn.), and known from early times: — termed "cyperoides polystachion flavicans spicis brevibus prope summitatem caulis" by Plukenet alm. pl. 34, and Tournefort inst. 530: known to grow from Lapland throughout middle Europe (fl. Dan. pl. 1060, Engl. bot. pl. 2185, and Pers.), also in Russia and Siberia (Wats.): was observed by Rudbeck elys. i. pl. 54, and Linnæus, in Lapland and Sweden;

by Decandolle, in France; by Savi, on the Appenines; by Sibthorp, in a grove not far from Constantinople. Westward, by Hooker in Iceland; but clearly by European colonists was carried to New England, observed by myself in both Eastern and Western Massachusetts, by Dewey in Western Massachusetts, by Torrey on the highlands along the Hudson, occurs according to J. Carey in "Pennsylvania, and northward" (A. Gray), and seems completely naturalized.

Carex hirta of Europe and the adjoining portion of Asia. Called in Sweden "grus-starr" (Linn.), and known from early times: — termed "gramen spicatum foliis et spicis hirsutis mollibus" by C. Bauhin theatr. 48, "cyperoides polystachion lanuginosum" by Tournefort inst. 529; and known to grow from Sweden and Russia throughout middle Europe (Engl. bot. pl. 685, Pers., and Wats.), and as far as the Taurian mountains (Bieb.); was observed by Hooker in Iceland; by Linnæus, in Sweden; by Sibthorp and Chaubard, from the Peloponnesus to Constantinople.

Carex elongata of Europe and the adjoining portion of Asia. A sedge called in Sweden "rank-starr" (Linn.), and known from early times: — termed "cyperoides polystachion spicis laxis paniculam veluti componentibus" by Scheuchzer agr. 487 pl. 11; and known to grow in marshy ground from Russia and 63° in Sweden to the Mediterranean (Engl. bot. pl. 1920, Pers., and Wats.): observed by Hooker in Iceland; by Linnæus, as far as Upsal, rare; by Sibthorp, in the Peloponnesus.

Carex leporina of Europe and the adjoining portion of Asia. Called in Sweden "har-starr" (Linn.), and known from early times: — termed "gramen cyperoides palustre majus spica divisa" by C. Bauhin pin. 6 and theatr. 88, "g. c. spica e pluribus spicis brevibus mollibus composita" by Scheuchzer hist. 456 pl. 10 f. 15 (Linn.), "carex ovalis" by Willdenow; and known to grow in moist meads throughout Northern and middle Europe (Huds. 404, Engl. bot. pl. 306, Leers 195 pl. 14 f. 6, and Pers.): observed by Hooker in Iceland; by Linnæus, in Lapland and Sweden; by Sibthorp, in moist meads in Greece.

Carex vulpina of Northern climates. Called in Sweden "raf-starr" (Linn.), and known from early times: — termed "gramen cyperoides triquetrum spica integra" by Bauhin hist. ii. 479, "g. c. palustre majus spica compacta" by C. Bauhin pin. 6 and theatr. 87: known to grow in marshes throughout Northern and middle Europe (fl. Dan. pl. 308, Engl. bot. pl. 307, and Pers.), also about Caucasus and the Taurian mountains (Bieb.), and as far as Japan (Wats.): was observed by Linnæus in Sweden; by Sibthorp, and Chaubard, in watery places in the Peloponnesus. Westward, by Hooker in Iceland; and according to J. Carey grows in "Ohio, Illinois, and Kentucky" (A. Gray).

Carex digitata of Europe and the adjoining portion of Asia. A woodland sedge called in Sweden "hwhisp-starr" (Linn.), and known from early times: — termed "gramen caryophyllum montanum spica varia" by C. Bauhin pin. 4 and theatr. 48, and by Scheuchzer 448 pl. 10: known to grow throughout Northern and middle Europe (Engl. bot. pl. 615, and Pers.); was observed by Linnæus in Lapland and Sweden; by Sibthorp, in woods in the environs of Constantinople.

Trisetum flavescens of Europe and the adjoining portion of Asia. A grass called in Sweden "golhåfre" (Linn.), and known from early times: — termed "gramen avenaceum spica sparsa flavescens locustis parvis" by Morison iii. 8 pl. 7, "g. a. pratense elatius panicula flavescens locustis parvis" by Tournefort inst. 525 and Scheuchzer hist. 223, "avena flavescens" by Linnæus: known to be frequent in meads throughout middle Europe (Curt. lond. iii. pl. 5, and Pers.); observed by Bergius in meads in Gothland (Linn.); by Sibthorp, in the environs of Constantinople.

Phalaris arundinacea of the marshes of Northern climates. A reedy grass called in different parts of Sweden "flack" or "ror-flen," and from early times used for thatching roofs — (Linn.): termed "gramen arundinaceum spicatum" by C. Bauhin pin. 6 and theatr. 94, "g. paniculatum aquaticum phalaridis semine" by Tournefort inst. 523; and known to grow from Lapland and the Feroe Islands to Switzerland (fl. Dan. pl. 259, Pers., and Wats.), also on Caucasus, and in Siberia and Japan (Kunth); was observed by Linnæus on the shores of lakes and rivers in Sweden; by Sibthorp, in watery places around Constantinople. Westward, by Michaux in Canada, New England, and Pennsylvania; by Lapylaie, in Newfoundland, as far as 51°; by myself, in marshes from 42° 30' to 40° along the Atlantic; by Drummond at 54° on the Saskatchewan near Fort Cumberland; and according to A. Gray is "very common northward" from central New York. The variety with striped leaves cultivated for ornament under the name of *ribbon grass* (Prior), was probably imported from Europe.

Phalaris phleoides of Europe and the adjoining portion of Asia. A grass called in Sweden "roll-flen" (Linn.), and known from early times: — termed "gramen typhoides asperum primum" by C. Bauhin pin. 4 and theatr. 51 (Linn.), "gramen spicatum spica cylindracea tenuiori longa" by Tournefort inst. 520, and known to occur throughout middle Europe (Ray hist. 1267, Scheuch. 61, fl. Dan. pl. 531, and Pers.); observed by Celsius, and Linnæus, in Sweden, in meads as well as along the margin of fields; by Forskal on Imros, by Sibthorp around Constantinople and frequent in cultivated ground on the Greek islands.

Phleum alpinum of the Arctic region and mountain-summits farther South. A grass called in Sweden "fiäll-kampe" (Linn.), and known from early times: — termed "gramen typhoides alpinum spica nigra brevi" by Burser (Mart. 498) and Rudbeck *elys. i. pl. 8* (Linn.), "g. typhoides alpinum spica brevi densa et veluti villosa" by Scheuchzer *prodr. pl. 3*: known to grow in Britain (Engl. bot. pl. 519), and on the Alps and Pyrenees (Dec.); observed by Linnæus frequent on the mountains of Lapland; by Haller 1529, on the Swiss Alps; by Savi, on the Appenines; by Sibthorp, on the Iithynian Olympus; is known to grow on Caucasus (Bieb.), and in Siberia (Wats.). Westward, was observed by Hooker in Iceland; by myself, on the summits of the White mountains of New England; is known to grow in Greenland and Labrador (Wats.), and in Unalaska (Kunth).

Alopecurus geniculatus of Northern Europe and Asia. Called in some English works *flote grass* (Prior), in Norland "stakra," in Sweden "kiarr-kafle" (Linn.), and known from early times: — termed "gramen aquaticum geniculatum spicatum" by C. Bauhin *pin. 3* and *theatr. 41*, "alopecurus culmo infracto aristis gluma longioribus" by Royer *lugdb. 54* (Linn.): known to occur in North Africa, Ireland, Russia (Wats.), Siberia, and Japan (Kunth); observed by Linnæus in wet meads in Sweden, and floating on the lakes of Lapland. Westward, was observed by Hooker in Iceland; by myself, in wet places in the outskirts of Salem, Mass., clearly introduced; by Chapman, in "wet cultivated grounds, Florida and northward;" by Short, in Kentucky; by Nuttall, and Pitcher, in Arkansas; and received by Hooker *fl. bor. am.* from Canada and the Northwest.

Milium effusum of Europe and the adjoining portion of Asia. A fragrant woodland grass called in different parts of Sweden "myskegras" or "luktgras" or "haslebrodd" or "amur" (Linn.), and known from early times: — termed "miliaceum gramen" by Lobel *pl. 3*, "gramen sylvaticum panicula miliacea sparsa" by C. Bauhin *pin. 8* and *theatr. 141* (Linn.), and by Tournefort *inst. 523*; known to grow from Lapland and Russia to the Mediterranean (*fl. Dan. pl. 1143*, *Curt. lond. iv. pl. 12*, and Wats.), also in Siberia (Kunth); observed by Hooker in Iceland; by Rudbeck, and Linnæus, in Sweden; by Decandolle, in France; by Savi, in Etruria; by Sibthorp, in woods on Cyprus; and by Bieberstein, along the Taurian mountains. ("M. glaucum" of North America, observed by Nuttall in West Pennsylvania, by myself on the White mountains, and according to A. Gray "common northward," is possibly not distinct.)

Agrostis spica-venti of Europe and the adjoining portion of Asia. A grass called in different parts of Sweden "kiosa" or "hwen" or "aker-when" (Linn.), and known from early times: — termed "gramen capillatum" by Bauhin *hist. ii. 462*, described also by Royer *lugd. 59* (Linn.); known to occur about cultivated ground throughout middle Europe (Scheuchz. *hist. 144*, and Pers.); observed by Linnæus in Sweden, a frequent weed in rye-fields: by Chaubard, in the Peloponnesus. Westward, an *Agrostis* with long upright awns has been observed by myself on the border of cultivated ground around Salem, Mass.

Catabrosa aquatica of Europe and Northern Asia. Called in some English works *flote grass* (Prior), in Sweden "kiarr-tatel" (Linn.), and known from early times: — termed "gramen caninum supinum paniculatum dulce" by C. Bauhin *pin. 2* and *theatr. 13* (Linn.), "g. paniculatum aquaticum miliaceum" by Tournefort *inst. 521*, and Vaillant *paris. pl. 17*, "aira aquatica" by Linnæus, and "poa airoides" by Koeler (Pers.): known to grow throughout middle Europe (Ray *angl. iii. 402*, *Curt. lond. i. pl. 5*, and Wats.), along the Taurian mountains (Bieb.), on Caucasus, and in Siberia (Kunth); was observed by Linnæus in Sweden, about springs and pools as far as Upsal; by Sibthorp, and Chaubard, in watery places in Greece as far as the Peloponnesus. Westward, was observed by Hooker in Iceland; according to Kunth, grows in North America, and according to Watson in both British America and the United States.

Aira canescens of Europe and the adjoining portion of Asia. Called in Sweden "borst-tatel" (Linn.), and known from early times: — termed "gramen foliis junceis radice jubata" and "g. spar-teum variegatum" by C. Bauhin *pin. 5* and *theatr. 72 to 74* (Linn.), "g. paniculatum capillaceo folio minimum" by Tournefort *inst. 523* and *herb. (Smith)*: known to grow in sandy situations throughout middle Europe (Roy. *lugd. 60*, *Engl. bot. pl. 1190*, and Pers.); observed by Linnæus in Sweden, in sandy fields as far as Scania; by Sibthorp, in the maritime sand of Achaia.

Melica ciliata of Europe and the adjoining portion of Asia. A grass called in Sweden "grus-slok" (Linn.), and known from early times: — termed "gramen avenaceum montanum lanuginosum" by C. Bauhin *pin. 10* and *theatr. 156* (Linn.), and by Tournefort *inst. 524*, "melica floribus horizontaliter patentibus" by Royer *lugd. 57*; known to grow throughout middle Europe (Scheuchz. *alp. pl. 4*, and Pers.); observed by Linnæus in Gothland and Sweden, becoming rare in Scania; by Forskal on Imros; by Sibthorp, and Chaubard, frequent on the hills of Greece as far as the Peloponnesus.

Sesleria cærulea of Europe and the adjoining portion of Asia. Called in Britain *moor grass* (Prior), in Sweden "elf-exing" (Linn.), and known from early times: — termed "gramen glumis variis" by C. Bauhin *pin. 10* and *prodr. 21* and *theatr. 158*, "g. spicatum glumis variis" by Tournefort *inst. 519*, "cynosurus cæruleus" by Linnæus; known to grow in mountainous situations through-

out middle Europe (Ray angl. iii. 339, Scheuch. hist. 83, Arduin. pl. 6, Pers., and Engl. bot. pl. 1613); observed by Linnæus in meads in Sweden; by Scopoli 189, in Carniola; and by Sibthorp, on mount Parnassus.

Poa alpina of the Arctic region and mountain summits farther South. A grass called in Sweden "fiäl-groe" (Linn.), and known from early times: — described by Dalibard, and known to grow on the Alps and Pyrenees (Dec.); also in Britain, Russia (Engl. bot. pl. 1003, and Wats.), and on Caucasus (Kunth); termed "gramen montanum spica foliacea graminea" by Scheuchzer alp. 38 pl. 4; observed by Linnæus in Lapland, its viviparous form continuing even under cultivation; by Sibthorp, on the Bithynian Olympus. Westward, by Hooker in Iceland; is known to grow in Greenland, and British America (Wats.); and was received by Kunth both from North America and the Falkland Islands.

Poa nemoralis of Northern Europe and Asia. A woodland grass called in Sweden "lund-groe" (Linn.), and known from early times: — described by Scheuchzer gram. 164 pl. 2, and termed "gramen sylvaticum panicula tenui e raris locustis composita" by Dillenius sp. 57: known to grow from Lapland to the Mediterranean (Engl. bot. pl. 1265, Pers., and Wats.), also on Caucasus, and in Siberia (Kunth); observed by Linnæus in Sweden, in woods at the base of mountains; by Sibthorp, in woods near Constantinople. Westward, was received by Hooker from the Saskatchewan and Slave river, — is known to grow in Russian America (Wats.), and var. "glauca" was observed by Hooker in Iceland (Kunth); (but the species growing in woods from "New England to Wisconsin," and observed by Nuttall near Philadelphia, is regarded by A. Gray as distinct and termed "p. alsodes").

Poa decumbens of Europe and the adjoining portion of Asia. A low grass called in Sweden "ax-swingel" (Linn.), and known from early times: — termed "gramen triticeum palustre humilium spica mutica brevior" by Morison iii. 177 pl. 1, "g. avenaceum parvum procumbens paniculis non aristatis" by Plukenet alm. pl. 34, and Tournefort inst. 525, "festuca decumbens" by Linnæus: known to grow throughout Northern and middle Europe (Engl. bot. pl. 792, and Pers.); was observed by Linnæus in Sweden, in sterile pasture-land as far as Scania and Upland; by Sibthorp, in the environs of Constantinople.

Bromus tectorum of Europe and the adjoining portion of Asia. A grass called in Sweden "tak-losta" (Linn.), and known from early times: — termed "festuca avenacea sterilis humilior" by C. Bauhin pin. 10 and theatr. 148, "gramen avenaceum locustis villosis angustis candicantibus et aristatis" by Tournefort inst. 526, and Scheuchzer gram. 254: known to grow on barren hills and on walls and roofs throughout middle Europe (Leers pl. 10, and Pers.); observed by Linnæus in fields and along their margin in arid soil, and covering the roofs of houses in Upsal; by Forskal, at Constantinople; and by Sibthorp, and Chaubard, around Athens and in the Peloponnesus.

Bromus pinnatus of Europe and the adjoining portion of Asia. A woodland grass called in Sweden "sparr-losta" (Linn.), and known from early times: — termed "gramen spica brizæ majus" by C. Bauhin pin. 9 and prodr. 19, "g. loliaceum altissimum spica brizæ perlonga aristis brevibus donata" by Tournefort inst. 517; and known to grow in grass-patches in woods throughout middle Europe (Rudb. elys. i. pl. 80, Hall., Engl. bot. pl. 730, and Pers.): observed by Bromelius 40 in woods in Gothland; by Linnæus in mountainous situations as far as Upland; by Sibthorp, and Chaubard, frequent in woods in shaded situations in the Peloponnesus and Greek islands.

Equisetum sylvaticum of Northern climates. Called in Sweden "grangras" or "hastgroning," and from early times esteemed there as feed for horses — (Hagstrom, and Linn.): termed "equisetum sylvaticum" by Tabernæmontanus 562, "e. s. tenuissimis setis" by C. Bauhin pin. 16 and theatr. 145, and known to grow throughout Northern and middle Europe (Rudbeck the younger elys. i. pl. 124, Roy. lugdb. 496, and Engl. bot. pl. 1874): observed by Linnæus in Sweden; by Sibthorp, from Greece and Cyprus to Constantinople. Westward, by myself from the Lower St. Lawrence to 42° 30' along the Atlantic; by Drummond, at 54° on the Saskatchewan near Fort Cumberland; and according to A. Gray is "common northward" from central New York.

As early perhaps as this year (see addit. art de verif.), expedition of the Inca Huayna Capac against Tumpiz and the countries beyond under the Equator, after assurance of success from the oracle at Pachacamac and the speaking statue in the valley of the Rimac.

"Feb., 1477" (Columb. mem., and Rafn. antiq. Amer.), visit of Columbus to Iceland; in a ship "from Bristol, England." Columbus according to his own account, sailed a "hundred leagues beyond Thulé" called Frislanda to "Lat 73° and an island as large as England where the English come to trade" (art de verif. contin.).

Theodorus Gaza translating Theophrastus into Latin. — He died "in 1478."

Polygonum fagopyrum of Eastern Tartary. The buckwheat, called in Esthonian "tatrikat" or "tattar," in Polish or Bohemian "tatarka," in Italy "faggina," in different parts of Spain "fajol" or "alforjon" or "alforfon" (Mor., and A. Dec.), in Japan "kjo" or usually "soba" (Thunb.); and the "trionum," a name given by Theodorus Gaza — apparently from the triangular seeds, is identified by

Ruel ii. 27 with the "Turcicum frumentum" brought into Europe "avorum nostrorum ætate," the seeds triangular and resembling beech-nuts; the account by John Bruyerinus in 1530 corresponds: buckwheat is mentioned in a German bible printed in 1522 (Beckm. 426), and according to Conrade Heresbach (writing before 1576) came from Northern Asia: is described also by Tragus, Dodoens, Cæsalpinus, and Bauhin hist. ii. 994; continues under cultivation in Western Europe, and was seen by Sestini in the environs of Constantinople (Sibth.). Farther East, is known to grow in Siberia around Lake Baikal (Ledeb.); was observed by Royle under cultivation in Northern Hindustan, but devoid of a Sanscrit name; by Kaempfer, and Thunberg, cultivated and growing spontaneously throughout Japan. By European colonists, was carried to Northeast America, where it continues abundantly cultivated in our Northern and Middle States; and to Ceylon, having there according to Moon 32 no native name.

"The same year" (Acost., Clavig. ii., and Humb. atl. pict.), Axajacatl succeeded by Tizoc, seventh Mexican emperor.

"In this year" (Burm. hist., and Mason 27) the Talaing general Thameinparau at the head of an army erecting an iron post on the Chinese frontier, to mark the boundary of the Peguan Empire. On his way back he was captured by the Burmese.

"1478 A. D." (Blair), expulsion from Florence of Laurence de Medici; under an anathema from pope Sixtus IV., "which greatly distressed learning." The Medicean *Library* had been collected through the agency of John Lascaris.

"The same year" (Pouchet) publication of the "Livres de Nature:" the first printed work on Natural History.

"In this year" (Grey transl. C. Zeno 38), Hassan Beg succeeded by Yakoob, now king of Persia.

"Sept. 4th, 1479" (Major pr. H. 129), the Canary Islands and Granada confirmed by treaty to Spain; and the African coast "from Cape Non" with the seas and islands as far as the Indies, to Portugal.

"1480 A. D." (Grey transl. C. Zeno 10), Otranto in Southern Italy captured by the Turks and a great part of Apulia ravaged: but being called away by war in Asia, a garrison only was left behind, — which at the end of a year surrendered.

"In this year" (Galvan.), Alfonso V. succeeded by John II., "thirteenth" king of Portugal (Camoens iv. 61).

"The same year" (Humb. atl. pict., Clavig. giving 1482), Tizoc succeeded by Ahuizotl, eighth Mexican emperor.*

"1481 A. D." (Galvan., & Major), by John II. of Portugal, the castle of Mina built, and Diego d'Azambuxa appointed to the command.

About this time, Martin Behaim voyaging to West Africa to procure "malagueta" — (Yule cath. i. 89). A globe was constructed at Nuremberg "in 1492" under his instructions (Stanley edit. Magell. 58).

Amonum grandiflorum of Western Equatorial Africa. A Scitamineous plant: its seeds included perhaps in the "malagueta" procured by Martin Behaim, — being grey or lead-coloured, much less polished than paradise-grains with a totally different flavour, resembling and equalling camphor in warmth and pungency (Lindl.): *A. grandiflorum* is known to grow in Sierra Leone (J. E. Smith exot. ii. p. 111).

Amonum melegueta of Western Equatorial Africa. Probably included in the "malagueta" procured by Martin Behaim, — for according to Yule cath. i. 88, its seeds continue to be exported from certain parts of the West African coast.

* *Cheiranthodendron pentadactylum* of Southern Mexico. Called *hand tree* from its flowers resembling the human hand; and a stock planted by a "king" of Toluca at his residence — long continued the only one known, and is described by Cervantes (Humb. ii. 6). Recently, the tree has been found indigenous in Southern Mexico.

Taxodium distichum of Carolina, the Lower Mississippi, and Texas. The deciduous or *bald cypress* is a lofty tree, filling swamps, and known from early times: stocks planted in a garden in Mexico before the Spanish invasion are mentioned by Humboldt (F. A. Mx.); and according to Kunth, the tree grows in the temperate portion of Mexico at the elevation of "870 to 1190." Eastward, "cypress" were seen by Amadas and Barlow in 1584 on Roanoke Island; and stocks eighty feet without a branch, by Strachey on James river: *T. distichum* is known to grow along the Atlantic as far as 39° at the capes of the Delaware (F. A. Mx.); was observed by myself from about 38° to 33°; by Catesby i. pl. 11, and Elliot, in South Carolina; by Chapman, in "deep swamps, Florida, and northward;" by Darby, in Louisiana and to 34° on Red river; by Short, in Kentucky, 38° being its Northern limit on the waters of the Mississippi according to Nuttall.

"1482 A. D." (voyag. Belg.), Van Ghistele visiting Egypt, found Alexandria one of the most commercial cities in the World: containing resident merchants of all countries, from Barbary, also Spaniards, Catalans, Genoese, Italians, Venetians, Turks, Persians, Tartars, Arabs, and Abyssinians. After proceeding as far as Thebes, he returned; the Egyptian government at this time prohibiting Europeans from going to Abyssinia, or sailing down the Red Sea to Hindustan. — In the following year, Van Ghistele visited Tauris in Persia; also a great commercial city, situated on one of the routes from Hindustan to the Black Sea.

"In this year (= 887 A. H." of Ferisht., Elph.), a naval expedition sent by Mahmud of Guzarat; the pirates of Balsar defeated at sea, and their resort the islands of Jigat and Bet captured.

"1483 A. D." (Alst.), Mohammed II. succeeded by his son Bajazet II., tenth Turkish sultan.

"The same year" (Talvi i), the first *printed Slavonic book*; a missal in Glagolitic letters. — About seven years later, the first printing in Cyrillic letters.

"The same year" (H. H. Wils. transl. Vishn. pur. pref. 24), date of one manuscript of the Vayu Purana.*

1484 A. D. (= "1409 an. jav.," Raffles xi.), Raden Patah or Panambahan Jimbun succeeded at Demak by his son Pangeran Sabrang Lor, second sultan of Java.

"In this year" (Alst. p. 308), Wallachia laid waste by the Turks under Bajazet II.

"Aug. 29th" (Alst., and Nicol.), Sixtus IV. succeeded by cardinal John Baptist Cibo, now Innocentius VIII., fifty-ninth pope. Charles VIII. ruling France; and Richard III., England.

"In this year" (Galvan.), Diogo Caon or James Cam sailing along the African coast as far as the mouth of the Congo, where he erected a pillar of stone; thence to a river near "the Tropicke of Capricorne," setting up other pillars. Returning to the Congo, the king of that country "sent an ambassadour and men of credit into Portugall." From this embassy (according to Gaspar Correa voy. Da Gama i. 1, and Barros), information of countries Eastward as far as India was obtained by John II.

In considering the dimensions of the known World, made "fifteen hours" by Marinus, leaving a deficit of "about eight hours" to complete its spherical shape, Columbus conceived that there must be land Westward: and having already sailed with the Portuguese along the African coast to the Equator, communicated his plan to John II. of Portugal. Who instead of accepting, secretly sent one of his own vessels West: the vessel returned without accomplishing any thing, and Columbus hearing of the affair, left Portugal "about the end" of this year (F. Columb. 4 to 12 and 41) for Spain.

"The same year" (Alst.), end of the chronicle of Wernerus.

"1485, Aug. 22d, Monday" (Blair, and Nicol. p. 328), in England, Richard III. defeated and slain in battle at Bosworth; ending the civil war between the "Houses of York and Lancaster." He was succeeded by Henry VII.

In this year (Spreng.), publication at Mayence of the Third edition of the *Ortus Sanitatis*, under the supervision of Hieronymus of Braunsweig. — Whose work *De arte distillandi* was published "in 1500."

Hepatica triloba of Northern climates. Called in Britain *noble liverwort* (Prior), in Germany "edel leberkraut" (Trag.) or "gulden klee" (Braunsw.), in France "hepatique" (Nugent): described by Braunsweig, — Brunfels, Lyte i. 40, and observed by Tragus i. pl. 177 in the woods of Germany as well as in gardens; termed "ranunculus tridentatus vernus flore simplici cæruleo" by Tournefort inst. 286; known to grow wild in various parts of Europe (Pers.); and observed by Sibthorp, but the locality not given; by Savi, on the Appenines. Westward, is a frequent vernal flower in North America; observed by myself from 43° along the Atlantic; by Schweinitz to 36° in Upper Carolina; by Elliot, in the upper district of Carolina and Georgia; by Chapman, in "Florida and northward;" by Short, in Kentucky; by Beck, on the Mississippi near St. Louis; by Pursh, from Carolina to Canada, growing according to Hooker as far as 52°; and observed by Drummond at 55° on the Rocky mountains.

* *Momordica dioica* of Burmah. A climbing Cucurbitaceous vine called in Telinga "agokara" (J. F. Wats.) or "agakara," in Malabar "erimapasel," in Tamil "paloopaghel" (Drur.), in Burmah "sa-byet" (Mason); probably known in Hindustan as early as this date: — observed by Rheede viii. pl. 12 in Malabar; by Graham, "cultivated in the environs of Bombay," the "fruit size of a pigeon's egg, knobbed;" by Roxburgh, Ainslie, hort. beng. 70, Piddington 103, and Wight, as far as Bengal, the young fruit and tuberous roots of the female plant eaten by the natives, the roots also, which are mucilaginous, employed medicinally (Rheede, and Drur.). Eastward, was observed by Mason v. 471 to 747 indigenous in Burmah, its "small muricated" fruit "occasionally eaten by the natives."

Tragopogon pratense of Europe and the adjoining portion of Asia. Called in Britain *goat's beard* (Prior), in Germany "bocks bart" (Trag.); in which we recognize the "barba hircina" of Hieronymus apodix., — and "barbula hirci" of Tragus i. pl. 93: *T. pratense* was observed by Tragus in the meads of Germany, its root eaten by boys; is termed "t. pratense luteum majus" by Tournefort inst. 477; is known to grow from Britain throughout middle Europe (Thuil., and Engl. bot. pl. 434); was observed by Sibthorp on mount Haemus and around Constantinople.

Pyrola rotundifolia of Northern climates. Called by Turner *winter-green* (Prior), in Germany "winter-grün" or "waldmangolt" or "holtz mangolt" (Trag.): the "winter-grün" is mentioned in the German ed. of the *Ortus Sanitatis* 316, is termed "pirola" by Hieronymus apodix., or (according to Tragus litt. Brunf.) "pyrola" by Braunsweig lib. de simpl.: — the "betula" prescribed by Gariopontus i. 16 is referred here by Tragus: *P. rotundifolia* is known to grow from Lapland throughout Northern Europe to the mountains of Switzerland (fl. Dan. pl. 110, Lam. fl. fr., and Wats.); was observed by Tragus in Germany, by Savi on the Appenines; and is known to grow throughout Siberia to Kamtchatka (Gmel., and Pall.). Farther East, was observed by Chamisso on Unalascha; by Drummond, at Fort Cumberland 54° on the Saskatchewan; by Pursh, in Canada; by Chapman, on the mountains of Georgia; by Schweinitz, at 36° in Upper Carolina; by myself, from about 40° to 45° along the Atlantic; by Parry, as far as Five-hawser Bay in Arctic America (Hook.); is known to grow also in Greenland (Wats.); and was observed by Hooker on Iceland.

Antennaria dioica of Northern climates. A Gnaphalioid herb called in Britain *cat's foot* (Prior), in Germany "hasenpfatlin" or "meussorlin" (Fuchs.); and the "pilosella minor" of the Herbarius manuscript — is referred here by Fuchsius pl. 606: *A. dioica* is known to grow from North Cape throughout middle Europe as far as Switzerland (fl. Dan. pl. 1228, Engl. bot. pl. 267, Pers., and Dec.); and Eastward to the Taurian mountains, Lake Baikal, and throughout Siberia to Bering's Island, Nootka Sound, and 54° to 64° in North America (Gmel., Pall., and Hook.). "*A. plantaginifolia*," occasionally developing "large lower leaves," appears to have been regarded by Josselyn as an American species, and is given as distinct by Plukenet alm. pl. 348; has been observed by myself along the Atlantic from 45° to 38°, by Schweinitz as far as 36° in Upper Carolina, by Chapman in "Florida and northward," by Short in Kentucky, and by Nuttall on the Arkansas.

Polygonum amphibium of Northern climates. A showy *water peachwort* called in Germany with the bistort "naterwurtz," or by herbalists "colubrina" and "serpentaria," and mentioned in the Old manuscript Herbarius — (Fuchsius pl. 774): *P. amphibium* is termed "phyllitis lacustris" by Valerius Cordus (Spreng.), "persicaria salicis folio potamogeton angustifolium dicta" by Tournefort inst. 509: is known to grow in and along the margin of pools throughout Northern and middle Europe (fl. Dan. pl. 282, Curt. lond. iv. pl. 28, and Pers.); was observed by Brotero in the Tagus, by Decandolle in France, by Sibthorp in Asia Minor in the Nicæan Lake and around Constantinople; was received by Bieberstein from Tauria; by Richard from Abyssinia, and by E. Meyer and Drège from Austral Africa (A. Dec.). Westward, was observed by Hooker on Iceland; by Michaux, in Lake St. John's in Canada; by Drummond at 54° near Fort Cumberland; by myself, along the Atlantic from 43° to 40°; by Short, in Kentucky; and according to Pursh grows along the Ohio and Mississippi. Its root-like stems according to Lindley are substituted in France for sarsaparilla.

Cheiranthus annuus of the West Mediterranean countries. Called in France "quarantain" from growing up and flowering within forty days (Pers.): described by Braunsweig f. 43 — (Spreng.), and known to grow in maritime situations in Southern Europe (Pers.).

Gentiana cruciata of the mountains of middle Europe. Called in Germany "modelgeer" or "creutzwurtz" (Trag.); in which we recognize the "creutz wurtz" of Hieronymus apodix. or Braunsweig: — *G. cruciata* was observed by Tragus i. pl. 83 in Germany, much used medicinally, and sometimes called "heil allen schaden;" is described also by Gesner; is termed "tretorrhiza" by Renealmi pl. 73; and is known to grow on wooded mountains from France to Austria (Jacq. austr. pl. 372, and Pers.).

"In this year" (Burm. hist., and Mason 65), accession of Zeyathura as "twenty-ninth" king of Toungoo. He built a new city for his seat of government: — to which the name of the old one, "Toungoo," has been transferred.

"In this or the following year" (Galvan., and Spreng.), Alonso Aveiro following the African coast as far as Benin.

Piper Afzelii of Western Equatorial Africa. Specimens of *Guinea cubebs* or "rabo pola" or "pimenta de rabo, pepper with a taile," brought home by Alonso Aveiro, "the first of that kinde seene in Portugall" — (Galvan.): "cubebs from Guinea" are mentioned also by Smith (in Rees cycl.), Nees, Ebermaier, and others: *P. Afzelii*, the plant in question, is known to grow at Sierra Leone, but "the quality of its fruit has still to be ascertained" (Lindl.).

"1486 A. D." (Churchill coll.), Bartholemew Diaz following the African coast "one hundred and twenty leagues" farther than any before him, discovered mountains which he called "Sierra Parda."

Passing a bay beyond, called by him "De los vaqueros" on account of the great herds of *cattle*, he touched at a small island named by him "Santa Cruz;" entered the mouth of a river, named by him "Del infante;"—and after sailing some distance Eastward, returned, and "May 1487" (Humb. cosm. iv.) reached the Southern point of the continent, which he named cape "Tormentoso;" a name afterwards changed to cape of "Good Hope."

The "vaqueros" having herds of cattle were of course *Hottentot* tribes: the animal having reached them through the neighbouring Caffers, who call a *cow* "go"—(Thunb. trav. iv. 10). The Hottentots are further described by Thunberg as not cultivating the soil; carrying on neither war nor commerce with remote neighbours; having no kind of money but exchanging articles directly, or bartering; having no calendar nor new year's day, but reckoning their age by the annual flowering of certain bulbous plants; possessing two musical instruments, the "kora" and "rabekin;" burying old people alive; the custom of *circumcision* in his day becoming obsolete.

"The same year" (Humb. iii. 8), on the Mexican table-land, building of the stone teocalli, or pyramidal mound, by the emperor Ahuitzotl.

First edition of the "Margarita philosophica," an encyclopædic work by Father Reisch (Humb. cosm.).

1487 A. D. (= "1412 an. jav.," Raffles xi.), Pangeran Sabrang Lor succeeded at Demak by his brother Pangeran Trangana, third sultan of Java.

"May" (Major ind. voy. p. lxxxii, and M. Russel 127), under instructions from John II. of Portugal Pedro de Covilham leaving Lisbon for Egypt and the Red Sea. From Aden he proceeded to Calicut and Goa, being the "first" Portuguese "who had sailed on the Indian Ocean."—Crossing to Sofala, he obtained information respecting the Southern termination of Africa, and returning as far as Egypt transmitted home the intelligence, That ships from Guinea on arriving "in the Eastern ocean, their best direction must be to enquire for Sofala, and the Island of the Moon" (Madagascar). After a visit to Ormuz, Covilham entered Abyssinia, where he was cordially received by king Iscander and conducted to the royal residence at Shoa, but was either persuaded or compelled to remain in the country: he married, held highly important posts, welcomed his countrymen on the arrival of an embassy "in 1525," and died after a residence of "thirty-three years."

"In this year" (Markham p. liii), accession of Hosein Meerza as sultan at Herat in Persia. He encouraged Literature, and his court was frequented by the poets Jami and Hatafi, and the historians Mirkhond and Khondemir.—He died "in 1506."

His grand vizier Ali Shir Beg composed a poem in the Toorki language, also wrote a complete prosody—(Markham p. liii).

"The same year" (Lubke and Lutrow), in Spain, building of the chapel of Hernandez de Velasco in the cathedral at Burgos.

"In this year" (Markham edit. Ciez. p. 140), Cacha, last scyri of Quito defeated and slain in battle by the Inca Huayna Capac; who married his only daughter Paccha, annexing the country to Peru.

Nectandra cinnamomoides of the Eastern slope of the Equatorial Andes. The *American cinnamon*, a Lauraceous tree, cultivated in the region around Quito as early probably as this date, its dried calyx brought also from forests to the Eastward and used as a spice, making a warm cordial drink—(Ciez. xl.): *N. cinnamomoides* was found by Gonzalo Pizarro "in 1539" growing wild in the district of Quijos, East of Quito, this and El Dorado being the objects of his expedition (Ovied., Schomb. edit. Ralegh, and Markham); but according to Garcilasso de la Vega, the product of the wild trees is inferior to that obtained from cultivation by the natives: *N. cinnamomoides* was observed by Humboldt and Bonpland n. g. ii. 169 cultivated about Mariquita, substituted for cinnamon in New Granada, and called "canela" (Lindl.). From transported specimens, is termed "*cinnamomum sylvestre americanum*" by Seba thes. ii. pl. 84.

"1488 A. D. = 'houng-tchi,' 1st year of Hiao-tsoung-king-ti" or Hiao-tsoung II., "of the Ming" or Twenty-third dynasty, *—(Chinese chron. table).

* *Salacia Sinensis* of Tropical China. A small Hippocrateaceous tree called in Tagalo "matang-olang" (Blanco); and from early times, its insipid berries eaten:—received by Linnæus from China; and observed by Blanco in Malinta on the Philippines.

Munchausia speciosa of Tropical China and the Philippines. A beautiful flowering tree called in Tagalo "banaba" (Blanco); and from early times, its tough durable timber much used:—observed by Blanco frequent on the Philippines; is known to grow also in China (Pers.). From transported specimens, is termed "*munchhausia speciosa*" by Linnæus.

Paspalum villosum of the Philippines and Japan. A grass two feet high, called in Tagalo "parag-is" (Blanco); and from early times, its root used by women medicinally:—observed by Blanco on the Philippines.

As early perhaps as this year (Dutch mem. emb., and Stanley edit. De Morga 18), the Chinese expelled from the Philippines by the natives. — They continued however to come in their ships and trade.

As early as this year, Nicolaus Leoniceus writing. — He is mentioned by Hermolaus Barbarus, and died in his hundredth year "in 1524" (Spreng.).

Ammania verticillata of Equatorial Africa. The "corneola" seen by Leoniceus near Ferrara, used for dyeing green, and supposed by him to be the "lysimachia." — may be compared with the "cornelia verticillata" seen in Italy by Arduino ii. pl. 1, and referred here by Lamarck pl. 77. "A. Ægyptiaca" of Willdenow hort. berol. i. 6, observed by Delile pl. 15 in the rice grounds of Egypt, may also be compared.

"1489 A. D." (Alst.), end of the chronicle of Matthias Palmerius. Hermolaus Barbarus writing. — He published his castig. Plin. "in 1492," and died "in 1493."

Hibiscus (Abelmoschus) moschatus of Tropical Eastern Asia. Called in Tagalo "castoli" or "castio castiogan" or "dalupan," in Pampango "castocastolian," in Bisaya "ducum" or "maricum" or "maropoto" or "sapinit" (Blanco), in Burmah "ba-lu-wa" (Mason), in Tamil "kath-kasturi" or "kasturi-venday," in Telinga "kasturi-benda," in Bengali "mushak-dana," on the Deccan "mushk-bhendi" (Drur.), in Egypt "hab el-mosk," musk grains: the "rosam moscheuton" of Hermolaus Barbarus — may be compared: A. moschatus was observed by Alpinus, and Delile, in the gardens of Egypt; and according to Lindley, the "musky seeds" are "considered cordial and stomachic and by the Arabs mixed with coffee." Eastward, A. moschatus was observed in Hindustan by Rheede ii. pl. 38, Roxburgh, Wight, and by Graham "in gardens pretty common." Farther East, is described by Mason v. 418 and 505 as one of the "most common indigenous plants" in Burmah, its seeds "said to be an antidote to snake bites," and the mucilage used in clarifying sugar: was observed by Blanco in the Philippines, its seeds used medicinally by the natives. By European colonists, was carried to the West Indies (Cav. iii. pl. 62, and Pers.).

Euphrasia lutea of the West Mediterranean countries. The "euphrasia" is described by Hermolaus coroll. iii. 10 as having "luteolos" yellowish flowers — (Fuch. 91): E. lutea is described by Morison iii. pl. 24: is termed "e. laevis" by Gatereau; was observed by Crantz, and Jacquin pl. 398, in Austria; and is known to grow in arid mountainous situations in other parts of Southern Europe and in Barbary, the flowers yellow (Pers.).

Gypsophila? saxifraga of middle Europe. The "floreem gariofillum" by some according to Hermolaus enumerated among "saxifragias," — may be compared: G. saxifraga is termed "dianthus saxifragus" by Linnæus, "tunica saxifraga" by Scopoli; and is known to grow in France, Switzerland, and Austria (Cav., Pers., and Steud.).

"1490 A. D." (= 26th year of Tsutsi-Mikaddo, ann. Jap. transl. Tits., and art de verif.), death of Josijmassa, cubo of Japan.

As early probably as this year, islands discovered by the Japanese navigator Osaska-wara. They proved uninhabited and received the name of "Mou-nin" (Bonin) Islands. Among the productions, the tree called "nan-kin-faze (*Croton sebiferum*)," the "arbre de cire" (. . .), trees too large for a man to clasp and very lofty with the wood hard and fine (. . .), lofty trees resembling the "siou-rou (tsoung-liu or *Chamaerops excelsa*)," the tree whose nuts are called in Chinese "pe-louan-tsu" (. . .), the "katsiran" (. . .), "bois de sandal rouge" (. . .), the "fou-mou" (. . .), the "camphrier" (. . .), "figues caques" of the mountains (*Ficus* . . .), lofty trees with leaves resembling those of the "lierre" (*Aleurites triloba?*), "cannelliers" (*Cinnamomum* . . .), and "muriers" (*Broussonetia papyrifera*), and among more humble plants the "Smilax china" called "san-ki-rei" (*Smilax* . . .), the "to-ki" (. . .), and a medicinal herb called "assa-ghiou-kwa" (. . .), — are enumerated in the San-kokf (transl. Klapp.). As a penal colony was established by the Japanese on these islands, the "cocotiers" (*Cocos nucifera*) and "arbre qui porte l'areca" (*Areca catechu*) may have been subsequently introduced. According to Kaempfer i. 4, the giant crab "four to six feet long" occurs around these islands.

"A few years before the" Spanish conquest (De Morga 307), "a few natives of the island of Borneo began to come with their trade to" Luzon, — "especially to the towns of Manila and Tondo; and the people of the two islands intermarried:" the Borneo people were "Mussulmans," and "were introducing their sect amongst these natives, giving them short prayers and ceremonies and forms to be observed, by means of some gazizes whom they brought with them: and already many, and the greatest chiefs, were beginning (although by piecemeal) to become Muslims, circumcising themselves, and taking Muslim names."

"In this year" (Humb. cosm. iv.), a comet observed in Mexico, and recorded in a manuscript written (or painted) "at least a quarter of a century before the arrival of the Spaniards." The same comet is "mentioned as having been observed in December of that year only in the Chinese comet-register."

"In this year" (Galvan.), by John II. of Portugal, Gonzalo de Sousa sent with three ships to convey "home the ambassadour of Congo." On their arrival, the king of Congo was "very glad," and "yeilded himselfe and the greater part of his realme to be baptized."

"1491 A. D." (Blair), the study of the Greek language brought into England by William Grocyn.*

"1492, Aug. 11th" (Alst., and Nicol.), Innocentius VIII. succeeded by cardinal Roderic Borgia, now Alexander VI., sixtieth pope. James IV. ruling Scotland.

Linum catharticum of Europe and the adjoining portion of Asia. Called in Britain *purging flax* or *fairy flax* or *dwarf flax* or *mill-mountain* from "*chamaedimum montanum*" and the Greek "*hamailinōn*" — (Prior): *L. catharticum* is termed "*l. pratense foliis exiguis*" by Tournefort inst. 340; and is known to grow throughout middle Europe as far as Britain (Blackw. pl. 368, and Pers.). Eastward, was observed by Sibthorp in the environs of Constantinople. The plant according to Lindley is "powerfully, but as it seems, not dangerously cathartic."

Spergula arvensis of Europe and Northern Asia. Called in Germany "*spark*" (Grieb), in France "*spurrie*" (Cotgrave) or "*espargoutte*," in Britain *spurry*, — from which word according to Lyte i. 38 the Latin "*spergula*" was formed (Prior): *S. arvensis* is described by Cornelius Petrus (Spreng.), and Dodoens 537; is termed "*alsine spergula dicta major*" by Tournefort inst. 243; was observed by Desfontaines in Barbary; and is known to occur as a weed throughout middle and Northern Europe as far as Lapland and Iceland (fl. Dan. pl. 1033, Hook., and Wats.). Eastward, was observed by Sibthorp, and Chaubard, in cultivated ground from the Peloponnesus to Caria and Constantinople; is known to occur also in Siberia, as far as the Altaian mountains and the river Yenisei (Ledeb.). By European colonists, was carried to Madeira (Lem., and A. Dec.); to North-east America, where it continues a weed in grain-fields as far even as the Assiniboine and Columbia rivers (Hook.); to Austral Africa (Drège); and to Ceylon, where it was observed by Gardner naturalized in one locality on the mountains.

Sagittaria sagittifolia of Northern Europe and Asia. Called in Britain *arrow head* (Prior), in France "*flèche d'eau*" (Nugent), in Germany "*pfeilkraut*," in Northern Italy "*saettaria*" (Lenz), and known from early times: — termed "*sagitta aquatica major latifolia*" by C. Bauhin pin. 194, and though unknown in Greece proper, was found by Grisebach in Thrace; by Hohen, and Ledebour, as far East as Lenkoran and the Altaian mountains; by Gmelin, from the Irtsch to Kamtchatka. Westward, seems unknown in Barbary, Sicily, and Southern Italy (A. Dec.); but was observed in Northern Italy by Scopoli, and Lenz; by Brotero, in Portugal; and is known to grow as far as Lapland (Linn.), Finland and Casan in Russia (Lam. fl. fr., Fries, and Wirtz).

Turritis glabra of Northern climates. Called *tower-mustard* from the tapering inflorescence something in the form of a Dutch spire — (Lobel kruidb. p. 262, and Prior); described also by Thalius 16 (Spreng.); termed "*t. foliis inferioribus cichoraceis cæteris perfoliatæ*" by Tournefort inst. 224; and known to grow throughout middle and Northern Europe as far as Sweden (flor. Dan. pl. 809, Curt. lond. iv. pl. 47, and Pers.). Eastward, observed by Sibthorp, and Chaubard, on the mountains of Greece; and known to grow in Northern Asia (Wats.). Farther East, observed by Mertens at Norfolk Sound on the American coast; occurring also from the Rocky mountains to Hudson's Bay and as far North as Lat. 64° (Hook.); and along the Atlantic as far South as Lat. 42°.

Arabis hirsuta of Northern climates. Known to European writers as early probably as this date: — described by Bauhin prodr. pl. 42, Linnæus, and Jacquin rar. pl. 126; and known to grow wild throughout middle Europe as far as Sweden and Ireland (Pers., and Wats.). Eastward, observed by Sibthorp, and Chaubard, in shady situations in Southern Greece and in the environs of Constantinople; and by Thunberg, in Japan and called "*inu nassuna*," naturalized *nassuna*. Farther East, observed by Chamisso on the opposite American coast at Unalascha; known to grow at the mouth of the Columbia, on the Rocky mountains, at Hudson's Bay, and from as far North as Lat. 68° (Hook.) throughout Canada to our Northern States, the Alleghanies, and even Kentucky (Short, A. Gray, and Chapm.).

Melampyrum arvense of the Caucasian countries? Known as a weed in middle Europe as early probably as this date: — described by Clusius, and Bauhin; termed "*m. purpurascens coma*" by

* *Calla palustris* of Northern climates. An Aroid growing in wet ground, and the "*arona*" figured in the edition of *Ortus Sanitatis* for 1491 is referred here by Pritzel thes. — *C. palustris* was observed by Fuchs pl. 844 in Germany; by Decandolle, in Alsace on the Rhine; by Linnæus, in Lapland, and bread prepared from its root highly esteemed and called "*missebrød*" (Lindl.); by Gmelin, growing throughout Siberia. Westward, was not found by Laplaie in Newfoundland, but has been observed by Michaux in Canada; by myself, from 48° on the Lower St. Lawrence to 42° along the Atlantic; by Torrey, as far as 41°; by Pursh, from Canada to Pennsylvania; by Drummond, at 54° near Fort Cumberland; and was received by A. Gray from Wisconsin.

Tournefort inst. 173; known to grow in cultivated ground as far North as Denmark, but in Britain, where it is called *cow-wheat*, first noticed by Dillenius (fl. Dan. pl. 911, A. Dec., and Prior). Eastward, observed by Sibthorp in cultivated ground around Constantinople; but around Caucasus occurring apparently in wilder situations (C. A. Mey., Gœbel, and Koch).

Scdum reflexum of Europe and the adjoining portion of Asia. Called in Britain *stonor* or *stone-hore* or *trip madam*, in France "trippe madame" (Prior), in Belgium "tripmadame," and from early times eaten there in salads — (Linn. fl. suec.): termed "s. minus luteum ramulis inflexis" by Tournefort inst. 263, and is known to grow in the woods of middle Europe (Pers.); was observed by Sibthorp around Constantinople. In Sweden, was seen by Linnæus in a garden at Upsal, recently introduced and not as yet flowering; and in Britain (Engl. bot. pl. 695) is regarded by Watson, and Bromfield, as probably not indigenous (A. Dec.).

Scutellaria galericulata of the marshes of Northern climates. Called in Britain *skullcap* or *helmet flower* (Prior), and known from early times: — termed "lysimachia galericulata" by Dalechamp 1060. "cassida palustris vulgarior flore cæruleo" by Tournefort inst. 182, and known to grow from Lapland to Northern Spain and throughout Siberia (Bauh. hist. iii. 435, Rivin. mon. 76, fl. Dan. pl. 637, Curt. lond. iii. 36, and Benth.): observed by Linnæus along lakes and streams in Lapland and Sweden; by Decandolle, in France; by Savi, in Etruria; by Sibthorp, around Constantinople; by Bieberstein, on Caucasus; by Jacquemont, at Cashmere; by Bunge, along the Altaian mountains and in Dahuria. Westward, according to Hooker, grows from near 66° on the Mackenzie (A. Dec.) at Fort Franklin throughout Canada; was observed by Lapylaie at 49° on Newfoundland; by myself, along the Atlantic to 42°; by Collins to 40°, and by Nuttall in New Jersey; by Chapman, in "North Carolina;" by Short, in Kentucky; by Drummond, at 54° near Fort Cumberland; and by Douglas, on the Northwest coast (Benth).

Dentaria bulbifera of Europe and the adjoining portion of Asia. Called in Britain *tooth-cress* or *tooth-violet* (Prior), and known from early times: — termed "dentaria tertia baccifera" by Clusius hist. ii. 121, "d. heptaphyllos baccifera" by C. Bauhin pin. 322, and Tournefort inst. 225, and is known to grow in woods from 60° in Sweden throughout middle Europe (fl. Dan. pl. 361, Engl. bot. pl. 309, Pers., and A. Dec.); was observed by Linnæus in Sweden; by Hæft, at 52° in Russia, in Koursk; by Sibthorp, on mount Hæmus; by Bieberstein, on Caucasus.

Spiranthes autumnalis of Europe and the adjoining portion of Asia. Called in Britain *lady's tresses* (Prior), and known from early times: — described by Brunfels 104, and Tragus 298 (Spreng.); termed "orchis spiralis alba odorata" by Tournefort inst. 433, "ophrys spiralis" by Linnæus, and known to grow from Denmark throughout middle Europe, also in Siberia (fl. Dan. pl. 387, Curt. lond. iv. pl. 59, and Pers.): observed by Sibthorp, and Chaubard, from the Peloponnesus to mount Athos and Constantinople.

Epipactis nidus-avis of Europe and the adjoining portion of Asia. A leafless orchid called in Britain *bird's-nest* from its matted roots (Prior), and known from early times: — mentioned by Tragus 298 (Spreng.); termed "neottia" by Dodoens pempt. 553, "nidus avis" by Lobel pl. 105, "orchis abortiva fusca" by C. Bauhin pin. 86, "ophrys nidus avis" by Linnæus, and known to grow in deep shade from Sweden throughout middle Europe (Tourn. inst. 438, fl. Dan. pl. 121, Engl. bot. pl. 48, and Pers.): observed by Rudbeck elys. ii. pl. 218, and Linnæus, in Sweden; by Haller pl. 37, in Switzerland; and by Chaubard, in the Peloponnesus.

Sanguisorba officinalis of Europe and the adjoining portion of Asia. Called in Britain *burnet blood-wort* (Prior), and from early times its root used for stanching blood: — termed "pimpinella sanguisorba major" by Matthioli comm. 103, C. Bauhin pin. 160, and Tournefort inst. 156, "pimpinella sylvestris s. sanguisorba major" by Dodoens pempt. 105, and known to grow throughout middle Europe (fl. Dan. pl. 97, Engl. bot. pl. 1312, and Pers.): observed by Linnæus in the meads of Gothland, also in gardens, and its root sold in drug-shops under the name of "pimpinella Italica;" by Sibthorp, and Chaubard, growing throughout the Peloponnesus.

Sagina procumbens of Northern climates. Called in Britain *pearl-wort* (Prior), and known from early times: — termed "alsine minima flore fugaci" by Tournefort inst. 243, and Ray suppl. 501, and known to grow from Lapland to the Mediterranean (Curt. lond. iii. pl. 12, Pers., and Wats.): observed by Linnæus in Sweden, frequent in sterile pasture-land; by Sibthorp, frequent on the Greek islands; by Thunberg, in Japan. Westward, by Hooker in Iceland; by Lapylaie, from 52° in Newfoundland; by myself, occurring as an introduced plant around Salem and sometimes in the city streets, but according to A. Gray is wild in "springy places, Maine to Pennsylvania;" grows according to Hooker on the plains of the Columbia and along the Northwest coast, was observed by myself abounding and clearly indigenous along the shores of Puget Sound. Has also been found in South America (Wats.), perhaps introduced.

Cardamine amara of Europe and the adjoining portion of Asia. Called in Britain *bitter cress* (Prior), in Sweden "backekrassa" (Linn.), and known from early times: — termed "nasturtium

aquaticum majus et amarum" by C. Bauhin pin. 104 and prodr. 45, "c. flore majore elatior" by Tournefort inst. 214, "c. nasturtiana" by Thuillier, and known to grow in woods and watery places throughout Northern and middle Europe (Curt. lond. iii. pl. 39, and Pers.): observed by Linnæus in Sweden; by Haller 558, in Switzerland; by Villars iii. pl. 39, in Dauphiny; by Sibthorp, in wet woods on mount Hæmus.

Lathyrus latifolius of Europe and the adjoining portion of Asia. Called in Britain *everlasting pea*, in France "pois eternel," and known from early times: — mentioned by Matthioli 690 (Spreng.); termed "l. major latifolius flore purpureo speciosior" by Bauhin hist. ii. 303, and known to occur along hedges in middle and Southern Europe (C. Bauhin pin. 344, Tourn. inst. 395, fl. Dan. pl. 985, Engl. bot. pl. 1108, and Pers.): was observed by Linnæus in Sweden, along hedges on the island of Muson; was already in Britain in the days of Ray syn. 319; escapes sometimes from the gardens around Paris and springs up spontaneously (Coss. and Germ.), and occurs in Southern France as far as the department of Calvados (A. Dec.); was observed by Sibthorp from the Peloponnesus to the banks of the Bosphorus. By European colonists, was carried to Northeast America, where it continues in gardens (A. Gray).

Trifolium agrarium of Europe and the adjoining portion of Asia. Called in Britain *hop clover* (Prior), in Sweden "jordhumble" or "skogshumble" or "gullkulla" (Linn.), and known from early times: — termed "t. pratense luteum fæmina flore pulchriore sive lupulino" by Bauhin hist. ii. 381, "t. montanum lupulinum" by Tournefort inst. 404 "t. aureum" by Pollich pat. ii. 344, and known to grow throughout middle Europe (C. Bauhin prodr. 140, Barrel. pl. 1024, fl. Dan. pl. 558, and Pers.): observed by Linnæus in Sweden; by Roth ii. 2. 207, in Germany; by Sibthorp, on mountains from Crete and the Peloponnesus to Caria. By European colonists, was carried to Northeast America, observed by myself naturalized in Western Massachusetts, and according to A. Gray, occurs also in Pennsylvania.

Pyrola secunda of the Subarctic forest. Called in Britain *yeveering* or *yethering bells*, in mediæval Latin "tintinabulum terræ," from its flowers resembling the string of little bells struck with a hammer in mediæval pictures of king David — (Prior): the plant is termed "ambrosia montana" by Dalechamp pl. 1148, "pyrola secunda tenerior" by Clusius pan. 506, "p. folio mucronato serrato" by C. Bauhin pin. 181, and Tournefort inst. 256, is known to grow from Lapland throughout Northern Europe (fl. Dan. pl. 402, Engl. bot. pl. 517, and Pers.), and on the Pyrenees and Swiss Alps (Dec.): was observed by Linnæus in Lapland and Sweden; by Sibthorp, in woods on the Bithynian Olympus; by Bieberstein, on Caucasus; by Gmelin iv. pl. 56, frequent throughout all Siberia. Westward, by Hooker in Iceland; is known to grow in Greenland (Wats.); was observed by Lapylæ in Newfoundland; by myself, from 47° 30' on the Lower St. Lawrence to 40° in peninsular New Jersey; by Drummond, at 54° on the Saskatchewan; by E. James, on the Rocky mountains; by Chamisso, around Elscholtz Bay on the Pacific; by Mertens, at Norfolk Sound.

Lychnis viscaria of Europe and the adjoining portion of Asia. Called in Britain *catch-fly* from its glutinous stalks (Prior), in Sweden "tiar-ort" or "bekblomster" (Linn.), and known from early times: * — termed "l. sylvestris quarta" by Clusius hist. i. 289, "l. s. viscosa rubra angustifolia"

* *Pilularia globulifera* of Northern climates. Called in Britain *pill-wort* (Prior), and known from early times: — termed "graminifolia palustris repens vasculis granorum piperis æmulis" by Ray hist. 1325, and Morison iii. 15. pl. 7, "p. palustris juncifolia" by Vaillant paris. pl. 15, and known to grow throughout middle Europe (Dill. musc. pl. 79): observed by Linnæus in Scania, in pasture-land subject to river-inundation. Westward, this or an allied species was observed by Nuttall in the Arkansas.

Agrostis vulgaris of Northern Europe and Asia. Called in Britain *florin* from the Erse "feareh" grass — (Prior): *A. vulgaris* is described by Linnæus (Wahl.); and is known to grow from Switzerland throughout middle and Northern Europe as far as Lapland and Iceland (Hoffm. germ., Pers., Hook., and Wats.). By European colonists, was carried to Northeast America, where it has become abundantly naturalized, has been observed by myself from Lat. 48° on the Lower St. Lawrence to 41°, by Short in Kentucky, and by Nuttall along the Arkansas; and to St. Helena (Kunth).

Botrychium lunaria of Northern Europe and Asia. A fern called in Britain *moon-wort* from the semilunar segments of its frond, giving rise in former times to the same superstition about horseshoes — (Brande pop. antiq., and Prior): *B. lunaria* is described by Fuchsius pl. 182, Dalechamp p. 1313, and Columna phyt. pl. 18; and is known to grow throughout middle and Northern Europe.

Aspidium thelypteris of Northern climates. Called in Britain *marsh fern* (Prior), and known from early times: — termed "filix mollis s. glabra vulgari mari non ramosæ accedens" by Bauhin hist. iii. pl. 731, "filix minor palustris repens" by Ray angl. iii. 122, and known to grow throughout Northern Europe (. . .): was observed by Linnæus in Sweden, as far as Upland. Westward, by myself in bogs and marshes from 46° near Montreal to 40° along the Atlantic; by A. Gray, "common" in central New York; by Chapman, as far as Florida.

Rhodomenia and *Halymenia*. Seaweeds called in Britain *dulse*, from the Gaelic "duillig" water-leaf — (Prior).

by C. Bauhin pin. 205, and Tournefort inst. 337, and known to grow from Sweden throughout middle Europe (fl. Dan. pl. 1032, Engl. bot. pl. 788, and Pers.): observed by Linnæus ornamenting hills and waysides in Sweden; by Sibthorp, in woods on mount Hæmus.

Hippocrepis comosa of Europe and the adjoining portion of Asia. Called in Britain *horseshoe vetch* or *unshoe-the-horse*, and in Italy "sferra-cavallo," from its horseshoe-shaped legumes supposed on the doctrine of signatures to have that power — (Prior): *H. comosa* is described by Tabernæmontanus ii. p. 230, and Columna ecphr. i. pl. 301; is termed "ferrum equinum germanicum siliquis in summitate" by Tournefort inst. 400; was observed by Garidel pl. 34 at Aix; and is known to grow throughout middle Europe as far as Britain (Lam. fl. fr., Pers., and Engl. bot. pl. 31). Eastward, was observed by Sibthorp on mount Athos.

Myosotis scorpioides of Northern Europe and Asia. Called in Britain *scorpion-grass*, — and only by this name in the days of Lyte, its current name "forget-me-not" having been transferred subsequently to 1821 (Prior): *M. scorpioides* is termed "lithospermum palustre minus flore cæruleo" by Tournefort inst. 137; and is known to grow throughout middle and Northern Europe as far as Sweden and Iceland (fl. Dan. pl. 583, Roth germ., Pers., Hook., and Wats.). Eastward, was observed by Sibthorp along alpine rills in Greece; and is known to grow on Caucasus (Bieb.).

Asperula cynanchica of Europe and the adjoining portion of Asia. Called in Britain *squinancy* and in France "esquinancie," from its efficacy in quinsy — (Prior): *A. cynanchica* is described by Caesalpinus vi. 46 (Spreng.); is termed "rubeola vulgaris quadrifolia lævis floribus purpurascens" by Tournefort inst. 130; was observed by Forskal near Marscilles; and is known to grow throughout middle Europe as far as Britain (Lam. fl. fr., Pers., and Engl. bot. pl. 33). Eastward, was observed by Sibthorp near Smyrna and Constantinople.

Cystopteris fragilis of Subarctic climates. Called in Britain *bladder fern* (Prior), and known from early times: — termed "filix pumila saxatilis secunda" by Clusius pan. 706, known to grow throughout Northern Europe (Pluk. phyt. pl. 180, and Engl. bot. pl. 1587) as far even as North Cape, and in Siberia (Hook.): observed by Linnæus in dry stony places in Lapland and Sweden; by Sibthorp, on mount Athos and the Bithynian Olympus. Westward, grows according to Hooker in Greenland, throughout Canada to Slave lake and the Rocky mountains or from 64° to 54°, also in Virginia; according to A. Gray, on "shaded cliffs, common" in central New York, and "very variable;" according to Chapman, on "moist rocks on the mountains of North Carolina."

"In this year" (Alst. p. 309 and 424, and Wilk. theb. and eg. p.), Granada captured by king Ferdinand, and the Moors or Muslims compelled either to leave Spain or embrace Christianity. The Jews were at the same time banished, — so many resorting to Palestine, that Spanish became the Jews' language there, and has so continued to the present day: a circumstance that in the absence of historical record might have proved inexplicable.

Vella annua of the Mediterranean countries. Perhaps indigenous on the Mediterranean border of Egypt; — where it was observed by Delile, growing spontaneously. Observed also by Sibthorp in Greece, but the locality not given. Westward, as observed by Clusius in Spain, is termed by him "nasturtium sylvestre valentinum;" is generally regarded as a Spanish plant (Trew pl. 10, Lam. ill. pl. 555, and Pers.), but has been found growing in England (Engl. bot. pl. 1442).

Hesperis ramosissima of the Northern border of the Desert. Indigenous in Egypt, — where it was observed by Delile around the pyramids at Sakara. Farther North, observed by Gittard on the coast of the Peloponnesus (Chaub.); and Westward, by Desfontaines ii. pl. 161 in the maritime sands of Algeria.

Raphanus lyratus of the East Mediterranean countries. Indigenous in Egypt and called there "rechad el-bar," wild cress: — observed by Lippi, Forskal, and Delile, in both Upper and Lower Egypt, growing on the river-flat. Farther North, observed by Labillardiere in Syria; received from Crete by C. Bauhin prodr. 30, and Tournefort cor. 17; and observed by Bory in Southern Greece.

Althæa Ludwigii of "Sicily." Known in Egypt as early perhaps as this date; — observed there by Delile, in cultivated ground near Bubastis; and Westward, said to grow in Sicily (Linn., Cav. ii. pl. 30 and v. pl. 423, and Pers.).

Sida spinosa of Equatorial Africa. Known in Egypt as early probably as this date; — observed there by Forskal, and Delile, as far North as Cairo, but no native names are given: from transported specimens, described by Commelyn hort. i. pl. 2. Southward, known to grow in Yemen, Abyssinia, Senegambia, the Cape Verd Islands, and Southeastern Africa (Pers., A. Rich., Guill., and E. Mey.). Eastward, has no Sanscrit name, but was observed in Hindustan by Roxburgh, and Wight (Pidd., and A. Dec.). By European colonists, carried to the Mauritius Islands (Bojer); and to our Middle and Southern States, where it occurs in waste ground from Philadelphia to Florida and Arkansas (Torr. and A. Gray).

Sida multica of Equatorial Africa. Called in Nubia "gergydan;" — and observed by Delile in Upper Egypt, as well as in gardens at Rosetta.

Cissus rotundifolia of the mountains of Yemen. Called in Egypt "oudneh roumy;" — and observed there in gardens by Delile. Farther South, observed by Forskal p. 35 among the mountains of Yemen, frequent and called "hælæs" or "halka," the leaves cooked and eaten though very sour.

Psoralea Palæstina of Syria. Known in Egypt as early perhaps as this date; — observed there in a garden at Cairo by Delile; and known to grow wild in Palestine (Linn., Jacq. hort. ii. pl. 184, Pall., and Pers.).

Potentilla supina of middle Europe and the adjoining portion of Asia. Known in Egypt as early probably as this date; — but introduced and only naturalized on the river-flat and islets of the Nile near Cairo, where it was observed by Forskal, and Delile. Farther North, observed by Sibthorp on the Bithynian Olympus; and known to grow in Siberia (Pers.). Westward, termed "pentaphylloides supinum" by Tournefort inst. 298; known to grow in Austria, Germany, and France (Crantz, Lam. fl. fr., and Pers.); and from transported specimens described by Plukenet phyt. pl. 106.

Kalanchoe Aegyptiaca of the mountains of Yemen. Called in Egypt "ouedneh;" — and observed there in gardens by Forskal, Delile, and Clot-Bey. Farther South, observed by Forskal p. 89 in its wild state on mount Melhan in Yemen, and called there "odejn." From transported specimens, described by Plukenet alm. pl. 228.

Scabiosa prolifera of the Mediterranean countries. Called in Cyprus "sitôthōri;" — observed there in cultivated ground by Sibthorp; and received from Egypt by Willdenow. Westward, described by Hermann parad. p. 125; termed "s. stellata annua prolifera" by Tournefort inst. 465; and known to grow in Barbary (Pers.).

Teucrium marum of Southern Europe. — Described by Matthioli comm. p. 537, Bauhin iii. 243, and Ludwig ect. pl. 14; and observed by Clusius in Spain. Eastward, observed by Gittard in Southern Greece, on mountains at Armyros (Chaub.); and according to Clot-Bey, recently introduced from the French gardens into Egypt.

Celsia Orientalis of the East Mediterranean countries. — From transported specimens, described by Zanoni 34 (Spreng.), and Linnæus; termed "verbascum orientale sophiæ folio" by Tournefort cor. 8. In its wild state, observed by Sibthorp pl. 605, and Chaubard, in Southern Greece and on the Greek islands; and known to grow in Cappadocia and Armenia (Lam. ill. pl. 532, and Pers.).

Celosia margaritacea of Hindustan and Burmah. Called in Japan "goofits" or "ino kadfits" (Thunb.), in Tagalo "candayohan" or "quindayohan" (Blanco), and known in Egypt as early probably as this date; — observed there by Delile, growing spontaneously around Cairo; and farther North, known in the gardens of Europe as early at least as the days of Tragus f. 219. Southward from Egypt, observed by Forskal under cultivation in Yemen. Eastward, observed in Hindustan by Rheede x. pl. 38 and 39, Burmann ind. pl. 25, Roxburgh, by Graham "common everywhere during the rains," and by myself in the Concan, to all appearance indigenous. Farther East, enumerated by Mason as indigenous in Burmah; by Blanco, as frequent on the Philippines, known to the natives; is known to grow in China (Pers.); and was observed by Kaempfer, and Thunberg 30, naturalized in Southern Japan.

Aerva tomentosa of Tropical Arabia. Called in Egypt "sadjaret ennadji;" — observed there by Forskal, and Delile, as far North as Cairo, also in Upper Egypt, growing in gardens and even in the Desert. Farther South, observed by Forskal p. 171 abounding in Yemen in sandy and calcareous soil, called "ra" or "ærua," and the spikes of flowers used for stuffing cushions and saddles. Eastward, enumerated by Mason as "exotic" in Burmah; and known to occur also in Hindustan and Java (Linn., Juss., Burm. ind. pl. 65, and Pers.).

Euphorbia thymifolia of Tropical Arabia and Hindustan. Called in Bengalee "shewt-kherua," in Telinga "biddarie-nanabeeam," in Tamil "sittra paladi" or "chin-amaum-patchayarise" (Drur.), in Yemen "rummid;" — observed there among the mountains by Forskal, and perhaps the same species near the sea at Ghomfude, the bruised herb applied to wounds, and the juice with wheat flour formed into pills given as a powerful purgative. In Upper Egypt, observed by Delile, as also on the Mediterranean border near Damietta: and from transported specimens, described by Plukenet alm. pl. 113. Eastward, known to grow in "gravelly places all over India," the "leaves and seeds given by" Tamul physicians "in worm cases and certain bowel affections of children" (Lindl.); in Ceylon, observed by Burmann pl. 105; and farther East, by Thunberg in Japan, but no native name is given. By European colonists, carried to the Mauritius Islands, where it has become a troublesome weed (Pers.).

Ornithogalum elatum of . . . Known in Egypt possibly as early as this date; — described by Andrews bot. repos. p. 528 from specimens received from Alexandria.

Dactylis glomerata of Europe and the adjoining portion of Asia. Known in Egypt as early probably as this date: — observed there by Delile, growing around Alexandria. Farther North, observed by Forskal, Sibthorp, and Chaubard, in Greece and on the Greek islands, not uncommon along roadsides. Westward, described by Dalechamp 427, C. Bauhin, and Parkinson; termed "gra-

men paniculatum spicis crassioribus et brevioribus" by Tournefort inst. 521; was observed by Forskal near Marseilles; and is known to grow in waste places and in woods throughout middle Europe as far as Britain, where it is called *orchard grass* or *cock's-foot* (Engl. bot. pl. 335, Pers., and Prior). From Europe, was carried by colonists to Northeast America, where it has become naturalized, growing not only in waste ground, but extending into the forest.

Lappago racemosa of Hindustan. Known in Arabia (Pers.) as early probably as this date; — observed in the environs of Constantinople by Forskal, and Sibthorp. Westward, described by Traugot, and Haller; termed "gramen spicatum locustis echinatis" by Tournefort inst. 519; and known to grow in various parts of Southern Europe (Lam. fl. fr., and Pers.). Eastward, observed in Hindustan by Roxburgh, by Law, in the environs of Bombay (Graham); and specimens were shown me on the Deccan by Mr. Ballantine. The grass bears minute burs, and by European colonists was carried to the West Indies (Pers.).

Eragrostis pœoides of Subtropical Africa and Asia. A grass called in Nubia "gytt;" — and observed by Forskal p. 21 among the mountains of Yemen; and by him, and Delile, in Lower Egypt. Farther North, observed by Sibthorp, and Chaubard, in the Peloponnesus and on Samos, frequent in cultivated ground; and farther East, known to grow in Siberia. Westward, described by Lobel hist., Clus. rar. vi. 38, and Barrelier pl. 44; termed "gramen paniculis elegantissimis sive éragrôstis, majus" by Tournefort inst. 522; and known to grow in Italy, Switzerland, and Barbary (Pers.).

Festuca rubens of the Mediterranean countries. A grass known in Egypt as early probably as this date: — observed there by Forskal, and Delile pl. 11, on the margin of grain-fields around Alexandria. Farther North, observed by Forskal, Sibthorp pl. 83, and Chaubard, in Crete, the Peloponnesus, and on Imros, on the margin of fields and the site of old walls; and Westward, described by Tournefort inst. 524, and known to grow in Liguria and Spain (All., Pers., and Dec.).

Bromus mollis of Europe and the adjoining portion of Asia. A grass called in Greece "lukônôra;" — observed there by Sibthorp, and Chaubard, frequent in cultivated ground on the Peloponnesus and the Greek islands; and farther South, observed by Delile growing around Cairo. Westward, termed "gramen avenaceum locustis villosis crassioribus" by Tournefort inst. 526; and is known to grow abundantly throughout middle Europe as far as Britain (Curt. lond. i. pl. 8, and Pers.). From Europe, carried by colonists to Northeast America, where though "scarce" it continues to occur in wheat-fields in our Middle States (A. Gray); also to Austral Africa (Rœm. and Schult.). According to London, the seeds bring on giddiness in the human species and in quadrupeds, and are fatal to poultry (Lindl.).

"Sept. 6th, Thursday" (F. Columb. 15 to 44), departure of Columbus from the Canary Islands Westward: with three ships, provided by Isabella wife of king Ferdinand. "On the 13th" at night-fall, having sailed about two hundred leagues, he remarked *Variation of the magnetic needle*: continuing his observations on this — and his succeeding voyages, he discovered a "line without magnetic variation" one hundred miles West of the Azores.

"Oct. 11th, Thursday," in the night (F. Columb. 22 to 62), land discovered by Columbus, supposed by him to be the beginning of the Indies. In the morning, the land was ascertained to be an island, called by the natives "Guanahani;" which name was changed by Columbus to "St. Salvador." The natives proving friendly, on being asked by signs, Where they procured the bits of *gold* worn for ornament, pointed South. Seven natives were then taken on board, and Columbus proceeded in the direction designated to another island in sight, which he called "Conception;" thence to a third island, which he called "Fernandina;" thence to a fourth, whose native name "Saomotto or Somoto" he changed to "Isabella;" and next came in sight of Cuba, a large and mountainous island. A "beast like a badger" (*Capromys*) was killed here by a party sent on shore. Turning now East, Columbus followed the coast of Cuba "one hundred and six leagues" to its termination: and continuing beyond, reached another large and mountainous island, and changed its native name "Aiti" to "Hispaniola." On this island, the source of the *gold* above mentioned, he lost his largest ship; and with the materials, saved through the aid of the natives, built a fort; and left behind thirty-nine of his men.

In the new archipelago, the *tides* were observed by Columbus to be "quite contrary to ours; for it was low water when the moon was Southwest and by South."

The natives first met with, are described (F. Columb.) as "of a middle stature, well shap'd, plump, but of an olive colour, like the people of the Canaries or peasants that are sun-burn'd. Their countenances were pleasant, and their features good, but their too high foreheads made them look somewhat wild. Their hair lank, thick, very black," and in some individuals cut short (agreeing with the Malayan race, but the complexion too light). They easily repeated the words they once heard; had javelins pointed with fish-bone, and sword-like clubs; and some of their canoes were large enough to contain "forty or fifty" men. "Their beds were like a net drawn together in the nature of a sling tied to two posts," and were called "hamacas" (*hammocks*, now first made known to Europeans). They had *nets*, cotton "very well spun, *cotton cloth*," and "looms to weave;" also *honey*, and balls of

wax (. . .). By the Cubans, large fishes and turtle were captured by means of the remora or suck-fish (*Echineis*).

Hayti was found governed by four principal caciques; each having under him seventy or eighty local subordinate chiefs, who "were obliged, whensoever called upon, to assist them in their wars, and till the ground." The principal chiefs spoke through an intermediate officer (as among the Feejeeans); in making treaties presented a "girdle" or belt (as among our North American tribes); and in travelling, were carried in "a sort of palanquine." Medicine-men are described (another point in common with our North American tribes; and as among the Hawaiians), bones of individuals were kept in calabashes, and certain stones were supposed to cause "women to be delivered without pain." Bows and arrows, the latter pointed with "a fish's tooth or bone," were in use (F. Columb.).

The natives generally, are described by Columbus as "so loving, tractable, and free from covetousness," that "there are no better people" in "the world. They love their neighbour as themselves, and their conversation is the sweetest in the universe, being pleasant and always smiling. True it is, both men and women go as naked as they were born;" yet "the king is served with great state; and he is so staid, that it is a great satisfaction to see him, as it is to think what good memories these people have, and how desirous they are to know everything, which moves 'em to ask many questions, and to enquire into the cause and effects of every thing." In regard to religious ideas, "I could discover neither idolatry nor any other sect among them, tho' every one of their kings, who are very many, as well in Hispaniola, as in all the other islands," has "a house apart from the town in which there is nothing at all but some wooden images carved" (compare Feejeeans): "I have taken pains to find out what it is they believe, and whether they know what becomes of them after they are dead; especially I enquired of Caunabo;" who "and the rest answered, That they go to a certain vale, which every great cacique supposes to be in his country, where they affirm they find their parents, and all their predecessors, and that they eat, have women, and give themselves up to pleasures and pastimes."*

* *Bombax ceiba* of the West Indies and neighbouring portion of Tropical America. An immense tree called by the natives "ceyba" (Ovied.), and its spiny trunk scooped out for canoes, some large enough according to Columbus lett. 1 to contain "seventy and eighty men, each with his oar:" — "arboles que llevan lana" and are "muy espinosos" were seen by Columbus on Hayti, on his Second voyage (Columb. lett. in soc. Hackl.); the "ceyba" was observed by Oviedo gen. hist. ix. 11 growing wild; trees of the girth of fifteen men were seen in Nicaragua by a writer (quoted by Lerijs); and according to Barcia i. 24, this was one of the first trees to engage the attention of the colonists (Spreng.): *B. ceiba* was observed by Jacquin am. pl. 176 on the West Indies or neighbouring mainland. By Nimmo, has recently been introduced into the environs of Bombay (Graham).

Isotoma longiflora of the West Indies. A Lobeliaceous plant called by Spanish colonists "rebenta cavallos" (Lindl.); and the "ruybaruo" mentioned by Columbus lett. 1, — may be compared: *I. longiflora* is termed "trachelium sonchii folio flore albo longissimo" by Plumier iii. pl. 353, as observed on Jamaica (Pers.); was also observed in the West Indies by Jacquin amer. 219; is known to grow on Cuba, Hayti, and Martinique, and is "one of the most venomous of known plants," bringing on "fatal hypercatharsis," and the juice applied to "the lips or eyes" producing "violent burning inflammation" (Lindl.).

Schinus molle of Western Peru. A small pinnate-leaved Terebinthaceous tree, apparently the "almastiga, arbol, hoja y eh fruto es semejante al lentisco," seen by Columbus in the West Indies: — *S. molle*, together with the *potato*, was introduced into Mexico after the time of the Montezumas (Hernand. iii. 15, and Humb. iv. 9); was observed by myself wild and frequent along river-banks in Western Peru: the bark and leaves according to Lindley are "filled with a resinous matter" that "concretes into a substance resembling mastich, a white odoriferous substance" also "procured from the leaves" and "used in diseases of the eye." Transported to Europe, the tree is described by Clusius post. 94 (Spreng.), and Lamarck pl. 822. "*S. aroeira*," if a variety only, was doubtless brought from Peru into Brazil, where it was found by Maximilian of Wied Neuwied employed by the native tribes in diseases of the eye.

Torreya taxifolia of Florida and the West Indies. A middle-sized tree of the pine tribe; and the "pinos" bearing instead of cones "frutos" that "parecen azeytunas del Axarafe de Sevilla," seen by Columbus journ. Nov. 25th and 27th in the West Indies — (Humb. cosm. i.) may be compared: *T. taxifolia* was observed by Croom, and Chapman, "along the east bank of the Apalachicola river, middle Florida."

Areca oleracea of the West Indies. Called by the Caribs "aouari" (Descourt.), and probably one of the "palmas de seys o de ocho maneros" seen by Columbus lett. 1: — *A. oleracea* was observed in the West Indies by Oviedo (Spreng.), Jacquin amer. pl. 170 (Pers.), and Descourtilz.

Elais Occidentalis of the West Indies. Probably one of the "six or eight kinds of palm-trees"

Canella alba of the West Indies. A tree forty to fifty feet high, called *wild cinnamon* and affording the *canella bark* of commerce: doubtless the "canela" found by Columbus lett. 1 on Hayti, — mentioned also by Barcia i. 61: *C. alba* was observed by Browne pl. 37, Catesby ii. pl. 50, and Swartz, in the West Indies, all its parts when fresh "hot aromatic and pungent" (Lindl.).

"1493, March 4th" (F. Columb., and Major), after sailing from Hayti in the beginning of the year, Columbus arriving at Lisbon in Europe.

X. THE REIGN OF COMMERCE.

Egypt now ceased to be the main or only route through which foreign animals and plants reached Europe, and the broad ocean becoming the theatre of commerce, was deprived of her relative importance; remaining in a measure neutral, slowly and but slightly participating in the new order of things.

From pope Alexander VI. a grant was obtained, Confirming to Spain the new land found by Columbus, and "all that should be discovered Westward, till it should come to the East, where any Christian prince was then actually in possession" (F. Columb. 43). — Limits, notwithstanding some encroachments by the French and English, very nearly defining the Spanish colonies to the present day.

In this year, in Java, death of Raden Paku or Sunan Giri aged "sixty-three." (The date probably taken from his tomb at Giri, which continued extant containing the pusaka kris when Raffles was writing in 1816).

The same year (= "29th year of Tsutsi-Mikaddo." art de verif.), in Japan, departure of Josij-simmi, invested with the title of "dai-seogun," to command the army.

"The same year" (Blair), the study of the Greek and Hebrew languages, brought into Germany by Reuchlin.

"The same year" (Alst. p. 308), in Croatia, the Christians defeated by the Turks under Bajazet II.

As early perhaps as this year (see Spreng.), Joannes Platearius writing his Comment. in Nicolai Praepos. — The work was published "in 1562."

Arabis turrita of the mountains of middle Europe. — The "maior Platea." of Clusius hist. ii. pl. 126, is referred here by Sprengel: *A. turrita* is known to occur along hedges on the mountains of Switzerland, France, and Hungary (Jacq. austr. pl. 11, and Pers.). In Britain, was first observed "in 1728" on the walls of a college at Cambridge (Huds.), afterwards at Oxford and in Kent, and in a locality near Kinross; but seems unknown in Ireland (Mackay) and in Northwestern France, and is regarded by A. Decandolle as derived from the botanic gardens at Cambridge and Oxford.

"Nov. 2d. in the night" (F. Columb. 46 to 51) arrival of Columbus on his Second voyage at a point in the West Indies farther South. In the morning, being Sunday, the new island in sight was named by him "Dominica." Turning North, he soon reached a second island, named by him "Marigalante."* And next "another great island," which he called "Guadalupe" and found inhabited by the warlike *Caribbes*; who were cannibals, and made their captives *canuchs*.

in question: — *E. Occidentalis* was observed in the West Indies by Oviedo (Spreng.); by Swartz i. 619, in mountain valleys on Jamaica (Pers.).

Thrinax parviflora of the West Indies. Ten to twenty feet high, and probably one of the "six or eight kinds of palm-trees" in question: — *T. parviflora* was observed in the West Indies by Oviedo (Spreng.); by Browne 190, and Swartz i. 614 in barren and maritime situations on Jamaica and Hayti (Pers.).

Cocos fusiformis of the West Indies. Probably one of the "six or eight kinds of palm-trees" in question: — observed in the West Indies by Oviedo p. 38 (Spreng.); by Swartz i. 616, on Jamaica and Hayti (Pers.).

Eurêxa odorata of the West Indies and Mexico. Called by the natives "cabuya" (Ovied.); and the "liguñaloe" of Columbus lett. 1, — termed simply "aloe" in the poem written on his return by Guilliano Dati, may be compared: *F. odorata* was observed by Oviedo vii. 10 in the West Indies; by Jacquin amer. pl. 260, on Cuba; and is said to occur also in Mexico (Lam. enc. i. 52, and Pers.).

* *Hippomane mancinella* of the seashore of the West Indies and neighbouring portion of South America. A very large tree, called by the English colonists *manchineel*, by the French "mancenillier" (Nugent): landing on Marigalante, some of the crew touching a wild fruit with their tongues, such heat and pain followed that according to Chanca "they seemed to be mad:" "mancanillas olorosas" are mentioned by Oviedo . . . f. 11: *H. mancinella* was observed by Sloane ii. pl. 159,

From Guadalupe continuing North, Columbus reached a fourth island, named by him "Monseratte;" and next a fifth, whose native name "Ocamaniro" he changed to "Redonda;" a sixth, named by him "Antigua;" a seventh, named by him "St. Martin;" and after visiting another island, turned West, leaving in the North "above fifty islands," the largest of which he named "St. Ursula," and the others "the Virgins." Continuing West, Columbus next came in sight of a very large island, by the natives termed "Borriquen" (Porto Rico).

On reaching Hayti, Columbus found his fort burned and not one of the Spaniards living: the result, according to native testimony, mainly of dissensions among themselves and a night-attack by a neighbouring unfriendly chief. A new site was in consequence selected, farther East; and the town of Isabella was built there, the first settlement in America that proved permanent. A tribute was imposed by Columbus on the natives of Hayti;—and before the close of his administration, some of them were held as slaves (F. Columb. 74 to 81).

"1494, Jan. 30th" (date of lett. in Hackl. soc.), Columbus writing from the city of Isabella to the home Government.

"May 4th, Sunday" (F. Columb. 54 to 60), Westward from Hayti another large island, Jamaica, discovered by Columbus. Returning to the coast of Cuba, he continued West among a labyrinth of low islets, and at length learned from a native, that Cuba is an island and not part of a continent. After reaching the island "Evangelista" (Pinos), Columbus turned back, re-visited Jamaica, and discovered the South coast of Hayti, which he followed throughout.

"Sept. 15th, in the night" (F. Columb.), *eclipse* of the moon. Observed by Columbus near the Eastern extreme of Hayti at the islet Adamanai; and "which he said varied five hours twenty-three minutes from Cadiz." Proceeding through the Mona Passage, Columbus reached the town of Isabella "Sept. 29th:"—and eighteen months afterwards, sailed for Spain, arriving at Cadiz "June 11th 1496" (Major 2d edit. lett. p. 159).

"In this year" (Dallet p. cxxvii), end of the reign of Sieng-tsong, king of Corea.

"In this year (=900 A. H.)" of Ferisht., Elph.), by Mahmud of Guzerat, a sea and land force sent against Bombay, occupied by a revolted officer of the Bahmani king of the Deccan. The fleet was destroyed in a storm, but through the co-operation of the Bahmani king, Bombay was recovered.

Before the following year (=1421 an. jav., Raffles xi.), "the whole island of Java had submitted to the authority of" sultan Tranggana, and the Mohammedan religion now firmly established throughout.

"1495 A. D." (Crawfurd vii. 11), the Mohammedan religion adopted by Zainalabdin, properly regarded as the first Muslim king of Ternate. Javanese in numbers now visiting the island, partly to extend the Mohammedan religion, and partly to procure *cloves*.

and Jacquin amer. pl. 238, in the West Indies, abounding in white caustic venomous juice, a drop, like fire, instantaneously raising a blister on the back of the hand (Lindl.).

Bursea gummifera of the West Indies and neighbouring portion of South America. An Amyroid tree called in Carib "chibou" (Desc.), affording a turpentine-like secretion that hardens as it dries: the "arboles de trementina muy singular é muy fina" seen by Chanca on Hayti,—may be compared: *B. gummifera* was observed by Swartz 130, Jacquin am. pl. 75, and Descourtilz, in the West Indies and neighbouring portion of South America. *B. acuminata* of Porto Rico and Hayti, yielding according to Royle a yellow concrete essential oil, is regarded by Lindley as "not very different."

Terminalia latifolia of the West Indies. The "mirabolanos cetrinos" observed on Hayti by Chanca on the Second voyage of Columbus—(lett. in Hackl. soc.), may be compared: *T. latifolia* is known to grow in woods on the mountains of Jamaica, and its root is employed by the inhabitants in diarrhœa (Swartz fl. ii. 747, and Lindl.).

Nectandra puchury-major of the Upper Orinoco. A Lauroid tree called there "puchury" or "puchery" or "puchyry" (Lindl.); and the trees seen by Chanca whose bark tastes and smells like "nueces moscadas"—may be compared: *N. puchury-major* was observed by Martius at Tabatinga in the forest on the Rio Negro. *Pichurim beans*, exported to Sweden in the middle of the last century, were found a valuable tonic and astringent medicine, and during the continental war "were used as a bad substitute for nutmegs," but are no longer known in commerce (Lindl.).

Nectandra puchury-minor of Eastern Equatorial America. Its seeds said to possess similar qualities,—and according to Humboldt are exported, and are the *sassafras nuts* of the London shops (Nees, and Lindl.).

Anomum sylvestre of the West Indies. The "raiz de gengibre" seen by Chanca worn by a native around the neck,—may be compared: *A. sylvestre* was observed by Sloane i. pl. 105, and Swartz 11, in the forest on Jamaica (Pers.).

"Oct. 27th" (Barros, and Camoens iv. 60 to 64), John II. succeeded by Manuel, fourteenth king of Portugal.

"1496 A. D." (Major edit Bethenc. p. 129), the Guanches of Teneriffe subdued, and the Canary Islands now entirely in Spanish possession.

"In this year" (art de verif.), Kayt-Bay succeeded by Mohammed Abu-l-Saadat, thirty-eighth Memluk sultan of Egypt.

"The same year" (narrat., and Mason ii. 28), Pegu first visited by a European, Hieronimo di Santo Stefano, who lost his companion "Dec. 27th." — Proceeding Southward, he found on Sumatra a cadi who had some knowledge of Italian; and on his way home, touched at the Maldive Islands, and at Cambay was assisted with money by some Moorish merchants of Alexandria and Damascus. He wrote an account of his voyage "at Tripoli in Syria, on the first of September, 1499."

Lodoicea Seychellarum of the Seychelles Islands. A remarkable palm, bearing very large double nuts, which drifting to the Maldive were long supposed to be produced there: "cocoa nuts of large size" were found on the Maldive Islands by Hieronimo di Santo Stefano: — and nuts imported from the Maldives were used as an antidote by the Javanese when visited by Nieuhoff in 1665. The "cocos maldavica" was first ascertained by Sonnerat to be a native of the Seychelles Islands; and *L. Seychellarum* is also described by Commerson and Labillardiere.

"1497, June 24th" (Pasqualigo, J. W. Jones introd. Hackl. p. lxix, and Asher edit. Huds. p. lxxviii), under letters patent from Henry VII. of England, John or Zuan Cabot sailing from Bristol Westward "seven hundred leagues" discovered land which he called Terra-primum-visa. He "coasted for three hundred leagues, and landed," saw "no human being," but "found some felled trees," also "certain snares which had been set to catch game, and a needle for making nets." He planted a large cross "on his new-found-land," and returned to England "about August 10th."

"In this year" (Spreng.), Schrickius editing the writings of Johannes Tollat von Vochenberg.

Ribes rubrum of Subarctic climates. Called in Britain *red currant* from the diminutive raisins imported from Corinth, by Turner "raisin-tree" (Prior), at Anjou "castilles" (Ménage), in France in the days of Dodoens p. 748 "grosseille d'outre mer," names indicating foreign origin, the earliest notice of the plant being "ribes Ioannis" in this edition by Schrickius — (Spreng.): the thornless "rubra grossula" called "transmarina" is mentioned by Ruel i. 106, the "ribes hortense" by Tragus 375, and the "ribes" bearing red fruit by Fuchsius pl. 663; but in Britain, *R. rubrum* is not enumerated by Tusser in 1557 among cultivated fruits (Philips), and continued rare in 1597 as appears from Gerarde p. 1143: Eastward, was observed by Forskal in gardens at Constantinople, but has not been met with in Greece nor in Egypt. Is said to grow wild from North Britain and Sweden as far as Lapland (Pers., and Wats.) and throughout Siberia to Kamtchatka (Ledeb., and A. Dec.): farther East, is clearly wild from the mouth of the Mackenzie throughout Canada (Hook.), at the Lake of the Woods (Schwein.), in Wisconsin (A. Gray), was observed by Michaux along the Mistassiny river, and by myself as far South as the flanks of the White mountains: but our gardens have been stocked from Europe.

"Dec. 21st" (Castanheda), Vasco da Gama in three ships from Portugal passing the island of Cruz, containing the last landmark left by Diaz. The wind favouring "for three or four days," on Christmas he gave the name of "Natal" to the new country. — "Jan. 24th," anchored within a large bay at the mouth of a large river, careened the ships, and left on "Sunday, Feb. 24th:" following the coast, a sambuc at anchor contained a "Moor" from Cambay who understood a few words of Arabic, and a crew of caffres: after passing the shoals and bank of Sofila, another sail was sighted, and a "caffre" obtained from it who could converse with one of Da Gama's men, "a caffre of Guiné" (through the Congo Language, Stanley edit. C. Correa 79). "Thursday, March 1st" (Castanh., and Barros), Da Gama "saw the four islands of Mozambique," his crew on entering the port giving thanks that they could now see houses and people. "April 1st," he finally left Mozambique, and "on the 7th" arrived at Mombaza; "on the 15th, Easter Sunday," at Melinda; and "on the 24th" (Barros), having procured "a Guzarat pilot," sailed for Hindustan.

Ximenea spinosa of the Tropical shores of America, Africa, and as far as the Malayan archipelago. A small submarine tree, more or less spinescent, called in Telinga "oora-nechra" (Drur.), in Suahili "m'peenjee," in Kinyoro "m'toondwah" (Grant); and the "yellow fruit of the size of walnuts" eaten by the natives around the bay where the ships were careened — (C. Corr. i. 10), may be compared: *X. spinosa* was observed by Grant in Unyoro and Ugani, oil extracted from its kernels. Eastward, was observed by Roxburgh, and Wight, in the Circars, its "yellow fruit, which is about the size of a pigeon's egg" eaten by the natives, and its pulverized wood used by the brahmins on the Coromandel coast in their religious ceremonies (Drur.); but possibly through Arab or Banian traders carried to Hindustan and Timor (Decaisne, and A. Dec.). Westward, is known to grow on the Atlantic shore of Equatorial Africa, in the maritime sands of Senegal (fl. Seneg., and fl. Nigr.), was observed by Chr. Smith as far as the Congo: also on the opposite American shore, was observed

by myself around the Bay of Rio Janeiro ; by A. Saint-Hilaire, inland in Brazil as far as the Catingas forest ; by Aublet pl. 125, in Guyana, and termed "heymassoli" (Steud.) ; by Plumier pl. 261, and Jacquin am. pl. 277, in the West Indies ; is known to grow as far as Key West in Florida (Chapm.), and on the Pacific side of the Isthmus (Benth. voy. Sulph. 160).

"*Vitis sp.*" of Eastern Equatorial Africa. A shrub three feet high called "m'peengee-peengee" (Grant) ; and from early times, its one-stoned pear-shaped fruit eaten : — observed in Madi woods, having "neither tendrils nor thorns" (cf. *Ximenia*).

"May 20th, 1498" (Barros), arrival of Vasco da Gama in Hindustan, two leagues below Calicut. At the city, the commercial jealousy of the Moors was aroused, and during his stay, Da Gama derived assistance from the secret promptings of one of them, "a native of Seville" (C. Correa i. 16). On "Friday, Oct. 5th" (Castanh., and Goes), he left Hindustan, — and on "Monday, Feb. 7th" in the following year, arrived at Melinda. Having procured Moorish pilots, he continued his voyage homewards, finding the pilots familiar with the Mozambique current and African coast almost to the Cape of Good Hope, but not beyond. "On the 20th March" (Castanh.), he doubled the Cape.

Ficus elastica of the mountains of Assam and Eastern Hindustan. The *inaia-rubber fig-tree* is called "kasmear" by the inhabitants of Pundua and the Juntipoor mountains, in Bengalee "kusneer" (Drur.) ; and boiled rice "on green fig leaves, which were as broad as a sheet of paper," were set before Da Gama at Calicut — (C. Corr. i. 17) : "leaves of the Indian fig-tree which are very large and stiff" used for plates by the king of Calicut and invited brahmins, are mentioned by Barbosa : *F. elastica* is described by Roxburgh iii. 541, Howison as. soc. Calcutt. v. Falconer, and Royle him. 338 ; is known to grow also on the Khassya mountains, and according to Drury is "cultivated in Malabar ;" was observed by Graham "in gardens about Bombay ;" by Mason v. 523, introduced "within a dozen years" into Tenasserim, and "appears to grow as well as an indigenous plant." By European colonists, was carried to Northeast America, where it has become frequent in greenhouses. Its milky juice is used by the natives of Silhet to smear and render baskets water-tight (Drur.), and according to Lindley "inspissates into an excellent kind of caoutchouc, which is now imported." (Compare *F. tsiela*.)

"In May" (Churchill coll., and Asher edit. Huds.), under instructions from Henry VII. of England Sebastian Cabot, son of John, sailing Westward "by way of Iceland." On reaching the newly-discovered country, he found land extending continuously in the desired Northwestern direction as far as "56° N.," at which point he turned back ; visited Newfoundland, brought away three natives, and continued Southward along the continent to "38°."

"Aug. 1st" (F. Columb. 47 and 68 to 73, Columb. lett. 3 gives "July 31st"), an island discovered and named Trinidad by Columbus, seeking on his Third voyage the "vast land Southward" he had heard of from the Caribbes. On the same day, the continent was in sight, but was at first mistaken for another island. Continuing along the South coast of Trinidad, Columbus entered the Gulf of Paria, finding the sea freshened by large rivers and the land continuous, "which he certainly concluded to be the continent." Of the *natïves*, the men wore a covering in front, and the women were entirely naked ; and strings of *pearls* in their possession, were explained by signs to have been brought from the Northwest. Columbus continued around through the straits ; and turning Westward, followed the coast of Paria to and beyond an outlying island which he named "Margarita ;" and thence sailed Northward direct to Hayti, arriving "Aug. 30th" (Major 2d edit. lett. p. 156).

Casalpinia echinata of Eastern Equatorial America. A large tree affording the *brazil-wood* of commerce, called by the aboriginals of Brazil "araboutam" (Ler.) : the "brasil" in great quantities mentioned by Columbus in a letter from Hayti giving an account of his Third voyage — (Major 2d edit. 112), may be compared : much "brasil" along the river Maranon, is mentioned by Oviedo nat. hyst. f. 10 ; and *C. echinata* was observed in Brazil by Leriüs. From transported specimens, is termed "pseudo-santalum rubrum s. arbor brasilia" by C. Bauhin pin. 393 ; is described also by Lamarck enc. i. 461 ; and has usurped the Oriental name of *C. sappan* from its wood equally dyeing red (see Cabral).

"In this year" (art de verif.), Mohammed Abu-I-Saadat succeeded by Kansu Abu-Said, thirtieth Memluk sultan of Egypt.

"The same year" (Alst. p. 308), Dalmatia again overrun by the Turks : and an army of them "seventy thousand" strong, sent by Bajazet II. into Russia.

"The same year" (Alst. p. 378), Savanarola a Dominican monk, having written against the supremacy of the pope, burned alive at Florence.

"1499 A. D." (Marcel), Kansu Abu-Said succeeded by Kansu Djan-balat, fortieth Memluk sultan of Egypt.

"The same year" (Churchill coll.), in a ship from Spain, Alonso de Ojeda "and some other private men," including Americus Vesputius "as merchant," followed the North coast of the new con-

tinent to Cape de la Vela; * and returned Eastward as far as the island of Margarita, and thence to Hayti.

"1500, Jan. 26th" (Churchill coll.), arrival at Cape St. Augustin, on the outer coast of the new continent, of Vincent Yanez Pinzon, in the first Spanish ship that crossed the Equator. Continuing Westward, Pinzon followed the coast as far as the mouth of the river Marañon.

"March" (Galvan., and Churchill coll.), Peter Alvarez Cabral leaving Portugal. Keeping at a distance from Africa "to shorten his way," he was driven out of his course as far as the new continent "in 10° S." Following this coast "to 17° S.," he entered a harbour named by him "Porto Seguro:" and landing, called the new country "Santa Cruz." — (The name "Brazil" was afterwards substituted, the country abounding in a kind of wood resembling "presillum" or sappan-wood; see *Cæsalpinia echinata*).

"Aug. 23d" (Major 2d edit. lett. 159 to 160), arrival in Hayti of Francesco de Bobadilla, superseding Columbus, who was sent home in chains; as appears from his letter written "Nov. 25th," just before reaching Spain.

"The same year" (Churchill coll., and D'Avezac edit. J. Cart.), from Tercera sailing Northwest, Gaspar Cortereal followed the land to "Lat. 50° or more," to a river loaded with glaciers called by him "Rio Nevado;" his own name was given to the country North of Newfoundland (since called Labrador), and he returned in safety to Lisbon.

"The same year" (Marcel), Kansu Djan-balat succeeded by Toman-Bay, forty-first Memluk sultan of Egypt.

"In this year" (Spreng.), Robertus de Valle publishing his *Explic. Plin.*

"The same year" (Alst.), end of the chronicle of Johannes Naclerus.

One hundred and seventy-fourth generation. Jan. 1st, 1501, onward mostly beyond youth: the Arab writers, Ebn Ayyas, Soyuti d. 1505: the Greek writers, Jacobus Triboles d. after 1528, Deme-trius Zenus d. about 1529, and Leonardus Phortius d. 1531: Barthelimi de Salignac, Augurellus, Raphael Volaterranus, Albertus Krantz, Johannes Trithemius d. 1516 (Pouch.), Hector Boetius, Paulus Aemilius, Erasmus of Rotterdam, J. Jovianus Pontanus; Machiavel; Baptista Mantuanus; Alexander ab Alexandro; Dr. Thomas Lynacre; Petrus Pomponatius; Gawin Douglas; Sannazarius; Cornelius Agrippa: the scholastic theologians, Thomas de Vejo Cajetanus, Jacobus Almainus, Sylvester Prieras, Franciscus Victoria, and Dominicus a Soto: the Italian poet Ariosto: the editor Aldus Manutius: the architect Donato Lazzari called Bramante d. 1514: the painters, Leonardo da Vinci d. 1519, Raphael d. 1520, Luca Signorelli d. 1521, Pietro Perugina d. 1524, Lucas Cranach d. 1553, Michele Angelo d. 1563, Giorgio Barbarelli called Giorgione d. 1511, Titian d. 1576, Antonio da Corregio d. 1534, Benvenuto Tisio called Garofalo d. 1559: the engravers, Maso Finiguerra b. 1460, Albert Durer d. 1528.

"The same year" (Alst. p. 361), by the Theological Faculty of Mayence, following the example of the Academies of Paris and Cologne, adoption of the decree of the Conception without sin, "Mariam sine peccato originali conceptam." They who dissented, were termed "Maculists."

"The same year" (D'Avezac edit. J. Cart.), from Portugal sailing West-northwest, Cortereal on his Second voyage found land at the distance of "two thousand miles," covered with woods and well-peopled, supposed by him a continuation of the Northern land seen on his previous voyage. He followed the coast "six or seven hundred miles," and captured many of the natives: "fifty" of whom he retained in his own ship, which never returned. The other ship with "eight" natives on board, reached Lisbon "Oct. 8th."

"The same year" (Churchill coll.), from Lisbon Juan de Nova sailing in mid ocean discovered "in 8° S." a small island which received the name of "Conception" or "Ascension." In the Indian Ocean, another small island, that which bears his name. — And on re-entering the Atlantic, he found a third small uninhabited island "in 15° S.," which received the name of "St. Helena."

"The same year" (art de verif.), Toman-Bay succeeded by Kansu El-Gouri, forty-second Memluk sultan of Egypt. — The mosque and tomb built by him, is "at the extremity of the bazar Ghoreeh" in Cairo (Wilk. theb. and eg. 297).

"The same year" (= 2161st of Synmu, art de verif.), Tsutsi-Mikaddo succeeded by his son Kasiawabara, now daïro of Japan.

* *Mauritia flexuosa* of Guayana. The hammocks seen by Vespucci on the South American coast — in part of fibres of the "ita" palm; which also furnishes the natives with bread and wine, the pith being converted into flour, and the trunk tapped at a certain season for a saccharine drink (Schomb. edit. Ralegh): *M. flexuosa* was observed in the same district by Humboldt and Bonpland (Steud.). From transported specimens, is described by the younger Linnæus suppl. 454 (Pers.).

Bromelia caraguata of Guayana. Called there "caraguata" (Schomb.), and the other material of the hammocks seen by Vespucci — clearly its fibres (Schomburgk edit. Ralegh).

"1502, April" (Galvan.), three ships sent by king Manuel of Portugal, after following the Brazilian coast to "about 32° S." turned back, finding it tempestuous and cold.

"In this year" (Galvan.), Vasco da Gama on his Second voyage sailing from Mozambique direct for Hindustan, discovered an island "in Lat. 4°," and named it after himself "Almirante." He left there Vincent Sodre with five ships "to keep the coast of India."

"In this year (= 908 A. H.) of the Kurrat el-Ayun, Badger edit. Varthem. 61), seven vessels seized by the Portuguese between Hindustan and Ormuz, and most of the crews murdered.

"In this year" (Lubke and Lutrow), in England, the chapel or choir in Westminster abbey built by Henry VII.

At this time (Spreng.), Io. Costæus writing his Adnot. in Mesue. — He died "in 1503."

"The same year" (Siguenz., coll. Mendoz., Clavig. ii., and Humb. atl. pict.), Ahuitzotl succeeded by Motezuma-Xocojotzin, or Montezuma II., ninth Mexican emperor.

"In this year" (Gomara ii.), Alfonso Hoeida following the coast of Terra Firma to the province of Uraba — (Gulf of Darien).

"Aug. 14th, Sunday" (F. Columb. 88 to 108), Columbus, accompanied on his Fourth voyage by his son Ferdinand, sailing West beyond Hayti discovered land (Cape Honduras); and a party was sent on shore to take possession. Turning back, Columbus followed the coast to its Eastern termination, termed by him "cape Gracias a Dios." At "Guanaia," an outlying island, *natives* were seen; and proved to be "like those of the other islands, but not of such high foreheads."

A large canoe had put in here, laden "with commodities brought from the westward, and bound towards New Spain;" with quilts; clouts, to wear in front; "shirts of cotton, without sleeves, curiously wrought and dy'd of several colours;" large sheets, in which the women, who would besides "hide their faces," wrapped themselves; long wooden swords, edged with sharp bits of "flint fix'd with thread" (compare sharks'-teeth swords of the Kingsmill Islanders); hatchets to cut wood "made of good *copper*, also bells of the same metal, plates and crucibles to melt the metal;" "cacao" or *chocolate* nuts (afterwards found to pass for money); and for drinking, "a sort of liquor made of *maiz*" — (*chicha*, mentioned by Oviedo nat. hyst. f. 16, and observed by myself in use in Peru).

On the main land opposite, the natives proved to be "much like those of the islands, but that their foreheads are not so high, nor do they seem to have any religion:" they wore a covering in front; and there were "several languages among them." Columbus in one of his letters (Major 2d edit. 200) mentions ferocious "*puercos*" (*Dicotyles*), one of them subdued by a monkey called "*begare*" winding its tail around the snout (*Cebus*), "*gallinas muy grandes y la pluma como lana*" (*Rhea*), "*leones*" (*Felis puma*), "*ciervos*" (*Cervus*), "*corzos otro tanto*" (. . .), "*y asi aves*" (birds).

From Cape Gracias a Dios, Columbus followed the coast South (F. Columb.). After some days, other *natives* made their appearance: "brandishing their spears, blowing horns, and beating a drum in a warlike manner" (Polynesian customs); also "chewing herbs" and "spurting it towards" the vessel. Columbus kept on as far as a harbour named by him "Porto Bello" and several leagues beyond (meeting with, according to Barcia i. 112, and Sprengel, "palman" with winey fruit *Bactris minor*) while seeking a passage into the South Sea by a "streight" he had heard of: — (ascertained some years later to be a narrowing, not of the sea but of the land).

"1503, in the beginning of the year" (F. Columb. 88 to 108), returning as far as Veragua, Columbus attempted to settle a colony; but was compelled to withdraw to Jamaica; — reached Hayti "Aug. 13th, 1504;" Spain "Nov. 7th" (Major 2d edit. lett. 235); and died "May 20th, 1506" (F. Columb.).

"Sept. 22d" (Alst., and Nicol.), Alexander VI. succeeded by cardinal Francis Piccolomini or Pius III.; and "Nov. 1st," by cardinal Julian della Rovere or Julius II., sixty-second pope and a warrior. Maximilian ruling Germany and Italy; and Louis XII., France.

"In this year" (Johnst. east. bord.), marriage of James IV. of Scotland with Margaret Tudor: on which occasion, a poem on the "*thrissel* and the rois" composed by Dunbar.

"In this year" (Spreng., and Winckler), Pandolfo Collenucci writing his *Simplic. Plin.*, in response to Leoniceus. — He was slain "in 1504," and his work was published with Brunfels herb. "in 1531."

"1504 A. D. = 17th year of the 'houng-tchi' of Hiao-tsong II." (Chinese chron. table), beginning of the Seventieth cycle. By census, the population of China found to consist of "53,280,000 persons; a diminution of about 7,000,000 within a little over a century" (Pauth. p. 405).

"In this year" (palm-leaf ann. Jag., and W. W. Hunter, Stirling giving 1503), Purushottama Deva succeeded by Pratab Rudra Deva, now king of Orissa; a learned man, deeply versed in the Sastras. — He was finally converted to the Vaidik faith, built the temple of Baraha at Jajpur, extended his conquests as far as Cape Comorin, and reigned "twenty-eight years."

"In this year" (Anderson, and Holmes ann. Amer.), the banks off Newfoundland visited by

Basque, Breton, and Norman fishermen, in "the first French vessels that appeared on the coasts of North America." According to the Narrative of Niflet and Antoine Maycini, the coast of Newfoundland was also visited (chron. edit. by Michelant).

"1505 A. D." (Galvan.), Francisco de Almeida, bearing the title of viceroy, arriving with a fleet of twenty sail at Quiloa, where he built a fort and appointed Peter Fereira to the command. Another fort was established farther South in Sofala by Peter de Anhaya. Crossing the Indian Ocean Almeida took possession of the island of Augedina, and built forts on the main land at Cananor and Cochim.

In this year (narrat. edit. Badger), after visiting Mecca, Aden, the Persian Gulf, the coast cities of Hindustan, and Tenasserim, Ludovico di Varthema at Pider in Sumatra.* He next proceeded with other Christians (Orientals) in a "chiampana" or small vessel with a native captain and crew to Bandan producing *nutmegs*, and Monoch producing *cloves*, and returning in "June," was informed of people towards the South who navigate by the Southern Cross, the climate beyond the said island being cold, and the day not lasting "more than four hours" — (compare New Zealand). "March 12th, 1506," Varthema was under Portuguese protection at Cannanore; "Dec. 6th 1507," he sailed for Mozambique; and reached Portugal in 1508.

"1506 A. D. = 'tching-te,' 1st year of Wou-tsoung-y-ti" or Wou-tsoung II., "of the Ming" or twenty-third dynasty (Chinese chron. table).

"The same year" (Galvan., and Churchill coll.), on a voyage from Portugal to the Indian Ocean, Tristan da Cunha having passed Brazil turned Eastward, and discovered the uninhabited island or islands that bear his name.

Arriving at Mozambique, Tristan da Cunha was joined by Emmanuel Telez de Meneses, who had been "driven without the great island" of Madagascar, and "ran along the coast." The island, reported to be rich in "gingibre, crauo" or cloves, and silver, was visited from Mozambique, but without result.

"The same year" (Lubke and Lutrow), at Rome, the foundation of the first pillar for the cupola of St. Peter's church, laid by Bramante. — The building was placed under the superintendence of Michel Angelo "in 1546."

"1507 A. D." (Churchill coll.), Cuba, already known from native authority to be an island, circumnavigated by Sebastian de Ocampo: who sailed from Hayti.

"The same year" (Baumg.), Baumgarten visiting Egypt.

1508 A. D. (= "8th year of Kasiawabara," art de verif.), in Japan, the title "dai-seogun" conferred by Kasiawabara on Jositanno, twenty-first in descent from Joritomo.

"In this year" (Stanley edit. Barbos. p. ix and 62), the Egyptian sultan Kansu el-Gouri, hearing of the depredations of the Portuguese on the Indian Ocean, prepared a fleet; which sailing down the Red Sea successfully attacked them off Diu, — but "Feb. 3d" in the following year, was totally defeated by Almeida.

"The same year" (N. Shaw edit. Champl. p. ii, and D'Avezac edit. J. Cart.), by Capt. Thomas Aubert, at the expense of Jean Ango, Norman colonists first carried to Newfoundland; and a North American native brought back to France. "Aulry, the French seaman," "first explored the mouth of the St. Lawrence in this year" (Asher edit. Huds.).

"The same year" (Churchill coll.), by John Diaz de Solis and Vincent Yanez Pinzon, the coast of America followed as far as "forty degrees" in south latitude.

"Dec. 10th" (Blair), signing of the "League of Cambray," against the Venetians. Who in consequence, — lost in the following year their territories on the continent.

"In this year" (Wilk. theb. and eg. p. 546), the use of *Kufic letters* ceased.

"1509 A. D." (Churchill coll.), a Spanish colony from Hayti established on Jamaica.

"In this year" (Ciez. vi.), the town of Antigua founded on the Gulf of Darien. — "In the following year" (Markham edit. p. 34), Alonzo de Ojeda governor of Terra Firma, advancing "four leagues" inland, was defeated with the loss of "seventy Spaniards" by the natives at Turbaco: retiring to the ships, and reinforcements arriving, the natives were in turn defeated, and all put to the sword. Ojeda then founded the town of Uraba towards the head of the Gulf, left Francisco Pizarro in command as his lieutenant, and before the close of the year, sailed for Hayti.

"1510 A. D." (Churchill coll.), from Portugal sailing into the Indian Ocean, James Lopes de Sequeira continued beyond Hindustan as far as Sumatra and the Straits of Malacca, now first entered by a European ship.

* *Tanarius major* of Sumatra. A tree called in Malay "laka" (Crawf.), its rose-coloured wood used in dyeing and pharmacy; and the "lacca" tree formed like our walnuts, seen by Varthema on Sumatra, — is referred here by Badger edit. p. 238. The wood according to Crawford disc. dict. p. 204 "is an article of considerable native trade, and is chiefly exported to China."

"September" (Nicol.), a synod at Tours. On the war about to be declared by Louis XII., supporting the duke of Ferrara against pope Julius II.

"1511, April" (Galvan., and De Morga 12), sailing from Cochin Albuquerque obtained possession of the city of Malacca.* "July," by returning Chinese he sent Duarte Fernandez with letters to Siam; who, "being the first Portugall" seen by the king, was received with great honour; and in company with ambassadors from Siam, returned overland by the way of Tanasirim. Albuquerque sent also Ruy Nunnez de Acunna with letters Northward along the coast beyond Tanasarim and Martaban to Pegu "in 17°;" and "in the end of" the year, three ships and "one hundred and twenty persons" under Antonio Dabreu for "Banda and Maluco."—In "January," Albuquerque returned to Goa.

"In this year" (Port. companion of De Soto 6, Churchill coll., and Presc.), a Spanish colony from Hayti established on Cuba by Diego Velasquez; with the aid of a Christian who had been left sick on the island many years previously.

"Sept. 1st" (Alst., and Nicol.), a synod at Pisa. Convened by certain cardinals. Pope Julius II. not having assembled a general Council, as he had sworn to do at his election.

"1512, March 27th" (Purchas, Churchill coll., art de verif. contin., and W. B. Rye edit. De Sot. p. x), Juan Ponce de Leon, sailing from Puerto Rico for "a country in the north" reported by the natives, discovered land; and named it "Florida" from the day being Pasqua Florida or Palm Sunday. Landing "April 2d," he formally took possession, and remarked that many of the fruits (unlike Tropical America) resembled those of Spain, but was repelled by the natives. He followed the coast as far as "30° 8'," doubled Cape Cañaveral "May 8th," "discovered the Bahamas and some other islands previously unknown," and reached Puerto Rico "Sept. 21st."

"May 3d" (Nicol.), Twentieth general ecclesiastical Council. Convened by pope Julius II. at the Lateran in Rome.—The last session was held "March 16th, 1517."

"The same year" (Blair), in London, St. Paul's school founded by John Colet.

"In this year" (Galvan.), Antonio Dabreu after passing Java, Sumbawa, Solor, Galao, Mauluca, Vitara, Rosolanguin, and the Aru Islands whence come dried birds "of great estimation because of their feathers" (*Paradisæ*), came "to other islands lying in the same parallele" in "7° or 8° S." Turning North, he arrived at Ternate, and thence proceeded to the islands of Burro and Amboino, finding "dead men hanging in the houses, for the people there are eaters of man's flesh." On the other side at a place "in 8° S.," he "laded cloues, nutmegs, and mace, in a junco or barke which Francis Serrano bought here," and from Banda returned to Malacca.

"In this year" (narrative in Stanley's edit. Barbos. 225), Francisco Serano "with three other Christians" and "five Malay mariners and pilots" after sailing from the city of Malacca to Pegu, thence to Pedir on Sumatra, continued "south and south-east" to Bandan where *nutmegs* grow, thence "north-east and east-north-east through many channels as far as the islands of Malut," producing *cloves*, and "five in all." Serano was received with great honour by the king of Maluco, and married his daughter.

Mariners of Borney spoke of a people who used the Southern stars in navigating, and dwelt so far South that the climate is "very cold," with only "four hours of daylight" (compare New Zealand, and Varithema's account).

Francisco Serano (according to Galvano) was wrecked with his "junco" before the close of the year on the shoals of Lusupino; but "nine or ten" of those on board escaped to "Midanao," and "the kings of Maluco sent for them. These were the first 'Espanhoes' that came to the Islands of Cloues, which stand from the equinoctiall line towards the north in one degree, where they liued seven or eight yeeres."

"1513, March 11th" (Nicol.), Julius II. succeeded by cardinal John de Medici, now Leo X., sixty-third pope. Henry VIII. ruling England: and in Scotland "Sept. 9th," James IV. succeeded by his son James V.

"The same year" (Churchill coll.), unsuccessful attack on Aden by Alfonso de Albuquerque. Who sailed thence into the Red Sea, now first visited by European ships.

"Sept. 25th" (Churchill coll., and Markh.), from the Spanish settlement on the Gulf of Darien, Basco Nunez de Balboa journeying inland to a mountain crest, discovered the Pacific Ocean. On reaching its shore, he learned from the natives, that the coast trended South.

"The same year" (Ov. gen. hist. i. and nat. hyst. 83, and Humb. cosm. v.), Oviedo (who ascended Vesuvius "in 1501") sent to Terra Firma:—where he resided in the town of Sancta Maria dela vera paz until his first return to Europe "in 1515." He ascended the volcano of Masaya in Nicaragua "in July 1529."

* *Metroxylon* sp. of the Western Equatorial portion of the Malayan archipelago. Discovered by Albuquerque on Sumatra—(Konig, and Spreng.).

According to Oviedo gen. hist. vi. 4, the boats of the *natives* are termed by them "canoes;" or by the Caribs, "piraguas," the latter at least being navigated with *sails*. A *stone hatchet* is figured; together with the process of *rubbing fire* with bits of wood (as among the Polynesians), vi. 4 and 5. A *drum* made of the trunk of a tree (as among the Polynesians and Feejeeans), is also figured, v. 1. Reports, that the natives (perhaps of the Isthmus) were acquainted with the art of *gilding* pieces of copper, had also reached Oviedo nat. hyst. 82.

"1514 A. D." (Alst.), Bajazet II. succeeded by his son Selim, eleventh Turkish sultan.

"The same year" (Alst.), end of the chronicle of Johannes Linturius.

"In this year" (A. Corsalis, Remus. i. 180, and Yule cath. i. p. cxli), a port in China first visited by the Portuguese. The adventurers were not allowed to land, but sold their goods to great profit.

"In this year" (Univ. Pittor., and Stanley edit. Barbos. p. ii and 46, San Roman giving "beginning of 1515"), the sultan of Ormuz having sent an ambassador to the king of Portugal, the city revisited by Albuquerque and his fleet, bringing the king's answer.

The above is the latest event mentioned by Duarte Barbosa, who after spending "sixteen years" on the Indian Ocean—"finished writing" his book "in 1516" (Stanley edit. Barbos. p. vii and 1).

Pogostemon patchouli of Tropical Hindustan. The *patchouli* is an aromatic Labiate herb two to three feet high, called in Bengalee "patchouli" or "pucha-pat," in Tamil "kottum," in Malabar "cot-tam" (Drur.), in the environs of Bombay "pach" (Graham); and from early times held sacred, its dried spikes and leaves sold in the bazaars as a most powerful perfume, and placed among clothing to keep out moths: the "puchio" drug, imported according to Barbosa into Malacca,—may be compared: *P. patchouli* was observed by Rheede x. pl. 77 in Malabar; by Graham at Bombay, "in gardens, also wild in the Concans;" by Wallich, in Silhet, and the Cashmere shawls scented with its essential oil. Farther East, patchouli is brought in great quantities by Arab merchants from Penang; is used by the Chinese in scenting their so-called "India ink," is known to have been exported from China. But in Europe, has only within "a few years" become familiarly known (Drur.).

Dioscorea purpurea of Equatorial Africa? The *Pondicherry sweet-potato*: the "yname" on which the Pareni of Malabar support themselves, resembling according to Barbosa the root of the maize found in the island of Antilla,—may be compared: *D. purpurea* is described by Roxburgh; and according to Drury is "an excellent kind of *yam*, but only found in a cultivated state."

Dioscorea globosa of Tropical Eastern Asia. The *round white yam*, called in Burmah "myouk-phoo" (Mason), is possibly the "yname" in question:—*D. globosa* is described by Roxburgh iii. 797, as observed in Hindustan; "is much cultivated" according to Drury, as "the best kind of yam, much esteemed both by" the natives and Europeans; was observed by Graham as far as Bombay.

Eastward, by Mason v. 64, "exotic" in Burmah and the most esteemed of the white-rooted kinds. "1515 A. D." (G. de la Vega ix. 14, and Churchill coll.). Basco Nunez de Balboa, having transported across the Isthmus hewn timber and all the materials for ship-building, now sailing on the Pacific along the coast Southward. He gave to the new country the name of "Peru." News of the strange ship and people reached the Inca Huayna Capac.

The common rat, *Mus decumanus*, unknown in Peru before the voyage of Balboa—(G. de la Vega ix. 22).

"The same year" (Alst.), end of the chronicle of Paulus Langius.

"1516 A. D." (art de verif.), Kansu El-Gouri succeeded by Toman-Bay II., of the Borgite Memluk dynasty;—the last Egyptian sultan.

"In this year" (biogr. univ.), Gariopontus publishing his medical writings.

"In this or the following year" (Asher edit. Huds. p. lxxii), under the patronage of Henry VIII. of England, Sebastian Cabot continuing along the American coast as far as "68° N." (Herrar.) in a seeming Northwestern Passage—(afterwards called Davis's Strait). The "west coast" of this "strait up to 67° 30'" is delineated "on Cabot's great planisphere of 1544," now in Paris.

"In this year" (Major edit. Zen. p. lxxvii to lxxix), Eric Walckendorf, archbishop of Trondheim, collecting documents and oral traditions respecting the lost Greenland colony, and submitted to the king a proposal for the re-discovery,—but was banished before a plan could be arranged, and died "in 1523" at Amsterdam. Expeditions were "in 1578" and during the two succeeding centuries, all mistakingly searching the Eastern coast, until the voyage of Graah "in 1828" fully demonstrated that the site of the colony was on the Southwestern coast (see Ivar Bardsen).

"1517, Jan. 8th" (art de verif.), Francisco Hernandez de Cordova sailing from Santiago de Cuba westward with three ships navigated by Anton. de Alaminos, at the end of "twenty-one" days discovered Yucatan.

"The same year" (Marcel p. 189), after defeating in Syria the Egyptian army, partly through the employment of *artillery*, entrance of the Turks under Selim into Egypt. Obtaining possession of the country, the sovereignty and spiritual authority were removed to Constantinople; the Memlucs

were formed into an aristocracy; and the names of the Turkish sultans were from this time inserted on the coins issued in Egypt (Wilk. theb. and eg. p. 557).

"The same year" (Churchill coll.), Fernan Perez de Andrade, continuing the discoveries of the Portuguese, sailed through the Straits of Malacca as far as Cambodia and Chiampa; and returned "to Malacca to refit." — When the weather again became "seasonable," he resumed his voyage, and reached Quantung (Canton) in China: According to the Chinese account (topog. Cant., and Pauth. p. 473), in the "12th year tching-te," strangers from West called "Fa-lan-ki" (Franks), saying that they brought tribute, entered the river abruptly and with their terribly resounding cannon shook the place from afar. When the news reached government, an order was dispatched, To repel the strangers and suspend commerce. From this time, tribute or duties were seldom brought to Canton, but went into Fou-kien: until at length, the governor of Canton wrote and obtained leave to re-open commerce. At a later period (Churchill coll.), permission was granted to the Portuguese, to settle on "a little island opposite to the port of Canton," and on which they built the city of Macao.

"In this year" (Anderson, and Holmes), fifty French, Spanish, and Portuguese ships employed in the cod fishery on the banks off Newfoundland.

"The same year" (Alst. p. 514, and Blair), "Indulgences" remitting sin, distributed by the pope in Germany, denounced by Luther an Augustinian monk.

The *Reformation* thus inaugurated — received the name of *Protestant* twelve years afterwards at the Diet at Spires.

"1518 A. D." (N. Shaw edit. Champl. p. ii), Baron de Lery sailing with the intention of forming a settlement in North America; but after leaving his cattle and pigs on Sable Island and at Canso, was obliged to return to France. — The cattle multiplying on Sable Island were "of the greatest service to certain of" De la Roche's people, who were left there seventy-three years later.

"In this year" (Ovied. gen. hist. xvii. 10, and Churchill coll.), from Cuba sailing Westward along Yucatan, Juan de Grijalva found his course arrested by continuous land (Mexico).

"The same year" (Alst. p. 310), the last remnant of the Moors or Muslims expelled by Charles V. king of Spain The *Inquisition*, employed in discovering them, — was introduced by him some years later into Belgium.

Scorzonera Hispanica of the West Mediterranean countries. Called in Britain *viper-grass* from the Latin "viperaria" (Prior); and not earlier than this year, its juice employed by "a Moore, a bonds slave," in bites of the viper, or "escuerso" as called in Catalonia — (Monard., Parkins. th. 410, and Beckm.): Monardes in his printed work speaks of the "yerva escuerçonera" as known in these parts for thirty years: *S. Hispanica* is termed "scorzonera" by Matthioli (Targ.), "s. edulis" by Moench, "s. sativa" by Gatereau; is cooked and eaten, is known to grow wild in Spain and Southern France (Lam. fl. fr.), and according to Persoon occurs also in Hungary and Siberia.

"Sept. 25th" (Alst.), through the influence of Frederic elector of Saxony, Luther relieved from a summons to Rome, and allowed to plead his cause before the pope's legate at Augsburg. "Nov. 19th," a written demand received from the pope's legate and shown to Luther; who in consequence appealed from the pope to the general Council. "Dec. 8th," the reply of Frederic, refusing to expel Luther or compel him to go to Rome, "as his error had not yet been demonstrated."

"In this year" (Spreng.), Marcellus Vergilius of Florence publishing his commentaries on Diosc. — He died in "1521."

Narcissus calathinus of the Mediterranean countries. Described by Marcellus Vergilius, — and known to grow wild on the Appenines (Spreng.): met with farther East by Rudbeck elys. ii. 60. f. 5 (Pers.).

"In this year" (Stanley append. De Morga 404), a machine for distilling sea water, and thus procuring fresh water at a distance from land, used by Domingo Rivera. — The plan was tried by Quiros, and so far as regards the quality of the product, with entire success.

"In this year, or perhaps some years later" (D'Avezac edit. J. Cart.), French colonists with a supply of domestic animals sent by Lery and Saint-Just to Sable Island. The want of water proved an obstacle to settlement: but cattle and swine were left behind, — and multiplying, became a resource subsequently to a shipwrecked party who were compelled to remain "five years" on the island.

"1519, Jan. 1st" (Alst. p. 408 and 515), at Tigurum, Zwinglius preaching; regarded as the first "Orthodox" theologian.

"April 25th" (biogr. univ.), the Tunisians defeated in naval combat by the Genoese under Andreas Doria.

Senecio Saracenicus of Western Europe? Called in Britain *Saracens consoud*, in mediæval Latin "consolida Saracénica" (Prior), in Germany "heidnisch wundkraut" (Trag), and the "doria" herb,

brought by Andreas Doria returning in his fleet from Africa — (Caesalp. xii. 42), may be compared : *S. Saracenicus* is however described by Braunsweig ; was observed by Tragus i. pl. 163 in the woods of Germany and much used as a vulnerary ; is regarded by Jacquin austr. pl. 186, Persoon, Fries, and A. Decandolle, as indigenous in middle Europe as far as Denmark. In Britain, was known to Parkinson th. 540, to Ray as growing spontaneously, was found by Mackay in woods near Bantry in Ireland, but occurring chiefly in suspected localities is regarded by Watson cyb. ii. 118 as probably exotic.

Senecio Doria of the Mediterranean countries. — Termed "dorea" in the *Viridarium botanicum* Italo-Hispanum (a manuscript of A. D. 1731, Targ.), "s. altissimus" by Miller, "s. carnosus" by Lamarck fl. fr. (Steud.) ; described also by Linnæus ; and known to grow in France and Germany (Jacq. austr. pl. 185, and Pers.).

"June 28th" (Alst.), Maximilian succeeded by the king of Spain Charles V., now elected emperor of Germany and Italy.

"The same year" (Churchill coll.), landing in Mexico of a Spanish expedition under Hernando Cortes.

"In this year" (W. B. Rye edit. De Sot. p. xii), Alonzo Alvarez de Pineda sailing from Jamaica under "orders to search for some gulf or strait on the continent towards Florida." After following the coast Eastward, and then Westward, making a careful survey and taking possession of the country, he fell in with Cortes, engaged at Vera Cruz. From this limit he turned backwards, and on his way "discovered a mighty river" (the Mississippi), "at whose mouth dwelt a considerable population."

"1520 A. D." (Alst., and art de verif.), Selim succeeded by Suliman II., twelfth Turkish sultan. Agreeably to the uniform practice with Turkish sultans (Marcel p. 200), the coins issued by him bear the date of his accession only.

"June 14th" (Alst.), by pope Leo X., a decree excommunicating Luther and ordering his writings to be burned. "Nov. 4th," by Frederic of Saxony, another refusal to comply with the pope's demand and deliver up Luther. "Dec. 10th," at Witemberg in the presence of a large assembly, the pope's decree publicly burned by Luther.

"The same year" (Clavig., and Humb. all. pict.), Montezuma II. succeeded by Cuitlahuatzin ; and after "three months," by Quauhtemotzin, eleventh Mexican emperor.

The collection of living animals kept by Montezuma included an *American bison* *Bos Americanus* (Henderson in Am. Nat. for 1872) ; showing communication with the plains of the Arkansas and Missouri.

"In this year" (Ciez. de Leon, and Markham edit.), the city of Panama founded by Pedrarias de Avila governor of Terra Firma. — The city was captured and destroyed by the buccaneer Morgan in "Feb. 1671," and the new city bearing the same name is "some miles" distant.

"The same year" (Ovied. gen. hist. iv. 4), rebellion of Negro slaves in the West Indies. Also, sailing from Hayti of two ships under L. Vazquez de Ayllon for the Florida coast : in "about Lat. 32°," he named a cape "Santa-Elena," and beyond entered the river Chico (Santee) ; where he enticed natives on board and returned with "fifty" to Hayti (art de verif. contin.) : the experiment proved a failure, for the captives could not be induced to labour.

"Aug. 24th" (Stanley edit. Mag., and Pigaf.), Fernando de Magalhaens or Magellan, a Portuguese in Spanish employ, with four small vessels on his way Westward to join his friend Francisco Serano at the Moluccas, leaving Port St. Julian in Patagonia : where he had quelled a mutiny. Magellan continued South, and "Oct. 21st in about 52° S." entered an opening leading to three channels ; and of the vessels sent to examine one secretly deserted and returned homewards. Magellan unaware continued onward in his explorations, and after many days word was brought by the boats of a "sea great and wide : " Magellan now "began to cry," for he "had made up his mind to go as far as seventy-five degrees towards the antarctic pole." On "Wednesday, Nov. 28th," he left the Straits (which continue to bear his name), sailing on the Pacific "West-northwest."

Apium dulce of Austral and Western America. Larger and possibly distinct from *A. graveolens*, the leaves more divided and incised ; called in Britain *celery*, in France "celeri," in Italy "sel-laro" (Prior) : the "appio," a "very sweet herb" growing near the springs, was eaten by Magellan's party for several days "from not finding anything else ; " there "is also some of the same kind which is bitter : " — "Alexander's scurvy grass" was found in the Straits of Magellan by Drake : *A. dulce* was first met with by myself within the Tropics, along the seashore of Southern Brazil ; afterwards, at the mouth of the Rio Negro in Patagonia ; and in crowded beds lining the Southern shore of Terra del Fuego, upright and tall and almost edible ; but in Chili along the Pacific, rare, spreading on the ground, and inedible ; is known to grow from the Falkland Islands to Mexico (Lindl.) ; and was observed by Nuttall in California (acad. Phila. n. s. i. 183). In regard to cultivated *celery*, Belon at Constantinople found the "ache" blanched and called "selino ; " in Western Europe, celery appears to have continued unknown until about the end of the Seventeenth century (Beckm., Miller, and

Prior); and in Egypt, was found by Clot-Bey confined almost exclusively to the pasha's garden, and only the root eaten. By European colonists, was carried to Hindustan (Graham); to Burmah (Mason); and to Northeast America. (Compare *A. graveolens*.)

"1521, Jan." (Humb. cosm. v), the use of the *log* to ascertain the rate of sailing, "cadena de la popa" and "corredera" of Pigafetta, first mentioned on Magellan's voyage.

"Jan. 24th" (Churchill coll., and Stanley edit. Mag.), at the end of "fifteen hundred leagues" in "about 16 $\frac{1}{4}$ ° S." Magellan discovered a small uninhabited island "with trees on it" and no anchorage around (a coral-island) and named it San Pablo: "two hundred leagues" beyond "in 11 $\frac{3}{4}$ ° S.," a similar small uninhabited island, from the number of sharks around, received the name of Tiburones: crossing the Equator and proceeding as far as "13° N.," suffering much from scurvy and want of food, on "Wednesday March 6th" a cluster of islands was discovered, which from their experience with the natives was named Ladrões. Continuing West, on "Saturday March 16th" Samar, one of the Philippines, was discovered (and the same longitude having been reached on the Moluccas by Antonio Dabreu sailing East, the division of the globe between Portugal and Spain was completed). Magellan visited the neighbouring islands of Mazzava and Sebu,* and warring against a chief on Matan, who refused baptism and submission to the king of Spain, was slain with several of his companions on "Saturday, April 27th." His successor Duarte Barbosa was soon afterwards slain with others by natives who had professed friendship, and the vessels sailed Westward: one of them was burned at sea, and the other two visited Palawan and the Northern part of Borneo, and having procured a native pilot, returned along the coast of Mindanao, and on "Friday Nov. 8th" reached Tidore in the Moluccas. "Dec. 21st," the Victoria, one of these vessels now in the charge of Juan Sebastian del Cano, leaving Tidore continued her voyage Westward; visiting on the way the islands of Burro, and Timor "in 11° S." (Galvan.).

"1521, March 6th" (Alst.), through Frederic, Luther furnished with letters of safe-conduct from the emperor Charles V., and invited to the Diet at Worms: where he explained his views before the princes of the Empire. Returning under proscription, he was concealed by Frederic in the castle of Warburg. Among those writing against Luther, Henry VIII. of England received from pope Leo X. the honorary title of "Defender of the church."

"In this year" (Spreng., and Winckler), Johannes Manardus of Ferrara writing his *Epist. Medic.* . . . — He died "in 1536."

Heracleum panaces of the Pyrenees? Observed by Manardus in a garden at Ferrara — (Spreng.); termed "*h. setosum*" by Lapeyrouse (Steud.), and attributed to the Appenines and Siberia (Pers.).

After "nine months" of this year (Clavig. iv. 55 to 61), end of the reign of Quauhtemotzin, eleventh and last Mexican emperor: the Spaniards under Cortes now obtaining entire possession of the country.

"1522, Jan. 21st" (Churchill coll.), sailing of Giles Gonzales Davila, with four ships built on the Pacific side of the Isthmus. After following the coast Westward as far as Nicoya in Nicaragua, he landed: one of his ships under the command of Andrew Nino, continued on "three hundred leagues" in all, as far as the Bay of Fonseca in Guatemala.

"The same year = 'kia-tsing,' 1st year of Chi-tsoung-sou-ti" or Chi-tsoung II., "of the Ming" or Twenty-third dynasty (Chinese chron. table). The Great Wall was repaired by Chi-tsoung II. (Pauth. 406).

"March 18th" (Alvo, and Stanley edit. Mag.), Amsterdam Island (North of St. Paul's) in the Indian Ocean, discovered by Sebastian del Cano in the Victoria. Continuing Westward, the Victoria entered the Atlantic, and on "Saturday, Sept. 6th" (according to the reckoning of those on board), arrived at

* *Canarium album* of Anam and the Philippines. A pinnate-leaved Terebinthine tree called in Tagalo "pisa" or "pilai," in Ylocano "anten" (Blanco); and the animé gum of Pigafetta, "wrapped up in leaves of palms or fig-trees" to make candles by the natives on Mindanao, — may be compared: *C. album* was observed by Loureiro on Anam; by Blanco, frequent on the Philippines, its mixed resinous juice wrapped in a frond of *Corypha umbraculifera* for illumination.

Ficus (*Covellia*) *odorata* of the Philippines. A small tree called in Tagalo "agos-os" (Blanco), and possibly distinct from *F. oppositifolia*: the natives on Mindanao according to Pigafetta in cooking rice first place inside the earthen pot "a large leaf which lines it all round internally:" — *F. odorata* was observed by Blanco rare on the Philippines, its leaves used by the natives for lining the interior of the pot in cooking rice, to impart an agreeable odour. (Compare *F. oppositifolia*.)

Dioscorea tugui of the Philippines. Called in Tagalo "tugui" (Blanco); and the "yams" seen by Pigafetta on Palawan — may be compared: *D. tugui* was observed by Blanco on the Philippines, much cultivated by the natives and much esteemed.

San Lucar in Spain, being the first ship that sailed around the World. The names of the "thirty-one" returning companions of Magellan — have been preserved by Herrera.

"The same year" (Alst. p. 308, 361, and 518), Belgrade in Hungary captured by the Turks under Suliman II. After voting assistance to king Louis of Hungary, the assembly at Norimberg responding to the request of pope Adrianus VI., Either to convince Luther by sound argument, or enforce the emperor's decree, declared against Luther's doctrines, and urged convening a general Council, to amend the condition of the church.

"The same year" (Purchas, and Holmes 1610), Bermuda visited, if not discovered, by John Bermudez.

At this time (according to Encycl. Meth., and Holmes) Newfoundland containing as many as fifty houses, belonging to European settlers of different nations.

"1523 A. D." (Alst.), at Brussels, two Augustinian monks having declared, They would be guided in their faith solely by the Bible, burned alive.

At the close of this or beginning of the following year (art de verif. contin.), Kicab-Tanub succeeded by his son Tecum-Umam, now "fifteenth" king of Guatimala at Quiché.

"1524. Jan. 17th" (letter in soc. Hakluyt, and Churchill coll.), under instructions from the French king Francis, Janus Verrazzanus of Florence sailing from a rock near Madeira. Continuing Westward, he came upon a new country in "Lat. 34°," the coast of fine sand, everywhere low, and covered with immense forests, "palme" (*Chamærops palmetto*), "lauri" (*Persca Carolinensis*), "cipressi" (*Taxodium distichum*); the natives wearing a covering of "certe erbe che stavano pendenti á rami degli alberi" (*Tillandsia usneoides*) interwoven with cords of "canape silvestra" (*Apocynum cannabinum*), and having "genere è di legumi" (*Phaseolus vulgaris*): he also met with "molte vite" bearing grapes "suave e dolce" (*Vitis vulpina*), "rose silvestre" (*Rosa Carolina*), "viole" (*Viola pedata*), "gigli" (*Lilium superbum*), deer (*Cervus Virginianus*), stags (*Cervus wapiti?*), and hares (*Lepus Americanus*). After proceeding fifty leagues Southward without finding a harbour, he returned and followed the coast Northeast. North of an opening (probably the mouth of the Hudson), he met with "quercie" (oaks), "cipressi" (*Cupressus thuoides*), "pomi" (*Cratægus tomentosa*),* "luculliane" (*Cerasus serotina*), "prune" (*Prunus maritima*), and "lupi cervieri" (*Felis rufa*); he reached "Lat. 41° 40'," and speaks of an island about as large as Rhodes "di grandezza simile alla isola di Rodi." From this point, he followed close along the coast "one hundred and fifty" leagues, and "fifty" leagues beyond met with "abeti" (*Abies nigra*), "cipressi" (*Thuia Occidentalis*), and like indications of a cold climate. In "Lat. 50°" he left the coast, and as appears by the date of his letter, reached Dieppe in France on or before "July 8th."

Thuia Occidentalis of Northeast America. The *Canadian arbor-vitæ*, clearly the "cipressi" seen by Verrazzanus at the Northern termination of his voyage, — and the "cedres" seen by Cartier around Chaleur Bay; *T. Occidentalis* was observed by F. A. Michaux from "Lat 49°" to 45° and along the Alleghanies to the rapids of the Potomac; by myself, from 48° on the St. Lawrence to 41° along the Atlantic and 43° in central New York; by Elliot, on the Alleghanies of Carolina; and according to A. Gray, grows Westward as far as Wisconsin. Transported to France in the reign of Francis (Dodoens 858, and Spreng.) the "arbre de vie de Canade" is mentioned by Belon in 1553: trees under cultivation by Robin in Paris were known to C. Bauhin (edit. Matthioli.); and *T. Occidentalis* was observed by Clot-Bey and Figari in the gardens of Egypt.

"April 25" (art de verif. contin.), Pedro de Alvarado with an army from Mexico entering Guatimala.

"Sept. 6th" (Castanh., and San Roman, C. Correa giving "7th"). earthquake in Hindustan, experienced off the port of Chaul by Vasco da Gama on his Third voyage arriving as viceroy. He died "Dec. 24th," and was buried in the cathedral at Cochim: — but the cathedral together with the city and harbour were destroyed by the English "in 1806" (Stanley edit. C. Corr. 429).

"Nov. 14th" (Francisco de Xeres, and Churchill coll.), sailing of Francisco Pizarro from the Pacific side of the Isthmus. Following the coast farther South than any before him, he reached the

* *Cratægus tomentosa* of Northeast America. The *pear-thorn* is a small tree, its fruit probably the "pomi" seen by Verrazzanus after passing the opening and before reaching Lat. 41° 40': — "pommes" brought by the natives, were seen by Cartier in Chaleur Bay, and "aubespines" with fruit as large as prunes, along the St. Lawrence: a "white thorne" that "affords hawes as big as an English cherrie, which is esteemed above a cherrie for his goodnesse and pleasantnesse to the taste," was known to W. Wood on Massachusetts Bay: *C. tomentosa* was observed by Pursh on the Chaudiere; by myself, from Montreal to Western Massachusetts: by Torrey, on the Hudson to Lat. 41°; by A. Gray, "common" in central New York, and received from "Michigan, Illinois, and southwestward." Transported to Europe, is described by Linnæus, and Jacquin hort. i. pl. 28.

Equator; and landing with most of his men, sent the ship back for supplies. On the return of the ship, he continued South; — and after much delay, again landing and sending for supplies, he was joined by other ships bringing James de Almagro “who was at the chief expense of this enterprise.”

“Towards the end of the year” (Ovied. nat. hyst. f. 14, and Asher edit. Huds. p. xc), Estevan Gomez, now in Spanish employ, examining the American coast “in 40° and 41° N.,” finding the natives larger than those of Terra Firma, clothed in “cueros” leather, and furs, including “zebellinos” sables. His “great river” “in the neighbourhood of the cape De Muchas Islas,” — afterwards called by Spanish seamen “Rio de Gamas,” is clearly the North or Hudson river (see Spreng.).

“The same year” (Alst.), Luther’s followers including monks who had married and cast the images out of churches, a demand by pope Clemens VII. through his legate in the assembly at Norimberg, That the elector of Saxony should purge his province of Lutherans.

“1525, February” (Alst. p. 521), the French defeated in Insubria, and their king Francis taken prisoner and carried to Charles V. in Spain. — He was released in the following year, leaving as hostages two sons; and deeming the conditions unjust, entered into a treaty with pope Clemens VII. and the Venetians.

“The same year” (Alst. p. 308), Rhodes captured from the knights of St. John by a Turkish fleet.

“The same year” (Steinschneid. iii. 27), the bible first printed in Hebrew “with perfect masora.” Corrected by Jacob ben Chajjim of Tunis.

“On the first Sunday of Lent” (according to his own account), Cortes on his land-journey from the city of Mexico to Honduras leaving Aculan; a populous and extensive province under the rule of Apospolon. Having detected a plot for the destruction of the Spaniards originated by his prisoner Quauhtemotzin, the ex-emperor and his assistant were put to death. From Trujillo — he returned by sea, leaving “April 25th,” and after visiting Havana “reached the port of Chalcicuela” (Vera Cruz) May 24th. While writing this fifth letter (dated “Sept. 3d, 1526”), a messenger from the Pacific brought news of the arrival of a ship from the “Malucco Islands.”

Juniperus thurifera of Mexico? A tree more than twenty-five feet high (Daubeny); and the “aromatic resin extracted from the pine tree,” used according to Cortes by the natives of Aculan for “incensing their idols,” — may be compared: *J. thurifera* is known to grow in Mexico (Pers.): but is termed “incenso” by Montigiano (Targ.), “j. hispanica” by Miller, and Lamarck enc. ii. 626, and occurring in the “kingdom of Murcie and Anatolie” (Cosson iii. 129 and A. Dec.), has clearly been transported by European colonists from one continent to the other.

“The same year” (according to his own account), Oviedo in Hayti, writing his “Natural hystoria de las Indias;” in which he refers to his “General y natural istoria de Indias.” He mentions (according to Sprengel) *Vitis Indica*, and *Quercus salicifolia*.

Anona squamosa of the West Indies and neighbouring portion of Tropical America. The *cus-tard-apple* or *sugar-apple*, called in Mexico “ahate” or “ate” * (Hernand. 340 to 454); observed by

* *Anona reticulata* of the West Indies. The *bullocks-heart* or “anon” was observed by Oviedo gen. hist. viii. 18 in the West Indies, its fruit resembling the “guanabano,” yellow; — the “ananes” on Cuba by the Portuguese companion of De Soto 5; *A. reticulata* by Jacquin obs. 223, and Macfadyen, wild on the mountains of Jamaica. By European colonists, was carried to Southern Brazil, observed under cultivation by Martius; and Westward across the Pacific to the Philippines, called in Tagalo “anonas” (Blanco); to the neighbouring islands, observed under cultivation by Rumphius i. 136; to Anam (Lour.); to Burmah (Mason); to Hindustan, observed by Rheede iii. pl. 30 under cultivation in Malabar, by Roxburgh in Bengal and called “noona” (A. Dec.), by Graham “in gardens and about temples” in the environs of Bombay, and called “ram-phul;” to the Mauritius Islands (Boj.), and called by the French “cœur-de-bœuf” (A. Dec.).

Lepidium Virginicum of Tropical and Subtropical North America. A *wild peppergrass*, apparently the “mastuerzo saluage” seen by Oviedo nat. hyst. 80 growing abundantly: — *L. Virginicum* was seen in the West Indies by Sloane pl. 123; by Humboldt, on the mountain near Caraccas; by Chamisso, at St. Catherine’s in Brazil; by Baldwin, on Bermuda and at 31° in Florida; by Croom, at 30° 30’; by Chapman, in “waste places, very common;” by Drummond, near Covington in Louisiana; by E. James, near the Rocky mountains; by Michaux, in Illinois; by A. Gray, along “road-sides” in central New York; by Elliot, in South Carolina; by myself, in waste places from 38° to 43° along the Atlantic; and “a plant like Knavers-mustard, called New England mustard,” was known to Josselyn rar. 54 before 1670. Transported to Europe, *L. Virginicum* is described by Morison hist. ii. pl. 21, and Linnæus; and for many years has continued springing up spontaneously in the lazaretto at Bayonne (Godron, and A. Dec.).

Heliconia bihai of Tropical America. Herbaceous and banana-like; the “bihaos,” whose leaves

Oviedo in the West Indies — (Marcgr. 94) ; by Sloane, P. Brown, and Macfadyen, wild on Jamaica ; by Descourtiz, both wild and cultivated in the West Indies ; by Splitgerber, perhaps indigenous in the woods of Surinam ; by Martius, wild in the forest on the Lower Amazon. By European colonists, was carried to Southern Brazil (Vellozo, A. Saint-Hil., and Mart.) ; and Westward across the Pacific to the Philippines, where it is called in Tagalo "ates," in Bisaya "yates" (Blanco) ; to the neighbouring islands (Rumph. i. 139) ; to Anam and Tropical China (Lour.) ; to Burmah, called there "au-za" (Mason) ; to Hindustan, observed by Rheede iii. pl. 29 in Malabar, called there "attamarum," in Hindustanee "ata," in Bengalee "loona" or "meba," in Tamil "sita-pullum" (Drur.), in the environs of Bombay "seeta-phul," now "very generally cultivated all over India," and naturalized, growing "without any care" (Graham, and Royle) ; to Eastern Equatorial Africa, observed by myself on Zanzibar ; to Yemen, called there "s'ferdjel hindi" Indian quince (Forsk.) ; to Egypt, called there "keschta" coagulated milk (Hasselq., Forsk. p. 102, Del.), and according to Clot-Bey ripening fruit ; to Western Equatorial Africa, occurring only under cultivation (fl. nigr. 204, and A. Dec.) ; and after the visit of Forster to the islands of the Pacific, observed by myself on the Tahitian, Samoan, and Tongan Islands, and in Southeast Australia.

Jatropha curcas of the Cape Verd Islands. A large thick-stemmed shrub called *physic-nut*, doubtless furnishing the "auellanos para purgar" seen by Oviedo nat. hyst. 80 growing on Hayti, but not on Terra Firma. — *J. curcas* was observed by Descourtiz in the West Indies, no Carib name given, by Ruiz and Pavon in Peru, by Marcgrave 97, and Martius, in Brazil, but in foliage and habit appeared to me at home on the Cape Verd Islands, especially as a corresponding species belongs to Southern Arabia, under the same Desert climate. Possibly without European intervention, was carried to Zanzibar, observed by myself springing up spontaneously around dwellings : to Hindustan, observed by Graham "a very common shrub in Bombay and about villages throughout the Concan," used "as a hedge plant ;" is called in Telinga "napalam," in Bengalee "bagbharinda," and according to Roxburgh, oil is expressed from its seeds, and its "leaves warmed and rubbed with castor oil" are applied by the natives to promote suppuration : to Burmah, observed by Mason v. 509 "exotic," planted for hedges, and its juice dyeing linen black : to the Philippines, called in Tagalo "tuba," in Ylocano "tavatava," on Gilolo "casla," but according to the natives unknown in former times (Blanco) : to China, its oil according to Lindley "boiled with oxyde of iron forms a varnish used by the Chinese for covering boxes ;" its seeds or nuts are powerfully cathartic.

"1526 A. D." (Prior), Treveris publishing his Grete Herbal.

"March 10th," the Description of North Africa by Leo Africanus completed.

Erodium glaucophyllum of the Egyptian Desert. Called in Egypt "tummæjr" or "kabsjie ;" the "habbasis" of Leo Africanus 5, may be compared : *E. glaucophyllum* was received from Egypt by Dillenius elth. pl. 124 (Pers.) ; and was observed by Forskal p. 123, and Delile, in the environs of Cairo, growing in the Desert.

"June 25th" (Alst.), meeting of the Diet at Spires. In regard to the restoration of the church, an invitation was extended to Charles V. to visit Germany ; To see the condition of things, and procure the assembling of a general Council. And at "the close of August," the session terminated.

"Sept. 13th" (Churchill coll.), by Alonzo de Salazar, on his way from Mexico to the Southernmost Ladrone Islands, an island discovered and named by him "S. Bartholemew."

"The same year" (Churchill coll.), by Sebastian Cabot, now in the Spanish service, the La Plata river ascended "two hundred leagues" to the Paraguay branch. Continuing up this branch "thirty leagues," he met with "a people that tilled the ground, which he had not seen before," and was compelled by them to return (see *Ilex Paraguayensis*).

In this year (Churchill, and Ciez.), arrival of a ship, sent by the governor of Panama to bring back Pizarro and his companions. Pizarro drew a line on the sand, and permitted all who wished to leave him : "thirteen" only remained behind. With these "thirteen," Pizarro "ten or twelve days" afterwards reached Tumbes, where he heard of the city of Cuzco. Following the coast as far as Santa in "S. Lat. 9°," he returned Northward, — and after "three years" absence arrived at Panama.

"In this year" (Garc. de la Vega), "the very year" that Pizarro "with his thirteen companions" entered Peru (Ciez. lxxvii), death of the Inca Huayna Capac. He was succeeded by his eldest son Huascar ; who at his father's request permitted another son Atahualpa to rule the kingdom of Quito.

"1527 A. D." (art de verif.), Kasiawabara succeeded by his son Gonara, now daïro of Japan.

according to Oviedo nat. hyst. 80 are used for covering dwellings, — is referred here by Sprengel : *H. bihai* was observed by Swartz obs. pl. 5 in the West Indies. Transported to Europe, is described by Linnæus, and Jacq. hort. 25.

Chamaedorea gracilis of Caraccas. A *palm* ten feet high ; described by Oviedo — (Spreng.) ; and known to grow in Caraccas (Jacq. hort. schoenb. ii. pl. 247-8, and Pers.).

"The same year" (Alst. p. 308), the Hungarian king Louis defeated and taken prisoner, and the city of Buda captured, by the Turks under Suliman II. The library of king Corvinus, reported to have been on this occasion burned, — has recently been discovered intact in Constantinople.

"May 6th" (Alst., and Blair), by the forces of Charles V., Rome captured, and pope Clemens VII. with the cardinals confined in the castle of St. Angelo. Henry VIII. of England and Francis, agreeing by treaty to send an army to liberate the pope, he was "after the seventh month" released.

"The same year" (Alst.), founding of the Sect of Anabaptists.

"1528, Jan. 26th" (Alst.), at Berne in Switzerland, the images removed from the churches and various religious ceremonies abolished. The example was followed in the neighbouring villages, and soon afterwards, at Constance, and Geneva.

"March" (Galvan.), Alvaro de Saavedra, sent by Cortes, arriving at Gilolo, finding "the sea calme and winde at will" all the way across the Pacific.

"April 12th" (Cabeza de Vaca, and Churchill coll.), arrival of the expedition under Pamphilo de Narvaez on the North shore of the Mexican Gulf (and clearly West of the Mississippi). "Forty horses" were landed; with which he and a party proceeded, leaving the ships to follow, to find a "harbor where they might settle a town." They met with "walnut trees" (*Juglans nigra* or *Carya olivæformis*), "laurels" (*Persea Carolinensis*), "others called liquid ambers" (*L. styraciflua*), "cedars" (*Taxodium distichum*), "savins" (*Juniperus Virginiana*), "ever-green oaks" (*Quercus virens*), "oaks, pines" (*Pinus tæda*) "and dwarf palmettos" (*Sabal Adansoni*), also an animal with a "pocket in its belly in which it carries its young" (*Didelphis Virginiana*), "rabbits" (*Lepus palustris*), "hares" (*Lepus Americanus*) "bears" (*Ursus Americanus*), "lions" (*Felis concolor*), "mallards" (*Anas . . .*), "night-herons" (*Ardea nycticorax*), "very fine pastures for herds," and "beans" and "pumpkins" (cultivated by the natives). The ships were wrecked, when they built five boats, which were completed "Sept. 20th." These were also wrecked, and the party reduced to "three or four" persons, — who after travelling "some hundreds of leagues across the country," succeeded in reaching Mexico.

"The same year" (art de verif.), in Japan, the title "dai-seogun" conferred by Gonara on Jositir, son of Josifar, and twenty-fourth in descent from Joritomo.

"1529, March 15th" (Alst.), another meeting of the Diet at Spires. A decree was adopted, Prohibiting further innovations in religion until the assembling of a general Council. Against this decree, the elector of Saxony and several other princes protested; and were afterwards joined by different cities in Germany and Switzerland; and hence the origin of the name "Protestants." The reformers now began to take measures for their own safety, and at the "close of November" met in consultation at Smalcald.

"April" (transl. Buckingham Smith), Cabeza de Vaca among the aborigines West of the mouths of the Mississippi, ate *blackberries* (*Rubus trivialis*) all this month: the women only had any part of the person covered, employing for clothing a moss that grows on the trees (*Tillandsia usneoides*): in travelling, many of the canes (*Arundinaria macrosperma*) were broken, so that they often tore his flesh: he speaks of extensive and beautiful plains, and distinctly describes the *American bison* (*Bos Americanus*): the Cutalchiches used for knives, flints a palm and a half long, and were ignorant of time either by the sun or moon, neither reckoning by the month nor year, but understanding the different seasons and positions of the stars: the "pears" (*Opuntia*) were green and so milky that they burned our mouths. — Passing the Rio del Norte, he began to see mountains, on which are small pines the seeds of which are eaten,* and met with a different people: these wore a cotton shirt (Mexicans), which they soap with a certain root that exceedingly cleanses (Wislizenus says the root of a *Yucca* is used for soap): poison was procured from a certain tree of the size of the apple yielding milk from the twigs (*Maclura*?). — Near the coast by the way of towns through which we came, more than a thousand leagues of inhabited country to San Miguel on the Pacific; where he arrived after being alone with the aborigines "nearly six years," ending "in 1533."

"May" (Galvan.), returning from Tidore Eastward, Saavedra "had sight of a land" in "2° S.," and ran along it "aboue fue hundred leagues" (New Guinea), "the people blacke and of curled haire" — called "Papuas" by the natives of Maluco.

In "4° or 5° S.," Saavedra turned Northward and crossing the Equator discovered an island which he called "Pintadas," the inhabitants being all marked (tattooed): a number of canoes came out and commenced a fight with slings, but Saavedra merely ordered sail to be shortened, and proceeded slowly without doing them any mischief. "A little beyond" in "10° or 12° N.," he found "many

* *Pinus flexilis* of the Rocky mountains. Its seeds from early times eaten by the natives — (R. Brown jun.): observed by E. James on the Rocky mountains at the sources of the Arkansas, from the base as far as perpetual snow; and Pike ap. 22 saw some pine timber to the north of Chihuahua.

small low islands full of palme trees and grasse" and anchoring in the midst called them "Jardim;" finding the natives brutish, without laws and without industry, "in maruailous feare of fire because they neuer saw any," living on fish and "cocos," wearing "white clothing which they make of grass" (Micronesians), and by means of shells scooping boats out of the trunks of *pinos* drifted here "at certaine times of the yeere." After leaving Saavedra died, and the ship put back to Maluco.

"The same year" (Alst. p. 308), Vienna besieged by the Turks under Suliman II.

"In this year" (Spreng.), count Hermannus, a Novenaar, writing his Epist. on plants.

Leontodon autumnale of Northern Europe and Asia. The *fall dandelion* is called by Gipsies "morsus diaboli minor," in Hesse "summer dorn," and is included in the "apostematica" of count Hermann de Neuenare — (Trag. i. 81 to 87): *A. autumnale* is described also by Fuchsius 320 pl.; is termed "hieracium chondrillæ folio glabro radice succisa majus" by Tournefort inst. 470; and is known to grow from Lapland and Russia throughout middle Europe (fl. Dan. pl. 501, Engl. bot. pl. 830, Lam. fl. fr., Vill., and Wats.); was observed by Forskal around Constantinople. Westward, by Hooker on Iceland; was received by him from Newfoundland; and clearly by European colonists was carried to New England, where it has become naturalized, and frequent in grassy situations.

"1530, Apr. 8th" (Alst.), general Assembly at Augsburg, On account of the Turkish war and the religious dissensions in Germany. The Augustan Confession, written by Melancthon and sanctioned by Luther, was submitted by the Protestants to the meeting: a "Refutation" was read: and Charles V. made an address, Requiring the Protestants to return to the Church. The session was prolonged; and after futile attempts at reconciliation, several princes left and formed treaties with the Protestant cities for mutual protection. In view of the approaching vote for "king of the Romans" by the elector of Saxony, a Protestant meeting was convened seven days beforehand, at Smalcald "Dec. 22d," and a general federation formed; letters being sent even to the kings of France, England, and Denmark.

"The same year" (Alst.), the Capucin Order of monks confirmed by pope Clemens VII. And by Charles V. (Blair), the island of Malta given to the Knights of St. John.

"The same year" (Alst. p. 284), by king Francis. professors of languages instituted at Paris: one of whom, Franciscus Vatablus, was skilled in Hebrew.

"The same year" (Churchill coll.), sailing from the Pacific side of the Isthmus of the Second expedition of Francisco Pizarro. Following the coast South, "and falling upon the town of Quapel, he took a vast booty of *gold, silver, and emeralds.*"

"1531 A. D." (Ciez. lix), by Francisco Pizarro, founding of the city of San Miguel near the Northern boundary of Peru and the first city established in that country by the Spaniards. — Pizarro narr. f. 16 travelled inland to Caxamalca and Xauxa "in 1533."

"The same year" (Schomb. edit. Raleigh), the Orinoko ascended by Diego de Ordaz as far as the cataract of Atures.

"In this year" (Alst. p. 308), Vienna for the second time besieged by the Turks under Suliman II.

"June 4th" (Alst.), meeting of the Protestants at Frankfort. Swiss cities desiring to join the Federation, were excluded on alleged doctrinal differences.

"In this year" letter of Hieronym Tragus to his "amico et domino Otho Brunfelsio" of Mayence, in which he confirms the statement, That the "angelicam et astranciam" are undescribed plants. Brunfels at this time (Spreng., and Prior) writing his *Novum Herbarium*, enumerating "chamaepitys" iii. 36, *Veronica prostrata*, *Plantago crassa* i. 25, *Viola palustris* i. 137, *Leucoium vernum* i. 129, *Betonica stricta* i. 88, "urtica iners femina" i. 152, *Lamium lacvigatum*, *Mentha rubra* ii. 76, "cardo paris" iii. 35 *Carlina acaulis*, "cynoglossa minor" r. 176, *Myosotis palustris* (Gesn. ii. fig. 77), *Ophrys myodes* i. 105. — He published two volumes "in 1532," died "in 1534," and the third volume was published "in 1537" (Spreng.).

Astrantia major of the mountains of middle and Western Europe. An Umbelliferous plant, probably the "astranciam" of Brunfels alluded to in this letter: — *A. major* is known to grow on the Pyrenees, the mountains of middle Europe, and the Appenines as far as Tuscany (Scop., Pers., and Nees). Transported to Britain, was found in 1840-41 seemingly wild near Ludlow on the border of Wales (A. Dec.). The roots according to Lindley are "acrid and purgative."

Veronica spicata of Europe and the adjoining portion of Asia. Described by Brunfels i.i. 36 — (Spreng.); termed "v. spicata minor" by C. Bauhin pin. 247 (Linn.), and Tournefort inst. 144, and known to grow throughout middle Europe (Oed. fl. Dan. pl. 52, Engl. bot. pl. 2, and Pers.): observed by Linnæus in dry sunny situations in Sweden; by Sibthorp, and Chaubard, in the Peloponnesus.

Sisymbrium sophia of the Uralian plains. An annual called in Germany "welsomen" (Fuchs.); described by Brunfels iii. 170, — termed "seriphium germanicum" by Tragus 338 (Spreng.), "seriphium absinthium" by Fuchsius pl. 2, "s. annuum absinthii minoris folio" by Tournefort inst. 226, and known to occur in waste places and along walls from Denmark throughout middle Europe (fl. Dan. pl. 528, Engl. bot. pl. 963, Lam. fl. fr., and Pers.): was observed by Sibthorp, and Chaubard, in the Peloponnesus and other parts of Greece.

Trifolium hybridum of Europe and the adjoining portion of Asia. Described by Brunfels iii. 48 — (Spreng.); termed "t. orientale altissimum caule fistuloso flore albo" by Tournefort cor. 27, and Vaillant par. pl. 22, and known to occur in cultivated and fallow ground from Sweden to the Mediterranean (Micheli pl. 25, Ehrh. phyt. 26, and Pers.): observed by Linnæus by the roadside between Stockholm and Upsal, also at Abo in Finland; by Sibthorp, and Chaubard, in meads in the Peloponnesus. "T. nigrescens, pallescens," and "Michelianum" of Decandolle, are regarded by Chaubard as not distinct.

Medicago lupulina of Europe and the adjoining portion of Asia. Described by Brunfels iii. 48, — and Fuchsius pl. 819 (Spreng.), and Dodoens pempt. 576; termed "melilotus capsulis reni similibus in capitulum congestis" by Tournefort inst. 407; known to grow in Italy and throughout middle Europe as far as Denmark, and in Britain from "supposed superiority as fodder" called *nonsuch* (flor. Dan. pl. 992, Savi, Engl. bot. pl. 971, Smith, and Prior). Eastward, observed by Sibthorp, and Chaubard, in Southern Greece and Cyprus, and in cultivated ground around Athens and Constantinople. From Europe, carried by colonists to Northeast America, where it continues to grow along roadsides and in grass-grown clearings in our Northern and Middle States.

Scilla bifolia of Europe and the adjoining portion of Asia. Called in Britain *star-hyacinth* (Prior); termed "hyacinthus martius" by Brunfels i. 184, — described also by Lonicer — (Spreng. comm. Diosc.); termed "ornithogalum bifolium germanicum cæruleum" by Tournefort inst. 380; and known to grow from Britain throughout middle Europe (Lam. fl. fr., Scop., and Jacq. austr. pl. 117). Eastward, was observed by Sibthorp, Hawkins, and Chaubard, from the mountains of Crete and the Peloponnesus to Constantinople.

"1532, July 23d" (Alst.), in view of the Turkish invasion, agreement by the Assembly at Norimberg, To refer religious dissensions to a general Council to be convened by the pope. "Aug. 2d," the decision was approved by Charles V.: and in the Diet at Ratisbon, he pledged his influence with the pope, to induce him to convene a general Council; and in case of delay beyond the allotted time, the matter should be referred to a future Diet of the Empire.

"The same year" (Churchill coll.), in Mexico, by an armed expedition under Nunho de Guzman proceeding Northwest, the provinces of Culiacan and Cinaloa discovered and subdued; extending along the Pacific to "twenty-eight degrees of north latitude."

"In this year" (Garc. de la Vega ix. 33, and Markh.), under the pretense of journeying in state to render homage to the Inca, Atahualpa arriving with an army within a few leagues of Cuzco defeated at Quepaypa the forces of Huascar, and took him prisoner. Atahualpa, being of mixed blood and a native of Quito, could not lawfully inherit, but entering Cuzco he summoned all the Inca chiefs of the Empire, and getting them in his power, several hundred in number, put them to death. — (In the words of an aged Inca chief in conversation with Garcilasso de la Vega ix. 39, If Atahualpa "had been an Inca, he not only would not have committed those cruelties and abominations, but he would not even have imagined them: for the tradition of our ancestors was to do harm to no man, not even to enemies.")

Atahualpa was shortly afterwards captured by Pizarro; yet by an order from his place of confinement caused the Inca Huascar to be put to death (Markh. edit. Ciez.).

"1533, June 30th" (Alst.), by the Protestant meeting at Smalcald, the proposed convening of a general Council in some city in Italy, declined.

"The same year" (Alst. p. 308), Vienna for the third time besieged by the Turks under Suliman II. — And as before, unsuccessfully.

"In this year" (Markham edit. Ciez. 35), Carthagera on the Gulf of Darien, not far from the mouths of the Magdalena, founded by Pedro de Heredia.

"Aug. 29th" (Markham edit. p. 300), Atahualpa put to death by Pizarro. Who now, having acquired control of the whole country, inaugurated Manco-Inca at Cuzco. — Manco continued always hostile to the Spaniards, but was unable to recover Cuzco, and "in 1553" was succeeded by the pensioned Inca Sayri Tupac.

"In this year" (Spreng.), Cornelius Petrus of Leyden publishing his Annot. Diosc.,* mentioning *Veronica longifolia*.

* *Ribes nigrum* of Northeast America. The *black currant* is mentioned by Cornelius Petrus — (Spreng.), Dodoens, and Dalechamp; is termed "ribes sylvestre" by Tragus (C. Bauh., and Willd.); and is said to grow wild "in some parts of Europe and Siberia" (fl. Dan., Pers., and Lindl.). Westward, "currants" were seen along Massachusetts Bay by W. Wood i. 5; and "black currents," which "are reasonable pleasant in eating," by Josselyn voy. 72; "R. floridum" is known to grow from Lat. 54° throughout Canada (Hook.); was observed by Pursh from Canada to Virginia; by myself, from 44° to 42° along the Atlantic; by Torrey, as far as 41° on the Hudson; by A. Gray, in "woods, common" in central New York; by Beck, near St. Louis on the Mississippi; and "R. recurvatum" by Michaux 110 "ad ripas Larorum juxta sinum Hudsonis" (Pers.).

Geranium rotundifolium of Europe and the adjoining portion of Asia. Described by Cornelius Petrus,—and Fuchsius 205 (Spreng.): termed “pes columbinus” by Dodoens pempt. 61, “g. aliud secundum” by Dalechamp hist. 1277, “g. folio malvæ rotundo” by C. Bauhin pin. 318, and Tournefort inst. 268, and known to occur in cultivated ground from Sweden throughout Europe (Engl. bot. pl. 157, and Pers.); observed by Linnæus in Sweden, frequent in cultivated ground; by Cavanilles iv. pl. 93, in Spain; by Sibthorp, and Chaubard, frequent in the Peloponnesus and on the Greek islands.

Epilobium tetragonum of Subarctic climates. Termed “cliamænerion glabrum minus” by Tournefort inst. 303,—and known to grow from Sweden throughout middle Europe (fl. Dan. pl. 1029, Curt. lond. ii. pl. 23, Pers., and Wats.), also as far as Tauria (Bieb.): was observed by Brotero in Portugal; by Forskal, and Sestini, in the environs of Constantinople. Westward, by Hooker in Iceland, and received by him from Canada as far as 64°, from the Rocky mountains and Northwest coast; was observed by Mertens at 57° around Norfolk Sound on the Pacific. (See *E. montanum*.)

Epilobium hirsutum of Europe and the adjoining portion of Asia. Described by Cornelius Petrus—(Spreng.); termed “lysimachia purpurea” by Fuchsius pl. 277 (Gesn. ii. fig. 74), “l. siliquosa hirsuta magno flore” by C. Bauhin pin. 245, “chamænerion villosum magno flore purpureo” by Tournefort inst. 303, and known to grow along rills throughout middle Europe (Dill. giss. 131, fl. Dan. pl. 326, Curt. lond. ii. pl. 21, and Pers.): observed by Linnæus in Sweden; by Sibthorp, about Constantinople and on the Bithynian Olympus; and is known to occur in Algeria (Boiss., and A. Dec.).

“1534, March 30th” (Alst., Blair, and Nicol. p. 337), the Protestant Reformation adopted by Henry VIII. of England: and an Act passed, declaring, That the king should be reputed “Supreme head of the Church of England.” In Paris and some other places in France, suspected Protestants were seized, and on conviction burned alive.

One hundred and seventy-fifth generation. May 1st, 1534, onward mostly beyond youth: the Jewish writers, Elia Levita, and Joseph Karo: the Greek writer Arsenius of Monembasia d. 1535: Pelegrino Brocardi, Alciatus, Petrus Apianus, Paulus Jovius, Conrade Heresbach, Hieronymus Fracastor, Sebastian Munster, and Georgius Agricola d. 1555 (Pouchet): the medical writers, Andreas Vesalius founder of the science of Human anatomy, Gabriel Fallopius, Paracelsus: the botanists, Io. Iaxava, Aloysius Mundella: other writers, Francis Guicciardin; cardinal Bembo: Ludovicus Vives; Clement Marot; Rabelais; J. George Trissino; Martin Bucer; Hieronymus Vida: Lilio Giraldi; archbishop Cranmer; John Leland; Peter Aretin; John Sleidan; Robert Stephens; Adrian Turnebus; Annibal Caro; Budeus of Paris; Polydor Virgil: the painters, Gulio Romano d. 1546, Hans Holbein d. 1554, Francesco Mazzuoli called Parmigiano d. 1540, Jacopo Palma il Vecchio b. 1510, Polidoro Caldara da Caravaggio d. 1543, Danielle da Volterra d. 1566.

“In this year” (palm-leaf ann. Jag., and W. W. Hunter, Stirling giving 1533), end of the Gangetic dynasty, Katharuya Deva slain by the prime minister Gobind Bidyadhar, who now became king of Orissa. — He disputed with the Muslims the possession of Rajmahendri, and reigned “seven years.”

“May 10th” (edit. Michelant), arrival of Jacques Cartier with two ships of sixty tons each at Cape Bonavista in “Lat. 48½°” on the coast of Newfoundland. Following the coast Northward, he reached the entrance of the bay of “Chasteaulx” (Straits of Belleisle) on the “27th” and the harbour of “Rapont” in “Lat. 51½°,” where he was detained until “June 9th.” He entered the harbour of “Brest” on the “10th:” in the course of a boat-excursion Westward, passing numberless islets he found a river which he named “Saint Jacques” and a large ship there from Rochelle, the captain having missed his way, and going on board returned in her to “Brest:” the coast was frequented by people painted with certain twiny colours, clad in skins of beasts and wearing feathers in their hair, who came from the Southward in birch-bark canoes to capture seals. On the “15th,” leaving “Brest” with his own vessels he sailed Southward about “twenty” leagues to a cape named by him “Double,” and ascertained that it formed part of the main land. On the “16th,” he followed the coast Southwestward about “thirty-five” leagues. On the “17th,” with a violent Northeast wind he sailed “thirty-seven” leagues Southwestward to a bay full of round islets like dovecots, a cape he called “Royal” (Anticosti) being “seven” leagues distant South a quarter Southwest. On the “18th” the wind being adverse and violent, he returned towards cape “Royal” seeking a harbour, and discovered a wide bay with the Southern shore low, situated in “Lat. 48½°:” the wind continued adverse until the “24th,” when he discovered a cape in the Southeast which he named “saint Jehan,” making his position about “thirty-five” leagues Southwest of cape “Royal.” On the “25th,” the weather continuing unfavourable, he discovered three islets covered with birds, and “five” leagues farther West, an island about “two” leagues in length and breadth which he named “Bryon:” land-

ing on "Bryon," he found fields of "blé sauvaige" (*Triticum repens*) and of peas in full flower,* "prairies" with odoriferous herbs and "frassiers" (*Fragaria vesca* and *F. Virginiana*), and a forest of beautiful trees, one acre of the soil being worth all Newfoundland; a cape "four" leagues distant,

**Lathyrus maritimus* of the seashore of Subarctic climates. The *beach pea* ("pisum maritimum" of Linnæus) probably the "poys en fleurs" seen by Cartier on Bryon Island and around Chaleur Bay: — *L. maritimus* was observed by Lapylaie on Newfoundland; by myself, on the seashore of New England to 42°; by Torrey, and A. Gray, to 40° 40' at the mouth of the Hudson; by Nuttall, on the shores of Lakes Erie, Huron, and Michigan; by Mertens, around Norfolk Sound; according to Hooker, grows about Interior salines from the Saskatchewan to California, the mouth of the Columbia, and along the Arctic Sea to Bering's Straits; and according to Decandolle, along the opposite Asiatic coast to Kamtchatka and Okhotsk. Eastward, was observed by Hooker on Iceland; and is known to grow on the European seashore from Archangel to nearly 50°, but seems wanting throughout Siberia (Morison ii. pl. 2, Pers., and A. Dec.). In the Southern Hemisphere, has been observed at a single point, by J. D. Hooker in S. Lat. 47° in Araucania.

Rosa blanda of Subarctic America. Probably the "rosses de Provins" seen by Cartier on Bryon Island: — *R. blanda* was received by Aiton from Newfoundland and Hudson Bay (Pers.); was observed by myself at 47° 30' on the Lower St. Lawrence and on the summit of Whiteface mountain in Northern New York; according to Hooker, grows from Bear Lake Lat. 65° throughout Canada; and according to A. Gray, from "Vermont to Pennsylvania and Wisconsin, chiefly northward," the "petals light rose-colour."

Rosa lucida of Northeast America. The *low wild rose*, probably the "roses rouges" seen by Cartier around Chaleur Bay, — and "eglantine" seen by Gosnold on Elizabeth Island (near Martha's Vineyard): "plentie of single damaske roses verie sweet" were seen by Higgeson around Salem (hist. coll. i. 119); and "wild damask roses, single, but very large and sweet, but stiptick," by Josselyn 58 in Eastern New England: *R. lucida* is termed "*r. humilis*" by Marshall; is known to grow in Newfoundland (Morrison, Dec., and Hook.); was observed by myself from 47° near Quebec to 40° along the Atlantic; by A. Gray, "common" in central New York; by Pursh, from New York to Carolina; by Schweinitz, at 36° in Upper Carolina; by Elliot, in Chatham County, Georgia; by Croom, as far as 30° 30'; by Chapman, "Florida to Mississippi, and northward, mostly in dry soil, common;" by Beck, as far as the Mississippi near St. Louis. Transported to Europe, is described by Ehrhart ii., and Dillenius pl. 245.

Conioselinum Canadense of Northeast America. Umbelliferous and somewhat parsley-like, probably the odorous "persil" seen by Cartier on Bryon Island: — *C. Canadense* was observed by Michaux at the mouth of the St. Lawrence (Pers.); by myself, frequent from 46° 30' to 47° 30' on the Lower St. Lawrence; according to A. Gray, grows from "Vermont to Wisconsin northward, and southward in the Alleghanies;" and according to Chapman, on the "high mountains of North Carolina."

Fraxinus Americana of Northeast America. The *white ash*: "frainnes" were seen by Cartier before entering Chaleur Bay: — *F. Americana* was observed by F. A. Michaux from Canada and New Brunswick to the Genessee, becoming rare in Southern New York and Pennsylvania; by A. Gray, "common" in central New York; by myself, from 46° to 42° along the Atlantic; by Pursh, from Canada to Carolina; by Croom, near Newbern; by Elliot, in South Carolina; by Chapman, "Florida to Mississippi, and northward;" and by Short, in Kentucky.

Fraxinus viridis of Northeast America. The *green ash*, possibly the "frainnes" seen by Cartier before entering Chaleur Bay: — Drummond found no species of *Fraxinus* North of 54°: *F. viridis* was observed by myself from 47° 30' on the Lower St. Lawrence to 42° along the Atlantic; by F. A. Michaux, in the Western portion of Pennsylvania, Maryland, and Virginia; and according to A. Gray, grows "near streams, New England to Wisconsin and southward."

Ulmus Americana of Northeast America. The *American elm* sometimes called *white elm* (A. Gray), a magnificent tree, probably the "ormes blans" seen by Cartier before entering Chaleur Bay: — the "broad-spread elme whose concave harbours wasps" was seen by W. Wood in Eastern Massachusetts: Drummond found no species of *Ulmus* North of 54°: *U. Americana* was observed by F. A. Michaux from 48° 20' to Nova Scotia, the extremity of Georgia, and the Western States; by myself, from 47° 30' on the Lower St. Lawrence throughout New England, growing especially on river-flats, and most luxuriant North of Lat. 40°; by Pursh, from New England to Carolina; by Chapman, in "low grounds, Florida, and northward;" by Nuttall, on the Arkansas; and by Say, as far as 49° on Red river of Lake Winnipeg.

Ribes (Grossularia) cynosbati of Canada. The *prickly-fruited gooseberry*, probably the "grouaiseliens blans" seen by Cartier around Chaleur Bay: — *G. cynosbati* was observed by Michaux in

he named "Daulphin" as marking the commencement of the fertile country, and from the heavy tide coming from the Southeast, he inferred the non-existence of a passage between Newfoundland and "terre des Bretons." On the "27th," he followed the coast West-southwest about "fifteen" leagues. On the "28th," he continued "ten" leagues to a cape of red land which he named "St. Pierre;" about "four" leagues beyond was another cape, and "five" leagues from this, an island which he called "Allezey." The wind coming from the South a quarter Southwest, he saw no land until the evening of the 30th. On the "1st of July," he landed in four places to examine the odoriferous and beautiful trees, "cedres, iffs pins" (*Abies Canadensis*), "ormes blans, frainnes, sauldres" (*willows*), and several others, none however fruit-bearing, and in unwooded tracts "grouaiseliens rouges" (*Ribes rubrum*) and "franboysses" (*Rubus strigosus*). On the "2d," he had entered a wide bay in "Lat. $47\frac{1}{2}^{\circ}$;" and on the "3d," found the Northern shore high and mountainous, covered with trees, and among them "cedres" and "pruches" large enough for masts of ships of "three hundred" tons or more (*Thuya Occidentalis* and *Abies nigra*); a cape in the South he called "Esperance," in the hope of finding a passage: on "Monday the 6th," in the course of a boat-excursion, had an interview with the natives in "forty or fifty" canoes; and on the 7th, trade was established, exchanging knives, bits of iron, and other articles for skins of beasts: finding that there was no passage, he named the bay "Chaleur;" and on "Sunday the 12th," sailed Eastward about "eighteen" leagues to cape "de Pratto," and anchored. "Five or six" leagues Northward was a river, which he entered on the "14th," and where he was detained by bad weather until the "25th;" visited by about "forty" canoes containing men, women, and children, more than "two hundred" in all, who had come to catch mackerel, and in language, manners, and costume, differing from the natives last seen: the men wearing only a small skin cincture with larger skins thrown over them, and having the head shaved with the exception of a long lock which is tied down with leather thongs; in their own country, which they leave only in the fishing season, grow "prunes," also "figues, noix" called "daheya" (*Juglans cinerea*), "poires, pommes" (*Crataegus tomentosa*), and other fruits, "febeues" called "sahe" (*Phaseolus vulgaris*), and "groz mil comme poix ainsi que au Bresil" (*Zea mays*). On the "25th," the wind fair, he left the river and followed the coast East-northeast "twenty" leagues to where it turned Northwest. Continuing along the coast, on the "28th" he reached a cape in "Lat. $49\frac{1}{4}^{\circ}$," and named it "St. Loys;" and on the "29th," reached land in "Lat. 50° ." On "Saturday August 1st," he perceived other land in the North and Northeast, mountainous in the distance; following this Northeast, and on the "5th," having made in all only "twenty-five" leagues, he passed over in boats to land in sight in the South (Anticosti); on regaining the ships, a council was held, and it was decided to return to France. The wind becoming favourable, he followed the Northern land East-southeast "twenty-five" leagues to a low cape, where natives came on board without hesitation, stating that a captain Thiennot was there and had laden his ships with fish; the cape was therefore named "Thiennot." The direction of the coast changing, he sailed East-northeast, and on the 8th, saw Newfoundland between the "Granches" and cape "Double." On the "9th," he entered Blanc Sablon; and on the "15th," sailed thence for Saint Malo in France, where he arrived "Sept. 5th."

"In this year" (Ciez. xl.), the city of Quito founded by Sebastian Belalcázar.

"In this year" (Spreng.), publication at Cologne of the Botanologicon of Euricius Cordus. — He died before the close of the year (Winckler).

Gnaphalium uliginosum of Europe and the adjoining portion of Asia? Described by Euricius Cordus — (Spreng.), Rudbeck cat. 19 (Smith ed. fl. lapp), termed "g. longifolium humile ramosum capitulis nigris" by Ray angl. iii. 181, "elichrysium aquaticum ramosum minus capitulis foliatis" by Tournefort inst. 452, "filago palustris capitulis nigricantibus supina" by Ruppius jen. 157, and known to occur from Lapland and Russia throughout Europe (fl. Dan. pl. 859, Engl. bot. pl. 1194, Pers., and Wats.), also in Northern Asia (Ledeb.), but not on Caucasus (A. Dec.): observed by Linnæus in Lapland and Sweden, chiefly in dried up pools by the wayside; by Sibthorp, in the Peloponnesus and around Constantinople; and was received by A. Richard from Abyssinia. Probably by European colonists was carried from one continent to the other; was observed by Hooker in Iceland; by myself, frequent in New England, but chiefly in the same situations as in Sweden; by Short, at Big-bone lick in Kentucky; was received by Torrey and A. Gray fl. ii. 427 from Newfoundland and California.

"1535, January" (Alst.), by king Francis, solemn supplications in the churches of Paris, To

Canada; by myself, from $47^{\circ} 30'$ on the Lower St. Lawrence to 43° along the Atlantic; by A. Gray, "common" in central New York, and "especially northward;" by Pursh, in Canada and on the Alleghanies; by Chapman, on "mountains of North Carolina, and northward;" and was received by Hooker from Lake Huron. Transported to Europe, is described by Linnæus, and Jacquin hort. ii. pl. 123.

appease the Divinity; and on his journey home, six Protestants at different places brought forward and burned alive. Having in consequence rendered himself odious in Germany, Francis excused himself, asserting, That the persons in question "under the pretence of religion had been plotting against the state." "Dec. 6th," a Protestant meeting at Smalcald, delegates from Henry VIII. of England being present.

"Jan. 6th" (Ciez., and Markham edit. p. 250), the city of Lima founded by Francisco Pizarro.

"The same year" (Maunder), by the Spaniards under Almagro, the Peruvians driven out of Chili. — After "three years," the Spaniards in turn expelled through a general rising of the natives.

"The same year," the Peruvians of Cuzco found by A. E. de Guzman to have "lances, arrows, darts, *slings*," and "ayllas;" the latter "consisting of three round stones sewn up in leather, and each fastened to a cord a cubit long" (transl. in soc. Hackl.). — This singular and very efficient weapon called "*boleros*" by the colonists, continues in use as witnessed by myself among the Spanish herdsmen of Patagonia.

"The same year" (Churchill coll.), by Peter de Mendoza, a Spanish colony established at Buenos Ayres on the La Plata river.

"Aug. 15th" (edit. D'Avezac), after passing the Straits of Belleisle, arrival at Assumption Island (Anticosti) of Jacques Cartier with three ships on his Second voyage. Returning to the Northern shore of the Bay, on the "19th" he anchored among seven high islands and named them "ysles Rondes." Proceeding up the great river (St. Lawrence) under the guidance of two natives (carried to France on his First voyage), "Sept. 1st" he entered the "Saguenay." Returning to the main river, he met with fishes as large as "merhoux" but entirely white (*Delphinapterus beluga*), living between the sea and fresh water, and called by the natives "adhothuys." On the "6th," he reached an island where were numbers of "grandes tortues" (*Chelonura serpentina*), and named it "ysle es Couldres" from the "noisilles" (*Corylus rostrata*) found in the forest. On the "7th," he reached fourteen islands, the beginning of the province of "Canada" (given in the vocabulary as the general name for town): the largest of these islands, ten leagues in length, he called "ysle de Bacchus" (now Orleans) from "vignes" called "ozaha" (*Vitis cordifolia*) first found here; among the forest-trees are enumerated, "chaisnes" (*Quercus rubra*), "hourmes, pins" (Strobus), "fresnes, noyers" called "quaheya" (*Fuglans cinerea*), "pruniers" (*Prunus Americana*), "yŷz" (*Abies Canadensis*), "sedres" (*Thuja Occidentalis*), "aubespines" with fruit as large as prunes (*Crataegus tomentosa*), and others, while underneath grew "chanure" as fine as that of France (*Apocynum*). He was visited by the chief Donnacona; and on the "14th," found a secure place for his vessels not far from the native town of Stadacone (the site of Quebec). On the "19th," taking his smallest vessel and two boats, he continued up the river; and until the "28th," proceeded without interruption through a fine country full of beautiful trees, including (in addition) "pruches" (*Abies alba* and *A. nigra* and *A. balsamea*), "boulx" (*Betula papyracea*), "sauldres" (*Salix* sp.), and "oziers" (*Salix* sp.); birds also being numerous, as "grues" (*Grus Canadensis*), "signes, outardes" (. . .), "cannes, alouettes" (*Sturnella Ludoviciana*), "faisans" (*Tetrao*), "perdrix" (*Colinus*), "merles" (*Turdus migratorius*), "mauvis, teurtres" (*Columba Carolinensis*), "chardonneraux" (*Linaria*), "serins" (*Linaria*), "linottes, rossignolz, passes solitaires," and others: he also met with "raz sauuaiges" that live in the water (*Ondatra zibethicus*) and are as large as "conŷnys." On the 29th, leaving his vessel in a lake-like expanse (Lake St. Peter), he proceeded up the river in boats; and "Oct. 19th," reached Hochelaga, a native town at the foot of a mountain which he called "mont Royal" (Montreal): the town was circular in form and very populous, the chief or Agouhanna wearing a fillet of "poil de Herissons" (*Hystrix Canadensis*). He subsequently heard of a country in the Southwest, devoid of snow and ice, and producing "oranges" (*Diospyrus Virginiana*) "almandes, noix, prunes, & aultres sortes de fruits," the natives continually warring with each other, but clothed in skins like themselves; Donnacona had been a moon in canoes in this direction to where were growing "canelle" called "adhotathny" (*Sassafras officinale*?), and "giroffle" called "canonotha" (*Laurus benzoïn*?). Returning down the river, the ships near Stadacone were enclosed by ice in the "middle of November." In further describing the country along the river, the following additional quadrupeds are enumerated, "cerfz" called "aionnesta" (*Cervus rangiferinus*), "dains" called "asquenondo" (*C. Virginianus*), "hours" (*Ursus Americanus*), "liepures" called "sourhamda" (*Lepus variabilis*), "connins" (*L. Americanus*), "martres" (*Mustela*), "regnards" (*Vulpes fulvus*), "loueres" (*Canis lupus*?), "bieures" (*Castor fiber*), "chatz sauuaiges" (*Felis Canadensis*), and "escureux" called "caioqnem" (*Sciurus*): among birds, "oyes sauuaiges blanches" (*Anser*) and "grises" (*A. Canadensis*), "cannardz" (*Anas* sp.), "ramiers" (*Columba migratoria*), and "tarins" (. . .): and among fishes, "macquereaulx, mulletz" (. . .), "bars, sartres, grosse anguilles" called "esgney," "lepelan" as good as in the Seine (*Osmerus eperlanus*?), "lamproys" called "zysto," and "saulmons" called "ondaccon," and in the fresh water "brochetz, truytes, carpes, braumes," and others: the natives keep *dogs* "noirs & blancs" called "agayo," cultivate "bled" called "ofizy" (*Zea mays*),

have also "febeus" called "sabe" (*Phaseolus vulgaris*) "de toutes couleurs, non de la sorte des nostres," and "poix" (small-seeded var. of do.), "gros melons" (*Cucurbita maxima*), "courges" (*Lagenaria vulgaris*), "grosses concombres" (*Cucurbita polymorpha* var. *verrucosa*), and an herb which they dry in the sun and place lighted in a little horn "cornet" of stone or wood to draw in the smoke (*Nicotiana rustica*). In "December," both natives and French were attacked with scurvy, many dying—until in "April" a remedy was pointed out by the natives in the leaves and bark of a tree called "amedá" (*Pinus strobus* according to D'Avezac). "April 15th," the ice broke up. Having lost "twenty-five" of his companions, Cartier abandoned one of his ships, and "May 6th" with the two remaining sailed down the river. On the "21st" he reached the passage between Honguedo and (Anticosti) previously unknown, and Cape "de Prato," the beginning of the Bay of "Chaleur;" on the "1st of June," Cape "de Lorraine" in "Lat. 46½°" (island of Cape Breton); on the "16th," Cape "de Raze;" in a harbour near this Southeastern extreme of Newfoundland he left one of his ships, and on the "6th of July" reached St. Malo in France.

"1536, June 1st" (Alst. p. 533), in England, queen Ann Boleyn?, wife of Henry VIII. beheaded.

"July 7th" (Alst.), letter to Protestants from Charles V.; declaring, That he would not make war against any one on account of religion, nor would he excite commotion in Germany.

"In this year" (Winckl., Spreng., and Prior), Jean Ruel or Ruellius publishing his *Natura Stirpium*.*—He died in "1537."

Jacaranda ovalifolia of Tropical America. A Bignoniaceous tree furnishing the rosewood of commerce (Royle ind. resourc.), the "lignum rosaceum" described by Ruel i. 23 and iii. 96 as heavy and knotty, from an arborescent shrub growing in the New World.—The material continues to be largely exported for ornamental woodwork.

"In this year" (Spreng. and Winckler), Antonius Musa Brassavolus of Venice publishing his *Exam. Simplic.*—He died "in 1555."

Convolvulus (Batatas) Imperati of the seashore of the West Indies and Florida, and as far as the Azores, Canaries, and the Mediterranean. A prostrate species, the "brassica marina" of Brassavolus,—according to Sprengel: *B. Imperati* is described also by Morison i. pl. 7, Barrelier pl. 856, and Cyrill. i. pl. 5; was observed by Delile on the Mediterranean shore of Egypt; is known to grow also on the seashore near Naples (Pers.), and on the Canaries and Azores Islands (Vahl, Wats., and A. Dec.). Westward, "*B. littoralis*," regarded as probably identical, was observed by Plumier i. pl. 90 in the West Indies; by Michaux, in Florida and Georgia; by Baldwin, from 29° to 31°; by Elliot, on the seashore of South Carolina; by Chapman, in "drifting sands along the coast, Florida to South Carolina." The genus *Batatas* being American, seeds may have floated in the Gulf stream to germinate on the opposite shore of the Atlantic.†

"In this year" (Spreng.), Carolus Stephanus publishing his *Libell. Hortens.*—He died "in 1564."

"In this year" (Galvan.), by direction of Cortes, Fernando de Grijalva and Alvarado crossing the Pacific under the Equator arrive at the islands producing cloves, but the natives would not allow them to land, referring them to Antonio Galvano commanding the castle on Ternate.

During his stay on Ternate, Galvano visited the summit of the island throwing out fire, and on

* *Triticum (Agropyrum) caninum* of Subarctic climates. Called in Britain *hound grass* or *dog grass* or *dog's-tooth grass*, in France "*chien-dent*" (Ainsw., and Prior); in which we recognize the "*dentem canis*" grass of Ruel ii. 62,—eaten by dogs according to Tabernæmontanus: *T. caninum* is described also by Morison viii. pl. 1, and Hudson; is known to occur along woods and hedges from Lapland to Switzerland and in Siberia (Pers., Kunth, and Wats.). Westward, was observed by Hooker in Iceland; by myself in New England, only in cultivated ground; by A. Gray, "sparingly naturalized in fields," and besides indigenous, "woods and banks, Western New York to Wisconsin, and northward;" according to Hooker, grows from Lake Winnipeg to the Saskatchewan and the Columbia river.

† *Guetarda speciosa* of the Malayan archipelago and Tropical islands of the Pacific. A Cinchonoid tree of medium size called in Malabar "ravapoo," in Tamil "puneer-marum" (Drur.); and the tree bearing "flowers at the sunne set, which fall down as soon as they be growne," seen by Galvano on Ternate,—may be compared: *G. speciosa* was observed by myself throughout the coral-islands of the Pacific, and submeritime around the high islands of the Feejeean and Samoan groups. Westward, is known to grow on Java (Pers.); was observed by Roxburgh in "Coromandel in gardens;" by Drury, in Travancore, its fragrant flowers "come out in the evening and have all dropped on the ground by the morning," an odoriferous water "very like rose-water" distilled from them by the natives; was observed by Rheede iv. pl. 47 in Malabar; by Lush, in the Bombay district at Lapooree (Graham).

the way found a stream of water "so extreme cold that he could not suffer his hand in it." — He left the island before "January 1545," and the last date in his History of maritime discoveries is "1550." Returning to Portugal, he was kept in a hospital "seventeene yeeres until the hower of his death" (Francis de Sousa).

The *honey-guide* (. . .), a South African bird noted for indicating deposits of wild honey by flying from tree to tree, described to Galvano 43 by a Portuguese who had visited Sofala.

About this time (see G. de Tassy i. 385), the sect of the Sikhs founded, and their sacred book called the "Adi Granth" written by Nanak Schah.

"1537 A. D." (Alst. p. 217), Ferdinand, brother of Charles V., made king of Hungary.

"Jun. iv. non." (addit. art de verif.), Bull from pope Paulus III., prohibiting the *enslavement* of American tribes; hitherto practised by the colonists "sub prætextu quod fidei catholicæ expertes existant," under the pretence of not being Catholics. — The order was received by the viceroy of Peru in 1551.

"Early in 1538 A. D." (Markham edit. Ciez. p. v and 47), from Uraba on the Gulf of Darien Pedro Vadillo crossing the mountains proceeded up the valley of the Cauca to its source at Popayan. Cieza de Leon, after passing five years in America, now at the age of nineteen accompanying the party. — He returned to the Cauca in the service of Jorge de Robledo, was present at the founding of Antioquia in "N. Lat. 7°," and commenced writing his journal higher up the river at Cartago.

"In this year" (Galvan.), Marcos de Missa, a Franciscan monk, proceeding from Mexico Northward through Culucan "came to the prouince of Sibola, where he found seven cities" (pueblos) "of which he related marvels: and the farther he went, the richer he found the countrie of gold, siluer, precious stones, and sheepe" — (the *bighorn*, *Ovis*).

"Near the end of March" (Alst.), Protestant meeting at Brunswick. Christian III. of Denmark received into the Federation: and admission sought by the marquis of Brandenburg, and by the duke of Prussia.

"The same year" (Alst.), origin of the Sect of Antinomians: and their doctrines opposed by Luther. For the Protestant refugees from Belgium and France, a church set apart at Argentinensis, under the charge of Calvin. — Who continued there some years.

"The same year" (Kobell ii.), by volcanic agency near Naples, Monte Nuovo, a new mountain "four hundred and forty feet" in height, raised up in the space of "seven days."

"In this year" (Spreng.), Symphorianus Campegius of Lyons publishing his *Campo elysio Galliaë*.

"Friday, May 30th, 1539" (W. B. Rye edit. De Sot. 7), Ferdinando de Soto landing with "two hundred and thirteene horses" at the port of Spirito Santo on the West side of Florida. At the end of "two leagues," on "Sunday, June 1st," he reached the native village of Ucita, the chief's house "neere the shore upon a very hie mount, made by hand for strength." A Spaniard named John Ortiz, left behind by Narvaez, unexpectedly making his appearance, friendly communication was opened with the natives. Gallegos "with fifty horsemen and thirty or forty footemen" was sent "thirty leagues" Northward to the village of Paracossi, chief of the Florida tribes. De Soto arriving with most of his men, all now proceeded "towards the west," crossed a river where were "low palme trees like those of Andaluzia" (*Sabal Adansoni*), and finding at every village "some beetes" (*Chenopodium*?) which were eaten "sodden with water and salt," reached Cale, but the town was deserted. Leaving "Aug. 11th," after gathering "maiz," on a "seven daies journie" for Apalache, where Narvaez built "barkes" and left the country, De Soto was opposed by the natives and only on "Tuesday, Oct. 27th," reached Anaica Apalache; the sea being "ten leagues" distant. A young man, taken prisoner, said he came from Yupaha, a country "farre off toward the sunrising," governed by a woman and where gold was mined. — "Wednesday, March 3d," De Soto departed Northward for Yupaha, "with maiz for sixtie leagues." "Wednesday, 21st," he reached Toalli, and from this "towne" forward the houses instead of being "thatched with straw" were "covered with reeds in manner of tiles," were "verie cleanly, some of them had walles daubed with clay;" the men wore "deeres skins" "well corried," and "of the same leather they make shooes." On the "4th of April," he "passed by a town called Altamaca;" and on the "10th" came to Ocute. Leaving on the "12th," he passed through the town of a chief named Cofaqui, and came to the province of a chief named Patofa, to "a fat country, beautifull, and very fruitfull;" whereas the country all the way from Spirito Santo "is a barren land, and the most of it groves of wild pine trees" (*Pinus teda*, and *palustris*). Turning now Eastward, on the "26th" he was within a "two daies journie" of Cutifa-Chiqui (according to native tradition Silver Bluff on the East bank of Savannah river, in Barnwell district): after passing "through countries of divers languages," the people now understood the Yupaha lad, and as he had asserted were governed by a woman: the "woods are thin, and ful of walnut trees" (*Carya sp.*), "and mulberrie trees" (*Morus rubra*); and at the town "a dagger and beades" were found, that had been left by Ayllon in the haven "two daies journie"

distant. Leaving "May 3d," and turning Northwest De Soto in "seven daies" came to Chalaque (Cherokee), the country for "an hundred leagues" being subject to the above-mentioned woman; thence in "five daies," to Xualla; thence in "five daies," passing "very rough and hie hills, to Guaxule;" thence "in two daies journee came to a towne called Canasagua;" thence after journeying "five daies," to Chiaha "June 5th," where he found much "fat of beares" in "gourds" (*Lagenaria*), "great store of oile of walnuts" (*Carya*), and "a pot full of honie of bees" (*Bombus*), was received in a friendly manner, and rested "thirtie daies." Thence "in seven daies" to Coste "July 2d:" two Spaniards sent with natives "toward the north" to "province named Chisca," where was said to be "a melting of copper" and of a softer "metall of the same colour," brought back "an oxe hide" covered with "haire like a soft wooll" (*Bos Americanus*), having been taken "through a countrie so poore of maiz and so rough, and over so high mountaines, that it was impossible for the armie to travell that way." Leaving "July 9th," De Soto came to Coça (Coosa) on the "26th," the country "greatly inhabited," and "in the fields many plum trees, as well of such as grow in Spaine" (*Prunus umbellata*), "as of the countrie" (*P. Chicasa*), "and wild tall vines that runne up the trees" (*Cissus indivisa*), also "low vines with big and sweet grapes" (*Vitis vulpina*). Leaving "Aug. 20th," he came to Tallise "Sept. 18th," and after resting "twenty daies" proceeded to Tascaluca (the chief according to Biedma having always near "a man whose duty it was to keep off the flies," *Musca domestica*); and on "Monday, Oct. 18th," came to Mavilla (Mobile), a walled town "sixe daies journee" from the port of Ochuse, where Maldonado was in waiting. Without communicating, he captured the town, defeating the natives, and on "Sunday, Nov. 18th," departed Northward and Westward. After travelling "five daies" to "a province called Pafallaya," thence to the town of Cabusto near a great river; thence "five daies," and across another river, to Chicaça, "a small towne of twentie houses," arriving "Dec. 17th." Suffering ensued from cold, for "it was now winter and it snowed before" his people could "make themselves houses."

"In this year" (Major edit. Zen. p. lvii), Olaus Magnus Gothus, exiled archbishop of Upsal, publishing at Venice a map of the three Scandinavian kingdoms:—"in 1557," he annexed the map to the Gothic History by his brother Johannes Magnus.

"In this year" (Spreng., and Winckler), Joh. Roderic de Castello Blanco or Amatus Lusitanus publishing his enarat. in Diosc., enumerating *Empetrum album*.—He was born in Portugal, lived in Antwerp, and published subsequent editions "in 1553 and 1554."

Lygeum spartum of the more Southern Mediterranean countries. A grass with very large glumes described by Amatus Lusitanus 471—(Spreng.), and known to grow in Spain (Pers.): observed by Delile on the Mediterranean shore of Egypt.

"In this year" (Winckl., and Spreng.), Hieronym. Tragus publishing his New Kreuterbuch, enumerating "quinquefolium" *Potentilla verna*, "quinquefolium quartum" pl. 507 *Potentilla alba* (Schmied ed. G. ii. p. 61), "rapunculum sylvestre" *Phytocuma spicata*, "heraclea" *Stachys sylvatica*, *Valeriana atolica* f. 23, *Cyperus flavescens* f. 259, *Rumex acetosella* 119, *Stellera passerina* 203, *Pedicularis sylvatica* f. 95, *Genista sagittalis* f. 230, *Hypericum humifusum* f. 27, *H. pulchrum* f. 28, *Hypochoeris maculata* f. 105, *Inula Germanica* f. 185, *Achillea nobilis* f. 180, *Gymnadenia odoratissima* f. 297, and *Aspidium spinulosum* f. 207:—a second edition "in 1552," and died "in 1554."

Genista Germanica of Europe and the adjoining portion of Asia. Called in Germany "erdpfrymen" or "klein streichblumen" (Fuchs.); and the "genistella" of Tragus—is referred here by Sprengel: G. Germanica is described also by Fuchsius pl. 220; is known to grow from France Eastward (Lam. fl. fr., Sleicher, and Pers.): and was observed by Chaubard in the Peloponnesus.

Crepis tectorum of Europe and the adjoining portion of Asia. Described by Tragus 101—(Spreng.); termed "hieracium secundum" by Tabernæmontanus 491, "h. chondrillæ folio hirsutum" by C. Bauhin pin. 127. "hieracioides vulgatissima pæne glabra annua folio longo dentato" by Vaillant act. 1715, and known to occur throughout Northern and Middle Europe (Ray angl. iii. 165, fl. Dan. pl. 501, and Pers.): observed by Linnæus in Sweden, frequent in arid situations and on the roofs of houses, a weed also in gardens, and very variable in form; by Chaubard, at a village on Taygetus.

Centaurea montana of the mountains of Southern Europe. Described by Tragus f. 84—(Spreng.), and Barrelier pl. 389; termed "ciano maggiore" by Matthioli (Targ.), by Barrelier pl. 389, "cyanus montanus latifolius" by Tournefort inst. 445. "c. seusana" by Villars. "c. Triumfetti" by Allioni, and known to grow on mountains from Southern France to Austria (Jacq. austr. pl. 371, Bertol., and Pers.): observed by Villars, in Dauphiny; by Allioni, on mount Cenis; by Waldstein and Kitaibel, in Hungary; by Sibthorp, and Chaubard, in the Peloponnesus. In Britain, has escaped from cultivation in two widely-separate localities (Wats., and A. Dec.).

Bupleurum falcatum of middle and Western Europe. Described by Tragus 163*—(Spreng.),

* *Stellaria graminea* of Northern climates. Described by Tragus 124.—and Dodoens p. 563 (Spreng.); termed "s. arvensis" by Hoffmann; and known to grow from Switzerland throughout

and Linnæus (Steud., and A. Dec.), and known to be frequent in calcareous soil throughout middle Europe (Jacq. austr. pl. 158, Moench, Hoffm., and Pers.): in Britain, was first observed "in 1832" in Essex (Engl. bot. pl. 2763), regarded however by Babington as probably indigenous, having escaped notice from its small size and scarcity. "*B. petiolare*" found by Lapeyrouse on the Pyrenees, is regarded as perhaps not distinct (Steud.).

Xylosteum vulgare of Europe and the adjoining portion of Asia. A flowering shrub termed "halimus" by Tragus — (Spreng.), "*chamæcerasus dumetorum fructu gemino rubro*" by Tournefort inst. 609, "*lonicera xylosteum*" by Linnæus, and known to grow from about the centre of France (A. Dec.) on the mountains of middle Europe: observed by Sibthorp on mount Parnassus. Cultivated for ornament, it has become naturalized in Britain (Bromf.), and perhaps as far as Denmark (fl. Dan. pl. 808).

Digitalis ambigua of the mountains of middle Europe. Termed "*campanula flore luteo*" by Tragus — (Spreng.), "*d. lutea magno flore*" by C. Bauhin herb. mss. (Dec., and A. Dec. 636), "*d. ochroleuca*" by Jacquin, and "*d. grandiflora*" by Lamarck (Steud.): observed by J. Bauhin hist. ii. 813 around Montbelliard, and according to P. F. Bernard continues to grow there (A. Dec.); by Pollich, and Roth, in Germany (Steud.).

Euphorbia exigua of Europe and the adjoining portion of Asia. A diminutive annual described by Tragus 112 — (Spreng.): observed by J. Bauhin in cultivated ground in central Europe, and so continues to the present day (A. Dec.); termed "*tithymalus sive esula exigua*" by Tournefort inst. 86, "*e. retusa*" by Cavanilles pl. 34 (Steud.), and known to occur from Spain and Montpellier to Denmark (fl. Dan. pl. 592, and Pers.): observed by Sibthorp, and Chaubard, one of the most frequent plants in cultivated ground from the Peloponnesus to Constantinople. In Britain, was already in cultivated ground in the days of Ray (Curt. lond. 4. pl. 36, and A. Dec.), of course exotic.

Euphorbia dulcis of the mountains of Southern Europe and the adjoining portion of Asia. Described by Tragus 112 — (Spreng.): termed "*tithym. hirsutus montis Pollini*" by Bobart — (Pers.), "*t. montanus non acris*" by Tournefort inst. 86, and known to grow on the mountains of middle Europe (Jacq. austr. pl. 213, and Pers.): observed by Haller 1052 in Switzerland (Davall); by Sibthorp, on the mountains of Greece and Asia Minor. In Britain, has escaped from cultivation in Moray county in Scotland (Wats., and A. Dec.).

Gomphrena globosa of Interior Brazil. The *globe amaranth* or *bachelor's button* is called in Japan "sennitsko" (Thunb.), in Tagalo "buqningan" (Blanco), in Burmah "ma-hnyo-ban" (Mason), in Sanscrit "amlana" or "umlana" (Roxb., and Pidd.), in the environs of Bombay "jafferee goon-dee" (Graham), in Yemen "aschek u maschuk" loving and beloved, or "zant habbeschi" or "sirr habbeschi" (Forsk.), in Egypt "ambar" (Del.), at Constantinople "mēnthēna" (Forsk.), in Spain "perpetuas" (Blanco): the "*circæa*" of Tragus 579 — is referred here by Sprengel: *G. globosa* was supposed by Breynius cent. i. pl. 51, and Commelyn hort. i. pl. 85, to have been brought from the East Indies: was seen by Blanco on the Philippines; by Thunberg, in Japan, here and there and often in vases; by Loureiro, under cultivation in China and Anam; was brought to Amboyna before the days of Rumphius v. pl. 100 "from Java," but on Java was seen by Blume only under cultivation; occurs also on Timor (Spanoghe), and Ceylon (A. Dec.); was observed by Mason "exotic" in Bur-

middle and Northern Europe as far as Lapland, the Faroe Islands, and Greenland (fl. Dan. pl. 414 and 415, Pers., and Wats.). Eastward, is known to grow in Siberia (Wats.). Farther East, is known to grow from Unalascha to the Columbia river, and from Lat. 64° to 54° in central North America (Hook.); was observed by Beck near St. Louis; by Muhlenberg, in Pennsylvania; by A. Gray, in "grassy places, common" in central New York; and by myself along the Atlantic from Lat. 43° to 40°. By European colonists, was carried to Southeast Australia, where it has become naturalized, even in the Interior (Th. Corder in phyt. for 1845, and A. Dec.).

Allium vineale of Northern Europe? Described by Tragus 285 — (Spreng.): observed in Switzerland, by Haller 1221, — and Schleicher; by Thuillier near Paris (Steud.); and is known to occur in pastures and cultivated ground in Britain and Germany (Pers.). Was observed by Pursh in Northeast America; and according to A. Gray is "naturalized" in "moist meadows and fields, near the coast, June." The "*A. Purshii*" of Don seems not distinct.

Polypodium dryopteris of Subarctic climates. Called in Britain by "modern botanists" *oak fern* (Prior): described by Tragus f. 204 — (Spreng.); termed "*filix pumila saxatilis*" by Clusius hist. ii. 212, "*f. ramosa minor pinnulis dentatis*" by C. Bauhin pin. 358, "*dryopteris*" by Dillenius giss. 103, and known to grow throughout Northern Europe (. . .): observed by Linnæus in woods in Sweden. Westward according to A. Gray, grows in "rocky woods, common northward" of central New York; was observed by myself around the base of the White mountains, in the upland forest; by Mrs. Horner, as far as 42° 30' along the Atlantic (Robinson).

mah; by Rheede x. pl. 37, in Malabar; by Graham "common in every garden" around Bombay, its flowers worn by the native women "in their hair;" by Forskal, in Yemen and Egypt, and at Constantinople; clearly by European colonists was carried to Northeast America, where it continues a favourite in gardens. In Tropical America, was observed by P. Browne around towns on Jamaica in 1789; by Descourtilz, also in the West Indies, but no Carib name given; by Aublet, in Guayana; by Martius, indigenous along the Yapura river in Interior Brazil: attracting the attention of Catholic colonists by the suitability of its flowers for garlands, was probably carried across the Pacific in the first voyages of the Spaniards to the Philippines.

Chenopodium hybridum of Central North America? The *stramonium-leaved* goosefoot, the "fourth solanum" of Tragus 304. — according to Sprengel: *C. hybridum* is termed "*c. stramonii folio*" by Vaillant paris. pl. 7, "*c. angulosum*" by Lamarck; is known to occur in waste and cultivated ground from Sweden and Britain to Switzerland and Russia, fetid (Curt. lond. pl. . . ., Pers., and Wats.). Westward, was observed by A. Gray "common" in central New York; by Short, in Kentucky; by E. James, at Council Bluffs on the Missouri; by Nuttall, at the confluence of the Arkansas and Verdigris; and according to Watson occurs on the Hawaiian Islands.

Orchis variegata of the Mediterranean countries. Described by Tragus 296 — (Spreng.); observed by Haller 1275 pl. 30 in Switzerland, also by Allioni, and known to grow in France (Pers.): described also by Jacquin coll. ii. 267 and rar. pl. 599; and observed by Sibthorp, and Chaubard, in the Peloponnesus. "*O. acuminata*" observed by Desfontaines ii. pl. 247 in Algeria, is regarded by Chaubard as not distinct.

Briza media of Europe and the adjoining portion of Asia. The "*ægilops*" of Tragus p. 670 — is referred here by Sprengel: *B. media* is also described by Linnæus; is termed "*gramen paniculatum majus locustis magnis candicantibus tremulis*" by Tournefort inst. 523; is known to grow throughout middle Europe as far as Denmark, and in Britain on account of its trembling spikelets is called *quaking grass* (flor. Dan. pl. 258, Engl. bot. pl. 340, and Prior). Eastward, was observed by Sibthorp on Cyprus and around Constantinople. From Europe, was carried by colonists to Madeira, where I found it abundantly naturalized in all open situations; to Northeast America, occurring along the Atlantic in grass-grown clearings and wild sunny situations; and to Southeast Australia and the Hawaiian Islands, appearing to me in both localities naturalized.

Asplenium Septentrionale of Northern Europe and Asia. A fern termed "*filix saxatilis tragi*" by Lobel ic. 47, "*f. s. corniculata*" by C. Bauhin pin. 358, and Tournefort inst. 542. "*acrosticum parvum septentrionale*" by Petiver 742, and known to grow throughout Northern Europe (Engl. bot. pl. 1017): observed by Linnæus in Sweden, frequent in clefts of rocks; by Sibthorp, on the Bithynian Olympus.

"1539 to 1540 A. D." (Churchill coll.), Francisco de Ulloa sailing along the West coast of Mexico and "back of California," as far as "cape Engano in 30° N."

"1540 A. D." (Churchill coll.), passing Cape Engano, John Rodriguez Cabrillo continued along the coast as far North as "thirty-five degrees twenty minutes," anchoring at intervals: beyond Cape Galera he entered a harbour and called it Port of Possession, "trading with the natives, who go naked, have their faces painted in chequers, and are all fishermen" (aboriginal Californians). Thence he "sailed to the northward as far as forty-four degrees."

"The same year" (Churchill coll., & Galvan.), in Mexico, a party under Francis Vasquez de Coronado journeying from Culiacan Northeast in a direct course "two hundred leagues," met with "beasts almost as big as horses, they have very great horns" (Ovis, the *bighorn*); "abundance of cows" (Bos, the *American bison* or buffalo); "pinhoes" (*Pinus fl. vilis*); "nozes" (*Corylus Americana*); "amoras" (*Morus rubra*); "ameixas" (*Prunus Chicasa*); "melaas" (*Cucurbita*); "huuas" (*Lilium Arkansana*?); "also flax growing wild" (*Linum perenne*).

"The same year" (Churchill coll.), in South America, Orellana leaving Peru, descended the river Amazon to its mouth, and thus crossed the continent.

"The same year" (Alst.), the Jesuit monastic Order founded by Ignatius Loyola, and confirmed by pope Paulus III.

"1541 A. D." (Alst.), end of the chronicle of Alexander Scultetus.

"In this year" (Humb. cosm. ii), printed letter of Copernicus renewing the ancient theory of the Universe, That the sun is the centre around which the Earth and other planets revolve. — The printing of his book "*De revolutionibus*" was completed "in 1543," a few days before his death on the "24th of May."

Phallus impudicus of Europe and the adjoining portion of Asia. A fungus called in Belgium "ongers eyeren" devil's eggs, and by the poet Hadrianus Junius "*phallum*" — (Dod. pempt. iii. 5. pl. 25): *P. impudicus* is termed "*boletus phalloides*" by Tournefort inst. 562, "*ph. fœtidus*" by Sowerby pl. 329; was observed by Sibthorp near Athens; and is known to grow as far as Britain (Schæff. iv. pl. 196 to 198, and Curt. lond. iii. pl. 72).

"February" (Maunder), after conquering part of Chili, the city of Santiago at the base of the Andes founded by Pizarro. He was assassinated at Lima by thirteen conspirators "Sunday, June 26th" (Markh. edit. p. 139).

"Tuesday, March 8th" (Portuguese narrat. 20, W. B. Rye edit.), in the night, the town of Chicaça burned by the natives: some of De Soto's men, losing their clothing, "invented the weaving of certaine mats of drie ivie" (*Berchemia volubilis*); and of "ash trees in those parts" (*Fraxinus quadrangulata*) "they made as good lances as in Biscay." Leaving "Apr. 25th," he "lodged at a small towne called Alimamu;" and after three or four daies' preparation, "travelled seven daies" through "marishes and thicke woods" to Quizquiz. Removing thence to another town "halfe a league from Rio Grande" (the Mississippi), he found the river "almost halfe a league broad" and "of great depth," and there came down "continually many trees and timber:" the natives here brought "loaves made of the substance of prunes, like unto bricces" (*Diospyros Virginiana*); and after "thirtie daies" delay in building barges, he crossed the river (probably below the Arkansas). Continuing "through great townes of Aquixo, which were all abandoned for feare," and one "day till sunset" wading in water, after a "three daies journie" came "to the first towne of Casqui" (. . .), a higher and dryer country, and the woods "verie thinne:" in the fields were trees bearing walnuts, soft shelled and "like unto acornes" (*Carya olivæformis*). Traversing the Casqui country in about four days, he came to "a lake like a brooke, which falleth into Rio Grande" and which was bridged by the natives, and on "Wednesday, June 19th," entered the town of Pacaha, where he rested "fortie daies." A "great lake" (bayou) "came neere unto the wall," and "from the lake to the great river was made a weare by the which the fish came into it." "Thirtie horsemen and fiftie footemen" were sent "seven daies journie" to "the province of Caluça;" "thence forward toward the north" according to the natives "the country was very ill inhabited" and "very cold, and that there were such store of oxen" (*Bos Americanus*) "that they could keep no corne for them, that the Indians lived upon their flesh." Returning now over the bridge, De Soto "tooke his journie toward Quigaute," a "hundred leagues" "toward the south;" arrived there "Aug. 4th," the town being "the greatest that was seene in" the whole country. Thence northwest, "forty leagues" to Coligoa, "on the bank of a meane river." Thence "toward the south," more than "five daies," to the "scattered" town of Cayas, where he "rested a moneth;" the horses drinking "of a lake of very hot water, and somewhat brackish" (hot springs and salines at the sources of the Washita), and the natives by evaporation procuring *salt*. Thence "toward the south, a day and a halves journie," to Tulla: thence "toward the south-east" about "eighty leagues" and "over very rough mountaines (Ozark hills) to Autiamque; where he remained "three moneths," unable to travel "for cold, waters, and snow." John Ortiz, the only interpreter, died at Autiamque. — Leaving "Monday, March 6th," De Soto on the "29th" came to Nilco, on the same river (Red river) that "passed by Cayas and Autiamque, and fell into Rio Grande:" sending "a captaine with fiftie men in sixe canoes downe the river," De Soto followed by land, and on "Sunday, Apr. 17th," came to Guachoya, where he proposed to build "brigantines," but after naming Luys de Moscoso de Alvarado as his successor, died "May 21st." Leaving on "Monday, June 5th," Alvarado proceeded West, proposing "to go by land" to Mexico, and "July 20th" encamped between Amaye and Naguatex (Nacodoche); but "in the beginning of October," at a river called Daycao, "a hundred and fifty leagues" from the Mississippi and on the border of the country traversed by Cabeça de Vaca, he decided to return to Nilco. Leaving Nilco "in the beginning of December," he proceeded direct to the Mississippi at Minoya, and built brigantines; calking them with "tow of an hearb like hempe" called "enequen" (*Apocynum cannabinum*), as well as with "the flaxe of the countrie" (*Linum Virginicum*), and making cables "of the barkes of mulberrie trees" (*Morus rubra*). Of other plants met with, "Where there be mountaines there be chestnuts" (*Castanea Americana*) "somewhat smaller then" ours; a fruit "like unto peares riall," growing "on a plant like ligoacan" and having "a verie good smell and an excellent taste" (*Asimina triloba*), is planted by the natives "through all the countrie;" there groweth also "in the open field" a "fruit like unto strawberries, close to the ground, which hath a verie good taste" (*Fragaria Virginiana*); of animals, "wild hennes as big as turkies" (*Meleagris gallipavo* wild); and "certaine blacke birds bigger than sparrows and lesser than stares" (*Molothrus pecoris*). The brigantines being finished, Alvarado left "July 2d, 1543," on the same day "with the helpe of ores" floated past Guachoya, and at the end of "seventeene daies, which may be two hundred and fifty leagues," came to the sea. Following the coast Westward, he arrived "Sept. 10th in the river of Panuco" with "three hundred and eleven" men surviving, and proceeded to the town and church.

"Aug. 23d" (D'Avezac edit.), arrival of Jacques Cartier on his Third voyage at his former station in the St. Lawrence near Stadacone; in advance of Roberval or Jean-François de la Roque, who had been appointed lieutenant-general of Canada, Hochelaga, Saguenay, and the surrounding provinces. After sending back two of his ships, "Sept. 2d," Cartier proceeded up the river to examine the rapids above Hochelaga; and returned to winter at a fort constructed "four leagues" from the first one and called Charlesbourg.

"In this year" (Schmied. p. vi), Gesner at Montpellier collecting and communicating plants to Rondelet, one of the professors there.

"1542, end of May" (D'Avezac edit.), hearing nothing of Roberval, Jacques Cartier decided to return. Approaching the Straits of Bellisle, he met Roberval with two ships; but refused to turn back, and continued his voyage home to France. Roberval proceeded to the St. Lawrence, — where he passed the winter and remained as late at least as "July 22d, 1543."

"The same year" (Spreng.), arrival of Girolamo Benzoni of Milan in the West Indies. He met with the "guanauano" (*Anona muricata*) pl. 59 on Hayti; the "mamei" (*Mammea Americana*), and "guaiaua" (*Psidium guayana*), on both Hayti and Terra Firma; distinctly describes *chiggers* (Acarus), and a tree producing "zucche" of which the aborigines make vases (*Crescentia cujete*) pl. 102; — speaks of the Peruvians carrying in their mouths an herb called "coca" (*Erythroxylon coca*), and having a root called "pape" (*Solanum tuberosum*); and returned to Europe in 1556. His narrative was published in Venice in 1565.

"In this year" (Humb. cosm. ii. note 425), one of the Hawaiian Islands discovered by Gaetano. And outlines of New Holland in the "Hydrography" of Joh. Rotz.

"In this year" (Galvan.), ships sent by Antonio de Mendoça, viceroy of Mexico, sailing along the Western coast of America came to a place called Sierras Neuadas "in 40° N.;" where "they saw ships with merchandises, which carried on their stems" alcatrazes and "other birds of gold and silver," and "seemed to be of the Isles of Japan, or of China, for they said that it was not above thirtie daies sailing unto their country."

"The same year" (Churchill coll., and art de verif.), Antony de Mota, Francis Zeimoto, and Antony Peixotto, three Portuguese merchants, driven by storms past China to the "Islands of Nipongi or Nifon," now first visited by Europeans; and settled there. The islands are by the Chinese "called Gipon, and by us Japan."

"The same year" (Alst. p. 259), by order of Suliman II., the walls of Jerusalem rebuilt, and pipes laid for supplying the city with water.

"In this year" (Spreng., and Prior), Leon. Fuchsius of the Tyrol publishing his *Historia Stirpium*, enumerating *Daucus gmgidium* 786, *Stachys recta* 769, *Turritis Loeselii* 592, "chamaestyrax" *Satyrion nigrum* (Gesn. ii. fig. 66), *Veronica teucrium* 872, *Galium sylvaticum* 281, *Epilobium roseum* 491, "veronica femina" 167, *Linaria spuria*, *Digitalis lutea* 894, "ervum sativum" 572, *Lathyrus annuus*, *Colutea Orientalis* 446, *Trifolium campestre* 819, "bupthalmum" 144, *Pyrethrum inodorum*, "satyrion trifolium" *Habenaria bifolia*, *Urtica Balearica* 106, *Salix rubra* 334, *Polygonatum verticillatum* 586. — He died "in 1565."

Ranunculus auricomus of Subarctic climates. Described by Fuchsius 156 — (Spreng.); termed "r. primus sylvestris" by Dalechamp 1028. — "r. nemorosus vel sylvaticus folio rotundo" by Tournefort inst. 285, and known to grow as far as middle Europe (C. Bauh. pin. 178, fl. Dan. pl. 665, Curt. lond. ii. pl. 47, and Pers.): was observed by Linnæus frequent in Sweden; by Sibthorp, in woods on mount Hæmus and around Constantinople; by Bieberstein, on Caucasus; by Gmelin, throughout Siberia, and by Thunberg, in Japan. Westward, by Sabine in Greenland, and is known to grow in Labrador (Wats.). "R. affinis, ovalis, brevicaulis," and "cardiophyllus," growing along the Arctic Sea from Melville Island to Cape Mulgrave in Northwest America, also on the alpine portion of the Rocky mountains and as far South as Lake Huron, are regarded by Hooker as perhaps not distinct.

Ranunculus arvensis of Barbary? Described by Fuchsius 157,* — and Delechamp 1030; termed "r. sylvestris tertius" by Dodoens pempt. 427, "r. arvensis echinatus" by Bauhin hist. iii. 859, and Tournefort inst. 289, and known to occur in cultivated ground throughout Europe (fl. Dan. pl. 219, Curt. lond. vi. 36, and Pers.): observed by Linnæus in cultivated ground as far as Scania in Sweden; by Boiss., in Spain; by Moris, in Sardinia; by Gussone, in Sicily; by Sibthorp, and Chaudard, in cultivated ground from the Peloponnesus to Constantinople; by Bieberstein, in Russia and the Crimea; by C. A. Meyer, Southeast of Caucasus; but by Munby, in wild situations in Algeria (A. Dec.)

Nasturtium sylvestre of Europe and Northern Asia. Termed "eruca sylvestris" by Fuchsius

* *Anemone ranunculoides* of Northern and middle Europe. Yellow-flowered, described by Fuchsius 162 — (Spreng.), and Linnæus; termed "a. nemorosa lutea" by Crantz (Steud.), and known to grow in the Scandinavian peninsula, Denmark (fl. Dan. pl. 140), Holland (prodr. fl. bat. 4), and here and there in Northern France (Lam. fl. fr.) as far as Paris and the departments of the Somme (Pauquy) and Eure (Breb.). Regarded by Watson as exotic in Britain and only naturalized, being first noticed by Hudson "in 1778;" seems unknown in Ireland (Mackay), the Channel islands and the department of Calvados (A. Dec.).

263, — “e. s. minor luteo parvoque flore” by C. Bauhin pin. 98, “sisymbrium palustre repens nasturtii folio” by Tournefort inst. 226, and known to grow in moist places throughout middle Europe (fl. Dan. pl. 931, Curt. lond. iii. pl. 41, and Pers.), also in Tauria, Persia, and China (Dec., and Wats.): observed by Linnæus in Sweden; by Sibthorp, in marshy places on mount Hæmus. In the Southern Hemisphere is known to occur in Australia (Dec., and Wats.), possibly transported there by Malaysians or Chinese. Clearly by European colonists, was carried to Northeast America, observed by C. J. Sprague in Newton near Boston (A. Gray).

Trifolium montanum of Europe and the adjoining portion of Asia. Termed “t. pratense album” by Fuchsius 818, — and Bauhin hist. ii. 379, “t. majus primum” by Clusius hist. ii. 245, “t. montanum album” by C. Bauhin pin. 328, and Tournefort inst. 405, and known to grow throughout middle Europe (Rivin. tetrap. pl. 12, fl. Dan. pl. 1172, and Pers.): observed by Linnæus in Sweden, abounding on arid hills; by Sibthorp, on the mountains of Crete.

Hypericum montanum of Europe and the adjoining portion of Asia. Termed “ascyrum” by Fuchsius 74, — “h. elegantissimum non ramosum folio lato” by Bauhin hist. iii. 383, and Tournefort inst. 255, and known to grow on the mountains of Northern and middle Europe (Col. ecphr. i. pl. 74, fl. Dan. pl. 173, Engl. bot. pl. 173, and Pers.): observed by Linnæus on the mountains of Sweden; by Sibthorp, and Chaubard, in the Peloponnesus.

Hypericum hirsutum of Europe and the adjoining portion of Asia. Described by Fuchsius 74 — (Spreng.); termed “h. majus sive androsæmum Matthioli” by Ray hist. 1000, “h. villosum erectum caule rotundo” by Tournefort inst. 255, and known to grow on the mountains of Northern and middle Europe (Columna ecphr. i. pl. 74, Moris. ii. 5. pl. 6, Curt. lond. iii. pl. 49, and Pers.): observed by Linnæus on the mountains of Sweden as far as Upsal; by Sibthorp, in the Peloponnesus.

Diplotaxis tenuifolia of Europe and the adjoining portion of Asia. Called in Britain *wall-rocket* (Prior); described by Fuchsius 539 — (Spreng.), and already in the days of Gerarde 192 common upon old walls (Sm. fl., and Bab.): termed “sinapi eruca folio” by Tournefort inst. 227, “eruca sylvestris” by Blackwell pl. 266, “sisymbrium tenuifolium” by Linnæus, “brassica muralis” by Hudson, and known to grow along walls and among rubbish throughout middle Europe (Lam. fl. fr., and Pers.): observed by Sibthorp around Constantinople. Suspected by Watson to be exotic in Britain, perhaps on insufficient grounds (A. Dec.).

Brassica erucastrum of the West Mediterranean countries. Described by Fuchsius pl. 262, — and known to grow among rubbish in Southern Europe (Pers.): observed by Villars, in Dauphiny (Steud.); by myself, on Malta.

Veronica agrestis of Europe and the adjoining portion of Asia; termed “alsine media” by Fuchsius 22 — (Spreng.), and the “alsine foliis trissaginis” of Tabernæmontanus hist. 1089, and “a. chamaedryfolia flosculis pediculis oblongis insidentibus” of C. Bauhin pin. 250, are referred here by Linnæus: *V. agrestis* is known to occur in cultivated and fallow ground throughout middle Europe (Tourn. inst. 145, and Curt. lond. i. pl. 1); was observed by Linnæus in Sweden; by Sibthorp, in shaded and cultivated ground on the Bithynian Olympus. By European colonists, was carried to Northeast America, observed in “sandy fields, rare” (A. Gray) in our Middle States, and in “cultivated ground” in our Southern States (Chapm.).

Blitum virgatum of the Uralian and Tartarian plains. Described by Fuchsius 174 — (Spreng.), and Morison iii. 5. pl. 32; termed “morocarpus foliosus” by Moench; observed by Pallas trav. i. 583 on the Lower Yaik; and known to grow in Tartary (Pers.). In Britain, has been found in one locality, near Edinburgh (Wats.), clearly exotic; occurs also here and there in Holland and the neighbouring countries (A. Dec.), and is perhaps exotic also near Narbonne and in Spain (see Pers.).

Teucrium botrys of Western Europe. An annual termed “chamaedrys femina” by Fuchsius 870 — (Spreng.); known to grow in stony calcareous soil in Normandy (Breb., Hard., Ren., and Lecl.), occurring also in cultivated ground (Pers.); observed by Moench in Germany (Steud.). In Britain, of late years has been found from time to time near Boxhill in Surrey (Wats.), but is regarded by A. Decandolle as probably exotic; and perhaps also exotic in Holland (prodr. fl. bat.).

Stachys Germanica of Europe and the adjoining portion of Asia. Called in Britain *woundwort*, its soft downy leaves being substituted for lint (Prior); described by Fuchsius 766 — (Spreng.); termed “s. major germanica” by Tournefort inst. 186, “s. lanata” by Crantz, and known to grow in woods from Denmark throughout middle Europe, occurring also about cultivated ground (fl. Dan. pl. 684, Jacq. austr. pl. 319, and Pers.): was observed by Sibthorp in sunny situations in the Peloponnesus. In Britain, though unknown to Gerarde, is regarded by Ray as indigenous; an opinion doubted by Watson on account of the few and wayside localities, but the plant according to A. Decandolle is more frequent on neighbouring portions of the continent.

Orchis sambucina of Europe and the adjoining portion of Asia. Described by Fuchsius 557 — (Spreng.); termed “o. pannonica octava” by Clusius hist. i. 269, “o. palmata sambuci odore” by C. Bauhin pin. 86, and known to grow in mountainous situations throughout middle Europe (Tourn.

inst. 435, fl. Dan. pl. 1232, Jacq. austr. pl. 108, and Pers.): observed by Rudbeck elys. ii. pl. 213, and Linnæus, as far as Stockholm; by Sibthorp, and Chaubard, in the Peloponnesus.

Orchis pyramidalis of Europe and the adjoining portion of Asia. Described by Fuchsius 554 — (Spreng.); termed "o. purpurea spica congesta pyramidalis" by Ray angl. iii. pl. 8, "o. militaris montana spica rubente conglomerata" by Tournefort inst. 432, and known to grow throughout middle Europe (Jacq. austr. pl. 206, and Pers.): observed by Bergius in Gothland (Linn.): by Decandolle, in France; by Seguieri pl. 15, in the environs of Verona; by Sibthorp, and Chaubard, from the Peloponnesus to Constantinople.

"In this year" (Schmied, and Winckl.), after his Medicam. succiduo. "in 1540," Enchirid. plant. "in 1541," Gesner publishing his Cat. plant. latine, graece, germanice, et gallice.

"October" (Galvan, and Churchill coll.), from Mexico, sailing West, Ruy Lopez de Villalobos at the end of "a hundred and eighty leagues" discovered "two desert islands" in "eighteen degrees and a half of latitude," named by him "S. Thoma and Anublada. Eighty leagues further, they saw another, and called it Roca Portida. Seventy-two leagues beyond it, they found an Archipelago of small islands inhabited by a poor people" (Tarawan coral-range?).

"1543, Jan. 6th," they "passed by ten other islands, which for their pleasantness they called the Gardens, all of them in about nine or ten degrees of latitude" (Micronesia or Caroline Islands). And "Feb. 2d" saw land, that proved an island "three hundred and fifty leagues in compass," "a small island near" possessing *China-ware, musk, amber, civit, benjamin, storax*, other perfumes, also some *gold*. "July 31" (Stanley edit. De Morga 15 and 394), a protest by "D. Jorge de Castro, governor of Ternate and the Moluccas," against Villalobos for having come with ships "to Mindanao and other Moluccas islands" beyond the prescribed meridian line of demarcation between the possessions of Spain and Portugal. The protest was received "Aug. 9th," and Villalobos replied, That the island where he then was "was within the Spanish limits," and that "he was getting his ships ready to seek another settlement further off from Maluco." The Portuguese governor "Sept. 2d" again requested Villalobos "to leave the island of Mindanao, which he had confessed he had no right to enter;" mentioning also "that according to report he had sent a ship" back to Mexico (in this century a vessel was wrecked on the Hawaiian Islands, and a peculiar Hawaiian head-dress has been conjectured to be modelled after a Spanish helmet; in fact agrees in outline with the helmet figured in the portrait of Legazpi published by the Hakluyt Society edit. De Morga): Villalobos replied "Sept. 12th" that "the islands of Maluco were known by name, and it was known what a different thing it was to trade with countries or to subject them;" he also "begged of the governor, as their sovereigns were brothers, not to give occasion for quarrels." The fleet of Villalobos "was broken up;" — this collection of documents was drawn up "Feb. 7th, 1544" by "Graviel Rebello, judge for the deceased;" and some of the Spaniards "who remained went away from Maluco through Portuguese India, and returned to Castile." There is "no trace of any protest by the Portuguese against the" Spanish occupation of the Philippines "in 1564."

"In the spring" (D'Avezac edit), sailing from St. Malo of Jacques Cartier on his Fourth voyage; under instructions from the king to search for the remains of Roberval's expedition. He was absent "eight months;" and the country on the St. Lawrence was abandoned by the French government — for more than half a century.

"In this year" (Sieb. eluc. Vries p. 4), one of the Bonin Islands seen by the navigator Bernado de Torres, and named by him Malabrigo.

"In this year" (Spreng.), Valerius Cordus, son of Euricius, enumerating *Anthericum liliago*, "philyrina" *Phillyrea media* v. 24, "coralloides altera" *Dentaria pinnata* (Gesn. ii. fig. 2), "damasonium calliphyllo" ii. 108 *Serapias palustris* (Gesn. ii. fig. 59), "hippion" 221 *Gentiana Bavarica* (Gesn. ii. fig. 83), "moschatella" f. 172 *Adoxa moschatellina*, *Cytisus Austriacus* f. 187, "pseudocytisus" f. 188 *Cytisus nigricans*, "ixopus" f. 104 *Lactuca saligna*, "corruda" *Asparagus amarus*, "tulipa turcarum" hist. 213 *Tulipa Gesneriana* (Linn. sp. pl.). — He died "in 1544," and his writings were published by Gesner "in 1561."

Lythrum hyssopifolium of Europe and the adjoining portion of Asia. A small annual called in Britain *grass-poley*, the name "grase-poley" being first given it by Cordus — (Prior, and Willd.): *L. hyssopifolium* is described also by Gesner, Camerarius, C. Bauhin, Barrelier pl. 773, and Ruppis: is termed "salicaria hyssopi folio latiore" by Tournefort inst. 253: is known to grow throughout middle Europe (Engl. bot. pl. 292, and Jacq. austr. pl. 133): and was observed by Sibthorp, and Chaubard, frequent in moist places in Greece as far as the Peloponnesus. By European colonists, was carried to Northeast America, observed by myself naturalized in Eastern Massachusetts, often among grass, also by Short in Kentucky; to Austral Africa, and to Australia (Dec.).

Epipactis latifolia of Europe and the adjoining portion of Asia. Termed "alisma quorundam" by Cordus ii. 150 — (Gesn. ii. pl. 61), "helleborine latifolia montana" by Tournefort inst. 436, "serapias latifolia" by Linnæus, and known to grow in woods from Denmark throughout middle Europe

(fl. Dan. pl. 811, Engl. bot. 269, and Pers.): observed by Haller pl. 40 in Switzerland, by Hoffman ii. 182 in Germany; by Sibthorp, and Chaubard, in woods in the middle region of the Peloponnesus.

Saxifraga cotyledon of Arctic Europe and alpine summits farther South. The "aizoon serratum" of Valerius Cordus 92, — and Gesner ii. fig. 27, may be compared: *S. cotyledon* is described by Matthioli 787, and Dalechamp 1195 (Spreng.); is termed "*s. pyramidalis*" by Lapeyrouse fl. i. pl. 11; was observed by Hooker on Iceland; by Bieberstein, on Caucasus; is known to grow in Lapland, Norway, and Sweden (Fries), on the Pyrenees (Lapeyr.), and on the Swiss Alps (Koch, and A. Dec.).

"The same year" (Royle resourc. Ind.), a *botanic garden* first established at Pisa.

Hibiscus (Ketmia) trionum of Equatorial Africa. A flowering annual known in Egypt as early perhaps as this year: — observed by Forskal in Yemen (but no locality given), by him, and Delile, in Lower Egypt. Farther North, was brought from Venice to Germany, and seeds were sent from Nuremberg to Tragus ii. pl. 143 some years before 1552, and about the same time was seen growing in Italy by Matthioli iv. pl. 63; is described also by Lobel, and Parkinson; is termed "*ketmia vesicaria vulgaris*" by Tournefort inst. 101; "*h. africanus*" by Miller; is known to occur as a weed in Carniolia and Italy (Scop., and Pers.); and was observed by Sibthorp, and Chaubard, in cultivated ground from the Peloponnesus to Cyprus. By European colonists, was carried to Northeast America, where it continues in gardens and from its quickly fading corolla is called *flower-of-an-hour*, has also been found springing up spontaneously (A. Gray).

"In this year" (Spreng.), the Franciscans, Bartholem. Urbevetanus and Angelus Palla Iuvenatiensis, publishing Commentaries on Mesue.

Onopordon acaulon of the Mediterranean countries. The "*corona fratrum*" of Barptolomæus Urbeueteranus and Angelus Palea, — is referred by Dodoens pempt. v. 5. 5 to a many-headed stemless thistle observed by him in Spain, its vernacular name being a translation of the above: *O. acaulon* is termed "*carduus orientalis acaulos incanus et tomentosus dentis leonis folio*" by Tournefort cor. 31; was observed by Sibthorp, and Chaubard, in the Peloponnesus, frequent and on the plain of Modon very troublesome. "*O. Pyrenaicum*," observed among the Pyrenees by Lapeyrouse (Dec. fl. fr.), is regarded by Chaubard as not distinct.

"1544, June 10th" (Alst.), at Spires, end of the session of the Diet: after a visit from Charles V., who promised, That the general Council should be convened in Germany.

"The same year" (Steinschneid. iii. 27), the Hebrew Pentateuch translated into Jewish-German by Michael Adam, assisted by Paul Fagius. — The Translation was revised by Jehuda ben Moses Naphtali sixteen years afterwards, and with subsequent additions "became, and in some parts of Poland and Russia continues to be a favourite book with women;" having "produced a lasting effect upon the Jews."

As early as this year (G. de la Vega, Herrera, and Acosta iv. 6 to 8), the silver mine of Potosi, "in S. Lat. 21° 40'" and at the elevation of "seventeen thousand feet" on the Andes, discovered by a native named Hualpa.* For some time he secretly worked the vein, — but at length communicated his discovery to the Spaniards, who commenced operations "in April 1545," as appears by register.

"1545, Dec. 13th" (Blair, and Nicol.), after years of delay, the Twenty-first general ecclesiastical Council convened at Trent by pope Paulus III. — The Council continued in existence eighteen years, until its concluding session "Dec. 3d, 1563."

Nasturtium amphibium of Northern Europe and Asia. The "*cleoma*" herb of Octavius Horatianus, growing in wet places and resembling "*sinapi*" — (Dod. pempt. iii. 4. 5), may be compared: *N. amphibium* includes the "*sisymbrium a. aquaticum*" and "*s. a. terrestre*" of Linnæus; is termed "*s. a. heterophyllum*" by Baumgarten, "*s. roripa*" by Scopoli, "*eruca aquatica*" and "*radicula lancifolia*" by Moench; was observed by Brotero i. 564 in Northern Portugal; by Scopoli, in Carniolia; is known to grow throughout middle and Northern Europe (fl. Dan. pl. 984, and Pers.); also on Caucasus (Bieb.); and was observed by Thunberg in Japan.

"1546, Jan." (Targ.), Montigiano publishing his Translation of Dioscorides, enumerating "*guaraguasco femmina*" *Verbascum nigrum*, "*symphito petreo*" *Coris Monspelienensis*, "*terzanella*" *Anagallis Monelli*.

Athamantha libanotis of middle Europe. Umbelliferous, termed "*libanotide*" by Montigiano — (Targ.), "*l. Rivini*" by Baumgarten, "*l. montana*" by Allioni; described also by Gesner hort.

* *Polylepis tomentella* of the Peruvian Andes. A graceful Sanguisorboid shrub or small tree called by the natives "*queñua*" (Markh.); and Hualpa in chase of deer climbing the steep part of the hill by catching hold of these shrubs, one of them gave way, disclosing native silver: — *P. tomentella* is described by Weddell; was observed also by Markham edit. 368 to 388 on various parts of the Peruvian Andes.

247 (Spreng.) ; and known to grow from Sweden to the Pyrenees, Switzerland and Carniola (Pluk. alm. pl. 173, Engl. bot. pl. 138, Jacq. austr. pl. 392, Scop., Pers., and A. Dec.).

Mentha viridis of Europe and the adjoining portion of Asia. Called in Britain *spear-mint* or *spire-mint* from its spiry not capitate inflorescence (Prior), in France "menthe aiguë" (Nugent), and termed "menta domestica" by Montigiano — (Targ.) : "spear-mint" is enumerated by Josselyn among the plants introduced by European colonists into New England ; *M. viridis* was observed by Clayton 167 in Virginia ; by myself from 45° North of the White mountains to 40° near Philadelphia, chiefly in wet places along roadsides ; by A. Gray, in "wet places, common" in central New York ; by Walter, on the Santee in South Carolina ; by Michaux fl. ii. 2, in moist places in Georgia and termed "m. tenuis" (Pers., and Chapman). Eastward, is described by Dodoens pempt. 95 (Linn. sp. pl.), Ray, and Dillenius, but is regarded by Watson as exotic and only naturalized (A. Dec.) ; is known to occur seemingly wild in France, Switzerland, and Germany (Crantz, and Pers.) ; was observed by Chaubard in cool moist places in the Peloponnesus. Clearly by European colonists was carried to the Canaries, South America, and Austral Africa, and "oil of spearmint" and "spearmint water" are employed medicinally as "aromatic and carminative" (Lindl.) : the use of the fresh leaves in preparing drinks called "juleps" is well known in North America.

"July 16th" (Alst.), in Germany, beginning of open war between Charles V. and the Protestants.

"The same year" (Spreng.), arrival of Petrus Belon in the East, on his visit to Constantinople and Egypt, meeting with *Aristolochia baetica*, *Caulis Orientalis*, *Ephedra altissima*.

Diospyrus lotus of Northern China. The *false lote-tree* is called by the Turks "trebison chormasi" (. . .) ; and the "cerasus trapezuntina" brought from Trebizond according to Belon, — is referred here by C. Bauhin : *D. lotus* was first planted at Padua by Fallopius, who supposed it to be *guaiacum* (Gerarde emend.) ; was received from Constantinople through Busbecke by Matthioli 211 ; is termed "guaiacana" by Tournefort inst. 600 ; is described also by Lobel, Cæsalspinus, Camerarius, Dalechamp, and Pallas pl. 58 ; has become well known throughout the Mediterranean countries (Pers.) ; was observed by Forskal p. xxvi, and Sibthorp, in gardens at Constantinople. Farther East, by Bunge, wild on the mountains of Northern China.

Cerasus laurocerasus of the East Mediterranean countries. A *cherry-laurel*, called in Greece "thaphnōēthēs" (Sibth.) ; seen by Belon in the East — (Spreng.), and "in 1576" introduced from Trebizond into Europe by Clusius — (Linn., Pers., and Daubeny) : described also by Camerarius hort. pl. 23 ; termed "laurocerasus" by Tournefort inst. 628 ; observed by Sibthorp in the Peloponnesus ; and continuing under cultivation as far as Britain, where it is called simply *laurel* (Prior). Its leaves bark and seeds according to Lindley contain "prussic acid, which exists in great abundance in the distilled water : this is a deadly poison."

Mimosa (Prosopis) agrestis of Palestine. A twisted thorny shrub observed by Belon near Rama, — by Sieber near Joppa (Spreng.).

Thuja Orientalis of the mountains of Middle and Eastern Asia. The *Chinese arbor-vitæ* clearly "thua" congeneric with the "arbre de vie de Canade" was seen by Belon in Crete, and apparently wild on the Taurus mountains along the Eastern border of Asia Minor : — *T. Orientalis* is described by Linnæus, and Lamarck ill. pl. 787 ; and is enumerated by Clot-Bey as planted for ornament in the gardens of Egypt. Eastward, was observed by Loureiro ii. p. 580 in Cochinchina ; is known to grow in China (Pers.) ; and was found by Thunberg in Japan, abounding on mount Fakon and called "konote gassiiwa" or "fi no ki." By European colonists, was carried to the environs of Bombay (Graham) ; and to Northeast America, where it has become frequent in gardens, hardly however exceeding the dimensions of a shrub.

"1547 A. D." (Steinschn. iii. 30), *valves in the veins* discovered by Amatus Lusitanus.

"In the Sixteenth century" (Pouchet), the *diamond* first employed for *cutting glass*.

"1548, May 15th" (Alst., and Blair), by Charles V., the Interim book granted to the Protestants ; a formula of religion to be used pending the sessions of the Council of Trent.

"In this year" (Prior), W. Turner publishing his *Names of plants*, enumerating *Ruta angustifolia* : * — he published his Herbal "in 1551," and died "in 1568" (Spreng.).

* *Spartina stricta* of the seashore of Northern Europe. Called by Turner *cord-grass* from seeing the inhabitants of East Friesland "make ropes of that rishe, and thache their houses also wyth the same" — (Prior) : *S. stricta* with "pubescent spikes and pungent leaves" is described by Roth, is known to grow on the seashore of France and Britain (Pers.), and was observed by Brotero as far as Portugal (Steud. ; compare A. Dec. g. b. 1052).

Lycopodium alpinum of the mountains of middle Europe. Called in Britain *heath-cypress* (Prior), a name "hethe cypres" given by Turner pl. who found it growing among heath on mountains above Bonn in Germany.

Atriplex portulacoides of the seashore of Europe and the Mediterranean countries. Called in Britain *sea-purslane* (Prior), a name "see porcelline" given by Turner pl. who found the plant on Porbek Isle and frequent on the seashore of Friesland: — *A. portulacoides* is described also by Plukenet alm. pl. 61; is termed "*a. maritima angustissimo folio*" by Tournefort inst. 505; continues on the seashore of Britain (Engl. bot. pl. 261, and Pers.); was observed by Sibthorp, and Chaubard, on the maritime rocks of Samos and other Greek islands; by Forskal, and Delile, along the Mediterranean shore of Egypt, near Rosetta and on islets within Lake Menzaleh.

Asperula arvensis of Europe and the adjoining portion of Asia. Described by Turner — (Spreng.), and Dodoens pempt. pl. 355; termed "*gallium arvense flore cæruleo*" by Tournefort inst. 115, "*a. ciliata*" by Moench, and known to occur in cultivated and especially calcareous soil in middle Europe (Pers.); was observed by Sibthorp, and Chaubard, in cultivated ground from the Peloponnesus to the Greek islands. Has recently made its appearance in Britain, in three widely-separated localities (Wats., and A. Dec.).

"September," Cieza de Leon lxxviii. passing through the valley of Pacasmayu to join soldiers from Popayan on their way to Truxillo, Lima, and Xauxa, to chastise the rebellion. — "In 1549," he proceeded as far as the silver-yielding province of Charchas; and returning to Lima, "finished writing his notes on the 8th of September 1550, and sailed for Spain;" where he died "about 1560" (Markham introd. p. ix.).

"In this year" (Markham edit. p. 227), after holding the office of bishop of Lima eight years, Fray Geronimo Loayza now "the first archbishop." — He held three autos-de-fé at Lima, in one of which John Millar of Flanders was burned as a Lutheran, prior to the introduction of the *Inquisition* "in 1569:" at the first auto-de-fé under the Inquisition "in 1573," a Frenchman was burned as a heretic, Loayza dying "in 1575."

"The same year" (Hakluyt iii. 131, and Holmes), the first act of the English parliament relating to America, Prohibiting exactions from fishermen visiting Newfoundland. Sebastian Cabot, returning in this year to England, urged the possibility of a Northeast Passage; giving rise to the commercial association of "Merchant Adventurers," and the freeing of English commerce from the yoke of the Hanse Towns. — The association continues in existence (Asher edit. Huds.).

"1549 A. D." (Univ. hist. xxxix. 217, and Holmes), the city of Bahia or St. Salvador founded by the Portuguese: being "the first European settlement in Brazil." Joannes Stadius anchored "in this year" at St. Catharine, — and "in 1554," left the harbour of "Rio de Ienero," called "Ganabara" by the natives (De Bry).

As early as this year, Lucas Ghini corresponding with Matthioli. — He died "in 1556" (Spreng.).

"August 15th" (art de verif., and Thunb. trav. iv. 30), arrival in Japan of the first Christian missionary, the jesuit François Xavier; bringing three Japanese, whom he had converted at Goa.

"1550, February" (Alst.), in France, edict of Henri II., Against judges who should be too remiss in convicting persons of Protestantism.

In or about this year (Neal, and Holmes), refusal of bishop Hooper "to be consecrated in the popish habits:" the beginning of the controversy that led to the Puritan separation from the Church of England.

"April 22d" (Schmied. p. xii), letter from Gesner to his friend Io. Kentmann.

"In this year" (biogr. univers.) Adam Lonicer publishing botanical writings, enumerating . . . — His Stirp. Histor. is quoted by Matthioli comm. 108, his Krauterbuch was published "in 1573" (Spreng.), and he died "in 1586."

"In this year, one year more or less" (G. de la Vega ix. 17), the ox-plough introduced at Cuzco, G. de la Vega * at this time a boy being present: the natives flocking from all quarters to witness the novel spectacle, and concluding, "That the Spaniards were too idle to work, and that they forced those great animals to do their work for them."

* *Anona cherimolia* of Peru. The *chirimoya*: the "fruit in the country of the Antis" called by the Spaniards "manjar blanco" from resemblance "in colour and taste," of "the size of a small melon," having within "some small black pips which are not good to eat" contained in a "highly esteemed" pulp, "sweet and just the least bit acid, so as to increase its luscious flavour," — may be compared: *A. cherimolia* was observed by Feuillée iii. pl. 17, and myself, under cultivation in Peru; but is indigenous I was assured by Mr. Matthews in ravines towards the Equator. By European colonists, was carried to Venezuela and New Granada (Humb. and Bonpl.): to Brazil (Mart.) and the mountains of Jamaica (Macfad.); to the Cape Verd Islands and Guinea (fl. Nigr., and A. Dec.); and "in 1833" to the environs of Bombay (Graham).

"The same year" (A. Dec. geogr. bot. p. 874), arrival of Garcias at Goa.

"In the middle of the Sixteenth century" (Kobell iv.), in Bohemia, staining glass with cobalt ores, discovered by Christopher Schürer of Platten. — This stained glass pulverized, forms the pigment sold under the name of "*smalt* or cobalt-blue."

"In the days of their ancestors" (according to the account of the natives to Dillon ii. p. 112, Hale ethnogr. Expl. Exp.), Tikopia Island invaded by "five large canoes from Tongatabu, the crews of which committed great ravages."

"1551, February" (art de verif.), arrival of the jesuit François Xavier at court in Meaco: after "fifteen days," he returned without obtaining audience; and "Nov. 20th," left Japan for the Indies. On reaching his destination, and sending three of his colleagues, jesuits, to Japan, — François Xavier left Malacca for China, and died "Dec. 2d 1552" at the isle of Sancian on the coast of Quantong.

"In this year" (Schmiedl.), letter from Gesner to Benedict. Aretius; and Aretius sending plants to Gesner, including "anckenballen damasonii aliqua species" 235 *Cypripedium calceolus* (Gesn. ii. fig. 63). — He died "in 1578."

Dentaria pentaphyllos of the mountains of middle Europe. Termed "wilder senff foliis quinis" by Aretius as sent to Gesner ii. fig. 1, "d. digitata" by Lamarck; described also by Matthioli 684 (Spreng.), and Gouan ill. 42: and known to grow on the mountains of Switzerland (Pers.).

As early as this year (Matthioli. comm. D. ii. 163), Anguillara corresponding with Matthioli, also enumerating "fior di velluto" *Celosia castrensis*.

"1552 A. D." (Alst.), in Germany, Augsburg captured, and other successes of the Protestants.

"The same year" (Robertson ii. 388, and Holmes), discovery of the rich *silver* mines in Mexico.

"1553 A. D." (Pauth. 407), the coasts of China infested by Hoang-tchi; a pirate chief commanding a fleet of "a hundred sea-going vessels."

"May 10th" (Asher edit. Huds., and Churchill coll.), sailing of Hugh Willoughby in command of the first Northeastern Expedition sent out by the "Merchant Adventurers." "Aug. 14th." he discovered land in "72° N." (Nova Zembla): and "after losing the company of his other two ships," entered the harbour of Arzina in Lapland: there were "no inhabitants, but thinking to have wintered there," all on board "were frozen to death." Of the other ships, one commanded by Richard Chancellor succeeded in getting to the inhabited Bay of St. Nicholas or the White Sea, "being the first ship" (since the days of Other) "that ever came upon" the North coast of Russia.

"July 6th" (Alst., and Nicol. 337), death of Edward VI. of England, after naming a successor; vainly attempting to exclude his sister Mary, who was a Catholic.

"October" (Alst. p. 391 and 557), at Paris, many Protestants burned alive. And at Geneva, Michael Servetus burned alive by the Protestants; for maintaining "nullam esse in deo realem generationem aut distinctionem" there is no real generation nor distinction of persons in God.

"The same year" (Alst.), end of the chronicle of Johannes Funccius.

As early perhaps as this year (see Spreng.), Anguillara travelling throughout Italy, Corsica, Sardinia, Illyria, Sclavonia, the Greek islands and Crete, meeting with *Atriplex veneta* on the strand of the Adriatic, *Cytisus spinosus* on Corsica 62, "caccialepre" of the Italians 109 *Mulgedium perenne*, *Bunium copticum* 130, *Centaurea crocodilium* 141, *Ranunculus philonotis* 178, *Nepeta nepetella* 202, "doricnio" 270 *Dorycnium herbaceum*, *Cynanchum acutum* 274, "poligala" 290 *Polygala flavescens*.

Arum tenuifolium of the Mediterranean countries. Observed by Anguillara not far from Rome, as well as in Dalmatia and the Peloponnesus, and communicated to Matthioli pl. — described also by Clusius hist. ii. pl. 74 (Spreng.); and known to grow in Southern France near Montpellier (Pers.).

Iberis umbellata of the West Mediterranean countries. Called in Britain *Candy-tuft* or *Candy-mustard* (Prior) from supposed Cretan origin, in Italy "tlaspi a mazetti" (Lenz); described by Anguillara p. 171 (Spreng.); observed by Lenz wild in Italy: known to grow also in Spain and as far as France (Pers.). By European colonists, was carried to Northeast America, where it continues under cultivation as a garden flower.

As early at least as this year (. . .), Lopez de Gomara writing.* — His work was published in Spanish at Antwerp in "1554."

* *Mimosa pudica* of Tropical America. The *sensitive plant* described by Lopez de Gomara — (C. Bauhin), and Martinus del Barco (Barcia, and Spreng.), received also by Commelyn hort. i. pl. 29 from Brazil. Farther West, was carried by Polynesians to the islands of the Pacific, observed by myself a frequent weed on the Tahitian, Samoan, and Tongan Islands; by C. Acosta, and myself, throughout the Malayan archipelago; by Mason v. 432 to 771, "exotic" in Burmah and called "hte-ka-yung," cultivated by the natives, but besides naturalized; by Gardner (bot. mag. 1848), a weed on Ceylon; by Roxburgh, in Hindustan; by Graham, "in gardens common" around Bombay and called "lajalu" or "lajuck." By European colonists, was carried to Northeast America, where it continues in greenhouses, and according to Chapman, has become "partially naturalized in some localities" in our Southern States.

Myrospermum toluiferum of the Caribbean terminus of the South American Andes. The tree yielding *balsam of Tolu*, mentioned by Lopez de Gomara — (Spreng.); growing on the "mountains of Turbaco near Carthagena, and extremely common in the high savannahs of Tolu" (Lindl.), and seen wild by Humboldt and Bonpland vi. 375. From transported specimens, described by Miller dict. 1, and Woodville. The product according to Lindley is a "warm sweet fragrant solid stimulant balsam," used in "coughs, chronic pulmonary complaints and on account of its flavour."

"1554. January" (Alst.), arrival in England of an embassy from Charles V., seeking the hand of queen Mary for his son Philip. The proposal was resisted by the people and many of the nobility, even to insurrection: which proving unsuccessful, the queen's half-sister Elizabeth was imprisoned on suspicion.

"July 25th" (Nicol. p. 337, compare Alst.), marriage of Philip and queen Mary. Many persons in consequence of the national change in religion, seeking refuge in Denmark and afterwards in Germany.

In this year (Tourn. trav. iii. 257), Astrakan on the Caspian acquired by the Russians.

"In this year" (Spreng.), after the Italian edition of his commentaries on Diosc., Matthioli publishing a more complete edition, enumerating *Astragalus hamosus* 641, *Cirsium Monspensulanum* 817, *Mercurialis tomentosa* 634, *Muscari moschatum*, *Potentilla nemoralis* 674, *Santolina squarrosa* 513, *Tanacetum annuum*, "fava salvatica" *Vicia Narbonensis*, "lunaria maggiore" *Hippocrepis unisiliquosa*, "nardo italiano" *Lavandula dentata*, "pentafilello bianco" *Potentilla multifida*, "salcio detto Vinchi" *Salix amygdalina*, *Ornithopus scorpioides* 895, *Saxifraga nivalis* (Bauh. hist. iii. 684), *Salvia triloba* 711 (Gesn. ii. fig. 23), *Saxifraga cuneifolia* (Gesn. ii. fig. 37), *Cortusa* Matthioli 698, "phyteuma" *Campanula persicifolia*, *Czackia liliastrum* 607, *Hyoscyamus Scopolia* 753, *Plantago Wulfenii* 54, "buglossum alterum flore nigro" 826 *Lycopsis pulla*, "verb. secundum" 800 *Verbasum pulverulentum*, "myriophyllum alterum" 812 *Hottonia palustris*, "meum" 24 *Athamantia Matthioli*, *Meum mutellina* 25, *Torilis nodosa* 404, "caucalis" 298 *Torilis Helvetica*, "ligusticum primum" 547 *Laserpitium peucedanoides*, "seseli aethiopicum" 550 "Laserpitium libanotis", "epipactis" 806 *Astrantia epipactis*, *Linum maritimum* 334, *L. tenuifolium* 334, *Silene saxifraga* 694, *Cotyledon serrata* 787, "cncorum Theophrasti" 872 *Saponaria ocymoides*, "ledum" 160 *Cistus ledum*, "aconitum quintum" 765 *Ranunculus Gouani*, "ran. quartum" 458 *Anemone narcissiflora*, "ran. sextum" 459 *Trollius Europaeus*, "aconit. quartum" 764 *Aconitum Pyrenaicum*, "aconit. septimum" 765 *Aconitum volubile*, "stachys prima" 605 *Sideritis Syriaca*, *Orobanche elatior* 409, "draba lutea" 430 *Erysimum junceum*, "geran. quintum" 623 *Geranium reflexum*, "securidaca minor" 641 *Trigonella polyceras*, *Lactuca quercina* 400, *Cacalia alpina* 823, "cirsium" 817 *Saussurea alpina*, "conyzia minor" 629 *Pulicaria odora*, "asarina" 370 *Tussilago alpina*, "absinthium marinum primum" 509 *Artemisia coerulescens*, "helichrysium" 753 *Chrysanthemum Italicum*, "alisma" 666 *Doronicum plantagineum*, "alterum" 762 *D. Austriacum*, "aster atticus alter" *Buphtthalmum spinosum*, "arum" 448 *Arum proboscideum*, *Quercus pseudosuber* 181, "nymphaea parva" 644 *Hydrocharis morsus-ranæ*.

Sedum dasyphyllum of Europe and the adjoining portion of Asia. Termed "sempervivum minus femina" by Matthioli 785 — (Spreng.), "s. minus folio circinato" by Tournefort inst. 263, — and known to grow on rocks from the department of Calvados to the Mediterranean (Wachend. ultr. 391, Lam. fl. fr., Pers., and A. Dec.): observed by Sibthorp on the rocks of Crete and mount Parnassus. In Britain, is first noticed by Dillenius "in 1724," and is regarded as exotic, confined to walls and the close vicinity of gardens (Wats., and Bromf.), but occurs both on walls and calcareous rocks near Cork in Ireland (Mackay, and Power).

Ligusticum Peloponnense of the mountains of middle Europe, from Carniolia to the Cevennes in France. The "seseli peloponnense" of Matthioli 551 — is referred here by Sprengel: *L. Peloponnense* is described by Linnæus, and Scopoli; and is known to grow in woods on the above-mentioned mountains (Jacq. austr. v. pl. 13, Hacq. carniol. pl. 5, Lam. fl. fr., and Pers.); but farther South, has not been observed in Greece; and according to Clot-Bey and Figari, has only recently been introduced into Egypt.*

* *Cerasus (Laurocerasus) Lusitanica* of America? Described by Matthioli 197 — (Spreng.), Miller pl. 196, and Dillenius elth. pl. 159. Received from Portugal (but evergreen cherries, *Laurocerasi*, have been observed by myself indigenous only in America); *C. Lusitanica* is termed "*lauro della Pensilvania*" by Gallizioli (Targ.), and the descriptions by Aiton and others agree with *L. Caroliniana*.

Ledum palustre of Subarctic climates. The "*rosmarinum sylvestre*" of Matthioli 576 — (Spreng.), mixed in beer, and sent from North Germany by I. A. Cortusus and A. C. Nissa to Dodoens pempt. ii. 3. pl. 5, clearly corresponds: *L. palustre* is described also by Linnæus; is known to grow in

Achillea Aegyptiaca of the East Mediterranean countries. The "absinthium seriphium ægyptiacum" of Matthioli 511 — is referred here by Sprengel: *A. Aegyptiaca* is termed "ptarmica incana pinnulis cristatis" by Tournefort cor. 37 and voy. i. pl. 87 as seen by him in the East; was observed by Sibthorp on the mountains of Southern Greece and in Cyprus; and farther East, is known to grow around Astrakan (Pers.).

Catananche coerulea of the West Mediterranean countries. Described by Matthioli p. 847, — Dodoens 638 (Spreng.), and Linnæus, and known to grow in Southwestern France and Barbary (Lam. ill. pl. 658, and (Pers.): observed by Valle on Corsica (Spreng.).

Moluccella lævis of Middle Asia. A Labiate annual: the "melissa Constantinop." of Matthioli 602 — (Spreng.), further described by Caesalpinus xi. 24 as exotic in Italy, clearly corresponds: *M. lævis* is termed "molucca lævis" by Tournefort inst. 187; is known to occur in Syria (Sabb. hort. iii. pl. 45, and Pers.); and was observed by Sibthorp in cultivated ground in the environs of Smyrna.

Dracocephalum Moldavicum of Siberia. The "melissa moldavica" of Matthioli 603 — is referred here by Sprengel: *D. Moldavicum* is also described by Linnæus, and Lamarck ill. pl. 513; has been long cultivated in gardens; and according to Clot-Bey and Figari, has recently by the way of France been introduced into Egypt. In its wild state, *D. Moldavicum* is known to grow in Siberia (Pers.).

Juncus bufonius of Europe and Northern Asia. The "holóstium" of Matthioli 687 — is referred here by Sprengel: *J. bufonius* is termed "*j. palustris humilior erectus etiam repens*" by Tournefort inst. 246; was observed by Savi in Italy; by Desfontaines in Barbary; by Brotero in Northern Portugal; and is known to grow along roadsides and in places subject to overflow throughout middle and Northern Europe as far as Lapland and Iceland (Hook., Pers., and Wats.). Eastward, was observed by Sibthorp, and Bory, frequent in moist situations in Greece; by Delile, on islands in the Nile; is known to grow in Abyssinia (A. Rich.); was observed by Bieberstein around Caucasus; and by Gmelin, throughout Siberia. From Europe, was perhaps carried by colonists to Northeast America, where it abounds along roadsides, and was observed by Lapylaie on Newfoundland, by Drummond at Cumberland house in Lat. 54°, and by Nuttall on the Arkansas; to New Granada, Chili, and Monte-Video (Kunth); to Austral Africa (Drège, and E. Mey.); to Southwest Australia (Preiss, Lehmann, and A. Dec.); and to New Zealand (J. D. Hook.).

Acercas anthropophora of Europe and the adjoining portion of Asia. Called in Britain *man orchis* or *green-man orchis* (Prior): termed "test. quintum" by Matthioli 636 — (Spreng.) "o. flore nudi hominis effigiem representans, femina" by Tournefort inst. 433, and known to grow throughout middle Europe (Curt. lond. vi. pl. 66, Vaill. pl. 31, and Pers.): observed by Haller pl. 23 in Switzerland; by Sestini, in the environs of Constantinople (Sibth.).

Allium victorale of Europe and the adjoining portion of Asia. Termed "anguinum" by Matthioli 422 — (Spreng.), "*a. montanum latifolium maculatum*" by Tournefort inst. 383, and known to grow from France throughout middle Europe (Blackw. pl. 544, and Pers.): observed by Lecoq and Lamotte in central and Southern France, by Thurmann on the Jura, by Godron in Lorraine, by Grabowski in Silesia (A. Dec.); by Jacquin pl. 216, in Austria; by Sestini, in the environs of Constantinople.

"In this year" (Spreng., and Winckler), Andr. Lucana publishing annotat. in Diosc., and sending plants to Matthioli, including *Digitalis thapsi*.

"In this year" (Schmied. p. xxvii, and Spreng.), Franc. Calceolarius, an apothecary of Verona, in company with Anguillara and Aldrovandus, ascending mount Baldo, "6860 feet" in elevation (Sternb.), meeting with *Campanula saxatilis*, *Selinum lineare*, *Anemone Baldensis*, and *Arnica Wulfeniana*.

Rhododendron chamaecistus of the Austrian Alps. The "rhododaphne alpina Aldrovand." of Gesner i. pl. clxxxi — may be compared: *R. chamaecistus* is known to grow on mount Baldo and in Austria (Jacq. pl. 217, and Pers.).

marshes throughout Northern Europe (Pers.); and was received by Decandolle from Alsace on the Upper Rhine. Eastward, was observed by Gmelin throughout Siberia to Kamtchatka: and farther East, by Chamisso on Chamisso Island and at Kotzebue Sound; by Mertens, at Norfolk Sound in 57°; by Parry, at Duckett Cove in Eastern Arctic America (Hook.).

Chenopodium glaucum of Europe? A *goosefoot* with leaves white-mealy underneath, the "atriplex sylv." of Matthioli ii. 362 — according to Spreng. præf.; described also by Bauhin hist. ii. pl. 473; termed "*c. concatenatum*" by Thuillier paris. 125; and occurring in waste places from Denmark throughout middle Europe (fl. Dan. pl. 1151, and Pers.). By European colonists, was carried to Austral Africa (E. Mey., and A. Dec.); to Northeast America, observed by D. Murray in Roxbury near Boston, by Bromfield around Philadelphia, and by Porter around Lancaster Penns., (but no specimens seen by A. Gray).

Saxifraga adscendens of Subarctic Europe and mountain-summits farther South. Observed by Calceolarius on mount Baldo — (Spreng.); by Linnæus, and Fries, in Scandinavia; by Ledebour, in Esthonia: by Lapeyrouse on the Pyrenees; by Koch, on the Swiss Alps; by Poech, from the Tyrolean Alps to mount Viso (A. Dec. 433); by Grisebâch, at "seven thousand feet" on the mountains of European Turkey; and is termed "*s. controversa*" by Sternberg.

The same year (Mason ii. 28), arrival in Pegu of the first missionary, Bonferrus. — He remained three years only.

1555, "Feb. 6th" (S. F. Haven in archæol. Amer. iv. 265), in consequence of the discoveries beyond Cape North, a *Trading company* chartered in England by Philip and Mary; under the name of the "Muscovy" or "Russia company." — In 1556, the title was changed to "the Fellowship of English merchants for the discovery of new trades;" the corporation continues in existence.

"February" (Alst.), in England, many persons of distinction, Protestants, burned alive. — Reminiscences of "bloody Mary" have not disappeared from the mind of the English people to the present day.

"The same year" (Pauth. 407), the coast of Tche-kiang in China invaded by the Japanese, hitherto regarded as a tributary nation. After landing, to the number of "four thousand," the Japanese were defeated and sought refuge in their ships. — In the following year, they returned "ten thousand" strong, but were again repelled. And after an interval of "seven" years, a third attempt proved in like manner unsuccessful.

"Aug. 20th" (Schmied.), Gesner ascending mount Pilate, near Lucerne, meeting with "*gentiana punicea*" ii. fig. 92 *G. purpurea*, "*sedula montana pulchra*" tab. fig. v *Saxifraga sedoides*, "*sedi minoris genus floribus luteis maculosis*" *Saxifraga autumnalis*. He published an account of his excursion before the close of the year, together with his Rar. et admirand. herb.

The *Canary bird*, *Fringilla Canaria* first mentioned by Gesner in this year, — and first figured by Aldrovandus (Beckm.). The bird was brought from the Canary Islands; and as kept in cages, has become familiarly known among civilized nations; having doubtless been sometimes transported into Egypt.

"The same year" (Vega 388, and Holmes), the culture of the *grape* having been successfully introduced into "the city of Chili," the historian Vega sent by his father Garcilasso de la Vega, to distribute bunches to different houses.

"The same year" (Maunder), Humaioon succeeded by his son Ackbar, now emperor of Northern Hindustan.

Fritillaria meleagris of the Uralian plains. Called in Britain *guinea hen* or *chequer lily* or *fritillary* from "*fritillus*" dicebox (Prior), and about the middle of the Sixteenth century transferred into gardens — (Beckm.): described by Dodoens pempt. 233; observed by Pallas trav. iv. and v. wild on the Lower Volga; has become naturalized in France, England, Holland, and as far as Sweden (Blakst. in Huds. fl. 144, fl. Dan. pl. 972, Bromf., and A. Dec.).

Fritillaria Persica of Central Asia. Brought about the middle of the Sixteenth century from Persia — (Clus. rar. ii. 2, and Beckm.): termed "*lilium persicum*" by Dodoens pempt. 220 (Spreng.), and Lobel hist. pl. 86; described also by Linnæus, and Redouté lil. pl. ; and occasionally cultivated in the gardens of Europe and Northeast America.

"1556, July" (Hakl., and Churchill coll.), arrival of Stephen Burrough in a small vessel at Nova Zembla or the "new land." He here learned how to shape his course for the river Ob: but on reaching the Straits of Weygats, "found no passage, and the summer season being almost spent, returned to Colmogro" in Russia. — After wintering here, the farther prosecution of the voyage was countermanded.

"Sept. 15th" (Alst.), departure for Spain of Charles V., leaving the government of Belgium to his son Philip; and of Germany, to his brother Ferdinand, with letters requesting the electors to make Ferdinand emperor.

"The same year" (De Bry.), arrival of Leriüs in Brazil: where the only plants common to Europe were "*portulaca*" (*P. oleracea*), "*ocymo*" (*O. Americanum*), and "*filice*" (*Pteris aquilina*). Among other novelties, he describes according to Sprengel *Cerbera ahovai*, "*hatch*" *Ipomoea plantanifolia*, and *Zamia furfuracea*.*

"1557 A. D." (Spreng.), Quakelbeen, physician to Busbequius, writing from Constantinople to Matthioli.

* *Amyris balsamifera* of the West Indies. A tree seen by Leriüs 202 in Brazil, — according to Sprengel: *A. balsamifera* was observed by Sloane pl. 168, and P. Browne 208, on Jamaica. From transported specimens, is termed "*lucinium*" by Plukenet alm. pl. 201, is described also by Linnæus.

1 *Æsculus hippocastanum* of Central Asia. The *horse-chestnut* made known in this year through a description sent by Quakelbeen from Constantinople to Matthioli — (Spreng.): is described also by Clusius, Parkinson th. 1402, and Rivinus; is termed "*hippocastanum vulgare*" by Tournefort inst. 612; and continues under cultivation for ornament throughout middle Europe; was observed by Hawkins in Greece, on the mountains Pelion and Pindus (Sibth.). By European colonists, was carried to Northeast America, where it continues planted for ornament in our Northern and Middle States, but does not succeed in the Latitude of Egypt in our Southern States.

Not later than this date (Spreng.), Iul. Cæs. Scaliger endeavouring to refute Hieron. Cardanus, in regard to novel plants in America described by Oviedo and Monardes. — Scaliger died "in 1558."

Fragaria Chiloensis of Northwest America. A dioecious *strawberry* bearing very large fruit, and called in Chilian "quelghen" (Molin.): "in this year" according to G. de la Vega viii. 11 the fruit called "chili" arrived at Cuzco, having "a very pleasant taste" and growing "on very low shrubs almost trailing on the ground," with "little grains outside like the fruit of an *arbutus*, and is the same size, not round, but rather long, in the shape of a heart," — may be compared. Farther South, the best quality of fruit of *F. Chiloensis* comes according to Molina from the Chilian provinces of Puchacay and Huilquilemu. The plant was carried by Frezier "in 1712" from Conception to Europe (Pers.); is described by Miller . . . and Dillenius elth. pl. 120; and from Europe was carried to the West Indies, requiring according to Descourtilz "to be sown with other kinds under penalty of sterility."

"1558, Jan. 8th" (Blair), Calais re-captured from the French. Who were commanded by the duke of Guise, minister to Henri II.

"The same year" (Alst. p. 493), a remarkable comet. And the abdication of Charles V., his brother Ferdinand becoming emperor of Germany and Italy.

"Nov. 17th" (Alst., and Nicol.), queen Mary of England succeeded by her half-sister Elizabeth. The Protestants now restored to power, and an act of Parliament Forbidding obeying the pope.

"The same year" (art de verif.), Gonara succeeded by his son Ookimatz, now dairo of Japan.

"The same year" (Holmes), in Peru, the Inca and his wife "in rich attire and costly liveries" baptized at Cuzco: the historian Vega being present.

"In this year" (Asher edit. Huds. p. xcvi), the mouth of the Straits (afterwards called Hudson's) known to the Portuguese, as appears from maps.

"In this or the following year" (Yule cath. i. p. cxliii), Anthony Jenkinson and the two Johnsons visiting Bokhara by the way of Russia.

"1559 A. D." (Alst.), Protestants persecuted by queen Mary of Scotland.

"In this year" (Spreng., and Winckler), Bartolomeo Maranta publishing his *Method. cogn. simplic.* — He published his *Nov. Herb.* "in 1571."

"The same year" (Spreng.), arrival of Guilandinus in Egypt. — Where he remained during a portion of the following year.

"1560, March" (Blair), in France, the conspiracy at Amboise, initiating civil war against the "Huguenots" — (another name for Protestants).

"The same year" (Alst.), by Philip, now Philip II. of Spain, many foreigners especially Spaniards introduced into Belgium. — And after two years, notwithstanding the remonstrances of the Belgians, three new archbishops and several bishops introduced by pope Pius IV.

"In this year" (Schmied.), letters from Gesner to Io. Fabricius, and J. Baubin.

"In this year" (Markh. edit. p. viii), Polo de Ondogardo, corregidor of Cuzco, writing on the Peruvians.

"In this year" (narrat. i. to ix, and Markh.) Garcilasso de la Vega leaving Peru, at which time there was no coined money in the country. — He commenced writing in Spain, continued writing "in 1604," and died "in 1616."

"1561, September" (Alst.), the general Council of Trent revived by pope Pius IV.

"In this year" (Spreng.), Anguillara, after receiving information in Crete from Robertus Constantinus, publishing his *Simplicib.*; enumerating *Caucalis grandiflora* 217. — He died in "1570."

"In this year" (Schmied. and Spreng.), Gesner editing the botanical writings of Valerius Cordus, publishing his *Hort. germ.*, and preparing drawings for his botanical work, enumerating "*juncus idaeus vel petraeus*" ii. fig. 16 *Juncus trifidus*, "*chamaecerasus bergkriesse*" ii. fig. 43 *Axylesteum alpi-genum*, "*satyrii species quam monorchin dixeris*" ii. fig. 64 *Hermimum monorchis*, "*calathiana autumnalis*" ii. fig. 88 *Gentiana ciliata*, "*pentaphyllum alpinum aureum*" ii. 97 *Potentilla cinerea*, "*lapathi genus sylvestre minus*" hort. f. 263 *Potamogeton serratus*, "*nummularia sylvatica*" hort. f. 268 *Lysimachia nemorum*, *Thalictrum tuberosum* ad Cord. f. 98, *Artemisia Austriaca* ad Cord. f. 107, *Chrysanthemum corymbosum* ad Cord. f. 140, *Asplenium Germanicum* ad Cord. f. 127.

Epilobium palustre of Northern climates. — Described by Tabernaemontanus vi. 1238 (Spreng.);

termed "*chamænerion Gesneri*" and "*lysimachia siliquosa tertia*" by Clusius hist. ii. 51, "*lysimachia siliquosa glabra angustifolia*" by C. Bauhin pin. 245, "*chamænerion angustifolium glabrum*" by Tournefort inst. 303, and known to grow from Lapland throughout middle Europe (Engl. bot. pl. 346. Pers., and Wats.): observed by Linnæus in Lapland and Sweden; by Pallas, at 67° on the Oby; and by Sibthorp. on the Bithynian Olympus. Westward, by Hooker in Iceland, and received by him from Canada as far as 64° and the Rocky mountains; was observed by Michaux at Hudson Bay and Lake Mistassiny; by myself, frequent in New England; by Nuttall, as far as Philadelphia (Dec.); by Pursh, from Pennsylvania to Virginia; and according to Chapman, grows on the "mountains of North Carolina."

Saxifraga aizoon of Subarctic climates. Described by Gesner, ii. fig. 28, — Barrelier pl. 1310, Morison 12. pl. 9, Plukenet phyt. pl. 221, and known to grow on the Pyrenees and Swiss Alps as far as Austria (Jacq. austr. pl. 438, Lapeyr., Pers., and A. Dec.); was observed by Fraas in Greece. Westward, by Colmaster in Labrador (Pursh); and was received by Hooker from the Saskatchewan; by A. Gray, from "Upper Michigan and Wisconsin," and observed by Blake on Willoughby mountain in Vermont.

Saxifraga cespitosa of the Arctic region and mountain-summits farther South. Termed "*sedulum quod moschatella alpina lutea*" by Gesner ii. fig. 31, — "*sedum tridactylites alpinum minus*" by Bauhin prodr. 131, and C. Bauhin pin. 284, "*s. tridactylites alpina minor et villosa*" by Tournefort inst. 252, and known to grow in Lapland and on the mountains of middle Europe as far as Switzerland (Engl. bot. pl. 794, Lapeyr., and Wats.): observed by Sabine on Spitzbergen (Hook.); by Linnæus, on the mountains of Lapland; by Seguieri pl. 9, not far from Verona; by Sibthorp, on Delphi mountain in Greece; by Bieberstein, on Caucasus. Westward, is known to grow in Greenland as far as Igloodik, also along the Arctic Sea to Kotzebue Sound (Hook.); was received by Pursh from the Northwest coast.

Saxifraga stellaris of the Arctic region and mountain-summits farther South. The "*sedulum alpinum quartum*" of Gesner ii. fig. 36 — may be compared: *S. stellaris* was observed by Linnæus fl. pl. 2. in Lapland, and is known to grow as far as the mouth of the Lena (Dec.) and Lake Baikal (Ladeg.); also from Sweden to Southern Ireland and Wales (Fries, and Mackay), on the Pyrenees, at "seven thousand feet" on the Sierra Nevada (Boiss.), on mount Rotundo in Corsica (Gren. and Godr.), on the Swiss Alps, and mountains of the Black forest (Koch), of Transylvania (Baumg.), and of Thrace and Macedonia (Griseb., and A. Dec.). Westward, was observed by Hooker on Iceland, and received from Spitzbergen, Greenland, and Labrador.

Solanum pseudo-capsicum of "Madeira." Transported to Europe, described by Gesner hort. f. 282 — (Spreng.), Dodoens pempt. 718, and C. Bauhin pin. 61: cultivated for its ornamental bright-red cherry-like berries, and has become naturalized at the base of the Pyrenees (herb. Req., Dun., Dec., and A. Dec.); was observed by Chaubard in the Peloponnesus, escaped from cultivation; by Delile, in the gardens of Egypt; but according to Persoon is wild on Madeira. By European colonists, was carried to Northeast America, where it continues in greenhouses; to Austral Africa, and thence to the environs of Bombay (Lush, and Graham).

"1562, Apr. 30th, Thursday" (transl. Hackitt in soc. Hakl.), under instructions from (the French admiral Coligny), Jean Ribault with a colony of Protestants arriving on the American coast not far from "29° 30'." In the morning "on the first of May," he entered with boats a great river (the St. John's): the natives naked, having "the fore part of their body and armes" painted with "azure, red and blacke," and trimming themselves with an "herbe like unto mosse, whereof the cedar trees, and all other trees, bee alwayes couered" (*Tillandsia usneoides*): they presented "mulberies" (*Morus rubra*), "raspis" (*Rubus villosus*), "and such other fruites as they founde ready by the way:" in the forests were "palme trees" (*Chamærops palmetto*), "cypresse" (*Taxodium distichum*) "and cedars" (*Cupressus thuyoides*), "bayes y^e highest and greatest" (*Laurus Carolinensis*), "grapes" (*Vitis vulpina*) the vines growing "to toppes of oaks" (*Quercus prinus*) "and other trees that be of a wonderfull greatnesse and height;" also "walnut trees" (*Juglans nigra*), "hasell trees" (*Corylus Americana*), "cheritrees, very faire and great" (*Cerasus serotina*); the natives brought "rootes like vnto rinbabe, which they haue in great estimation, and make thereof a potion of medecine" (. . .), also "some small spices like vnto vire" (*Benzoin odoriferum*). Sailing thence Northward, finding "euery where the highest and greatest firtrees y^e can be seene" (*Pinus palustris* and *P. taeda*), "very well smelling, and where out might bee gathered, with cutting the only bark, as much rosen, turpentine, and frakēsence, as men would desire," on "the 27th" he entered with his ships port Royall, finding it "one of the fayrest and greatest hauens of the worlde:" here were many "pepertrees, the pepper yet greene and not ready to bee gathered" (*Celtis*?) ; and leaving Albert de la Pierria, the first of "thirtie" volunteers, "gentlemen, souldiers, and marriners," he departed "June 11th." — Dissensions afterwards arising among the colonists, some were slain, and those remaining built a small vessel, calking it with the "kind of mosse" growing on trees (*Tillandsia usneoides*), and abandoned the country (Holmes, and J. W. Jones in soc. Hakl.).

"In this year" (Spreng.), Matthioli residing as court physician at Prague and after the Valgrische edition of his comm. Diosc. with small figures "in 1560," publishing an edition in Bohemian with large figures. He left Prague for Vienna "in 1565," and died at Triest "in 1577."

"The same year" (Maunder), surrender and execution of Tupac Amaru, last Inca of Peru; the Spaniards now acquiring complete possession of the whole country.

"In this year" (Spreng.), Andr. Marini and Petr. Aut. Micheli publishing comment. in Mesue.

1563 A. D. (Schmied.), letter from Gesner to Felix Platerus.*

"In this year" (Schmied. ed. ii. 11), Gesner preparing drawings for his botanical work, including "bumma d'chiaun" ii. fig. 45 *Xylosteum caeruleum*, "periclymenum alpinum nigrum" ii. fig. 48 *Xylosteum nigrum*, "schoen blaue bergblümle" ii. fig. 32 *Saxifraga oppositifolia*, "wildschellkraut" ii. fig. 25 *S. rotundifolia*, "orminum luteum klibkraut" ii. fig. 25 *Salvia glutinosa*, "sedum aut phylli genus flosculus albis" ii. fig. 30 *Saxifraga caesia*, "tufelsangesicht vocatum flore purpureo" ii. fig. 67 *Ophris aranifera*, "gentianellae berggilgele secunda" ii. fig. 84 *Gentiana verna*, *G. punctata* ii. fig. 92 b, "quinquefolium alpinum album" ii. fig. 98 *Potentilla caulescens*, "chamaenerion aliud" ii. fig. 71 *Chamaenerium angustissimum*, *Veronica bellidioides* 4. f. 32 lign., *V. peregrina* 4. f. 33 lign., *Salvia ceratophylla* 12. f. 104 lign., *Triticum junceum* t. 2. f. 17, *Phleum Boehmeri* and *P. Michelii* t. 3. f. 19, *Centranthus angustifolius* t. 9. f. 74, *Globularia cordifolia* t. 6. f. 51, *Scabiosa integrifolia* f. 52, *Crucianella maritima* 16. f. 136, *Plantago maritima* 3. f. 26 lign., *Plantago Bellardi* pl. 3. f. 28, *Androsace villosa* opp. 9. f. 76 aen., *Primula marginata* opp. 9. f. 77 aen., *P. minima* 8. f. 69 aen., *P. integrifolia* 8. f. 67 aen., *Convulvulus lincatus* 9. f. 73 lign., *Specularia speculum* 9. f. 76 lign., *Gentiana Pannonica* t. 11. f. 99, *Armeria scorzoneraefolia* 7. f. 55 lign., *Statice reticulata* t. 18. f. 158, *Allium moly* 11. f. 98 lign., *Tofieldia palustris* 17. f. 145. 3 lign., *Daphne villosa* t. 21. f. 182, *Rhododendron ferrugineum* 21. f. 181 lign., *Silene catholica* 18. f. 156 lign., *Gypsophila repens* 11. f. 93 aen., *G. fastigiata* 12. f. 107 lign., *Cerastium alpinum* t. 11. f. 96, *Arenaria verna* t. 11. f. 98, *Trianthema pentandra* 17. f. 150 lign., *Euphorbia verrucosa* 14. f. 122 aen., *E. serrata* 14. f. 123 aen., *E. segetalis* t. 15. f. 131, *E. amygdaloides* t. 13. f. 112, *E. sylvatica* t. 13. f. 113, *Geum reptans* t. 16. f. 137, *Dryas octopetala* opp. aen. 3. f. 22, *Capparis ovata* t. 16. f. 144, *Cistus linearis* 3. f. 25 aen., *C. albidus* 2. f. 22 aen., *Helianthemum halimifolium* 3. f. 26 aen., *H. guttatum* 3. f. 27 aen., *H. thymifolium* 16. f. 143 lign., *Thalictrum foetidum* 17. f. 148, *Anemone palmata* 16. f. 139, *Ranunculus falcatus* 16. f. 136 lign., *Teucrium Achaemenis* 12. f. 107 lign., *Stachys hirta* 10. f. 84 aen., *Nepeta tuberosa* 12. f. 102 lign., "pulegium angustifolium" 12. f. 274 lign. and 10 f. 89 aen., *Mentha cervina*, *Phlomis herba-venti* t. 10. f. 33, *Pedicularis foliosa* 9. f. 77 lign., *P. incarnata* 9. f. 78 lign., *Lepidium perfoliatum* 13. f. 110 lign., *Draba aizoides* 13. f. 110 lign., *Biscutella coronopifolia* 13. f. 114, *Myagrurn rugosum* 13. f. 115 lign. and 14. f. 125, *M. perfoliatum* 14. f. 124, *Sisymbrium vimineum* 13. f. 111 aen., *Matthiola sinuata* 13. f. 111 lign., *Cheiranthus litoreus* 13. f. 111, *Genista Lusitanica* 14. f. 122 lign., *G. Anglica* 14. f. 123 lign., *Corydalis capnoides* 9. f. 81 aen., *Fumaria spicata* 9. f. 81, *Hippocrepis multisiliquosa* 14. f. 126 lign. and 1. f. 3 aen., *Astragalus viciaefolius* 15 f. 127 lign., "poterium Rauwolf" 13. f. 119 lign., *Astragalus erianthus*, s. *eriocephalus*, *Ulex nanus* 1. f. 2 aen., *Lathyrus setifolius* t. 2. f. 11, *L. angulatus* t. 2. f. 12, *Hedysarum coronarium* 1. f. 7 aen., *Trigonella polycerata* t. 2. f. 10, *Lotus peregrinus* 15. f. 130, *L. hirsutus* 1. f. 6 aen., *Trifolium tomentosum* t. 15. f. 135, *Medicago murex* 21. f. 185 lign., *M. tornata* 21. f. 186 lign., *M. laciniata* 1. f. 9 aen., *Lactuca angustana* 7. f. 57, *Picridium Orientale* 7. f. 58 lign., *Picridium albidum* 7. f. 63 lign., *Sonchus dichotomus* 7. f. 56, *Hieracium villosum* 4. f. 52 aen., *Onopordum rotundifolium* 7. f. 57, *Cacalia albifrons* t. 8. f. 71, *Artemisia glacialis* 3. f. 28 aen., *A. mutellina* 6. f. 47 lign., *Gnaphalium luteo-album* 8. f. 68 lign., *Tussilago discolor* t. 4. f. 42, *Inula tuberosa* t. 8. f. 67, *Arnica bellidiastrium* 8. f. 64 lign., *A. glacialis* 4. f. 53 aen., *Senecio Carniolicus* t. 5. f. 38, *Chrysanthemum maritimum* t. 5. f. 39, *Achillea nana* t. 4. f. 38, *Zoege leptaurea* t. 7. f. 63, *Centaurea scabiosa* 5. f. 41 lign., *C. splendens* 5. f. 42 lign., *C. muricata* 5. f. 43 lign., *Goodyera repens* 12. f. 103 aen., *Ceratophyllum submersum* 16. f. 138 aen., *Pteris Cretica* 2. f. 12 lign., *Aspidium Halleri* 18. f. 155 aen.

Alyssum maritimum of the West Mediterranean countries. A Cruciferous plant called in the gardens of Britain *sweet alison* (Prior); figured by Gesner 14. f. 120 — (Spreng.); described by Tournefort inst. 217 (Smith in Silbth.), termed "clypeola maritima" by Linnæus, and known to grow on the Mediterranean shore of France, Spain, and North Africa: observed by Chaubard at Nisi in Greece; by Brotero on the seashore of Portugal; and received by Watson from the Azores. Much cultivated in the gardens of Britain, and escaping has become naturalized from the beginning of the

* *Ranunculus glacialis* of the Arctic region and mountain summits farther South. — Termed "r. montanus purpureus calyce villosa Felicis Platerii" by Bauhin hist. iii. 846, "r. alpinus roseus albus calyce hirsuto" by Rudbeck lapp. 99; observed by him, and Linnæus, in Lapland; by Scheuchzer alp. pl. 20, in the alpine portion of Switzerland.

Century at various points on the Southern shore of the island (Ait. ed. 1, Curt. mag. pl. 101, Engl. bot. pl. 1729, and Wats.), occurs also more adventive near Aberdeen (A. Dec.).

Gypsophila muralis of middle Europe and the adjoining portion of Asia. Figured by Gesner t. 11. f. 95 — (Spreng.); termed "*cariophyllus minimus muralis*" by C. Bauhin pin. 211, "*lychnis annua minima flore carneo lineis purpureis distinctis*" by Tournefort inst. 338, and known to grow from Lapland throughout middle Europe (Mentz. pl. 7, Dill., and Pers.): observed by Linnæus in sandy roads in Lapland and Sweden; by Sibthorp, on the Bithynian Olympus.

Myriophyllum verticillatum of Northern climates. Called in Britain *water-milfoil* (Prior); figured by Gesner 16. f. 144 aen. — (Spreng.); observed by Gmelin from the Yaik to the Angara, by Bunge in Northern China, by Ledebour in middle Siberia and around Caucasus (A. Dec.); and known to grow from Subarctic Sweden to Switzerland (fl. Dan. pl. 1046, Engl. bot. pl. 218, and Wats.); was observed by Brotero in Northern Portugal; by Desfontaines, and Munby, in Barbary. Westward, by Hooker on Iceland; and is attributed to North America by Michaux, Nuttall, and others. Probably by European colonists was carried to Chili, observed there by C. Gay fl. ii. 387.

Onobrychis sativa of middle Europe and the adjoining portion of Asia. Called in Britain *sain-foin* or *French grass* or "*foenum Burgundiacum*" (Prior), in Bretagne "*foin français*," in other parts of France "*sainfoin*" or "*esparcette*," its cultivation beginning in the Sixteenth century (A. Dec.): *O. sativa* is described by Gesner, — Lobel pl. 335, Thalius, and C. Bauhin (Willd.); is known to grow wild in Italy (Scop., and Lenz), Southern France, and Germany (Jacq. austr. pl. 352, and Pers.); and its cultivation was introduced into Britain before 1578, as appears from Lyte. Eastward, was observed by Bory in the Peloponnesus; is known to grow wild in Southern Russia and as far as Caucasus (Ledeb., and A. Dec.); and according to Clot-Bey, has been recently introduced into Egypt. By European colonists, was carried to Northeast America, where an attempt at cultivation near Salem did not prove altogether successful, and the plant after a few years disappeared.

Xeranthemum Orientale of the Tauro-Caspian countries. Figured by Gesner 8. f. 68 lign., — and the "*jacea pusilla incana*" of Lobel hist. pl. 545 is referred here by Sprengel: described also by Willdenow, and Desfontaines; and known to grow in Armenia (Pers.).

Eriqeron alpinum of Polar climates and mountain-summits in lower latitudes. Figured by Gesner t. 4. f. 45 — (Spreng.); termed "*asteri montano purpureo similis vel globulariæ*" by J. Bauhin hist. ii. pl. 1047, — "*aster atticus cæruleus minor*" by Tournefort inst. 481, "*a. m. p. s. v. g. calyce villosa*" by Scheuchzer alp. 329, "*a. m. omnium minimus foliis oblongis floribus albis*" by Vaillant act. 1720, and known to grow in Lapland and Scotland, also on the Pyrenees and mountains of Switzerland and Carniola (Pers., Dec., and Hook.): observed by Linnæus, frequent on the mountains of Lapland; by Pallas, at 67° on the Oby; by Sibthorp, on the Bithynian Olympus. Westward, by Hooker in Iceland, and received from the Arctic shore of America; was observed by Sabine, in Greenland; by Colm in Labrador (Pursh); is known to grow in Russian America (Wats.), and though not seen by Lapylaie in Newfoundland, was found by Goldie not far from Quebec (Hook.). In the Southern Hemisphere, by J. D. Hooker at the Southern extreme of America. "*E. uniflorum*" is regarded as not distinct.

Veronica triphyllos of Europe and the adjoining portion of Asia. Described by Gesner 16. f. 140 aen. — (Spreng.); termed "*alsine parva erecta folio alsines hederacæ sed rutæ modo divisa*" by Lobel pl. 464, "*a. triphyllos cærulea*" by C. Bauhin pin. 250 (Linn.), "*v. verna trifido vel quinquefido folio*" by Tournefort inst. 145: is known to grow throughout middle Europe (Riv. pl. 96, Oed. Dan. pl. 627, and Pers.); was observed by Linnæus on the margin of fields as far as Scania in Sweden; by Sibthorp pl. 10, in open ground in Thrace and on the Bosphorus towards the Black Sea.

Veronica scutellata of Northern climates. The "*gratiola minima*" of Gesner i. fig. 87 — may be compared: *V. scutellata* is described by J. Bauhin hist. 780; is termed "*anagallis aquatica angustifolia scutellata*" by C. Bauhin pin. 252, "*veronica aquatica angustiore folio*" by Tournefort inst. 145 (Linn.), and is known to grow throughout Northern Europe and Asia: was observed by Linnæus in Lapland and Sweden, by Watson on the Orkney Islands (A. Dec.), by Oeder 209 in Denmark, by Ledebour in Finland and Russia, by Gmelin throughout Siberia, by Decandolle in France, by Savi in Etruria, and by Desfontaines, and Munby, in Algeria. Westward, was observed by Hooker in Iceland; by Michaux, in streams flowing into Hudson Bay; by myself, along the Atlantic as far as 42° 30', by Nuttall to 40° near Philadelphia, and by Beck 261 in Virginia; by Drummond at 54° on the Saskatchewan, near Fort Cumberland.

Gentiana prostrata of alpine summits from Austria to East Siberia, the Rocky mountains, and Cape Horn. The "*gentianellæ alpinae species prima*" of Gesner ii. fig. 85 — may be compared: *G. prostrata* was observed by Haenke on the summits of the Salsburg Alps (Jacq. coll. ii. pl. 17); is known to grow on mountains near Caucasus (Koch), on the Altaian mountains as well as in East Siberia and on Unalaska (Ledeb.); was observed by Chamisso on the seashore at Bering Straits; was received by Hooker from the summits of the Rocky mountains in "52°," and from the East side

of the Chilian Andes in "35°;" was observed by J. D. Hooker along the sea-margin at Cape Negro in Southern Chili, and in the Straits of Magellan (A. Dec.).

Juncus uliginosus of Europe and the adjoining portion of Asia. A rush termed "juncus ramulosus" by Gesner ii. fig. 12, — "gramen junceum folio articuloso cum utriculis" by C. Bauhin prodr. 12, "j. foliis articulosis floribus umbellatis cum utriculis" by Tournefort inst. 247, and known to grow in wet places throughout middle Europe (Sibth. oxon. 115, Smith fl. brit. 380, Engl. bot. pl. 801, and Pers.): observed by Sibthorp frequent in the marshes of Greece.

Ophrys arachnites of Europe and the adjoining portion of Asia. Called in Britain *spider orchis* (Prior): termed "orchis larvatus . . . foliis tribus superioribus ex fusco albicantibus" by Gesner ii. fig. 68, — "orchis araneam referens" by Tournefort inst. 434, and known to grow throughout middle Europe (Pers.): observed by Vaillant pl. 30 in the environs of Paris; by Haller pl. 24, in Switzerland; and by Sibthorp, in the Peloponnesus.

Plumbago Europæa of Peru? Called in France "dentelaire" from having been used to remove toothache (Lindl.), in Greece "lēpithōhōrtōn" (. . .), in Illyria "curcurida;" figured by Gesner 10. f. 83 — (Spreng.); known to Pena as found around Rome (T. Johnson in Ger. emend. 1254); described also by Columna ecphr. 161; termed "erba di S. Antonio" by Caesalpini, and Micheli (Targ.), "p. quorundam" by Tournefort inst. 141; observed by Forskal, Sibthorp, and Chaubard, frequent along roadsides from the Peloponnesus to Asia Minor and the Greek islands; but the genus is essentially Tropical, foreign to the Mediterranean countries, and according to Persoon, *P. Europæa* is found also in Peru. The plant according to Lindley is "very acrid," recommended as "a kind of potential cautery," and in decoction "as a stimulating wash."

Potamogeton pusi'llus of all climates. An aquatic figured by Gesner 17. f. 147 — (Spreng.); observed by Vaillant pl. 32 in the environs of Paris — (Pers.); by Bieberstein around Caucasus; and known to grow from Lapland and Russia to Ireland and Switzerland (Wats.), also on the Canary Islands (Kunth en.), and in Guinea (fl. nigr.). Westward, was observed by Hooker on Iceland; according to Watson, grows in British America and the United States; and according to A. Gray, is "rather common northward." In the Southern Hemisphere, was observed by Gay fl. in Chili (A. Dec.).

Allium descendens of the Mediterranean countries. Figured by Gesner 11. f. 96 lign. — (Spreng.); described by Rudbeck elys. ii. pl. 160; — and according to Persoon growing in Switzerland: was observed by Sibthorp abounding on various Greek islands as far as Cyprus and the shores of Caramania.

Allium nigrum of the Mediterranean countries. Figured by Gesner 11. f. 97 lign. — (Spreng.); observed by Desfontaines i. in Algeria; by Gouan pl. 16 near Montpellier; by Jacquin i. pl. 10, in Austria; by Sibthorp, and Gittard, from the Peloponnesus to Cyprus. "*A. magicum*" observed by Sauvages 18 near Montpellier, and described by Linnæus, is regarded by Chaubard as not distinct.

Ornithogalum Arabicum of Madeira or Barbary. Figured by Gesner 11. f. 95 lign. — (Spreng.); also described by Besler v. pl. 12, — and Rudbeck elys. pl. 130; known to occur on Madeira and in Barbary (Pers.), and received by Linnæus fl. pal. from Egypt (Del.).

"Dec. 3d" (Alst., and Nicol. 206 and 264), concluding session of the Council of Trent. — In the beginning of the following year, the Council and its proceedings were confirmed by pope Pius IV.: closing the series of general ecclesiastical Councils.

"1564 A. D. = 43d year of the 'kia-tsing' of Chi-tsoung II." (Chinese chron. table), beginning of the Seventy-first cycle.

"The same year" (Talvi i.), by Ivan IV., often called Ivan II., *printing* introduced into Russia, and an edition of the "Apostle" issued. *Schools* were also established by Ivan IV. in all the cities of his dominions.

"June 25th" (Hakluyt iii. 323 to 336, and Holmes), arrival in Florida of Laudonniere with a colony of French Protestants, at the river of May (St. John's) situated "in thirtie degrees and better" (J. Hawkins). Not above two leagues "from the mouth," he built a fort and named it Caroline; in honour of the reigning king of France, Charles IX.

In the country around (De Bry edit.), J. Le Moyne remarked "*quercus*" (*Q. virens*, *Q. falcata*, *Q. aquatica*, and *Q. nigra*), "*aquifolia*" (*Ilex opaca*), "*pruna fructu eleganti*" (*P. Chicasa*), and "*exiguu quidam fructus*" called by the French "*bleves*" (*Vaccinium?*).

"In this year" (De Morg. 16), under instructions "to endeavour to pacify" the natives of the Philippines, "reduce them to submission," and "to receive the holy Catholic faith," Miguel Lopez de Legazpi from Mexico arriving at the island of Sebu. He was "peacefully received," but the natives afterwards seeking to kill him, were "conquered and subjected." Seeing what had taken place, the natives of neighbouring islands voluntarily tendered their submission; and in one house was found "a carved image of Jesus," held in great reverence, and supposed to have "remained there from the fleet of Magellan."

In this year (Schmied. vit. G. p. xxxvii), Gesner writing to Theodorus Zwingger, receiving plants from Cortusi, and preparing drawings for his botanical work, including "gentianæ species rara" tab. fig. i *Swertia perennis*, "anonymos" i. fig. cxvii *Lobelia Dortmanna*, "glaux a quibusdam dicta" i. fig. 8 *Dorycnium Monspelense*, "alga marina" i. fig. 147 *Ruppia maritima*, "anemone montana" i. fig. 18 *A. alpina*, *Colchicum fasciculare* i. fig. cxc. — He died "Dec. 13th, 1565."

"1565, March 1st" (Sieb. elucid. Vries p. 98), letter of the jesuit Aloisius Froes from Meaco in Japan, describing an extensive region three hundred leagues distant inhabited by "sylvestrium hominum" (Ainos), having the whole body hairy and a great beard and moustaches which they lift with a stick when about to drink; are bold in war and much feared by the Japanese, and when wounded wash the part in salt water, which is their only remedy; have no "sacra" religious ceremonies, only that they are accustomed to venerate heaven. — In Ortelius's theatrum orbis published in "1570," the island North of Japan is termed "Satyrorum Insulam."

"September" (Hakl. and Holmes), arrival at Fort Caroline of Pedro Melendez, with full power from Philip II. of Spain "To drive the Huguenots out of Florida, and settle it with good Catholics." The French were massacred, Laudonniere and a few others escaping in a boat: and three forts were built on the river of May, and strongly garrisoned with Spanish soldiers.

"1566 A. D." (art de verif.), Suliman II. succeeded by Selim II., thirteenth Turkish sultan. — Who wrested Cyprus from the Venetians before the close of the year (Alst. p. 308); also, Tunis and Guleta in Barbary from the Spaniards, and Wallachia from the Hungarians.

"August" (Alst.), throughout almost all the cities of Belgium, the images removed from the churches and demolished: initiating open war against Philip II. of Spain.

"The same year" (Alst.), end of the chronicle of Gilbertus Genebrardus.

"The same year" (addit. art de verif.), a red stone called "limpi," used by a Peruvian to paint his face before going to war, procured by Henrique Garces, a Portuguese. This led to the discovery of the *quicksilver* mines of Huancavelica.

"In this year" (Schmied. ed. G. i. 57), Wolph, assisted by Thomas Penneius of London, commencing the publication of the botanical work of Gesner.

"1567 A. D. = 'loun-king,' 1st year of" Mou-tsoong or "Mou-tsoong-tchouang-ti, of the Ming" or Twenty-third dynasty (Chinese chron. table). He modified the ancient law, Prohibiting a magistrate from acting in his own province; and granted some exceptions in favour of mandarins of the Second order (Pauth. p. 408).

"July 24th" (Nicol. p. 382), queen Mary of Scotland deposed; and the accession of her son James VI.

One hundred and seventy-sixth generation. Sept. 1st, 1567, onward mostly beyond youth: the Jewish writer As. de Rossi: the Arab writers, Shems-eddin Basrawi, Abdalcader: the Greek writers Emmanuel Gluzonius d. 1596, Maximus Margounius d. about 1601: Beza, Petrus Canisius, John Knox, Radzivil, Josephus Scaliger; Robertus Stephanus, Michael Neander, Frideric Sylburg; J. Genesius; Paul Manutius; Castelvetro; Frederick Commandin; Hieronymus Wolfius; Ronsard; George Buchanan; Peter Ramus; Osorius; James Cujas; Ciaconius; Pancirolus; Carolus Sigonius; Henry Stephens; Bodinus; Montagne; Francis Hotomanus; Riccoboni; Peter Pithou; Philip Sidney; Melvill James: the poets, Camoens, Torquato Tasso, and Edmund Spenser: the Slavonic writers, Truber, and A. Bohorizh: the painters, Paul Veronese d. 1588, Giacomo Robusti called Tintoretto d. 1594: the architect Palladio: the musician Orlandus de Lasso.

"1567-8 A. D. (= A. H. 975," Blochmann and W. W. Hunter), Muslim conquest of Orissa, by Afghans from Berar and Bengal. Mukund Deva, the last independent king was slain in battle before Jajpur; and the sacred city of Puri, including the temple of Jagannath, was captured and plundered by Kala Pahar.

"1568, Feb. 23d (= 25th Shaban A. H. 975" of Abul Fazl, Orient. transl. lond.), the fortress of Chaitur in the Rajput country captured by Akbar, emperor of Northern Hindustan. Matchlocks, artillery, mining with gunpowder, and war *elephants* were employed in the reduction.

In this year (= "11th year of Ookimatz," art de verif.), the title "dai-seogun" conferred by Ookimatz on Josijtira, son of Jositir.

"The same year" (Blair), defeat at Glasgow of the army of the ex-queen Mary of Scotland; and her withdrawal into England.

"In this year" (Winckler), after his Cruydeboek "in 1563," Frument. Hist. "in 1566," Dodo-næus or Dodoens publishing his Coronar. Hist., enumerating *Hieracium umbellatum*, *Campanula rapunculoides*, and *Chenopodina maritima*.*

* *Celosia coccinea* of Tropical America. An annual, transported to Europe, termed "amaranthus purpureus" by Dodoens 185 — (C. Bauhin, and Willd.); described also by Linnæus. Westward, "C. purpurea" of A. Saint-Hilaire, observed in Brazil; is regarded by Steudel as probably identical.

Tropæolum minus of the Peruvian Andes. Transported to Europe, is termed "nasturtium indicum" by Dodoens — (C. Bauhin, and Willd.); is described also by Monardes 348, Lobel hist. 338, and Linnæus; and under cultivation as a garden flower has become doubled; was observed by Forskal in gardens at Constantinople. Westward, is termed "nasturtium peruvianum" by Hernandez, as seen by him in Mexico.

Pennisetum typhoides of Tropical America? A reedy millet, called in France "millet à chandelles" (Del.), in Greece "phragkōkēghri" (Fraas), in Egypt included under the general name "dokhn" (Clot-Bey), in Nubia called "herneh" (Del.), in Hindustanee "bajara" (D'roz.), in the environs of Bombay "bajree" (Graham): transported to Europe, is described by Dodoens pl. — and termed "panici americani" by Clusius rar. ii. 216: harvested spikes were observed by myself in various Mediterranean countries, and the living plant by Fraas 311 under cultivation in Greece; by Clot-Bey, in Egypt; by Delile, at the first cataract of the Nile, and sown generally in the country of the Blacks, but in Equatorial Africa was seen by Grant only along the Indian Ocean; by myself, under cultivation at Muscat. Farther East, was received by Plukenet alm. pl. 32 from "Indiæ orientalis;" was observed by Roxburgh i. 283 in Hindustan; by Graham, in the environs of Bombay "extensively cultivated and forms a very important article of food to the natives;" and varieties hardly more than a foot high, bearing a short ovoid spike, were observed by myself under cultivation on the Deccan. Westward from the Mediterranean, was observed by N. A. Ware in Carolina, Georgia, Alabama, and Florida; by Croom, under cultivation in Florida; and according to Chapman, is "commonly cultivated" with *Setaria Italica* "as green food for cattle."

"April" (Hakl., and Holmes), arrival in Florida of a retaliatory expedition under Dominique de Gourgues, fitted out at his own expense. The three forts at the river of May were captured, and the Spanish soldiers were all put to death. The affair was however disavowed by Charles IX., and no further attempts were made by the French, to establish settlements in that portion of America.

"The same year" (Hakl., Purch., Holmes, and Major edit. De Morga (4), a fleet under Alvaro de Mendaña sent from Peru Westward. A cluster of islands was discovered in "eleven degrees south latitude," was named "Solomon Islands," and the principal island "St. Christopher."

"1569 A. D." (Alst.), by Maximilian II. emperor of Germany and Italy, futile intercession in favour of the Belgians.

As early as this year (Asher edit. Huds. p. xcvi), the inland sea (now called Hudson's Bay) discovered: — delineated in Ortelius's atlas published "in 1570."

"1570 A. D." (Alst.), end of the chronicle of Onuphrius Panvinus.

"In this year" (Markham edit. laws of the Incas p. 3), Sebastian de Artaun appointed bishop of Cuzco, to whom Christoval de Molina dedicates his Fables and rites of the Incas. His writings — formed the base of the History by Miguel Cavello Balboa, commenced at Quito "in 1576," and finished "in 1586."

"In this year" (Spreng., and Winckl.), Lobel of Belgium publishing his Stirp. nov. advers., enumerating *Frankenia pulverulenta* 196, *Polypodium lycopodioides*, *Hypecoum pendulum* 330, *Pedicularis tuberosa* 326, *Potentilla subcaulis* 209, *Suffrenia filiformis* adv. 227, *Crocus reticulatus* ii. 497, "gramen avenaceum rariori grano danicum" ii. 465 *Melica uniflora*, *Scabiosa* (*Cephalaria*) *alpina* 233, *Plantago albicans* 18, "polygonum montanum niveum" adv. 180 *Paronychia capitata*, "saxifraga Anglorum" 351 *Angelica carvifolia*, "laserp. massiliense" 313 *Laserpitium Gallicum*, "peucedani facie pusilla planta" 331 *Pimpinella dioica*, "limonium maritimum" 123 *Statice oleaeifolia* 123, *Haemanthus coccineus* 2. 503, *Pantratum amoenum* 2. 502, *Crinum Americanum* 2. 501, *Aphyllanthes Mouspeliensis* 190, *Frankenia laevis* 180, *Sideritis scordioides* 225, "verbascum sylvestre" 241 *Phlomis Italica*, "thlaspi minus umbellatum" 75 *Iberis pinnata*, "althaea" 294 *Lavatera alba*, "lagopus" 384 *Trifolium angustifolium*, *Lotus siliculosus* 385, *Medicago marina* 383, "medicæ spec. secunda" 383 *M. turbinata*, "stoechas citrina altera" 203 *Serratula dubia*, *Carthamus cavauncellus* 374, *Balsamita ageratifolia* 2. 509, "tertium anglicum" 202 *Gnaphalium sylvaticum*, "minor Narbonensium" 147, "aster montanus hirsutus" 148 *Inula montana*, *Senecio artemisiaefolius* 333, "herbariorum anthemis chrysanthemos" 343 *Anacyclus aureus*, "cotula s. parthenium maritimum" 345 *Anthemis maritima*, "chameleon non aculeatus" 367 *Centaurea* (*Leuzia*) *conifera*, "jacea humilis serpens" 235 *Centaurea pullata*, "spina alba" 369 *Echinops strigosus*, *Liparis Loeselii* 2. 506, *Typha media* 41, "terebinthus minor" 411 *Pistacia reticulata*.

Caryolopha sempervirens of the West Mediterranean countries. Described by Lobel adv. 247 — (Spreng.); observed by Gerarde only under cultivation in Britain, termed "anchusa sempervirens" by Linnæus, and known to grow in Spain (Pers.) and Piedmont (All.). In Britain, between 1690 and 1724, made its appearance in one locality in Kent (edit. Dillen.); two additional localities are mentioned by Hudson "in 1778;" localities in six different counties are mentioned by J. E. Smith "in 1800," and in eleven "in 1824;" and "in 1849," Watson mentions the plant as occurring along hedges and roadsides in seventeen of the eighteen districts into which he divides Britain (A. Dec.).

Radiola millegrana of Europe and the adjoining portion of Asia. A diminutive plant of the flax tribe called in Britain *flax-seed* (Prior); termed "herba turca" by Lobel adv. 180 — (Spreng.), "polygonum minimum s. millegrana minima" by C. Bauhin pin. 282, "radiola vulgaris serpillifolia" by Ray angl. iii. pl. 15, and known to grow from 63° 26' in Norway to the Mediterranean (fl. Dan. pl. 178, Engl. bot. pl. 893, Pers., and A. Dec.): observed by Linnæus in Sweden, in places subject to inundation; by Vaillant pl. 4, near Paris; by Brotero, in Portugal; by Lemann, on Madeira; by Boissier, near Cadiz, Gibraltar, and Tangier; by Schousboe, in Morocco; by Moris, on Sardinia and Corsica; by Gussone, on Sicily; by Gaudin, near Bale; by Schrank, near Salzbourg; by Baumgarten, in Transylvania; by Sibthorp, on the Bithynian Olympus.

Seseli glaucum of Europe and the adjoining portion of Asia. Termed "caucalis Anguillarae" by Lobel adv. 325 — (Spreng.), "fœniculum sylvestre glauco folio" by Tournefort inst. 311, described also by Morison iii. 9. pl. 2, and known to grow from Carniola to France (Pers.): observed by Crantz, and Jacquin austr. pl. 144, in Austria; by Sibthorp, on hills around Constantinople; by Guldenstadt, as far as Caucasus (Steud.); in less than fifty years between the opening of the Doubs canal and "1822" made its appearance in the environs of Montbelliard (Bernard). "*S. junceum*," described by J. E. Smith from a specimen in Sibthorp's herbarium, is regarded by Sprengel as not distinct.

Cirsium eriophorum of Europe and the adjoining portion of Asia. A woolly-headed thistle said to grow in various parts of Spain, described by Lobel adv. 370 — (Spreng.), and observed by Dodoens pempt. v. 5. pl. 5 exotic in the gardens of Belgium: — is described also by Caesalpinus xiii. 40 (Spreng.); is termed "c. capite rotundo tomentoso" by Tournefort inst. 441; was observed by Scopoli in Carniola (Jacq. austr. pl. 171, and Steud.); by Sibthorp, from the Peloponnesus to mount Haemus and Smyrna.

Carduus acanthoides of Europe and the adjoining portion of Asia. Described by Lobel adv. 371 — (Spreng.); termed "carduus acanthoides" by Bauhin hist. iii. 59, "c. nigrescens" by Villars iii. pl. 20, and known to occur in waste places throughout Europe (Moris. iii. 15 Jacq. austr. pl. 249, and Pers.): observed by Linnæus in Sweden, frequent along waysides and about villages in Scania; by Villars, in Dauphiny; by Forskal, and Sibthorp, from Crete and the Peloponnesus to Cyprus and Constantinople.

Moluccella spinosa of middle Asia. Termed "molucca asperior" by Lobel adv. 221 — (Spreng.), and according to Caesalpinus xi. 24 also exotic in Italy, taller with the floral whorls more spiny: *M. spinosa* is termed "molucca spinosa" by Tournefort inst. 187; was observed by Sibthorp, and Chaubard, near Navarino in the Peloponnesus and on mount Parnassus.

Panocratium maritimum of the seashore of Carolina and Florida. A large ornamental bulbous-rooted plant called in Greece "agria skilla" (Sibth.), in Egypt "sousan" (Del.); described by Lobel adv. 57 — (Spreng.), having possibly without human intervention reached the shore of Southern France and Spain (Pers.): observed by Sibthorp, and Chaubard, frequent in the maritime sands of Greece and Cyprus; by Delile, near Alexandria. Westward, was observed by Catesby app. v. pl. 5 in South Carolina (Ell.); by Chapman, in "salt marshes, South Florida to South Carolina." By Arab visitors, or possibly by Spanish colonists crossing the Pacific, was carried to the Malayan archipelago; observed by Blanco on the Philippines, kept by the natives in vases; by Rumphius vi. pl. 70, in other parts of the archipelago. (See *Lilium candidum* and *Iris sambucina*.) *

* *Mamillaria simplex* of the West Indies and neighbouring portion of Tropical America. A melon-shaped cactus, transported to Europe, termed "echinomelocactus" by Lobel stirp. nov. 373 — (Spreng.); described also by Tournefort inst., and Linnæus. Westward, known to grow in rocky situations in South America (Pers.).

Sarracenia flava of Carolina and the Lower Mississippi. Its leaves from their size and shape called *trumpets*, and one procured from a sailor figured by Lobel stirp. nov. 430: the plant, transported to Europe, is described by Plukenet amalth. pl. 376. Westward, was observed by myself in bogs from 37° in Lower Virginia; by Catesby, and Walter, in South Carolina; by Chapman, "Florida to North Carolina, and westward;" by Drummond, from St. Louis along the Mississippi to New Orleans.

Yucca gloriosa of the seashore of Carolina and Florida. Having a palm-like stem two to four feet high crowned with bayonet-like leaves and an upright panicle of white tulip-like flowers: transported to Europe, described by Lobel adv. 2. 508, — Cnoffelius (Spreng.), Barrelier rar. pl. 1194, and Linnæus: by European colonists also, was carried to the environs of Bombay, where according to Graham "it seems to be quite naturalized" in "gardens," flowering "in the rains when the large panicle has a very showy appearance;" also to Peru (Pers.); and is cultivated in our own gardens as far North at least as the Merrimack. In its wild state, was observed by Michaux i. 196 on the seashore of Carolina (Pers.); by Elliot, in South Carolina; by Leconte, in Georgia (Collins); and by Chapman, "drifting sands along the coast, Florida to North Carolina, and westward."

"May 19th, 1571" (Stanley edit. De Morga 18 and 368), Manila, a large town "fortified with palms, and thick arigues filled in with earth, and a great quantity of bronze cannon, and other larger pieces with chambers," captured by a force sent by Legazpi from Panay. A new town was now founded on the site of the old one, presented "for that purpose" by the local chief Rajamora; the neighbouring chiefs gave in their submission, and the Spanish conquest of the Philippines was soon completed. — Legazpi died "Aug. 20th, 1572," and was succeeded by Guido de Labazaris, named in a sealed despatch "from the high court of Mexico" found among the papers of the deceased.

"Oct. 7th" (Blair), at Lepanto, the Turks defeated in *naval combat* by forces under Don John of Austria.

"1572, Aug. 24th, Sunday" (Alst. and Blair), in Paris and other places in France, massacre of some thousands of Protestants; Charles IX. reigning.

"The same year" (Hakl. iii. 525 to 779, Purch., and Holmes), landing of Francis Drake in Darien harbour, and two trains of mules laden with *gold* and *silver* intercepted. — The proceedings of Drake and the English "buccaneers," are to this day remembered along the Western coast of South America.

"In this year" (Markham edit. p. 390), Potosi visited by the viceroy Francisco de Toledo. Who introduced the use of *quicksilver*, and caused a census to be taken of the natives throughout Peru "between the ages of eighteen and fifty" they numbered "1,677,697."

"In this year" (Humb. cosm. ii.), sudden appearance of a star of more than the first magnitude in the constellation Cassiopea. The star soon disappeared.

"In this year" (Spreng.), Ioannes Fragosus of Toledo publishing his Discurs.

"1573 A. D. = 'wen-li' 1st year of" Chin-tsoung II. or "Chin-tsoung-hien-ti, of the Ming" or Twenty-third dynasty (Chinese chron. table).

"In this year" — (Spreng.), Rauwolf visiting Syria and part of Persia, meeting with among other plants *Astragalus coluteoides*, *A. christianus*, *A. densifolius*, *Tragopogon lanatus*, *Inula tuberosa*, *Michauxia campanuloides*, *Acanthus Dioscoridis*, "rausut" and "rumigi" *Aristolochia Maurorum*, and "arum Carsaami" *Calla Orientalis*. — He returned in "1576," published his travels in "1583," and died in "1596."

Gundelia Tournefortii of the Tauro-Caspian countries. The "silybum" of Rauwolf 74 — is referred here by Sprengel: *G. Tournefortii* was also observed in the East by Tournefort voy. ii. pl. 108; and transported to Europe, is described by Miller, and Linnæus.

"In this year" (Barcia 3, Biogr. univers., and Spreng.), Martinus del Barco visiting Paraguay. — His account was continued "to 1581."

Passiflora cœrulea of Brazil. A *passion-flower* observed and described by Martinus del Barco — (Spreng.), and known to grow wild in Brazil (Pers.). Transported to Europe, is described by Miller pl. Linnæus, and Cavanilles pl. 295; was observed by Forskal, Delile, and Clot-Bey, in the gardens of Egypt, called there "sjerk el fêlak;" and apparently the same species by Forskal in gardens at Constantinople.

Dorstenia contrayerva of Mexico, the West Indies, and Peru. An herb observed and described by Martinus del Barco,* — according to Sprengel: known to grow as far as the West Indies (Jacq. ic. iii. pl. 514). Transported to Europe, is described by Blackwell pl. 579, and Linnæus. Its root, one of the kinds of *contrayerva* of commerce, is employed medicinally for its "stimulant sudorific and tonic qualities" (Guibourt, Mart., and Lindl.).

"1574 A. D." (art de verif.), Selim II. succeeded by Amurath III. or Murad III., fourteenth Turkish sultan. Coins of Murad III. issued at Cairo, are figured in Marcel p. 202.

Robbers becoming numerous among the population of Egypt, the pasha sent by Murad III. is said to have decapitated not less than "ten thousand" (Marcel p. 200).

"In this year" (Smith ed. fl. lapp.), Simler publishing his Description of Vallesia and the Alps.

"In this year" (inscr. date), letter to the pope from Nicol. Monardes, at this time printing his

* *Dorstenia Braziliensis* of the West Indies and Brazil. Called in Brazil "caa-apia" (Marcg.), and probably the species seen by Martinus del Barco: — observed in Brazil by Marcgrave 52. pl. ; by Martius, in the mountainous parts of S. Paulo and Minas, used against the bite of serpents and for other medicinal purposes, frequently confounded with but superior to all other species in salutary value, although unknown as an article of commerce; by Swartz 275, as far North as the West Indies (Lindl.).

Dorstenia opifera of Brazil. Possibly the species in question: — *D. opifera*, growing in Brazil, is described by Martius as a third kind of *contrayerva*, more farinaceous than the others (Lindl. See *D. Drakena*).

botanical work, enumerating, *Jatropha multifida* 334, *Convolvulus mechoacantha* 334. — The Second part contains a letter from Peru bearing the date of 1578.

Tropæolum majus of Peru. The *garden nasturtium*, called in Egypt "tortour el-bachah" (. . .), described by Monardes 348 — (Spreng.), and "in 1684" introduced into Europe (Pers.); termed "*cardaminum majus*" by Moench; and observed by Delile, and Clot-Bey, in the gardens of Egypt. By European colonists, was carried to Northeast America, where it continues under cultivation for ornament and its capsules pickled; also to Hindustan, observed by Graham in "gardens" at Bombay.

Hymenæa courbaril of Tropical America. From transported specimens described by Monardes 297 — (Spreng.), C. Bauhin pin. 404, and Plukenet alm. pl. 82. Westward, was observed by Macfadyen a large forest-tree frequent on Jamaica; is known to grow also in Brazil, where the transparent resin exuding between the principal roots is called "jatchy" or "jatahy" or in Minas Geraës "jatoba," is used medicinally and for various kinds of varnish (Martius, and Lindl.), and is exported under the name of *American gum animi* (Descourt., and Mason). By European colonists, the living tree has recently been introduced into Hindustan (Graham), and Burmah (Mason v. 486).

Smilax Mauritiana of the West Mediterranean countries. Monardes thinks that the *sarsaparilla* of Spain, which is the root of "*smilax aspera*," possesses the same properties as that from Mexico: — Alpinus ascertained that a portion of the sarsaparilla of commerce was produced in the Mediterranean countries; and the kind most esteemed in Egypt was found by Forskal mat. med. to come "from Barbary:" *S. Mauritiana* is described by Duhamel, and Poret; and was observed in Barbary by Desfontaines ii. 367 (Pers.).

"1575 A. D." (Alst., and Blair), founding of the University at Leyden; Janus Dousa made the first rector.

"In this year" (Spreng., and Winckler), Lorenzo Perez, an apothecary of Toledo, publishing *De la Teriaca*. — His Medicament. was published "in 1599."

"1576, May" (Blair), signing of the edict of Pacification. Followed in France by a League of the Catholics, against Henri III. and the Protestants.*

"In this year" (Humb. cosm. ii.), the inclinometer or dipping needle invented in England by Robert Norman.

"In this year" (Spreng., and Winckler), Lobel publishing his *Hist. Stirp.*, enumerating "*ligusticum alterum Belgarum*" hist. 457 *Physospermum Cornubiense*, "*cicutaria maxima Brancionis*" hist. 422 *Ligusticum athamanthoides*.

Hypochaeris radicata of Europe and the adjoining portion of Asia. Termed "*hieracium longius radicatum*" by Lobel hist. 120, — "*costole d'asino*" by Caesalpinus (Targ.), "*hieracium dentis leonis folio obtuso majus*" by C. Bauhin pin. 127, and Tournefort inst. 420, and known to grow from Sweden throughout middle Europe (fl. Dan. pl. 150, Curt. lond. iii. pl. 52, and Pers.): observed by Rosen, and Linnæus in Sweden, as far as Scania; by Forskal, and Sibthorp, from the Peloponnesus to Constantinople.

"The same year" (Hakl., and Churchill coll.), under instructions from queen Elizabeth, Martin Forbisher seeking a Northwest passage, discovered a Strait in "sixty-three degrees and eight minutes latitude;" the same that has received his name. After penetrating many leagues, he was prevented by ice; but had interviews with the natives; and some of his company landing, procured flowers and specimens of a black mineral.

"The same year" (Steinschneid. iii. 27), by Moses ben Elia Pobian, the Bible translated from the Hebrew into Modern Greek.

"In this year" (Spreng., and Winckler), Clusius publishing his *Rar. Stirp. Hispan.*, enumerating "*candilera*" *Phlomis lychnitis* 378, *Ixia bulbocodium* hisp. 259, *Iris scorpioides* hisp. 274, "*sisyrinchium*" hisp. 281 *Moraea sisyrinchium*, "*juncaria Salmanticensis*" hisp. 503 *Ortegia Hispanica*,

* *Psoralea Americana* of Madeira. An *it-h-trefoil*, transported to Europe, described by Lobel hist. ii. pl. 31, — Linnæus, and Jacquin schoenb. ii. pl. 227. Westward, known to grow wild on Madeira (Pers.); observed there by myself.

Cereus Peruvianus of Jamaica. A columnar *cactus*, thirty to forty feet high, transported to Europe termed "*euphorbii arbor*" by Lobel hist. ii. 25 — (Spreng.), described also by Linnæus. Westward, according to Persoon, grows wild on Jamaica.

Tillandsia utriculata of the West Indies. An *air-plant* two to three feet high, transported to Europe, termed "*peruviana alia aloes facie*" by Lobel hist. ii. 204 — (Spreng.); described also by Linnæus. Westward, was observed by P. Browne 194 on Jamaica; by Leconte, and N. A. Ware, as far North as "28°" in Florida, the dilated bases of its "leaves form a kind of cup which commonly contains a considerable quantity of water" (Chapman).

Scabiosa stellata hisp. 365, *Rhamnus lycioides* hisp. 70, "e. pumilum" hisp. 456 *Eryngium tenue*, "thapsia quarta" hisp. 431 *Athamantha panacifolia*, "bulbosum serot. tenuifolium" hisp. 272 *Leucoium autumnale*, "colchicum montanum" hisp. 267 *Eulbocodium autumnale*, *Asparagus albus* hisp. 461, *Erica Mediterranea* hisp. 112, *E. australis* hisp. 110, *E. scoparia* hisp. 113, *E. umbellata* hisp. 115, *E. cinerea* hisp. 116, *E. ciliaris* hisp. 119, "sanamunda prima" hisp. 175 *Passerina juniperifolia*, "sanamunda secunda" hisp. 176 *P. polygalacifolia*, *Silene conica* hisp. 339, *S. muscipula* hisp. 340, *S. polyphylla* hisp. 336, *S. tridentata* hisp. 343, "alsine corniculata" hisp. 416 *Cerastium dichotomum*, *Cistus lavandulifolius* hisp. 147, *C. ladaniferus* hisp. 156, *C. laurifolius* hisp. 158, *C. laxus* hisp. 160, *C. crispus* hisp. 139, *C. "1577 A. D." (Parkhurst, Hakl., and Holmes), "one hundred ships from Spain, fifty from Portugal, one hundred and fifty from France, and fifty from England," engaged in the Newfoundland fishery. Besides "twenty or thirty ships from Biscay, to kill whales for train oil."

"The same year" (Alst.), end of the chronicle of Gerhardus Mercator.

"1578 A. D." (A. Dec. g. b. 978), Christophe Acosta writing *De las drogas*.

"Aug. 20th" (Hackl. soc., Churchill coll., and Holmes), Francis Drake passing cape Virgin Maria, near the entrance of the Straits of Magellan: among the simples on the South side of the Straits, he remarked "time" (. . .), "marjerom" (. . .), and "Alexander's scurvy grass" (*Apium dulce*), "and divers others well-known to us;" and on an island, he met with "fowl that could not fly, as big as geese" (. . .): entering the Pacific, his ship was driven Southward among islands the uttermost cape of which is near Lat. 56° with no land in sight beyond; in "a good bay, they saw many men and women naked in canoes" (Fuegians), "and traded with them for such things as they had," remarked their "drinking of one herbe" not unlike "pennyleafe" (*Myrtus nummularia*), and found growing on shore a "small berry with us named currants" (*Ribes* no. 10 expl. exp.). Thence following the coast Northward, two of his men were killed by the natives of the outlying island of Mocha in "Lat. 39°." At Valparaiso he captured a Spanish ship; proceeding inland, "plundered nine houses being all there were in that which they called the town of Santiago;" and returning to the ship, continued his course Northward.

Wintera aromatica of Fuegia. A tree named from Winter, one of Drake's officers, who is said to have discovered it — (Bethune), and who may have brought home specimens of the bark: "Winters barke" was gathered by Hawkins in 1593 in the Straits of Magellan, the leaf "whitish greene and is not unlike to the aspen leafe;" but the *Winter's bark* of the present day, may be derived from the more Northern species, which appeared to me decidedly distinct (See W. Chilensis).

"In this year" (Prior), Lyte publishing his *Niewe Herbal*.

"In this year" (Spreng.), Leon. Thurneysser publishing his *Hist. plant.*, containing figures of *Calystegia tomentosa* 485, *Meum heterophyllum* 1021, *Salsola rosacea* 41, *Cardamine latifolia* 163, and *Chrysanthemum serotinum* 539. — He died "in 1595," a full edition was published by Thom. Pancovius "in 1654," and a third by Barth. Zorn "in 1673."

Erigeron (Canotus) Canadense of Northeast America. Figured by Thurneysser 538 — (Spreng.), and as early as "1655" cultivated in the jardin de Blois and termed by Brunyer "aster canadensis annuus" — (Tourn., and A. Dec.); known to Boccone pl. 86 in Sicily in 1674, to Zannoni in Italy in 1675, and in 1694 termed "virga aurea virginiana annua" by Tournefort inst. 484: has become naturalized in Algeria (Munby) and throughout Europe as far as Sweden and Moscow (Ten., and Fries), from the Greek islands to Smyrna and Constantinople (Sibth.), in cultivated ground in the Tauro-Caucasian countries (Bieb.), and in Siberia as far as the Altaian mountains (Ledeb., and Dec.): by European colonists also, was carried to the Azores and Madeira (Dec., and Wats.), Austral Africa (Drège), the West Indies, Mexico, and Brazil (Dec.), and the Hawaiian Islands (Cham., and Mann). In its wild state, is known to grow in sunny situations from Canada along the Atlantic to Lat. 31° in Florida (Pursh, Baldw., and Chapm.), to Kentucky (Short), the Arkansas river (Nutt.): but multiplying in clearings after the removal of the forest, has become an abundant weed in waste and cultivated ground: was received by Torrey from Oregon.

"1579 A. D." (Spreng.), Linschoten visiting the Malayan Archipelago and China. — He published an account of his voyage "in 1599," — and died "in 1601."

"The same year (= 986 Hej., Pall. trav. i. 192). date of the latest of three Armenian inscriptions in the cemetery of the ruined city of Bolgari, on the lower Volga.

"June 5th" (Hackl. soc., Churchill coll., and Holmes), to avoid being intercepted, Drake proceeded North, anchored in "Lat. 43°," and called this portion of the continent "Albion." He next followed the coast Southward, and on the "17th" anchored in a large bay in "38° 30':" a native in a canoe brought a basket made of rushes (*Scirpus lacustris*) filled with an "herbe which they called tabah" (. . .); in the course of other interviews he ascertained, that the men for the most part go naked, while the women make a loose garment of a kind of bulrushes and "kembing" it after the manner of hemp (cincture of *Apocynum*); the natives having quantities of the finest down from an herb much like our lettuce (. . .), also a root called "petah," of which they make a kind of meal and eat raw (. . .); the country containing very large fat deer (*American elk*, *Cervus wapiti*). Thence he sailed Westward across the Pacific, the Malayan Archipelago, — Indian Ocean, and up the Atlantic to England; completing the Second Circumnavigation of the Globe "Sept. 26th, 1580," in "two yeares ten moneths and some few odde daies beside."

"1580 A. D." (Spreng.), Alpinus arriving in Egypt, meeting with *Bunias spinosa* exot. 200. — He remained "three years."

Cordia crenata of Tropical Asia? The "sebesten sylvestris" of Alpinus pl. 8 — is referred here by Delile: *C. crenata* was observed by Forskal, and Delile, in the gardens of Egypt, and is described as a small tree called "mokhayet roumy;" as though brought from Constantinople.*

"Between 1580–90 A. D." (Jap. centen. comm. 60), Gorodayu Shonsui returning from China, where he had studied "this branch of trade," brought the art of making *porcelain* to Japan.

"1581 A. D. = 18th year of the cycle" (Pauth. 411), arrival in China of the first Christian missionary, the jesuit P. Michael Rogerius.

"The same year" (S. F. Haven in archæol. Amer. iv. 280), a number of eminent English merchants incorporated for trade with Turkey. — A perpetual charter was granted them by king James "in 1605:" and under the name of "the Levant or Turkey company," the corporation continues in existence to the present day.

"In this year" (Spreng., and Winckler), Lobel publishing his *Kruidtboeck* and *Icones*, enumerating *Gymnadenia viridis* obs. 90, "colus jovis" ic. 557 *Salvia glutinosa*, *Nardus stricta* ic. 90, *Arrhenantherum bulbosum* ic. 23, *Avena nuda* ic. 32, *Plantago subulata* ic. 439, *Polygonum erinaceum* ic. 468, *Omphalodes verna* ic. 577, *Symphytum tuberosum* ic. 584, *Verbascum virgatum* ic. 564, *Bunium aromaticum* ic. 724, *Myrrhis aurea* ic. 735, *Linum strictum* ic. 411, *L. campanulatum* ic. 414, *Tulipa suaveolens* ic. 127, *Scilla lilio-hyacinthus* ic. 101, *Allium carinatum* ic. 156, *Juncus aquaticus* ic. 12, *Luzula campestris* ic. 15, *Triglochin maritimum* ic. 17, *Alisma damasonium* ic. 301, *A. ranunculoides* ic. 300, *Rhododendron hirsutum* ic. 367, *Saxifraga Burseriana* ic. 375, *Dianthus prolifer* ic. 449, *D. deltoideus* ic. 444, *Silene conoidea* ic. 338, *Silene maritima* ic. 337, *Cereus Peruvianus* ic. 2. 25, *Paeonia humilis*† ic. 683, *Digitalis ferruginea* ic. 573, *Cochlearia Anglica* ic. 294, *Alyssum spinosum* ic. 217, *A. campestre* ic. 220, *Vella pseudo-cytisus* ic. 2. 49, *Erysimum diffusum* ic. 205, *Erodium gruinum* ic. 662, *Ononis rotundifolia* ic. 2. 73, *Cytisus argenteus* ic. 2. 41, *Astragalus stella* ic. 2. 95,

* *Antennaria margaritacea* of North America and Kamtschatka. Called in Britain *everlasting flower* (Prior), "gnaphalium americanum" by Clusius, who in this year received it from England; — where it became naturalized before the days of Ray; was known to the Bauhins only as a cultivated plant, but has since been found seemingly wild in various parts of Europe (Haller, Allion., and A. Dec.). Westward, "live forever a kind of cud-weed" was seen by Josselyn rar. 55 in New England: *A. margaritacea*, by Lapylaie from Lat. 49° in Newfoundland; by myself, frequent from 48° on the Lower St. Lawrence to 42° along the Atlantic; by Torrey, to 41° on the Hudson; by Chapman, in the "Upper districts of North Carolina, and northward;" by Long's Expedition ii., at Rainy Lake (Schw.); was received by Torrey from Oregon; by Gmelin, from Bering's Island and Kamtschatka.

† *Aquilegia Canadensis* of Northeast America. The *Canadian Columbine* transported to Europe described by Lobel ic. 26, — Cornuti pl. 60, Morison iii. 12. 2. f. 4, and Miller pl. 47. Westward, "columbines, of a flesh-colour, growing upon rocks," were seen by Josselyn 46 in New England: *A. Canadensis* is known to grow from Hudson Bay and 55° throughout Canada (Hook.); was observed by Michaux from Canada to the Alleghanies of Carolina; by myself, on rocky hills throughout New England; by A. Gray, "common" in central New York; by Schweinitz, at 36° in Upper Carolina; by Croom, near Newbern; by Elliot, on the Alleghanies of Carolina and Georgia; by Chapman, in "rocky woods, West Florida and northward in the upper districts;" by Beck, as far as the Mississippi near St. Louis.

Limnanthemum lacunosum of Northeast America. An aquatic with small floating Nymphæa-like leaves, and the "lutea minor" found by Lobel p. 258 in the Thames, — may be compared: also as transported to Europe, *L. lacunosum* is described by Ventenat (Steud.). Westward, according to A. Gray, grows in Maine and Northern New York; has been observed by myself frequent in lakes and slow-moving water from 43° to 38° along the Atlantic; by Pursh, from New Jersey to Carolina;

Medicago radiata ic. 2. 38, *Hypericum elodes* ic. 400, *H. serpyllifolium* ic. 2. 390, *Leontodon crispum* ic. 238, *Stachelina fruticosa* ic. 548, *Cirsium bulbosum* ic. 582, *Cirsium pratense* ic. 583, "acarna Theophrasti" ic. 2. 16, *C. Casabonae*, *C. Italicum* ic. 2. 15, *Gnaphalium alpinum* ic. 484, *Evax asterisciflora* ic. 484, *Filago minima* ic. 481, *Cineraria campestris* ic. 347, *Carex ovalis* ic. 19, *C. pseudocyperus* ic. 76, *Atriplex laciniata* ic. 254, *A. patula* ic. 254, *A. angustifolia* ic. 257, *Asplenium marinum* ic. 814, *Cistoseira barbata* ic. 2. 254, *Fucus acinarius* ic. 2. 256, and *Ulva umbilicalis* ic. 2. 246: — he completed the *Icones* "in 1591."

Asperula Taurina of the West Mediterranean countries. Termed "rubia laevis taurinensium" by Lobel ic. 800 — (Spreng.), "galium taurinum" by Scopoli (Steud.), and known to grow in Southern France and the neighbouring portion of Italy, in woods from Dauphiny to Piedmont (Dec. fl. fr. and Mut.); was observed by Gouan near Montpellier, but perhaps adventive only (A. Dec.). In Britain, "from 1836" has become naturalized in two localities, in Leicester and Westmoreland (Bab.), and more recently in Southeastern Scotland (Wats.).

Thymus Barrelieri of the Mediterranean countries. Termed "calamintha secunda incana" by Lobel ic. 514 — (Spreng.), "c. pulegii odore" by Barrelier pl. 1166, "melissa Cretica" by Linnæus; known to grow in Spain and around Montpellier (Pers.), also in Sicily and Greece (Spreng.).

Polygonum lapathifolium of Northeast America. Described by Lobel ic. 315 — (Linn., and Spreng.); termed "persicaria major lapathi foliis calyce floris purpureo" by Tournefort inst. 510, "p. Pennsylvanicum" by Curtis lond. i. pl. 24 and 25; seems known to Linnæus only as occurring in France, but was observed by Sibthorp and Chaubard, in waste places around Athens and in the Peloponnesus. Westward, by Banister (Ray suppl. 119) in Virginia; by Elliot, in South Carolina, and termed "p. incarnatum;" by Chapman, in "ponds, ditches, etc., South Carolina, and westward," the "flowers small flesh-colour" (pale pink), and the leaves "eight inches long." The white-flowered form, "P. densiflorum" of Meisner, was observed by Chapman on "muddy banks, Florida, and westward;" by myself, intermingled with *P. persicaria* in waste places around Salem in New England; and is perhaps the same seen by Torrey at 41° on the Hudson, and according to A. Gray growing in "moist places Michigan to Kentucky, and common southward," and "apparently indigenous."

Juncus glaucus of Europe and the adjoining portion of Asia. A leafless rush called in Greece "vōurla" (Sibth.); described by Lobel ic. 85 — (Spreng.), and Barrelier pl. 208; termed "j. acutus panicula sparsa" by Tournefort inst. 246; and known to grow in moist places from Lapland and Russia to the Mediterranean (fl. Dan. pl. 1159. Engl. bot. pl. 665. Pers., and Wats.): observed by Sibthorp, and Chaubard, from the Peloponnesus to the Mediterranean.

Poa (Hellechloa) maritima of the shores of the North Atlantic and Mediterranean. A seaside grass termed "gramen geniculatum marinum" by Lobel ic. 21 — (Spreng.), "poa maritima" by Hudson, Willdenow i. 396, and Smith brit. i. 97, "glyceria maritima" by Wahlenberg, "festuca thalassica" by Kunth; known to grow along the seashore from Lapland to Ireland and the Mediterranean (fl. Dan. pl. 251. Engl. bot. pl. 1140. Pers., and Wats.), and even in Siberia (Kunth): observed by Decandolle on the seashore of France as far as the Mediterranean; by Sibthorp, around the Greek islands. Westward, by Hooker in Iceland; by myself, on the border of salt marshes around Salem, Mass.; and according to A. Gray is "not rare" along our sea-coast.

by Elliot, in Granby, South Carolina, and Augusta; by Chapman, in "Florida, and northward;" by Short, in Kentucky; and by Nuttall, in New Jersey and Arkansas.

Polygonum (Helxine) dumetorum of Northeast America. A climbing buckwheat, transported to Europe, termed "helxine cissampelos altera" by Lobel pl. 624 — (J. E. Smith); described also by Tournefort inst. 511, and Linnæus; known to occur seemingly wild from Denmark throughout middle Europe (fl. Dan. pl. 79. Bromf., and A. Dec.); and collected by Sibthorp in Greece (J. E. Smith). Westward, has been observed by myself from 43° in New England to 40° along the Atlantic; by Schweinitz, at 36° in Upper Carolina; by Elliot, in South Carolina; by Chapman, in "Florida, and northward;" by A. Gray, "common" in central New York; by Michaux, and Short, in Kentucky.

Trisetum subspicatum of the Arctic region and alpine summits all over the Globe. A grass described by Lobel pl. 8; — known to grow in Lapland, and on the alpine summits of the Pyrenees and Switzerland (Fries, Ram., and A. Dec.), also in extreme Northern Asia (Kunth) as far as Kamtchatka (Ledeb.). Westward, was received by Hooker from Iceland and Melville Island; by Collins from Labrador; was observed by Sabine in Greenland; by myself, on the summits of the White mountains in New England; by E. James, on the Rocky mountains; and was received by Ledebour from Unalaska. Within the Tropics and in the Southern Hemisphere, was received by J. D. Hooker from the Andes of Mexico, Colombia, and Peru, and observed on the Falkland Islands, and on the mountains of Campbell's Island; was observed by myself on the mountains around Orange Bay near Cape Horn, and on the summit of Mauna Kea on the Hawaiian Islands.

Orchis latifolia of Europe and the adjoining portion of Asia. Described by Lobel obs. 90 — (Spreng.); termed “o. palmata pratensis latifolia longis calcaribus” by C. Bauhin pin. 85, and known to grow in moist meads throughout middle Europe (Tourn. inst. 434, fl. Dan. pl. 266, Curt. lond. v. pl. 65, and Pers.): observed by Rudbeck elys. ii. pl. 211, and Linnæus, in Sweden; by Vaillant pl. 31, in the environs of Paris; by Haller pl. 32, in Switzerland; by Sibthorp, and Chaubard, in the Peloponnesus.

“1582 B. C.” (art de verif., and Thunb. trav. iv. 31), “at the solicitation of the jesuit missionaries,” an embassy sent by the princes of Neugato, Bungo, and Arima to Rome, assuring pope Gregorius XIII. of their filial obedience; a measure that was ill-received in Japan. The same year (= “second day of the fifth month of the 25th year of Ookimatz,” art de verif.), Nobunanga, holding next after Josijtira the office of cubo, slain together with his eldest son at Meaco: he was succeeded by Fide-josi, who took the name of Taiko-sama.

A painting by Taiko-sama is extant, — and after he had “quieted the country,” a decided change in *Japanese art*: peaceful scenes were now represented, with flowers and trees, including “the Japanese maple with its beautiful autumnal tints” (*Acer pictum*. See Jap. centen. comm. 100).

“The same year” (Humb. iii. 8), the Northwest coast of America in Lat. 57° 30', discovered by Francisco Gali.

“Oct. 5th,” alias “15th” (Nicol. 34 and 206), “New Style,” the change in reckoning devised by Christopher Clavius, established by pope Gregorius XIII.: “ten days” being deducted from this year by calling what “would have been the 5th of October, the 15th.” — The so-called “Gregorian Calendar” has in the course of years been adopted by European nations generally: but not by Russia, nor anywhere in the East.

“The same year” (Churchill coll.), arrival of Francis de Ovalle from Mexico at the Philippine Islands. He next sailed North to Macao in China; and thence Northeast through the “Lequios” or Loo-Choo Islands, and at length Eastward across to the Pacific to the California coast “in thirty-eight degrees and a half of latitude:” not only making the first voyage from Mexico to China, but discovering the way of returning to Mexico.

“1583 A. D.” (Hakl., Churchill coll., and Holmes), arrival in Newfoundland of Humphrey Gilbert, having obtained from queen Elizabeth the first English charter for a colony. Entering the harbour of St. John’s among “thirty-six vessels of various nations,” he landed and took formal possession; and “published three laws for the government of the territory.” Sailing thence for Cape Breton, the loss of his largest ship induced him to return; his own ship was next lost; but the remaining one succeeded in reaching England.

“In or about this year” (Gassendi, and Blair), *refraction* of the rays of light in passing through transparent substances, re-discovered by Tycho Brahe; and the amount of error from this source in astronomical observation, ascertained by him with great exactness.

“In this year” (Spreng., and Winckler), Alpinus returning from Egypt by the way of Crete and the Greek islands, meeting with *Galium Graecum* exot. 166, *Ficula Orientalis* 199, *Statice echinus* 56, *Linum arboreum* 18, *Saponaria Cretica* 291, *Dianthus juniperinus* 38, *Teucrium Creticum* 102, *Nepeta scordotis* 283, *Alyssum Creticum* 118, *Anthyllis Hermanniae* 26, *Coronilla argentea* 16, *C. globosa* 314, *Astragalus echioides* 54, *Catananche lutea* 286, *Stachelina arborescens* 32, *Achillea Cretica* 83, *Ephedra fragilis* 140, and *Pteris ensifolia* 66.

Onosma simplicissima of the Uralian plains. Termed “echium ereticum” by Alpinus exot. 129 — (Spreng.): observed by Gmelin iv. pl. 40 in Siberia; by Pallas trav. i. 235 to ii. 18 from the Lower Volga to Oufa.

“In this year” (Spreng., Prior, and Winckler), Dodoens publishing his *Stirp. Hist. pemptades*, enumerating * *Allium magicum* 985, *Farsetia clypeata* 89, *Lathyrus Nissolia* 529, *Lysimachia ephemerata* 203, *Bromus arvensis* 540, *Narthecium ossifragum* 208, *Veronica maritima* 86, *Iris graminea*

* *Hibiscus palustris* of Northeast America. Possibly distinct from *H. moscheutos*, the flowers roseate and in all instances destitute of a dark central spot. Transported to Europe, is termed “*althæa hortensis* s. *peregrina*” by Dodoens pempt. 653 — (Linn. sp. pl.). Westward, was observed by Kalm in Canada; by Bigelow, in the environs of Boston; by myself, only in Eastern New England, from 42° 30' to 41° 30'.

Hibiscus moscheutos of Northeast America. The flowers in some instances deeply roseate and destitute of a dark central spot: — observed by Pursh from New York to Carolina; by Torrey, from Lat. 41° on the Hudson; by myself, frequent and very showy along the estuary of the Delaware; by Clayton, in Virginia; by Walter, and Elliot, in South Carolina; by Baldwin, as far as 31° in Florida; by Chapman, “Georgia, northward and westward;” by Short, in Kentucky; and by Nuttall, along the Arkansas. Transported to Europe, is described by Cornuti pl. 145 (Linn. sp. pl.).

247, *Plantago graminea* 108, *Tordylium Syriacum* 702, *Bupleurum rigidum* 633, *Tulipa sylvestris* 232, *Ornithogalum Narbonnense* 222, "bulbus eriophorus" 692 *Lanaria plumosa*, *Delphinium elatum* 441, *Anemone trifolia* 436, *Teucrium gnaphalodes* 283, *Thymus mastichina* 271, *Pedicularis jasciculata* 56, *Anarrhinum bellidifolium* 184, "alysum Dioscoridis" 89 *Lunaria canescens*, *Anthyllis lotoides* (found by Paludanus on Lebanon) 109, *Trifolium rubens* 578, *Filago arvensis* 66, *Centaurea nigrescens* 124, *Salix fusca* 843, *Asplenium lanceolatum* 456, *Fucus siliquosus* 480, and *F. loreus* 479. — He died "in 1586."

Dianthus virgineus of the Uralian plains. Described by Dodoens stirp. hist. 176 — (Spreng.): observed by Scopoli in Carniolia (Steud.); by Pallas trav. i. 64 along the Volga; known to grow also in Siberia (Pers.).

Anemone Appennina of Italy and Greece. Described by Dodoens pempt. 434 f. 2. — termed "ranunculus nemorosus flore cæruleo foliis majoribus Apennini montis" by Tournefort inst. 285, and known to grow wild in Provence (Lois. i. 40) Corsica and Italy (A. Dec.): observed by Gussone frequent around Naples: by Sibthorp, and Chaubard, in shaded situations in the Peloponnesus. Introduced into Britain, became naturalized "before 1724," and continues to be cultivated in parks (Wats.); has been observed "sine dubio advena" in Holland (prodr. fl. bat.).

Lathyrus sylvestris of Europe and the adjoining portion of Asia. Termed "l. sylvestris" by Dodoens pempt. 523, — and Clusius hist. ii. 129, "l. s. major" by C. Bauhin pin. 344. and Tournefort inst. 395, and known to grow in mountainous situations throughout middle Europe (fl. Dan. pl. 315, Curt. lond. vi. pl. 52, and Pers.): observed by Linnæus in Sweden, fetid and neglected by cattle; by Sestini (Sibth.) and Chaubard, from the Peloponnesus to Constantinople.

Teesdalia nudicaulis of Europe and the adjoining portion of Asia. A small annual termed "bursa pastoris minor" by Dodoens pempt. 103, — "nasturtium petræum" by Tabernæmontanus pl. 451. "n. p. foliis bursæ pastoris" by Tournefort inst. 214. and known to grow in gravelly and sandy places from Sweden throughout Europe (C. Bauh. pin. 108, fl. Dan. pl. 323, Curt. lond. vi. pl. 42, and Pers.): observed by Linnæus in Sweden; by Sibthorp, in sunny situations in the Peloponnesus.

Polemonium coeruleum of Europe and Northern Asia. Called in Britain *Jacob's ladder* or *Greek valerian* (Prior), termed "valeriana coerulea aut graeca" by Dodoens 352, — and known to grow from Denmark and Western France to Caucasus (Tourn. inst. 146, fl. Dan. 255, Pers., and Spreng.); is further enumerated by A. Decandolle among widely-extended marsh plants.

Eranthis hyemalis of central Europe. Called in English gardens *winter-aconite* (Prior), first mentioned by Dodoens 440 — (Spreng.), termed "helleborus hyemalis" by Linnæus, and known to grow wild in Switzerland, Italy, and Austria (Jacq. austr. pl. 202, and Pers.). In Britain, has sometimes escaped from cultivation, but has not as yet become naturalized (Wats., and A. Dec.).

Ranunculus Illyricus of Europe and the adjoining portion of Asia. Termed "r. illyricus" by Dodoens pempt. 428, — and Lobel hist. 383, "r. lanuginosus angustifolius grumosa radice major" by Tournefort inst. 289, and known to grow from Sweden to Narbonne, Italy, and Hungary (Bauh. hist. iii. 863, C. Bauh. pin. 181, Jacq. austr. pl. 222, and Pers.): observed by Linnæus in Sweden, extremely rare in Oeland; by Sibthorp, in shaded situations on mount Hæmus.

Epilobium montanum of Subarctic climates. Termed "pseudo-lysimachium purpureum primum" by Dodoens pempt. 85, — "lysimachia siliquosa glabra major" by C. Bauhin pin. 245, "chamænerion glabrum majus" by Tournefort inst. 303, and known to grow from Lapland throughout middle Europe, also in Northern Asia (fl. Dan. pl. 922, Curt. lond. iii. pl. 24, Pers., Dec., and Wats.): observed by Linnæus in Lapland and Sweden; by Schmidt 377, in Bohemia; by Ludwig in Switzerland and Silesia; by Sibthorp, around Constantinople and on the Bithynian Olympus: by Bieberstein, on Caucasus. Westward, by Hooker in Iceland; by Mertens, at 57° around Norfolk Sound on the Pacific; is perhaps the species seen by myself in wet woods at 47° 30' on the Lower St. Lawrence, also on the alpine portion of the White mountains, the stigma not examined (see *E. tetragonum*).

Ophrys fusca of the Mediterranean countries. Termed "o. serapias secundus minor" by Dodoens pempt. 238, — "orchis fucum referens flore subvirente" by Tournefort inst. 434. and known to grow in Portugal (Pers.): observed by Decandolle fl. fr. in France; by Sibthorp, and Chaubard, in the Peloponnesus.

Pulicaria vulgaris of Europe and the adjoining portion of Asia. Termed "conyza minima" by Dodoens pempt. 52, — "c. minor flore globoso" by C. Bauhin pin. 266. "aster palustris parvo flore globoso" by Tournefort inst. 483, and known to occur in rain-water pools, often in the streets of cities, throughout middle Europe (fl. Dan. pl. 613, Curt. lond. iii. pl. 57, and Pers.): observed by Linnæus in Sweden, as far as Scania; by Sibthorp, around Constantinople and in Asia Minor.

Cacalia antiphorbum of Austral Africa. Recently brought to Europe, according to Dodoens pempt. iii. 378; — cultivated in Gerarde's garden, "in 1596;" described also by C. Bauhin pin. 387, and Linnæus; and in Europe very rarely flowering (Curt. bot. mag. for 1874).

Senecio viscosus of Europe and the adjoining portion of Asia. Described by Dodoens 641 —

(Spreng.); termed "*jacobæa pannonica prima Clusii*" by Tournefort inst. 486, "*s. incanus pinguis*" by C. Bauhin pin. 131, and known to grow wild throughout middle Europe, occurring besides in city streets (fl. Dan. pl. 1230, Engl. bot. pl. 32, and Pers.): observed by Linnæus as far as Stockholm, having the aspect of *S. vulgaris*, but entirely viscid; by Sibthorp, in the Peloponnesus.

Linaria purpurea of the mountains of Italy, Sicily, and Greece. Described by Dodoens 183 — (Spreng.), termed "*l. p. major odorata*" by Tournefort inst. 170, and known to grow on the basal portion of Vesuvius (Pers.): observed by Gussone on the mountains of Italy and Sicily; by Sibthorp, in Greece. In Britain, is mentioned by Miller, and has escaped from cultivation in as many as six different localities (Bab., Wats., and A. Dec.).

"In this year" (Spreng.), Cæsalpinus publishing his treatise *De plant.*, enumerating *Convolvulus cneorum* ix. 27, *Salvinia natans* xvi. 36, and "*panacea*" *Heracleum alpinum*. — (Spreng.). He died "in 1603."

Briza maxima of the West Mediterranean countries. An ornamental grass called in Greece "*skōlarikakia*" (Sibth.); described by Cæsalpinus, — Clusius, and C. Bauhin; termed "*gramen paniculatum locustis maximis candicantibus tremulis*" by Tournefort inst. 523; and known to grow in Portugal and Italy (Pers.). Eastward, observed by Sibthorp, and Chaubard, frequent in cultivated ground in Southern Greece and on the Greek islands. From Europe, was carried by colonists to Northeast America, where it continues to be cultivated in gardens; also, to Austral Africa, and India (Pers.).

Thymus lanuginosus of Western Europe. The "*serpillum citratum*" of Cæsalpinus xi. 52 — may be compared: *T. lanuginosus* is described by Miller, and Ehrhart; was observed by Allioni in Piedmont (Steud.); is known to grow farther North in France, and "*var. citriodorum*" is enumerated by Persoon.

"In this year" (J. E. Smith, and Spreng.), Clusius publishing his account of plants observed in Pannonia, Austria, etc., enumerating among others *Santolina rosmarinifolia*, *Bupthalmum maritimum*, and "*colchicum pannonicum*" *Sternbergia colchiciflora*, *Cardamine trifolia* 456, *Veronica latifolia* 613, *Salvia Austriaca* 579, *Pinguicula alpina* 361, *Echium violaceum* 681, *Androsace lactea* 491, *Soldanella montana* 354, *Viola grandiflora* 359, *V. biflora* 357, *Selinum Austriacum* 690, *Seseli hippomarathrum* 698, *Linum alpinum* 304, *Allium senescens* 221, *Ornithogalum comosum* 189, *O. pusillum* 190, *Tofieldia alpina* 262, *Chimaphila umbellata* 507, *Silene pumilio* 325, *Sedum villosum* 487, *Potentilla canescens* 429, *P. opaca* 428, *P. aurea* 427, *P. Clusiana* 425, *Aconitum Tauricum* 407, *A. Neubergense* 408, *A. cernuum* 451, *A. cammarum* 412, *A. variegatum* 414, *Clematis integrifolia* 294, *Ranunculus alpestris* 364, *Isopyrum thalictroides* 379, *Marrubium peregrinum* 589, *Thymus Pannonicus* 627, *Thymus alpinus* 623, *Dracocephalum Austriacum* 632, *Prunella grandiflora* 607, *P. laciniata* 608, *Pedicularis rostrata* 709, *Biscutella picridifolia* 471, *Peltaria alliacea* 466, *Arabis bellidifolia* 458, *Cytisus capitatus* 38, *C. supinus* 41, *Vicia oroboides* 741, *V. Pannonica* 745, *Astragalus Austriacus* 753, *A. asper* 756, *Scorzonera purpurea* 639, *S. humilis* 635, *S. rosea* 637, *Carduus Pannonicus* 656, *Artemisia scoparia* 556, *Arnica doricum* 518, *Achillea Clavennae* 553.

Geranium phœnum of the mountains of middle Europe. Described by Clusius pann. 416 — (Spreng.); known in Britain as early as "1724" as appears from Dillenius (A. Dec.); escaping from cultivation, occurs at present only in suspected localities near gardens (Wats. cyb. i. 259 to iii. 400); occurs also in Holland (prodr. fl. bat. 54), and in moist meads around Montdidier in the department of Somme (Pauquy fl. somm.). In its wild state, is termed "*g. patulum*" by Villars, "*g. lividum*" by L'Heritier, and is known to grow on the mountains of Switzerland from France to Pannonia and Styria (Pers.).

Gentiana nivalis of the Arctic region and alpine summits farther South. An annual observed by Clusius pann. 291 — (Spreng.), Barrelier pl. 103 and 509, and Haller pl. 17, on the alpine summits of Switzerland (Pers.); by Wahlberg, on the Carpathians and in Lapland, and is known to grow on mountain-summits in Silesia (A. Dec.); was observed by Pallas on alpine summits in Daouria. Westward, by Hooker on Iceland; and is known to grow in Labrador (Wats.).

Arabis alpina of Subarctic climates. Vernal, and termed "*draba altera*" by Clusius pann. 462, — "*hesperis alpina seu muralis minor repens*" by Bauhin hist. ii. 118, "*turritis verna*" by Desfontaines, and known to grow in the Arctic region and on mountains farther South (C. Bauhin pin. 109, Tourn. inst. 221, fl. Dan. pl. 62, Pers., and A. Dec.): observed by Linnæus frequent on the mountains of Lapland; by Boiss, on the mountains of Spain; by Desfontaines ii. 92, in Barbary; by Grenier and Godron, on the mountains of Corsica; by Hawkins, on the mountains of Crete (Sibth.); by Bieberstein, on Caucasus; and by Pallas, at 67° on the Oby. Westward, by Hooker in Iceland, and received by him from Greenland and Labrador.

Loiseleuria procumbens of the Arctic region and alpine summits farther South. Observed by Clusius 58; — by myself, in the alpine region of Switzerland; known to grow also on the Pyrenees (A. Dec.), the mountains of Scotland, the Feroe Islands (Martins), and Scandinavian peninsula as far

as North Cape and Finland (fl. Dan. pl. 6, Linn. fl. lapp. pl. 6, Fries, and Hook.). Eastward, was observed by Gmelin from the Biela river to Ochotsk and Kamtschatka; by Chamisso, in East Siberia as far as Bering Straits, and on the Aleutian Islands; by Mertens, around Norfolk Sound; by myself, on the alpine summits of the White mountains of New England; was received by Hooker ii. 44 from Arctic America, Newfoundland (A. Dec.), and Iceland.

Scrophularia vernalis of middle Europe. Described by Clusius pann. 595 — (Spreng.), and known to grow in France, Italy, Switzerland, and Austria (Pers.). In Britain, seems first mentioned by Aiton ii. 342, but has become frequent about towns and along hedges, and is regarded by Watson and A. Decandolle as exotic.

Linaria genistifolia of Europe and the adjoining portion of Asia. Described by Clusius pann. 308 — (Spreng.); termed "l. flore pallido rictu aureo" by Tournefort inst. 170, "ant. pallidiflorum" by Lamarck fl. fr., and known to grow from Switzerland and Saxony to Siberia (Pers.): observed by Jacquin austr. pl. 244 in Austria; by Sibthorp, from mount Athos to Constantinople. By European colonists was carried to Northeast America, observed by H. G. Clark, and Lesquereux, along "road-sides, New York, near the city" (A. Gray).

"In this year" (Klapr. chrest. p. viii), the Mandchous increasing in power and extending their conquests over Tartary and in the direction of China.

"In this year" (Dutch mem. emb., and Stanley note to De Morga 80), a mission of four Franciscans and a Jesuit, obtaining an audience of Fide-josi, receive permission to establish themselves at Meaco, on condition of not converting any Japanese.

"1584, July 13th" (Hakl., Churchill coll., and Holmes), Philip Amadas and Arthur Barlow under a charter from queen Elizabeth obtained by Walter Raleigh, arriving at Wohoken Island, outside of Pamlico Sound. Landing, they took formal possession; and Barlow with seven men proceeded up the Sound to Roanoke Island, to a village "of nine houses, built with cedar, and fortified with sharp trees" (palisades): meeting with "deer" (*Cervus Virginianus*), "rabbits" (*Lepus palustris*?), "hares" (*Lepus Americanus*?), and "fowl" (*Melagris gallopavo*): also "vines" (*Vitis vulpina*), "pines, sassafras, cypress" (*Taxodium distichum*), "mastich-trees" (*Rhus copallina*), "white coral, and some pearls." Also (according to Strachey 142) "currants" (*Vaccinium*), and "the tree that beareth the rind of black synamon, of which like Capt. Winter brought from the Streights of Magel-lan" (*Magnolia glauca*).

"In this year" (Spreng.), Gwafridus Linocierus publishing his Hist., chiefly derived from Leries, Garcias, Acosta, and others.

"1585 A. D." (art de verif.), the title "quambuku" conferred by Ookimatz on Fide-josi, rendering him equal and in effect, depriving himself of all temporal power: the ceremony only remaining of a visit of homage every three to five years.

"June 26th" (Hakl., and Holmes), Richard Greenville under instructions from Walter Raleigh, arriving at Wohoken Island. After examining the neighbouring continent, he proceeded to Roanoke Island, and left there "one hundred and seven persons" under Rafe Lane: being the first settlement in America attempted by the English. He next sailed along the coast "one hundred and thirty miles," as far North as "the country of the Chesepeaks."

In the country around (De By i. 7) Hariot met with a kind of herb two and a half feet or more high, large-leaved and in its leaves producing silk (*Asclepius Cornuti*); "linum" growing wild (*Linum Virginianum*); trees in great abundance yielding turpentine, tar, and resin (*Pinus australis*); "cedrus," furnishing "odoratum" timber suitable for cabinet-work (*Juniperus Virginiana*); "vitis" of two kinds, one with acerb grapes as large as the English (*Vitis labrusca*), the other with much larger grapes full of juice (*V. vulpina*); nuts of two kinds that will yield oil (*Carya alba*, and *C. sulcata*); berries of three kinds, in shape "glandibus similis," from which oil is procured by the natives (*Myrica cerifera*, *Olea Americana*, *Pyrularia oleifera* *); various kinds of gums (. . .), and other

* *Sapium sebiferum* of . . . The tallow tree "twenty to forty feet high" (Chapm.), is called in the environs of Bombay "pippal yank" (Graham); and possibly one of the berries "glandibus similis" observed by Hariot yielding oil to the natives on the Roanoke. — *S. sebiferum* is described by Plukenet amalth. pl. 390; was observed by Michaux under cultivation in our Southern States (Pers.); by Chapman, in "Georgia and South Carolina near the coast," but regarded by him as "introduced." Eastward, was observed by Graham in gardens at Bombay; by Ainslie ii. 433, and Roxburgh, in other parts of Hindustan; and according to Drury "introduced," but now extensively cultivated in the Dhooons and Punjaub, its seed-vessels "hard brownish husks not unlike those of chestnuts." Farther East, the "kuei-xu" was seen by Navarrete i. 15 in 1663 used by the Chinese for making candles: *S. sebiferum* is used for this purpose in Northern China, and "forms a vast trade" (Abel trav. in chin. 177, and Drur.).

"medicamenta" (. . . .); "rhus coriariorum" (*Rhus glabra*); the herb "wasewowr" (. . . .) cooked, small and slender roots called "chappacor" (. . . .), and the bark of the "tangomockomindge" tree (. . . .), furnishing the natives with different red dyes; "kaishucpenauk," a white root of the size and shape of a hen's egg, cooked and eaten by the natives but the flavour not agreeable (. . . .); "cocushaw," a root growing in marshes, poisonous until dried and prepared by the natives, when it is pulverized and made into bread (*Caladium* (*Xanthosoma*) *sagittifolium*); "habascon," a hot root in size and form like "pastinacæ," not eaten by itself but cooked with other food (*Angelica lucida*); "allia," growing in many places and much like the English, eaten by ourselves but not by the natives (*A. Canadense*); "nucis regiæ" in the greatest abundance, occupying a third part of the forest for many miles and of two kinds, one having a nut in taste and form differing little from the English but its shell thicker and harder (*Carya sulcata*), the other with a hard and rough bark and a large sweet oleaginous nucleus which is pounded into a milky juice and mixed in the native cookery (*Juglans nigra*); "mora" and other similar fruits such as we have in England (*Rubus* sp.); five kinds of berries or nuts growing on as many different trees, the "sagatemener" (. . . .), "osamener" (. . . .), and "pummuckoner" (. . . .), the three from which oil is obtained; the fourth, "sapummener," cooked and squeezed having the taste of chestnuts and sometimes made into bread (. . . .); "abies" large and lofty for masts of ships (*Pinus tæda*); "rakiock," a large tree furnishing canoes, its timber valuable and easily worked (*Liriodendron tulipifera*); "aquifolia, ad viscum" (*Ilex opaca*); "salices" suitable for making fish-baskets (*Salix nigra*), although the natives employ only "arundinibus" which are "firmæ et lentæ," (*Arundinaria macrosperma*); "fagi" (*Fagus ferruginea*) and "fraxini" (*Fraxinus platycarpa*), suitable for making buckets and hoops; "ulmi" (*Ulmus alata*); dwellings covered with mats in great part of "scirpo" (*Scirpus lacustris*); and among animals, "mustelæ odoratæ" (*Mephitis Americana*), and the "seekanauk" (according to the figure *Limulus Americanus*).

"Aug. 6th" (Asher edit. Huds., and Churchill coll.), John Davis, seeking a Northwest Passage in the Strait (that bears his name), arriving at "66° 40' N.:" turning and following the American coast, he discovered an opening "on the 11th," named it Cumberland Strait, and returned in safety "Sept. 30th." — His Second voyage, in the following year, was interrupted by a mutiny, but he discovered Davis' Inlet and Tovuctoke Inlet, and traded with the natives "for seals, stags" (*Cervus rangiferinus*), "white hares skins" (*Lepus Grænländicus*), "dried fish and some fowl." On the "30th June, 1587," on his Third voyage, he reached "72° 12', nearly four degrees farther north" in the Strait than any preceding navigator.

"The same year" (Anders. ii. p. 211, and S. F. Haven archæol. Amer. iv. p. 260), Antwerp captured and sacked by the duke of Parma: revolutionizing the whole system of European commerce, and rendering English trade independent: for "one-third part of the merchants and workmen who worked and dealt in silks, damasks, and taffeties, and in bayes, says, serges, stockings, etc., settled in England."

"1586 A. D." (Kaempf. iv. 5, and art de verif.), under Fide-josi, edict against Christians: — who from this time were persecuted in Japan.

"The same year" (Hakluyt, Churchill coll., and Holmes), Spanish settlements in the West Indies plundered by Francis Drake, in "a fleet of twenty sail" fitted out by "private adventurers." On his way home, Drake stopped "June 9th" off Roanoke Island; and finding the colonists "in distress for want of provision," offered a passage to England: the invitation was accepted. "Within fourteen or fifteen days" after the ships had left, arrival of Richard Greenville with supplies. Not finding the colonists and "unwilling to lose possession of the country," Greenville left "fifteen of his crew" upon Roanoke Island, "with provisions for two years."

"The same year," Joseph Acosta vii. 3 visiting Mexico.* He enumerates as introduced from Spain into Tropical America: "let uce, radishes, onions, garlic, parsley, turneps, parsenepps, becen- genes or apples of love" (*Solanum melongena*), "siccorie" (*Cichorium*), "beets, spinage, peaches, apples, pearces, a few plumbs, figges, quinces, cherries, pomegranats, almonds rarely, vines, olives, mulberries, and sugar-cane."

"In this year" (Spreng.), Camerarius publishing his Epitome, enumerating "trifolium corniculatum" Rauwolf. *Lotus ornithopodioides* h. pl. 25 (Schmied. ed. G. i. fig. 10), *Gentiana imbricata* hort. pl. 15, *Eryngium amethystinum* h. 58, *Bupleurum longifolium* h. pl. 38, *Cachrys dichotoma*

* *Caryocar butyrosom* of Guayana. The "chachapoyas almonds," growing only in the country of that name and on high trees, oily according to J. Acosta 26 and fatter than those of Spain, the husk somewhat bigger and more pricking than chestnut, — may be compared: *C. butyrosom* was observed by Aublet i. pl. 238 a forest-tree in Guayana; and from transported specimens is termed "castanea peruviana" by Clusius hist. i. 8 (Spreng).

h. pl. 11, *Silene fruticosa* h. pl. 33, *Euphorbia Gerardiana* h. 170, *Anthyllis tetraphylla* h. pl. 47, *Hieracium dubium* h. 82, *Artemisia Gallica* ep. 458, *Imperatoria angustifolia* ep. 533, *Athamantia annua* ep. 535, *Ballota alba* ep. 572, *Tragopogon Orientalis* ep. 312, *Sonchus alpinus* ep. 281, *Ulvula plicata* ep. 872. — He published his Hort. med. in "1588," and died in "1598."

Bunias Syriaca of the Uralian plains. Described by Camerarius h. pl. 42 — (Spreng.), Scopoli, and Crantz (Steud.); and known to occur in Austria, Hungary, Syria, and even Sumatra (Jacq. austr. i. pl. 6, and Pers.). Observed by Pallas v. 508 in ditches around Lake Bogdo in the Naryn Desert.

Silene noctiflora of middle Asia. Termed "ocimoides noctiflorum" by Camerarius hort. pl. 34, — "lychnis noctiflora" by C. Bauhin pin. 208, and Tournefort inst. 335, and known to occur as a weed in grain-fields throughout Northern and middle Europe (Engl. bot. pl. 291, and Pers.): was observed by Linnæus naturalized in Sweden, although recently introduced; was already in Britain in the days of Ray syn. 340; was observed by Koch in Holland and Germany; by Fleischer, in Russia; by Zawadski, in Galicia; by Sibthorp, from Crete to Caria; but according to Linnæus, Ledebour, and Hohen., is clearly wild around Caucasus and in Siberia (A. Dec.). By European colonists, was carried to Northeast America, observed by Bigelow in the environs of Boston (A. Gray), by myself in grain-fields in Western Massachusetts.

Linaria minor of the Sierra Nevada mountains in Spain. Termed "antirrhinum tertium" by Camerarius epit. 922, — "l. arvensis minima" by Rivinus mon. 84, "l. pumila vulgarior arvensis" by Tournefort inst. 160, and known to occur in cultivated ground throughout Europe (C. Bauh. pin. 212, fl. Dan. pl. 502, Curt. lond. v. pl. 41, and Pers.): enumerated by Parkinson theatr. 1334 as an exotic cultivated in English gardens, had escaped and become a weed in the days of Ray syn.; was observed by Linnæus in Sweden, as far as Scania and Upsal; by Sibthorp, in cultivated ground in Greece; by Bieberstein, in fallow ground around Caucasus, but by C. A. Meyer in one wild situation; is however regarded by Boiss. and A. Decandolle, as indigenous only on the Sierra Nevada of Spain.

Alyssum calycinum of the Tauro-Caspian countries. An annual Cruciferous weed termed "alysso" by Camerarius epit. 558 f. 1, — described also by Clusius hist. ii. 133, and C. Bauhin pin. 107 (Linn. sp. pl., Steud., and A. Dec.), termed "clypeola alyssoides" by Crantz, "adysetum calycinum" by Scopoli, "adysetum mutabile" by Moench, and more recently (Jacq. austr. pl. 338, and fl. Dan. pl. 1704) has extended itself throughout Western Europe from 57° in Scotland to 37° in Sicily, its seeds mingled often with grain: was around Copenhagen "in 1838," in Britain "in 1835," and naturalized near Edinburgh "before 1843;" was observed by Laterrade before 1846 near Bordeaux; by Noulet, in 1837 frequent around Toulouse; by Boissier, before 1839 on the mountains of Southern Spain; by Colmeiro, frequent around Barcelona and Tarragona; by Castagne, in 1845 around Marseilles; by Moris, in 1837 on Sardinia; by Gussone, in 1842 on Sicily; by Bertoloni, before 1846 in Calabria; by Friederichsthal, around Peros on the coast of Argolis; by Ebel, before 1844 in Dalmatia; by Endlicher, in 1830 on the hills of Hungary near Pesth; by Wahlenberg, abounding in the plain around the Carpathians; by Baumgarten, in 1816 in Transylvania; by Trautvetter, in 1842 near Kiev; by C. A. Meyer, about Caucasus from West to East, and on the Talsch mountains; by Hohenacker, in 1838 near the Helenendorff colony in the Talsch; by Gœbel, on the steppes between the Volga and the Ural; but down to 1854, when A. Decandolle was writing, seemed unknown in Siberia, as well as in Ireland, Portugal, the Azores, Madeira, the Canaries, and Algeria.

Cardamine hirsuta of Temperate climates. Termed "sisymbrium aquaticum alterum" by Camerarius ep. 270 — (Spreng.), "c. quarta Dalechampii" by Tournefort inst. 214, "nasturtium aquaticum minus" by C. Bauhin, pin. 104, "c. hirsuta minore flore" by Dillenius giss. 76, and known to occur in cultivated and fallow ground throughout Europe (Barrel pl. 455, fl. Dan. pl. 735, Curt. lond. iv. pl. 48, and Pers.), also in Tauria and Persia (Dec.). Nepal (Wats.), and from the Ural to Kamtchatka (Leleb.): observed by Linnæus in Sweden; by Brotero, near Lisbon in Portugal; by Munby, in Algeria; by Sibthorp, and Chaubard, in the Peloponnesus; received by Richard from Abyssinia; by J. D. Hooker, from the Mauritius Islands and Ceylon; by Wight, from the Neilgherry mountains in Tropical Hindustan. Eastward from Kamtchatka was observed by Chamisso on St. Paul Island and Unalaska (Schlecht.); is known to grow from Oregon to the Arctic Sea (Hook. fl. ii. 45, and A. Dec.); was observed by Hooker in Iceland. In the Southern Hemisphere, by Chamisso in Chili (Hook. and Arn.); occurs according to J. D. Hooker on the Tropical islands of the Pacific; and as determined by him and Watson, on Auckland and Campbell's Islands, on the Falkland Islands, Tristan-d'Acunha, and from Patagonia to Buenos Ayres.

Tussilago (Petasites) alba of Northern Europe. Described by Camerarius epit. 593 — (Spreng.), and Linnæus, and known to grow in Sweden and Silesia (fl. Dan. pl. 544, Hoppe, and A. Dec.). In Britain, a patch several yards in extent discovered "in 1848" in oak woods near Huddersfield, and more recently another locality discovered in the county of Forfar (Wats. iii. 459, and A. Dec.).

At this time also (Spreng.), Thalius writing his *Sylva Hercynia*, enumerating * *Genista pilosa* 55, *Veronica verna* 39, *Eriophorum alpinum* 55, *Scabiosa ochroleuca* 108-9, *Campanula thyrsoidea* 32 pl. 4, *Phyteuma hemisphaerica* 94 pl. 8, *Laserpitium latifolium* 71, *Seseli annuum* 71, *Myrrhis hirsuta* 77, *Trientalis Europaea* 15, *Turritis glabra* 16, *Lathyrus latifolius* 74, *L. pratensis* 74, *Astragalus microphyllus* 37, *Hypochaeris glabra* 22, *Hieracium cymosum* 9. 64, *H. praemorsum* 9. 66, *H. paludosum* 13. 67, *Prenanthes purpurea* 75, *Senecio paludosus* 21, *Centaurea Phrygia*, *C. paniculata*, *Betula pubescens* 20, *Melampyrum sylvaticum* 79. — He died in "1587," and his book was published in "1588."

Sisymbrium Thalianum of Europe and the adjoining portion of Asia. Called in Britain *Thale cress* (Prior); and termed "pilosella siliquosa minor" by Thalius herc. pl. 7, — "bursæ pastoris similis siliquosa major seu majoribus foliis" by C. Bauhin pin. 108, "turritis vulgaris ramosa" by Tournefort inst. 224, and known to occur along walls and in fallow ground from Sweden to the Mediterranean (Bauh. hist. ii. 870, Curt. lond. ii. pl. 49, and Pers.), also on Teneriffe (Wats.) and in Abyssinia (A. Dec.): was observed by Linnæus in Sweden, frequent in sandy situations; by Sibthorp, and Chaubard, from the Peloponnesus to Cyprus; by Pallas trav. iv. on the Lower Volga; but seems unknown in Eastern Asia (A. Dec.). By European colonists, was carried to Northeast America, where it has become naturalized, occurring according to A. Gray from "New York to Kentucky;" was observed by myself in the environs of Philadelphia; by Chapman, in "Georgia, and northward, introduced."

Geranium lucidum of Europe and the adjoining portion of Asia. Termed "g. saxatile" by Thalius herc. pl. 5, — and Ray hist. 1060, "g. lucidum saxatile" by C. Bauhin pin. 318, and Tournefort inst. 267, and known to grow from Sweden to the Mediterranean (Col. ecphr. i. pl. 137, Bauh. hist. iii. 481, fl. Dan. pl. 218, Engl. bot. pl. 75, and Pers.): observed by Linnæus in Sweden; by Sibthorp, and Chaubard, from Crete and the Peloponnesus to mount Athos.

Silene otites of Europe and the adjoining portion of Asia. Described by Thalius 68 — (Spreng.); termed "lychnis viscosa flore muscoso" by Tournefort inst. 336: observed by Sibthorp in cultivated ground on Cyprus, also near Thessalonica; by Pallas trav. i. 64, along the Volga; by Baumgarten, in Transylvania; by Scopoli, in Carniolia (Steud.); and is known to grow as far as France (Lam. fl. fr.), Britain (Engl. bot. pl. 85), and Denmark (fl. Dan. pl. 518).

Hieracium murorum of Europe and the adjoining portion of Asia. Described by Thalius 11. 67 — (Spreng.); termed "pulmonaria gallica fœmina" by Tabernæmontanus 504, "h. murorum folio pilosissimo" by C. Bauhin pin. 129, and Tournefort inst. 471, and known to grow from Lapland to Switzerland (Engl. bot. pl. 2082, and Pers.): observed by Linnæus in Lapland and Sweden, growing in woods; by Sibthorp, in shaded situations from mount Athos to Constantinople and Smyrna; by Bieberstein, on the Taurian mountains. Westward, by Hooker in Iceland; and is known to grow in Greenland (Wats.).

Hieracium sabaudum of middle Europe and the adjoining portion of Asia. Described by Thalius 7. 65 — (Spreng.); termed "h. s. varietas secunda" by Bauhin hist. ii. 1030, "h. fruticosum latifolium hirsutum" by C. Bauhin pin. 129, and Tournefort inst. 472, and known to grow from Sweden throughout middle Europe (Engl. bot. pl. 349, and Pers.): observed by Leche in Westrogothia (Linn.); by Allioni pl. 17, in Piedmont; by Sibthorp, in woods in the environs of Constantinople; by Pallas trav. ii. 424, from the Volga and Yaik to Troitzkaia.

Hieracium alpinum of the Arctic region and mountain summits farther South. Described by Thalius 57 — (Spreng.); termed "h. a. pumilum folio lanuginoso" by C. Bauhin pin. 129, "h. villosum alpinum flore magno singulari" by Ray angl. iii. pl. 6, and known to grow in Lapland and on the Farøe Islands and mountains of Switzerland (Tourn. inst. 469, Engl. bot. pl. 1110, Jacq. austr. pl. 191, Pers., and Wats.): observed by Linnæus frequent on the mountains of Lapland; by Allioni pl. 14, in Piedmont; by Sibthorp, on the mountains of Greece; by Pallas, from 67° on the Oby to the

* *Galeopsis ladanum* of Northern Europe. Observed by Thalius 103 about the Hartz mountains — (Spreng.), and known to occur in cultivated ground from Sweden and Russia to Switzerland (Pers., and Wats.): was observed by Moench in Germany, by Crantz in Austria. Westward, by Hooker on Iceland; by B. D. Greene, and myself, seemingly wild on Chelsea Beach near Boston.

Struthiopteris Germanica of Northern climates. A large tufted fern termed "struthiopteris" by Thalius 119, — "filix palustris altera fusco pulvere hirsuta" by C. Bauhin pin. 358, "strutiophera" by Munting phyt. 292, "lonchitis norwegica major" by Ray app. 68, and known to grow throughout Northern Europe; observed by Linnæus in Sweden; by Amman ruth. 175, in Russia. Westward, was observed by J. Robinson in the environs of Salem, Mass.; by D. C. Eaton, near Brattleboro, Vermont; was received by Willdenow from Pennsylvania; according to A. Gray, is "not rare northward" from central New York; and according to Hooker, grows throughout Canada as far as the Saskatchewan.

mountains of Dahuria. Westward, by Hooker, in Iceland; was received by Steinhauer from Labrador (Collins); and is known to grow in Greenland and British America (Wats.).

Funcus triglumis of the Arctic region and alpine summits farther South. Observed by Thalius 60—(Spreng.), and C. Bauhin theatr. 22; known to grow on the Swiss Alps (Koch) and the Pyrenees (Gay, and A. Dec.); also on the mountains of Britain (Bab.), the Faroe Islands (Wats.), Scandinavian peninsula (fl. Dan. pl. 132, and Fries), Finland, and on Caucasus and the Altaian mountains (Ledeb.). Westward, was observed by Hooker on Iceland, and received from the summits of the Rocky mountains.

"1587, Feb. 18th" (Blair), in England, Mary ex-queen of Scotland beheaded.

"In this year" (Spreng.), Dalechamp publishing his botanical writings, enumerating *Inula saxatilis* 1201, *Polygala Monspelica* 490, *Thymra verticillata* 934, *Vicia angustifolia* 478, *Veronica urticaefolia* 1165, *Elymus arenarius* 432, *Knappia acrostoides* 424, *Plantago alpina* 1183, *Camphorosma glabra* 1179, *Androsace chamaejasme* 1204, *Viola calcarata* 1204, *Convolvulus saxatilis* 817, *Ramondia Pyrenaica* 837, *Eryngium rigidum* 1462, *Angelica Pyrenaica* 766, *Caucalis platycarpus* 762, *Myrrhis aromatica* 760, "pyrethrum Gesneri" 1170, *Seseli gracile*, *Oenanthe globulosa* 724, *Sium verticillatum* 718, *Ornithogalum latifolium* 1583, *Moehringia muscosa* 1235, *Acer Monspensulanum* 95, *Gypsophila rigida* 1191, *Helianthemum tuberaria* 1099, *Lamium incisum* 1253, *Erinus alpinus* 1184, *Ononis pinguis* 449, *Coronilla minima* 510, *Ornithopus perpusillus* 486, *Astragalus montanus* 1347, *Arnopogon Dalechampii* 569, *Andryala integrifolia* 1116, *Conyza sordida* 778, *Erigeron glutinosus* 1201, *Chrysanthemum Myconi* 873, and *Orchis globosa* 1556. — He died "in 1588."

Althæa hirsuta of the Mediterranean countries. An annual described by Dalechamp 594—(Spreng.), and Barrelier pl. 1169; termed "*alcea hirsuta*" by Tournefort inst. 98, and known to grow in Spain, France, Italy, and Austria (Jacq. austr. pl. 170, and Pers.): observed by Sibthorp in the Peloponnesus. In Britain is marked by A. Decandolle as introduced since 1724, maintaining itself in a single locality in Kent (Engl. bot. pl. 2674, Bab., and Wats.); occurs also in one locality in Holland, apparently washed down by the Meuse (prodr. fl. bat. 50); occurs also in Luxembourg (Lestib.), and seemingly wild at some points in Normandy and the Calvados (Hard., Ren., Lecl.).

Anthoxanthum odoratum of Northern climates. A sweet-scented grass called in Britain *vernal grass* (Prior), described by Dalechamp pl. 426, — and termed "*gramen anthoxanthum spicatum*" by Tournefort inst. 518: known to grow from the Faroe Islands and Lapland throughout Europe to Barbary (fl. Dan. pl. 666, Pers., and Wats.), also in Siberia (A. Dec.); and observed by Sibthorp, and Chaudard, in Greece and on the Bithynian Olympus. Westward, was observed by Hooker in Iceland; is known to grow also in Greenland and Newfoundland (Wats., and Hook.); observed by myself along the Atlantic from 41° to 40°, often in wild situations in the forest; by A. Gray, "naturalized" in central New York; by Chapman, in "low grounds around the larger cities, Savannah, Charleston, etc., introduced."

Campanula patula of Europe and the adjoining portion of Asia. Described by Dalechamp 490* — (Spreng.); termed "*rapunculus angustifolius floribus purpureis amplis*" by Ray extr. 308, "*c. minor rotundifolia flore in summis cauliculis*" by Tournefort inst. 112, and known to grow throughout middle Europe (Dillen. elth. pl. 58, fl. Dan. pl. 373, Engl. bot. pl. 42, and Pers.): observed by Hooker in Iceland; by Linnæus, in Finland; by Link pl. 70, in Portugal; by Sibthorp, and Chaudard, in the Peloponnesus; and known to grow in Russia and Northern Asia (Wats.).

Euphorbia esula of middle Europe. — Termed "*esula Dalechampii*" by Haworth (Steud.), "*tithymalus fol. linearibus petalis emarginatis*" by Haller 1046 as observed in Switzerland, and known to grow in woods and pasture-land in various parts of middle Europe (Pers., and Lindl.): observed by Scopoli in Carniola. In Britain, from the few and way-side localities is suspected by Watson to be exotic; it occurs also in Sweden (Fries), Holland (prodr. fl. bat.), Jersey (Bab.), and Normandy (Breb.), but in all Northwestern Europe is regarded by A. Decandolle as probably exotic. By Euro-

* *Seseli montanum* of middle Europe. Described by Dalechamp 759—(Spreng.), and Blackwell pl. 426; known to grow on the hills of France and Italy (Pers.): observed by Thuillier in the environs of Paris (Steud.); within less than fifty years from the opening of the Doubs canal "to 1822," made its appearance in the environs of Montbelliard (Bern., and A. Dec.).

Woodsia Ilvensis of Northern climates. A small tufted fern termed "*lonchitis aspera Ilvensis*" by Dalechamp 1221, — and Bauhin hist. iii. 749, and known to grow throughout Northern Europe (Moris. iii. 14. pl. 3, and Pluk. phyt. pl. 179): observed by Linnæus in Sweden, frequent in clefts of rocks in elevated situations. Westward, is termed "*nephrodium rufidulum*" by Michaux; was observed by myself from 45° at Mount Desert to 40° along the Atlantic; grows according to A. Gray on "exposed rocks, common, especially northward, and southward in the Alleghanies;" according to Chapman, "along the Alleghany mountains" in our Southern States.

pean colonists, has been carried to Northeast America, observed by Oakes adventive in "Essex county, Massachusetts" (A. Gray).

"In this year" (Pall. trav. ii. 521), building of a small fort opposite the junction of the Tobol with the Irtych; the commencement of the city of Tobolsk.

"July 22d" (Hakl., Churchill coll., and Holmes), under instructions from Walter Raleigh, arrival at Hatteras of "one hundred and seventeen" colonists, with John White as governor. The "fifteen English" left on Roanoke Island had been attacked by the natives, some slain, and the remainder compelled to depart in their boat: the new colonists were however landed, a grandchild, Virginia Dare, the first Anglo-American, was born to the governor "Aug. 18th" (note by Major), and at the solicitation of the colonists he sailed on the "27th" for England for supplies. — Returning after three years, governor White learned from an "inscription on a tree," that the colonists were removed to Croatoan; a native village South of Hatteras. The abandoned colonists as afterwards appeared, were slaughtered by order of the aboriginal chief Powhatan; "seven" of them remaining alive until the settling of Jamestown in 1607 (Strachey trav. Virgin.).

"The same year (= 2247th of Synmu," art de verif), abdication of Ookimatz in favour of his grandson Go-josei, now dairo of Japan.

"1588 A. D." (Blair), invention of *bombs*; cannon-balls made hollow and filled with gunpowder.

"July 27th" (Alst. p. 313, and Blair), the formidable armada fleet of Philip II. of Spain, defeated and dispersed by the English under Francis Drake.

"Sept. 9th" (Alst. p. 313, and Churchill coll.), after plundering Spanish settlements on the West coast of America, and thence continuing West, Thomas Candish arriving in England completed the Third circumnavigation of the Globe.

Pterocarpus draco of the Northern extreme of South America. A tree thirty feet high growing near Carthagera, exuding from the bark drops of red juice that soon harden, and are collected and exported under the name of *dragon's blood*: — observed also by Jacquin amer. pl. 183, but at the time of his visit to Carthagera, the commerce had nearly ceased.

"In this year" (Spreng.), Io. Bapt. Porta publishing his Phytognom. — He died "in 1615."

"In this year" (Spreng.), Tabernæmontanus publishing his Krauterbuch or Icones plant, enumerating *Holosteum umbellatum* 543, *Salvia Hispanica* 764, *Scirpus Tabernæmontani* 566, *Polycnemum arvense* 57, *Dipsacus laciniatus* 1071, *Galium lucidum* 434, *Cnidium Pyrenæum* 304, *Linum Austriacum* 1207, *Juncus sylvaticus* 535, *Dianthus pinifolius* 668, *Scleranthus perennis* 1217, *Stellaria alsine* 1089, *Erodium pimpinellifolium* 123, *Geranium radicans* 124, *Spartium multiflorum* 1509, *Hieracium sylvaticum* 505, *Crepis virens* 491, and *C. Nemaurensis* 492. — He died "in 1590," and the work was completed "in 1592."

Cerastium arvense of Northern climates. Termed "*holosteum caryophyllæum*" by Tabernæmontanus pl. 233; — "*myosotis arvensis subhirsuta flore majore*" by Tournefort inst. 245, and known to grow from Sweden throughout middle Europe (C. Bauh., fl. Dan. pl. 626, Curt. lond. vi. pl. 29, and Pers.): observed by Linnæus in Sweden, on sandy hills as far as Scania; by Vaillant pl. 30, near Paris; by Sibthorp, on mount Athos. Westward, according to Hooker, grows throughout Canada to the Rocky mountains, and was observed by Menzies near the mouth of the Columbia; according to Chapman, grows in "rocky or dry soil, chiefly in the upper districts" of our Southern States; observed by myself at Rivière du Loup on the Lower St. Lawrence, also near Boston and Philadelphia, but having the aspect of an introduced plant. Clearly by European colonists was carried to Mendoza, at the elevation of "five thousand feet" in Austral America (Wats.).

Cerastium aquaticum of Europe and the adjoining portion of Asia. Described by Tabernæmontanus 1089 — (Spreng.); termed "*alsine major*" by C. Bauhin pin. 350, "*a. maxima solanifolia*" by Mentzel pl. 1, and Tournefort inst. 242, and known to grow in watery places from Sweden throughout middle Europe (Curt. lond. i. pl. 34, and Pers.): observed by Linnæus in dripping woods in Sweden; by Sibthorp, and Chaubard, from Crete and the Peloponnesus to mount Athos and the Bithynian Olympus.

Vicia dumetorum of Europe and the adjoining portion of Asia. Termed "*cracca maior*" by Dalechamp 892 — (Spreng.), "*v. sylvatica maxima piso similis*" by Bauhin hist. ii. 315, "*v. s. m. piso sylvestri similis*" by Tournefort inst. 398, and known to grow in woods and thickets throughout middle Europe (C. Bauh. pin. 385, Ray hist. 900, and Pers.): observed by Leche in Scania in Sweden (Linn.); by Sprengel fl. hal. pl. 7, in Germany; by Sestini, in the environs of Constantinople (Sibth.).

Epilobium parviflorum of Europe and the adjoining portion of Asia. Described by Tabernæmontanus 1237 — (Spreng.); termed "*lysimachia siliquosa hirsuta parvo flore*" by Bauhin prodr. 116 and C. Bauhin pin. 245, "*chamænerion villosum majus parvo flore*" by Tournefort inst. 303, "*e. pubescens*" by Roth, and known to grow throughout middle Europe (fl. Dan. pl. 347, Curt. lond. ii. pl. 22, and Pers.): observed by Linnæus in Sweden; by Hoffmann, in Germany; by Sibthorp, and

Chaubard, from the Peloponnesus to Constantinople. By European colonists was carried to Northeast America, observed by myself in the streets of Newport R. I.

Helianthus annuus var. The first "corona solis" of Tabernæmontanus ii. 466 — is referred by Sprengel to "H. Indicus;" described by Linnæus mant. p. 117; by Persoon, as hardly a foot high, and cultivated in Egypt; observed there in gardens by Clot-Bey and Figari.*

Verbascum lychnitis of middle Europe. The *white mullein* is termed "v. album 2" by Tabernæmontanus pl. 564, — "v. lychnitis flore albo parvo" by C. Bauhin pin. 240, and is known to grow in calcareous soil from Sweden throughout middle Europe (Engl. bot. pl. 58, and Pers.): was observed by Linnæus as far as Scania in Sweden. By European colonists was carried to Northeast America, occurring according to A. Gray along "road-sides, Pennsylvania, rare, and sandy fields at the head of Oneida Lake;" according to Muhlenberg, in "Carolina" (Chapm.).

Veronica arvensis of Europe and the adjoining portion of Asia. Described by Tabernæmontanus 1089, — and Columna phyt. pl. 8 (Spreng.); termed "alsine veronicæ foliis flosculis cauliculis adhærentibus" by C. Bauhin pin. 250, "v. flosculis adhærentibus" by Morison ii. 321 (Linn.), and Tournefort inst. 145: known to occur in waste and cultivated ground throughout middle Europe (Oed. Dan. 515, Curt. lond. ii. pl. 2, and Pers.); observed by Linnæus, frequent in Sweden; by Sibthorp, and Chaubard, in cultivated ground from Constantinople to Cyprus and the Peloponnesus. By European colonists, was carried to Northeast America, observed in "cultivated grounds, rather common" (A. Gray) in our Middle States, and in "cultivated ground" in our Southern States (Chapm.).

Crepis Dioscoridis of Europe and the adjoining portion of Asia. An annual termed "hieracium maior" by Tabernæmontanus — (Spreng.), "h. majus erectum angustifolium caule lævi" by Tournefort inst. 469, and "c. lacera" by Tenore as observed in Italy (Chaub.); known to grow from France and Germany to Siberia (Pers.); and observed by Sibthorp, and Chaubard, in cultivated ground in the Peloponnesus and other parts of Greece.

Athyrium filix-fœmina of Northern climates. Called in Britain *lady fern*, a translation from the Latin (Prior): termed "filix petræa fœmina prima" by Tabernæmontanus pl. 793, — "f. non ramosa petiolis tenuissimis et tenuissime dentatis" by Tournefort inst. 537, and known to grow throughout middle Europe (Moris. iii. 4. pl. 3, Pluk. phyt. pl. 130, Ray angl. iii. 121, and Engl. bot. pl. 1459): observed by Linnæus in Lapland and Sweden; by Sibthorp, in moist shady places in Greece. Westward, by myself from 47° 30' on the Lower St. Lawrence to 40° along the Atlantic; by A. Gray, "common" in central New York; by Chapman, in "low shady woods, Florida to Mississippi;" by Nuttall, on the Arkansas.

"1589 A. D." (Alst. p. 234), Henri III. of France assassinated by a monk.

"1590 A. D." (Alst. p. 313), Paris besieged by Henry IV. of France. "The same year" (chron. edit. by Michelant), he appointed the marquis de la Roche governor of the French possessions in America, from "Lat. 4° to 52°."

"In this year" (Spreng., and Winckler), Io. Wigand publishing his *Herb. Boruss.*, enumerating *Glaux maritima*.

"About this time" (Humb. cosm. ii.), the *compound microscope* invented in Holland by Zacharias Jansen and his father Hans.

At this time (Winckler), J. Jungermann, nephew of Camerarius, journeying in the East, meeting with . . . — He died at Corinth "in 1591."

"1591 A. D." (N. Shaw edit. Champl. p. xi), vessels under Chédotel sent by the marquis de la Roche to form a settlement in Canada. Arriving at Sable Island, seventeen persons were sent on shore and abandoned, — who after subsisting "seven years" on fish and "cattle which they found wild in considerable numbers," were brought away by Chédotel; he receiving half of the "black fox skins" and other property collected. (The cattle according to Champlain were derived from the wreck of a Spanish ship, see Baron de Lery.)

"1592 A. D." (Purchas, and Holmes), by Juan de Fuca, a Greek in the Spanish service, sailing along the West coast of America, a strait discovered "in the forty-eighth degree of north latitude;" the same that has received his name.

* *Helianthus multiflorus* of Northeast America. A slender species of *sunflower*, transported from "Virginia," to Europe (Pers.), is the fourth "corona solis" of Tabernæmontanus ii. 466 — (Spreng.), is clearly described by Plukenet phyt. 159, Tournefort inst. 489, Linnæus, and Jussieu. Westward, *H. decapetalus* (regarded as identical) is figured by Josselyn rar. pl. 62; is known to grow from Quebec to the Saskatchewan (Hook.); was observed by Pursh from Canada to Virginia; by myself, throughout New England; by Nuttall, as far as 40° in New Jersey; by Schweinitz, at 36° in Upper Carolina; by Elliot, and Chapman, on the mountains of Georgia; by A. Gray, "common" in central New York; by Short, in Kentucky.

"In this year (=20th of wan-ly," geogr. Chin., and Klapr.), Corea invaded and in great part conquered by the Japanese under Fide-yosi.

In this year (=1595—3 years" of Barents, Purchas v. iii. 518), on the North coast of Asia, Gielhsidi, sometimes visited by sea from Pechora, won by the Russians from the Tartars.

"In this year" (Spreng., and Winckler), Adamus Zaluzani publishing his Method. herbar.

"In this year" (J. E. Smith, and Spreng.), Columna in his "twenty-fifth" year publishing his Phytobas., enumerating *Primula Palinuri* pl. 5, *Scabiosa Palaestina* pl. 22, *Campanula graminifolia* pl. 34, and *Cerastium repens* pl. 31.

Stachys annua of the Tauro-Caspian countries. A weed called in Italy "herba Turca" or "herba stregona" sorceress herb (Targ.), described by Columna phyt. pl. 9—(Spreng.), and observed by C. Bauhin pin. 233 already in cultivated ground in central Europe: termed "betonica arvensis annua flore ex albo flavescente" by Tournefort inst. 203, "betonica annua" by Linnæus, and at the present day occurring in and about cultivated ground from France to Russia (Jacq. austr. pl. 360, Pers., and A. Dec.): observed by Bertoloni in Italy, in one or two instances outside of cultivated ground; by Sibthorp, on mount Athos and near Constantinople; by Bieberstein, in waste places and grain-fields in the Crimea; by C. A. Meyer, in cultivated ground on the Talsch mountains. In Britain "from 1830" has made its appearance in grain-fields in Kent (Engl. bot. pl. 2669, and Bab.).

"1593, June 12th" (Hackl. soc. . . .), sailing of Richard Hawkins. On Saint Annes islands in Lat. 22° 30' off Brazil, he met with *purslane*; the natives along the coast having canoes carrying seventy or eighty men. Passing through the Straits of Magellan, he gave the natives "lamskinnies," and at Coquimbo procured skins of the "*chinchilla*" (. . .).

Cacalia Kleinii of Western Hindustan? The *cabbage-tree* of English colonists is called in the environs of Bombay "gao-zaban" (Graham); and in this year a branch sent by Garetus to Clusius — (exot. i. 5): the plant is described also by Dillenius elth. pl. 54, and Linnæus hort. cliff.; and was seen by Clot-Bey in the gardens of Egypt. In its wild state is said to grow on the Canary Islands (Pers.); but was observed by Gibson, and Graham, in Western Hindustan, "in high rocky situations" on the Deccan, "used in medicine" by the natives.

Amaryllis formosissima of Mexico. Roots of the *jacobea lily* procured in this year by Simon de Tovar from a ship from South America, and sent to Clusius and Bernard Paludanus — (Beckmann): the plant is described also by Rudbeck 2 f. 10, and Dillenius elth. pl. 162; and continues in greenhouses; was introduced in 1835 into the environs of Bombay, and afterwards in 1837 "from Egypt" (Graham). Westward, according to Descourtilz, has become seemingly wild in the forests of the Antilles, but came originally from Mexico.

Polyanthes tuberosa of Peru. The *tuberosa*, called in Egypt "zymbyl" (. . .), at Bombay "gool-shubo" or "cheree," at Cochín by the Portuguese colonists "fulla pipa" pipe-flower (Graham), in Burmah "hnen-ben" (Mason), at Manila "azucena" (Blanco); and as early at least as this year, brought from the East Indies by Simon de Tovar and roots sent to Bernard Paludanus, — who published a description in Linschoten's Voyage (Beckm.): also as transported to Europe, is described by Morison ii. pl. 12, and Linnæus, and from Europe was carried to Northeast America, where it has become a favourite in gardens: was observed by Forskal in gardens at Constantinople; by him, Hasselquist, Delile, and Clot-Bey, in the gardens of Egypt; by myself, in Yemen, the flowers brought to market at Mocha; by Graham, "common in gardens" around Bombay; by Roxburgh in Eastern Hindustan; by Mason, "exotic" in Burmah; by Rumphius v. pl. 98, in the Malayan archipelago, enumerated as introduced; by Blanco, on the Philippines. Seems therefore to have been brought in the first Spanish voyages across the Pacific, and was seen by Ruiz and Pavon iii. 66 wild in Peru.

"Dec. 17th" (Hakl., and Holmes), Henry May in a French ship wrecked on Bermuda. — A bark was built of "cedar" (*Juniperus Bermudiana*); and at the end of "nearly five months," plac'ng on board "thirteen live turtles for provisions," the party left the island.

"The same year" (Spreng.), arrival of Hernandez in Mexico, meeting with *Salvia leonuroides* 103, *Piper geniculatum* 126, *Commelyna tuberosa* 253, *Ficus citrifolia* 81-2, *Tournefortia bicolor* 292, *Convolvulus (Batatas) littoralis* 256, *Lobelia acuminata* 210, *Cerbera Thevetia* 443, *Lisianthus exaltatus* 233, *Eryngium aquaticum* 222, *Melastoma fragile* 413, *Bocconia frutescens* 158, *Cactus (Euphyllium) phyllanthus* 392 and 457, *Passiflora perfoliata* 301, *Geranium Carolinianum* 293, *Carolinea insignis* 68, *Achania mollis* 117, *Stevia punctata* 360, *Gnaphalium Domingense* 232, *Epidendrum bifidum* 368, *Aristolochia arborescens* 42, *Calopogon pulchellus* 283, *Acalypha cuspidata* 390, *Acacia Portoricensis* 58, *Mimosa cornigera* 86, and *Mirabilis longiflora* 170. — He remained there "seven years untill 1600."

Hura crepitans of the West Indies and neighbouring portions of Tropical America. The *sandbox tree*, described by Hernandez 88 — and from transported specimens by Clusius exot. 47 (Spreng.), and Linnæus hort. cliff. pl. 34. Westward, was observed by Aublet, and Martius, in Guayana; is known to grow also in the West Indies and Mexico, its milky juice producing "blindness a few days

after touching the eye," and its seeds "a violent drastic dangerous purgative" (Lindl.). By European colonists, has been recently introduced into Hindustan, observed by Graham, and myself, in gardens at Bombay.

Cyperus articulatus of Tropical America. A tall leafless rush observed and described by Hernandez 33 — (Spreng.); seen by Sloane pl. 81 on Jamaica, and known to grow as far as Cumana and Truxillo (Kunth); observed by Elliot at Ogeechee in Georgia; by Chapman, in "marshes near the coast, Florida to South Carolina." Possibly through European colonists carried to the opposite coast of Equatorial Africa (R. Brown, and Benth.), observed by Grant along "Nile edges 2° N.," by Forskal, and Delile, in wet situations in Lower Egypt; to Madagascar (A. de Jussieu); and to Hindustan (Pers., Del., and A. Dec.).

"1594 A. D." (Asher edit. Huds. p. cxxxvii), Willem Barents, sailing from Amsterdam, followed the coast of Nova Zembla to the Orange Islands beyond, and rounded its Northeastern extremity — (an exploit that has been repeated only by Barents himself, two years afterwards). Returning to the Southern extreme of Nova Zembla, on the "24th Aug. N. S. 1595," he obtained information of the sea beyond from the Samoieds, and "Sept. 1st" from a Russian "lodie or barke;" and landing "Sept. 9th" on "the south end of the Siates Iland, where the crosse standeth," ascertained that there is no tide (Purchas v. iii. 518).

"In the beginning of this year" (Dallat 2), the Japanese army in Corea, consisting chiefly of Christians, joined by the jesuit P. Gregorio de Cespedes, who remained nearly a year.

"The same year" (Pauth. 400), the Japanese, after capturing various cities, repelled by the native Coreans aided by Chinese troops. — On application, the emperor Chin-tsoung II. in the following year, granted the title "Ji-pen-wang, king of Japan;" but prohibited the Japanese ruler from sending ambassadors to China.

"Dec. 19th" (Blair), expulsion of the Jesuits from France. — The prohibition continued nine years.

"The same year" (Spreng.), Honorius Bellus in Crete writing to Clusius,* enumerating *Plantago Cretica*, and "gaiderothymo" *Stachys spinosa*.

Fagonia Cretica of the North African Desert. Called in Yemen "schoæka" or "schouki" (Forsk.); sent by Honorius Bellus, — and termed "trifolium spinosum creticum" prodr. 142: observed by Forskal in Yemen; by Delile, not far from Cairo, growing in the Desert; by Desfontaines, near Mascar in Algeria (Pers.).

"In this year" (Wislizen., and Humb. cosm. v.), settlements in New Mexico, North from Zacatecas, first planned by the viceroy Juan de Oñate.

1595 A. D. (= "1585 + 10 years," art de verif.), Fide-josei, having established his authority over the local princes and fixed his seat of government at Jedo, meditating the expulsion of foreigners from Japan.

"March 22d" (Hakl., and Holmes), arrival of Walter Raleigh in Trinidad. Leaving his ships there, he proceeded in boats "four hundred miles" up the Orinoco, and returned: and on his way to England was prevented by adverse winds from reaching Hatteras, to search for the lost colony.

"June 11th" (De Morga 42 and 220), Dr. Antonio de Morga, appointed "lieutenant-general of the Philippines," arriving in the port of Cabit. — He left Manila for Mexico "July 10th, 1603."

In various parts of Luzon, according to De Morga 267 and 306, are "natives of a black colour, with 'cabellos de pasas' tangled hair" (Negrillos), "not very tall in stature," who "have no houses nor settled dwellings; they go in troops and bivouac in the mountains and craggy ground, changing their abode according to the season," "maintaining themselves with some little tillage, and sowing of rice, which they do temporarily, and with the game which they shoot with their bows," also "with the mountain honey, and roots which grow in the earth. They are barbarous people with whom there is no security, inclined to murder, and to attack the towns of the other natives, where they do great mischief without its having been possible to take measures to prevent them, nor to reduce them to subjection, nor bring them to a state of peace, although it is always attempted by good or evil means, as opportunity or necessity demands."

Other natives of the Philippines wash their hair "with the boiled rind of a tree," which they

* *Ribes* (*Grossularia*) *hirtella* of Northeast America. The purple gooseberry transported to Leyden, seen in this year and termed "grossularia spinosa fruct. purpurasc." by Clusius — rar. i. 85. Westward, was observed by Michaux along the Saguenay (Pers.); by myself, from 47° 30' on the Lower St. Lawrence to 42° along the Atlantic; by Pursh, from Canada to the Alleghanies of Virginia; according to A. Gray, grows from "New England to Wisconsin, common;" and "G. saxosa" according to Hooker, from Boston to the Saskatchewan. Under cultivation, *G. hirtella* in our climate succeeds better than the European species.

call "gogo" (*Entada scandens*): and "before the Spaniards entered the country" wore "coats of cangan without collars," "coming a little below the waist, some blue, others black, and a few of colours for the chief men;" and "a coloured wrapper," the "feet unshod, the head uncovered, and a narrow cloth wrapped round it."

Among the fruit trees are "sanctores" (*Citrus Sinensis*), "tamarinds" (*Tamarindus Indica*); in the province of Cagayan, "chestnut trees which give fruit" (*Castanea Morgai*); and in other parts "pine trees,"* other "trees which give very large pine-nuts, with a strong smell and pleasant taste" called "piles" (*Canarium album*); "bejucos" with which they make inclosures for capturing fish, also "cables and other cordage for their vessels" (*Calamus usitatus*); "a green fruit like walnuts," pickled and called "paos" (*Mangifera altissima*); "much cachumba, instead of saffron and other spices" (. . .). "In all these islands there were no temples, nor public houses for the worship of idols, but each person made and kept in his own his anitos:" prayers for the sick were offered by a few old men and women called "catalonas:" and "they buried their dead in their own houses."

"July 21st" (Churchill coll., Dalrymple, and Quiros in De Morga 65), by Alvaro de Mendaña, sailing from Peru with a colony, an island discovered, one of four inhabited by very large, handsome, and tattooed people: "on the west side of Sta. Christina" (Waitahu) "in $9\frac{1}{2}^{\circ}$ " S. Lat., "a good port was found, in which the fleet anchored:" "in the way of victuals" were seen "pigs and hens, *sweet canes*" (*Saccharum officinale*), very good *plantains* (*Musa paradisica*), a "fruit like chestnuts in savour but much larger than six chestnuts" (*Artocarpus incisa*), "nuts with a very hard shell which were very oily" (*Inocarpus edulis*), and "pumpkins of Castille sown in the ground" (*Lagenaria vulgaris*). Leaving "Aug. 5th" for the "west, to the south-west, or north-west, a matter of four hundred leagues," on the "20th" in " $10\frac{1}{4}^{\circ}$ " S., "we saw four low islands, with sandy beaches, full of many palms and woods;" "all four may have a circuit of twelve leagues," and we named them "St. Bernard." Continuing Westward, never rising above 11° or going below 10° , on the "29th" we "discovered a round islet, which might be a league round, all surrounded by reefs," and named it "Solitary Island;" it is "in $10\frac{3}{4}^{\circ}$ " S., and will be "one thousand five hundred and thirty-five leagues from Lima." On the "eve of our Lady in September, at midnight, we saw an island which might have a circuit of from ninety to a hundred leagues," and "will be a thousand eight hundred leagues from Lima;" we named it "Santa Cruz," and "the ships came to anchor in the northern" part "in 10° " S., about seven leagues from an active volcano; in addition to the above-named esculents, were seen "one, two, or three kinds of roots like sweet potatoes, which they eat roast and boiled, and make 'buyos' with it" (*Batatas edulis* and *Dioscorea* sp.?), "two kinds of good almonds" (*Terminalia catappa*), "two kinds of pine nuts" (. . .), "muchos bledos" (*Euxolus viridis*), "a very strongly scented sweet basil" (*Ocimum*), "and coloured flowers" which "they keep in the gardens" (*Amaranthus tricolor*), "and two other species of another sort also coloured" (*Codiaeum variegatum*), a "fruit on high trees, like pippins" (*Fambosa Malaccensis*), "great quantity of ginger which grows there without its being cultivated" (*Zingiber zerumbet*), "much yerba chiquilite with which they make indigo" (. . .) "agave trees" (*Pandanus furcatus*), "and a great deal of sagia" (*Cycas circinalis*); the people "are black" (Papuan or Negrillo). "Oct. 17th" a "total eclipse of the moon," and on the "18th" Mendaña died; much sickness ensued, many died, and "Nov. 18th" the island was abandoned. After "two days," the chief pilot Quiros was ordered to "shape the course" for Manila; — and "Jan. 14th," the flagship arrived in sight of Cape Espiritu Santo.

* *Pinus Morgai* of Northern Luzon. A tree called in Ylocano "saleng" (Blanco); and from early times, used for torches: — clearly the "pine trees" in question; and according to Blanco growing in Ylocos, Zambales, and other localities in Northern Luzon.

Mimosa acle of the Philippines. A large unarmed tree called in Tagalo "acle" (Blanco); and from early times, employed in house building, and its bark for washing, like the "gogo," but inferior in quality: — observed by Blanco in the environs of Manila.

Pterocarpus pallidus of the Philippines. A large tree called in Tagalo "asana," in Bisaya and Camarines "naga" or "narra," in Pampango "daitanag" (Blanco); and from early times employed medicinally, and its timber for cabinet-work: — "a finely coloured wood" called "asana" is enumerated by De Morga 275; and *P. pallidus* according to Blanco grows on all the islands.

Diospyros multiflora of the Philippines. A tree called in Tagalo "canomoi" or "canomai" (Blanco); its poisonous fruit known from early times, said to kill fish, and cause the crocodile to quit the water: — observed by Blanco.

Diospyros pilosanthera of the Philippines. A tree; its hard wood known from early times, and its fruit eaten: — "ebony, one kind finer than another" is enumerated by De Morga 275, and according to Blanco the wood of all the Philippine species more or less resembles ebony: *D. pilosanthera* was observed by him on the Philippines.

"The same year" (Alst., and art de verif.), Murad III. succeeded by Mohammed III., fifteenth Turkish sultan. Coins of Mohammed III. issued at Cairo, are figured in Marcel p. 204.

"In this year" (Spreng.), Marcus Urzedowa publishing his *Polonicum Herbarium*, enumerating *Melampyrum nemorosum* 293.

"In this year" (Spreng., and Winckler), Giovanni Pona of Verona publishing his *Simplicia in Baldo*, enumerating* *Lotus glaucus*, *Marrubium acetabulosum* 10, "trifoglio argentato alpino" pl. 222 *Potentilla nitida* (Schmied. ed. G. p. 63), *Veronica saxatilis* 74, *Paederota bonarota* 72, *Campanula petraea* 62, *Phyteuma comosa* 70, *Bupleurum graminifolium* 111, *Saxifraga rupestris* 76, *Cherleria sedoides* 89, *Arenaria Bavarica* 60, *Clematis (Atragene) alpina* 68, *Ranunculus rutaeifolius* 87, *Myagrum saxatile* 78, *Geranium argenteum* 91, *Trifolium alpinum* 84, *Senecio incanus* 111, and *Aspidium alpinum* 101.

"1596 A. D." (Pauth. p. 409), in the provinces of Ho-nan, Chen-si, and Chan-si, "ten gold and silver mines" opened by the emperor Chin-tsoung II., contrary to the advice of his ministers. — "Six years" afterwards, he caused them to be closed.

"In this year" (Spreng.), arrival of Barnabas Cobo in the West Indies. — He afterwards proceeded to Mexico, and remained chiefly in Peru "until 1653."

"June 9th" (Churchill coll.), sailing from Amsterdam, Willem Barents and John Cornelis Ryp discovered Bear Island "in 74° 30' ;" and "on the 19th," Spitzbergen in "80° 11'," supposed however by them to be part of Greenland. Continuing East, Barents "on the 15th Aug." again rounded the Northeastern extreme of Nova Zembla, but being unable to advance or return, wintered there, — and died on the following "20th June."

"June 11th" (Churchill coll.), arrival on the coast of Sumatra of Cornelius Hootman with four ships; "the first voyage the Dutch made to India."

"In this year" (De Morga 78), a Spanish vessel from the Philippines in distress seeking refuge in Japan, the pilot, Francisco de Landa, imprudently exhibited his charts of navigation to a Japanese official: the charts included Mexico and Peru, and on being asked how possession was obtained of such very distant countries, Landa replied, "that first the monks had entered and preached their religion, and the military forces following after them had subjected those countries." All which being reported to Fide-josi, he again prohibited Christianity in his dominions, — and on the following "Feb. 5th," six Franciscans and eighteen Japanese converts were crucified.

"June 21st" (Blair), Cadiz in Spain captured by the English.

"In this year" (Spreng.), C. Bauhin publishing his *Phytopinax*, enumerating *Trifolium lappaceum* pl. 5.

"1597 A. D." (Univ. hist., and Holmes), in addition to the English buccaneers in the West Indies, a fleet of French making their appearance captured and pillaged Carthagera.

In this year (De Morga 88), near Mindanao, the small island of Jolo (Sulu), that "may have three thousand men, with their own king and lord, all of them" Mussulmans, had hitherto willingly paid tribute: but after the withdrawal of the main body of Spanish forces from Mindanao, Juan Pacho, captain of the fort at Caldera, sent a few soldiers to barter for wax, when they were ill-treated and two of them killed by the people of Jolo. Pacho desiring to chastise this excess, went there "with a few boats and thirty soldiers;" but was himself slain, and his party totally defeated. The "event caused much regret at Manila," from the loss of prestige both on Jolo and Mindanao.

"In this year" (Spreng.), Evang. Quatrami of Ferrara publishing his *Ingredienti della teriaca*.

Scutellaria Columnæ of Italy and Greece. Mentioned by Quatrami — (Spreng.); observed also in Italy by Columna ecphr. pl. 189, and Allioni pl. 84 (Pers.); by Chaubard, in the Peloponnesus.

"In this year" (Spreng., and Prior), Gerarde publishing his *Herbal*, enumerating *Rhynchospora alba* 50, *Fistula myrtus* 29, *Hordeum pratense* 29, *Potamogeton heterophyllus* 821, *Campanula latifolia* 448, *Asclepias variegata* 100, *Sison segetum* 1018, *Polygonum minus* 446, *Arenaria peploides*

* *Silene acaulis* of the Arctic region and mountain-summits farther South. Termed "ocymoides muscosus" by Pona 341, as observed on mount Baldo, — "muscus alpinus lychnidis flore" by Bauhin hist. iii. 767, and known to grow on Spitzbergen and on the mountains of Northern and middle Europe and Asia (C. Bauhin pin. 206, fl. Dan. pl. 21, Pers., and Wats.): observed by Linnæus abounding on the mountains of Lapland, often covering their summits with its deep purple flowers; by myself, in purple patches on the crest of the Swiss Alps, meriting the appellation of "*Alpium ornamentum*" bestowed by Persoon. Westward, was observed by Sabine in Iceland and Greenland, and according to Hooker grows along the shores of the Arctic Sea and throughout Arctic America; was observed by . . . in Labrador (Pursh, and Tor.); by Chamisso, on Unalaska; by E. James, on the alpine portion of the Rocky mountains; by myself, on the alpine portion of the White mountains, but here inconspicuous and moss-like with whitish flowers (compare *S. exocapa* of Allioni pl. 79 f. 2).

622, *Mentha gracilis* 680, *Stachys palustris* 1005, *Scutellaria minor* 581, *Trifolium maritimum* 1208, *Trifolium filiforme* 1186, *Cineraria integrifolia* 304, "snakeweed" 848 *Aristolochia serpentaria*, *Salix aurita* 1390, and *S. acuminata* 1390. — He died "in 1607."

"1598, April" (Blair), by Henri IV. of France, the edict of Nantes granted to the Protestants.

At this time (Spreng., and Winckler), Castor Durante writing his *Hist. Plant.* — He died "in 1599," and his work was published "in 1636."

"In this year" (Spreng.), J. Bauhin publishing his *Hist. balnei Boll.*

"In this year" (Spreng., and Winckl.), Pierre Richer de Belleval, having founded at Montpellier the earliest *botanic garden* in France, now publishing his *Nomencl. stirp. in hort. reg. Monsp.*, enumerating *Scabiosa maritima* 76, *Plantago serraria* 10, *Androsace Septentrionalis* 12, *A. elongata* 13, *Gentiana pumila* 25, *Campanula pulla* 26, *C. vesula* 27, *Seseli saxifragum* 210, *S. turbith* 212, *Statice echioides* 142, *Allium narcissiflorum* 240, *Arenaria saxatilis* 153, *Ranunculus Cassubicus* 176, *Betonica hirsuta* 53, *Limosella aquatica* 63, *Iberis saxatilis* 193, *Cardamine asarifolia* 199, *Brassica Richerii* 197, *Erodium Romanum* 232, *Ononis fruticosa* 224, *O. pubescens* 225, *Hedysarum saxatile* 216, *H. obscurum* 217, *Hypericum Richeri* 168, *Hieracium aureum* 121, *H. cerinthoides* 128, *H. porrifolium* 133, *H. verbascifolium* 135, *Apargia dubia* 120, *Crepis alpina* 126, *Hyoseris hedyphnois* 123, *Serratula heterophylla* 81, *Cirsium helenioides* 83, *Carthamus mitissimus* 86, *Erigeron uniflorum* 100, *Chrysanthemum montanum* 103, *Centaurea amara* 92, *Microstylis monophyllos* 262, *Salix formosa* 274, *S. arbuscula* 275.

Allium moschatum of the Mediterranean countries. Described by R. de Belleval 241 — (Spreng.), Bauhin *prodr. pl.* 28, Rudbeck *elys. ii.* 166, and known to grow in Spain and Southern France (Pers.): observed by Kitaibel *pl.* 68 in Hungary, by Gittard in the Peloponnesus (Chaub.).

Hieracium amplexicaule of Dauphiny and the Pyrenees. Described by R. de Belleval 134 — (Spreng.); termed "h. pyrenaicum rotundifolium amplexicaule" by Tournefort *inst.* 472, "h. balsameum" by Asso, "h. pulmonarioides" by Villars, "lepicaune balsamea" by Lapeyrouse, and known to grow in the alpine portion of Dauphiny and the Pyrenees (Pers., Steud., and A. Dec.). In Britain, has been found only on the walls of a college at Oxford and of castle Cleish in Kinross, and is therefore considered not completely naturalized.

"Sept. 13th" (Alst. p. 566, and Nicol.), Philip II. of Spain succeeded by his son Philip III.; the war in Belgium continuing. — In the following year, Philip III. married an Austrian princess: and on the same day, "April 12th," his sister married Albert of Austria, an archduke and cardinal having charge of Belgium.

"The same year" (Churchill coll.), by the "Holland East India company," a fleet of "six great ships and two yachts" sent to the East Indies.

"The same year" (art de verif.), death of Fide-josi. He was numbered among the gods by the daïro, a temple erected to him at Meaco containing his urn; he was succeeded by his son Fide-jori, now at the age of six ruler of Japan, under the regency of Ijesaz.

"1599, March" (narrat., Wilmere transl. p. xvii and 6 to 48), Samuel Champlain accompanying a Spanish fleet in sight of the island of Descada in the West Indies. He visited Guadeloupe, Hayti, Porto Rico, Mexico,* — Panama, and Cuba, and returned to Spain after "two years and two months" absence.

Hæmatoxylon Campechianum of Central America. A Leguminous tree, its wood called in commerce *logwood*; and "Campeche" wood was seen by Champlain on his way to the city of Mexico — (N. Shaw edit. 23): goods were brought by Dampier for the logwood cutters in Campechy: *H. Campechianum* was observed by Sloane ii. *pl.* 10, and Macfadyen 332, on Jamaica; is described also by Catesby ii. *pl.* 66; and is known to abound especially around the Bay of Honduras. By European colonists has recently been carried to Burmah, and successfully introduced (Mason v. 511). Logwood "is a powerful astringent," but as an article of commerce is "chiefly used by dyers" (Macf., and Lindl.).

* *Icica? copallina* of Mexico. The "copal" of the Mexicans of Papantla and Misantla (Linnæa v. 601, and Lindl.); and the "copal" gum from a tree like the pine-tree and very good for gout and pains, seen by Champlain in Mexico — (N. Shaw edit. 32), may be compared.

Ficus Americana of the West Indies. The "sombrade" tree seen by Champlain on Porto Rico, the tops of its branches, falling to the earth, taking root and producing other branches, and thus covering "more than a league and a quarter, bearing laurel-like leaves but no fruit," — is referred here by N. Shaw p. 11, and identified with the "figuier maudit marron" of Hayti: *F. Americana* was observed by Plumier *pl.* 132 on Jamaica (Pers.); by Aublet, in Guayana (Steud.).

Cocos lapidea of Mexico. A species of *cocoa-palm*, distinguished by Champlain, its "cocques" made by the Mexicans into "little cups and bottles," like those "of Indian nuts which come from the palm" — (N. Shaw edit. p. 30). From transported nuts, *C. lapidea* is described by Gaertner.

"The same year" (Wilmere edit. Champl. p. xii), under "a privilege for ten years, at the charge of forming a company for the colonization of Canada" and "propagation of the Roman Catholic religion among the savages," Chauvin and Du Pont Gravé, Protestants, arriving at Tadoussac on the St. Lawrence at the mouth of the Saguenay. Du Pont Gravé desired to proceed farther, having traded with the natives at "Three Rivers" in a previous voyage; De Monts, a volunteer, was of the same opinion; but Chauvin insisted on building a house at Tadoussac, and leaving behind "sixteen men," sailed for France. The men suffered severely, and but for the compassion of the natives, would have all perished. — Returning in the following year, Chauvin found few survivors, but left behind "twenty more men" (Desmarquets); and on reaching France, died while fitting out an expedition on a larger scale.

Abies balsamea of Canada. A slender tree thirty feet high, called in our Northern States *fir* (Slafter) or *balsam fir* (A. Gray); and the "fir" seen by Chauvin at Tadoussac — (Champl.), may be compared: the "firre" is mentioned by various early visitors to Newfoundland and Northern New England: *A. balsamea* is described by H. Marshall 102; was received by Collins from Labrador; was observed by Lapylaie from 51° on Newfoundland; by F. A. Michaux, in Nova Scotia and Canada; by myself, from Canada to 43° 30' on the Atlantic near Portland; by Long's Expedition, at 49° on Lake Superior; by Drummond, on the Saskatchewan near the Rocky mountains; and yields "the oleo-resin called *Canada balsam*" (Lindl.).

Abies alba of Subarctic America. The *white spruce*, a tree seventy feet or more high, with slender tapering cones twice as long as those of *A. nigra*; included perhaps in the "fir" seen by Chauvin at Tadoussac — (Champl.): was observed by Richardson in Arctic America, along the Coppermine: by Herzberg at 57° 20' in Labrador (Meyer); by Lapylaie, from 51° on Newfoundland; by F. A. Michaux, from 49° in Canada to Maine, New Brunswick, and Nova Scotia; by myself, not South of 46°; by Long's Expedition ii. 81, at 50° on Lake Winnipeg; by Drummond, on the Saskatchewan near the Rocky mountains.

"In this year" (Klapr. chrest. p. ix) by the Chinese emperor Thai-tsou, Erdeni-baksi and Gagaidchargoutsi sent to instruct the Mandchous in the art of writing. The alphabet selected was that of the Mongols, derived from the Ouigours of Central Asia, and ultimately from the Syriac. — Since the conquest of China in "1041," Mandchou literature has been enriched by a great number of works, chiefly translations from the Chinese.

"In this year" (Spreng.), Ferrandus Imperati, a friend of Columna and Clusius, publishing his *Hist. Nat.*, enumerating *Valeriana Italica* 869, *Phyteuma pinnata* 882, *Telephium Imperati* 872, *Euphorbia Mauritanica* 876, *Cichorium spinosum* 88, *Parmelia fuciformis* 850, *Fucus lumbricalis* 842, *Fucus plocanium* 844, and "cava" 858 *Ulva intestinalis*.

Zapania nodiflora of Tropical America. A diminutive Verbenaceous herb, transported to Europe, described by Ferrandus Imperati 889 — (Spreng.), C. Bauhin, and Barrelier pl. 855; known to occur in Southern Italy (. . .); observed by Sibthorp, and Chaubard, in two localities in the Peloponnesus and in one on Crete; by Forskal, and Delile, on the Mediterranean border of Egypt; by myself in Upper Egypt, seemingly wild on the river-flat: by Forskal, on the mountains of Yemen, but as in the preceding instances, no native names given. Westward from America, may have been carried by European colonists across the Pacific to the Philippines, observed by Blanco frequent, though not universally known to the natives, called in Tagalo "chachachachahan" and made into a kind of tea; to Hindustan, where it has acquired Sanscrit names (A. Dec.), was observed by Burmann ind. pl. 6, by Rheede x. pl. 47 in Malabar, by Graham "common all over Bombay, creeping among the grass." In its wild state, is known to grow from Cuba near Havana (Kunth) throughout Tropical and Austral America as far as Buenos Ayres (Schauer, and A. Dec.).

"1600 A. D." (Humb. cosm. ii.), sudden appearance of a star of more than the first magnitude in the constellation Cygnus. — After continuing visible "twenty-one years," the star disappeared.

"In this year" (Spreng., and Winckler), Schwenkfeld publishing his *Stirp. Siles.*, enumerating *Ligusticum Austriacum* 60, and *Sedum saxatile* 105.

"In this year" (Churchill coll.), "by patent from queen Elizabeth," a company of "merchant-adventurers" authorized to trade in the East Indies. An association better known as the English East India company.

"The same year" (Churchill coll.), in "sailing from Peru for the Philippine Islands," a squadron of "four ships" driven South of the Equator among "several rich countries and islands not far from the isles of Solomon;" the name "Monte de Plata" being in one instance bestowed. — "A captain of note went out on purpose and saw these discoveries:" and two petitions to the king of Spain from captain Peter Fernandez de Quiros, on the extent "of the continent and great value of the islands, which he speaks of as an eye-witness," are preserved by Purchas iv. p. 1432.

"In this year" (Juss., and Markham 206), the healing powers of *Peruvian bark* first made known to Europeans, a jesuit not far from Loxa having been cured of a fever: — "in 1638," specimens

of the bark were sent by Francisco Lopez Cañizares to the conde de Chinchon, viceroy of Peru, and hence the name *cinchona*. The bark soon became extensively known, the most approved kinds being exported from Lima. Among more than twenty species enumerated by Lindley, *C. micrantha* furnishes "silver, grey, or Huanuco bark;" *C. lanceolata*, most of the "yellow bark," a portion being contributed by *C. hirsuta* and *C. nitida*, *C. magnifolia* furnishes "cinchona nova;" *C. purpurea*, "Huamalis bark;" and there are various exported kinds whose origin has not been traced.

Cinchona Condaminea of the Western slope of the Peruvian Andes. Probably the kind employed in the case of the jesuit:—presumed by Lindley to be the "cascarilla chauharguera" said by Ruiz to be that sent to the conde de Chincon: termed "quinaquina" in a description sent by Condamine, and published in act. par. 1738: *C. Condaminea* according to Humboldt and Bonpland i. pl. 10 grows near Loxa, also near Guancabamba and Ayavaca in Peru, always on micaceous schist, and at the elevation of "5700 to 7500 feet." Its imported bark is called in commerce "*pale crown or Loxa bark*" (Lindl.).

One hundred and seventy-seventh generation. Jan. 1st, 1601, onward mostly beyond youth: the Greek writer Nicolaus son of Demetrius d. 1625: Brenning: cardinal Baronius; Henrico Catharino Davila; Justus Lipsius; Stephen Pasquier; Mariana; Scevole de St. Marthe; cardinal Perron; Isaac Casaubon; president de Thou; Henry Saville; William Camden; Francis Bacon; Paul Sarpi; Gruterus; Malherbe; Marini; Papirius Masso; Boccalini; Helvicus; Andrew du Chesne; John Barclay; Robert Cotton: the Spanish writers, Cervantes, and Lopez de Vega: the English dramatists, Shakespeare, and Ben Jonson: the botanists, Josephus de Aromatariis, Petr. Paawius, Anton. Donati, Casp. Piletier, Lauremberg, Io. Stephan. Strobelberger, Io. Fischartus: the painters, Ludovico Caracci d. 1619, and Annibale Caracci d. 1609.

"January = twelfth lunation of the thirty-eighth year of the cycle" (Semedo, and Pauth. 411), arrival at the Chinese court of the first Jesuit missionary, P. Matthæus Riccius or Ricci. In the "winter of the 29th year wen-li" (topog. Cant., and Pauth. p. 474), first arrival of the English in China; at Macao, in two or three large ships. They wore red garments, were tall, with red hair and deeply sunk blue eyes, and feet fourteen inches long; and frightened the people by their strange aspect. They came saying, "We are not pirates but bring tribute:" but having never before made their appearance, and bringing no letter, a reception was refused by the commandant; the captain was imprisoned by the officer of customs for a month, and then released.

"The same year" (Alst. p. 313, Grot. ann., and Holmes), arrival home in Holland of Olivarius or Oliver Van Noort, completing the Fourth circumnavigation of the Globe.

"In this year" (J. E. Smith, and Spreng.), Clusius publishing his Hist. rar. plant., enumerating *Iris Mauritanica*, *Hyacinthus serotinus*, *Centaurea erucifolia*, *Paronychia Hispanica* ii. 183, *Melica nutans* 2. 219, *Veronica spuria* 1. 347, *V. alpina* 1. 350, *V. aphylla* 1. 350, *V. dentata* 1. 349, *Fedia cornucopiae* 2. 54, *Iris variegata* 1. 221, *I. susiana* 217, *I. aphylla* 223, *I. lutescens* 1. 227, *I. spuria* 1. 228, *I. pumila* 225, *Scabiosa (Trichera) sylvatica* 2. 2, *Galium rubrum* 2. 175, *Crucianella latifolia* 2. 177, *Cynoglossum cheirifolium* 2. 162, *Soldanella alpina* 1. 309, *Lysimachia (Naumburgia) thyrsiflora* 2. 53, *L. punctata* 52, *Euonymus verrucosus* 57, *Viola pinnata* 1. 309, *Eryngium pusillum* 2. 158, *Narcissus minor* 1. 165, *N. bulbocodium* 1. 166, *N. moschatus* 1. 166, *Allium oleraceum* 194, *Scilla Italica* 1. 184, *S. Morisoni* 182 ("S. peruv."), *S. verna* 188, *Asphodelus albus* 197, "comosus byzantinus" 180, *Hyacinthus ciliatus*, *Erica purpurascens* 1. 43, *Dianthus caesius* 1. 282, *Sedum anacampseros* 2. 67, *S. collinum* 2. 60, *S. virescens* 2. 60, *Reseda purpurascens* 1. 295, *Spiraea salicifolia* 1. 84, *Helianthemum Oelandicum* 73, *H. umbellatum* 1. 81, *Cistus populifolius* 78, *Illicium Philippinarum* 2. 202, *Delphinium ambiguum* 2. 206, *D. intermedium* 2. 94, *Rhizobolus butyrosus* 1. 8, *Ranunculus Creticus* 239, *Scrophularia tanacetifolia* 2. 209, *Orobanche ramosa* 1. 271, *Lepidium alpinum* 2. 128, *Vesicaria sinuata* 2. 133, *Thlaspi montanum* 131, *Iberis odorata* 132, *Hesperis tristis* 296, *H. inodora* 297, "alcea americana" 2. 26, *Hibiscus subdariffa* 2. 26, *Polygala major* 1. 324, *Erythrina corallo-dendron* app. 253, *Anthyllis cytisoides* 96, *A. erinacea* 107, *Vicia pisiiformis* 2. 229, *Coronilla glauca* 97, *C. coronata* 98, *Trifolium alpestre* 245, *Lotus tetragonolobus* 2. 244, *Hypericum Balearicum* 1. 68, *Apargia incana* 2. 141, *Saussurea discolor* 2. 151, *Carduus defloratus* 2. 149, *Serratula simplex* 150, *Curtina racemosa* 2. 157, *Carthamus coeruleus* 2. 152, *Senecio abrotanifolius* 334, *Cineraria alpina* 2. 23, *Senecio doronicum* 2. 17, *Inula ensifolia* 15, *Chrysanthemum alpinum* 1. 335, *Achillea tanacetifolia* 331, *Buphthalmum salicifolium* 2. 13, *Centaurea alba* 9, *Corallorhiza Linnaei* 2. 120, *Aristolochia glauca* 2. 71, *Quercus Austriaca* 20, *Corylus tubulosa* 1. 11, *Polypodium calcareum* 2. 212, *Botrychium rutaceum* 3. 119, *Fucus vesiculosus* 1. 21, *Peziza auricula* 2. 276, and *Merulius lobatus* 294.

Erysimum Orientale of the mountains of middle Europe. Described by Clusius hist. ii. 127, — and C. Bauhin pin. 112; termed "brassica orientalis perfoliata flore albo siliqua quadrangula" by Tournefort cor. 16, "b. orientalis" by Linnæus, "erysimum perfoliatum" by Crantz, "e. glaucum" by Moench (Steud.), and known to grow from Montpelier to Thuringia and Austria (Jacq. austr. pl.

282-3, and Pers.). Transported to Britain, has been found adventive, springing up spontaneously (Wats. cyb. i. 154).

Thlaspi alpestre of Western Europe. Described by Clusius hist. 2. 131 — (Spreng.), Arduino ii. pl. 15, and Linnæus: observed by Hudson in Britain (Engl. bot. pl. 81); known to grow in mountainous pasture-land in Switzerland and on the Pyrenees (Pers., Dec., and Wats.), but remains unknown in Lapland and Siberia (A. Dec.). By European colonists was carried to Northeast America, observed by Mrs. Perceval in Canada.

Alyssum incanum of Europe and the adjoining portion of Asia. Termed "thlaspi incanum machliniense" by Clusius hist. ii. 132, — "alysson fruticosum incanum" by Tournefort inst. 217, and known to grow throughout middle Europe (C. Bauh. pin. 108, and Pers.): observed by Linnæus in Sweden; by Roth, in Germany; by Sibthorp, on mount Athos.

Helianthemum fumana of middle Europe and the adjoining portion of Asia. Termed "chamæcistus sextus" by Clusius hist. i. 74. — "h. tenuifolium glabrum luteo flore per humum sparsum" by Bauhin hist. ii. 18, and Tournefort inst. 249, "herba fumana" by Bartholin, and known to grow from Gothland to France and Switzerland and throughout middle Europe (Jacq. austr. pl. 252, and Pers.): observed by Linnæus in Gothland; by Sibthorp, on mount Athos.

Silene nutans of Europe and the adjoining portion of Asia. Termed "lychnis sylvestris nona" by Clusius hist. i. 291, — "l. montana viscosa alba latifolia" by C. Bauhin pin. 205, and Tournefort inst. 335, and known to grow from Sweden throughout middle Europe (fl. Dan. pl. 242, Engl. bot. pl. 465, and Pers.): observed by Linnæus in mountain meads in Sweden; by Loesel pl. 40 in Prussia; by Scopoli, in Carniola; by Sibthorp, and Chaubard, from the Peloponnesus to Constantinople.

Silene alpestris of the mountains of middle Europe. Described by Clusius hist. i. 291* — (Spreng.); termed "lychnis quadrifida" by Scopoli (Steud.), and known to grow on the Tyrolean and Austrian Alps (Jacq. austr. i. pl. 96, and Koch). A single specimen collected in Scotland, on a mountain East of Clova (Bab., and A. Dec.).

Linodorum abortivum of middle Europe and the adjoining portion of Asia. Described by Clusius hist. i. 270 — (Spreng.), termed "orchis abortiva" by Linnæus, and known to grow in shaded situations throughout middle Europe (Swartz, and Pers.): observed by Allioni and Decandolle fl. in France; by Jacquin pl. 193, in Austria; by Scopoli, in Carniola; by Chaubard, in the Peloponnesus.

Lilium Pyrenaicum of the Pyrenees and Southern Alps. Termed "montanum flavum" by Clusius hist. 2. 256 — (Spreng.); observed by Gouan on the Pyrenees, known to grow also on the Southern Alps of Switzerland (A. Dec.). Transported to Britain, cultivated in gardens: but prior to 1850 found by G. Maas in a locality about a mile and a half from Molland in North Devonshire (Bot. Gaz. ii. 305, Phytol., and Wats. cyb. iii. 370), but A. Decandolle suggests, it may have been planted.

Scilla autumnalis of Europe and the adjoining portion of Asia. Described by Clusius hist. 185 — (Spreng.), termed "ornithogalum autumnale minus flore dilute purpureo" by Tournefort inst. 381, and known to grow from Britain throughout middle and Southern Europe (Curt. lond. vi. pl. 25, Cav. iii. pl. 274, and Pers.): observed by Sibthorp, and Chaubard, frequent from the Peloponnesus to Constantinople.

Allium paniculatum of Eastern Europe and the adjoining portion of Asia. Described by Clusius hist. 194 — (Spreng.); termed "a. montanum bicornis flore obsoletiore" by Tournefort inst. 384, and known to grow from Italy and Switzerland to Siberia (Hall. opusc. 25, and Pers.): observed by Scopoli 398 in Carniola; by Sibthorp, Link, and Chaubard, from the Peloponnesus to mount Athos and Bithynia; and received by Bieberstein from the Taurian mountains.

Allium Clusianum of the Mediterranean Countries. Observed by Clusius hist. i. pl. 192 in Southern Europe — (Pers.); by Chaubard, in the Peloponnesus.

* *Sarracenia purpurea* of Northeast America. The *side-saddle flower*, transported to Europe, described by Clusius hist. 2. 82 — (Spreng.). Plukenet amalth. pl. 376, and Miller pl. 376. Westward, is known to grow from Quebec to Lake Huron and farther North (Hook.), and "from New England to Wisconsin" (A. Gray), but farther South not seen West of the Alleghanies by Nuttall; was observed by Lapylaie from 51° in Newfoundland; by Josselyn pl. 54, in New England; by myself, as far as 40°; by Schweinitz, to 36° in Upper Carolina; by Catesby ii. pl. 70, in South Carolina; by Elliot, in the middle district of Carolina and Georgia; by Chapman, in "Florida and northward."

Scabiosa atropurpurea of Austral Africa? Herbaceous with sweet-scented flowers. Transported to Europe, is described by Clusius hist. 2. 3 — (Spreng.), Linnæus, Moench, and Schott (Steud.); and is cultivated in gardens, sometimes springing up spontaneously in cultivated ground (A. Dec.). Eastward, was observed by Lush at Dapooree in Hindustan "introduced from the Cape" (Graham).

Allium flavum of Europe and the adjoining portion of Asia. Described by Clusius hist. 194 — (Spreng.), and Rudbeck elys. ii. pl. 157; termed "a. juncifolium bicornue luteum" by Tournefort inst. 384; and known to grow from Fontainebleau to Montpellier (Pers.): observed by Jacquin pl. 141 in Austria; by Sibthorp, on the Greek islands.

"March, 1602" (Strach. 154), Samuell Mace, in the employ of Sir Walter Raleigh, sailing from England. but instead of examining the country around Hatteras, he visited the coast "forty leagues to the so-westward" in "34°;" procuring "saxafras" at that time "worth some three shillings the lb," also "Chyna roots" (*Smilax pseudo-China*), "benjamin" (*Benzoin odoriferum*), "cassia lignea" (*Cassia Marilandica*), "and the rynd of the tree which growes there, more strong than any spice, the vertue whereof, at length, is nowe well knowne" (*Aralia spinosa*).

"May 15th" (Strachey, Purchas, and Holmes), by Bartholomew Gosnold, in making the first direct passage from England West to America, a headland discovered "in the latitude of forty-two degrees," and named by him "cape Cod." Following the coast Southward and soon Westward, an island discovered on the "21st," and named by him "Martha's Vineyard" from the "nombre of vynes" (*Vitis labrusca*). Beyond this, on another island named by him "Elizabeth," he commenced a fort and settlement. The island proved to be covered with "oaks, ashes, beech, walnut, witch-hazel" (*Ulmus Americana*), "sassafrage and cedars" (*Juniperus Virginiana*), "with divers others of unknown names;" also "wild pease" (*Pisum maritimum*), "young sassafrage" (*Sassafras officinale*), "cherry-trees, gooseberry-bushes" (*Ribes hirtellum*), "hawthorn" (*Cratægus coccinea*), "honeysuckles" (*Azalea viscosa*), "with others of the like quality;" besides "strawberries" (*Fragaria Virginiana*), "rasps" (*Rubus strigosus*), "eglantine" (*Rosa lucida*), "ground-nuts" (*Apios tuberosa*), "surrin" (. . . .), "tansy" (*Potentilla anserina*), "etc. without count." * — Dissensions arising, the whole party "June 18th" sailed for home.

"1603, March 24th" (Blair, and Nicol. p. 339), Elizabeth queen of England succeeded by James VI. of Scotland. Thereby uniting the two kingdoms, under the general title "Great Britain."

"May" (Churchill coll., and chron. edit. by Michelant), anchoring at Tadoussac, Samuel Champlain continued up the St. Lawrence to the rapids, "getting information of several great lakes and of a boundless sea at four hundred leagues distance westward."

"Beginning of June" (Purchas, and Holmes), arrival of Martin Pring with two small vessels on the American coast, "between the forty-third and forty-fourth degrees of north latitude, among a multitude of islands." Following the coast South, in search of *sassafras*, he entered a large sound; and on the North side, "in the latitude of forty-one degrees and odde minutes," built a hut and enclosed it with a barricade; where some of the party kept guard while others collected *sassafras* in the woods. The natives were treated with kindness, and the last of the two vessels departed well freighted on the "9th of August."

"The same year" (art de verif.), Mohammed III. succeeded by Achmed or Achmet, sixteenth Turkish sultan.

"The same year" (Spreng.), the Academia Lynceorum, the earliest literary and scientific association, founded by Fredericus Cæsius of Rome.

✂ "1604, May 6th" (Churchill coll., Charlev., and Holmes), arrival in Acadie of De Monts, with two ships. Doubling Cape Sable, he entered an extensive bay; and on the East side, found a harbor which he named Port Royal, and settled there some of his men. On the West side of the Bay, he discovered a great river which he called St. John; and proceeding thence "southwesterly twenty leagues," he wintered on an island which he called St. Croix.

"The same year" (Humb. cosm. ii.), sudden appearance in the foot of the constellation Ophiucus of a star of more than the first magnitude. The star soon disappeared, — and from this time, no new star of the first or second magnitude has made its appearance in the heavens.

"The same year" (M. Russell p. 273), the Abyssinian king Za Denghel converted to Catholicism by the jesuit Peter Pæz. and the observance of Saturday or the Jewish sabbath prohibited. The Abyssinians revolting, Za Denghel was overpowered and slain, and Yacob was restored as king.

"1605, May" (Strachey, and Slafter), Capt. Georg Weymouth sailing along the coast from Cape Cod as far as the Sachadehoc (Kennebec). He continued sailing "very neere forty miles" up the river, which he found "virged with a greene border of grasse" and a noble growth of timber, the

* *Thaspium aureum* of Northeast America. A yellow-flowered Umbelliferous plant, perhaps the "alexander" seen by Gosnold on Elizabeth Islands, — and the "alexanders which grow upon rocks by the seashore" seen by Josselyn 45 farther North in New England: T. aureum was received by Hooker from Quebec and Lake Huron; was observed by myself from 44° throughout New England; by A. Gray, "not rare" in central New York; by Pursh, from Pennsylvania to Carolina; by Elliot, in South Carolina; by Chapman, in "Florida, and northward."

"goodly oake" (*Quercus rubra*), "birch" (*Betula papyracea*), "tall firre" (*Strobus Americanus*), "and spruce" (*Abies nigra*). Having "sett upp a crosse with his majestie's inscription thereon" he returned to England.

"In this year" (Peyrere relat. du Groenl. 218), under instructions from Christian IV. of Denmark, Gotske Lindenau sailing for Greenland. He brought back some of the natives, — and in the following year, on a second voyage, brought back others; who remained some years in Denmark. Also "a Greenland calendar, composed of twenty-five or thirty little bones fastened to a strap of sheepskin, which is not used by any but the original Greenlanders."

"Nov. 5th" (Blair), in England, Gunpowder plot detected. — The celebration of this event, brought into New England by the first colonists, was within my recollection kept up in Salem: and may be regarded as the beginning of New England Tradition.

"In this year" (Blochmann, and W. W. Hunter), Akbar succeeded by Jahangir, now emperor of Hindustan. — In whose reign, arrival of the first British ambassador, Thomas Roe.

"In this year" (Spreng.), Clusius publishing his Exot., enumerating *Protea nereifolia* 38, *Yucca Draconis* 48, *Ranunculus amplexicaulis* app. alt. exot., "indicum" 89. *Polypodium quercifolium* and *Clathrus ruber* app. alt. exot.

Ornithogalum nutans of Eastern Europe and the adjoining portion of Asia. Termed "neapolitanum" by Clusius app. alt. exot. — (Spreng.), observed by Jacquin pl. 301 in Austria, and known to occur in Switzerland and Italy (Pers.): observed "in 1787" on the ramparts of Copenhagen (fl. Dan. pl. 912), "in 1808" in Britain (Engl. bot. pl. 1997) and has since become more frequent (Bab.), is known to occur in Holland (prodr. fl. bat. 273), and sparingly in central France (A. Dec.); was observed by Koch here and there in Germany; by Chaubard, in the Peloponnesus.

Dorstenia Drakena of Eastern Mexico. An Urticaceous herb, transported to Europe, described by Clusius exot. 83 — (Spreng.), Miller dict. 3, and Linnaeus. Westward, grows wild on "high ground near Vera Cruz," and its exported root constitutes a fourth kind of *contrayerba* (Houston phil. trans. 421 pl. 195, Guibourt, and Lindl.).

Dorstenia Houstoni of Central America. Known probably as early as this date. — Transported to Europe, is described by Miller dict. 2, and Linnaeus. Westward, grows wild on "high rocky ground near Campeachy," and its exported root constitutes a fifth kind of *contrayerba* (Houston phil. trans. 421 pl. 195, Guibourt, and Lindl.).

"1606, Jan. 26th" (Leza, and Stanley append. De Morga 403), Quiros from Peru arriving in sight of Anegada, a flat uninhabited islet about two leagues long, "in 25°" S. and "one thousand leagues from Callao." On the "20th," another uninhabited island without anchorage, Sin Puerto, was reached, "in 24½° and 1075 leagues from Callao." "Feb. 4th and 5th," four islands were reached, "three or four leagues apart" and "in 20° and 21°." On the "9th," an islet "like those left behind" was seen "in 19°," and received the name of "Santa Polonia." On the "10th," a flat island "in 18° 10'," full of palm trees, with "people on the beach," armed with long lances (*Panmotuans*); two Spaniards, swimming to the shore, met with a friendly reception, and in return a chief and an old woman came off to the ship; they were "clothed and treated," but were "much frightened," and on being set on shore, sent back a parting gift of "a bunch of hair and some poor feathers, and some carved shells of pearl oysters," the "finery" of this "very wild people: the woman had "a small white dog like ours;" half of "a pulley of cedar, wrought on the coast of Nicaragua or Peru," was found on the island, and the chief's canoe was "not of one piece of wood," but "as good as could have been made in Castile" (probably the work of survivors from a Spanish shipwreck): coasting along on the "12th," the island was found to be "twenty-five leagues long and ten broad, all the middle is sunk, as though "a piece of the sea surrounded by land" (Dean's Island). On the "13th," in "16¼°," another island. On the "14th," an island "in 15°," found by De Leza to be "in a straight line 1398 leagues" from Callao. On the "21st," an island "in 10½°," understood to be San Bernardo. Sailing thence W. and a quarter N. W. "fully ten degrees," on "March 2d" a low island, the people and arms "of the fashion of those we had left behind;" the island received the name of La Matanza, and on landing in spite of the opposition of the natives, "some little dogs were found in the village."

Continuing on the same "parallel for thirty-two days," at the end of "1940 leagues from the city of Lima" a very high island called Taomaco; the inhabitants "great seafarers, all well furnished with beards" (Papuan), "great archers and throwers of javelins and very venturesome; their boats, which are very large, could go a great distance; they gave us information of more than forty islands, large and small, and all inhabited," "telling us that they fought with several of them;" information also "of the isle of Santa Cruz, and of that which happened there to" Mendaña, and sent a canoe there, a distance of "sixty leagues," to convey the news; "there were amongst them white people" (albinoes) "and others red, other native Indians of the colour of those of the Indies" (Malayans), "and others black, swarthy, and dusky," for they use captives as slaves for their tillage; they

live on "yams and fish," cocoa-nuts, and have "pigs and fowls;" on leaving, Quiros carried away four of the natives. One of these (according to Hale ethnogr. 168 to 195) was a native of Chikayana, four days sail from Taomaco and two days from Guaytopo (Vaitupu), had seen people of Guaytopo, driven out of their course in seeking "tortoise-shell of which they make ear-rings," and described the women as wearing "a veil of blue or black called foafoa;" he further stated that a great pilot, a native of Taomaco, had procured "from a large country named Pouro" (Bouro) "arrows pointed with a metal as white as silver" — (*tin* from the Malayan archipelago). Confirmation is found in Rienzi ocean. iii. 384 meeting with a Bugis captain who had visited the Solomon Islands: and Hale found the natives of Vaitupu "wearing ear-rings of tortoise-shell, a very unusual ornament in Polynesia," and the women, a "long fringe of *pandanus leaves* called fou." (See Burotu.)

From information procured at Taomaco, Quiros now sailed southwest, and "in $12\frac{1}{2}^{\circ}$ " found "an island of the size of that of Taomaco with the same sort of people," and "called Chucupia;" the natives offered peace, and "presented the husk of a tree, which looked like a very fine cloth" (*tapa*). Continuing South, and afterwards "a day's sail" West, a volcano was discovered, "very high and thick, more than three leagues in circumference" (Tanna), "and with black inhabitants with thick beards" (*Papuans*): "to the west, and in sight" at "the distance of eight leagues," was an island "well peopled with black inhabitants" (*Negrillos*), two of whom were caught, and "were clothed and fed, and the next day put on shore," but at a port "a gunshot further on" a Spaniard was wounded with an arrow: in sight and all around "were many very high and large islands;" and "going southwards," one of these islands was found "May 1st" to contain a bay fifteen or sixteen leagues in circumference, "well inhabited and very fertile, with yams and many fruits, pigs, and fowls; all these people are black and naked" (*Negrillos*), "fight with arrows, javelins, and large clubs; they never would be friends with us, although we spoke together many times, and I treated them; I never set foot on shore with their good will, as they always wished to oppose it, and we always fought with little risk;" the island received the name of "Espiritu Santo" (the largest island of the New Hebrides); the bay is "in $15^{\circ} 20'$," is "very fresh, and has many and large rivers," and on the "6th," Quiros took formal possession, "and of the Austral regions to the pole," in the name of the king of Spain: "June 11th," Quiros, a Portuguese among Spaniards, was prevented by his mutinous crew from making farther explorations; but arrived safely with his ship at Navidad in Mexico "Oct. 20th."

Torres, in command of the second ship, knowing only that the flagship went forth "at one o'clock after midnight" without "making signals," spent "fifteen days" in a fruitless search, opened the king's orders, and proceeded south-west a degree beyond the latitude named (40° S.) without seeing land. Turning "north-north-west as far as $11\frac{1}{2}^{\circ}$," he "fell in with the beginning of New Guinea" (the Southern point of Louisiada), and as he "could not go up it by the east side," "went coasting to the west, and on the south side it is all the land of New Guinea; it is peopled by Indians who are not very white, and naked, though their middles are well covered with the bark of trees, after the manner of cloth, much coloured and painted" (*tapa*); "they fight with javelins and bucklers, and some stone clubs, with many gaudy feathers about them." "Having run three hundred leagues of coast" to " 9° ," a bank begins "which stretches along the coast until $7\frac{1}{2}^{\circ}$, and the extremity of it is five;" he was therefore obliged to go out South-west to " 11° ," and keep in the deep channel; "there were some very large islands, and more were seen towards the south; they were inhabited by black people, naked, and very corpulent" (*Papuans*), having "for weapons some thick and long lances, many arrows, very uncouth stone clubs." Following "this shoal for two months" to " 5° , and ten leagues from the coast, and we had gone four hundred and eighty leagues; here the coast trends to the north-east" (he had passed through what are now called Torres Straits). Running to the North "as far as 4° , when we fell in with a coast which also stretched from east to west," understood to be continuous with that left behind, and "inhabited by black people, different from all the rest," "more gaudily adorned; they also use arrows and javelins, and very large shields, and some blow-pipes of cane full of lime which they discharge;" continuing "west north-west beside the coast, always finding these people, though we landed in several places," also meeting with "the first iron and bells of China, and other things from there," we went "a hundred and thirty leagues, so that the extremity would remain at fifty leagues distance:" at the extremity "we found some clothed Moors, with artillery," "arquebuses, and white weapons; they go conquering these people who are named Papuas (*Negrillos*), and preach to them the sect of Mahomed; these Moors traded with us, selling us fowls, and goats, and fruit, and some pepper and biscuit, which they call *sagu*," and "gave us news of the events in the Moluccas, and of Dutch ships, though they had not reached here."

"July 26th" (Lesc. iv. 12), De Monts and Poutrincourt on their Second voyage arriving at Port Royal, where they found two survivors of the party left behind. In the forest around, Lescarbot vi. 24 met with "chenes" (*Quercus rubra*), "frenes" (*Fraxinus sambucifolia*), "bouleaux fort bons en menuiserie" (*Betula lenta*), "erables" (*Acer rubrum*), "sycomores" (*Acer saccharinum*), "aube-

pins" (*Crataegus coccinea*), "framboises" (*Rubus strigosus*), "petits fruits bleuz" (*Vaccinium Canadense*) "et rouges" (*V. vitis-Idæa*), "grozelles semblables aux nôtres mais elles deviennent rouges" (*Grossularia hirtella*), "ces autres grozelles rondelettes que nous appellions guedres" (*Viburnum opulus*), "pois en quâite sur les rives de mer" (*Lathyrus maritimus*). — Returning to France "in 1607," Lescarbot iv. 3 again visited Port Royal, and remained there three years.

"In this year" (Spreng., and Winckler), Adrian Spigelius publishing his *Isag. in rem herb.* — He died "in 1626."

As early as this year (Spreng.), Augerius Clutius after traversing Spain crossing to Morocco. — He returned "in 1607," and his work was published in "1634."

"1607 A. D." (Humb. cosm. ii.), Halley's comet making its appearance.

"Apr. 26th" (Purchas, Smyth, Churchill coll., Holmes, and archæol. Amer. iv.), under a charter from king James, arrival of Christopher Newport with three ships in "the bay of Chesapeac." Sailing up the Powhatan river, men were landed "May 14th" on the North side; who proceeded to cut down the trees, to the alarm of the natives, and named the place "James Town." An aristocratic form of administration prepared by the home government, was established; and under Edward Maria Wingfield as president, the first permanent English settlement on the American continent inaugurated.

Ascending the river to the head of tide-water, Newport (relatyon, archæolog Amer. iv. 42) on "May 22 Fryday" was offered baskets of "dried oysters" (*Ostrea Virginica*); also, "wheate" (*Zea mays*), "beanes" (*Phaseolus vulgaris*), "and mulberyes" (*Rubus*), "sodd together;" and on "May 23 Saturday," a "wiroans," who "satt upon a matt of reeds with his people about him," gave "a deare roasted," caused "his weomen to make cakes," and also gave "his crowne, which was of deare's hayre dyed redd." While "banquetting with them, seeing their dauncs, and taking tobacco," the great chief Powatah arrived: when "they all rose from their matts, save" the wirowans Arahatec, "separated themselves aparte in fashion of a guard, and with a long shout they saluted him." Continuing up the river to the residence of Powatah, on a high hill with "a playne betweene it and the water, twelve score over, wheron he sowes his wheate, beane, peaze" (*Phaseolus vulgaris* var.), "tobacco, pompions, gowrds" (*Lagenaria*), "flaxe" (*Linum Virginianum*), "etc.," Newport was hospitably received, but was not permitted to proceed inland beyond the Falls. He learned however that the "caquassun" or copper "was gott in the bites of rocks, and betweene cliffs in certayne waynes" (clearly therefore from Lake Superior); and found it flexible enough to bend "a peece of the thicknes of a shilling rounde about" the finger (native copper being as is well known tougher than smelted copper). "May 25," returning down the river, he was shown the herb "wisacan, which they say heales poysoned wounds" (. . .), and which "is like lyverwort or bloudwort;" also, "a roote wherewith they poison their arrowes" (. . .). "They would shew us any thing we demanded; and laboured very much, by signes, to make us understand their languag." The natives are further described: as living "commonly by the water-side, in litle cottages made of canes and reeds covered with the barke of trees;" some "fortie or fiftie in a hatto or small village, which townes are not past a myle or half a myle asunder in most places;" the women doing "all the labour," while "the men hunt and goe at plesure." They "goe all naked, save their privities, yet in coole weather they weare deare-skinns with the hayre on, loose: some have leather stockings up to their twists, and sandalls on their feet." Their "feight is alway in the wood, with low and arrowes and a short wodden sword." They "steale anything comes neare them;" and "having once conveyed, they hold it an injury to take the same from them." "They sacrifice tobacco to the sunn, fayre picture, or a harmefull thing, as a sword or peece; also, they strincke some into the water in the morning before they wash. They have many wives; to whome, as neare as I could perceive, they keep constant. The great king Powatah had most wives. These they abide not to be toucht before their face." The country is described as naturally yielding "vines abundance," "respeses" (*Rubus strigosus*), "scarretts" (*Archemora rigida*?), "the roote called Sigilla christi" (*Polygonatum*), "and many other unknowne;" also "apothecary-druggs of diverse sorts, some knowne to be of good estimacon, some strange, of whose vertue the salvages report wonders."

"May 26th" (relatyon Newp. p. 54), first attack by the natives on the colonists at James Town; the assailants numbering "above two hundred." Hostile demonstrations by smaller parties were made at intervals during the ensuing months. "Dec. 10th" (Wingfield in archæol. Amer. iv. 92), John Smith ascending the Chechobomynies river, was "taken prysoner, and by the means of his guide, his leif was saved:" after some days he was brought "to the great Powaton," who had already proffered friendship, and who, — "Jan. 8th," sent him home. The chief's daughter Pocahontas at this time a child (Deane in note); she is not mentioned in the early accounts of the transaction.

"July 30th" (Strachey, Hakl. soc. 1849, and Purchas), George Popham and Raleigh Gilbert with two ships on their way to the Sachadehoc (Kennebec) arriving in sight of land. "Aug. 1st," a party landing "on a galland island" in "44th" found "gooseberries" (*Grossularia cynosbati*), "strawber-

ries" (*Fragaria Virginiana*), "raspices" (*Rubus strigosus*), "hurts" (*Vaccinium*), "and all the island full of huge high trees of divers sorts." Sailing thence "so-west, for soe the coast lieth," on the "17th" the two captains entered the Sachadehoc, and on the "18th" made "choise of a place for their plantacion, at the mouth or entry of the ryver on the west side." While the fort was building, Gilbert on the "28th" sailed in the shallop Westward as far as a headland in "43 $\frac{1}{2}$ °," the trees growing thereon being "most oake" (*Quercus rubra*) "and walnutt" (*Juglans cinerea*), the islands on the way "all overgrowne with woods, as oak, walnutt, pine, spruse trees, hasell nutts, sarsaparilla, and hurts in abundaunce." After an unsuccessful attempt to find the Penobscot, had a sight "Sept. 15th in the morning, of a *blasing starr* in the nor-east of them." On the "25th," at the head of navigation on the Sachadehoc, were "great store of grapes, both redd and white" (*Vitis cordifolia* and *V. labrusca*, unripe), "good hopps" (*Ostrya Virginica*?), "as also chiballs and garlike" (*Allium schoenoprasum* and *A. Canadense*), "certaine coddys in which they supposed the cotton wooll to grow" (*Asclepias Cornuti*), and among other trees "pineapple" (*Pinus resinosa*?). The ensuing winter proved "extreame unseasonable and frosty," but the colonists "fully finished the fort," built "fifty howses therein, besides a church and a storehowse," also a "pynnae of about some thirty tonne, which they called the Virginia," obtained many kinds of furs "from the Indians by way of trade," and gathered "good store of sarsaparilla" (*Aralia nudicaulis* and *A. hispida**) : but "noe mynes" were discovered, Capt. Popham died, — and a ship with supplies arriving in the spring brought news of a legacy to Capt. Gilbert requiring his presence in England, when the colonists unwilling to remain behind all embarked for home.

"Before the middle of August" (Purchas iii. 464, and Asher edit. Huds. p. xcxi), by Henry Hudson on his First voyage, an island discovered in "71° N." near the Greenland coast, and named Hudson's Tutches — (now called Jan Mayen).

"1608, June 26th" (narrat., edit. Asher). Hudson on his Second voyage arriving on the coast of Nova Zembla in "72° 25' N.:" parties landing at different times found "a crosse standing on the shoare, much driftwood, and signes of fires," also "a herd of white deere" (*Cervus rangiferinus*), "footings of many great beares, of deere, and foxes," grass "of the last yeere and young grasse came up amongst it a shaftman long," also "flowers and greene things that did there grow." As far as examined Nova Zembla seemed "a pleasant land, much mayne high land with no snow on it, looking in some places greene, and deere feeding thereon; and the hills are partly covered with snow."

Elymus arenarius of the seashore in Arctic and Subarctic climates. A species of *lyme grass*, probably the tall "grasse" seen on Nova Zembla: — *E. arenarius* is termed "gramen spicatum secalinum maritimum spica brevior" by Tournefort inst. 518; was observed by Forskal along the Sea of Marmora, and by Sibthorp from the Greek islands to the Euxine; is known to grow along the Atlantic seashore from France to Ireland and Lapland (Pers., and Wats.). Westward, was received by Hooker from Arctic America; was observed by him on Iceland; by Lapylaie, on Newfoundland; by Kalm, as far South as 48° on the Lower St. Lawrence; by myself to 47° 30'.

"July 3d" (N. Shaw edit. Champl. p. xxiv), having arrived at a narrow part of the St. Lawrence, Champlain decided to establish his settlement on a spot called by the natives "Quebec;" and caused dwellings to be erected, and the land apportioned, cleared and sown. — On the following "18th of May," he proceeded farther up the river, and having promised the natives aid against the Iroquois, arrived at Saint Croix on the "1st of June." Entering the Iroquois river, his boat was stopped at the first rapid; but Champlain, with only two of his men willing to accompany him, kept on with the natives and their canoes "July 2d." On reaching the Lake (which continues to bear his name) a battle ensued at a village on its border, when Champlain with his "arquebuss loaded with four balls" killed at one shot two Iroquois chiefs and wounded a third: this decided the contest in favour of his native allies, who returned to the St. Lawrence with "ten or twelve prisoners." In "1610," he accompanied the Algonquins against the Iroquois, and stormed a fort or stockade; and hearing from his friend De Monts at Paris, returned to France.

"Summer" (Smith, Purchas, and Holmes), exploration of the Chesapeake by John Smith in an open barge: sailing in all "about three thousand miles." At the Susquehanna river, the natives had implements "of iron and brass," derived by their own account from the French of Canada.

"In this year" (edit. Markh.), Francisco de Avila recording Peruvian legends.

* *Aralia hispida* of Northeast America. Called there *bristly sarsaparilla* (A. Gray), and possibly included in the "sarsaparilla" gathered on this occasion: — the other "sarsaparilla" is described by Josselyn as "having the same leaf, but is a shrub as high as a gooseberry-bush, and full of sharp thorns:" *A. hispida* is known to grow from Newfoundland to the Saskatchewan (Hook.); was observed by Michaux at Hudson's Bay and in Canada; by myself, along the Atlantic as far as 42° N. beyond Salem; and by Pursh, on the Alleghanies in Pennsylvania and Virginia.

"The same year" (Blair, and Humb. cosm. ii.), *telescopes* invented in Holland. Three instruments offered to the government "Oct. 2d" by Hans Lippershey; and on the "17th," a similar offer by Jacob Adriansz called Metius, who claimed to have made such instruments for "two years."

"In this year" (Spreng.), Clusius continuing his botanical investigations, describing *Saxifraga hirculus* post. 11. — He died "in 1609," and his Cur. post. were published "in 1611."*

"In this year" (Spreng.), Schwenckfeld writing his Cat. plant. Hirschb., enumerating *Tussilago spuria*, *T. nivea*.

"In this year" (Spreng. gesch. ii. 91), J. Robin and Petr. Vallet publishing their Jardin du Henri IV., enumerating *Haemanthus multiflorus*.

"1609 A. D." (San-kokf transl. Klapp.), Sio-nei (Chang-ning) "twentieth" Loo Choo king of the Tame-tomo dynasty, taken prisoner by the prince of Satsouma and carried to Japan. — After "four years," he was released and returned to his own country: the Loo Choo kings have since continued vassals of Japan.

"May 15th" (Major introd. Strach. p. xi.), sailing of nine vessels with five hundred emigrants for the new colony in the Chesapeake. The ship containing the three officers, Sir Thomas Gates lieutenant governor, Sir George Summers admiral, and Christopher Newport vice admiral, became separated "July 28th" (Strach. 42), and was wrecked on Bermuda: where they occupied themselves "in forming a settlement" and building "two small vessels." In the mean time, the seat of Summers in parliament was declared vacant, on account of his accepting a colonial office: apparently the first notice of Virginia by the English parliament (Holmes). The remaining vessels, with the exception of one ketch that was lost, reached James Town "Aug. 11th."

"May 19th N. S." (Juet, and Asher edit. Huds. 46), Hudson off North Cape on his Third voyage "observed the sunne having a slake" (without the aid of a telescope): — in "March, 1610" (Humb. cosm. ii. and iv.), John Fabricius of East Friesland from the gradual change in position of *solar spots* inferred rotation of the sun: and solar spots were seen "Dec 8th" by Thomas Harriot, who however did not recognize them as belonging to the sun.

"July 18th N. S." (Juet, Van Meteren, and Asher edit. Huds. 61 to 149), Hudson in the Dutch service entering a harbour in "Nova Francia" in "44° 1'" (near the Kennebec): he here cut a new fore-mast, one of the natives speaking "some words of French:" and "on the 19th," two French shallops came in, bringing "red cassockes, knives, hatchets, copper, kettles, trevits, beades, and other trifles" to trade for furs. "Aug. 3d," in about "41° 56'," the shallop with five men was sent in to sound, and landing (on the peninsula of Cape Cod) found "goodly grapes" (*Vitis labrusca*) and "rose trees" (*Kalmia latifolia*): voices were heard on the following day, and a boat sent on shore "found them to be savages which seemed very glad of our comming," and had "greene tabacco" (*Nicotiana rustica*). Continuing South, Hudson "on the 18th" in "37° 26'" on the north side of "the entrance into the King's river in Virginia" (Chesapeake) "where our English-men are;" and "on the 24th" was in "35° 41'," being farre off at sea." Returning, "on the 28th" he found the land trending "north-west, with a great bay and rivers" (mouth of the Delaware): but the bay "shoald," and he turned back. "Sept. 3d," he entered an opening in "40° 30'" (entrance to the Hudson), finding "a very good harbour," abundance of "blue plums" (*Prunus maritima*), some "currants" brought by the natives "dried" (*Vaccinium*), and the country "full of great and tall oakes:" proceeding up the river, "on the 22d" he reached the "end for shipping to goe in," but boats went "eight or nine leagues" farther, finding "but seven foot water," and Hudson himself landed in "42° 18'" on the "25th," nine or ten leagues down the river, on "the west side" were found "great store of goodly oakes, and walnut-trees" (*Carya*), "and chest-nut trees" (*Castanea Americana*), "ewe trees" (*Abies Canadensis*), "and trees of sweet wood in great abundance" (*Liquidambar styraciflua*), "and great store of slate for houses:" on the "30th," the "wind at south-east, a stiffe gale betweene the mountaynes;" "Oct. 1st," at the end of seven leagues "got downe below the mountaynes," then "it fell calme," and "the people of the mountaynes came aboard;" a thieving native endeavouring to escape with his plunder was shot, and hostilities commenced; "on the 2d," at the end of "2+7+2" leagues, "anchored in a bay cleere from all danger of them on the other side of the river," on that side "that is called Manna-hata;" on the "4th," sailed from the inlet. "Nov. 7th," Hudson with a mutinous crew, composed in great part of Englishmen, arrived at Dartmouth, and was detained by the government.

"Dec. 29th" (Riccioli, Blair, and Humb. cosm. ii.), through the invention of telescopes, the four satellites of Jupiter discovered by Simon Marius at Ansbach, — and "Jan. 7th 1610," by Galileo:

* *Cassine Capensis* of Austral Africa. A Celastroid shrub, transported to Europe, described by Clusius post. 4 — (Spreng.), and Dillenius elth. pl. 236. In its wild state, observed by Burmann afr. pl. 85, and Thunberg prodr. 52, in Austral Africa.

affording ocular demonstration of the truth of the so-called Copernican System. From the eclipses or occultations of these satellites, Galileo further proposed determining Longitude on the Earth's surface.

"1610, February" (Humb. cosm. ii. and iv.), the crescent or the moon-like phases of Venus discovered by Galileo; — comparison with the outer planets now hastening the general adoption of the Copernican System. In "November," the planet Saturn found by Galileo to be irregular in outline, like "three heavenly bodies in contact with each-other."

"The same year" (Blair), nine hundred thousand Moors or Muslims, expelled from Spain.

"In this year" (Starch. 42), Captain Argol, in search of the lost ship, returning from Bermuda followed the American coast from "44°," discovered another goodly bay "in 39°," and called its Southern cape "in 38½" Cape Lawar.

"May 23d" (Major edit. Strach. p. xiii), Sumers with his companions, including William Strachey, in two small vessels from Bermuda arriving at James Town. The colony, after the departure of Capt. John Smith, had been reduced "to only sixty" persons "in the last stage of wretchedness and famine." On consultation, it was decided to abandon the country, and the colonists were on their way down the river "June 6th" when they were met by news of the arrival of their governor Thomas 11th Lord de Lawarre, bringing supplies. In the reorganization, Strachey was appointed secretary of the governor's Council: — and may have returned with the governor in the following year, was at least in England "in 1612" (Major p. xv).

The natives make cordage "of their naturall hempe, and flax together" (*Apocynum cannabinum* and *Linum Virginianum*), girdles of "silke grasse" (*Eriophorum Virginicum*?); "in June, July, and August they feed upon rootes of tockohow" (*Pachyma cocos*), "berries, grownd nutts" (*Aphis tuberosa*), "fish, and greene wheate" (*Zizania aquatica*?); have "rattles made of small gourdes" (*Lagenaria vulgaris*): their "bowes are of some young plant, eyther of the locust-tree" (*Robinia hispida*) "or of weech" (*Corylus Americana*): "the women sow and weed the corne," cleansing it of the "orabauke" (*Cuscuta arvensis*?), "dodder" (*Cuscuta Gronovii*), "and choak weed" (*Polygonum dumetorum*?), "and such like, which ells would wynd about the corne and hinder the growth;" sow also "a fruit like unto a musk million, but lesse and worse, which they call macock gourds" (*Cucurbita polymorpha*): they have "cherries, much like a damoizin, but for their tast and cullour we called them cherries" (*Prunus Chicasa*); "and a plomb there is, somewhat fairer then a cherrie, of the same relish" (*Prunus Americana*); "a berry much like our goose-berries in greatness, cullour, and tast, which they call rawcomenes, and they doe eate them rawe or boyled" (*Vaccinium stamineum*); "many hearbs in the spring time are comonly dispersed throughout the woodes, good for broathes and sallotts, as violets" (*Viola pedata*), "purselin" (*Portulaca oleracea*), "sorrell" (*Rumex acetosella*), "and roses" (*Rosa lucida*): they have also "a smale roote" which they call "vighsacan" (. . .), that bruised and applied "cureth their hurts and diseases;" "pellitory of Spaine" (*Parthenium integrifolium*); "in the low marishes grow plotts of onion's conteyning an acre of ground or more," appearing for the most part "in the last season of the yeare," small, "not past the bignes of the toppe of one's thumb," eaten by ourselves but not by the natives (*Allium cernuum*); "all the country is overshadowed with trees," including "twoo or three" kinds of oak, one having bark "more white then the other" and "somewhat sweetish" acorns, which being boiled "affordes a sweet oyle" (*Quercus alba*); "there is also elme" (*Ulmus Americana*) "and ash" (*Fraxinus pubescens*), "black walnutt" (*Juglans nigra*), "white poplar" (*Liriodendron tulipifera*) "and another tree like unto yt, that yieldeth" an "odoriferous gumme" (*Liquidambar styraciflua*), also a small tree like the "mir-tle" but the fruit "much more bynding" (*Adenrachis arbutifolia*). "By the dwellings of the salvages are bay-trees" (*Gordonia lasianthus*), "wild roses" (*Rosa lucida*), "and a kynd of low tree, which beares a cod" . . . "we take yt to be locust" (*Robinia hispida*): "crabb trees there be, but the fruit small and bitter" (*Malus angustifolia*). "The country wants not salsodiack enough to make glasse of, and of which we have made some stoor" (from *Salicornia ambigua*, and *Salsola kali*).

The country is described by Strachey as producing transported fruits and vegetables as well or "better then in England, as *parsenips*, *carrotts*, *turnips*, *pumpions*, *mellons*, *cowcumbers*, etc., and many of our English garden seedes, *parsley*, *endiff*, *socory*, etc.:" besides, "*tobacco-seed* from Trindado, *cotton wool*, and *potatoes*."

"Aug. 3d" (Asher edit. Huds., and Churchill coll.), Hudson on his Fourth voyage, now in English employ, in "61° 20'" passing out of the strait which bears his name into the "sea to the westward:" a party landing found "sorell" (*Oxyria digyna*), "and that which wee call scurvy-grass in great abundance" (*Cochlearia officinalis*). Turning Southward, the ship was frozen in "Nov. 10th" in "52°." — The following spring, "a budde of a tree full of a turpentine substance" was brought, and "of this our surgeon made a decoction to drinke" (*Abies nigra*), a single native also made his appearance: "June 21st," after the ship was released, Hudson was placed in the shallop with eight others and abandoned; he was not heard of afterwards.

"In this year" (Campion addit. Stan-Jul. industr. chin. 109), Siu-kouang-ki writing.

"1611, March 28th" (Major edit. Strach. p. xv), Lord de Lawarre, seriously ill, sailing for home, leaving Sir George Percy in command of the Virginia colony. Sir Thomas Gates, arriving "in August," assumed the post of governor, — which he held "till 1614."

"In the early spring" (Wilmere edit. Champl. p. xxviii), Champlain, having returned from France, proceeding from Quebec up the river. At Mont Royal (Montreal), he met the Algonquins, and after exchanging presents, entrusted another lad to their care; returned to Quebec "in June," and sailed for France.

"June 12th" (relat. Jes. i. præf.), arrival at Port Royal in Acadia of Pierre Biard and Enmond Massé, the first Jesuit missionaries in North America.

"In this year" (append. Sibth., Spreng., and Winckler), Paul Renealmus publishing his Specim. hist. plant., enumerating *Dianthus atrorubens*.

"The same year" (art de verif.), by the regent Ijesaz, leave granted to the Dutch to trade with and throughout Japan.

"1612 A. D." (Churchill coll., Anders. ii. 274, and Asher edit. Huds. 194), Thomas Button sent in search of Hudson. From the Strait sailing on the inland sea "above two hundred leagues to the southwestward," he reached the main land opposite at the mouth of a river called by him Nelson's; and after wintering, — returned in the following "autumn."

"June" (Purchas, and Churchill coll.) by Richard More, a permanent settlement established on Bermuda.

"In this year (= 2272 d. of Synmu," art de verif.), Go-Josei or Josei II. succeeded by his son Dai-sco-kouotei, now daïro of Japan.

"The same year" (Alst., and Nicol.), Rodolph II. succeeded by the king of Hungary Matthias; now thirty-third emperor of Germany and Italy.

"The same year" (Alst.), end of the chronicle of Robertus Bellarminus.

"In this year" (Spreng., and Winckl.), Alpinus publishing his Rhapont. disput., and writing his Exot., enumerating *Scabiosa limonifolia* 34, *Campanula Alpini* 340, *Scrophularia sambucifolia* 202, *Trifolium clypeatum* 306, *Chrysanthemum trifurcatum* 320, *Centaurea Babylonica* 281, and *C. eryngoides* 158.* — He died "in 1617," and his Exot. was published "in 1627."

Cardamine impatiens of Europe and the adjoining portion of Asia. Termed "sium impatiens" by Alpinus exot. 331, — "c. annua exiguo flore" by Tournefort inst. 214, and known to grow in woods from 60° in Sweden throughout middle Europe (Barrel. pl. 155, Engl. bot. pl. 80, and Pers.): observed by Linnæus in Sweden; by Sibthorp, in shaded situations on mount Hæmus.

Syringa Persica of Central Asia. The *Persian lilac* or "agem lilag Persarum" brought "from Persia" (Miller dict. pl. 164) is termed "ligustrum nigrum" by Alpinus exot. 178, — "ligustrum" by J. Bauhin prodr. 158 (Spreng.); escaping from cultivation has in some localities been found seemingly wild (A. Dec.). By European colonists, was carried to Northeast America, where it continues in gardens; and recently by Nimmo to Hindustan (Graham).

"In this year" (Spreng.), Emanuel Sweett publishing his Florilegium, enumerating *Iris Swertii* 41, *Gladiolus iridifolius* 66, *Narcissus radians* 21. f. 8, and *Amaryllis Orientalis*.

In this year (see Spreng.), J. Bauhin continuing his botanical writings, enumerating *Saxifraga aspera* 3. 695, *Galium uliginosum*, "hyssopi-folia minor" *Lythrum thymifolia* 3. 792, *Ajuga Genevensis*, *A. alpina*, *Plantago serpentina*, *Andromeda polifolia* i. 527, *Gnaphalium rectum* iii. 160, *Listera cordata* iii. 534, *Scirpus sylvaticus* 2. 501, *Veronica Austriaca* 3. 287, "gramen minimum Cherleri" 2. 465, *Triticum loliaceum*, *Galium rotundifolium* 3. 718, *Campanula spicata* 2. 801, *C. linifolia* 2. 797, *C. rhomboidea* 2. 806, *C. Bononiensis* 2. 804, *C. hederacea* 2. 797, *Phyteuma pauciflora* 2. 811, *Herniaria hirsuta* 3. 379, *Myrrhis bulbosa* 3. 183, *Bupleurum Pyrenaicum* 3. 199, *Cnidium Alsaticum* 3. 106, *Laserpitium angustissimum* 3. 137, *L. aureum* 3. 57, *Scilla unifolia* 2. 622, *Rumex lunaria* 904, *Sax-*

* *Oenothera biennis* of North America. Seeds sent from England in this year by John More to Alpinus, — by whom the plant was termed "hyosciamus virginianus" (exot. pl. 325, Linn., and Pers.): *Oe. biennis* is described also by C. Bauhin pin. 245; and before 1640 had become naturalized in Britain (Park., Morison, and Ray), spreading thence to Denmark and throughout middle Europe (Miller, and A. Dec.). Is known to grow wild in North America, from Lat. 56° throughout Canada and along the Atlantic to 30° in Florida, and Westward to the Rocky mountains and Nutka Sound (Baldw., E. James, and Hook.). The name *evening-primrose*, given by colonists remembering the pale yellow flowers of the true primrose, has been adopted in the mother-country (as appears from Prior). By European colonists also, *Oe. biennis* was carried to Hindustan, observed by Law "in gardens Belgaum" (Graham); and to Japan, var. "parviflora" having no native name observed by Thunberg around Nagasaki and in gardens.

ifraga moschata 3. 762, *Arenaria tenuifolia* 3. 364, *A. striata* 3. 360, "*Cerasus racemosa*" 1. 223, *Cerasus semperflorens*, *Pyrus Pollveria* 1. 59, *Rosa tomentosa* 2. 44, *Helianthemum nummularium* 2. 20, *H. ocymoides* 2. 20, *H. glutinosum* 2. 19, *Ranunculus plantagineus* 3. 866, *R. Pyrenaeus* 3. 866, *R. montanus* 3. 861, *Nepeta nuda* 3. 226, *Sideritis Romana* 3. 428, *Ocimum monachorum* 3. 260, *Scutellaria albidia* 3. 291, *Linaria Pelisseriana* 3. 461, *Thlaspi peregrinum* 2. 927, *Sisymbrium obtusangulum* 2. 862, *Spartium purgans* 1. 404, *Genista sylvestris* 1. 400, *Orobis canescens* 2. 326, *Lathyrus hirsutus* 2. 305, *Vicia platycarpus* 2. 286, *Cytisus biflorus* 1. 373, *Coronilla juncea* 1. 383, *Astragalus Monspensulanus* 2. 338, *Astragalus pilosus* 2. 335, *Lotus angustissimus* 2. 356, *Medicago coronata* 2. 386, *M. tuberculata* 2. 385, *M. rigidula* 2. 385, *M. pubescens* 2. 385, *Leontodon obovatus* 2. 1037, *Hieracium staticaeifolium* 2. 1041, *Picris Sprengeriana* 2. 1026, *Cirsium canum* 3. 44, *C. ferox* 3. 58, *Conyza Sicula* 2. 1049, *Inula spiraeaeifolia* 2. 1049, *Senecio nemorensis* 2. 1063, *S. aquaticus* 2. 1057, *Cotula aurea* 3. 119, "*chrysanthemum latifolium*" 3. 105, *Acmella repens*, *Achillea herba rota* 3. 144, *Caulinia fragilis* 1. 216, *Salix Ammanniana* 1. 216, *S. arbutifolia* 1. 217, and *S. reticulata* 1. 217. — He died "in 1613," his *Prodrom.* was published "in 1619," and his *Hist. plant.* "in 1650-1."

Thlaspi alliaceum of the Mediterranean countries. A garlic-scented annual described by J. Bauhin 2. 932 — (Spreng.), and Jacquin rar. i. pl. 121; and known to grow in France (Lam. fl. fr.) and Southern Europe (Pers.). By European colonists carried to Northeast America, is enumerated by A. Decandolle as having been found there but not as yet naturalized.

Calepina Corvini of the plains around the Caspian. A Cruciferous weed known to J. Bauhin 2. 895 as brought from Italy and cultivated in a garden at Stuttgart — (Spreng. and A. Dec.), but now occurring in various localities on the Upper Rhine (Koch, and Godron): observed by Barrelier 38 along the Tiber; by Gussone, around Naples and in Sicily; by Vaillant, on garden-walls near Paris; by Boreau, and Lecoq, in central France; by Kitaibel, Bieberstein, and others, in localities more or less artificial in Southern Germany, Hungary, and as far as the Crimea; by Reuter and Margot, on Zante. But farther East, by Goebel, and Hohenacker, wild in moist places in the plains North of the Caspian.

Arenaria trinervis of Europe and the adjoining portion of Asia. Termed "*alsine plantaginis folio*" by J. Bauhin hist. iii. 364, — and Tournefort inst. 242, and known to grow from Sweden and Russia to the Mediterranean (fl. Dan. pl. 429, Curt. lond. iv. pl. 31, Pers., and Wats.): observed by Linnæus in woods in Sweden; by Sibthorp, and Chaubard, in the Peloponnesus. Westward, has been found in Greenland (Wats.).

Ranunculus nivalis of the Arctic region and mountain-summits farther South. Termed "*r. minimus alpinus luteus*" by J. Bauhin hist. iii. 861, — and known to grow from Spitzbergen to the Altaian mountains (Jacq. austr. pl. 325, Pers., and Hook.): observed by Linnæus everywhere on the highest points of the Lapland mountains; by Sibthorp, on the summit of the Bithynian Olympus. Westward, by Sabine in Iceland and Greenland, growing also according to Hooker along the Arctic Sea to Bering's Straits, and on the alpine portion of the Rocky mountains.

Draba muralis of Europe and the adjoining portion of Asia. Termed "*bursæ pastoris sublongo loculo affinis pulchra planta*" by J. Bauhin hist. ii. 938, — "*d. minima muralis discoïdes*" by Columna ecphr. i. pl. 272, "*alysson veronicæ folio*" by Tournefort inst. 217, and known to grow from Sweden to the Mediterranean (Engl. bot. pl. 912, Pers., and Dec.), also in North Africa (Wats.): was observed by Linnæus in Gothland and as far as Upsal; by Brotero, in Conimbrica in Portugal; by Sibthorp, and Chaubard, on the mountains of the Peloponnesus; and by Bieberstein, along the Taurian mountains. Westward, by Hooker in Iceland, and was received by him from Montreal.

Thalictrum galioides of middle Europe. Termed "*t. pratense angustissimis foliolis*" by Bauhin prodr. pl. 146, — "*t. Bauhini*" by Crantz, and known to grow about Basle and on the Upper Rhine (Pers.); observed by C. Ch. Gmelin around Baden; by Crantz, in Austria; by Pollich, in Germany; by Decandolle fl. fr., in France (Steud.); and in less than fifty years after the completion of the Doubs canal "to 1822," made its appearance in the environs of Montbelliard (Bern., and A. Dec.).

Carduus crispus of Europe and the adjoining portion of Asia. A thistle termed "*carduus caule crispo*" by J. Bauhin hist. iii. 59, — and Tournefort inst. 440, "*carduus spinosissimus angustifolius vulgaris*" by C. Bauhin pin. 385, and known to occur in cultivated and fallow ground throughout Europe (fl. Dan. pl. 621, and Pers.): observed by Linnæus as far as Upland in Sweden; by Loesel pl. 5, in Prussia; by Sibthorp, in the Peloponnesus.

Rumex pulcher of Central Asia. Called in Greece "*lapathō*" (Sibth.); known to J. Bauhin hist. ii. 988 only from a specimen sent from Bologne, termed by him "*lapathum pulchrum bononiense*" — (A. Dec.), by Tournefort inst. 504, "*l. p. b. sinuatum*" and seems to have been first observed in Britain by Ray syn. 142, in the outskirts of London: has since become frequent in waste places from Italy throughout middle Europe (Tilli pis. pl. 37, Pollini, Hall. helv. 1593, Lam. fl. fr., and Pers.), was observed by Forskal near Marseilles, by A. Decandolle around Geneva. Eastward, was observed by Sibthorp, and Bory, among rubbish and ruins from the Peloponnesus to Constantinople, and is

said to abound from Caucasus to Tartary (A. Dec.). By European colonists, was carried to America, observed by Elliot around Charleston, S. C.; by A. Saint-Hilaire in the streets of Porto Alegre in Austral America. "*R. divaricatus*" annual and pubescent, but regarded as probably not distinct, was also observed in Italy by Tilli pl. 37 f. 2, and on Lemnos by Sibthorp.

Stachys alpina of the mountains of middle and Southern Europe. Termed "pseudo-stachys alpina" by Bauhin prodr. 113, — and C. Bauhin pin. 236, "*galeopsis alpina betonicae folio flore variegato*" by Tournefort inst. 185, and known to grow in mountainous situations in Germany (Pers.): observed by Celsius, and Rosen, in Sweden (Linn.); by Sibthorp, on the mountains of the Peloponnesus.

Najas major of Europe. An aquatic annual described by J. Bauhin 3779 — (Spreng.), and Micheli n. g. pl. 8. f. 2 — (Pers.); termed "*n. marina*" by Linnæus, "*n. fluviatilis*" by Lamarck; observed by Allioni in Piedmont; by C. Ch. Gmelin, in the waters at Baden; and by Thuillier, near Paris (Steud.). Occurs according to Kunth enum. iii. 113 on the Hawaiian Islands (A. Dec.).

Funcus ericetorum of Eastern Europe and the adjoining portion of Asia. Termed "*foliatus minimus*" by J. Bauhin 2. 523 — (Spreng.); observed by Pollich in the Palatinate (Steud.), by Chaubard in the Peloponnesus.

"1613, May 30th" (narrat., archæol. Amer. iv. p. 285), arrival in Spitzbergen of Benjamin Joseph, William Baffin, Robert Fotherby, and others, with seven English ships, having on board the necessary outfit, and "twenty-four Basks, who are men best experienced" in "killing of the whale." Along the shore "in all places of the countrye" there was "great store of driftwood, which the sea bestows on the barren land" (brought from the great rivers entering the Arctic Sea, the "tree" or "peice of straight timber" towed p. 291 agreeing with Northern Coniferae). "The thawe began" (Lat. 79°) "about the 10th of June:" and "in the moneths of June, Julye. and the beginning of August, ther is oftentimes pleasant and warme weather; but, in the other moneths, certainlie very uncomfortable." The land quadrupeds met with, were "white bears" (*Ursus maritimus*), "graie foxes" (*Vulpes Arcticus*), "and great plentie of deare" (*Cervus rangiferinus*); all three species having come of course over the ice, from Greenland or from Nova Zembla). "But, by all likelihood," the country "was neuer yet inhabited by anie natiues that beare the shape of man."

"The same year" (Charlev., and Holmes), a party of French missionaries, including two Jesuits from Port Royal, landing on the island of "Monts Deserts" (East of the Penobscot), commenced a settlement there: but were forcibly removed by captain Samuel Argoll, on a fishing voyage from Virginia. Returning, Argoll obtained three armed vessels from the governor of Virginia; and after taking formal possession of Monts Deserts, proceeded to destroy the remains of De Monts' settlement on St. Croix, and the abandoned dwellings at Port Royal, where he found "not a single person." The home government being all the while at peace. He also visited Manhattan, and induced the Dutch colonists to submit to the governor of Virginia

"The same year" (Purchas i. 4. p. 371, and Churchill coll.), "rowing betwixt Firando and Fuccata" in Japan, captain John Saris found "a great town, where there lay in a dock a junk of eight or ten hundred tun burden *sheathed all with iron*."

As ambassador from the English Company at the court of Jedo, Saris obtained the following account from a Japanese who had twice visited Yesso: the men (Ainos) "are white and well made, but very rough and hairy all over their bodies:" their "arms consist of a bow and poisoned arrows: those who live on the south side understand weights and measures, but thirty days journey inland they know nothing about them." The Japanese on the island "have no fixed dwelling place or market except Matchma" (Matsmae), where "are five hundred Japanese families who have also a fort:" to this city "almost all the natives go to buy and sell, especially in the month of September to lay in their winter store: in the month of March they bring salmon and all sorts of fish, together with other wares which the Japanese accept in barter" (Sieb. elucid. Vries p. 101).

"In this year" (Winckl., and Spreng.), publication of the Hortus Eystettensis (attributed to Besler), enumerating *Lavatera Thuringiaca* aest. 6. f. 5. 1, *Salvia grandiflora* aest. 8. f. 1, *S. odorata* aest. 8. f. 1. 2, *S. Syriaca* aest. 8. f. 2. 3, *Iris biflora* vern. 8. f. 1. 4, *I. xiphium* aest. 3. f. 10. 1, *Scabiosa Bannatica* aest. 9. f. 9. 3, *S. argentea* aest. 9. f. 10. 3, *Ipomoea discolor* aest. 13. f. 8. 2, *Lysimachia quadrifolia* aest. 10. f. 7. 1, *Lachenalia pallida* vern. 2. f. 17. 2, *Ornithogalum pyramidale* vern. 5. f. 14. 2, *Scilla Lusitanica* vern. 2. f. 11, *Cactus melocactus* autumn. 4. f. 1. 1, *Fragaria elatior* vern. 7. f. 8, *Melissa grandiflora* aest. 7. f. 7. 1, *Geranium palustre* vern. 1. f. 9, and *Malva crispa* aest. 6. f. 9. 1. — Besler died "in 1629."

Iris xiphoides of the West Mediterranean countries. Described by Besler eyst. aest. 3. f. 10. 1, — termed "*iris xiphium*" by Jacquin coll. iii. 320, and known to grow in Spain and Southern France (Pers., and Diétr.). In Britain termed "*xiphium latifolium*" by Miller, "*iris anglica*" by gardeners, and escaping from cultivation has maintained itself forty years upon one point of Wales (Dillw., and Wats.), has also become naturalized in a locality in Scotland (G. Don, and A. Dec.).

"1614 A. D." (Stith, Josselyn, and Holmes), arrival at Manhattan of a new governor from Holland, who refused tribute and acknowledgment to the English, assumed a posture of defence, and under a grant from the States General, named the country "New Netherlands." According to Vanderdonck verthoogh 27, the Dutch in this year had "traded at the Fresh river" (Connecticut), and "had also ascended it."

"The same year" (Smith, Purchas, and Holmes), by John Smith, exploration and survey of the coast between the Penobscot and Cape Cod; and a map presented to prince Charles, who named the country "New England."

"In this year" (Major edit. Strach. p. xvi), Sir Thomas Gates succeeded by Sir Thomas Dale, now third governor of Virginia.

"The same year" (Blair), *logarithms*, facilitating arithmetical computation, invented by John Napier of Merchiston.

"The same year" publication of the glossarium Graecobarbarum of Meursius, the earliest glossary of the kind (E. A. Soph.).

"1615 A. D." (Stith, Chalmers, Holmes, and Major p. xvi), landed property first granted to the colonists in Virginia: "fifty acres" to each adventurer, and his heirs.

"June 9th" (Wilmere edit. Champl. p. xxxvii), Champlain, with two Europeans and ten natives, leaving Sault St. Louis by the "Rivière des Prairies" for the Algonquin country. Thence he continued by land to the Lake of the Nipiserini (Nipising) in "45 $\frac{1}{4}$," descended a river to the great Lake Attigouantan (Huron), and reached the village of Cahiagué on its shore "Aug. 17th," having "overtaken on the way thirteen or fourteen Frenchmen." After an unsuccessful attack on a stockade as allies of the natives, Champlain returned to Cahiagué on the "23d;" — passed the winter in exploring the country, and leaving on the "20th May," after "forty days journey" reached Sault St. Louis.

"In this year" (Winckler, and Spreng.), L. Jungermann publishing his Flor. Altorf, "written in 1600;" — his Flor. Giess. "in 1623," Cat. hort. Altorf "in 1646," and died "in 1653."

In this year (Spreng. gesch. ii. 98, and Winckl.), Lobel in Britain as court-botanist to James I., enumerating *Agrostis pungens* ill. p. 32, and *Pulmonaria maritima* p. 121. — He died "in 1616," and his Illustr. were published by Howe "in 1655."

"The same year = 52d year of the cycle" (Couplet, and Pauth. 411), in China, first persecution of Christians, including P. Alvarez Semedo; by one of the principal mandarins at Nan-king, named Chin-kio. Of the dispersed converts, many were openly protected by Christian mandarins: — and at the end of "six years," Chin-kio was disgraced.

"The same year" (Crawford vii. 11), in the Moluccas, eruption of a volcano on Banda.

"1616, Jan. 25th" (Harris, Churchill coll., and Holmes), by Isaac le Maier and William Cornelison Schouten, an island discovered in "almost fifty-five degrees of south latitude," and named "Staten-land." Sailing through the Strait between this and Terra del Fuego, and passing islands which he named "Barnevelt's," and a cape which he named "Hoorn," Schouten found himself in "fifty-nine degrees twenty-five minutes" and beyond the longitude of the Straits of Magellan. He now changed his course, and in "April," discovered several small islands in about fourteen or fifteen degrees of South Latitude "inhabited by naked people, none of whom come aboard" (Paumotuans), nor could he "come to anchor." Thence sailing West, in "May" he saw many more islands; and inclining Northward to avoid falling South of New Guinea, many more islands were met with, on some of which he landed and procured refreshments. He anchored "July 1st" off the coast of New Guinea; and following this, in "half a degree of south latitude" discovered the small island which has received his own name "Schouten." On reaching Jacatra (Batavia), his vessel was seized; but taking passage with his men in one of the Company's ships, — he reached home; completing in "two years and eighteen days" the Sixth circumnavigation of the Globe.

"Early in this year" (Major p. xvi), Sir Thomas Dale succeeded by Sir George Yeardly, now fourth governor of Virginia. *Tobacco* first cultivated there in this year by the English.

"The same year" (Forster, and Holmes), passing Davis' Straits, Robert Bylot discovered islands in "seventy-two degrees forty-five minutes;" and finding women only there, named them "Women's Islands." Continuing North, he discovered and named Lancaster Sound, Jones Sound, cape Dudley Digges, Wolstenholme Sound, and Whale Sound in 77 deg. 30 min. William Baffin in the same season (. . Churchill coll., and Anders. ii. 268), continued North to "seventy-eight degrees" to a sound called by him "Thomas Smith's:" where the *compass varied* "fifty-six degrees to the westward," making the true North bear "N. E. by E." — The Northern expanse of water has received the name "Baffin's Bay."

"Oct. 25th" (inscript., in Voyag. Belg.), Australia first visited by a European ship; commanded by Hartoghs or Hartograde of Holland. — The *Australians* on the Murray were found by Eyre to have the following account of the origin of the creation, "That there are four individuals living up

among the clouds called Nooreele, a father and his three male children, but there is no mother" (the Hindu system of creation by a Supreme Power with three emanations, Stanley edit. De Morga 307): "the father is all powerful and of benevolent character: he made the earth, trees, etc., gave names to every thing and place, placed the natives in their different districts, telling each tribe that they were to inhabit such and such localities, and were to speak in such and such a language: it is said that he brought the natives originally from some place over the waters to the eastward." Moorhouse found that the natives round Adelaide "believe in a soul or spirit (itpitukutya) separate and distinct altogether from the body, which at death goes to the west, to a large pit, where the souls of all men go."

"The same year" (Chinese chron. table, and Pauth. 410), cities in Northern China captured by the Mantchou or Eastern Tartars; whose chief declared himself emperor, and assumed the name Thian-ming. — The titles "Tai sou Kao-hoang-ti of the Tai-hsing," and "Tsing-Tai-tsou," were added by his descendants.

"The same year" (art de verif.), Fide-jori manifesting predilection for Christianity and the Portuguese, attacked by the regent Ijesaz, and driven to the fortress of Osakka; where, according to one account, he destroyed his palace and himself by fire. Ijesaz having now acquired supreme power, commenced the execution of the policy of Fide-josi, and enjoined all foreigners except the Dutch to quit Japan; and soon afterwards, prohibited the Japanese from leaving their own country.

"In this year" (Spreng.), Columna publishing his Ecphrasi, enumerating *Stachys Heraclea* i. 128 to 131, *Teucrium pseudohyssopum* 67, *Veronica montana* 288, "cercæa minima" *Cercæa alpina* ii. 80, *Fedia echinata* i. 206, *F. coronata* i. 209, *F. dentata* i. 209, *Sherardia erecta* i. 300, *Galium hispidum* i. 297, *Myosotis Apula* i. 185, *Cynoglossum sylvaticum* i. 175, *Androsace Vitaliana* 2. 65, *A. carnea* 2. 65, *Phyteuma orbicularis* i. 224, *Gentiana utriculosa* i. 222, *Hydrocotyle natans* i. 316, *Bupleurum tenuissimum* i. 247, *B. odontites* i. 247, *Daucus muricatus* i. 94, *Tordylium Apulum* i. 124, *Ornithogalum villosum* i. 323, *Chlora sessilifolia* 2. 77, *Scleranthus polycarpus* i. 294, *Saxifraga bryoides* 2. 67, *S. androsacea* 2. 67, *S. bulbifera* i. 317, *Saponaria bellidifolia* i. 153, *Agrimonia agimonooides* i. 144, *Euphorbia epithymoides* 2. 51, *Ranunculus chaerophyllus* i. 311, *Sempervivum arachnoideum* i. 291, *Rhinanthus elephas* i. 188, *Bartsia trixago* i. 197, *Euphrasia latifolia* i. 202, "anonyma S. Gregorii" 2. 50, *Tozzia alpina* 2. 50, *Clypeola ionthlaspi* i. 284, *Sisymbrium Columnæ* i. 268, *Spartium radiatum* i. 294, *Ononis Columnæ* i. 301, *Astragalus sesameus* i. 301, *Geropogon hirsutus* i. 231, *Scorzonera hirsuta* i. 233, *Prenanthes viminea* i. 240, *P. hieracifolia* i. 249, *Hypochaeris minima* 2. 27, *Crepis corymbosa* i. 236, *C. scariosa* i. 237, *Tolpis barbata* 2. 27, *Hyoscris foetida* 2. 31, *Carpesium cernuum* i. 252, *Doronicum Columnæ* 2. 36, *Centaurea crupina* i. 34, and *Orchis simia* i. 320. — He died "in 1640."

Turgenia latifolia of the Tauro-Caspian countries. An annual Umbelliferous weed described by Columna ecphr. i. 97 — (Spreng.), known also to the Bauhins (A. Dec.), termed "c. arvensis echinata latifolia" by Tournefort inst. 323, "caucalis latifolia" by Linnæus, and known to occur in cultivated ground throughout middle Europe (Jacq. hort. pl. 128, Hoffm., and Pers.): in Britain, is first mentioned by Dillenius "in 1724;" was observed by Moris in Sardinia, by Munby in Algeria, by Gussone in Sicily; by Sibthorp, and Fraas, in cultivated ground from the Peloponnesus to Cyprus. To all appearance wild on the mountains of Suwant (Hohen. and C. A. Meyer).

Thlaspi perfoliatum of Europe and the adjoining portion of Asia. Described by Columna ecphr. i. 276 — (Spreng.); termed "t. arvense perfoliatum majus" by Tournefort inst. 212, "erba montanella" by Micheli (Targ.), "t. alpestre" by Hudson, "t. montanum var." by Lamarck fl. fr. (Steud.), and known to occur throughout middle Europe (Jacq. austr. pl. 237, and Pers.); was observed by Sibthorp, and Chaubard, from the Peloponnesus to Cyprus.

Hutchinsia petraea of Europe and the adjoining portion of Asia. A diminutive annual termed "cardamine pusilla saxatilis montana discoides" by Columna ecphr. i. pl. 274. — "nasturtium pumilum verum" by C. Bauhin pin. 105, and Tournefort inst. 214 and known to grow in stony places, chiefly calcareous, from 59° in Sweden to the Mediterranean (Engl. bot. pl. 111, Jacq. austr. pl. 131, and A. Dec.), also on the mountains of Algeria (Du Rieu): observed by Linnæus in Sweden; by Miquel, in Holland; by Gaudin, in Switzerland; by Brotero, in Portugal; by Boiss., on the Sierra Nevada in Spain; by Moris, on the mountains of Sardinia; by Gussone, on the mountains of Sicily; by Ebel, in Dalmatia; by Baumgarten, in Transylvania; by Sibthorp, and Chaubard, in the Peloponnesus; and by Bieberstein, in the Crimea.

Allium pallens of the Mediterranean countries. Described by Columna ecphr. ii. pl. 7, — termed "a. montanum bicornis flore pallido odore" by Tournefort inst. 384, and known to grow in Spain, Italy, and Pannonia (Pers.): observed by Gouan ill. 24 in the environs of Montpellier; by Sibthorp, frequent on the Greek islands; by . . . in Egypt.

Hieracium aurantiacum of middle and Western Europe. Described by Columna ecphr. 2. 30 — (Spreng.), termed "h. fuscum" by Villars (see Steud.), and known to grow in the subalpine woods of middle Europe (Jacq. austr. pl. 410, and Pers.). In Britain, long cultivated for ornament,

but discovered by G. Don escaped from gardens in several localities in Northern Scotland (Engl. bot. pl. 1469), afterwards found in localities in Wales and the North of England, but universally admitted to be exotic (Wats. cyb. ii. 52, and A. Dec.).

Centaurea solstitialis of Austral America? Called in Greece "phalaritha" (Sibth.); termed "spina solstitialis" by Columna ecphr. i. 31 — (Spreng.), "carduus stellatus luteus foliis cyani" by Tournefort inst. 440, "centaurea sicula" by Leysser (Steud.): observed by Sibthorp, Chaubard, and Fraas, frequent from the Peloponnesus throughout the Greek islands; by Forskal on Malta as well as near Marseilles; and is known to occur in cultivated ground throughout middle Europe (Lam. fl. fr., and Pers.), occasionally making its appearance in the grain-fields of Britain (A. Dec.). By European colonists, was carried to Southeast Australia, where it has become naturalized, occurring far inland (Corder). "C. tomentosa," called "atrôgira" at the Dardanelles and Smyrna, and the young shoots eaten, is regarded by Forskal as perhaps not distinct.

"1617 A. D." (art. de verif.), Achmed succeeded by Mustafa, seventeenth Turkish sultan.

"June 17th" (Alst.), Philip III. of Spain having yielded his claim, Ferdinand grandson of the emperor Ferdinand, crowned king of Bohemia. This was regarded by the Bohemians, as interfering with their right of electing a king.

"August" (D. Laing pref. 5), letter from Capt. John Mason "from the plantacion of Cuper's Cove" in Newfoundland to John Scot, in which he expresses the hope to "afford" a "mapp" of the island "with a particular relacien." — His "Brief discourse of the Newfoundland," written after "three yeares and seuenth monthes residence," was printed in Edinburgh in 1620; and that he spent seven years on the island is stated on the map.

"The common wild herbes" of Newfoundland according to Mason are "angelica" (*Ligusticum actaeefolium*), "violets" (*Viola cucullata*, *V. palustris*, and *V. Muhlenbergii*), "mints" (*M. Canadensis*, and *M. aquatica*), "scabius" * "yarrow" (*Achillea millefolium*), "sarsaparilla" (*Aralia nudicaulis*), "with divers other sorts:" of these "we haue only made vse of certain great green leaues plêtifully growing in the woods" (*Heracleum lanatum*), "and a great roote growing in fresh water ponds" (*Nymphaea odorata*), "both good against the skiruye; and an other prettie roote with a blew stalke and leaues of the nature of a skirret growing in a dry beachy ground, good meate boyled" (*Ligusticum Scoticum*): "the countrie fruites wild are, cherries small whole groaues of them" (*Cerasus Pennsylvanica*), "filberds good" (*Corylus rostrata*), "damaske roses single very sweet" (*Rosa blanda*), "excellêt straberries" (*Fragaria Virginiana*), "and hartleberries" (*Vaccinium Pennsylvanicum*), "and gooseberries somewhat better than ours" (*Grossularia hirtella*): "also a kind of wild coranies" (*Ribes rubrum?*), "wild pease or feetches" (*Pisum maritimum*). "the North parts most mountanye and woodye very thick of firre trees" (*Abies balsamea*), "spruce" (*Abies nigra*), "pine" (*Strobus vulgaris*), "lereckhout" (*Larix Americana*), "aspe" (*Populus tremuloides*), "hasill" (*Corylus Americana*), "a kinde of stinking wood" (*Acer?*), "the three formest goodly timber:" but "no oakes, ashe, beech, or ellmes, haue we seene or heard of."

Of plants introduced and cultivated, "wheate, rye, barlie, oates, and pease" have "growen and ripened" as well "as in Yorkshire:" and of garden herbs "hysope" (*Hyssopus officinalis*), "time, parsely, clirie, nepe" (*Nepeta cataria*), "french mallowes" (*Althæa officinalis*), "buglosse" (*Anchusa officinalis*), "collombines" (*Aquilegia vulgaris*), "wormewood" (*Artemisia absinthium*), "etc." there is at this present of three yeares old of my sowing, likewise rosemary, fenell, sweet marierim, bassel, purselyn" (*Portulaca oleracea*), "lettise, and all other herbes and rootes, as tornepe, pasnepes, caretts, and radishes we haue found to growe well there in the sommer season."

"In this year" (Major edit. Strach. p. xvi), Sir George Yeardley succeeded by Captain Argoll, now fifth governor of Virginia.

* *Erigeron (Phalacrologa) annuum* of Northeast America. Sometimes called there *sweet scabious* (A. Gray), in which we recognize the "scabius" seen by John Mason in Newfoundland: — *P. annuum* was observed by Muhlenberg in Pennsylvania (Pers.); by Pursh, "common;" by A. Gray, in "fields and waste places, a very common weed" in central New York; by myself, from 43° to 40° along the Atlantic; by Schweinitz, as far as 36° in Upper Carolina. Eastward, was received from America by Cornuti pl. 194, and termed "bellis ramosa umbellifera:" becoming naturalized, is figured in 1749 by Gmelin ii. 78, from seeds collected in the Ukraine; in 1770 by Oeder fl. Dan. pl. 486, found near Altona; but has since become generally distributed throughout Germany, France, and Northern Italy (Pers., and A. Dec.).

Erigeron (Phalacrologa) strigosum of Northeast America. The leaves more entire and floret-rays invariably white, possibly the "scabius" in question: — observed by Muhlenberg in Pennsylvania; by Pursh, from Canada to Virginia; by A. Gray, "fields, etc., common" in central New York; by myself, from 45° to 40° along the Atlantic; by Schweinitz, as far as 36° in Upper Carolina.

"In this year" (Johns. wond. prov. 8), a remarkable comet, noted throughout Europe and by the natives around Massachusetts Bay: who "not long before" first saw a ship and spread the alarm in their light canoes "made of birch rindes." The ship brought copper kettles, and readily opened trade with the natives.

"Nov. 12th" (Anders, and Holmes). arrival of Walter Raleigh in Guayana; where he captured a Spanish city, and searched for mines, intending to form a settlement. — In the following year, returning disappointed to England, he was arrested, and on the "29th of October" beheaded: counted (according to Burnet) "a barbarous sacrificing him to the Spaniards." Raleigh and Humphrey Gilbert (see above) are regarded as the founders of the trade and naval power of Britain.

Piratinera Guayanensis of Guayana. Raleigh was accompanied by two Hollanders in search of "*spekeld wood*," called by the natives "paira," — as identified by Schomburgk (edit. Ral.): *P. Guayanensis* is also described by Aublet.

"1618, May 15th" (Humb. cosm. ii.), demonstration by Kepler, That the squares of the times of revolution of the planets are as the cubes of the mean distances. Kepler also discovered, That the planets move in ellipses, the sun occupying one of the foci.

"June" (Alst.), by the "directors of the kingdom," the Jesuits expelled from Bohemia.

"In this year" (Spreng., and Winckler), Philipp and Albert Menzel publishing their *Synon. plant. Ingolst.*

Hardly later than this date. Vesling while a youth "*cum juvenis*" (Spreng.) visiting Egypt, meeting with *Salvia marruboides* 77: — his account was published in "1638;" and shortly after making a second visit, he died in "1649."

Ipomoea palmata of Equatorial Africa. Called in Egypt "*sett el hösch*" (Forsk.) or "*cherk falek*" (Del.): observed there by Vesling pl., and termed "*convolvulus Aegyptiacus*:" — by Forskal p. 43, and Delile, climbing over trees in gardens, and over reeds along the Nile; by Grant, "common, Nile banks 9° N. etc." Eastward, was observed by Roxburgh frequent in Hindustan, but no native name is given. Transported to Europe, is described by C. Bauhin pin. 295; and is termed "*i. tuberculata*" by Roemer and Schultes. By European colonists, was carried to the Mauritius Islands, observed by Bojer under cultivation and hardly naturalized (A. Dec.); to Montevideo, Brazil, and Para (Choisy); and to the Hawaiian Islands (Choisy, A. Gray, and Mann).

"In this year" (Major edit. Strach. p. xvii), the administration of Argoll in Virginia causing great dissatisfaction, the captain general Lord de Lawarre was again sent out: but on the way, died in or near the bay which bears his name.

"1619 A. D." (. . . Stith, and Holmes), a provincial legislature granted to Virginia; enabling the colonists to take part in the government. The first meeting was on "June 19th."

"July" (Relat. du Groenl. 237). under instructions from Christian IV. of Denmark, Captain Munck sailing through Hudson's Strait into Hudson's Sea; where he wintered in "63° 20'." Much suffering was endured from scurvy and want of food, but searching among the snow "they found a kind of strawberry" (*red-mora*, *Protococcus nivalis*) "which sustained and nourished them after a manner," though withering "a short time after" removal from the snow. — "Apr. 12th," rain fell for the first time in seven months. "July 16th," abandoning the largest of his two vessels, Captain Munck and a few survivors sailed for home; arriving in Norway "Sept. 21st."

"In this year" (Spreng.), plants brought from the 'Isle Virgine' described by Jo. Robin, including "*narcissus virginianus flore albo rubicante*" *Amarvllis atamasco* pl. 4. "*martagon de Canada*" *Lilium superbum* pl. 10 — He published a Second edition "in 1620" (introd.).

"Aug. 28th" (Alst. p. 573), Matthias succeeded by the king of Hungary and Bohemia, now Ferdinand II., thirty-fourth emperor of Germany and Italy. "Aug. 29th," by the Bohemians, a new king elected in opposition; soon followed by removing the images from a church in Prague, and open war.

"The same year" (Blair), by William Harvey of England, discovery of the *circulation of the blood*.

"In this year" (Spreng.), Joh. Frank, a friend of C. Bauhin, publishing his *Hort. lusat.*, with Latin, German, and some Wendish names of plants.

"1620 A. D. = 'tai-tchang,' 1st year of Kouang-tsong II., of the Ming" or Twenty-third dynasty (Chinese chron. table, and Pauth. 414). He reigned "one month" only.

"In this year" (Krusenstern, and Bickmore), the Jesuit Hieronymus de Angelis visiting Yeso and Krafu (Saghalien), being probably the first European who travelled so far through the Japanese empire. In a letter (dated "1622," Sieb. elucid. Vries p. 99) he gives the following particulars respecting Yeso: "as for the appearance of the inhabitants" (Ainos), "they are coarse and of a larger stature than men generally are, more inclining in colour to white than brown: they wear long beards sometimes down to the middle:" instead "of armour they have coats of small planks fastened together, which is ridiculous to look at." The "lord of Matsumay assured me that the inhabitants of Jesso went to three islands not far distant from their country and the inhabitants of which had no

beards and a very different language" (Aleutians) to purchase "raccon" (skins of *sea-otter*, *Enhydrys marina*): "but he did not know whether those islands were to the South or North of Jesso." — In "1623," Hieronymus de Angelis was burned at Yedo.

"In this year" (Krapf trav.), Ormuz on the Persian Gulf captured from the Portuguese: an event which strengthened the influence of the Arabs of Oman.

"In this year" (Spreng., and Winckl.), C. Bauhin publishing his *Prodrom.*, enumerating *Salix herbacea* 159, *Valeriana tripteris* 86, *V. montana* 87, *Scirpus triqueter* 22, *S. (Isolepis) fluitans* 23, *Aira caryophylla* 105, *Festuca? distachya* 19, *Sesleria echinata* 16, *Poa compressa* 2, *P. bulbosa* 6, *Dactylis littoralis* 2, *Triticum rigidum* 17, *Festuca pinnata* 18, *Globularia spinosa* 121, *Asperula Pyrenaica* 146, *Asperula laevigata* 145, *Galium pusillum* 145, *G. glaucum* 145, *G. Bauhini* 146, *Alchemilla pentaphylla* 138, *Potamogeton setaceus* 101, *Lysimachia linum-stellatum* 107, *Campanula stylosa* 35, *C. caespitosa* 34, *C. barbata* 36, *Lobelia urens* 53, *Erythraea spicata* 130, *Rhamnus alpinus* 160, *Ribes alpinum* 160, *Herniaria alpina* 160, *Velezia rigida* 103, *Astrantia minor* 97, *Bupleurum stellatum* 129, *B. petraeum* 129, *B. angulosum* 129, *B. ranunculoides* 129, *Heracleum angustifolium* 83, *H. Austriacum* 83, *Scandix pinnatifida* 78, *Rhus glabra* 158, *Statice cordata* 99, *S. minuta* 99, *Linum Narbonense* 107, *Sedum rubens* 132, *Luzula albida* 16, *Rumex vesicarius* 54, *R. Tingitanus* 56, *Oxyria digyna* 55, *Daphne thymelea* 160, *Elatine alsinastrum* 24, *Monotropa hypopitys* 31, *Saxifraga petraea* 131, *Dianthus sylvestris* 104, *D. suffruticosus* 104, *Arenaria tetraquetra* 105, *A. juniperina* 105, *Sedum atratum* 132, *Cerastium latifolium* 104, *C. tomentosum* 104, *Euphorbia rubra* 133, *Potentilla intermedia* 139, *Papaver alpinum* 93, *P. Cambricum* 92, *Aquilegia viscosa* 75, *A. alpina* 75, *Nigella Hispanica* 75, *N. Orientalis* 75, *Anemone vernalis* 94, *Isopyrum aquilegioides* 75, *Stachys Cretica* 113, *S. arvensis* 111, *Scutellaria alpina* 116, *Linaria repens* 106, *L. arvensis* 107, *L. origanifolia* 106, *L. Dalmatica* 106, *L. linifolia* 106, *Myagrum perenne* 37, *Draba stellata* 51, *Thlaspi hirtum* 47, *Alyssum montanum* 49, *Cardamine resedifolia* 45, *C. parviflora* 44, *Sisymbrium asperum* 41, *Arabis arenosa* 40, *Erysimum hieracifolium* 102, *Cheiranthus trilobus* 103, *Arabis Halleri* 46, *Lavatera trimestris* 132, *Genista Hispanica* 157, *Orobis luteus* 149, *Hedysarum caput-galli* 149, *Astragalus incanus* 149, *A. exscapus* 147, *Trifolium Cherleri* 143, *T. saxatile* 140, *T. scabrum* 140, *T. spumosum* 140, *Lotus diffusus* 144, *Medicago orbicularis* 130, *H. nummularium* 130, *Sonchus maritimus* 61, *S. tenerrimus* 61, *Hieracium praealtum* 67, *H. chondrilloides* 64, *H. grandiflorum* 65, *H. glutinosum* 63, *Crepis foetida* 68, *Andryala cheiranthifolia* 61, *Hyoseris radiata* 62, *Conyza saxatilis* 123, *Senecio linifolius* 107, *Cineraria cordifolia* 69, *Inula provincialis* 69, *Chrysanthemum atratum* 120, *C. Halleri* 120, *Anthemis mixta* 121, *A. altissima* 70, *Achillea macrophylla* 39, *Centaurea alpina* 56, *C. pectinata* 128, *C. cineraria* 128, *C. sonchifolia* 128, *Aceras alpinum* 29, *Chara hispida* 25, *Carex Baldensis* 13, *C. ornithopoda* 9, *Salix retusa* 159, *Neckera pennata* 151, *Trichostomum ericoides* 151, *Mnium roseum* 151, *Fucus bulbosus* 154, *F. saccharinus* 154, *F. palmatus* 155, *F. filum* 155, *Padina pavonia* 155, "gramen junceum folio articulo cum utriculis" 12 *Fucus sylvaticus*.

Clematis angustifolia of the Uralian plains. An erect species described by C. Bauhin prodr. 135 — (Spreng.): observed by Jacquin rar. pl. 104 in Austria; by Messerschmid 1274 in Siberia (Amman stirp. 108); by Pallas iv. 316 to 701, as far as Daouria.

Thalictrum angustifolium of Europe and the adjoining portion of Asia. Described by C. Bauhin prodr. 146 — (Spreng.); termed "t. pratense angustissimo folio" by Tournefort inst. 271; observed by Sibthorp on the Bithynian Olympus; by Crantz, in Austria; known to grow also in Germany and France (Pers.), and within fifty years between the completion of the Doubs canal and "1822," made its appearance in the environs of Montbelliard (Bern., and A. Dec.).

Sagina nodosa of Subarctic climates. Described by C. Bauhin prodr. 118 — (Spreng.); termed "stellaria nodosa" by Scopoli, "spargula nodosa" by Linnæus (Steud.); and known to grow in marshes and on the seashore from Lapland and Northern Asia to Denmark, Ireland, and Switzerland (fl. Dan. pl. 96, Pers., and Wats.). Westward, was observed by Hooker on Iceland, and received from the Arctic shore at the mouth of Mackenzie river; was observed by Oakes and Robbins along the Atlantic as far South as 43° on the Isle of Shoals; and was received by A. Gray from the "shore of Lake Superior."

Silene rupestris of Northern Europe and mountains farther South. Described by C. Bauhin prodr. 104 * — (Spreng.), and termed "lychnis glabra minima, aut caryophyllæi minima species flore

* *Cornus Canadensis* of Subarctic America. The dwarf cornel or pigeon-berry is a low woodland herb, transported to Europe. Described by C. Bauhin prodr. 101 — (Spreng.), and termed "solanum quadrifolium bacciferum" in pin. 167 (Linn.). Westward, was received by Collins from Labrador; was observed by Lapylæ in Newfoundland; by Josselyn pl. 80, in New England; by myself, frequent from 48° on the Lower St. Lawrence to 42°; by Torrey, as far as 41° on the Hudson; by Drummond, at Fort Cumberland in 54°; and according to Hooker grows nearly to the Arctic Sea,

albo" in pin. iii. 360, "l. saxatilis alpina glabra pumila" by Tournefort inst. 338; known to grow in Lapland and on the mountains of middle Europe (fl. Dan. pl. 4, and Pers.): observed by Celsius, and Linnæus, in Lapland and on the mountains of Sweden; by Sibthorp, on the mountains of Greece.

Geranium pusillum of Europe? Termed "g. columbinum tenuius laciniatum" by C. Bauhin prodr. 138 — (Linn. sp.); observed by Scopoli 847 in Carniolia, — by Cavanilles iv. pl. 83, in Spain; and known to occur in waste places and cultivated ground throughout middle Europe (Ray angl. iii. 16. f. 2, and Pers.). By European colonists was carried to Northeast America, occurring according to A. Gray in "waste places, New York."

Convolvulus tricolor of Peru? Described by C. Bauhin prodr. 134 — (Spreng.), Morison i. pl. 4, and Linnæus; and further attributed by Persoon to "Africa, Mauritania, Spain, and Italy."

Ipomæa coptica of the Tropical border of the Sahara from Senegal to Hindustan. From transported specimens, described by C. Bauhin prodr. 134 — (Spreng.), Linnæus, and Roth. In its wild state, known to grow in Senegal and Nubia (A. Dec.); and farther East, observed in Hindustan by Roxburgh, and by Graham "in the open glades about Kandalla, creeping among the grass." *I. coptica* is further attributed by A. Decandolle with a mark of doubt to Cuba; and if really occurring there, has of course been introduced through European colonists.

Sibbaldia procumbens of the Arctic region and mountain-summits farther South. Described by C. Bauhin prodr. 139 — (Spreng.), and Sibbald ii. pl. 6: observed by Gmelin on the mountains around Lake Baikal: — by Bieberstein, on Caucasus; and known to grow in Finland, Lapland, and from Scandinavia to the Farøe Islands and the mountains of Scotland (Ledeb.); also on the Pyrenees (A. Dec.), the Sierra Nevada at the elevation of "9500 feet," and on the Swiss Alps (Koch) Westward, was received by Hooker from the Rocky mountains, and by Ledebour from Unalashka; but I have not met with evidence of its existence on the mountains of New England.

Zannichellia palustris of Temperate climates. An aquatic termed "potamogeton capillaceum capitulis ad alas trifidis" by C. Bauhin prodr. 101, — "Z. p. major foliis gramineis acutis" by Micheli pl. 84, and known to grow from Lapland and Russia to the Mediterranean (Ray angl. iii. 135, Engl. bot. pl. 1844, Pers., and Wats.): observed by Linnæus in Lapland and Sweden, in rivers and ditches; by Decandolle, in France; by Gussone, in Sicily; by Munby, in Algeria; by Sibthorp, in the environs of Constantinople; by . . . in Egypt (Kunth); by Bieberstein, along the Taurian mountains. Westward, has been received from Virginia (Pers., and Pursh); by Hooker fl. ii. 170, from Oregon; according to A. Gray, grows in New England (A. Dec.) in "ponds and slow streams, rather rare;" and according to Chapman, in "West Florida." In the Southern Hemisphere, was observed by Cl. Gay in Chili; by J. D. Hooker, in New Zealand.

Narcissus dubius of the Mediterranean countries. Described by C. Bauhin prodr. 27 — (Spreng.), and Rudbeck ii. pl. 51 (Pers.): observed by Gouan ill. 22 in the environs of Montpellier; by Gittard, in the Peloponnesus.

"In or about this year" (Markham edit. p. viii), Pachacuti-yamqui Salcamayhua, a native, writing on the Antiquities of Peru.

also on the Columbia river as far as the Northwest Coast; was received by Decandolle from Unalashka. The berries are abundant, and though insipid are sometimes eaten.

Uvularia perfoliata of Northeast America. Smilaceous and resembling the herb called "Solomon's seal," transported to Europe and termed "polygonatum perfoliatum" by C. Bauhin prodr. 136 — (Spreng.), "polygonatum ramosum flore luteo minus" by Cornuti pl. 41 as received from "Nova Francia;" described also by Morison xiii. pl. 4. Westward, was observed by Pursh from Canada to Carolina; by myself, from 45° to 40° along the Atlantic; by Schweinitz, at 36° in Upper Carolina; by Elliot, rare in Lower Carolina; by Chapman, in "Florida, and northward;" and by Short, in Kentucky.

Trillium erectum of Northeast America. With flowers and ovary mostly dark-purple. Transported to Europe, is described by C. Bauhin prodr. 91 — (Spreng.), and Cornuti pl. 167. Westward, observed by Cleghorn in Canada (Hook.); by myself, from 48° on the Lower St. Lawrence to 40° along the Atlantic, a woodland plant; by Pursh, from Pennsylvania to Carolina; by Elliot, on the Alleghanies of Carolina; by Chapman, "on the mountains of North Carolina, and northward;" and by Short, in Kentucky. Its rhizoma according to Lindley is "violently emetic."

Adiantum pedatum of Northeast America. The *Canada maiden-hair* transported to Europe, described by C. Bauhin prodr. 150 — (Spreng.), and termed "adiantum americanum" by Cornuti pl. 6. Westward, "maiden-hair" ordinarily "half a yard in height," was seen by Josselyn rar. 55 in New England: *A. pedatum*, by Lapylaie from 51° in Newfoundland; by myself, from 44° to 40° along the Atlantic; by Croom, near Newbern; by Chapman, in "North Carolina, and northward;" by Nuttall, on the Mississippi; and by Drummond, as far as 53° on the Rocky mountains.

"In the beginning of this year" (N. Shaw edit. Champl. p. xlviii), the duke of Montmorency made viceroy of New France, "from Florida along the seacoast to the Arctic circle; to the west, from Newfoundland to the Great Lake called the Freshwater Sea" (Lake Superior). Champlain was appointed his lieutenant, to proceed to the new colony and have entire control (letter from the king "May 7th").

"The same year" (Smith, Chalm., and Holmes), freedom granted to the colonial commerce of Virginia: and a Dutch ship arriving, sold "twenty *negroes*," being the first imported into Virginia. The Dutch West India company chartered in this year; and the island of Margarita seized, and from this time chiefly abandoned by its Spanish inhabitants.

"Nov. 11th" (Bradf., and Holmes), under a pledge from king James "Not to molest them," arrival at Cape Cod of "one hundred" Brownists or Puritan reformers, in the ship *Mayflower*. Finding themselves contrary to their wishes in "Lat. 42°," beyond the chartered limits of South Virginia, and therefore under no government; an agreement was signed before landing, and John Carver elected governor for one year. On "Wednesday the 15th," a party on shore under Miles Standish "saw five or six persons with a *dogg*." A few days afterwards, a party in the shalop "found more of their *corne* and of their *beans* of various collours" (*Phaseolus vulgaris*). "Before the close of November" (Holmes), birth of Peregrine White; the first child of European parentage born in New England. — He died in 1704, in his "eighty-fourth year" (Prince chron.).

"Dec. 9th" (Churchill coll. ii.), *eclipse of the moon*. Observed in Anam or Cochinchina by Borri; of the party of missionaries who first entered that country.

"Dec. 23d, Saturday" (Churchill coll., and Holmes), after searching the bay beyond Cape Cod, and selecting a harbour, many of the colonists went on shore to remain permanently; and commenced a settlement, which they called "New Plimouth." — The "twenty-second day of December, new style, corresponding to the eleventh, old style" (Holmes), has long been observed as the anniversary of the Landing.

"The same year" (Spreng.), by H. and Z. Jansen in Holland, *microscopes* invented and first manufactured.

"1621 A. D. = 'thian-ki,' 1st year of Hi-tsoung-tchi-ti, Tchi-ti," or Hi-tsoung, "of the Ming" or Twenty-third dynasty (Chinese chron. table, and Pauth.). Hi-tsoung invited Portuguese soldiers from Macao, to aid him against the Mantchous; but through the jealousy of merchants, was persuaded to order a return (Semedo, and Pauth. 414).

"In this year" (Klapr. mem. i. 323), Japanese establishing themselves on the Northern coast of Formosa.

"In this year" (Stirling, and W. W. Hunter), prince Shah Jahan, rebelling against his father the emperor Jahangir, takes possession of Orissa and Bardwan.

"March 16th" (Holmes), the colonists at Plymouth visited by Samoset, a native who had learned broken English from fishermen. Means of communication were now obtained; and through him, Squanto a native who had been forcibly carried to England, and Hobomack a third friendly native, a treaty was entered into with Masasoit, the most influential chief among the surrounding tribes. "Great store of wild *turkies*" were found in the woods (Bradf.). "June 18th," a *duel* between two servants: who were condemned to lying twenty-four hours the head and feet tied together. "Sept. 13th," visit of nine sachems, who voluntarily subscribed an instrument of submission to king James; partly, it would appear, through fears of the Canadian French. "Nov. 11th," arrival of Robert Cushman with "thirty-five" additional colonists; bringing a charter, procured by friends at home.* — The treaty of friendship with Masasoit and the natives continued inviolate more than fifty years, until 1675.

"The same year" (Purchas, and Holmes), a school for the natives founded in Virginia, endowed with a tract of land, and connected with the college at Henrico. And in England, the policy of favouring colonial over foreign importations, adopted.

"The same year" (Alst. p. 561), by the emperor Ferdinand II., the Protestants banished from "Bohemia, Moravia, Austria, Silesia, and Lusatia." In France (Blair), commencement of civil war against the Protestants: — the war continued seven years, until the capture of Rochelle by Louis XIII.

"In this year" (Linn. fl. suec. p. vii), academic dissertation by J. L. Starchii, the first Swede who wrote on plants; treating them however only in a general way.

* *Juniperus prostrata* of Subarctic America. The *ground juniper* is clearly the "junipere" of Plymouth Colony mentioned in W. Morell's poem, — and "juniper" of New England described by Josselyn 49 as "very dwarfish and shrubby:" *J. prostrata* is described by Michaux (Pers.); was observed by myself from 45° to 42° along the Atlantic; by Nuttall, from Lake Huron to Fort Mandan on the Upper Missouri; by Drummond, from the Saskatchewan to 53° on the Rocky mountains; and by Mertens, to 57° on the Pacific at Norfolk Sound.

"In the night of Sept. 12th and 13th, the moon being one day old" (Relat. du Groenl. 207), a remarkable display of the *aurora borealis* in France, observed and described by Gassendi (vit. Peresc. and ex. Flud).

"1622, Sept. 16th" (Alst. p. 585. and Blair), Heidelberg on the Upper Rhine captured by the emperor Ferdinand II., and its Library sent to Rome.

"In this year" (title-page), publication in London of "A briefe relation of the discovery and plantation of New England . . . from 1607 to this present 1622:" enumerating among the products "oake" (*Q. alba*), "firre" (*Abies balsamea*), "masts for ships of all burdens" (*Strobus strobus*), "pitch" (*Pinus rigida*), "walnut" (*Juglans cinerea*), "chestnut" (*Castanea Americana*), "elme" (*Ulmus Americana*), "plum-trees" (*Prunus Americana*), "vines of three kindes and those pleasant to the taste yet some better than other" (*Vitis cordifolia*, *V. labrusca*, and *V. æstivalis*), "hempe" (*Apocynum cannabinum*), "flax" (*Linum Virginianum*), and "silkgasse" (*Eriophorum Virginicum*).

"1623, January" (Churchill coll., and Holmes), a settlement commenced by the English on St. Christopher; and one by the French on the same day at the other end of the island, being their first settlement in the West Indies. The settlers were soon driven out of the island by the Spaniards: — but afterwards returned; the French in small numbers, the more enterprising preferring to form settlements on Guadalupe and Martinico.

"The same year" (Holmes, see also Bradford), after long trading with the natives, the Dutch commenced settlements; and at the mouth of the Hudson, built a town which they called "New Amsterdam" (New York). They further established fortified trading-posts; "Fort Orange," a hundred and fifty miles up the Hudson; and "Fort Nassau," on the East side of Delaware Bay.

"The same year" (Hubbard, and Holmes), under patents from England, settlements commenced and a house built within the mouth of the Pascataqua river. — The origin of the State of New Hampshire.

"July 13th," under a charter from king James, a ship sent by Sir William Alexander encour. col. 35 entering Luke's Bay in Nova Scotia. On landing, "meadows" were met with "hauing roses white and red" (*Rosa blanda* and *R. lucida*) growing "with a kind of wilde lilly which had a daintie smel" (*Lilium Canadense*?), and on ground without wood between the two rivers "goose-beries" (*Grossularia cynosbati*), "strawberies" (*Fragaria Virginiana*), "hind-beries" (*Rubus Occidentalis*?), "ras-beries" (*Rubus strigosus*), "and a kind of red wine-berie" (*Vaccinium vitis-Idæa*), also "some eares of wheate" (*Triticum repens*?) "barly" (*Hordeum jubatum*?) and "rie" (*Elymus Virginicus*?) "growing there wilde," and along the coast "pease" (*Pisum maritimum*) "good to eate but did taste of the fitch:" the country for twelve leagues along to Port Negro found full of woods, "the most part oake" (*Quercus rubra*?), the rest "firre" (*Strobus strobus*), "spruce" (*Abies nigra*), "birch" (*Betula papyracea*), "with some sicamores" (*Acer saccharinum*) "and ashes" (*Fraxinus sambucifolia*), "and many other sorts" they had not seen before.

"In this year" (Spreng., and Winckl.), C. Bauhin publishing his Pinax and writing his Theatr., enumerating *Scirpus (Isolepis) acicularis* theatr. 183, "gramen typhoides spica angustiore" theatr. 53, *Alopecurus agrestis*, *Pollinia gryllus* theatr. 149 *Chrysurus echinatus* theatr. 59, *Aira flexuosa* theatr. 14, *Bromus velutinus* theatr. 143, "gramen caninum arvense" theatr. 9, *Agropyrum repens*, *Pulmonaria suffruticosa* pin. 521, *Linum viscosum* pin. 214, *Tradescantia Virginica* pin. 516, *Aster alpinus* ad Matth. 818, *Rhododendron Lapponicum* pin. 468, *Juncus filiformis* pin. 12, and *Cardamine bellidifolia* pin. 105, *Carex flava* 7, "cannabis virginiana" 320, *Acnida cannabina*. — He died "in 1624," and the first portion of his Theatr. was published by his son "in 1658."

Lathyrus palustris of Subarctic climates. Termed "l. peregrinus foliis vicie flore subcæruleo pallideve purpurascente" by C. Bauhin pin. 344. — and known to grow in marshes from Lapland throughout middle Europe (fl. Dan. pl. 399. Engl. bot. pl. 169, and Pers.), also in Northern Asia (Wats.): was observed by Linnæus in Lapland and Sweden; by Brotero, in Extramadura in Portugal; by Savi, in Etruria. Westward, by Michaux in Northern Canada; by myself, along the Atlantic as far as 42°, only on the border of salt marshes; but according to Hooker, grows throughout Canada to the Saskatchewan and along the Northwest coast as far South as 48°.

Spiræa hypericifolia of the Uralian plains. An ornamental shrub described by C. Bauhin pin. 517 — (Spreng.), seen by Barrelier in Spain (Camb.), by Thunberg in Japan. In its wild state, observed by Pallas trav. from 53° on the Lower Volga; known to grow also on Caucasus (Dec. prodr.). By European colonists was carried to Northeast America, where it continues frequent in gardens (A. Gray).

Leersia oryzoides of Northeast America. A subaquatic grass known perhaps to C. Bauhin* —

* *Blitum capitatum* of North America. Called in Britain *blite* (Prior) or *strawberry spinage*, in France "blette" (Nugent): described by C. Bauhin ad Matth. 365 — (Spreng.), Knorr del. hort. i. pl. E. 3, and Linnæus hort. cliff. 1; termed "morocarpus capitatus" by Scopoli (Steud.); and known to

(though not in his herbarium), and from at least 1705 occurring along streams from Paris throughout middle Europe (Linn., Mieg, Schreb. vi. pl. 22, Web., Spreng., and A. Dec.): termed "*homalocenchrus oryzoides*" by Pollich (Steud.), and observed by Savi in Etruria; by Delile, in Lower Egypt; known to occur also in Persia (Kunth), and Japan (Thunb.). Westward, observed by myself from 48° on the Lower St. Lawrence to 42°; by Conrad to 40°; by A. Gray, "common" in central New York; by Michaux, from Pennsylvania to Carolina and Kentucky; by Elliot, to 33° in South Carolina; by Chapman, in "Florida, and northward;" by Nuttall, on the Arkansas; and by Beck, on the Mississippi near St. Louis.

Phleum pratense of Northeast America. The *herds-grass* or *timothy* said by Prior to have been introduced by Timothy Hanson from New York "into Carolina, and thence into England;" termed "*gramen typhoides maximum*" by C. Bauhin theatr. 49—(Spreng.); and attributed to Europe by Linnæus, Schreber pl. 14, and Leers pl. 3; known to occur in meads and cultivated ground from Lapland to Switzerland and North Africa (Pers., and Wats.), and according to Kunth as far as Caucasus and Siberia: Westward, was observed by Hooker in Iceland; by Drummond, in 54° at Fort Cumberland; by myself, from 45° to 42° in wild situations in New England, often within the margin of the forest, but besides regularly cultivated. Var. "*nodosum*" is termed "*gramen spicatum spica cylindracea brevi radice nodosa*" by Tournefort inst. 520, is known to occur from Denmark (fl. Dan. pl. 380) throughout middle Europe, and according to Bieberstein in the Tauro-Caucasian countries, was observed by Sibthorp, and Chaubard, around Constantinople, by Hooker in Iceland, and by myself in wild situations in New England. (See *Leersia oryzoides* and *Cornus Canadensis*.)

Carex ampullacea of Europe and the adjoining portion of Asia. Termed "*gramen cyperoides quartum*" by C. Bauhin theatr. 84—(Spreng.), "*cyperoides polystachion spicis teretibus erectis*" by Tournefort inst. 529; known to grow in marshes from Lapland and Russia throughout middle Europe, also in Siberia (Engl. bot. pl. 780, Leers pl. 16, Pers., and Wats.): observed by Hooker in Iceland; by Thuillier 490, in the environs of Paris; by Sibthorp, in watery places in the Peloponnesus.

Burserus collected plants throughout Europe, labelled them with the names adopted by his associate and friend C. Bauhin,—and this *herbarium* continued extant at Upsal in the days of Linnæus. The unnamed plants in the Collection were published by Petrus Martin "in 1724" (Linn. fl. suec. p. xi).

"In this year" (Spreng.), Vespasian Robin, successor of his father in the charge of the Royal garden at Paris, publishing his *Enchirid. isagog.**

occur in the Tyrol, Switzerland (Pers.), and other parts of middle Europe. Westward, was observed by myself in cultivated ground in New England; but by A. Gray, indigenous, and in "dry rich ground common from W. New York to Lake Superior and northward."

Solidago limonifolia of the seashore of Northeast America. The *seaside golden-rod* described by C. Bauhin pin. 517—(Spreng.): observed by myself from 43° to 39° along the seashore especially in salt marshes, rarely exceeding four feet, and the stems more or less oblique; by Pursh, in salt marshes, Canada to Virginia; by Elliot, near salt water in South Carolina; by Chapman, "salt marshes, Florida, and northward;" and by Nuttall, on the Azores.

Rudbeckia laciniata of Northeast America. A *cone flower*, transported to Europe is termed "*doronicum americanum*" by C. Bauhin pin. 516—(Spreng.), seems the "*aconitum helianthemum Canadense*" of Cornuti pl. 179, and is clearly described by Morison vi. pl. 6, Miller. and Linnæus (Pers.). Westward, is known to grow from Lake Huron to the Red river of Lake Winnipeg; was observed by Nuttall towards the sources of the Missouri; by Short, in Kentucky; by Pursh, from Canada to Virginia; by myself, from 44° to 42° along the Atlantic; by W. Barton, to 40°; by Schweinitz, at 36° in Upper Carolina; by Elliot, in the Western district of Georgia.

Ipomoea (Pharbitis) purpurea of the Andes from Mexico to the Equator. Transported to Europe, is described by C. Bauhin pin. 295,—Ehret pict. pl. 7 (Linn.); and escaping from cultivation, has been found growing spontaneously near Saint-Barnabé in France (Castagne, and A. Dec.). Westward, came from America (Pers.); and was observed by Humboldt and Bonpland from the city of Mexico to Chillo near Quito, at the elevation of 1200 to 1350 toises (Kunth). Transported to Northeast America, is one of the two kinds of *morning-glory* planted in gardens, occurs besides "around dwellings, escaping from cultivation" (A. Gray).

* *Robinia viscosa* of the Alleghany mountains. The *clammy locust*, a small tree introduced by Vespasian Robin into the gardens of Paris as early as this year,—the "*acacia Americana Robini*" having according to Cornuti pl. 172 erect racemes of flowers, and pods "*ex omni parte echinatis*:" *R. viscosa* as planted in European gardens, is described also by Duhamel ii. pl. 17, and Ventenat pl. 4. Westward, is known to grow wild on the Alleghanies from about 36° 30' to their Southern termination. (F. A. Mx., Ell., A. Gray, and Chapm.).

Smilacina stellata of Northeast America. Transported "from Virginia" to Vespasian Robin in

Ampelopsis quinquefolia of Northeast America. The *five-leaved creeper* transported to Europe and cultivated at Paris more than five years before—the account by Cornuti pl. 100 of the “*edera quinquefolia Canadensis* :” cultivated more generally throughout Europe for ornamenting walls, it has in some localities become naturalized (A. Dec.): was observed by Forskal at Constantinople. Westward, was received by Hooker from Lake Huron; was observed by Michaux from Canada to Virginia; by myself, wild in the forest from 45° to 38° along the Atlantic; by Elliot, in South Carolina; by Baldwin, on Bermuda and to 31° in Florida; by Bartram, to 28°; and by E. James, along the Arkansas.

“The same year” (Lubke and Lutrow), at Madura in Southern Hindustan, commencement of the great hall of the Tschultri of the temple.

“The same year” (art de verif), Mustafa succeeded by Amurath IV. or Murad IV., eighteenth Turkish sultan. Coins of Murad IV. issued at Cairo, are figured in Marcel p. 215.

“1624 A. D. = 4th year of the ‘thian-ki’ of Hi-tsoung, and 9th year of Thian-ming,” Mantchou ruler of Northern China (Chinese chron. table). To this time (as described by P. Alvarez Semedo), the Chinese wore their hair: but Liao-toung being recaptured by the Mantchous, an edict was issued, compelling the inhabitants to shave the head after the manner of the Mantchous.—The edict was afterwards extended to the whole of China, and the Mantchou fashion becoming universal, has continued so to the present day.

“The same year” (Prince, Hubbard, and Holmes), a settlement commenced on Cape Ann, and a fishing-stage set up there for the Plymouth settlers.

“In this year” (C. Francis biogr. Ell.), publication in London of “Good newes from New-England” by Edward Winslow.

“Aug. 26th” (Rymer, and Holmes), the Virginia charter having been annulled, a new commission for the government, issued by king James: the governor and council to be appointed during the king’s pleasure; and no assembly was mentioned, nor allowed.

“In this year” (A. Dec. g. b. 627), Marc. Zuer. Boxhorn publishing his “*Origines gallicae*.” It contains the “*Botanologium*” of John Davies, in which about a thousand plants are enumerated under their Welsh and Latin names.

“In this year” (title-page), Sir Wm. Alexander publishing his *Encouragement to colonies*. From information collected, he describes Port Royal in Nova Scotia as having “land fit to be laboured lying betweene” the meadows overflowed by the tide and “the woods, which doe compasse all about with very faire trees of sundry sorts, as oakes” (*Quercus rubra*?), “ash” (*Fraxinus sambucifolia*), “playnes” (*Acer saccharinum*), “maple” (*Acer rubrum*), “beech” (*Fagus ferruginea*), “birch” (*Betula papyracea*), “cypresse” (*Thuya Occidentalis*), “pine” (*Strobus Americanus*), “and firre” (*Abies balsamea*).

“1625, March 27th” (Nicol. p. 340, Alsted p. 587 giving “26th”), James succeeded by his son Charles, second king of United Britain, and a Catholic.

“May 13th” (Chalmers, and Holmes), proclamation of king Charles; placing Virginia under the immediate direction of the crown, and ordering all patents and processes to issue in his own name. Fears now began to prevail, Lest the English ecclesiastical government should be extended over the colonies (Bradf.).

“The same year” (Smith, Dougl., and Holmes), Roger Conant in removing from Nantasket to Cape Ann, found a place called Naumkeak, which he judged suitable for a settlement, and sent notice to his friends in England.

Paris,—and termed “*polygonatum spicatum*” by Cornuti pl. 32 and 34. and “*Virginian’s Salomon’s seale*” by T. Johnson (edit. Gerarde 905); described also by Morison xv. pl. 4. and Stapel. Westward, the “*Virginia Salomon’s seal*” was seen by Josselyn 45 in New England: *S. stellata*, by Michaux in Canada; by myself, from 47° 30’ on the Lower St. Lawrence to 42° along the Atlantic; by Torrey, to 41° on the Hudson; by Pursh, from Canada to the Alleghanies of Virginia; by Nuttall, from Lake Erie to the Arkansas, the Missouri as far as the Mandans, and the sources of the Columbia.

Bignonia (Tecoma) radicans of Northeast America. The *trumpet-flower*, a procumbent woody vine climbing by rootlets, transported to Europe and Paris as early as this date,—as appears from the account of the “*gelseminum ederaceum*” by Cornuti pl. 103; described also by Morison , continues under cultivation for ornament; and according to Graham has been recently introduced into the gardens of Hindustan. Westward, was observed by myself wild in openings and on the margin of the forest from 40° to 38° along the Atlantic; by Catesby i. pl. 65, and Elliot, in South Carolina; by N. A. Ware, in Florida; by Chapman, “Florida to North Carolina, and westward;” by Nuttall, and E. James, on the Arkansas; and by Beck, on the Mississippi near St. Louis.

"In this year" (title-page), in a compilation published at Edinburgh, entitled "Encouragements," and in which North American productions are enumerated, mention is made of dyes, "for blew the herbe woad" (*Baptisia tinctoria*).

"The same year" (Maunder), first permanent settlement of the English on Barbadoes.

"In this year" (Spreng.), Tobias Aldini publishing his *Plant. rar. hort. Farnes.*, enumerating *Helleborus lividus*.

"1626, February" (Henault, and Holmes), by the English Commons, a bill passed for the freedom of fishing along the American coast. The bill not being returned from the House of lords; the commons vindicated its authority by refusing to grant a second subsidy, and was dissolved. Now commenced the quarrels between king Charles and parliament; the latter perceiving that he wished to absorb power and render himself independent.

"The same year" (Blair), League against the emperor Ferdinand II., of the Protestant princes of Germany, the Dutch, and Gustavus Adolphus king of Sweden.

"1627 A. D. = 1st year of Thian-tsoung," Mantchou ruler of Northern China (Chinese chron. table).

"January" (N. Shaw edit. *Champl.* p. lxii), on the St. Lawrence, death of Hebert, according to Champlain "the first head of a family who lived by what he cultivated."

"March" (Morton, and Holmes), letters of friendship received at Plymouth from the Dutch settlers of New Netherlands.

"September" (Alst.), treaty of peace between the emperor Ferdinand II. and the Turks.

At this time (Spreng., and Winckler), Georg Fuiren writing. — He died "in 1628."

"The same year" (Maunder), Jahangir succeeded by his son Shah Jehan, now emperor of Hindustan. — In whose reign, the Seiks, "a new set of religionists," silently "established themselves along the eastern mountains."

"1628 A. D. = 'tsoung-tching,' 1st year of Hoai-tsoung-ming-ti" or Hoai-tsoung, "of the Ming" or Twenty-third dynasty (Chinese chron. table). In the reign of Hoai-tsoung (official documents quoted by P. Martin Martini, and Pauth. p. 424), China contained "10,728,787 families, and 58,917,683 males."

"September" (Alst. p. 561 and 591), end of the chronicle of Alsted.

"Sept. 6th" (Bradf., Holmes, and Felt, *archæol. Amer.* p. 8), arrival of John Endecott, bringing a charter for the separate colony of Massachusetts: extending from three miles North of the Merrimack to three miles South of Charles river, and within these limits to the Pacific. Endecott established himself at Naumkeak, founding there the second important town in New England; Plymouth being the first. — "For Salem was the next of any fame, That began to augment New England's name" (poem ascribed to governor Bradford).

Before the close of the year (Prince, and Holmes), by general consent of the New England colonists, Thomas Morton seized, and sent to England: For persisting in selling fire-arms to the natives.

"1629, March 4th" (Blair), nine members of the Commons of England imprisoned for their speeches by king Charles. "The same day" (Holmes), the Massachusetts charter confirmed by king Charles, under the name "The governor and company of the Massachusetts Bay:" to have perpetual succession, and annually elect out of their own number a governor, deputy governor, and eighteen assistants; and to make laws not repugnant to the laws of England.

"April 30th" (Holmes), the above officers of the Massachusetts Company having been elected, a meeting at London, and a form of government for the new colony adopted: to be administered by a Council of the colonists themselves, including John Endecott as governor. "Aug. 29th" (Holmes), several persons "of considerable importance" having resolved to remove to Massachusetts "for the unmolested enjoyment of their religion," and unwilling to be governed by laws made without their consent; an agreement for the transfer of the charter, so that the corporate powers should be executed in New England. In accordance with this arrangement, John Winthrop was elected governor of the Company, to proceed to New England.

"June" (Chalmers i. 142, Holmes, and Higgeson, *hist. coll.* i. p. 120), arrival of about "two hundred" colonists at Naumkeak or Salem: where they found only governor Endecott and "eight hovels;" the whole colony containing at this time but "one hundred planters."

"The same year" (N. E. prosp. i. 10), arrival of William Wood in New England. Residing it would seem, principally in Plymouth colony, he met with: an ash, "different from the ash of England, being brittle and good for little" (*Fraxinus pubescens*) i. 6; "ever-trembling aspens" (*Populus tremuloides*); the "red oak" (*Quercus rubra*); and a third kind, the "blacke" (*Quercus tinctoria*).*

* *Quercus tinctoria* of Northeast America. The black or quercitron oak, a large tree, clearly the "blacke oak" seen by W. Wood in Eastern Massachusetts: — observed by myself from Lat. 44° throughout New England; by A. Gray, "common" in central New York; by Bartram, in Pennsyl-

"In planted gardens and in woods, sweete marjoram" (*Origanum vulgare?*), "sorell" (*Rumex acetosella*), "penerial, yarrow" (*Achillea millefolium*), "myrtle," were met with by W. Wood i. 5. He further mentions: "hempe" (*Cannabis sativa*) "and flaxe" (*Linum usitatissimum*) "some planted by the English, with rapes;" besides "turneps, parsnips, carrots, radishes, muskmillions, cucumbers, onyons;" also wheat, and good crops of "rie, oates, and barley."

The natives tattooed figures of "bears, deer, hawks, etc.," on their "cheeks;" were more grieved "to see an English man take one deere, than a thousand acres of land;" wove "coats of turkie feathers;" built "forts of young timber trees, rammed into the ground" (palisades); in cooking, boiled or roasted, and abandoning the "earthen pots of their owne making," used "brasse" kettles "which they traded for with the French long since." They were exposed to attacks from the "Mowhacks:" who wore "sea horse skinnies, and barks of trees, made by their art as impenitrible," and who "beate them downe with their right hand tamahaukes, and left hand iavelins, being all the weapons which they use." — At the end of "four years," on the "15th of August 1633," W. Wood i. 10 and ii. 1 to 17, sailed for England.

"July 19th" (Wilmere edit. Champl. p. lxxxii, Holmes), Quebec surrendered by Champlain to a British fleet under the command of David Kertk, a French Protestant; but in place of removing as had been stipulated to France, most of the colonists preferred to remain behind; and it was soon ascertained that peace had been declared "two months" previously. — Champlain returned to Quebec as governor of the colony in "June 1633," bringing with him "a reinforcement of Jesuits," and died "towards the end of 1635." The editor adds, "But for him Quebec would probably have never existed."

"The same year" (Churchill coll.), Francis Pelsart of Holland on his way to India, wrecked on "rocks near some small islands not inhabited and having no fresh water, in upwards of thirty-eight

vania; by Muhlenberg, and Pursh, from New England to Georgia; by Elliot, in the upper district of Carolina; by Short, near Lexington in Kentucky; by Darby 44, on the Washita; by Nuttall, on the Arkansas; and by Long's Expedition ii. 215, on the Mississippi as far as 43°. Its thick yellow inner bark prepared for dyeing and chiefly exported from Philadelphia.

Nabalus albus of Northeast America. Called *rattlesnake-root* (A. Gray), in Virginia *Dr. Witt's snake-root* (Clayt.), and clearly the "root caled snake weede" mentioned by W. Wood i. 11 as an antidote to the bite of the rattlesnake; — also the "root of an herb called snake-weed, to bite on" within "a quarter of an houre" by "the partie stinged," according to Higgeson (hist. coll. i. 122); the "snakeweed" always carried about by Gov. Winthrop "in summer-time" (diary); the plant is figured by Josselyn rar. pl. 77; and the "radix snaqroel nothæ Angliæ" used against the bite of a serpent that otherwise kills within "twelve hours," reported to Cornuti p. 214; *Dr. Witt's "rattle-snake-root"* of Virginia, as appears from Clayton, and Pursh, belongs here: *N. albus* according to Hooker grows from Newfoundland to Quebec and Lake Huron; has been observed by myself from 45° to 40° along the Atlantic; by Pursh, from New England to Carolina; by Schweinitz, at 36° in Upper Carolina; by Chapman, "in the upper districts of Georgia, and northward." (See *N. albus*, and *Hieracium venosum*.)

Hedeoma pulegioides of Northeast America. The *American pennyroyal*, named from resemblance in smell and taste (Tuckerm.), clearly the "peneriall" seen by W. Wood i. 5. — and Higgeson, in Eastern Massachusetts, and "upright periroyal" of Josselyn rar. 44: *H. pulegioides*, an annual growing in open situations and multiplying in clearings, has been observed by myself from 45° on Mount Desert and in Northern New York to 40° along the Atlantic; by Pursh, from Canada to Carolina; by Schweinitz, at 36° in Upper Carolina; and by Short, in Kentucky.

Smilacina racemosa of Northeast America. Sometimes called *false spikeuard* (A. Gray); clearly the "treackleberries" seen by W. Wood i. 5 in Eastern Massachusetts, — and the third kind of "Salomon's seal" called according to Josselyn 45 "treacleberries, having the perfect taste of treacle when they are ripe, and will keep good a long while, certainly a very wholesome berry, and medicinal" (J. L. Russell in Hovey's mag. 1858): *S. racemosa* was observed by Michaux in Canada and on the Alleghanies of Carolina; by myself, from 45° to 40° along the Atlantic; by Schweinitz, at 36° in Upper Carolina; by Beck, on the Mississippi near St. Louis; and by Nuttall, on the Arkansas. Transported to Europe, is described by Cornuti pl. 37, and Morison xiii. pl. 4.

Smilax glauca of Northeast America. Possibly the "saxifarilla" seen by W. Wood in Eastern Massachusetts: — observed by myself from 42° near Plymouth to 38° near Washington, the leaves edible; by Torrey, from 41° on the Hudson; by Walter, and Elliot, in South Carolina; by Chapman, "Florida, and northward;" by Nuttall, on the Arkansas; and was received by A. Gray from "Kentucky." Transported to Europe, is the "*S. sarsaparilla* of Linnæus in part" (Pers., Steud., and A. Gray. See *Aralia nudicaulis*).

degrees of south latitude" (. . .). After building a deck to the long-boat, the party put to sea and "soon discovered the continent," on "June 8th." In "twenty-four degrees of south latitude" on the "14th," six men "swimming ashore, saw four savages quite naked, who fled" (*Australians*). Continuing along the coast Northward and Eastward, the boat safely arrived among the East India islands.

"In this year" (Spreng.), Parkinson publishing his *Parad.*, enumerating *Canna lutea* 376, *Narcissus laetus* 94. n. 9, *N. viridiflorus* 93. f. 6, *Colchicum Byzantinum* 155. f. 2, *Geranium striatum* 227. n. 7, *Medicago scutellata* 337. n. 5.

Allium triquetrum of the Mediterranean countries. Described by Parkinson *parad.* 143 f. 6 — (Spreng.), and Rudbeck *elys.* ii. pl. 159; termed "a. caule triangulo" by Tournefort *inst.* 385; and known to grow in Spain, about Narbonne (Pers.): observed by Desfontaines i. 288 in Algeria; by Tenore, in Italy; by Sibthorp, in the environs of Rome; and by Gittard, in the Peloponnesus (Chaub.).

Colchicum variegatum of the East Mediterranean countries. A species of *meadow-saffron* called in Greece "spassöhörtön" (Sibth.); from transported specimens described by Parkinson *parad.* pl. 155 as having "leaves for the most part three," "lying close upon the ground," and termed by him "C. fritillaricum Chiense;" — by Tournefort *inst.* 349, "C. flore fritillaræ instar tessellato:" observed by Sibthorp, and Chaubard, on Helicon, Parnassus, and other mountains of Greece.

"Towards 1630" (art de verif.), Ijesaz succeeded by his son or grandson Fide-tada, now emperor of Japan. He continued the policy of persecuting Christians and excluding foreigners, the Dutch excepted.

"1630 A. D." (art de verif.), abdication of Kouotei in favour of his daughter Niote or Siote, now dairo of Japan.

After passing the winter of 1629-30 at Salem (hist. coll. i. 121), Higgeson found "divers excellent pot-herbs" growing "among the grasse, as strawberrie leaves in all places," and "pennyroyal, wintersaverie, sorrell, brookelime, liverwort, carvell, and watercresses;" * also "good ash" (*Fraxinus*

* *Lobelia cardinalis* of Northeast America. The *cardinal-flower*, transported to Europe, described by Parkinson *parad.* 355, — Jungermann (Spreng.), Miller, and Linnæus. Westward, is known to grow from the Saskatchewan throughout Canada (Hook.); was observed by Pursh from Canada to Carolina; by myself, on marshy margins of streams from 45° to 39° along the Atlantic; by Elliot, in South Carolina; by Baldwin, at 31°; by Bartram, to 30°; by Chapman, "Florida to Mississippi;" by Short, near Lexington in Kentucky.

Asclepias Cornuti of Northeast America. The *milkweed* transported to Europe described by Parkinson *parad.* 443. n. 2 — (Spreng.), termed "apocynum maius" by Cornuti pl. 90: pods "used to stuff pillows and cushions" were sent from Connecticut by John Winthrop the younger in 1670 (phil. trans. Lond., and arch. Am. iv. 124); and the living plant has become naturalized in France, Corsica, and Dalmatia (A. Dec.). Westward, is known to grow throughout Canada to the Saskatchewan; was observed by myself from 46° 30' on the St. Lawrence to 40° along the Atlantic; by Croom, as far as Newbern; by Short, in Kentucky; and by Michaux, in Illinois (Pers.).

Cardamine Pennsylvanica of North America. The *American water-cress*, the flowers small and uniformly white, clearly the "watercresses" seen by Higgeson near Salem: — observed by myself frequent around Salem and from 44° to 39° along the Atlantic; by Muhlenberg, and Pursh, from New York to Pennsylvania; by Elliot, in South Carolina; by Baldwin, as far as 30° in Florida; by Chapman, in "wet soil, Florida and northward;" and according to Hooker, grows as far as the Arctic Sea and Columbia river.

Rubus odoratus of Northeast America. Called in New England *mulberry* (C. P.) or *flowering mulberry* (J. Robins.), and doubtless the "mulberries" seen by Higgeson around Salem: — the "raspberry, here called mulberry" was seen by Josselyn *rar.* 48 in New England: *R. odoratus* is known to grow from the Saskatchewan throughout Canada (Hook.); was observed by Michaux in Canada and on the Alleghany mountains; by myself, from 45° to the vicinity of Salem; by W. Barton, to 40° near Philadelphia; by McEuen, near Ithaca in central New York; by Short, in Kentucky; by Elliot, on the Alleghanies of South Carolina; and by Chapman, "on the mountains of Georgia." Transported to Europe, is termed "*rubus odoratus*" by Cornuti pl. 150; and continues under cultivation for ornament.

Osmorhiza longistylis of Northeast America. The *American sweet cicely*, probably the "carvell" seen by Higgeson near Salem; — observed by myself in a rocky precipitous place in the suburb called "Paradise," possibly the spot where it was seen by Higgeson: by Torrey, near Albany on the Hudson (Dec.); by Conrad, near Philadelphia; by Short, in Kentucky; by Beck, on the Mississippi; by Nuttall, on the Arkansas; and according to Hooker, grows throughout Canada to the Saskatchewan and Northwest America.

Apocynum cannabinum of Northeast America. A species of *American dogbane*, probably one

Americana); and "up and downe in the woods," among other fruits, "walnuts" (*Juglans cinerea*), and "smalnuts" (*Carya glabra*). The natives "generally professe to like well of our coming and planting here; partly because there is abundance of ground that they cannot possesse nor make use of, and partly because our being here will bee a meanes of relief to them when they want, and also a defence from their enemies." They "will come into our houses" sometimes "half a score at a time when we are at victuals, but will ask or take nothing but what we give them." We "neither fear them nor trust them:" but "use them kindly:" and "purpose to learn their language." Their "haire is generally blacke, and cut before," and "one locke longer than the rest, much like to our gentlemen, which fashion" (wearing the *queue*) "I thinke came from hence into England."

In addition to plants already mentioned as introduced by the colonists into New England, Higgeson states, That the governor had "green *pease* growing in his garden."

"In this year also" (Poole introd. Wond. Prov. xxii), publication of White's "Planter's Plea;" a work on New England.

"July 6th" (Prince, and Holmes), arrival in Massachusetts Bay of John Winthrop, governor of

of the "two kinds of flowers very sweet, which they say are good to make cordage," observed by Higgeson near Salem: — but not known to grow nearer than Middleton Lake, where it was pointed out to me by Mr. Oakes.

Quercus bicolor of Northeast America. The *swamp white-oak*, probably the fourth sort of "oke" seen by Higgeson around Salem: — the frame-timbers of a house erected in 1652, recorded as of "swamp white oak," continue sound, and *Q. bicolor* has been observed by myself in the immediate vicinity of Salem: by F. A. Michaux, from Lake Champlain and 43° on the Atlantic to Lake Ontario and the Western States; by Darlington, to 40° near West Chester, Penns.; by Schweinitz, and Nuttall, at 36° in Upper Carolina; and by Nuttall, and Pitcher, on the Arkansas.

Veronica Americana of North America. Closely resembling *V. beccabunga*, but given as distinct; clearly the "brooklime" seen by Higgeson near Salem; — observed by myself in the outlet of Mineral-spring Lake, possibly where it was seen by Higgeson: by Pursh, from Pennsylvania to Virginia; and by Conrad, near Philadelphia; and according to Hooker grows throughout Canada to Fort Norway. (Compare *V. beccabunga*.)

Pycnanthemum muticum of Northeast America. An aromatic Labiate, perhaps the "wintersaverie" seen by Higgeson around Salem: — the specimen marked "*satureja virginica*" in the Linnaean herbarium, is referred here with some doubt by Bentham: *P. muticum* has been observed by myself from 42° 30' in the environs of Salem; and according to A. Gray, grows from "Maine to Ohio, Kentucky, and southward;" was observed by Drummond at 40° near West Chester, and on the Mississippi near St. Louis (Benth.); by Michaux, in Upper Carolina (Pers.), and by Schweinitz at 36°; by Chapman, "Florida to Mississippi, and northward;" by Short, in Kentucky: by Nuttall, on the Arkansas.

Pycnanthemum lanceolatum of Northeast America. Possibly the "wintersaverie" seen by Higgeson near Salem: — observed by myself from 45° in Northern New York to and beyond Salem; by A. Gray, "common" in central New York; by Torrey, as far as 41° on the Hudson; by Michaux, on the mountains of Pennsylvania and Upper Carolina (Pers., and Benth.); and by Short, in Kentucky.

Salix cordata of Northeast America. Arborescent, with lanceolate leaves heart-shaped at the base only, possibly the "willow" seen by Higgeson around Salem, and its wood commended: — observed there by myself, and from 47° 30' on the Lower St. Lawrence to 40° along the Atlantic; by Muhlenberg, in Pennsylvania; by Pursh, from New York to Virginia; by J. Carey, and A. Gray, on "inundated banks of rivers, and low meadows, common," becoming "a small tree six to fifteen feet high."

Salix lucida of Northeast America. Arborescent, with shining foliage, possibly the "willow" whose wood is commended by Higgeson: — observed by myself from 47° 30' on the Lower St. Lawrence to the vicinity of Salem; by Torrey, to 41° on the Hudson; by Muhlenberg, in Pennsylvania; by F. A. Michaux, in the Northern and Middle States; by Pursh, from New York to Virginia; by J. Carey, and A. Gray, on "overflowed banks of streams, rather common," "sometimes becoming a small bushy tree of twelve to fifteen feet."

Salix discolor of Northeast America. Arborescent, with leaves glaucous beneath, possibly the "willow" seen by Higgeson: — observed by myself from 47° 30' on the Lower St. Lawrence to the vicinity of Salem; by W. Barton, as far as 40°; by Collins, in Northern New York; by Muhlenberg, in New York and Pennsylvania; by Pursh, from New England to Carolina (Ell.); by J. Carey, and A. Gray, "low meadows and river-banks, common, a large shrub or small tree, eight to fifteen feet high."

the Company, and now of the colony. Proceeding to the head of the Bay, he landed at Mishawum or Charlestown, together with "about fifteen hundred" colonists brought in the fleet. Shawmut across the river, being a peninsula where *wolves* could be fenced out (W. Wood), several persons settled there: the governor with most of the assistants followed before the close of the year, and the name was changed to "Boston." Thomas Morton had returned to New England: but "Nov. 24th," a proclamation by king Charles, forbidding disorderly trading with the natives, and especially supplying them with fire-arms.

"The same year" (Chalm., and Holmes), by Robert Heath, attorney general of king Charles, a grant obtained of the region South of Virginia "from the thirty-sixth degree" of Latitude, under the name "Carolana." — Heath however appears "to have made no settlement;" and in 1663, his patent was declared to have become void.

"1631, March 19th" (Trumbull, and Holmes), a grant of that part of New England extending from Narraganset river one hundred and twenty miles on a straight line along the coast, and Westward to the Pacific, after confirmation by king Charles, made over to viscount Say and Seal and his associates: being the original charter for Connecticut. — A governor was sent over in 1635.

"The same year" (Chalmers, and Holmes), George Calvert Lord Baltimore, visiting the Chesapeake and finding that the Virginians had formed no settlements North of the Potomac, obtained on application to king Charles a charter for Maryland: but died before the formalities could be completed. — The charter was issued in the following year to his son Cecilius Calvert.

"Sept. 3d" (Churchill coll. ii.), discovery by Thomas James of the Southern prolongation of Hudson's Bay. Sailing to its termination, he wintered there in "lat. 52° 3':" the prolongation has received the name of "James' Bay."

"1632, March 17th" (Chalmers, and Holmes), treaty of St. Germain, by which the English conquests and claims on Acadie, New France, and Canada, were ceded to Louis XIII. of France. — The source of a long train of colonial difficulties.

"In this year" (Johns. wond. prov. 26), the colonists on Charles river in want of food, but found some relief in "wild onions" (*Allium Canadense*) and other herbs.*

"June 14th" (M. Russell p. 291), proclamation of Socinius restoring to the Abyssinians their ancient faith, also abdicating in favour of his son Facilidas. The Catholic missionaries were now banished and excluded from Abyssinia; an abuna consecrated at Alexandria being already on his way, to resume the ecclesiastical government.

At this time, "1631 to 1637" (Lubke and Lutrow), in Hindustan, building of the Jamna mosque at Delhi.

"1633, Jan. 17th" (Chalm., and Holmes), pursuant to the treaty of St. Germain, the trading house of the Plymouth colonists at Penobscot seized and plundered by the French. Forts were now hastened and commenced at Boston and Nantasket; and the planting of Agawam (Ipswich) was also hastened, lest the French should get possession. "October," the frame of a house taken in a vessel up the Connecticut river, notwithstanding menaces from a Dutch fort, and set up about a mile beyond: being the first house erected in Connecticut.

"Feb. 21st" (Hubbard, and Holmes), by the English government alarmed at the increase of emigration, an Order of the council, to stay several ships in the Thames.

"In this year" (Spreng., and Winckler), after his Itin. Cant. "in 1632," Thomas Johnston publishing his edition of Gerarde.† — He published his Mercur. bot. from "1634-41," and died "in 1647."

* *Antholyza Æthiopica* of Austral Africa. Transported to Europe, first flowered in this year at Paris — (Cornuti pl. 79); described also by Linnæus, and Andrews repos. pl. 210. Known to grow wild in Austral Africa (Thunb. prodr. p. 7, and Pers.). By European colonists, recently introduced by the way of the Cape of Good Hope into Hindustan (Graham).

Amaryllis falcata of Austral Africa. Transported to Europe, cultivated at this time at Paris, — and named "narcissus pumilus polyanthos" by Cornuti pl. 154; described also by Linnæus, Jacquin hort. iii. pl. 60, L'Heritier sert. 13, and Ker. Known to grow wild in Austral Africa (Thunb., and Pers.).

Hypoxis stellata of Austral Africa. Transported to Paris about this time, — according to Cornuti pl. 165, and named by him "sisynrichium Robini;" described also by Miller. Linnæus, Jacquin rar. ii. pl. 368, and Andrews pl. 101. Known to grow wild in Austral Africa (Thunb., and Pers.).

† *Pelargonium triste* of Austral Africa. Transported to Europe, termed "geranium triste" by T. Johnston (Ger. emend.), — described also by Cornuti pl. 110 and p. 122, Linnæus, and Cavanilles iv. pl. 107. Known to grow wild in Austral Africa, its tuberous roots said to be eaten by the natives. The flowers odorous at night (Pers.).

"In this year" (title-page, and iii. 22), De Laet publishing his *Nov. Orb.*, having received from the Hudson river *Polygonum sagittatum*, and *P. arifolium* iii. 10. pl. — The date "1635" occurs in the French edition xvi. 2, issued "in 1640."

Advent in Plymouth colony of the seventeen-years locust, *Cicada septemdecim*, witnessed in this year by Bradford p. 198. The insect is peculiar to Northeast America, and is remarkable for its longevity; known to extend throughout the whole intervening seventeen years.

One hundred and seventy-eighth generation. May 1st, 1634, onward mostly beyond youth: the Chinese historians Fou-y-tchang, and Kou-yng-tai (Pauth. 400): the Jewish writers, Manasseh ben Israel; Zacutus Lusitanus; Chajjim Beneviste: the Greek writers, Agapius of Crete d. after 1643, Andreas Troilus d. 1647: Riccioli; Fabri de Peiresc; Caspar Barthius; Henry Spelman; cardinal Bentivoglio; Gerard John Vossius; Ericius Puteanus; Quevedo; Grotius; archbishop Usher; Gabriel Naudé; John Selden; Descartes; Famianus Strada; Petavius; Voiture; Balzac; Chillingworth; Salmasius; Paul Scarron; Henry Hammond; Samuel Bochart; Blaise Pascal: the botanists, Balthas. and Mich. Campius, Joseph Bonfiglioli, Petrus Carrera d. 1647, Ovid. Montalbanus, Io. Ant. Bumaldi, Thomas Brown, Kenelm Digby d. 1665, Levinus Fischer, Ioach. Jungius d. 1657, P. Dionys. Vellia, Bartholomæus Ambrosinius d. 1657, Io. Bapt. Ferrarius d. 1655, Petr. Castellus, Io. Royerus, Adolph. Vorstius d. 1663, Io. Chemnitz d. 1651, Sim. Paulus d. 1680, Petrus Firens and Dan. Rabel, Antonius Vallot and Dionysius Joncquet d. 1671, Otho Sperlingius d. 1681, Thomas Pancovius d. 1665: the painters, Guido Reni d. 1642, Rubens d. 1640, Vandyck d. 1641, Nicholas Poussin d. 1665, Adrian Brower or Brauwer d. 1640, Diego Velasquez de Silva d. 1660, Dominico Zampieri called Domenichino d. 1641: the architect Inigo Jones.

"The same year" (Chalmers, Hubbard, and Holmes), Roger Williams, a clergyman of Salem, holding tenets regarded as heretical and seditious, "tending equally to sap the foundation of the establishment in church and state," and being found irreclaimable, banished from Massachusetts. In Boston, select men first chosen to manage the town affairs; a market established; a house of entertainment set up; and the first merchant's shop opened.

"The same year" (relat. Jes. i.), letter from the jesuit Paul le Jeune, enumerating among the animals of the surrounding country "originaux" (*Cervus Canadensis*, *moose*), "caribous" or "asnes sauvages" (*Cervus rangiferinus*), "blereaux" (*Gulo luscus*), "siffleurs ou rossignols" an animal "plus gros qu'un lieure" (*Arctomys Marilandica*), and three species of "ecurieux" (*Sciurus cinereus*, *S. rufus*, and *Tamias striatus*).

"In this year" (Klapr. mem i. 324), by permission of the Japanese, Fort Zelandia built by the Dutch at the entrance of the harbour of Thay ouan in Formosa. — The Japanese soon afterwards abandoned the island and all their foreign possessions.

"In this year" (Stirling, and W. W. Hunter), a firman granted by the emperor Shah Jahan, allowing the English to trade with their ships in Bengal. But Azim Khan, governor of Orissa, Behar, and Bengal, restricted them to the single port of Pippli, where they built their first factory.

"1635 A. D." (univ. hist., and Holmes), landing of French colonists under M. Bretigny on Cayenne Island and the adjacent continent.

"The same year" (Winthrop i. 162, archæol. Amer. iv. 229), sailing from Massachusetts Bay of "Mr. Graves in the James, and Mr. Hodges in the Rebecka, for the" outlying "Isle of Sable for sea-horse, which are there in great number." — In 1642, John Webb "with his company," sailed for the Isle of Sables "with commission from the Bay to get sea-horse teeth and oyle" (Lechford, hist. coll. iii. 3d ser. p. 100). And even in the days of Josselyn voyag. p. 106 and rar. p. 97, "*morse*, or sea-horse" (*Trichecus rosmarus*), "smooth-skinned, and impenetrable," having "tushes as white as ivory," continued "frequent at the Isle of Sables."

"About this year" (narrat., and Murdoch hist. Nov. Scot. i. 130 to 536), Denys, one of the companions of Razilly "in 1632," remaining or again visiting Nova Scotia: — "in 1636" he was appointed "governor in the bay of St. Lawrence and isles adjacent:" he founded Miramichi in the "Bay des Chaleurs;" published his account of the country "in 1672," and was living at Miramichi "in 1690."

"In this year" (Spreng.), Cornuti publishing his *Plant. Canadens*, enumerating of North American plants, "*fili baccifera*" (*Cystopteris bulbifera*) pl. 4; * "*origanum fistulosum Canadense*" (*Monarda fistulosa*) pl. 14; "*eruca maxima Canadensis*" (. . .) pl. 17; "*valeriana urticæfolia*

* *Archangelica atropurpurea* of Canada. The *great angelica* transported to Europe is termed "*angelica atropurpurea Canadensis*" by Cornuti pl. 199, — described also by Linnæus. Westward, "*wild angelica, majoris*" was seen by Josselyn rar. 45 in New England: and *A. atropurpurea* has been observed by myself from 45° to 42° in Eastern and Western Massachusetts; by Darlington, as far as 40° near West Chester; by Michaux, in Canada; by Pursh, from Canada to the Alleghanies of

flore albo" of Canada (*Eupatorium ageratoides*) pl. 21; "verbena urticæfolia flore violaceo" of Canada (*Verbena hastata*?) pl. 23; "polygonatum ramosum flore luteo majus" (*Uvularia grandiflora*) pl. 39; "hedysarum triphyllum Canadense" (*Desmodium Canadense*) pl. 45; "fumaria siliquosa sempervirens" (*Corydalis glauca*) pl. 58; "fumaria tuberosa insipida" (*Dieleytra Canadensis*) pl. 126; "aster luteus alatus" of North America (*Helenium autumnale*) pl. 63; "asteriscus latifolius autumnalis" (*Aster cordifolius*) pl. 65; "aconitum baccis niveis et rubris" (*Actæa Americana*) pl. 77; "apocynon minus rectum Canadense" (*Asclepias incarnata*) pl. 93; "trifolium asphaltion Canadense" (. . .) pl. 131; "pimpinella maxima Canadensis" (*Sanguisorba Canadensis*) pl. 174; "cerefolium latifolium Canadense," esculent, and perishing in the third year (. . .) pl. 177; "thalictrum Canadense" (*T. Cornuti*) pl. 187; "eupatoria foliis enulæ" (*Eupatorium purpureum*) pl. 191; "calceolus Marianus Canadensis" (*Cypripedium spectabile*) pl. 205; and "herbatum Canadensium, sive panaces moschatum" (. . .) p. 212; *Plantago cucullata* 163, *Smilacina racemosa* 37, *Scutellaria peregrina* 129.

Crambe Hispanica of the West Mediterranean countries. An annual received by Cornuti pl. 148 from Spain and termed "rapistrum maximum monospermum," — described also by Morison iii. pl. 13; known to grow in maritime situations in Spain (Dec. syst.), also on Sardinia (Moris), Sicily (Guss.), and observed by Chaubard among rubbish at Modon and Pylos in the Peloponnesus: received by Achille Richard from Gaddia in Tigre in Northeastern Abyssinia (A. Dec.).

"In this year" (inscript., and Krapf trav.), Francisco de Xeixas de Cabreira appointed to the command of the fortress at Mombasa. "He reduced into submission" the coast of Malindi, and "made the kings of Tondo, Mandra, Lazieva, and Jaca, tributaries:" — "visited Paté and Sio with a punishment never before witnessed in India, levelling the walls thereof to the ground:" "imposed a fine on the Mzungulos, and punished Pemba and its rebel people, killing the petty king:" and at the end of four years rebuilt the fortress.

"1636 A. D. = 1st year of Tsoung-te," Mantchou ruler of Northern China (Chinese chron. table, and Pauth. p. 417). *Suspension bridges*, some of iron, in use in China and Thibet; such structures being as yet unknown in Europe (Pauth. 234).

"In this year" (Spreng.), after the death of Michael Boym, Jesuit missionary in China, publication of his *Flor. Sinens.*

"In this year" (Relat. du Groenl. 227), by the Greenland Company of Copenhagen, two vessels sent "to that part of New Greenland which is on the coast of" Davis' Gulf. While trading with the natives, a *sea-unicorn* (*Monoceros unicornu*) was observed on the "grass" (*Zostera*) which "the tide had left dry," these animals it was said allowing themselves to be temporarily stranded: it was immediately attacked by a crowd of natives, killed, and its "horn" sold to the Danes.

"The same year" (Hutchinson, and Holmes), Roger Williams finding himself excluded from both Massachusetts and Plymouth Colonies, and land being offered by Narraganset chiefs, commenced a settlement with several of his friends at Mooshausick; changing the name to "Providence." — The beginning of the fourth important town in New England, and of the separate State of Rhode Island.

"The same year" (Hubbard, and Holmes), a murder by aboriginals of Block Island, who sought refuge among the Pequots: giving rise to the first serious war against a native Tribe. — The Pequots were in the following year broken up and dispersed.

"In this year" (Stirling, and W. W. Hunter), a daughter of the emperor Shah Jahan healed by surgeon Gabriel Boughton. As a reward, the English were allowed to trade in Bengal and Orissa free of all duties.

Virginia; and according to A. Gray, grows from "New England to Pennsylvania, Wisconsin, and northward," a "popular aromatic."

Angelica lucida of Northeast America. Transported to Europe is termed "*angelica lucida Canadensis*" by Cornuti pl. 197, — described also by Morison ix. pl. 3, and Jacquin hort. iii. pl. 24: Westward, was received by Muhlenberg from Carolina and the Cherokee country, and according to Pursh grows in Pennsylvania. The "*thaspium actæifolium*" of Nuttall, or *nondo*, observed by Short in Kentucky, and growing according to A. Gray in "rich woods, Virginia, Kentucky, and southward along the mountains," may be compared.

Solidago sempervirens of Northeast America. A tall *golden-rod*, transported to Europe termed by Cornuti pl. 169, "*solidago maxima Americana*" three to four cubits high, its stem smooth and somewhat purplish; described also by Morison vii. pl. 23, and Plukenet alm. pl. 235, the leaves according to Linnæus "*subcarnosis tota hyeme persistentibus*" (Pers.). Westward, observed by Michaux in Canada and New York (Pers.); by Pursh, from Canada to Pennsylvania; by A. Gray, sometimes "eight feet" high, in "less brackish swamps, with thinner and elongated linear-lanceolate leaves;" by Elliot, in South Carolina; by Baldwin, as far as 30° in Florida.

Smilax Zeylanica of Tropical Eastern Asia. Called in the environs of Bombay "gootee wail" (Graham), in Burmah "ku-ku" (Mason); and among the natives as early perhaps as this year substituted for sarsaparilla: — observed by Rheede vii. pl. 31 in Malabar; by Graham, in both "Deccan and Concans;" by Roxburgh, in Eastern Hindustan; by Mason v. 501, in "jungles" in Burmah, "used by the natives as a medicine, to supply the place of a species of sarsaparilla, whose dried roots are sold in the bazars;" the "china Amboinensis" of Rumphius v. pl. 161 is also referred here by writers.

"1637, April" (Hazard coll. i. 421, and Holmes), proclamation by king Charles, prohibiting emigration, unless under a certificate of having "taken the oaths of supremacy and allegiance, and conformed to the discipline of the Church of England."

"In this year" (Spreng., and Winckl.), Wilhelm Piso, in an Expedition under Maurice of Nassau, arriving in Brazil, meeting with *Costus spicatus* 214, *Thulia geniculata* 224, *Piper caudatum* 197, *P. peltatum* 197, *P. rugosum* 216, *Xyris Americana* 238, *Cyperus Surinamensis* 238, *Kyllinga odorata* 231, *Dichromena ciliata* 238, *Spermacoce linifolia* 199, *Calliopa Mutisi* 231, *Physalis pubescens* 223, *Solanum Bahamense* 182, *S. paniculatum* 181, *S. macrocarpon* 210, *Sabicea cinerea* 184, *Plumbago scandens* 200, *Genipa Americana* 138, *Atropa arborescens* 224, *Phloxeris vermicularis* 243, *Hydrocotyle umbellata* 260, *Bromelia acanga* 293, *B. humilis* 192, *B. bracteata* 194, *Paulinia pinnata* 250, *Gomphia jabotapita* 166, "paionariba" 185 *Cassia longisiliqua*, *C. sericea* 185, *Guarea trichilioides* 170, *Malpighia faginea* 169, "caapongo" 243 *Portulaca halimoides*, *P. pilosa* 244, *Psidium aromaticum* 15, *Plinia crocea* 187, *Cereus fligelliformis* 189, *C. Royeni* 189, *C. triangularis* 190, *Opuntia Curassavica* 190, *Pereskia portulacifolia* 191, *Lecythis parviflora* 137, "ianipaba" 138 *Aciaa dulcis*, *Nymphaea odorata* 219, *Alpeba tibourbou* 123, *Bignonia chrysantha* 148, *B. alba* 164, *B. orbiculata* 165, *Jacaranda Braziliensis* 165, *Tanaecium jaroba* 173, "murucuia" 247 *Passiflora filamentosa*, *P. angustifolia* 247, *P. maliformis* 248, *Melochia pyramidata* 222, *Gustavia angusta* 172, *Gossypium vitifolium* 186, *Geoffraea spinosa* 174, *Hedysarum supinum* 201, *Vernonia scabra* 176, *Eupatorium trachifolium* 217, *E. odoratum* 218, *Aristolochia ringens* 260, "aniga" 220 *Arum lingulatum*, *Caladium arborescens* 220, *C. bicolor* 237, *Janipha Loeftlingii* 179, *Urtica baccifera* 235, *Cucumis anguinus* 262, *C. anguria* 263, *Dioscorea sativa* 255, "pindova" *Canarium accumanum*, *Licania spinosa* 126, *Carica spinosa* 160, *Morus? tinctoria* 163, *Feuillea cordifolia* 251, *Cecropia palmata* 147, and *Cissampelos canbela* 261, *Cnidioscolus stimulosa* 79 f. 2. — He was joined by Marcgraf in the following year: the Expedition returned "in 1641;" Marcgraf died "in 1644." and the Hist. Nat. Bras. was published by Joan de Laet "in 1643;" Piso published a second edition "in 1653," and Maurice died "in 1679."

Vismia guttifera of Eastern Equatorial America. A bush about ten feet high, observed by Piso and Marcgraf 96. f. 1, in Brazil, — and by Aublet ii. pl. 311 in Guayana: yielding with other species a purgative gum-resin resembling gamboge, and imported into Europe under the name of *American gamboge*.*

Mimosa asperata of Equatorial Africa. Known to grow there both in the Eastern and Western portion (fl. Nigr.), and probably by European colonists carried to Tropical America; observed by Piso 203 in Brazil, and called "caaco" — (Spreng.); was thence introduced into Jamaica according to Browne, and was seen by Macfadyen in gardens only: continues on the continent from Venezuela to Brazil (Benth. and A. Dec.). Clearly by European colonists, was carried to the Mauritius Islands, observed under cultivation by Bojer.

Mucuna urens of Tropical Atlantic shores. A woody-stemmed climbing bean, its pods covered with stinging hairs called *cowich*, observed by Piso 307 in Brazil — (Spreng.); by Sloane i. 79, Plumier, and Jacquin, in the West Indies; and known to grow on the neighbouring portion of South America (A. Dec.). Instances of its seeds carried by ocean-currents to the coast of Scotland being

* *Tandellia diffusa* of Equatorial Africa and Madagascar. Probably by European colonists carried to Tropical America; observed by Marcgraf xv. pl. 32 in Brazil, — by Aublet ii. pl. 251 in Guayana, and known to occur "frequentissima ad vias" as far as the West Indies and Guyaquil (Pers., and A. Dec.); called in Arowak "haimarada," by the Dutch settlers "bitter blain," and "of great value in Guayana as an antibilious emetic and febrifuge, and a most efficacious remedy in malignant fevers and dysentery" (Hancock med. bot. trans. 1829). Eastward, known to grow in Guinea (Hook. fl. Nigr.), and on Madagascar (Benth.); but possibly by European colonists, carried to the Mauritius Islands (Lindl.).

Remirea maritima of the Equatorial shores of the Atlantic. A reed observed by Piso 238 in Brazil — (Spreng.), by Aublet pl. 16 in the maritime sands of Guayana. Known to grow also on the opposite African seashore (Kunth, and Benth. fl. Nigr.), seeds doubtless transported from one continent to the other by ocean-currents (A. Dec.).

known to Sloane, the plant probably crossed the Atlantic without human intervention: was observed by Adanson in Senegal (Steud.) ; is known to grow also in Guinea, and on Fernando Po (Benth. fl. Nigr.).

Iresine vermicularis of the Atlantic seashore of Tropical America and Africa. A branching prostrate Amaranthaceous plant called in Brazil "caaoponga" (Pis. 243) or "parexxil" — (Marcg. 14, and Willd. i. 2322): observed by Swartz obs. 101 in the West Indies; known to grow on Key West (Torr.), and "sandy sea-shores, South Florida" (Pursh, and Chapm.). Eastward, on the seashore of Senegal and Guinea (Moq., A. Dec., and Benth. fl. Nigr.), doubtless transported from one continent to the other by ocean currents.

Smilax siphilitica of the Upper Orinoco. Among other species substituted for sarsaparilla, a kind was observed by Marcgraf and Piso iii. 258 in Brazil: — *S. siphilitica*, known to grow on the Cassiquiare branch of the Orinoco (Pers., and Lindl.), is said to have been found farther South by Martius, on the Rio Negro and at Yupura, and according to Pareira furnishes the *Brazilian* or *Lisbon sarsaparilla*.

"1638, April 12th" (art de verif., and Thunb. trav. iv. 30), capture of the fortress of Sinabaro, in which the Christians of Japan had all taken refuge. They were put to death, "thirty-seven thousand" in number, and the extinction of Christianity in Japan completed.

"In this year" (Linn. fl. succ. p. viii), J. Frankenius publishing his "Speculum Botanicum:" in which Swedish plants are for the first time enumerated, intermingled however with exotic. He mentions *Chrysosplenium alternifolium* 27, *Rubus arcticus* 14, *Betula nana* 32. — He published a Second edition "in 1659," and died "in 1661."

"April" (H. C. Murphy note to Vanderd. vertoogh 77), arrival of Swedes in the Delaware, where they commenced a settlement and fort, notwithstanding the protest of the Dutch governor Kieft at New Amsterdam.

"May" (Hazard coll. i. 422, and Holmes), an order staying eight ships on the point of sailing: by which, John Hampden, and Oliver Cromwell, among other persons, were prevented from coming to New England. Before the close of the year (Pemberton, and Holmes), arrival in the Thames of the first New England-built ship.

"June 1st" (Holmes), a violent *earthquake* in New England, — long remembered in the annals of the colony.

"The same year" (Winthrop, and Holmes), legacy by John Harvard, a clergyman of Charlestown, to the college founded the previous year; and the name of "Cambridge" given to the site selected. Josselyn voy. 29 arriving "July 3d" found Boston consisting of "not above twenty or thirty houses." "Oct. 11th," he was treated with "half a score very fair pippins" from Governor's Island in Boston harbour, "there being not one *apple* tree nor *pear* planted yet in no part of the country but upon that island."

"The same year" (. . .), at Gizeh, the coating of the Second pyramid continuing entire; the sides described by Greaves, as rising "not with degrees like" the First pyramid, "but are all of them plain and smooth." — At the time of my own visit, the coating remained only on the apex.

"The same year, Pedro de Silvoa being viceroy" (Krapf trav.), date of the above-mentioned inscription over the gateway of the fortress at Mombas.

"1639 A. D." (Winthrop, and Holmes), the first *printing-press* in North America set up at Cambridge. The settlers at Windsor, Hartford, and Wethersfield, three towns on the Connecticut, finding themselves without the limits of the Massachusetts charter, conceived the idea of forming by voluntary compact a distinct commonwealth: the constitution framed, — is much celebrated; and after being extended to all Connecticut, "has continued with little alteration to the present time" (Hazard coll. i. 437, and Holmes).

"The same year" (Chalm., and Holmes), by king Charles, William Berkeley appointed governor of Virginia, and civil privileges restored; including "a provincial legislature, a regular administration of justice, a government of laws." In Maryland, the House of Assembly established; its acts to be "of the same force, as if the proprietary and freemen had been personally present:" in one of these acts "the people" are defined, as consisting of all Christian inhabitants "*slaves* only excepted." — Arriving in Virginia, Berkeley continued governor from "1642-77" (hist. Virg.).

"1640 A. D." (art de verif.), Murad IV. succeeded by Ibrahim, nineteenth Turkish sultan. Coins of Ibrahim, issued at Cairo, are figured in Marcel p. 219.

"In this year" (Krapf trav.), Portugal restored to independence by John IV.; too late to save the colonies.

"In this year" (Spreng., and Prior), Parkinson publishing his Theatr., enumerating * *Gladiolus*

* *Polygonum acre* of Northeast America. The *American water-pepper*, transported to Europe, termed "*polygonum persicaria acris* of Virginia" by Parkinson herb., — described also by Kunth.

Byzantinus 191, *Ipomaea lacunosa* 164 n. 5, *Asclepias amocna* 386, *Heracleum elegans* 954, *Selinum peucedanoides* 904 n. 2, *Caucalis leptophylla* 920, *Statice mucronata* 1235, *Tovaria Virginiana* 875 f. 6, *Euphorbia isatifolia* 188 n. 11, *Erodium petraeum* 709 n. 4, *Astragalus Baeticus* 1084 n. 23, *Prenanthes spinosa* 804, *Serapias microphylla* 218 n. 8, *Helianthus frondosus* 130 n. 8, *Aster Tradescanti* 132.

Crocus biflorus of the East Mediterranean countries. Transported to Britain, is described by Parkinson theatr. 162 n. 10 — (Spreng.), and Miller — (Steud.); escaping from cultivation has been found growing spontaneously in a single park (A. Dec. g. plant. 691). Eastward, was observed by Chaubard around the Saronica gulf of the Peloponnesus.

Narcissus incomparabilis of the West Mediterranean countries. Transported to Britain, is termed "nonpareille" by Parkinson theatr. 68:—and escaping from cultivation, has maintained itself for probably two centuries in a park near Swansea (Dillw., and Wats.); occurs also in a locality in the county of Worcester, as well as in Normandy (A. Dec.). In its wild state, is known to grow in Portugal and Spain (Pers.), was observed by Gouan near Montpellier (Steud.).

"The same year" (Winthrop, and Holmes), settlers from Lynn near Salem, removing to the Eastern end of Long Island, erected themselves into a civil government.

"In this year" (Stirling, and W. W. Hunter), one of the wives of Sultan Shujar, governor of Behar, Orissa, and Bengal, healed by surgeon Boughton. As a reward, the English were now allowed to build factories at Balasor and Hugli.

"In this year" (Sieb. elucid. Vries p. 102), François Caron chief of the Dutch trade in Japan describes the land of Yeso as "very large, has often been explored by Japanese, deeply and far travelled through, but no one has ever come to the end or come to any certainty respecting it, so that they have generally come short of food and each time been obliged to return: the reports of visitors have been such that his majesty's curiosity to know more about it has been restrained, for the land (as is said) is wild, and in some parts inhabited by a people with hairy bodies, wearing long hair and beards, as brutal as the Chinese, more like savages than like other men."

"1641 A. D." (art de verif.), the Dutch excluded from Japan, confined to the islet of Desima opposite Nangasaki; where under strict guard they were allowed to continue their trade.

"April 16th" (H. C. Murphy note to Vanderd. vertoogh 83), the value of good sewan (wampum) fixed by director Kieft in New Netherland at four pieces for a stiver, and of loose sewan at six. This Indian money in the absence of coin long continued in use even among the Whites.

"In this year" (Pauth. 418), in China, civil war; and by the Imperial general, the dykes of the Hoang-ho cut on the "9th of October," destroying great numbers of rebel troops, and contrary to his expectations the city of Kai-foung, in all "more than three hundred thousand persons." P. Martin Martini visiting the site soon afterwards, found in place of a city "only a large lake."

"Oct. 23d" (Blair), in Ireland, beginning of the massacre of the Protestants.

"1642, Jan. 4th" (Blair), five members of the Commons of England demanded by king Charles: initiating civil war. A memorable resolve of the Commons in favour of New England (Hutchinson i. 114, and Holmes), in consideration of having "had good and prosperous success without any public charge to this state," exempting its imports and exports from custom, subsidy, or taxation.

"The same year" (Winthrop journ. ii. p. 67 and 89, and Tuckerm. archæol. Amer. iv. p. 140), the White Mountains of New England first ascended by a European; by Darby Field, "an Irishman, living about Pascataquack."

"In this year" (Poole introd. Wond. Prov. xxii), publication of Lechford's "Plain dealing," a work on New England.

"In this year" (Spreng., and Winckler), Jac. Bontius publishing his *Medecin. Indor.*, enumerating *Justicia betonica* 146, *Calanchoe laciniata* 132.

Cyathula prostrata of the Malayan archipelago and islands of the Pacific. Observed by Bontius 150,—and Blume, on Java; by Rheede x. pl. 79 in Malabar; by Graham, "annual, a weed" in the environs of Bombay; by Loureiro, in Cochinchina; by Rumphius vi. pl. 11, and received by Roxburgh from the Moluccas; was observed by myself, frequent around dwellings on Luzon; by Brackenridge, at Savu-Savu in the Feejeean Islands; by myself, on the Samoan Islands not far inland, but on Tabeiti in the deep mountain-forest. Westward from Hindustan, is known to occur in Western Equatorial Africa (fl. Nigr. p. 492): but probably by European colonists, was carried to the West Indies and Brazil (Moq., and A. Dec.).

Westward, was observed by Michaux (Steud.); by Pursh, from Canada to Carolina; by myself, from 43° to 40° along the Atlantic, subaquatic, forming beds on the margin of slow-moving streams; by Elliot, in South Carolina; by Chapman, "Florida, and northward; by Short, in Kentucky;" and by Nuttall, along the Arkansas.

"The same year" (Flacourt ii. 1), the French East India Company formed: and "about September," arrival in Madagascar of a ship sent by them. Continuing on, the two commissioners on board, Pronis and Foucquebourg, took possession of Mascareigne Island and Diego Rois in the name of the French king; and returning to Madagascar, established a colony at Manghafia in "S. Lat. 24° 30'," which was joined by "six or eight" of the survivors of a shipwrecked French vessel. — "The following year," the colony was removed to Fort Dauphin in "Lat. 25° 6'."

"Nov. 24th" (Churchill coll.), by Abel Jansen Tasman sailing from Mauritius East, land discovered in "forty-two degrees twenty-five minutes" and named "Antony van Diemens lands:" he remained on the coast some days, and anchored, but saw "only the footing of wild beasts and some smoaks" (kindled by Tasmanians). Continuing East to "the country called on the maps New Zealand," and anchoring there, four of his men were killed by the natives: — "the northwest cape of this land" was reached "Jan. 4th," and a cluster of outlying islets was named "Three kings." Sailing thence Northeast, a small island was seen in "twenty-two degrees thirty-five minutes," which could not be reached but was called "Pulstreet's" Island. "Jan. 21st," two islands in "twenty-one degrees twenty minutes" were named "Amsterdam" and "Zealand;" and on the first, "many hogs, hens, and all sorts of fruit" were procured; the inhabitants (Tongans) being "friendly, had no weapons, and seemed to know no evil, but that they would steal." Thence sailing Northward, many islands were seen; and in "seventeen degrees nineteen minutes," eighteen or twenty islands on the charts called "Prince William's Islands or Hemskirk's Shoals." Inclining now Westward, "March 22d, in five degrees two minutes south latitude," about twenty islands were in sight "called in the charts Onthong Java, about ninety miles from the coast of New Guinea." Passing the Islands of Mark, already known, the natives of which "are savage and have their hair tied up" (Papuaans); passing also Green Island, and St. John's Island, New Guinea was reached "April 1st" in "four degrees thirty minutes," at the "cape called by the Spaniards Santa Maria:" the West end of New Guinea was reached "May 18th;" and the voyage terminated at Batavia.

"1643 A. D." (Spreng.), Oelhafen publishing his Elench. plant. dantisc., enumerating "three hundred and forty-eight species."

"May 19th" (Winthrop, and Holmes), union of the New England colonies, Massachusetts, Plymouth, Connecticut, and New Haven: for amity, offence and defence, mutual advice and assistance. Rhode Island petitioning to be admitted, was refused, unless on condition of submitting to the jurisdiction of Plymouth. Massachusetts was in this year divided into counties or shires.

"June 8th" (Sieb. eluc. p. 34), after leaving the supposed Northern point of Japan, the Dutch navigator Maerten Gerrits Vries in sight of the island of Yeso at Cape Eroen. Continuing along the Eastern coast, on the "13th" he saw mount Tsiuna on Kunasiri; two wooden crosses were found on this island (marking probably the graves of Christian converts). On the "17th," he sailed along land named by him "Staetenlant" or "Staeten eylant" (Yeterop), the "high mountains very sparkling from the snow." On the "19th," he caught "a glimpse of land," found to contain "very high mountains which shone much with the snow," and named it "Compagnyslant" (Urup), the land in many places "still covered with snow down to the water's edge;" landing "June 20th," Spring appeared to be just beginning, the *alder*-trees began to bud, and among other herbs met with was "sorrel just the same as grows at home" (*Acetos pratensis*?). There being no land in the Northwest, he proceeded in this direction, and on the 27th having reached "N. Lat. 47° 27'," decided to return Southward; he reached the West end of Yeterop, discovered the strait separating this island from Kunasiri; and thence proceeding Westward, "from the 13th to the 14th of July" was in the middle of the strait separating Yeso from Krafsto (Saghalin), but supposed the land in the West continuous and entered Aniwa Bay; on the "21st," he doubled Cape Aniwa (on Krafsto); steering North and afterwards Northwest, he entered Patientie Bay, and reached the mouth of the river (Boronai in "N. Lat. 49° 15'"); leaving Cape Patientie, it was decided on the "3d of August" to return South, and passing through the strait between Yeterop and Urup he reached the harbour of Tayouan in Formosa "Nov. 18th."

The Ainos are described by Vries and his companions as gaining "their subsistence in a small boat which is cut out of a thick tree, strengthened on each side with four planks one foot high;" have their boats towed by dogs, as also ice-sledges, and the dogs are besides taught to capture salmon; fire is procured by means of "square planks with a hollow," in which they put a "short stick" inserted in a reed, "and rub it between the hands so that it turns round, and so being dipped in melted sulphur they hold that to it and soon have burning fire."

"The same year (= 2303d of Synmu," art de verif), abdication of Niote in favour of her brother Gotto-mio, now daïro of Japan.

The following particulars respecting the aboriginals of New England are given by Roger Williams (key, the vocabulary "framed chiefly after the Narraganset dialect," hist. coll. iii. 203): "There is a mixture of this language, north and south, from the place of my abode" (Providence) "about six hundred miles." The natives "constantly anoint their heads, as the Jews did:" they "gave dowries

for their wives, as the Jews did : ” and apparently in common with the Jews alone, they “ separate their women, during the time of their monthly sickness, in a little house alone by themselves, four or five days, and hold it an irreligious thing for either father, or husband, or any male, to come near them ; ” for the “ practice they plead nature and tradition. ” In accordance with “ the Greeks and other nations, ” they call the seven stars “ mosk or paukunnawaw, ” the bear. “ They have many strange relations of one Wetucks, a man that wrought great miracles amongst them, walking upon the sea, etc. ” The “ southwest, Sowwaniu, is the great subject of their discourse ; from thence their traditions ; there, ” is “ the court of their great god Cawtantowwit ; at the southwest, are their forefathers souls ; ” and there, “ they go themselves, when they die : from the southwest, came their *corn* and *beans*, out of the great god Cawtantowwit’s field. ” Some connexion is inferred with the Southwest wind being the “ pleasingest ” and most desired by the natives, “ making fair weather ordinarily. ” They “ are exceedingly delighted with salutations in their own language ; ” are “ remarkably free and courteous to invite all strangers into their houses ; ” and he “ acknowledged amongst them an heart sensible of kindness, ” having “ reaped kindness again from many, seven years after, when ” he himself “ had forgotten. ” Their provision for a journey of three or four days, is “ nokebick ” parched meal : of their other dishes, parched corn, “ msickquatah ” (succotash) boiled corn whole, “ manu-squussedash ” beans, and “ nawsump ” (samp) a kind of meal pottage unparched, are mentioned. “ They generally all take *tobacco* ; ” one of the causes alleged being “ against the rheum, which causeth the *tooth-ache*. ” Howling “ and shouting is their alarm, they having no drums nor trumpets. ” When “ they have had a bad dream, which they conceive to be a threatening from God, they fall to prayer at all times of the night, especially early before day. ” Having “ no letters nor arts, it is admirable how quick they are in casting up great numbers, with the help of grains of corn, instead of Europe’s pens or counters : ” the names of numbers up to “ nquittemittannug ” thousand, are given ; and even by combination, up to one hundred thousand. “ They hold the band of brother-hood so dear, that when one had committed a murder and fled, they executed his brother ; and it is common for a brother to pay the debt of a brother deceased : ” their “ virgins are distinguished by a bashful falling down of the hair over their eyes : there are no beggars among them, nor fatherless children unprovided for : their affections, especially to their children, are very strong ; ” and this, “ together with want of learning, makes their children saucy, bold, and undutiful. ‘ Nickquenum ’ I am going home, is a solemn word amongst them ; and no man will offer any hinderance to him, who after some absence, is going to visit his family, and useth this word : ” two “ families will live comfortably and lovingly in a little round house, of some fourteen or sixteen feet over, and so more and more families in proportion : ” they “ are as full of business, and as impatient of hinderance, in their kind, as any merchant in Europe : ” they “ have amongst them natural fools, either so born, or accidentally deprived of reason. ” They “ are much delighted after battle, to hang up the hands and heads of their enemies. ” Their “ desire of, and delight in news, is great as the Athenians ; ” and “ upon any tidings, ” I have “ seen near a thousand in a round, ” and many “ will deliver themselves ” with “ very emphatical speech and great action, commonly an hour, and sometimes two hours together : ” in “ time of war, he that is a messenger runs swiftly, and at every town the messenger comes, a fresh messenger is sent : ” their word for letter is from “ wussuckwhommin ” to paint, “ for having no letters, their painting comes the nearest. ” They “ have thirteen months, according to the several moons ; and they give to each of them significant names. ” It “ is admirable to see, what paths their naked hardened feet have made in the wilderness, in most stony and rocky places : ” I have “ known many of them run between four-score or an hundred miles in a summer’s day, and back within two days : ” they “ are joyful in meeting of any in travel, and will *strike fire* either with stones or sticks, to take tobacco, and discourse a little together : ” I have travelled “ many a hundred miles among them, without need of stick or staff, for any appearance of danger amongst them ; yet it is a rule amongst them, that it is not good for a man to travel without a weapon, nor alone : ” if justice be refused in case of robbery between persons of different states, “ they grant a kind of letter of mart to take satisfaction themselves ; yet they are careful not to exceed in taking from others, beyond the proportion of their own loss : I could never hear that murders or robberies are comparably so frequent, as in parts of Europe, amongst the English, French, etc. ” Some “ of them account seven winds ; some, eight or nine. ” A certain small bird is called “ sachim, ” from its “ courage and command over greater birds ” (the *king bird*, *Muscicapra tyrannus*) : a hawk “ wushowunan ” is kept “ tame about their houses, to keep the little birds from their corn ” (compare origin of *falconry*). They “ are very exact and punctual in the bounds of their lands, belonging to this or that ” people, “ even to a river, brook, etc. : and I have known them make bargain and sale among themselves for a small piece or quantity of ground : ” when “ a field is to be broken up, ” all “ the neighbours, men and women, forty, fifty, a hundred, etc. join, and come in to help freely : with friendly joining they break up their fields, build their forts, hunt the woods, stop and kill fish in the rivers : ” the “ women to this day, notwithstanding our hoes, do use their natural hoes of shells and wood. ” The “ variety of their dialects and proper speech, within thirty or forty

miles of each other, is very great, as appears in" the word for *dog*: "anum" in the Cowweset dialect, "ayim" in the Narroganset, "arum" in the Quunniepieuck, and "alum" in the Neepmuck: "moos-soog" is the name of the "great ox, or rather red deer" (*moose*). "Paumpagussit" is the "name which they give that deity or god-head, which they conceive to be in the sea:" a sail is called "sepa-kehig," and "their own reason hath taught them to pull off a coat or two, and set it up on a small pole, with which they will sail before the wind ten or twenty miles:" some of their canoes will carry "twenty, thirty, forty men;" and "I have known thirty or forty of their canoes filled with men, and near as many more of their enemies, in a sea fight." I have heard a native lamenting the loss of a child, "cry out, 'O God, thou hast taken away my child! thou art angry with me; O turn thine anger from me, and spare the rest of my children:' if they receive any good in hunting, fishing, harvest, etc., they acknowledge God in it; yea, if it be but an ordinary accident, a fall, etc., they will say, God was angry and did it: but" they "branch their godhead into many gods," and "have given me the names of thirty-seven, all which in their solemn worships they invoke," as the great southwest god Cantantowwit, the eastern god, the western god, the northern god, the southern god, the house god, the woman's god, the children's god "Muckquachuckquand:" the last-named, believed by a dying native to have appeared to him "many years before, and bid him, when he was in distress, call upon him:" they also worship created things, in which "they conceive doth rest some deity," as the sun god, the moon god, the sea god, the "fire god;" "Can it, say they, be but this fire must be a god, or divine power, that out of a stone will arise in a spark, and when a poor naked Indian is ready to starve with cold in the house, and especially in the woods, often saves his life, doth dress all our food for us, and if it be angry, will burn the house about us, yea if a spark fall into the dry wood, burns up the country:" besides there is a general custom amongst them, at the apprehension of any excellency in men, women, birds, beasts, etc., to cry out 'manitto,' that is, it is a god;" and further, "they conceive that there are many gods, or divine powers, within the body of a man, in his pulse, his heart, his lungs, etc.:" in sickness the "powwaw" or priest "comes close to the sick person, and performs many strange actions about him, and threatens and conjures out the sickness:" they "have an exact form of king, priest, and prophet;" their "priests perform and manage their worship; their wise and old men, of which number the priests are also, make solemn speeches and orations, or lectures, to them concerning religion, peace, or war, and all things:" besides the public feasts or dances, individuals give private ones, expending "sometimes beyond their estate:" the word for soul "cowwe-wonck" is "derived from 'cowwene' to sleep, because, say they, it works and operates, when the body sleeps;" 'michachunck' the soul, in a higher notion, which is of affinity with a word signifying a looking glass or clear resemblance." Besides "their general subjection to the highest sachims, to whom they carry presents, they have also particular protectors, under-sachims, to whom they also carry presents, and upon any injury received, and complaint made, these protectors will revenge it: the sachims, although they have an absolute monarchy over the people, yet they will not conclude of ought that concerns all, either laws, or subsidies, or wars, unto which the people are adverse, and by gentle persuasion cannot be brought:" the "most usual custom with them in executing punishments, is for the sachim either to beat, or whip, or put to death with his own hand; to which the common sort most quietly submit." Marriage "they solemnize by consent of parents and publick approbation, publicly:" the "number of wives is not stinted; yet the chief nation in the country, the Narrogansets, generally have but one wife:" the "men put away frequently for other occasions beside adultery; yet I know many couples, that have lived twenty, thirty, forty years together." They have *money*: the white, called "wompam," made "of the stem or stock of the periwinkle, when all the shell is broken off" (*Dentalium*?) and the black, called "suckauhock," made of the shell of the "poquaauhock" (*Venus mercenaria*); and for this money, the natives "bring down all their sorts of furs, which they take in the country:" they have great difference in their money; "some that will not pass without allowance; and some again, made of a counterfeit shell; and their very black, counterfeited by a stone and other materials; yet I never saw any of them much deceived." Of their occupations, some "follow only making bows; some, arrows; some, dishes; and the women make all their earthen vessels; some follow fishing; some, hunting; most on the sea side make money, and store up shells in summer against winter," and before obtaining awl-blades, "they made shift to bore their shell money with stone: they also felled their trees with stone set in a wooden staff." They have games, "private and publick:" one, "like unto the English cards, yet instead of cards, they play with strong rushes; secondly, they have a kind of dice, which are plumstones painted, which they cast" in a tray; "ntakesemin, I am telling or counting, for their play is a kind of arithmetick:" their "publick games are solemnized with the meeting of hundreds, sometimes thousands:" the "chief gamesters amongst them much desire to make their gods side with them in their games; therefore I have seen them keep" a kind of stone "which is like unto a crystal, which they dig out of the ground, under some tree thundersmitten, and from this stone they have an opinion of success:" besides gambling-houses, "puttuckquapuonck, a playing arbour," on "which they hang great store of

their stringed money, have great stakings town against town, and two chosen out of the rest by course to play the game," they "have great meetings of *foot-ball* playing, only in summer, town against town," at "which they have great stakings, but seldom quarrel:" they "will sometimes stake and lose their money, clothes, house, corn, and themselves, if single persons; they then become weary of their lives, and ready to make away themselves." The "mocking between their great ones is a great kindling of wars amongst them; yet I have known some of their chiefs say, 'What should I hazard the lives of my precious subjects, them and theirs, to kindle a fire which no man knows how far and how long it will burn, for the barking of a dog:' their wars are far less bloody than the cruel wars of Europe, and seldom twenty slain in a pitched battle;" and yet, "all that are slain, are commonly slain with great valour and courage, for the conqueror ventures into the thickest, and brings away the head of his enemy." They have sweating-houses, "pesuponck, a hot house;" into which, after being heated with fire on "a heap of stones in the middle," the men "ten, twelve, twenty, more or less, enter at once stark naked;" and "which doubtless is a great means of preserving them, and recovering them from diseases:" in sickness, "their only drink in all their extremities is a little boiled water." At "the first being sick, all the women and maids black their faces;" and "upon the death of the sick, the father, or husband, and all his neighbours, the men also, as the English, wear black mourning clothes, wear black" faces; "sequuttoi, he is in black, that is, he hath some dead in his house:" as "they abound in lamentations for the dead, so they abound in consolation to the living," using different expressions, "because they abhor to mention the dead by name; and therefore if any man bear the name of the dead, he changeth his name; and if any stranger accidentally name him, he is checked; and if any wilfully name him he is fined; and among states, the naming of their dead sachims is one ground of their wars" (see Metacom): "mockuttasuit, one of chief esteem, who winds up in mats and coats, and buries the dead; commonly some wise, grave, and well descended man hath that office."

"1644, March 14th" (Hazard col. i. 538, and Holmes), by Roger Williams now in England, a charter obtained for Rhode Island: incorporating the towns of Providence, Newport, and Portsmouth, and conferring the power of governing themselves, but agreeably to the laws of England. The king taking the part of the banished colony, and declaring, "That he would experiment, whether civil government could consist with such libertie of conscience" (R. Williams in lett., hist. coll. i. p. 281).

"The same year" (Chinese chron. table, and Pauth. 419), the rebel chieftain Li-tseu-tching, after his capture of Peking and the death of the Chinese emperor, defeated by the Manchous under Tsoung-te. Who thus became head of the new dynasty of the Tai-tsing. Dying almost immediately afterwards, Tsoung-te was succeeded as emperor by his son Chun-tchi; a child under the guardianship of an uncle, A-ma-van.

"At this time" (chin. hist., and Klapp. mem. i. 9), the Russians furtively in possession of the country on the Amoor, and had built there a palisaded town.

"1645 A. D." (Spreng.), the London Society, an academy of arts and sciences, founded by Theodore Hake. (The founding of this society is placed by Blair in "1662, July 15th.")

"In this year" (Jap. mann. 386), a Japanese vessel driven to the coast of Mandshuria, at Olan-kai north of Corea. A piece of unprepared *ginseng* being offered them, some of the party, wishing to see "the region where the ginseng grows," landed under the direction of three Mandshu guides, but were ambushed, most of them slain, and "thirteen" survivors carried to Peking. These were afterwards told that ginseng "is found only in two parts of the mountains between China and Corea," and that "gatherers must begin by hunting the tigers."

"1646 A. D." (Hutchinson i. 161, and Holmes), in Massachusetts, the first legislative act to encourage carrying the gospel to the natives. A mission was commenced "Oct. 28th" by John Eliot, at Nonantum on the South side of Charles river.

"The same year" (Anderson ii. 404, and Holmes), by the English parliament, merchandise for the colonies in America exempted from duty for three years; on condition, that the colonial exports should be sent to foreign countries only in English ships. The beginning of the British Navigation acts.

"About October" (Flacourt ii. 8), in Madagascar, seventy-three Negroes employed about or visiting Fort Dauphin kidnapped by Pronis, put on board vessels, and sold most of them to the Dutch governor of Mauritius.* — From this time, the Negroes would no longer approach the French settlement while there was a vessel in the harbour.

* *Justicia (Andrographis) paniculata* of the West Indies. Growing on Cuba, St. Vincent, and Jamaica, in mountainous situations (Nees, and A. Dec.). Carried from Mauritius to Southern Hindustan, — and called in Sanscrit "kairata," in Tamul and Canarese "kiriati," in colonial French "crête," in Cingalese "attadie" (Ainsw. mat. ind.), in Telinga "nella-venngo," in Bengalee "kala-

"In this year" (Spreng.), Henr. Munting publishing his Hort. Groning. cat., and in his Phyt. mentions *Prinos verticillatus* pl. 51 (Linn. sp.). — He died "in 1658."

"1647 A. D." (Gookin, and Holmes), aid against the Mohawks* solicited by the French of Canada, and declined by the government of Massachusetts. A legislative act was passed, against Jesuits.

"Towards 1648" (art de verif.), Fide-tada succeeded by his son Iemitz or Ijetiruko, now emperor of Japan.

"1648 A. D." (univ. hist., and Holmes), proposal from the New England colonists to the governor and council of Canada, That there should be perpetual peace between the colonies, even though their mother countries were at war. The proposal was accepted, on condition of assistance against the Iroquois; and the negotiation fell through. "June" (Josselyn, and Hutch.), the first execution in New England for the supposed crime of witchcraft; Margaret Jones of Charlestown being the victim.

"The same year" (Marcel), Ibrahim succeeded by Mohammed IV., twentieth Turkish sultan.

"In this year" (Spreng.), Jacob Bobart publishing his Indic. hort. Oxon., — and "in 1658" an improved edition published.

"Dec. 3d" (Flac. ii. 21), Stephan de Flacourt arriving at Fort Dauphin on Madagascar, superseding Pronis as French governor, and meeting with *Carphalea corymbosa* p. 137, *Endrachyum Madagascarense* 137, *Lisianthus trinervis* 135. n. 87, *Combretum purpureum* 130. n. 42, *Deidamia alata* 133. n. 70, *Schizolaena rosea* 130. n. 44, *Euphorbia lophogona* 138. n. 106, and *Limonia Madagascarensis* 131: — his Hist. Mad. was published at Paris "in 1661" (Spreng.).

"1649 A. D." (Flac. ii. 21), the ship sent by Flacourt to Mascareigne Island and its name changed to Bourbon. The island was found fertile, covered with beautiful woods of various kinds of trees including palms, no undergrowth of bushes vines or thorny plants to impede walking, and *land-tortoises* of great size "extremement grosses" abounding; there were no crocodiles, nor venomous serpents, nor rats, nor mice, nor fleas, nor flies, nor mosquitos, nor ants; *swine* were very numerous, also *goats* "cabrits" on the hills (both of course introduced by previous visitors): Flacourt now caused to be landed "four *cows* and a bull," — which in 1654 had increased to "more than thirty."

"Jan. 30th" (Blair, Holmes, and Nicol. p. 340), in England, king Charles beheaded: and succeeded by a form of government termed the "Commonwealth;" all power falling into the hands of the people. The oaths of allegiance and supremacy were abolished; the House of lords suppressed; and Oliver Cromwell declared captain general of the troops of the state.

"At this time" (Robertson iii. 409, and Holmes), the Spanish settlements in America containing "one patriarch, six archbishops, thirty-two bishops, three hundred and forty-six prebends, two abbots, five royal chaplains, and eight hundred and forty convents." — New England in the following year, contained "about forty churches" and "seven thousand seven hundred and fifty communicants" (Stiles, and Holmes).

"August" (H. C. Murphy introd. to transl. 5), the "Vertoogh van Nieu Nederland," a remonstrance against director Stuyvesant and the mere trading policy of the government of New Netherland, carried to Holland by a deputation consisting of Adrian Vanderdonck and two colleagues. Among the productions of the new country, "post-oak" and "white rough bark" (*Quercus obtusiloba*), "grey bark" (*Q. prinus*?), "black bark" (*Q. tinctoria*), and "butter oak the poorest of all and not very valuable" (*Q. rubra*), "oil-nuts large and small" (*Juglans nigra* and *J. cinerea*),

megh" or "kalup-nath" or "muha-tita" (Lindl.); observed by Rheede ix. pl. 56 in Malabar; by Graham, an "herbaceous plant common in gardens," called "kreat" or "kuriatoo" or "kulpa" or "kala metee" or "mahatita," *king of bitters*, "and much used in medicine by the natives;" observed also in Hindustan by Burmann ind. 9, Roxburgh, and Wallich; and according to Lindley. "has been much celebrated as a stomachic, and used as a remedy for cholera and dysentery, and in intermittent fevers," and "is the basis of a French mixture called 'drogue amère.'" Eastward, mentioned by Mason v. p. 494 as "often confounded with Agathotes chirayta," but not seen by him in Burmah: according however to Lindley, occurring in "dry places in the East Indies, beneath the shade of trees; China."

* *Lobelia siphilitica* of Northeast America. "Nearly two hundred years ago" (Pursh) "introduced into Europe" on account of its supposed "medicinal virtues;" — is described by Dodart 104, and Morison 5. f. 55; but its reputation according to Lindley has not been confirmed by "European practice." Westward, *L. siphilitica* was observed by Eaton as far as 44° on Lake Champlain; by McEuen, on the Genessee river; was received by Muhlenberg from Kentucky, by Elliot from the Alleghanies of Carolina and Georgia; was observed by myself frequent in the environs of Philadelphia, but seems unknown in Eastern New England.

"water beech" (*Carpinus Americana*), "common beech" and "beechnuts" (*Fagus ferruginea*), "hedge beech" (*Celtis Occidentalis*?), "axe-handle wood" (. . .), "two species of canoe wood" (*Liriodendron tulipifera*, and . . .), "linden" (*Tilia Americana*), "willow" (*Salix nigra*), "thorn" (*Crataegus tomentosa*), "elder" (*Sambucus Canadensis*), "plums but not many" (*Prunus Americana*), "black currants" (*Ribes floridum*), "gooseberries" (*Grossularia hirtella*), "small apples" (*Malus coronaria*), "artichokes which grow under ground" (*Helianthus tuberosus*), "grapes" some "very large" (*Vitis labrusca*) "and others small" (*V. æstivalis*), are enumerated: and of medicinal plants, "the true snake-root" (*Aristolochia serpentaria*), "Venus' hair" (*Adiantum pedatum*), "hart's tongue" (*Scolopendrium officinarum*), "lingwort" (*Hudsonia ericoides*), "polypody" (*Polypodium vulgare*), "priest's shoe" (*Cypripedium acaule*?), "sea-beach orach" (*Atriplex hastata*), "water germander" (*Teucrium Canadense*), "tower-mustard" (*Turritis glabra*), "crowfoot" (*Ranunculus acris* and *R. repens*), "crane's bill" (*Geranium maculatum*), "false eglantine" (*Rosa Carolina*?), "laurel" (*Kalmia latifolia*), "violet" (*Viola cucullata* and *V. sagittata*), "blue flag" (*Iris versicolor*), "wild indigo" or "indigo silvestris" (*Baptisia tinctoria*), "solomon's seal" (*Polygonatum pubescens*), "dragon's blood" (*Sanguinaria Canadensis*), "milfoil" (*Achillea millefolium*), "wild lilies of different kinds" (*L. superbum*, *L. Canadense*, and *L. Philadelphicum*), "agrimony" (*Agrimonia eupatoria*), "white mullein" (*Verbascum thapsus* introduced), "garden orach" (*Atriplex hortensis* introd.), "plantain" (*Plantago major* introd.), "shepherd's purse" (*Thlaspi bursa-pastoris* introd.), "mallows" (*Malva rotundifolia* introd.), "marsh-mallows" (*Althæa officinalis* introd.), "wild marjoram" (*Origanum vulgare* introd.), "comfrey" (*Symphytum officinale* introd.), "blessed thistle" (*Carduus marianus* introd.), and "tarragon" (*Artemisia dracunculus* cult.).

"1650, Oct. 3d" (Chalm., and Holmes), Charles II. although excluded from England, exercising jurisdiction in Virginia and several West India islands, an ordinance by parliament; Prohibiting trade with Barbadoes, Virginia, Bermuda, and Antego. — A similar legislative act was passed in the following year in Massachusetts, until their "compliance with the Commonwealth of England," or further order (Hazard coll. i. 553).

"In this year" (Spreng.), William How publishing his *Phytolog. britann.* an alphabetical Catalogue of all the plants growing in England, "twelve hundred and twenty" in number: — he died "in 1656." A second edition was published by Christopher Merrett "in 1667" under the title of *Pinax britann.*, professedly increasing the number of plants to "fourteen hundred," but these were reduced by Ray to "ten hundred and fifty."

"Nov. 26th" (Martini, and Pauth. 421 to 431), surrender of Canton, leaving the Mantchous undisputed masters of all China. P. Gabriel de Magalhan at this time in China, and from official documents consulted by him, the population under the first Mantchou emperors found to include "11,502,872 families and 59,788,364 males;" there being also "272 libraries and 3,636 distinguished men."

In or about 1650 (= 1680 — "30 years," art de verif.), Iemitz succeeded by Jetznako, now emperor of Japan; — and who reigned "thirty" years.

"1651 A. D." (Pauth. 432), in China, death of the regent A-ma-van, and the cares of government assumed by Chun-tchi. A Jesuit missionary P. Adam Schaal, was placed by Chun-tchi at the head of the tribunal of mathematics, To reform the Chinese astronomy upon the European methods.

"In this year," John Endicott chosen governor, and Tho. Dudley deputy governor "of the English inhabiting the colony of the Mattachusetts." The latest date in the "Wonder-working Providence," attributed to Edward Johnson of Woburn, — and published in London in 1654.

"The same year" (Robertson ix. 111, and Holmes), by the parliament of England, a noted Navigation act: Prohibiting imports from Asia, Africa, or America, "in any but English built ships, and belonging either to English or English plantation subjects, navigated also by an English commander, and three fourths of the sailors to be Englishmen; excepting" imports "from the original place of their growth or manufacture in Europe solely."

"1652, March 12th" (Hazard coll. i. 560, and Holmes), by an English squadron, Virginia "the last of all the king's dominions" reduced to obedience. The government of Maryland was also taken from Lord Baltimore, for disloyalty to the "Commonwealth."

"Nov. 22d" (Hazard coll. i. 575, and Holmes), the inhabitants of Maine at their own request taken under the protection of Massachusetts: sending from this time deputies to the legislature. Also "upon occasion of much counterfeit brought in the country" (Hull diar., Hutch., archæol. Amer. iii. p. 145), money first coined in New England. John Hull was appointed mint-master; — and on all the successive issues for "thirty years," the date "1652" was continued (Holmes).

"The same year" (relat. Jes. præf.), in ascending the Saguenay, lake St. John called by the natives Pacouagami, discovered by the jesuit Jean Dequen.

"The same year" (Spreng.), the Academia Curiosorum of Germany founded by Io. Laur. Bausch.

"1653, Dec. 16th" (Nicol. p. 341), in England, the supreme authority seized by Oliver Cromwell: now entitled "Protector of the Commonwealth."

"The same year," Navarrete at Manila.

"1654 A. D. (= 2314th of Synmu," art de verif.), Gotto-mio succeeded by his third brother Sinin, now dairo of Japan.

"The same year" (Chalm., and Holmes), by an English fleet, reduction of "the country from Penobscot to Port Royal;" including the French forts about the river St. Johns. — The territory in question was confirmed in the following year to England.

"The same year" (Spreng. rei herb.), oxygen gas discovered by Rad. Bathurst and Nathan Henshaw.

"In this year" (Spreng., and Winckl.), Johann Loesel publishing his *Plant. Boruss. sponte nasc.*, enumerating * *Hierochloa Borealis* 111. n. 26, *Carex canascens* or *curta* 117. n. 32, *Hyppnum cristatastrensis* 167. n. 42, *H. recognitum* 167. n. 43, *Fontinalis antipyretica* 173. n. 53, *Fungermannia asplenoides* 167. n. 45, *Cyatrus striatus* 98. n. 16, *C. olla* 98. n. 16, and *Clavaria alvearis* 99. n. 17. — He died "in 1656," and an improved edition under the name of *Flor. Pruss.* was published by Gottsched "in 1703."

Koeleria cristata of Northern climates. A grass described by Loesel 110. n. 22 — (Spreng.); termed "gramen spica cristata hirsuta" by Tournefort inst. 519, "aira cristata" by Linnæus sp. plant. 94, and known to grow from Sweden, Russia, and Ireland to the Mediterranean (Engl. bot. pl. 648, and Wats.): received by Richard from Switzerland (Pers.); observed by Sibthorp in the Peloponnesus, by Chaubard, covering the stony summits of mount Diaforti: known to grow also on Caucasus and in Siberia (Kunth). Farther East, was received by Pursh from the Columbia river; was observed by Nuttall from the Red river to the Arkansas and Missouri; by E. James, on the Lower Missouri; and according to A. Gray, grows on dry hills from Illinois as far as Pennsylvania.

"1655, March 25th" (Humb. cosm. ii. and iv.), a satellite of Saturn discovered by Huygens, by means of an object-glass polished by himself: the sixth in the order of distance — as afterwards appeared.

"May 2d" (Blair, and Holmes), by an English fleet under Penn, landing of a force on Jamaica; and possession soon obtained of the whole island.

"Sept. 16th" (Smith, and Holmes), Fort Casimir on the Delaware, captured from the Swedes by the Dutch under governor Stuyvesant. — The site is at the present day called "Newcastle"

"In this year" (Spreng.), after the first issue of "1653," Brunyer publishing a second edition of his *Hort. Blesensis*.

"1656, July" (Chalmers i. 190, Hazard i. 630 to 638, and Holmes), Quakers make their first appearance in New England, coming from Barbadoes: being regarded as hostile to civil order and Christian truth, they were banished from Massachusetts to the number of "twelve" by the legislature. Proposal of Cromwell for the removal of colonists to Jamaica, declined by the same legislature.

"In this year" (Spreng.), publication of the *Museum Tradescantianum*, in which are enumerated *Jasminum odoratissimum*.

"The same year" (Ait.), John Tradescant the younger in Virginia, meeting with *Henchera Americana* (Spreng.). — He died "in 1662" (biogr. univ.).

Lonicera sempervirens of the Marginal alluvial of Northeast America. The coral or trumpet honeysuckle observed by Tradescant in Virginia — (Spreng.); transported to Europe is described by Hermann lugd. pl. 483, and Miller; continues to be cultivated for ornament, as far even as Bombay, where it was found by Graham "in gardens pretty common." Westward, according to A. Gray, grows wild as far as 40° 40', "copses, New York, near the city;" was observed by myself at 40° in the New Jersey forest, and frequent throughout the forest at 32° beyond Charleston; by Schweinitz, at 36° near Salem in Upper Carolina; by Croom, wild near Newbern and as far as 30° 30' in Florida; by N. A. Ware, also in Florida.

* *Potentilla Norwegica* of North America. Termed "quinquefolium hirsutum luteum paucioribus laciniis" by Loesel pruss. pl. 70, — "trifolium norwegicum majus serratum foliis crenatis flore luteo" by Kyllingius (in Act. Hafn. for 1673 pl. 346), and known to occur in waste and fallow ground in Northern Europe and Siberia (Moris. ii. 2. pl. 20, fl. Dan. pl. 171, Pers., and Dec.): observed by Linnæus abounding on the Dalekarian mountains, but in cultivated ground in other parts of Sweden, having migrated from Norway. Westward, according to Hooker, grows from Labrador and 65° at Bear Lake to the mouth of the Columbia and throughout Canada; was observed by myself, from 45° to 38° along the Atlantic, often in marshes and wild situations, but multiplying in clearings and becoming a weed in cultivated ground; by Pursh, from Canada to New York; by Short, in Kentucky; by Nuttall, on the Arkansas; by Beck, on the Mississippi near St. Louis; by Long's Expedition ii., as far up as the St. Peter's (Schw.): but probably an introduced weed on "Charleston neck" (Ell.), and in other "waste places" in our Southern States (Chapm.).

"The same year = 13th of Chun-tchi" (Pauth. 443), edict by the Chinese emperor against Christian missionaries. At Pekin (Pauth 432), first arrival of a Russian ambassador: but refusing compliance with the ceremonies of introduction, he was not received at Court. The Dutch ambassador was in like manner unsuccessful: the commander of the Chinese fleet, abandoning further resistance to the Mantchous, having withdrawn to Formosa and dispossessed the Dutch.

"The same year" (Blair), by Huygens, the *pendulum* applied to clocks, a great improvement.

In the poem attributed to Governor Bradford (hist. coll. iii. p. 77), mention is made of fruit trees now bearing in New England: "*pears, cherries, plumbs, quinces, and peach*;" also, of "the fair white lily" (*Lilium candidum*) "and sweet fragrant rose" (*Rosa rubiginosa*); and of additional garden herbs, as "skirets" (*Sium sisarum*), "*beets, coleworts and fair cabbages*" (*Brassica oleracea*).

"1657 A. D." (Belknap i. 160, and Holmes), by the Massachusetts legislature a licence to certain persons to supply the Eastern natives with arms and ammunition for hunting, on paying an acknowledgment. Death of Governor William Bradford; "the very prop and glory of Plymouth colony during all the whole series of changes that passed over it" (Hubbard 62).

"December 17th" (Humb. cosm. iv.), the real form of the ring of Saturn made out by Huygens. — The eighth or outermost satellite was discovered by Cassini in "October 1671;" the fifth, by him "Dec. 23d 1672;" the third and fourth, by him at the "end of March 1684;" the first, by Herschel "Aug. 28th 1789;" the second, by him on the following "Sept. 17th;" and the seventh, by "Bond at Cambridge U. S. Sept. 16 to 19" and "Lassell at Liverpool Sept. 19 to 20, 1848."

"1658 A. D." (Churchill coll.), at Macasar in Celebes, Fernandez Navarrete vi. 8 found an ambassador from the "great nababo of Golconda" in Hindustan. Showing commercial relations; and that the people of Celebes had already acquired political importance.

A bird of paradise (Paradisea) was seen by Navarrete at Terranate: and at Macassar, many "cacatua" (*cockatoos*, *Psittacus*), all white, easily made tame and learned to talk. — Dampier bought cockatoos at the island of Bouton, farther South (both kinds of birds having of course been brought originally from the Eastward).

"In this year" (Krapf trav. 521-9), Muscat recaptured from the Portuguese by the Arabs under Sultan bin Seif bin Malik.

"Sept. 3d and 13th, Friday" (Nicol.), death of Oliver Cromwell. Who was succeeded as "Protector" by his son Richard.

"In this year" (Smith ed. fl. lapp.), Olaus Rudbeck publishing his Cat. hort. Upsal., enumerating *Pedicularis sceptrum-carolinum* 4.

"1659 A. D." (Chalm., and Holmes), Charles II., although excluded from England, proclaimed king by the Virginia colonists. The Spanish town of Campeachy captured by the English under Christopher Mims (Harris voy. ii. 903).

"The same year" (Hazard coll. ii. 565 to 572), in Massachusetts, William Robinson and Marmaduke Stephenson, Quakers, returning "after banishment upon pain of death," were executed. Mary Dyer, a Quakeress, was reprieved on condition of leaving the jurisdiction: — but she returned in the following year, and was executed.

"1660, May 29th" (Blair, and Nicol.), Richard Cromwell having resigned, the "Commonwealth" succeeded by the restoration of monarchy, with Charles II. as king. By the English parliament, the Navigation act was rendered more stringent: the export of various colonial products to countries not belonging to England, being prohibited.

In Denmark (Blair), the government was in this year made absolute.

"July" (Chalm., and Holmes), arrival at Boston of Whalley and Goffe, regicide judges: having left England before the Restoration, they did not at first conceal themselves. New England, Maryland, and Virginia, at this time "the only English colonies on the American continent;" and estimated to contain "no more than eighty thousand inhabitants" (Chalm. i. 239).

"The same year" (Maunder), Shah Jehan dethroned by his son Aurungzebe, now emperor of Northern Hindustan.

"1661 A. D." (Chalm., and Holmes), by the governor and legislature of Massachusetts, Charles II. formally acknowledged king. In accordance with a letter from him, the penal laws against Quakers were suspended: on which occasion, "twenty-eight" Quakers were released from prison and conducted beyond the jurisdiction of Massachusetts (Hazard ii. 595). The translation by John Eliot of the New Testament into the aboriginal language, completed in this year, and printed.

"In this year" (Spreng.), Gabr. Grisley at Lisbon, publishing his Viridar. Lusitan., enumerating *Myrica Faya* (of Madeira) 305, *Salvia polymorpha* 751-5, *Gratiola linifolia* 698, *Iris Lusitanica* 1560, *Milium multiflorum* 602, *Avena pallens* 601, *Hordeum hystrix* 639, *Exacum filiforme* 310, *Nonea nigricans* 97, *Anagallis parviflora* 92, *Parietaria platyphyllos* 1111, *Anagallis linifolia* 88, *Verbascum blattarioides* 202, *Echium plantagineum* 449, *Eryngium ilicifolium* 470, *E. odoratum* 479,

E. pentanthum 481, *Angelica montana* 101, *Caucalis elongata* 303, *Athamantha verticilliosa* 437, *Oenanthe apifolia* 124, *Statice angustifolia* 876, *Armeria fasciculata* 1361, *A. cephalotes* 1360, *A. humilis* 1362, *Linum tenue* 891, *Scilla monophylla* 1552, *Ornithogalum roccense* 1596, *O. chloranthum* 1595, *Leucoium trichophyllum* 1572, *Polygonatum ambiguum* 1175, *Colchicum tessellatum* 1525, *Rumex thyrsoides* 18, *Alisma trinerivium* 1166, *Dianthus attenuatus* 290, *Silene arenaria* 921, *S. sabuletorum* 922, *S. psammitis* 923, *Lythrum meoanthum* 936, *Geum Atlanticum* 286, *Cistus verticilliflorus* 371, *Delphinium pentagynum* 26, *Linaria dealbata* 457, *L. multipunctata* 880, *L. amethystina* 881, *L. linogrisea* 882, *L. bipunctata* 883, *L. Lusitanica* 885, *Antirrhinum meoanthum* 108, *Bartsia maxima* 57, *Euphrasia scabra* 496, *E. filifolia* 495, *Cochlearia acaulis* 377, *Cheiranthus longisiliquis* 860, *Malva tuberculata* 55, *Lathyrus helodes* 740. 837, *Genista triacanthos* 543, *Astragalus cymbaearpos* 171, *Anthyllis hamosa* 106, *Ornithopus sativus* 1089, *O. repandus* 1281, *Hypericum linariaefolium* 765, *H. tomentosum* 768, *Cichorium divaricatum* 355, *Helminthia spinosa* 230, *Scorzonera multifida* 1295, *S. pinifolia* 1294, *Anthemis fuscata* 323, *Centaurea uliginosa* 771, *C. polyacantha* 774, *C. limbata* 775, *Aceras anthropomorpha* 1592, *Quercus phellodrys* 787, *Mercurialis elliptica* 1025.

"In the reign of Chun-tchi" (according to Chinese historians, Pauth. 433), the population of China amounting to "14,883,858 families."

"1662 A. D." (Chalm., and Holmes), by the assembly of Maryland, a law for establishing a mint: being, with one in Massachusetts already noticed, the only laws in the country for *coining money*—until the Revolution.

"Aug. 24th" (Neal, and Holmes), in England, enforcement of the Act of uniformity in religion: by which about "two thousand" dissenting clergymen were ejected, without provision for themselves or families. Many, for exercising their ministry in private, died in prison; but a considerable number found an asylum in New England.

"In this year" (Klapr. mem. i. 324), the Dutch driven out of Formosa and the Pescadores by the Chinese pirate Tching-tching-koung or Koxinga;—who with his successors held possession twenty-one years.

"The same year" (Chinese chron. table, and Pauth. 433), Chun-tchi succeeded as emperor by his child Khang-hi, under the guardianship of "four regents." One of their first measures was the expulsion of eunuchs from the palace and all posts of honour and dignity. The abandonment of the seacoast was also ordered by the regents: on account of the depredations of Koxinga, the pirate-chief of Formosa.

"In this year" (Spreng.), Georg a Turre, after visiting Crete, publishing his *Cat. hort. Padua*, enumerating "*rubia arborescens cretica*" *Ernodea montana*, and "*petroselinum creticum radice tuberosa*" *Bunium ferulaceum*.

"1663, Jan. 26th" (Josselyn, and Holmes), a severe *earthquake* throughout Canada, New England, and the New Netherlands.

"July 27th," Josselyn on his Second voyage arriving in the harbor below Boston. He proceeded to Black point "six mile to the Eastward of Saco,"*—and remained in New England until "Oct. 10th, 1671."

During the governorship of Berkeley (Spreng. gesch.), John Banister in company with William Vernon and David Krieg, arriving in Virginia, meeting with *Xyris bulbosa* (Ray pl. 2), "*cyperus miliaceus marilandicus*" *Trichophorum eriophorum*, *Elymus Canadensis* (Ray suppl. 599), *Lechea minor* (R. s. 132), *Houstonia cœrulea* (R. s. 502), *Hedyotis purpurea* (R. s. 262), *Plantago Virginica* (R. hist. ii. 188), *Onosmodium Virginianum* (R. s. 272), *Phlox pilosa* (R. s. 490), *Spigelia Marylandica* (R. dendr. 32), *Ceanothus Americanus* (R. dendr. 69), *Euonymus Americanus* (R. d. 57), *Sanicula Marylandica* (R. s. 260), *Cicuta bulbifera* (R. s. 260), *Oenothera pumila* (R. s. 416), *Gaultheria*

* *Platanus Occidentalis* of the Mississippi and its tributaries. The *button-wood* or *American sycamore* possibly brought and planted by the natives in Eastern New England: observed by Josselyn voyag. 70, "a stately tree, growing here and there in valleys, not like to any trees in Europe, having a smooth bark, of a dark brown colour, the leaves like great maple, in England called sycamor, but larger:—" "a button-wood tree which measured nine yards in girth," is mentioned by Paul Dudley writing from New England in 1726 (phil. trans. xxxiii. 129, and arch. Am. iv. 125): *P. Occidentalis* was observed by F. A. Michaux as far East as Portland, and from 44° on Lake Champlain throughout the Western States, but rare in the lower portion of Carolina and Georgia; by myself, not clearly indigenous along the Atlantic in New England and our Middle States, but wild along the banks of the Ohio; by Catesby i. pl. 56, and Elliot, in South Carolina; by Bartram, as far as 30° in Florida; by Darby 77, to 31° in Louisiana; by Nuttall, at 34° on the Arkansas; by Long's Exp., as far up the Mississippi as 41°; and by E. James, on the Missouri and the Canadian.

hispiacula (R. h. 685), *Tovaria Virginiana* (R. h. 183), *Cercis Canadensis* (R. dendr. 100), *Epigaea repens* (R. s. 596), *Silene stellata* (R. h. 1895), *Euphorbia polygonifolia* (R. s. 431), *Spiraea tomentosa* (R. s. 330), *Gillenia trifoliata* (R. s. 330), *Clematis viorna* (R. h. 1928), *Fedia radiata* (R. s. 3, p. 244); "rubia tetraphylla glabra latiore folio bermudensis seminibus binis atropurpureis" (Pluk. alm. pl. 248, R. s. 261), *Galium Bermudense* ("G. latifolium" of Mx. ?); *Pycnanthemum incanum* (R. h. 1229), *Trichostema dichotoma* (R. s. 311), *Scutellaria integrifolia* (R. s. 310), *Euchroma coccinea* (R. s. 400), *Gerardia purpurea* 1926, *G. flava* 1926, *G. pedicularia* (R. s. 397), *Chelone glabra* (R. s. 397), "digitalis flore pallido transparente foliis et caule molli hirsutiae imbutis" 1928 *Pentstemon hirsutum* ("P. pubescens" of Willd. ?), *Gelsemium sempervirens* (R. h. 1769), *Bignonia capreolata* (R. h. 1329), *Obolaria Virginica* (R. s. 595), *Epiphagus Virginianus* (R. s. 595), *Orobancha uniflora* (R. s. 595), *Mimulus ringens* (R. h. 769), *Napaea dioica* 1928, *Dichytra cucullaria* (R. s. 475), *Polygala incarnata* (R. s. 639), *P. lutea* (R. s. 639), *P. verticillata* (R. s. 639), *P. cruciata* (R. s. 639), *Desmodium canescens* (R. s. 458), *D. marilandicum* (R. s. 455), "hypericum pumilum sempervirens caule compresso ligneo ad bina latera alato flore luteo tetrapetalo" (Pluk. mant. 104 and Ray suppl. 495) *Ascyrum pumilum*; "sonchus sylvestris folio laciniato glauco costa non spinosa" (R. s. 137) *Lactuca Canadensis*; *Vernonia Norveboracensis* (R. s. 208); "jacea altera non ramosa tuberosa radice foliis latioribus flores ferens pauciores majores" 1929 *Liatris scariosa*, "jacea non ramosa tuberosa radice floribus plurimum rigidis perangustis" 1927 *L. spicata*; *Cirsium Virginianum* (R. s. 197); *Eupatorium hyssopifolium* (R. s. 189), *E. sessilifolium* (R. s. 188), *E. rotundifolium* (R. s. 189), *E. altissimum* (R. s. 187), *E. trifoliatum* (R. s. 189), *E. perfoliatum* (R. s. 189), *Baccharis humifolia* (R. hist. 1799), *Senecio aureus* (R. s. 180), *Diplopappus linarifolius* (R. s. 175), *Solidago caesia* (R. s. 168), *Verbesina sigesbeckia* (R. s. 213), *Borrchia frutescens* (R. s. 211), *Helioopsis laevis* (R. s. 211), *Rudbeckia hirta* (R. s. 210), *R. purpurea* (R. s. 218), *Coreopsis auriculata* (R. s. 212), *C. tripteris* (R. s. 215), *Actinomeris alternifolia* (R. h. 337), *Silphium trifoliatum* (R. s. 211), *Chrysogonum Virginianum* (R. s. 213), *Platanthera psychodes* (R. s. 582), *Tragia urticifolia* (R. s. 205), *Betula nigra* (R. dendr. 12), *Quercus phellos* (R. dendr. 8), *Q. prinus* (R. h. 1916), *Q. nigra* (R.), *Smilax glauca* (R. s. 345), *S. herbacea* (R. s. 345), *Cenchrus tribuloides* (R. s. 602), *Osmunda cinnamomica* (R. s. 86), *Lycopodium (Selaginella) rupestris* (R. s. 32), *L. alopecuroides* (R. s. 32), *Verbena Caroliniana* (R. s. app. 249, n. 10, Willd.), *Dichromena leucocephala* (R. h. iii. 624). — He remained behind as a missionary, and after his death his collection of plants fell into the hands of Sloane, and some of them were published by Ray hist. "in 1686" (Brendel in Am. nat. 1870).

Isnardia palustris of North America. An aquatic, usually submerged, found by Banister in Virginia * — (Ray hist. 1102 suppl. 635); but by Zanoni 67 in Southern Europe (Spreng.), and

* *Hypericum quinquenervium* of Northeast America. A small annual observed by Banister in Maryland and termed "hypericoides ex terra mariana floribus exiguis luteis" — (Pluk. mant. 104 and Ray suppl. 495); by Walter (Pers.), Michaux, and Elliot in Carolina; by Croom, as far as 30° 30' in Florida; by Nuttall, along the Arkansas; by Beck, on the Mississippi near St. Louis; by myself, throughout New England; and is known to grow in Canada as far as Lake Winnipeg (Hook.); in our Southern States, according to Chapman, "a foot high" "branching above," the capsule remaining "green." Transported to Europe, was observed by Savi naturalized near Pisa (Treviran., and A. Dec.).

Hieracium venosum of Northeast America. Its leaves mostly radical and veined with red, called *poor Robin's plantain* (Ph.) or *rattlesnake-weed* (A. Gray); observed by Banister 1926 in Virginia and termed "hieracium fruticosum latifolium foliis punctis et venis sanguineis notatis;" — by Pursh, from Canada to Carolina; by A. Gray, "common" in central New York; by myself, from 45° to 38° along the Atlantic; by Schweinitz, at 36° in Upper Carolina; by Elliot, in the upper district of Carolina and Georgia; and by Short, in Kentucky. In regard to its alleged "medicinal powers" (Ph.), I have seen a young Pennsylvanian allow himself to be bitten by a rattlesnake that had just killed a hen, and applying this herb no ill effects followed, but I cannot recommend a repetition of the experiment. (See H. nudicaule.)

Pycnanthemum incanum of Northeast America. The *horse-mint* is a pubescent hoary aromatic herb, observed by Barrelier in Virginia — (Ray suppl. 298); growing according to A. Gray from "New England to Michigan, and southward;" observed by Torrey as far North as 41° on the Hudson; by Pursh, from New York to Carolina; by Elliot, in South Carolina; by Chapman, "Florida to Mississippi;" by Drummond, in Alabama (Benth.); by Short, in Kentucky; and by Nuttall, on the Arkansas. Transported to Europe, is described by Morison iii. 11. 8. 4. and Plukenet mant. 344. f. 7.

Cenchrus tribuloides of Northeast America. The *bur grass* observed by Banister in Virginia — (Ray suppl. 602); by Torrey as far North as 41°; by myself, frequent and troublesome in sandy

Boccone mus. pl. 84; by Desfontaines, in Algeria; by Soleirol, in Corsica (A. Dec.); by Savi, in Etruria; by Roth, in Germany; by Sibthorp, in Southern Greece; by Ledebour, South of Caucasus, occurring according to Decandolle as far as Persia and Siberia; and by Drège, in Austral Africa. Westward, according to Hooker, grows throughout Canada to the Saskatchewan; was observed by myself from 45° to 40° along the Atlantic, clearly indigenous; by Schweinitz, at 36° in Upper Carolina; by Elliot, in South Carolina; by Baldwin, as far as 31°; by Short, in Kentucky; was received by Torrey from Oregon, and by Decandolle from Mexico.

Cyperus compressus of Tropical and Subtropical America. Observed by Banister in Virginia — (Ray suppl. 623), by Sloane pl 76 in the West Indies, known to grow also in the warm district of Mexico and on Jorullo (Kunth): was received by Muhlenberg from Georgia; was observed by Pursh from Pennsylvania to Carolina; by Baldwin, from Delaware to Florida; by Chapman, in "cultivated grounds, Florida to North Carolina, and westward," the umbel "sometimes reduced to few spikelets or a single one." Possibly through European colonists, was carried across the Atlantic to Equatorial Africa (Benth. fl. Nigr.); to Madagascar (Ad. Juss., and A. Dec.); to Bombay (Graham) and Eastern Hindustan (Roxb.). "*C. Nuttallii*," growing according to A. Gray in "salt or brackish marshes, Massachusetts to Virginia, and southward," may be compared.

"The same year" (Holmes), by the legislature of Rhode Island, all men professing Christianity, though of different judgment in religious affairs, Roman Catholics only excepted, admitted as freemen, with power to hold office.

"The same year" (Chalm., and Holmes), a charter from Charles II. for the territory South of Virginia, under the name "Carolina:" permitting even some religious freedom. Proposals for settlers were issued, agreeably to the request of New England colonists residing for three years around Cape Fear. And a small plantation, established for several years on the Chowan river received the name "Albemarle."

"In this year" (Spreng., and Winckler), Io. Siegesmund Elsholtz publishing his *Flor. Marchica*. — He died "in 1688."

"The same year (= 2323d of Synmu," art de verif.), Sinin succeeded by his youngest brother Kinsen, son of Kouotei, and now dairo of Japan.

The same year = "2d year of Khang-hi" (topog. Cant., and Pauth. 474), by the English, an admiral sent, to assist against the pirates of Fou-kien: with a request, for opening trade. Leave was granted them, to come once in every two years. — At the end of three years, they were forbidden; on account of proposing to bring tribute only once in eight years. The next year, contrary to law, they sent the tribute by Fou-kien.

"The same year," Navarrete in China.*

"1664, March 12th" (Smith, and Holmes), a charter for extensive tracts of land in America, granted by Charles II. to his brother, duke of York and Albany. A portion was conveyed to other persons "June 23d" under the name "Nova Cæsarea" or New Jersey. Stuyvesant, the Dutch governor of New Netherlands surrendered "Aug. 27th;" and the name of the fort and town of New Amsterdam, was changed to "New York." The Dutch garrison at Fort Orange surrendered "Sept. 24th," the name was changed to "Albany;" and the reduction was completed by the surrender "Oct. 1st" of the Dutch and Swedes on the Delaware Bay and river. Before the close of the year, Elizabethtown was founded by colonists from Long Island: — and soon afterwards by various colonists, Newark, Middletown, and Shrewsbury, in the same portion of New Jersey.

"The same year" (Josselyn, and Holmes), in New England, the translation of the Bible into the aboriginal language by John Eliot, completed and printed.

"May 11th" (narrat.), arrival at Cayenne of F. De la Barre, lieutenant-general of French Guayana:

soil along the tide-waters of the Delaware; by Pursh, on the seashore of New Jersey; by Michaux, on the seashore of Virginia (Pers.); by Baldwin, from New York to Florida; by A. Gray, "along the Great Lakes;" by Nuttall, on the Arkansas; by E. James, as far as the sources of the Canadian; and according to Kunth, grows also in Mexico, and at Rio Janeiro and Montevideo. Transported to Europe, is described by Morison iii. 8. f. 4 (Linn. sp.).

* *Rosa arborea* of China. The "rose" seen by Navarrete in China, becoming a tree and putting forth new flowers every month, — may be compared. *R. arborea* is otherwise known only from Olivier, who brought seeds "from Persia" to France, the growing plants young when seen by Persoon.

Lonicera Japonica of Japan. The "honeysuckles" wild according to Navarrete i. 16 in the Northern provinces of China, — may be compared. *L. Japonica*, a climbing species, is described by Thunberg 89 as observed in Japan. By European colonists, was carried to Burmah, observed "exotic" there by Mason; and to Northeast America, where it continues in gardens.

the remnant of Dutch colonists were sent to France; leaving behind "more than one thousand and sixty" colonists White and Black, including "not forty" women. In regard to the climate, not a drop of rain fell from the "10th of July to the 10th of November." In Indian Guayana, nearer to and as far as the Equator, rains are more frequent and abundant, the native tribes in general living by cultivating the soil, making and drinking several kinds of beverages: the Aracarets are enumerated as having no enemies; the Palicours are continually warring against the Caribs; and the Arrouagues, a considerable tribe on Berbice river, have had long wars against the Caribs, and have often defeated them.

"Nov. 17th" (Josselyn, and Holmes), a very large *comet*: which continued visible in New England — until "Feb. 4th." The comet "was conspicuous to the whole world."

"In this year" (Linn. fl. suec.), after his Hort. Upsal. "in 1658" Olaus Rudbeck publishing his Delic. Hort. Jacob. — He published Auct. Hort. Upsal. "in 1666," Hort. Botan. "in 1685," commenced Camp. Elys., and died "in 1702" (Spreng.).

1665 A. D. (= "3d year of Kinsen," art de verif.), the inquisitorial tribunal Jesumi established by Kinsen and the cubo: by which every inhabitant of Nangasaki and of the province of Bungo, the only parts of Japan where there remained suspicion of Christianity, was compelled to trample on the cross.

"July" (Blair), London desolated by pestilence.

"The same year" (Spreng.), founding of the Academy of Sciences of Paris. — The first meetings were held in the following year (Blair).

"In this year" (Spreng.), John Rea publishing his Florilege, enumerating *Erythronium Americanum*.

"The same year" (tradit. by Z. Macy, hist. coll. iii. p. 159), Metacom or Philip having come alone to Nantucket, to kill a native for "speaking the name of the dead," it was supposed, of a near connexion (see R. Williams' key): the English interceding, all the money they were able to collect "was barely sufficient to satisfy" Metacom for the native's life.

"The same year" (Maunder), the French obtain footing on the West coast of Haiti or Hayti.

"1666 A. D." (Pauth. 434), in China, one of the four regents dying, the cares of government assumed by Khang-hi, now "thirteen" years old. — P. Verbiest was appointed by him chief of the Bureau of astronomers.

"Sept. 2d" (Blair), the great fire in London.

"In or about this year" (Harris voy., and Holmes), beginning of the depredations of the "buccaneers": adventurers combined together, principally English and French, for the purpose of plundering Spanish settlements in the West Indies.

"In this year" (Spreng.), after his Hort. Stud. in "1657," Hyacinth Ambrosini publishing his Phytol., enumerating **Passiflora hederacea* 91, *Anthemis tomentosa* 100, and *Centaurea amberboi* 187. — He died in "1672."

"In this year" (Winckl.), Chabré publishing his Stirp. Sciagraph., taken principally from J. Bauhin.

Selinum Chabraci of middle Europe. Described by Chabré — (Spreng.); observed by Crantz, and Jacquin austr. i. pl. 72, in Austria; by Moench, in Germany; by Allioni, in Piedmont; by Villars, in Dauphiny; by Thuillier, as far as the environs of Paris (Steud.); and within fifty years, after the opening of the Doubs canal "to 1822," made its appearance in the environs of Montbelliard (Bern., and A. Dec.).

1667 A. D. = "6th year of Khang-hi" (topog. Cant., and Pauth. p. 473), reception of an ambassador; bringing a letter written on leaves of gold, the king's portrait, a sword ornamented with gold,

* *Tripsacum dactyloides* of North America. The *gama grass*, reedy with leaves an inch wide, transported to Europe described by Hyacinth Ambrosini 516 — (Spreng.), Miller, and Linnæus. Westward, was observed by Torrey, and A. Gray, from 41° in Connecticut "near the coast," "sometimes used for fodder at the South;" by Pursh, in Virginia, Carolina, and Illinois; by Nuttall, from 40° on the Atlantic and the "prairies of the West" to Red river of Louisiana; by Schweinitz, at 36° in Upper Carolina; by Walter, and Elliot, in South Carolina; by Chapman, in "rich soil, Florida, and northward;" by Baldwin, as far as 29°; and according to Kunth, grows also as far as Hayti, Mexico, and California. "T. monostachyum," regarded by Nuttall as only a variety, was observed by him on the Arkansas; by Pursh, near salt water from New York to Carolina.

Colladea monostachya of the West Indies. A grass, transported to Europe, described by Hyacinth Ambrosini 235 — (Spreng.), termed "tripsacum hermaphroditum" by the younger Linnæus, "antephora elegans" by Schreber and Beauvois (Steud.). Westward, is known to grow wild on Jamaica (Pers.).

a scabbard of gold and precious stones, many other costly articles; and for the empress, a large looking-glass, a collar of coral, also amber, rose-water, and other perfumes. In return the emperor gave silver, eighty pieces of silk, etc.; and besides, sixty-six pieces of silk and a hundred taels of silver to the ambassador; eighteen pieces of silk and fifty taels, to the second in rank; the same, to the priest; and ten pieces of silk and twenty taels, to each of the nineteen attachés.

"The same year" (Walpole trav. p. 181), near Tabriz in Northern Persia, death of the traveller Thevenot. — "In 1813," the English traveller W. G. Browne was also buried at Tabriz.

July 20th (= 128 + 1539 years), should be the end of the fourth *Great Year* of the Egyptians.

"July 31st" (Anderson, and Holmes), treaties of peace at Breda: the Dutch ceding New Netherlands to the English, and the English ceding Surinam to the Dutch; the French ceding their portion of St. Christopher with the neighbouring islands of Antigua and Montserrat, to the English, and the English ceding Acadie to France. A treaty of commerce was also concluded between England and Spain; comprehending all interests, both in Europe and America.

One hundred and seventy-ninth generation. Sept. 1st, 1667, mostly beyond youth: the Greek writers Georgius Chortatzes d. 1676, Matthaëus bishop of Myra d. 1683: Joseph Penco de la Vega: Mothe le Vayer; duke de Rochefoucauld; Thomas Hobbes; Mezeray; Dr. John Wallis; J. Frederick Gronovius; John Milton; Thomas Bartholin; Edmund Waller; Peter Corneille; Molière; Du Cange; Algernon Sidney; Sir John Marsham; Samuel Butler; Lewis Maimbourg; Ralph Cudworth; Giles Menage; Charles de St. Evremond; Benedict de Spinoza; Isaac Barrow; Sir William Temple; René Rapin; Dr. Thomas Sydenham; Robert Boyle; Samuel Puffendorf; Daniel George Morhoff; John de la Bruyere; John de la Fontaine; Sir George Mackenzie; Bouhours; John Dryden; Racine; John Locke; Edward Stillingfleet; archbishop Tillotson; Bossuet: the microscopic observers, Robert Hook d. 1702, Nehemiah Grew d. 1711, Marc. Malpighi d. 1694: the botanists, Herbertus de Jager, Maurit. Hofmannus d. 1698, Guerner Rolfinck d. 1673, Elias Peine, Marcus Mappus d. 1701, Henr. Regio d. 1679, Abr. Muntingius d. 1683, Carol. Schaffer d. 1675, Iacobus Roggeri, Christopher Merrett d. 1695, Robert Plot d. 1696, Franc. Sterbeeck, Dedu: the painters, Carlo Maratti, Charles le Brun, Jacob Ruysdael d. 1681, Claude Gelée of Lorraine d. 1682, Rembrandt van Ryn d. 1674, David Teniers the younger d. 1694, Bartolome Estevan Murillo d. 1685, Salvatore Rosa d. 1673, Caspar Poussin d. 1675: the architect Christopher Wren.

"The same year" (Anderson, and Holmes), Captain Gillam after passing through Hudson's Straits to the head of James' Bay, building a fort at Rupert's river: the beginning of the *fur trade* in those countries. — In the following year, "May 2d," the Hudson's Bay Company was chartered.

"1668 A. D." (Chalm., and Holmes), on application to the Massachusetts legislature, commissioners accompanied by a troop of horse sent into Maine; and the colonial authority re-established.

"The same year" (univ. hist., and Holmes), by Lord Willoughby, governor of Barbadoes, forces sent to the islands of St. Vincent and Dominica, and the natives compelled to submit to the English government.

"1669 A. D." (Chalm., and Holmes), in accordance with the constitution granted, an assembly first convened in Carolina. Meeting in Albemarle County.

"In this year" (Spreng.), Morison publishing his Hort. Bles. auct., enumerating *Staphylea trifolia* 295, "virga aurea americana foliis serratis angustis subtus nervosis" 322 *Solidago Canadensis*, *Helianthus strumosus* 250.

"In this year" (Humb. cosm. ii.), rocky strata hardened before the existence of plants and animals and therefore never containing organic remains, distinguished from "turbida maris sedimenta" by Nicolaus Steno or Stenson. Who also thought he could distinguish "six" great geological epochs or revolutions in Tuscany.

"Sept. 6th" (Blair), the island of Candia or Crete captured by the Turks.

In a letter to the Royal Society of London (phil. trans. for 1670, Tuckerm. archæol. Amer. iv. 123), governor John Winthrop of Connecticut mentions as sent: specimens of "fir-balsam" (*Abies balsamea*), "which grows in Nova Scotia, and, as I hear, in the more easterly part of New England."*

* *Populus monilifera* of the Mississippi and its tributaries. The *cotton-wood*, a lofty tree, probably the "cotton-tree bearing a kind of down, which also is not fit to spin," a branch of which was sent by John Winthrop the younger from Connecticut: — *P. monilifera* is known to grow from "New England to Illinois" (A. Gray); was observed by F. A. Michaux from the Genessee to Virginia and islands in the Ohio, but rare in the Atlantic States; by myself, along the banks of the Ohio; by Nuttall, along the Arkansas; by Lewis and Clark, along the Mississippi and Missouri; by Long's Expedition ii. 141, as far as 48°; by E. James, as far as the Rocky mountains and sources of the Columbia; and is perhaps the shrubby cotton tree seen by Pike app. 22 along the Del Norte "throughout New Biscay."

Quercus ilicifolia of Northeast America. A rigid straggling shrub called *bear oak* or *scrub oak*,

"Sept. 20th" (introd. letter, see also Spreng.), Rumphius in Amboyna meeting with (some plants observed on Ceylon intermingled) *Amomum echinatum* vi. pl. 61. 1, *A. villosum* vi. 61. 2, *Kaempferia pandurata* v. 69, *Maranta tonchat* iv. 7, *Alpinia Malaicensis* v. 71. 1, *Curanga amara* v. 170, *Dicliptera bivalvis* vi. 22, *Piper diffusum* v. 119, *P. subpeltatum* vi. 59, *Fimbristylis polytrichoides* vi. 7. 1, *Oplismenus polystachyus* vi. 7. 2, *Anthistiria arguens* vi. 6. 1, *Andropogon caricosus* vii. 2, *Cissus crenata* v. 166. 2, *Hedyotis crataegonum* vi. 10, *Pothos pinnata* v. 183. 2, *Tournefortia argentea* iv. 55, *Convolvulus peltatus* v. 157, *C. bifidus* v. 158, *Nauclea purpurea* iii. 55, *Flindersia radulifera* iii. 129, *Erithalis timon* iii. 140, *Ventilago Maderaspatana* v. 2, *Pittosporum Moluccanum* vii. 7, *Aegiceras majus* iii. 77, *A. minus* iii. 82, *Desmochaeta muricata* v. 83. 2, *Achyranthes sanguinolenta* vii. 27. 2, *Damnacanthus Gaertneri* vii. 19, *Dischidia nummularia* v. 176. 1, *Apocynum reticulatum* v. 40, *Panax fruticosum* iv. 33, *Musa troglodytarum* v. 61, *Commersonia echinata* iii. 119, *Crinum nervosum* vii. 60. 1, *Dianella ensifolia* v. 73, *Corypha rotundifolia* i. 8, *Licuala spinosa* i. 9, *Calamus verus* v. 54, *C. equestris* v. 56, *Bambusa verticillata* iv. 1, *Sophora heptaphylla* iv. 22, *Guilandina morphophylla* v. 49. 2, *Cynometra cauliflora* i. 64, *Adenanthera falcata* iii. 111, *Melastoma asperum* iv. 43, *Garcinia (Oxycarpus) Celebica* i. 44, *G. cornea* ii. 30, *Pemphis acidula* iii. 84, *Psidium pumilum* i. 49, *Eugenia cymosa* i. 4, *E. Javanica* i. 38. 2, *Rubus parvifolius* v. 47. 1, *Eleocarpus integrifolius* iii. 102, *Coleus Amboinensis* v. 72, *Dillenia elliptica* ii. 45, *D. serrata* ii. 46, *Unona ligularis* ii. 66. 2, *Mentha auricularia* vi. 16, *Ocymum tenuiflorum* v. 92. 2, *O. scutellarioides* v. 101, *Ruellia repanda* vi. 13, *Dilicaria ebracteata* vi. 71. 1, *Sida hirta* iv. 10, *Erythrina picta* ii. 77, *Dolichos lignosus* v. 136, *Litsaea glaberrima* iii. 44, *Bidens Chinensis* vi. 14. 2, *Conyza pubigera, prolifera, and Chinensis* v. 103. 2 to vi. 14. 2, *Orchis Susannae* v. 99. 2, *Cymbidium tenuifolium* vi. 49. 1, *Epidendrum scriptum* vi. 42, *E. amabile* vi. 43, *Dendrobium crumenatum* vi. 47. 2, *Coix agrestis* vi. 91. 1, *Scleria tessellata* vi. 6. 2, *Hernandia ovigera* iii. 123, *Begonia tuberosa* v. 69. 2, *Quercus Moluccana* iii. 56, *Acalypha betulina* iv. 37, *A. mappa* iii. 108, *Croton aromaticum* iii. 127, *Exocarpus Ceramicus* vii. 12, *Areca spicata, glandiformis, and globulifera* i. 5 to 6, *Plukenetia corniculata* i. 79, *Momordica trifoliata* v. 152. 2, *Pandanus humilis* iv. 76, *Trophis spinosa* v. 15. 2, *Canarium minimum, balsamiferum, sylvestre, and hirsutum* ii. 49 to 54, *Dioscorea nummularia* v. 162, *Stratiotes acoroides* vi. 75. 2, *Myristica microcarpa* ii. 7. 8. 9, *M. salicifolia* ii. 6, *Nepenthes phyllamphora* v. 59. 2, *Cheilanthes tenuifolia* vi. 34. 2, *Acrostichum auritum* vi. 35. 1, *Pteris thalictroides* vi. 74. 1, *Botrychium Zeylanicum* vi. 68. 3, *Ophioglossum pendulum* vi. 37. 3, and *Leucas Zeylanica*. * — He became blind in the "following year, the forty-third" of his age, but continued his observations, completed his Herbarium amboinens. "in 1690," died "in 1706," and the work was published by Burmann in seven volumes "in 1741-51."

Oxalis (Biophytum) sensitiva of Tropical Eastern Asia. Described by Rumphius v. pl. 104: — and frequent in many places in the Philippines, supposed to induce sleep to an invalid if placed under the pillow, and called in Tagalo "macahiya" or "damonghiya." in Ylocano "mahihii" (Clain, and Blanco). Westward, enumerated by Mason as indigenous in Burmah; observed in Hindustan by Rheede ix. pl. 19, Wight, and by Graham "a small annual, almost stemless plant, common on pasture grounds during the rains." Farther West, perhaps aboriginally introduced into Equatorial Africa; but clearly by European colonists carried to the Mauritius Islands and the West Indies (Boj., J. D. Hook., Benth., and A. Dec.).

Spilanthus acmella of the Mauritius Islands. A yellow-flowered Composite herb, called in Tagalo "hagonoi," in Bisaya "agonoi," in Pampango "palunai" (Blanco), in Burmah "hen-ka-la"

and specimens were sent by John Winthrop the younger from Connecticut: — (*O. ilicifolia* is termed "q. nigra pumila" by Marshall (Steud.); was observed by Pursh in Virginia; by myself, in barren gravelly soil from 45° to 40° along the Atlantic; was received by Muhlenberg from Georgia, the upper district according to F. A. Michaux, Elliot, and Chapman; and according to A. Gray, grows in West Virginia and Ohio.

* *Cacalia (Emilia) sonchifolia* of Tropical Eastern Asia. Observed in Amboyna by Rumphius v. pl. 103: — farther North, by Blanco in the Philippines, in waste ground and the beds of streams, used by the natives medicinally as refrigerant, and called in Tagalo "tagolinao," in Pampango "tagulinao," and in Bisaya "libun;" known to grow also in China (Lindl.). Westward, observed by Rheede x. pl. 68, Roxburgh, and Wight, in Hindustan; by Graham, in "waste places" flowering "in the cold weather;" and by myself, a weed around one of the villages on the Deccan. By European colonists, carried to the Mauritius Islands (Lindl.); and as transported to Europe, described by Plukenet alm. pl. 144.

Ipomoea mammosa of the Moluccas. Termed "batata mammosa" by Rumphius ix. 131 as observed on Amboyna wild as well as cultivated for its esculent root: — observed also by Loureiro in Anam, where its root is much esteemed (A. Dec.).

(Mason): observed by Rumphius vi. pl. 65 on Ceylon—(Pers.); by Prevost voy. xx. 152, Sta. Maria, Mercado, and Blanco, frequent on the Philippines, celebrated as an antidote in wounds with poisoned weapons and for its diuretic and other medicinal properties; by Mason v. 495, "exotic" in Burmah, "cultivated by the natives for its medicinal properties;" by Roxburgh, in Eastern Hindustan; by Nimmo, in the Concan South from Bombay (Graham); is attributed by Richard to the Mauritius Islands and termed "*acmella mauritiana*" (Pers.). Transported to Europe, is described by Plukenet alm. pl. 159, Seba i. pl. 9 and 10, and Linnæus; and according to Clot-Bey has recently been introduced by the way of France into Egypt.

Vandellia crustacea of the countries around the Indian Ocean. Observed by Rumphius v. pl. 170 on the Moluccas;—known to grow also in Tropical Australia and in China (Benth.). Westward, seems devoid of a Sanscrit name (Pidd.), but was observed by Rheede ix. pl. 58 in Malabar; by Graham, "common in the rains" in the environs of Bombay, and by Roxburgh in other parts of Hindustan; is known to grow also about the Red Sea, and on Madagascar and the Mauritius Islands (Benth.). By European colonists, was carried to Brazil and Guayana (A. Dec.).

Oplismenus Burmanni of Tropical climates. A grass observed by Rumphius iv. pl. 5;—by myself, on the Philippines, and from the Feejeean to the Tahitian and Hawaiian Islands, to all appearance indigenous in the forest. Westward from the Malayan archipelago, is described by Burmann ind. pl. 12 and was observed in Hindustan by Roxburgh; by Graham, in the environs of Bombay "generally found under the shade of trees;" and is known to grow in Equatorial Africa along the Atlantic (Benth. fl. Nigr.). Farther West, is known to grow in Tropical America (H. and Bonpl., Kunth, and A. Dec.), and in "shady woods Florida to North Carolina" (Chapm.).

"1670 A. D." (Chalm., and Holmes), treaty of Madrid, between Spain and England: each to retain of American territory the portion in its possession; and the subjects of neither, to enter the fortified places of the other for purposes of trade. The buccaneers were in consequence no longer protected by England, and all commissions to them were annulled.

"In this year" (Humb. cosm. ii.), measurement of a degree by Picard. Leading Newton to resume his theory of *gravitation*, that had occurred to him four years previously.

"In this year" (San-kokf transl. Klapr.), letters patent issued to Nori-firo, now at the age of "eleven," hereditary prince of Matsmaye. Without asking leave, Siyam-siya-in made himself chief, built a strong castle on the East side of Yeso, and was joined by a Japanese miner who married his daughter. Other miners and falconers were living in the Northern portion of Yeso, but from this time all Japanese quit the territory, being unwilling to live under the Aino government.

"The same year" (Pauth. 443), in China, report from the president of the tribunal of rites on the Christians: That having no ceremony relating to ancestors, in disregard of their own precept of honouring father and mother, and the missionaries professing to forgive sins, the religion cannot be true. A decree in consequence by the emperor Khang-hi, prohibiting Christianity.

1671 A. D., Josselyn residing at "Scarborough," about 43° 40' on the seacoast of New England *

* *Angelica triquinata* of Northeast America. The wild angelica "*minoris*" seen by Josselyn 45 in New England,—may be compared: *A. triquinata* was observed by Torrey as far South as 41° on the Hudson; by myself recently on Starucca creek; by Pursh, from Canada to the mountains of Virginia; by Short, in Kentucky; by Nuttall, probably on the Arkansas: is termed "*archangelica hirsuta*" by Torrey and Gray, growing in "dry open woods, New York to Michigan, and southward."

Oxalis stricta of North America. The "wood-sorrel with the yellow flower" is enumerated by Josselyn rar. 47 as peculiar to North America:—has been observed by myself to all appearance indigenous from 45° to 40°, though often springing up in clearings and cultivated ground; by A. Gray, "borders of woods, fields, and cultivated grounds common;" by Pursh, in cultivated ground from Pennsylvania to Virginia; and according to Hooker, grows to the Saskatchewan and West of the Rocky mountains. Transported to Europe, is described by Linnæus, Jacquin pl. 4, and in the fl. Dan. pl. 873; has become a weed in cultivated ground in Britain (A. Dec.), occurring also in Switzerland, Russia, Western and Eastern Asia (Wats.).

Goodyera pubescens of Northeast America. A woodland Orchid called *rattlesnake-plantain* (A. Gray), its ovate leaves spreading on the ground and conspicuously reticulated with white, described by Josselyn pl. 67 as "a kind of pirola," its leaf "embroydered, as it were, with many pale-yellow ribs:"—growing according to Pursh from Canada to Florida; observed by myself from 44° throughout New England; by Schweinitz, at 36° in Upper Carolina; by Elliot, in the middle and upper district of Carolina and Georgia; by Chapman, "Florida, and northward;" and by Short, in Kentucky.

Sambucus racemosa of North America. The *red-berried elder*, distinguished by Josselyn 50 as the "dwarf-elder,"—observed by Michaux in Canada and on high mountains in Pennsylvania and

He left "Oct. 10th,"—and in the following year published his "New England's Rarities." He afterwards wrote a Supplementary account, and continued his Chronological record to "1674."

The following plants distinguished by Josselyn as North America: "stichwort" (*Stellaria longifolia*), "commonly taken here, by ignorant people, for eye-bright," rar. p. 41; "blew flower-de-luce" (*Iris versicolor*); "yellow-bastard daffodil," the "green leaves are spotted with black spots" (*Erythronium Americanum*); "dogstones, a kind of satyrion, whereof there are several kinds groweth in our salt-marshes" (*Platanthera lacera* and *P. flava*); "red lillies grow all over the country innumably amongst the small bushes" (*Lilium Philadelphicum*) p. 42; "lilly convallie, with the yellow flowers, grows upon rocky banks by the sea" (*Utricularia sessilifolia*?); "autumn bell-flower" (*Gentiana linearis*) p. 43; "arsmart, both kinds" (perhaps *Polygonum avic* and *P. mite*, see below); "spurge-time," growing "upon dry, sandy sea-banks," is "very like to rupter-wort," and "is full of milk" (*Euphorbia polygonifolia*); "rupter-wort, with the white flower" (*Euphorbia maculata*); "jagged rose-penny wort" (*Hydrocotyle Americana*?); "St. John's wort" (*Hypericum corymbosum*, see below) p. 44; "St. Peter's wort" (*Elodea Virginica*); "speedwell chick-weed" (*Stellaria borealis*?); "male fluellin, or speedwell" (*Helianthemum Canadense*); "wild mint" (*Mentha borealis*); "the white violet, which is sweet, but not so strong as our blew violets" (*Viola blanda*); "blew violets, without sent" (*V. ovata*); and "a reddish violet, without sent" (*V. cucullata*); "Salomon's seal," the "first" kind (*Polygonatum pubescens*); "woodbine, good for hot swellings of the legs" (*Ampelopsis hederacea*) p. 45; "dove's-foot" (*Geranium Carolinianum*); "raven's claw," which "is admirable for agues" (*Geranium maculatum*); "cink-foil" (*Potentilla Canadensis*), and "tormentile" (*Potentilla simplex*); "avens, with the leaf of mountane-avens, the flower and root of English avens" (*Geum Virginicum*); "oak of Cappadocia" (*Ambrosia artemisiifolia*) p. 46; "line-tree" (*Tilia Americana*), "the other kind I could never find," voyag. p. 69; "blackberry" (*Rubus villosus*) rar. p. 48; "dewberry" (*R. Canadensis*); "mouse-ear minor" (*Krigia Virginica*?); "spurge-lawrel, called here poyson-berry" (*Kalmia angustifolia*) p. 49; "elder" (*Sambucus Canadensis*); the "filberd" with "hairy husks upon the nuts" (*Corylus rostrata*) p. 50; "quick-beam, or wild ash" (*Sorbus Americana*) p. 51; "a solar plant, as some will have it" (*Sisyrinchium Bermudianum*) p. 55; "Homer's molley" (*Allium Canadense*?); "lysimachus, or loose-strife," the "flowers purple, standing upon a small sheath, or cod, which, when it is ripe, breaks, and puts forth a white silken down" (*Chamenerium Americanum*) p. 56; "marygold of Peru," a kind "bearing black seeds" (*Helianthus divaricatus*); "the other black and white streak'd," or "the small sunflower" (*H. decapetalus*?) pl. 82 and 83; "sea-tears," growing "upon the sea-banks," and "good for the scurvy and dropsie, boiled and eaten as a sallade, and the broth drunk with it" (*Cakile maritima*) p. 56; "New England dayisie, or primrose," it "flowers in May, and grows amongst moss upon hilly grounds and rocks that are shady" (*Erigeron bellidifolium*) p. 58; "sweet fern" (*Comptonia asplenifolia*); plant "with a sheath, or hood, like dragons, but the pestle is of another shape" (*Symplocarpus fetidus*) pl. 71; and an herb "between twelve and thirteen foot" high, "the top of the stalk runs out

Carolina; by myself, from 47° to 44°; by Oakes, to 42° 30' along the Atlantic; by Chapman, "mountains of North Carolina, and northward;" and according to Hooker, grows throughout Canada to the Saskatchewan and Rocky mountains, and as far as the mouth of the Columbia. Transported to Europe, is termed "s. racemosa rubra" by Tournefort inst. 606; was observed by Forskal in gardens at Constantinople, called "kōuphōxulia," and "aqu" and "acetum" prepared from its berries; by Sibthorp, on mountains in Arcadia, and called "anthruanós;" by Jacquin rar. i. pl. 59, on wooded mountains as far as middle Europe (Pers.).

Chelone glabra of Northeast America. The *snake-head* was observed by Josselyn rar. pl. 78 "about three or four foot in height," growing "in wet ground" and flowering "in August;"—by myself, on the marshy border of streams from 44° to 41° along the Atlantic; by Croom, as far as New-bern; by Pursh, from New England to Carolina; by Schweinitz at 36° in Upper Carolina; by Chapman, "Florida and northward, rare in the lower districts;" by Short, near Lexington in Kentucky; by Nuttall, on the Arkansas; and was received from Canada by Linnæus (Pers.).

Verbena hastata of Northeast America. The *blue vervain*, termed by Josselyn rar. 69 "clowne's all-heal of New England," the "flowers are blew, small, and many, growing in spoky tufts at the top, and are not hooded, but having only four round leaves,"—is known to grow throughout Canada to the Saskatchewan (Hook.); was observed by myself from 46° to 41°, chiefly along roadsides; by Pursh, from Canada to Carolina; by Elliot, in the middle district of Carolina and Georgia; by Baldwin, as far as 30° 30' near St. Mary's; by Chapman, "in the upper districts, Mississippi, and northward;" by Michaux, in Upper Carolina and in Illinois; by Beck, on the Mississippi near St. Louis; and by Nuttall, on the Arkansas. Transported to Europe, is described by Hermann parad. pl. 242, and Linnæus.

into a spike, beset about with flowers like sow-thistle, of a blew or azure colour" (*Mulgedium leucophæum*) p. 74.

The following plants enumerated by Josselyn as common to Europe and New England: "hedgehog grass" (*Carex flava*) rar. p. 41; "mattweed" (*Psamma arenaria*); "cat's-tail" (*Typha latifolia*); "wild sorrel" (*Acetosa acetosella*) p. 42; "adder's-tongue" (*Ophioglossum vulgatum*); "one-blade" (*Smilacina bifolia*); "water-plantane" (*Alisma plantago*), "bears feed much upon this plant, so do the moose-deer; sea-plantane, three kinds" (*Plantago maritima*, *P. major* in salt marshes? and *Triglochin maritimum*) p. 43; "soda bariglia, or massacote, the ashes of soda, of which they make glasses" (*Salsola kali*) p. 44; "glass-wort, here called berrelia, it grows abundantly in salt marshes" (*Salicornia herbacea*); "egrimony" (*Agrimonia eupatoria*); "the lesser clot-bur" (*Xanthium strumarium*); "yarrow, with the white flower" (*Achillea millefolium*) p. 46; "goose-grass, or clivers" (*Galium parviflorum*) p. 47; "fearn" (*Athyrium filix-fœmina*, *Aspidium spinulosum* and *A. thelypteris*); "brakes" (*Pteris aquilina*); "dew-grass" (*Drosera rotundifolia*, and *D. longifolia*); "blew-flowered pimpernel" (*Veronica anagallis*) p. 48; "noble liverwort, one sort with white flowers, the other with blew" (*Hepatica triloba*); "gaul, or noble mirtle" (*Myrica gale*) p. 49; "bastard calamus aromaticus" (*Acorus calamus*) p. 53; "knot-berry, or clowde-berry, seldom ripe" (*Rubus chamaemorus*) p. 60; "pirola, or winter-green, that kind which grows with us in England is common" (*Pyrola rotundifolia*) p. 67; and "red currans" (*Ribes rubrum*) p. 51.

The following plants according to Josselyn brought by European colonists to New England: "arsmart, both kinds" (*Polygonum hydropiper*, and *P. persicaria*, see above) p. 43; "St. John's-wort" (*Hypericum perforatum*, see above) p. 44; "cat-mint" (*Nepeta cataria*); "herb Robert" (*Geranium Robertianum*) p. 45; "oak of Hierusalem" (*Chenopodium botrys*) p. 46 and 56; "toad-flax" (*Linaria vulgaris*) p. 48; "pellamount, or mountain-time" (*Thymus serpyllum*); and "water-mellon" p. 57. Of plants expressly enumerated as having "sprung up since the English planted and kept cattle in New England" p. 85: "nettles stinging, which was the first plant taken notice of" (*Urtica dioica*); "couch-grass" (*Ho'cus lanatus*); "shepherd's-purse" (*Capsella bursa-pastoris*); "dandelion" (*Taraxacum dens-leonis*); "groundsel" (*Senecio vulgaris*); "sow-thistle" (*Sonchus oleraceus*); "wild arrach" (*Atriplex hortensis*); "nightshade, with the white flower" (*Solanum nigrum*); "mallows" (*Malva rotundifolia*); "black henbane" (*Hyoscyamus niger*); "wormwood" (*Artemisia absinthium*); "sharp-pointed dock" (*Rumex crispus*); "patience" (*R. patientia*, see below); "bloodwort" (*R. sanguineus*, see below); "and, I suspect, adder's-tongue" (*Ophioglossum vulgatum*); "knot-grass" (*Polygonum aviculare*); "cheek-weed" (*Stellaria media*); "compherie, with the white flower" (*Symphytum officinale*); "may-weed, excellent for the mother, some of our English housewives call it iron-wort, and make a good unguent for old sores" (*Marula cotula*); "the great clot-bur" (*Arctium lappa*); and "mullin, with the white flower" (*Verbascum blattaria*).

Of additional "garden-herbs" under cultivation: "lettice" (*Lactuca scariola*); "parsley" (*Petroselinum sativum*); "marygold" (*Calendula officinalis*); "French mallows" (*Althæa officinalis*); "chervel" (*Anthriscus cerefolium*); "burnet" (*Poterium sanguisorba*); "winter savory" (. . .); "summer savory" (*Satureja hortensis*); "time" (*Thymus vulgaris*); "sage" (*Salvia officinalis*); "parsnips, of a prodigious size" (*Pastinaca sativa*); "garden beans" (*Faba vulgaris*); "oats," and "naked oats, there called silpee, an excellent grain, used instead of oat-meal" (*Avena sativa*, and *var. nuda*); "rew will hardly grow" (*Ruta graveolens*); "fetherfew prospereth exceedingly" (*Matricaria parthenium*); "southern wood is no plant for this country" (*Artemisia abrotanum*), "nor rosemary" (*Rosmarinus officinalis*), "nor bayes" (*Laurus nobilis*); "white satten groweth pretty well" (*Lunaria rediviva*), "so doth lavender-cotton" (*Santolina chamæcyparissus*); "but lavender is not for the climate" (*Lavandula vera*); "pennyroyal" (*Mentha pulegium*); "smalledge" (*Apium graveolens*); "ground-ivy, or ale-hoof" (*Nepeta glechoma*); "gilly-flowers will continue two years" (*Matthiola incana* and *Cheiranthus cheiri*); "fennel must be taken up, and kept in a warm cellar all winter" (*Foeniculum vulgare*, see below); "houseleek prospereth notably" (*Sempervivum tectorum*); "hollyhocks" (*Althæa rosea*); "enula campagna, in two years' time, the roots rot" (*Inula helenium*); "coriander" (*Coriandrum sativum*) "and dill" (*Anethum graveolens*) "and annis thrive exceedingly" (*Sison anisum*), "but annis-seed, as also the seed of fennel, seldom come to maturity" (see above); "clary never lasts but one summer, the roots rot with the frost" (*Salvia sclarea*); "sparagus thrives exceedingly" (*Asparagus officinalis*), "so does garden-sorrel" (*Acetosa acetosa*), "and sweet-bryer, or eglantine" (*Rosa rubiginosa*); "bloodwort but sorrily" (*Rumex sanguineus*, see above); "but patience" (*R. patientia*, see above), "and English roses very pleasantly" (*Rosa canina* and others); "celandine, by the west-countrymen called kenningwort, grows but slowly" (*Chelidonium majus*); "muschata as well as in England" (*Malva moschata*); "dittander, or pepperwort, flourisheth notably" (*Lepidium latifolium*), "and so doth tansie" (*Tanacetum vulgare*). And of additional fruit-trees: "quinces, cherries, damsons set the dames a work, marmalad and preserved damsons is to be met with in every house" (*Prunus domestica*); and "barberry-trees" (*Berberis vulgaris*).

In his Supplementary account, Josselyn 2d voy. 77 mentions the "mandrake, it is a very rare plant, the Indians know it not, it is found in the woods about Pascataway" (*Podophyllum peltatum*); "the yellow lysimachus of Virginia" called "tree-primrose" (*Oenothera biennis*); "herba-paris, one-berry, herb true love, or four-leaved night-shade" (*Trillium erectum*); and "fuss-balls . . . bigger by much than any I have seen in England" (*J. ycopendon*). — In the preceding identification of the plants mentioned by Josselyn, it will be observed, that I have in most instances followed Russel in trans. agricult. and Tuckerman in archæolog. amer. iv.

"In this year" (Chalm., and Holmes), governor Sayle of Carolina, dissatisfied with Port Royal, removing Northward to the neck of land between Ashley and Cooper rivers, where he laid out a town to be called in honour of the king "Charleston."

"The same year" (Charlev., and Holmes), at St. Mary's Fall, congress between the French and the aboriginal Tribes; and submission professed by the latter to the king of France.

"June 14th" (narrat., A. White edit. 7), Frederick Martens of Hamburg, on a whaling voyage, arriving in Spitzbergen. Among the plants observed, he mentions "four crowsfeet," the fourth having "but one long stalk whereon sprouted out one single leaf" (*Ranunculus nivalis*), another, fig. 10 (*R. sulphureus*), another, burning the tongue, its flowers "small and the seed-vessels are like one another" (*R. Lapponicus*), the third, burning the tongue, very small and white-flowered, its "leaves are thick and juicy" (*R. pygmaeus*); a "small plant exactly like to these, only the flowers" purple, "and the leaves not so juicy" (*Saxifraga cernua*); "the white poppy whereof we stuck the flowers in our hats" (*Papaver nudicaule*); scurvy-grass, "much weaker than the scurvy-grass of our countries so that we eat it instead of salad" (*Cochlearia Groenlandica*); an herb with "smooth-edged leaves by pares, they are rough and like mouse-ear" (*Cerastium alpinum*); a plant with "roundish leaves by pairs on creeping stalks" which are "somewhat knotty and woody" (*Andromeda tetragona*); an herb that "agreeth in its leaves with the strawberry," but "the flower is yellow" (*Potentilla nivea*); "a kind of stone-crap, but the leaves are rough and hairy," the flowers "purple" (*Saxifraga biflora*); "a very pretty herb" with "thick prickly and sad green leaves like those of aloes, a brown naked stalk" whereon "hang round heads of flesh-coloured flowers" (*S. stellaris*); a "small house-leek" with leaves "indented and very like those of our dasies" (*S. nivalis*); *S. rivularis* t. H. f. c (Spreng.); "red sorrel," the "leaves of that of Spitzbergen are red" (*Oxyria digyna*); "a small snake-weed," the root "lieth twisted in the ground" (*Polygonum viviparum*) and *Salix Polaris* t. G. f. b (Spreng.).

"In this year" (Winckl.), arrival of Paul Hermann in Ceylon, meeting with *Justicia Moretiana* B. 3. 1, *Isolepis tristachya* 47. 2 or *Scirpus (Oncostylis) capillaris* (Pers.), *Mollugo pentaphylla* 7, *Samara lacta* 31, *Elacagnus latifolia* 39. 2, *Spermacoce articularis* 20. 3, *Ardisia humilis* 103, *Chironia trinervia* 67, *Impatiens cornuta* 16. 1, *Lahaya spadicea* 65. 2, *Quirivelia Zeylanica* 12. 1, *Wrightia Zeylanica* 12. 2, *Drosera Burmanni* 94. 2, *Burmannia disticha* 20. 1, *Asparagus falcatus* 13. 2, *Memecylon capitellatum* 30, *Tribulus lanuginosus* 106. 1, *Euphorbia parviflora* 105. 2, *Gomphia Zeylanica* 56, *Cistus Aegyptiacus* 36, *Leucas biflora* 63. 1, *Cleome dodecandra* 100. 1, *Connarus Asiaticus* 109, *Polygala theezans* 85, *Dolichos medicagineus* 84. 2, *Stylosanthes mucronata* 106. 2, *Alysicarpus vaginalis* 49. 1, *Desmodium biarticulatum* 50. 2, *D. heterophyllum* 54. 1, *Indigofera hirsuta* 14, *Tephrosia maxima* 108. 2, *Inula Indica* 55. 2, *Antidesma Zeylanica* 10, *Acacia pennata* 1, *Asplenium falcatum* 43, *Pteris crenata* 87, *Adiantum caudatum* 5. 1, and *Menispermum peltatum* pl. 101. — After residing there as a physician he returned "in 1679," and the plants he collected were published by Burmann "in 1737" under the title of *Thesaur. ceilan.*

Waltheria Indica of Tropical climates from Africa throughout the Malayan and Polynesian archipelagoes. Suffrutescent, yellow-flowered, and two to three feet high, called in Burmah "penlay htse" (Mason); observed by Hermann — (Burm. pl. 68), and Moon, on Ceylon; by Nimmo in both Concans, and by Law "common on sandstone hills at Badamee, Bagulkote," in the environs of Bombay (Graham); by Mason in Burmah, enumerated as indigenous; by Blanco, in the street of a town on the Philippines; by myself, to all appearance indigenous on Feejeean, and Hawaiian Islands. Westward, by Bojer on the Mauritius Islands; by myself, on Zanzibar; and is known to grow in Equatorial Africa along the Atlantic (R. Brown cong., and Webb in fl. Nigr.). Farther West, was observed by myself along roadsides and in open situations around Rio Janeiro; is known to occur in other parts of Tropical America (A. Dec.), and according to Chapman as far North as the point of Florida. Transported to Europe, is described by Plukenet pl. 150.

"1672 A. D." (art de verif.), in Japan, the Dutch subjected to new exactions depriving them of expected profit. They however persisted in maintaining trade.*

* *Melianthus major* of Austral Africa. Brought in this year to Europe — (Linn.), and somewhat later described by Hermann lugd. 117 (Spreng.); continuing under cultivation, and thence introduced into the greenhouses of Northeast America. Known to grow wild in Austral Africa (Pers.).

"In this year" (Sieb. elucid Vries p. 69), the Kurils first made known to the Japanese, a coaster driven by a storm among the Southernmost islands.

"In this year" (Winckl.), Georg Frank von Frankenau publishing his *Lex. veget. usual.* — He died "in 1704."

"The same year" (Blair), by the French under Louis XIV., Utrecht captured and a great part of Holland overrun.

"Aug. 12th" (Mather, and Holmes), *eclipse of the sun*, total in New England.

"The same year" (Blair), by Cassini and Picard, the Longitude determined by *eclipses* of Jupiter's satellites; and for the first time, the relative position of places on the Earth's surface satisfactorily ascertained.

At this time (Spreng.), Barrelier writing his account of plants observed in Italy, France, and Spain, enumerating *Salvia Barrelieri* n. 186, *S. multifida* 220, *S. valentina* 1317, *S. Lusitanica* 167, *Valeriana supina* 868, *Phleum asperum* 28. f. 2, *Bromus erectus* 13. f. 1, *Achnodonton tenue* 14. f. 1, *Briza humilis* 15. f. 2, *Chrysurus cynosuroides* 4, *Melica pyramidalis* 95. f. 1, *Koeleria phleoides* 123. f. 1, *Festuca stipoides* 76. f. 1, *Avena fragilis* 905, *Poa Cilianensis* 743, *Galium linifolium* 583, *G. maritimum* 81, *Anchusa stylosa* 578, *Campanula diffusa* 453, *C. cochlearifolia* 454, *Trachelium coeruleum* 683, *Atropa frutescens* 1173, *Viola Zoysii* 691, *Atriplex glauca* 733, *Salsola polyclonos* 275, *Ligusticum ferulaceum* 836, *Statice dichotoma* 805, *Daphne vermiculata* 231, *Polygonum Bellardi* 560. f. 2, *Gypsophila perfoliata* 1002, *Dianthus ferrugineus* 497, *Silene longiflora* 380, *Oxalis Barrelieri* 1139, *Reseda undata* 588, *Euphorbia terracina* 833, *E. pilosa* 885, *Cistus sericeus* 1315, *Helianthemum Italicum* 366, *H. torosum* 446, *H. racemosum* 293, *H. hirtum* 488, *Teucrium thymifolium* 1062, *T. flavescens* 1072, *T. Valentinum* 1048, *T. pycnophyllum* 1091, *T. libanotis* 1090, *T. pumilum* 1092, *T. angustissimum* 1080, *T. coeleste* 1081, *Sideritis glauca* 250, *S. linearifolia* 172, *Marrubium candidissimum* 686, *Phlomis purpurea* 405, *Nepeta graveolens* 735, *Bartsia viscosa* 665, *B. spicata* 774, *Linaria villosa* 597, *Anarrhinum crassifolium* 1315, *Iberis rotundifolia* 1305, *Biscutella longifolia* 841, *Cardamine chelidonia* 156, *Hesperis alyssoides* 804, *Sisymbrium Barrelieri* 1016, *Cleome violacea* 865, *Ononis Cenisia* 1104, *O. minutissima* 1107, *O. viscosa* 1239, *Oxytropis Pallasii* 557, *Trifolium sphaerocephalum* 859, *T. badium* 1024, *Scorzonera calcitrapifolia* 800, *Atractylis humilis* 1127, *Santolina alpina* 522, *Anthemis Barrelieri* 457, *Artemisia Arragonensis* 447, *Senecio crassifolius* 261, *S. Nebrodensis* 401, *S. Barrelieri* 801, *S. rotundifolius* 145, *Cineraria longifolia* 266, *C. minuta* 1153, *Chrysanthemum pectinatum* 421, *Centaurea linifolia* 139, *C. abrotanifolia* 149, *C. hyssopifolia* 306, *C. argentea* 218, *C. leucantha* 1229, *Fucus volubilis* 1303, *Phallus Hadriani* 1258, *Clathrus flavescens* 1265, *Boletus umbellatus* 1269, *B. polycephalus*, *Physostegia Virginiana* 1152. — He died "in 1673," and his work was published "in 1714."

Diplotaxis muralis of Western Europe. Described by Barrelier pl. 131, — termed "sisymbrium murale" by Linnæus, "S. erucastrum" by Gouan, "sinapis muralis" by others, "eruca decumbens" by Moench, and known to grow in Italy and France (Pers.): observed by Thuillier near Paris; by Gouan, near Montpellier; by Chaubard, at Patras in the Peloponnesus. To all appearance wild in Britain (A. Dec.), though regarded by some writers as probably exotic.

Viola arborecens of the Mediterranean countries. A woody-stemmed species observed by Barrelier pl. 568 in Spain, — and termed "v. Hispanica fruticosa longifolia" by Tournefort inst. 421: observed by Gittard at the base of the heights of Philatra in the Peloponnesus (Chaub.).

Salsola vermiculata of the Uralian plains. Observed by Barrelier rar. pl. 215, — and Cavanilles iii. 215, in Portugal and Spain (Pers., and Steud.); termed "kali fruticosum incanum folliis exsuccis" by Buxbaum. cent. i. pl. 15; observed by Pallas trav. i. 337 on the Lower Volga; by Gmelin iii. pl. 18, in Siberia.

Phalaris aquatica of the Mediterranean countries. Described by Barrelier rar. pl. 700; — termed "gramen spicatum perenne semine miliaceo tuberosa radice" by Tournefort inst. 519; and known to grow in the Tiber and in Algeria (Pers., and A. Dec.). Eastward, was observed by Sibthorp in watery places in Asia Minor; and by Delile in Egypt, from Alexandria to Cairo. By European colonists, was carried to Southwest Australia, where according to J. Drummond it has become naturalized.

Beckmannia erucaeformis of Subarctic Asia and America. A grass described by Barrelier rar. pl. 29 — (Pers.). Observed by Bieberstein along the Taurian mountains; by Pallas iv. 443 abounding along tributaries of the Yenisei; by Gmelin, throughout Siberia to Kamtchatka. Farther East, by E. James on the Platte; by Nuttall, at Fort Mandan on the Upper Missouri; and is known to grow at Hudson's Bay (Pers.).

"1677, A. D." (Minot, and Holmes), a fort built by the French at Michilimackinac. "May 13th" (Churchill coll.), leaving the "Lac des Puans" (Michigan), the Jesuit F. Marquette with six other Frenchmen proceeded in two canoes through the territory of the "Folle Avoine and Illiquois," tribes at peace with France. Sometimes carrying their canoes, and sometimes carried in them, they dis-

covered "June 17th" (Charlev., and Holmes) the "great river Mississippi." Entering and descending, "at the end of several days solitude, they came among savage Indians, were friendly received, and heard that the sea was within two or three days sail of them; which was the gulph of Mexico. Thus he discovered all that inland part of North America along the river, from thirty-eight to thirty-four degrees of north latitude, lying on the back of Canada, Virginia, etc. down to Florida."

"In this year" (Humb. cosm. ii.), experiments on the length of the seconds' pendulum at Cayenne by Richer, and on the West coast of Africa by Varin: demonstrating, decrease of gravity from the pole to the Equator.

"In this year" (Linn. fl. suec.), Til-lands publishing his Catalogue of plants around Aboa, enumerating *Ranunculus reptans* 57: — a Second edition with plates "in 1683," and died "in 1692" (Spreng.).

"In this year" (Spreng.), Kyllingius publishing his memoir in the Act. Hafn.; — "in 1688," his Virid. Dan.; and died "in 1696."

"1674, Feb. 9th" (Chalm., and Holmes), signing at Westminster of a treaty of peace between England and Holland.

"In this year" (Linn. fl. suec.), Nic. Grimmius of Gothland resident physician on Ceylon. — He enumerates Ceylon plants in Acad. nat. Cur. and Act. Hafn. as "*planta mirabilis distillatoria*" (*Nepenthes distillatoria*) "*zedoaria Zeylanica*" (. . .), "*planta stercoraria*" (. . .), "*convolvulus syriacus*" (*Ipomoea obscura*). He died "in 1711" (Spreng.).

"In this year" (J. E. Smith, and Spreng.), Boccone publishing his plants observed in Sicily, Malta, Italy, and France, enumerating *Conyza Aegyptiaca* sic. 7, *Poa Sicula* t. 33, *Andropogon distachyos* t. 11, *Scabiosa urcolata* t. 52, *Parictaria Lusitanica* 24, *Plantago macrorhiza* t. 15, *Tillaea muscosa* t. 29, *Campanula mollis* 45, *Achyranthus argentea* 9, *Paronychia echinata* t. 20. f. III. 39, *Eryngium tricuspidatum* 47, *Athamantha Sicula* 14, *Bubon Siculus* 27. 28, *Statice monopetala* 16. 17, *Allium Siculum* 33, *Glinus lotoides* 11, *Nepeta Apuleii* 25, *Linaria multicaulis* 19, *Biscutella raphanifolia* 23, *Cardamine Graeca* 44, *Hesperis Africana* 42, *Malope malacoides* 8, *Ononis variegata* 38, *Senecio delphinifolius* 51, *S. cirsanthemifolius* 36, *Inula foetida* 13, *Centaurea sempervirens* 39, *Cinorum coccineum* 43, *Ambrosinia Bassii*, *Poterium hybridum* 30.

Sida rhombifolia of Tropical Africa. Transported to Europe, was observed by Boccone rar. sic. 6 on Sicily — (Spreng.), and was received by Cavanilles i. pl. 3 from the Canaries (Webb). Known to grow on the Cape Verd Islands (Webb), and from Guinea (J. D. Hook.) to Abyssinia (A. Rich.); observed by Roxburgh in Bengal, according to Drury indigenous and yielding fibres. Clearly by European colonists, was carried to the Mauritius Islands (Boj. and A. Dec.), and to America: was received by Dillenius pl. 172, and Cavanilles, from "India orientali" and "Jamaica" (Pers.); by Hooker, from Buenos Ayres; by Decandolle, from Brazil, the West Indies, and Carolina; was observed by Baldwin at 31° in Florida; by N. A. Ware. at "St. Johns, about settlements;" by Chapman, "around dwellings, Florida to North Carolina and westward."

Centaurea Melitensis of the Mediterranean countries. An annual described by Boccone sic. 35 — (Spreng.); termed "*carduus stellatus luteus capitulo minus spinoso*" by Tournefort inst. 440, and known to grow on Melita and about Montpellier, observed by Sibthorp from the Peloponnesus to Rhodes. By European colonists was carried to Northeast America (A. Dec.).

"The same year" (hist. coll. Mass. i. 141, and Holmes), a historical account of the aboriginals of New England, their numbers, customs, manners, religion, government, and condition, completed by Daniel Gookin.

"1675 A. D." (Klapr. mem. iii. 105), Simayé tsaghema with two companions in a large junk, sailing from Fatsisio Southeast reached a group of "eighty islands" (Bonin Islands), and made a map of them. The islands continued uninhabited, though long known to the Japanese under the name of their discoverer Okassa wara.

"June 24th" (Holmes), in New England, beginning of the second serious war with aboriginal Tribes: incited by Metacom, called "king Philip." — In the following year, the war was brought to a close by the death of Metacom.

"In this year" (J. E. Smith, Spreng., and Winckl.), after his Indice piant. Bologn. "in 1652," Zanoni publishing his Istor. Bot., enumerating* *Stachys glutinosa* pl. 81, *Sanguisorba media* 138, *Borago Cretica* 37, *Nonca violacea* 35, *Guetarda Matthiola* 154. 155, *Ruplexum Baldense* 40, *Sium*

* *Sida carpinifolia* of Tropical America. Abounding in waste ground and near dwellings in Brazil and the West Indies (A. Saint-Hil., and A. Dec.). Transported to Europe, is described by Zanoni 114 — (Spreng.). Linnæus, Jacquin ic. rar. i. pl. 135, and Cavanilles v. pl. 134 and i. pl. 3: by European colonists also, was carried to Madeira and the Canary Islands (Pers., and Webb); to the Mauritius Islands, observed there along roadsides by Bojer p. 32.

Siculum 128, *Silene paradoxa* 109, *S. Lusitanica* 111, *Euphrasia tricuspidata* 76, *Sisymbrium tanaetifolium* 72, *Cytisus purpureus* 63, *Serratula centauroides* 95, *Gnaphalium lavandulaefolium* 71, *Buphthalmum flosculosum* 21, *B. aquaticum* 24, *Aster? laevigatus* 22, *Centaurea atrata* 58, *C. Romana* 42. 43, *C. Ragusina* 92, *Helianthus trachelifolius* 57, *Cymbidium praemorsum* 16, *Arum pentaphyllum* 23, *Desmanthus diffusus* 123, and *Onoclea sensibilis*. — He died "in 1682."

Dracocephalum Ruyschiana of the Uralian plains. Described by Zanoni 146 — (Spreng.), and Morison iii. 11. pl. 5 (Pers.); observed by Pallas trav. i. 64 along the Volga; and known to grow as far West as Austria.

"In this year" (Targ.), Michetti publishing his *Lexicon botanicum*.

"The same year" (Lubke and Lutrow), in London, St. Paul's church commenced; on a plan furnished by Christopher Wren. — The building was completed "in 1710."

"1676 A. D." (Chalm., and Holmes), by Charles II., troops sent to Virginia: the first troops sent to any of the English colonies for the suppression of insurrection.

"In this year" (Spreng.), Dodart publishing his *Mem. hist. plant.*, enumerating *Heliotropium parviflorum* p. 82, *Campanula planiflora* 118, *Mitella diphylla* 106, *Pentstemon campanulatus* 78, *Astragalus Carolinianus* 64, *Trifolium subterraneum* 122, *Grindelia Siberica* 62, *Chrysanthemum maximum* 66, *Achillea odorata* 101, *Centaurea Sicula* 86, and *Urtica Dodartii* 130,* *Campanula Americana* iv. pl. 18, *Astragalus Canadensis* 65. — He died "in 1707."

Silene quinquevulnera of Europe and the adjoining portion of Asia. An annual described by Dodart 98 — (Spreng.), termed "*lychnis hirta minor flore variegato*" by Tournefort inst. 338, — and known to grow from Britain throughout middle Europe to Siberia (Engl. bot. pl. 86, Lam. fl. fr., and Pers.): observed by Scopoli in Carniola; by Sibthorp, and Chaubard, from the Peloponnesus to Caria. By European colonists was carried to Northeast America, observed "near Charleston" (Chapm.).

"In this year" (Spreng.), Magnol publishing his *Bot. Monsp.*, enumerating *Stipa juncea* 121, *Crassula Magnolii* 237. 238, *Teesdalia regularis* 187, *Hutchinsia procumbens* 185, and *Linkia nostoc* 180: — a second edition "in 1686" (Winckl.).

Silene nocturna of the Mediterranean countries. An annual described by Magnol bot. 170 — (Spreng.), Morison 5. pl. 36, and Dillenius elth. pl. 36; known to grow in France and Spain (Lam. fl. fr., and Pers.): observed by Moench in Germany; by Sibthorp, and Chaubard, from the Peloponnesus to Constantinople, sometimes in vineyards. By European colonists was carried to Northeast America, "introduced sparingly in Pennsylvania" (Pers., Schweinitz, and A. Gray).

"In this year" (Spreng., and Winckl.), Rheede publishing his *Hort. malabar.*, enumerating *Gratiola trifida* xii. 36, *G. rotundifolia* ix. 57, *Justicia echioides* ix. 46, *Ruellia infundibuliformis* ix. 62, *Utricularia coerulea* ix. 70, *Piper amalago* vii. 16, *Rotala verticillata* ix. 81, *Rumphia Amboinensis* iv. 11, *Ficus venosa* iii. 64, *F. septica* iii. 59, *F. ampelos* iii. 60, *F. cotoneaeifolia* iii. 57, *F. rufescens* iii. 62, *Hyphaelytrum nemorum* xii. 58, *Scirpus articulatus* xii. 71, *Fimbristylis argentea* xii. 54, *Isolepis squarrosa* xii. 38, *Cyperus canescens* xii. 42, *Kyllinga umbellata* xii. 63, *K. monocephala* xii. 53, *K. triceps* xii. 52, *Perotis latifolia* xii. 62, *Pestuca Indica* xii. 45, *Ischaemum muticum* xii. 49, *Eriocaulon setaceum* xii. 68, *Hedyotis racemosa* x. 25, *H. auricularia* x. 32, *Ixora alba* ii. 14, *Cissus latifolia* vii. 11, *C. carnosa* vii. 9, *Pothos scandens* vii. 40, *Convolvulus Medium* xi. 55, *C. maximus* xi. 53, *Ipomaea tridentata* xi. 65, *I. grandiflora* xi. 50, *I. repens* xi. 52, *I. pes-caprae* xi. 57, *I. campanulata* xi. 56, *Walkera serrata*

* *Verbena urticifolia* of Northeast America. The *white-flowered vervain*, transported to Europe, described by Dodart — (Spreng.), and Morison iii. pl. 25. Westward, is known to be peculiar to North America, where according to Hooker it grows throughout Canada to the Saskatchewan: was observed by myself from 45° to 40° along the Atlantic, chiefly along roadsides and in waste ground; by Pursh, from New England to Carolina; by Michaux, in Virginia and Carolina; by Elliot, in South Carolina; by Beck, on the Mississippi near St. Louis; and by Nuttall, on the Arkansas.

Urtica (Laportea) Canadensis of Northeast America. The *woodland nettle*, alternate-leaved with stinging hairs, transported to Europe, described by Dodart — (Spreng.), Plukenet alm. pl. 239, and Linnæus; said to occur also in Siberia (Pers.). Westward, was observed by Kalm near Montreal; by myself, from 45° to 42° along the Atlantic, in rich soil in the forest; by Schweinitz, at 36° in Upper Carolina; by Elliot, on the Alleghanies of South Carolina; by Chapman, "Florida, and northward;" by Short, in Kentucky; and by Nuttall, on the Arkansas.

Zornia diphylla of Equatorial Africa? Observed by Rheede ix. pl. 82 in Malabar, — by Roxburgh in other parts of Hindustan, by Graham "common in the rains" in the environs of Bombay, but no native names are given (A. Dec.). Westward, is known to grow in Equatorial Africa along the Atlantic (fl. Nigr. p. 301). Probably by European colonists, was carried to the West Indies (Pers., and Schlecht.).

v. 48, *Viola (Hybanthus) cuneasperma* ix. 60, *Impatiens latifolia* ix. 48, *I. fasciculata* ix. 47. 49, *Desmodium atropurpureum* x. 59, *Celosia argentea* x. 39, *Tabernaemontana alternifolia* i. 43, *Monetia diacantha* v. 37, *Asclepias alexicaca* ix. 13, *Ceropegia candelabrum* ix. 16, *Gomphrena hispida* ix. 72, *Aralia Chinensis* ii. 26, *Drosera Indica* x. 20, *Tradescantia Malabarica* ix. 63, *T. axillaris* x. 13, *Amaryllis latifolia* xi. 39, *Achras dissecta* iv. 25, *Loranthus elasticus* x. 3, *L. loniceroides* vii. 29, *Amyris protium* vii. 23, *Daphne (Causiera) monostachya* vii. 4, *D. (C.) polystachya* vii. 2, *Sapindus laurifolius* iv. 19, *Cassia arborescens* vi. 9, 10, *Caesalpinia mimosoides* vi. 8, *Guilandina axillaris* vi. 20, *G. paniculata* vi. 19, *Heritiera littoralis* vi. 21, *Melastoma Malabathricum* iv. 42, *Bergia verticillata* ix. 78, *Rhizophora candel* vi. 25, *R. cylindrica* vi. 53, *Garcinia Malabarica* iii. 41, *Eugenia corymbosa* v. 27, *E. parviflora* v. 19, *Grewia Orientalis* v. 46, *G. microcos* i. 56, *Lagerstroemia hirsuta* iv. 22, *Delima sarmentosa* vii. 54, *Uvaria Zeylanica* ii. 9, *Nepeta Madagascariensis* xi. 25, *Torenia Asiatica* ix. 53, *Aeginetia Indica* xi. 47, *Diceros longifolius* ix. 87, *Hygrophila ringens* ix. 64, *Cleome monophylla* ix. 34, *Melochia corchorifolia* ix. 73, *Connarus pinnatus* vi. 24, *Sida populifolia* vi. 45, *Hibiscus Surattensis* vi. 44, *H. vitifolius* vi. 46, *Dalbergia lanceolaria* vi. 22, *Crotalaria quinquefolia* ix. 28, *Dolichos gladiatus* viii. 44, *D. rotundifolius* viii. 43, *D. catiang* iii. 41, *Sesbania aculeata* vi. 27, *Aeschynomene Indica* ix. 18, *A. pumila* ix. 21, *Indigofera glabra* ix. 67, *I. hedyaroides* ix. 36, *Malaxis Rheedii* xii. 27, *Cymbidium aloefolium* xii. 8, *C. ovatum* xii. 7, *Artocarpus pubescens* iii. 32, *Scleria lithosperma* xii. 48, *Tragia mercurialis* x. 82, *Boehmeria interrupta* ii. 40, *Sagittaria obtusifolia* xi. 45, *Arum divaricatum* xi. 20, *Croton coccineum* v. 22, *Trichosanthes caudata* viii. 16, *T. nervifolia* viii. 17, *Momordica muricata* viii. 10, *Antidesma sylvestris* v. 26, *Cocculus radiatus* vii. 3, *C. orbiculatus* xi. 62, *Myrsine tomentosa* iv. 5, *Acacia intsia* vi. 4, *Acrostichum heterophyllum* xii. 29, *Polypodium acrostichoides* xii. 47, *Asplenium ambiguum* xii. 15, *Onoclea scandens* xii. 35, *Lygodium pinnatifidum* xii. 33, *L. flexuosum* xii. 32, and *Lycopodium phlegmaria* xii. 14.* — He died "in 1691," and the Twelfth and concluding volume was published "in 1703."

Neptunia oleracea of Equatorial Africa. Observed by Rheede ix. pl. 20 in Malabar; — by Nimmo, in "tanks throughout the Concan" (Graham); by Roxburgh, and Wallich, as far as Silhet, but having modern names only (A. Dec.); by Loureiro, in Cochinchina, its leaves eaten in salads (Pers.). Westward from Hindustan, is known to grow in Equatorial Africa along the Atlantic (Rich. fl. Seneg., Guill. and Perr., and Benth. fl. Nigr.). Probably by European colonists, was carried to Tropical America, where it has been observed along the Magdalena (H. and Bonpl.), and at Guayaquil (Benth.).

Crotalaria verrucosa of Equatorial Africa? Observed by Rheede ix. pl. 29 in Malabar; — by Graham, "common in Bombay during the rains" and found by Law "in the Sholapore Districts;" by Roxburgh, in other parts of Hindustan; by Mason, in Burmah; and known to grow in Ceylon, Java, and the Philippines (Pers.). Westward from Hindustan, is known to grow seemingly indigenous on the Mauritius Islands (Pers., and A. Dec.). By European colonists, was carried to the West Indies, where it continues in cultivated ground on Jamaica (Macfad.), and St. Thomas.

Oldenlandia herbacea of Equatorial Africa? Observed by Rheede x. pl. 35 in Malabar — (Spreng.); known to occur also on Ceylon (N. L. Burm. ind. pl. 14, and Pers.), and from Madagascar to Senegal (herb. Dec.). Probably through European colonists carried to Hayti (A. Dec.).

Elephantopus scaber of Equatorial Africa. Called in Bengalee "samdullum" (Lindl.), and observed by Rheede x. pl. 7 in Malabar; — by Wight, and Graham, in other parts of the peninsula as far as Bombay; by Roxburgh, as far as Bengal; by Mason, in Burmah, enumerated as indigenous; by Blanco, on the Philippines, unknown to the natives though frequent along roadsides, by myself also in the vicinity of Manila. Westward, by Grant towards the sources of the Nile, in "1°

* *Hollastonia biflora* of Tropical Eastern Asia. An erect "annual" called in the environs of Bombay "soonkee" (Graham): observed by Rheede x. 40 in Malabar; — by Graham, as far as Bombay, "about a foot high" flowering "in the rains, very common on the Ghauts" and covering "the roofs of houses at Kandalla;" by Roxburgh, in Eastern Hindustan: and by Mason, indigenous in Burmah. The species observed by myself from Manila to the Feejeean, Tongan, and Samoan Islands, hardly corresponds with the above description, being much taller.

Vinca (Catharanthus) pusilla of Hindustan? A small annual observed by Rheede ix. pl. 33 in Malabar; — by Lush, on "the Deccan," flowering "in the rains" (Graham); by Retz, a troublesome weed in the gardens of Tranquebar (Pers.); by Roxburgh, in other parts of Hindustan; and according to Royle, is applied as an external stimulant in cases of lumbago (Lindl.).

Ipomœa pes-tigridis of Tropical Eastern Asia. Observed by Rheede xi. pl. 59 in Malabar; — by Graham, "common everywhere during the rains" in the environs of Bombay; by Roxburgh, in other parts of Hindustan; by Mason, in Burmah; and is known to grow in the Malayan archipelago (Choisy). By European colonists, was carried to the West Indies, where it has been found in cultivated ground on St. Thomas (Schlecht., and A. Dec.).

42' S., alt. five thousand feet," the flowers lilac. Transported to Europe, is described by Breynius pl. 34, Plukenet alm. pl. 388, and Dillenius elth. pl. 106. "E. Carolinianus" was observed by Conrad as far North as 40° near Philadelphia; by myself, on the Delaware peninsula; by Croom, near Newbern; by Elliot, in South Carolina; by Nuttall, in Maryland, Virginia, and Georgia; by N. A. Ware, in Florida; by Chapman, "Florida to Mississippi, and northward;" by E. James, in Louisiana; by Pitcher, in Arkansas; and by Sloane i. pl. 156, on Jamaica.

Herpestis Monnieri of Tropical and Subtropical America? A smooth small and somewhat creeping herb, having a Sanscrit name (Pidd., and A. Dec.), observed by Rheede x. pl. 14 in Malabar; — by Graham, around Bombay "generally to be met with on the margins of tanks," by myself on the Deccan; by Roxburgh, as far as Bengal, its expressed juice rubbed on parts affected with rheumatic pains; by Mason, in Burmah, enumerated as indigenous; by myself, on the Philippines, and Hawaiian Islands; is known to grow also on the Marquesas Islands (Pers.), New Zealand (Raoul), and in Tropical Australia (Benth.). Westward, is known to grow in Yemen (Schimp., and herb. Dec.); and in Equatorial Africa (Boj., and Benth.). Farther West, according to A. Gray, grows as far North as 38°, "Maryland and southward along the coast;" was observed by Elliot, and Leconte, in South Carolina and Georgia; by Chapman, "Florida to North Carolina, and westward;" by Nuttall, along the Mississippi near New Orleans; by Sloane pl. 129, Jacquin obs. pl. 1, and Swartz obs., in the West Indies (Pers.); by Humboldt and Bonpland, on Cuba (Kunth); by myself, in Brazil, and Peru; and was received by Bentham from Buenos Ayres and Chili.

Limnanthemum cristatum of Madagascar or Hindustan. An aquatic with small white flowers growing from the petioles, observed by Rheede xi. pl. 29 in Malabar, — by Graham in "Kandalla tank, common in the Concans," by Roxburgh cor. ii. pl. 105 in Bengal. Westward, by Bojer on Madagascar, and received by Grisebach from the Mauritius Islands (A. Dec.).

"1677 A. D." (Chalm., and Holmes), in England, the Northern boundary of Massachusetts fixed at three miles North of the Metrimack: but pending negotiations between Charles II. and the proprietor of Maine, the proprietor's interest was purchased by an agent of Massachusetts.

"In this and the following year" (Humb. cosm. v.), an important catalogue of *Southern stars* made by Halley at St. Helena: including however none under the sixth magnitude.

"1678 A. D." (Humb. cosm. ii.), Lister maintaining that each kind of rock has its own fossils: and that these are all "specifically different" from the somewhat similar ones in the present sea — Lister died "in 1711."

"Sept. 6th" (Blair), the Popish plot in England discovered by Oates.

"In this year" (coll. hist. vi. 223, and Holmes), Salem in New England containing "eighty-five houses, and three hundred polls:" and New York city (Chalm. i. 597), "three hundred and forty-three houses."

"In this year" (Spreng.), Jac. Breyn publishing his *Exot. plant. cent.*, enumerating* *Salvia paniculata* pl. 85, *Wachendorfia hirsuta* 37, *Eriocaulon triangulare* 50, *Leucadendron decurrens* 9, *Lobelia pinifolia* 87, *L. coronopifolia* 88, *L. Breynii* 89, *Chironia linoidea* 90, *Myrsine Africana* 5, *Phyllis brunioidea* 7, *Brunia nodiflora* 10, *Staavia radiata* 82, *Laserpitium pruthenicum* 84, *Tulipa Breyniana* 36, *Eriospermum latifolium* 41, *Erica cerinthoides* 33, *Gnidia simplex* 6, *Cassia grandis* 14, *C. mollis* 21, *C. flexuosa* 23, *C. glandulosa* 24, *Melastoma holosericeum* 2, *Oxalis speciosa* 46, *Mesembrianthemum molle* 81, *M. expansum* 79, *Leonotis leonurus* 86, *Pelargonium lacerum* 59, *Polygala teretifolia* 49, *Borbonia cordata* 28, *B. crenata* 28, *Clitoria Brasiliana* 32, *Colutea frutescens* 29, *Psoralea aphylla* 25, *Trigonella spinosa* 33, *Athanasia capitata* 78, *Artemisia vermiculata* 12, *Gnaphalium nudifolium* 71, *Senecio pubigerus* 65, *S. longifolius* 63, *S. purpureus* 67, *Inula pinifolia* 64, *Cenia turbinata* 73, *Osteospermum moniliferum* 76, *Othonna bulbosa* 66, *Stoebe ericoides* 10, *Croton solanifolium* 54, *Phyllanthus rhamnoides* 4, *Leptocarpus simplex* 91, *Inga cinerea* 15, *Mimosa sensitiva* 16, *M. polydactyla* 18, *Asplenium nidus* 99, *A. Breynii* 97, *Lycopodium plumosum* 100-1, and *Lygodium scandens*, — Breyn described in the *Ephem. nat. cur. Metastelma parviflorum* 1. 4. 138, and *Cynanchum Indicum* (Spreng.).

"In this year" (Spreng.), after his Hort. Bles. auct. "in 1669," and Umbell. "in 1672," Morison publishing his Hist. Plant., enumerating *Laserpitium hirsutum* 9. 15, *Cuchrys microcarpa* 9. 1. 1, *Daucus Mauritanicus* 9. 13. f. 6, *D. polygamus* 9. 13. f. 5, *Myrrhis colorata* 9. 10. f. ult., *Osmorhiza*

* *Cotula coronopifolia* of the seashore of Austral Africa. Described by Breyn exot. 76 — (Spreng.), and already naturalized in Friesland in the days of Linnæus sp. p. 1257; spreading subsequently to various points along the seashore from Germany to Portugal and Cadiz (Pers., Koch, and Reuter): possibly by European colonists also, carried to "South America and New Zealand" Known to grow in Austral Africa (Pers.), the home according to A. Decandolle of all the species of *Cotula*.

Claytoni 9. 11. f. 1, *Cryptotrenia Canadensis* 9. 11. f. 8, *Chaerophyllum procumbens* 9. 11. f. ult., *Alcum inundatum* 9. 5. f. ult., *Narcissus anceps* 4. 9. 13, and *Passiflora lutea* 1. 2. 3, *Heliopsis laevis* 6. 3. f. 69 (Pers.), *Pontederia cordata* 15. 4. f. 8.

Saxifraga geum of the mountains of Ireland and middle Europe. Described by Morison xii. pl. 9. — termed “*geum rotundifolium minus*” by Tournefort inst. 251, and known to grow on the mountains of Ireland (A. Dec.), and middle Europe (Moench, and Pers.): observed by Lapeyrouse pl. 14 on the Pyrenees: by Sibthorp, on mount Parnassus. Has become naturalized near Edinburgh (Engl. bot. pl. 1561 to 2093, and Bab.), also in York-shire and Cumberland (Wats.).

Mesembryanthemum tenuiflorum of Austral Africa. Transported to Europe, described by Morison 12. pl. 8, — Bradley i. 9, and Dillenius pl. 201; was observed by Chaubard to all appearance long naturalized on old walls at Athens. Is said to grow wild in Austral Africa (Chaub., and Gittard).

Xanthium spinosum of Austral America. A thorny kind of *bur-weed*, transported to Europe, described by Morison xv. pl. 2,* — and Magnol hort. 208; and from seeds procured in Portugal termed “*xanthium lusitanicum*” by Tournefort: becoming naturalized, has extended into Algeria, Sicily, Italy, and Southern France (Boissier, Gussone, Seguier, and Gouan); was observed by Guldens-tadt in 1787, frequent in Southern Russia; subsequently, by Chaubard, and Grisebach, frequent in the Peloponnesus and on some of the Greek islands. Transported to North America as late perhaps as 1814 (as may be inferred from the silence of Walter, Michaux, and Pursh), was found by Nuttall in 1818 near dwellings from Savannah to Washington, and not foreseeing that it would become troublesome, was introduced by him as he informed me into the environs of Philadelphia; was observed by myself in 1823 in the vicinity of Boston. In the Southern Hemisphere, by European colonists also, was probably carried across the Andes into Chili (Beechey voy. 57, and A. Dec.); for it is known to be indigenous and abundant in the extensive plains on the La Plata.

Luzula nivea of Switzerland and the Tyrol. Described by Morison viii. pl. 9, — and Scheuchzer gram. pl. 7, and known to grow on the mountains of Switzerland and the Tyrol (Pers., and A. Dec.). In Scotland, planted by a gardener in Bromhall woods (Balfour, and Bab.), but not known to have extended itself into the surrounding country.

“1679 A. D.” (Chalm., and Holmes), arrival in New England of the first collector of customs, Edward Randolph. He was persistently opposed, the colonists deeming “their chartered privileges invaded.” — He returned two years afterwards, but was unable to execute his office.

“May 26th” (Macaulay i. 2), the *Habeas Corpus* Act signed by king Charles II.

“Sept. 2d” (Pauth. 436), at Pekin, a severe *earthquake*; throwing down walls and buildings, and destroying more than “four hundred thousand” persons.

“The same year” (Dampier), the buccaneers, continuing their ravages, and islands along the North coast of the Isthmus first made a rendezvous. In their vessels, one or more “Moskito indians” were employed; partly it would seem, from their knowledge of the means of procuring provision. These Indians are described by Dampier as “tall, well made, raw boned, long visaged, look stern” (Malayans?, see below, Guam), having no form of government, but cultivating in small plantations “*plantain trees*” (*Musa sapientum*), “*yams*, potatoes” (*Patatas edulis*?), “*indian pepper*” (*Cap-sicum*), “and *pine-apples*,” of which they make an intoxicating drink.

“Towards 1680 A. D.” (Kaempfer, and art de verif.), Jetznako succeeded by Tsinajos, now emperor of Japan.

“1680 A. D.” (Kaempfer v. 13), Cleyer in Japan, in charge of the Dutch there, and meeting with among plants *Zingiber minge* iii. a. 3. o. 120, *Ligustrum Japonicum* iii. a. 2. o. 180, *Ficus itabu* ii. a. 10. o. 36. f. 10, *Bladhia Japonica* iii. a. 5. 6. o. 3, *B. crispa* iii. a. 2. o. 179, *Campanula glauca* iii. a. 3. o. 119, *Euonymus pungens* iii. a. 5. 6. o. 2, *Cissus Japonica* ii. a. 7. o. 71. f. 25, *Scilla Japonica* ii. a. 5. 6. o. 53. f. 39, *Lilium speciosum* ii. a. 8. o. 191. f. 54, *L. pomponium* ii. a. 9. o. 76. f. 20, *Oron-tium Japonicum* ii. a. 9. o. 75. f. 18, *Houttuynia cordata* ii. a. 8. o. 189. f. 51. 52, *Alisma cordifolia* ii. a. 6. o. 53. f. 40, *Eurya Japonica* ii. a. 8. o. 192. f. 56, *Apactis Japonica* ii. a. 7. o. 70. f. 23, *Fumaria racemosa* iii. a. 3. o. 120, *Cineraria Japonica* ii. a. 9. o. 76, *Epidendrum ensifolium* iii. a. 10. o. 38, *Arum ringens* ii. a. 9. o. 75, *Rajania quinata* ii. a. 7. o. 71, and *Mertensia dichotoma* ii. a. 7. o. 73. f. 30. — He returned shortly afterwards (Spreng.).

Linca (Catharanthus) rosea of Madagascar. Observed by Cleyer ii. a. 7. o. 72. f. 27 in Japan — (Spreng.); by Thunberg, growing in and around Nagasaki, and cultivated besides in vases, but no native name given: in the Philippines, formerly cultivated by the natives, continuing known to many of them, and called in Tagalo “cantotan” (Blanco): known to grow also in Java (Pers.): and in Bur-

* *Bromus racemosus* of middle Europe. Resembling *B. secalinus* but the panicle upright: described by Morison 8 pl. 7 f. 19: — observed by Smith fl. i. 128 in Britain; and known to grow in woods and pasture-land in France. By European colonists carried to Northeast America, has been observed by A. Gray in “grain-fields, not rare;” by myself, beyond the limits of cultivated ground in “the environs of Philadelphia, naturalized.

mah, enumerated by Mason v. p. 432 as "exotic," called "them-bau-ma-hnyo-ban," and cultivated for ornament both by natives and Europeans. Westward, devoid of a Sanscrit name (Pidd.), and observed in Hindustan by Roxburgh, and Graham, only in the cultivated state, "common in gardens" and "in flower all the year;" and in Ceylon, only recently becoming naturalized (Moon, and Gardn.): called in Madagascar "tsi-felan-felan" (Boj.), but no specimens from that island seen by A. Decandolle. By European colonists, was carried to the Mauritius Islands, where it has become naturalized (Boj.); to Austral Africa (A. Dec.); to one locality in Guinea (flor. Nigr.); to the West Indies, where it is not mentioned by the early writers, but now occurs even in the neighbouring portion of Florida and "in the streets of Apalachicola" (Chapm.), and throughout Tropical America from Realejo in Western Mexico (Benth. bot. Sulph.) to Rio Janeiro. Transported to Europe, is described by Miller pl. 186, and Linnæus; has become frequent in greenhouses; and was observed by Clot-Bey in the gardens of Egypt.

"March 7th" (Charlev., Holmes, and voy. Belg.), leaving the mouth of the Illinois river, Father Hennepin with others proceeded up the Mississippi. At the "forty sixth" degree of North Latitude, he was stopped by falls, named by him "Falls of St. Anthony."

"March 16th" (Chalm., Belknap, and Holmes), Edward Randolph having arrived, bringing a commission separating New Hampshire from Massachusetts; the new government inaugurated at Portsmouth, by the meeting of the first assembly.

"Nov. 3d" (Blair), the *great comet*:—continuing in sight until "March 9th." From observations thereon, Isaac Newton was enabled to demonstrate, The regular revolution of comets around the sun (Holmes).

"In this year" (append. Sibth.), Morison publishing the second volume of his *Hist. plant.*, enumerating * *Potentilla hirsuta* ii. 2. 20. 2, *Pentstemon laevigatus* ii. 5. 8. 6, *Sisymbrium Pyrenaicum* ii. 3. 7. 1, *Lavatera micans* ii. 5. 17. 9, *L. Cretica* ii. 5. 17. 5, *Ononis mitissima* ii. 2. 17. 4, *Scorpiurus muricata* ii. 2. 11. f. iv, *Medicago elegans* ii. 2. 15. 4, *M. muricata* ii. 2. 15. f. 11, *M. Gerardi* ii. 2. 15. f. 18, *M. terebellum* ii. 2. 15. f. 20, *Archemora rigida* ii. 7. f. 1 (Pers. i. p. 316), *Yucca filamentosa* ii. p. 419, *Lupinus perennis* ii. 2. 7. f. 6.

Hypericum calycinum of Eastern Europe and the adjoining portion of Asia. A low shrub described by Morison ii. 5. 35 f. 2,—termed "h. ascyrum" by Miller (Steud.), and received from Greece (Jacq. fragm. pl. 6, and Pers.); observed by Sibthorp in shaded situations near Constantino-ple. Seemingly naturalized at some points in Scotland (Bab.), Ireland, and on the Isle of Wight, but does not ripen seed (Wats., Bromf., and A. Dec.).

Medicago intertexta of the Mediterranean countries. An annual called in Egypt "nafal" (Del.); described by Morison 2. pl. 15. f. 7. 8. 9,—and known to grow in Barbary and Southern Europe (Pers.): observed by Forskal near Marseilles; by Delile, around Rosetta in Egypt. By European colonists, was carried to Northeast America (A. Dec.).

Medicago nigra of the West Mediterranean countries. An annual described by Morison 2. pl. 15. f. 19,—and known to grow in Southern France (Willd., and Pers.). By European colonists was carried to Northeast America (A. Dec.).

"In this year" (Spreng., and Winckl.), Breyn publishing his *Prodrom.*, enumerating † *Gladiolus tristis* 7. f. 1, *G. angustus* 7. f. 2, *G. Lamarckii* 12. f. 1, *Antholyza ringens* 8. 1, *A. plicata* 9. 2, *Wachendorfia paniculata* 9. 1, *Rhynchospora aurea* 23, *Drosera cistiflora* 22. 2, *Crassula coccinea* 20. 1, *Lachenalia orchioidea* 11. 3, *Euphorbia caput-Medusae* 19, *Capparis Breynii* 13, *Monsonia speciosa* 21. 2, *Spilanthus insipidus* 24, *Eupatorium divaricatum* 17. 2, *Pteronia oppositifolia* 17. 3, *Gnaphalium serratum* 18. 2, *G. divaricatum* 18. 3, *Helichrysum proliferum* 17. 1, *H. imbricatum* 18. 1, *H. virgatum* 16. 3, *Cineraria sonchifolia* 21. 1, and *Calendula hybrida* 14. 2:—the second part "in 1689," died "in 1697," and a new edition of the whole was published by his son Jo. Philipp Breyn "in 1734."

"1680 and 1681" (Churchill coll.), Captain Sharp returning from the Pacific and unable "to recover the strait of Magellan," continued South as far as "sixty degrees," meeting with many ice-

* *Trifolium medium* of Europe. The "t. pratense purpureum vulgare" of Morison ii. p. 138. 11. 5—(Afzel. linn. soc. lond. i. 237) may be compared: *T. medium* is described by Linnæus. By European colonists was carried to Northeast America, observed by myself springing up spontaneously around Salem, much resembling *T. pratense* but the heads of flowers I think smaller: "*T. Pennsylvanicum*" of Willdenow, and Pursh, may be compared (see Dec. prodr.).

† *Agapanthus umbellatus* of Austral Africa. Transported to Europe, described by Breyn prodr. pl. 10—(Spreng.), Miller pl. 210, and Linnæus. By European colonists also, carried to Northeast America, where it has become frequent in greenhouses; recently to Hindustan, and called *African blue lily* (Graham). In its wild state, known to grow in Austral Africa (Thunb. prod. 60, and Pers.).

bergs, "and abundance of snow, frost, and *whales*, and called a small place he found the Duke of York's Island. Thus he came into the Atlantic by "a new way, and made it appear that the land" on the East side of the Strait of Le Maire was insular, and "not joined to any continent."

"1681, March 4th" (Proud i. 171 to 187, and Holmes), a charter granted by Charles II. to William Penn, for a new province named "Pennsylvania." After "July 11th," three ships sailed with colonists: and some of these arriving in the Delaware, commenced a settlement above the confluence with the Schuylkill.

"1682 A. D." (Proud i. 196, and Holmes), the right and interest of the Duke of York in the territory on the West side of Delaware Bay, procured by William Penn: who on "Oct. 24th" landed at Newcastle. — The origin of the State of Delaware.

The banks of the Delaware already inhabited by "three thousand" colonists, Swedes, Dutch, Finlanders, and English (Chalm. i. 643). Proceeding to Upland (Chester), William Penn called an assembly "Dec. 4th;" the foreigners were naturalized, and the body of laws brought by him were formally adopted. After making a treaty with the natives, and purchasing territory, Penn proceeded with a surveyor to lay out above the confluence with the Schuylkill his projected city of "Philadelphia." The first settlers were generally Quakers, who had suffered persecution: — and within less than a year, "eighty houses and cottages" were built (Proud, Chalm., and Holmes).

"The same year" (Charlev. and Holmes), M. de la Sale descending the Mississippi to the sea, formally took possession of all the country watered by that river, and in honour of Louis XIV. named it "Louisiana."

"In this year" (Winckl.), George Wheeler publishing his Travels in Greece, enumerating *Hypericum Olympicum* 222.

"In this year" (append. Sibth., and Spreng.), Chr. Mentzel publishing his Pugill. rar. plant., enumerating *Centunculus minimus* pl. 7, *Silene chlorantha* pl. 2. f. 1, *Massonia latifolia* pl. 13. f. 4, *Helthimia viridiflora* pl. 13. f. 5, *Ornithogalum altissimum* pl. 13. f. 2, *Helianthemum Appeninum* pl. 8. f. 3. — He died "in 1701," and his Lex. was published "in 1715."

In this year (see Spreng.), Morison writing the third volume of his Hist. plant., enumerating *Ziziphora thymoides* iii. 11. pl. 19. f. 6, *Salvia colorata* iii. 11. 16. f. ult., *S. lyrata* iii. 11. 13. 27, *S. urticifolia* iii. 11. 13. 51, *S. Indica* iii. 11. 13. f. 16, *Fedia mixta* iii. 7. 16. 35, *F. discoidea* iii. 7. 16. f. 29, *Melica speciosa* iii. 8. 7. 51, *Chloris radiata* iii. 8. 3. 15, *Eragrostis rigida* iii. 8. 2. 9, *Festuca loliacea* iii. 8. 2. 2, *F. caespitosa* iii. 8. 7. 19, *Bromus asper* iii. 8. 7. f. 27, *B. Madritensis* iii. 8. 7. f. 13, *Triticum tenellum* iii. 8. 2. 3, *Lolium arvense* iii. 8. 2. 1, *Hordeum maritimum* iii. 8. 6. 5, *Cephalaria Transylvanica* iii. 6. 13. 13, *Plantago stricta* iii. 8. 17. 2, *Omphalodes linifolia* iii. 11. 30. 11, *Ellisia nyctelaea* iii. 11. 28. 3, *Cynanchum hirsutum* iii. 15. 3. 61, *Gentiana saponaria* iii. 1. 5. 4, *Eryngium coeruleum* iii. 7. 37. 13, *Fucus subverticillatus* iii. 8. 9. 4, *F. lampocarpus* iii. 8. 9. 2, *Saxifraga punctata* iii. 12. 9. 17, *Thalictrum rugosum* iii. 9. 20. f. 3, *T. Calabricum* iii. 9. 20. f. 16, *Teucrium Nissolianum* iii. 11. 22. 19, *Cleonia Lusitania* iii. 11. 5. 4, *Scorzonera lana a* iii. 7. 6. 17, *Liatris squarrosa* iii. 7. 27. 10, *Serratula cynaroides* iii. 7. 25. 2, *Carthamus Tingitanus* iii. 7. 34. 19, *Bidens frondosa* iii. 6. 5. 21, *Gnaphalium polycephalum* iii. 7. 10. 19, *Xeranthemum cylindricum* iii. 6. 12. 1, *Conyza cinerea* iii. 7. 17. 7, *Helianthus altissimus* iii. 6. 7. 67, *H. divaricatus* iii. 6. 7. f. 66, *Rudbeckia digitata* iii. 6. 6. 54, *Silphium trifoliatum* iii. 6. 3. 68, *Aristol. chia angustida* iii. 12. 17. 7, *Ambrosia trifida* iii. 6. 1. 4, *Botrychium matricarioides* iii. 14. 5. 26, *Polypodium incanum* iii. 14. 2. 5, *Asplenium polypodioides* iii. 14. 2. f. 12, *A. angustifolium* iii. 14. 2. 25, *Fucus articulatus* iii. 15. 8. f. 6, *Littorella lacustris* iii. 8. pl. 9, * *Camptosorus rhizophyllus* iii. 14. 5. f. 14, *Asplenium ebencum* iii. 14.

* *Heliotropium Curassavicum* of the seashore of Tropical and Subtropical America. A prostrate annual, transported to Europe, described by Morison xi. pl. 31. — Plukenet alm. pl. 36, and has become naturalized near Montpellier, Narbonne, Collioure, and Cette (Treviran., Martins, and A. Dec.). Westward, is known to grow near Norfolk (A. Gray); has been observed by myself from Lat. 39, wild on the seashore of the Delaware peninsula; by Elliot, near salt water in South Carolina; by Chapman, "Florida to North Carolina;" by Nuttall, on the Missouri, and along Salt river of Arkansas; by E. James, on salines along the Platte; according to Torrey, grows at Key West; according to Kunth, on salines near Mexico, and along the Pacific as far as Truxillo and Callao.

Cynoglossum Morisoni of Northeast America. A branching herb, transported to Europe, described by Morison iii. 11. pl. 30. — and Linnæus. Westward, observed by myself from 42° 30' along the Atlantic, growing in the forest; by A. Gray, "copses, common" in central New York; by Pursh, in Virginia and Carolina; by Elliot, and Chapman, "in the upper districts of South Carolina."

Pulmonaria (Mertensia) Virginica of the Ohio and its tributaries. The American lungwort, transported to Europe, is described by Morison iii. 414. — Plukenet alm. pl. 227 (Linn.), and Roth; and escaping from cultivation, has been found in Britain on ruins near Netley abbey (Nicholls,

2. f. 12, *Woodwardia onocleoides*, *Cacalia atriplicifolia* iii. 7. 15. 7, *Polymnia uvvedalia* iii. 6. 7. f. 55, *Cypripedium pubescens* iii. 12. 11. f. 15, *Hydrophyllum Virginicum* iii. 51. 1. f. 1, *Funcus nodosus* iii. 8. 9. f. 15, *Monotropa uniflora* iii. 12. 16. f. 5, *Pycnanthemum Virginicum* iii. 11. 7. f. 8, *P. aristatum* iii. 11. 8. f. ult., *Hysopus* (*Lophanthus*) *nepetoides* iii. 11. 4. f. 11, *Scutellaria lateriflora* iii. p. 416, *Eupatorium aromaticum* iii. p. 98, *Gnaphalium purpureum* iii. p. 92, *Aster linifolius* iii. p. 121, *Iva frutescens* iii. p. 90, *Phlomis leonitis* iii. p. 383. — He died "in 1683," and the volume was published by Bobart "in 1699."

Thalictrum alpinum of Subarctic Europe and Asia. Described by Morison iii. 9. pl. 20. f — (. . . .), and known to grow from Lapland and Finland to Ireland and Wales (fl. Dan. pl. 11, Engl. bot. pl. 262, and Wats.), also on the Pyrenees, throughout the Swiss Alps (A. Dec.), on Caucasus and in Northern Asia as far as the Altaian mountains (Ledeb.). Westward, according to Torrey and Gray fl. i. 39, grows on Newfoundland and in Canada.

Valeriana (*Centranthus*) *calcitrapa* of the Mediterranean countries. Described by Morison iii. 7. pl. 14, — termed "v. foliis calcitrapæ, etiam v. lusitanica latifolia annua laciniata" by Tournefort inst. 132, and known to grow in Barbary, Portugal (Pers.), and France (Dec. fl. fr.): observed by Sibthorp, and Chaubard, in cultivated ground in the Peloponnesus. In Britain, after maintaining itself fifty years near Eltham, is regarded by Watson as not completely naturalized (A. Dec.).

Solanum Hermannii of Austral Africa. Transported to Europe and described by Morison iii. pl. 1, the berries which are black inducing according to Hermann hort. lugd. 574 headache, torpor, furor and even death — (Spreng.); termed "s. pomiferum frutescens africanum spinosum nigricans borraginis flore foliis profunde laciniatis" by Tournefort inst. 149; was observed by Sibthorp growing spontaneously in Sicily; and has become naturalized in Greece (Heldr.), Italy, Sardinia, Majorca, Portugal, around Cadiz where it is called "tomates del diablo," and around Tangier in Morocco (Bertol, Dun., Reuter, and A. Dec.).

Ophrys lutea of the Mediterranean countries. Described by Morison iii. 12. 13. f. 15 — (Spreng.); termed "o. Cretica maxima" by Tournefort trav. pl. 37; and observed by Chaubard in the Peloponnesus. Westward, by Decandolle fl. in France; by Cavanilles, in Spain; and by Brotero, in Portugal.

Ophrys scolopax of the Mediterranean countries. Described by Morison iii. 12. 13. 11 — (Spreng.); observed by Cavanilles ii. pl. 161 in Spain; known to grow in Southwestern France, and observed by Chaubard in the Peloponnesus.

Carex riparia of Europe and the adjoining portion of Asia. A large subaquatic sedge described by Morison iii. 8. 12. 9 — (Spreng.); termed "cyperoides latifolium spica rufa sive caule triangulo" by Tournefort inst. 529; and known to grow throughout middle Europe (Micheli pl. 32, Pers., and Curt. lond. iv. pl. 60): observed by Sibthorp frequent in watery places from the Peloponnesus to Constantinople.

Bromf., and A. Dec.). Westward, according to A. Gray, grows on "alluvial banks, Western New York to Wisconsin, Virginia, Kentucky, and southward;" was observed by Michaux on the Alleghanies of Carolina; by Chapman, "along mountain streams, South Carolina to Tennessee;" by Beck, in Illinois; and by Nuttall, on the Arkansas.

Pteris longifolia of Mexico and the West Indies. A fern, transported to Europe, described by Morison iii. p. 568, — and Ray suppl. 65 (Linn. sp. pl.); and naturalized on the isle of Ischia in the Bay of Naples (Tenore). Westward, observed by Plumier am. pl. 18 in the West Indies; grows according to Chapman, on "Key West" at the Southern extreme of Florida; is known to grow also in Mexico (A. Dec.).

Aspidium cristatum of Northern Climates. A fern described by Morison iii. 14. 3. f. 1, — and Plukenet phyt. 181. f. 2 (Linn. sp. 1551); known to grow throughout middle Europe (Engl. bot. pl. 2125); and observed by Sibthorp from Bœotia to Constantinople. Westward, grows according to Hooker as far as the Saskatchewan; received by Swartz from Pennsylvania; observed by A. Gray "common" in central New York; by myself, in swampy ground from 43° to 40° along the Atlantic.

Bromus secalinus of middle and Northern Europe. A coarse grass described by Morison iii. 8. pl. 7 — (Spreng.), and Linnæus; and known to occur as a weed in middle Europe (Weigel, Huds., Lam., and Pers.). By European colonists, unintentionally carried to Northeast America, where it continues in waste ground but chiefly in grain-fields, and is called *cheat*.

Panicum latifolium of Northeast America. A reedy grass, transported to Europe, described by Morison iii. 8. pl. 5, — and Linnæus. Westward, observed by myself from 46° on the St. Lawrence to 40° along the Atlantic; by A. Gray, in "moist thickets, common" in central New York; by Schweinitz, at 36° in Upper Carolina; by Beck, on the Mississippi near St. Louis; and by Nuttall, on the Arkansas.

Carex flacca of Europe and the adjoining portion of Asia. Described by Morison iii. 8. 12. f. 14 — (Spreng.), Schreber, and Schkuhr 117. t. O. f. 57; termed "c. glauca" by Scopoli as observed in Carniola, "c. recurva" by Hudson; known to grow from Denmark throughout middle Europe (fl. Dan. pl. 1051, Engl. bot. pl. 1506, and Pers.); observed by Sibthorp, and Chaubard, from the subalpine portion of the Peloponnesus to Constantinople. Westward, was observed by Collins, and Knieskern, in the "marshes of New Jersey, near the coast" (J. Carey), "Cape May" according to Torrey; by Curtis, in "marshes, Alabama to North Carolina" (Chapm.).

Carex sylvatica of Europe and the adjoining portion of Asia. A woodland sedge described by Morison iii. 8. 12. 18 — (Spreng.); termed "cyperoides sylvarum tenuius spicatum" by Tournefort inst. 530; and known to grow from Sweden to the Mediterranean: observed by Decandolle in France; by Sibthorp, in woods in the environs of Constantinople.

Carex capitata of the Arctic region and alpine summits farther South. Described by Morison iii. 8. 12. f. 6, — and Schkuhr 80; observed by Linnæus in Lapland and Norway; and known to grow in the alpine portion of Switzerland (A. Dec.). Westward, was observed by Hooker on Iceland; by Robbins and Oakes, on the alpine summits of the White mountains of New England (A. Gray).

Carex distans of Europe and the adjoining portion of Asia. Described by Morison iii. 8. 12. 18 — (Spreng.); termed "cyperoides spicis parvis longe distantibus" by Tournefort inst. 530; and known to grow from Denmark throughout middle Europe (fl. Dan. pl. 1049, Engl. bot. pl. 1234, and Pers.): observed by Sibthorp, and Chaubard, frequent in marshes in the Peloponnesus.

Festuca elatior of Northern Europe and Asia. Described by Morison iii. 8. pl. 2, — and Linnæus; termed "gramen paniculatum arundinaceum spica multiplici" by Tournefort inst. 523; and known to grow throughout middle and Northern Europe as far as Sweden and Iceland (Pers., Curt. lond. vi. pl. 7, Hook., and Wats.). Farther East, observed by Sibthorp in the environs of Constantinople; by Bieberstein, along the Taurian mountains; and by Gmelin in Siberia (Spreng.). By European colonists, carried to Northeast America, where it has become naturalized in our Northern States, occurring not only in grass-grown clearings, but in wild situations within the border of the forest.

Alopecurus pratensis of Europe and the adjoining portion of Asia. Described by Morison iii. 8. pl. 4 — (Spreng.), and Linnæus; termed "gramen spicatum spica cylindracea longioribus villis donata" by Tournefort inst. 520; known to grow throughout middle Europe, and in Britain called *foxtail grass* (Pers., Weinm., Curt. lond. v. pl. 5, and Prior): farther East, observed by Sibthorp growing around Athens and on Cyprus. By European colonists, carried to Northeast America, where besides being cultivated it has become naturalized, growing in waste ground and on the margin of the forest in our Northern States.

"1683, Sept. 2d" (Blair), siege of Vienna abandoned by the Turks.

"The same year" (Proud i. 219, and Holmes), about "twenty families" of German Quakers from the Palatinate, establishing themselves seven miles from Philadelphia, named their settlement "Germanatown." Other Quakers of the original stock of the society in Wales, established themselves in Pennsylvania at a place named by them "North Wales."

"In this year" (Klapr. mem. i. 325), the Chinese, aided by the Dutch, obtain possession of all the Northwest coast of Formosa.

"In this year" (Spreng.), Jacob Sutherland publishing his Cat. hort. Edin., enumerating *Scabiosa graminifolia*, *Verbascum ferrugineum*, *Ribes (Grossularia) reclinata*, *Paronychia capitata*, *Imperatoria verticillaris*.

Amygdalus nana of the Uralian and Mongolian plains. A shrub enumerated by Sutherland — (Spreng.); termed "a. indica nana" by Tournefort inst. 627: observed by Sibthorp on the declivity of mount Haemus; by Baumgarten in Transylvania; by Gmelin, and Pallas trav. i. 125 to iv. 370, from 55° on the Volga to the Upper Selenga. Transported to Northeast America, the double-flowered variety has become frequent in gardens.

"In this year" (Winckler), Johannes Commelyn publishing his Plant. indig. Holl.

"1684 A. D. = 23d year of Khang-hi" (Chinese chron. table), beginning of the Seventy-third cycle. To Khang-hi (Pauth. 436), the island of Formosa surrendered by a son of the above-mentioned pirate chief.

"In the 23d year of his own reign," according to Khang-hi, the *magnetic needle* at Pekin declined "three degrees:" — but now only "two and a half" (Cibot in mem. Chin. iv.).

"June 18th" (Hutch. i. 340, Chalm., and Holmes), by the high court of chancery in England, the charter of Massachusetts declared forfeited. Philadelphia already containing "nearly three hundred houses, and two thousand inhabitants" (Belknap ii. 424, and Proud i. 288).

June 22-3d (pref., and lett. 7), after arriving at Quebec in the previous "November," Lahontan at the age of sixteen leaving Montreal for Lake Ontario. — "Nov. 20th, 1690" (lett. 20), he sailed from the St. Lawrence for France.

"In this year" (Humb. cosm. ii.), the black stripes in Saturn's ring, showing at least two concentric rings, discovered by Dominie Cassini.

"In this year" (Spreng.), Sibbald publishing his Scot. Ill.

"1685, Feb. 6th" (Nicol., Holmes gives "16th"), Charles II. succeeded by his brother James II., now king of United Britain. Also "in this year" (Nicol.), Iwan Alex. succeeded by Peter the Great, as emperor of Russia.

"July" (Chalm., and Holmes), a writ issued against the charter of Connecticut. "October," a writ against the charter of Rhode Island. And "Oct. 8th," by James II., Joseph Dudley born in Massachusetts appointed president of New England. His jurisdiction included Maine, New Hampshire, Massachusetts, and "the Narraganset or king's province;" but the previous legislative ordinances "were declared to be in force, and the laws and customs of the colony were continued."

At this time (Chalm. i. 609, and Holmes), by "an accurate account taken by order of the governor," the inhabitants of Canada ascertained to be "seventeen thousand;" of whom, "three thousand" were supposed to be capable of bearing arms.

"Oct. 12th" (Blair), by Louis XIV., the Edict of Nantes revoked. — In the following year, a small brick church was built in Boston by fugitive French protestants.

"In this year" (Winckl.), Giov. Bapt. Triumfetti publishing his Obs. de ortu plant.

"The same year" (Kobell iii.), *gold-purple*, "formed as a purple precipitate when diluted solutions of gold and tin are mixed," discovered by Andreus Cassius; and applied by Kunkel to the manufacture of red or ruby glass.

"The same year" (art de verif.), in Japan, the Dutch subjected to further exaction; their trade not to exceed the annual value of "three hundred thousand taëls" = 1,500,000 livres.

"In this year" (Stirling, and W. W. Hunter), the English East India Company warring against the Muslim Mughuls. — "Nov. 29th, 1688," the governor of Balasor having imprisoned two English servants and threatened the factory, the town attacked and plundered by Capt. Heath.

"In this year" (Smith ed. fl. lapp., and Spreng.), Rudbeck publishing the third edition of his Hort. Upsal, enumerating *Calypto borealis* 81.

"1686, May," arrival of Dampier at Guam. The natives are described by him as "copper-coloured like other Indians, long-visaged, stern of countenance" (Malayans). The *hogs* seen there, appeared to him to belong to "that breed in America which came originally from Spain" (see Mendana).

The inhabitants of the Bashee Islets (Malayans) described by Dampier as the "quietest and civilist people" he ever met with; having "no idols and not seen to worship anything, and all equal apparently;" the men having "but one wife," and the "children honouring and respecting parents." As a punishment for theft, a young man was buried alive. They have no coin, but wore in their ears small pieces of metal which they called "bullawan," the "Mindanao name for gold;" and their language presented "no affinity in sound to Chinese nor to Malayan."

At Pulo Condore, Dampier found the inhabitants Cochinchinese; having large nets for turtle, such as he had seen only at Jamaica; and exporting *tar* to Cochinchina.

Along the East coast of Celebes, Dampier found *beacons* placed on the shoals. And at the out-lying island of Bouton, the inhabitants were all Muslim, under a sultan.

At the Nicobar Islands, Dampier found the inhabitants "all equal" (Malayans), "honest, civil, harmless people," having "neither temple nor idol," nor as far as discovered, any "form of religion." Their language differed from any he had heard before, but contained some Malay words.

"Dec. 20th" (Sewall, Chalm., and Holmes), arrival at Boston of Sir Edmund Andros, appointed by James II. governor of New England: "to continue the former laws," so far as "not inconsistent with his commission or instructions, until other regulations were established by the governor and council; to allow no printing press; to give universal toleration in religion, but encouragement to the church of England;" and a small military force of "about sixty" soldiers was at the same time introduced. Before the end of the month, Andros agreeably to orders dissolved the government of Rhode Island, broke its seal, and assumed the administration. In this year also, writs were issued against the charter of Carolina, against East and West Jersey, and New York was deprived of its assembly.

"In this year" (Spreng., and Winckl.), Paul Amman publishing his Hort. Bosian. exot., enumerating *Veltheimia uvaria*. — He died "in 1691."

"In this year" (Spreng., and Winckl.), after his Cat. plant. circa Cantabrig. "in 1660," Method. plant. "in 1682," Ray commencing his Hist., plant., enumerating "*melianthus hysiquanensis minor foetidus*" dendr. 120 *Melianthus minor*. — He published the Second volume "in 1688."

"1687 A. D." (Kaempfer, and art de verif.), Kinsen succeeded by his son Kinsen II., "one hundred and fourteenth" daïro of Japan; — reigning five years later, during Kaempfer's visit.

"October" (Chalm., and Holmes), Andros visiting Connecticut, demanded the charter; which was produced, and surreptitiously removed: he however declared the government dissolved, assumed the administration, and the records of the colony were closed. The English trade beginning to extend far into the continent, an attempt at prevention by the French of Canada, by making war on the Senecas, a tribe favouring the English (Colden 78).

"The same year" (art de verif.), Mohammed IV. succeeded by Suliman III., twenty-first Turkish sultan.

"The same year" (Holmes note to 1746), severe *earthquake* at Lima in Peru.

"In this year" (J. E. Smith, and Spreng.), Hermann publishing his Hort. Lugd., enumerating *Lobelia erinoides* 109, *Asclepias tuberosa* 647, *Sophora tomentosa* 171, *Eryngium foetidum* 237, *Crasula dichotoma* 553, *Pancratium Zeylanicum* 693, *Cotyledon orbiculata* 551, *Myrtus Zeylanica* 435, *Mesembryanthemum bicolor* 249, *Heliophila coronopifolia* 367, *Cleome triphylla* 565, *Pelargonium coriandrifolium*, *cucullatum*, *myrrhifolium*, *alchemilloides*, *gibbosum*, and *grossularioides* 280-5, *Sida napaea* 23, *Crotalaria sagittalis* 203, *C. laburnifolia* 197, *Glycine bituminosa* 493, *Vicia Bengalensis* 625, *Astragalus pentaglottis* 75, *A. epiglottis* 77, *Psoralea pinnata* 273, *Andryala Ragusina* 673, *Tarchonanthus camphoratus* 229, *Athanasia annua* 227, *Conyza foetida* 662, *Aster puniceus* 651, *A. mutabilis* 67, *A. Novi Belgii* 69, *Calendula pluvialis* 105, and *Funiperus Bermudiana* 347, *Anemone Virginica* 645, *Ranunculus abortivus* 514, *Napaea laevis* 23, *Arum dracontium* 60, *Acalypha Virginica* 687.

Pelargonium capitatum of Austral Africa. The rose-scented geranium is described by Hermann lugd. 278 — (Spreng.), was introduced into England "in 1690" (Ait.), and soon became a favourite garden flower: is figured by Cavanilles iv. pl. 105; was observed by Clot-Bey in the gardens of Egypt; by Graham, "in gardens" at Bombay.

Convolvulus (Batatas) pentaphylla of Tropical America. Known to grow there (Pers., and A. Dec.). Transported to Europe is described by Hermann lugd. 185 — (Spreng.), Jacquin rar. ii., and Cavanilles iv. pl. 323. Regarded by R. Brown cong. p. 58 as indigenous in Western Equatorial Africa: clearly by European colonists, carried to the Mauritius Islands, observed by Bojer hardly naturalized: to Hindustan, observed by Roxburgh but no native name is given, by Graham "common on Malabar Hill etc.," and to the Hawaiian Islands (Mann).

Leonotis nepetifolia of Equatorial Africa. Called in Hindustan "matee-sool" (Graham), and transported to Europe, described by Hermann lugd. pl. 117: — observed by Graham "about villages in the Concan," by Gibson "about hill forts throughout the Deccan, but never at any distance from the habitations of man;" and by Wallich, in Silhet. Westward, is enumerated as frequent and probably indigenous in Western Equatorial Africa (Benth. prodr. and fl. Nigr.). By European colonists, was carried to Tropical America (A. Dec.).

"In this year" (Spreng.), Christoph Knauth publishing his Enum. plant. hal., mentioning plants that are no longer to be found in that vicinity. — He died "in 1664."

"1687-8 A. D." (Spreng.), Sloane visiting Madeira, Barbadoes, Nives, S. Christophers and Jamaica, meeting with *Justicia nitida* pl. 10. f. 2, *Dianthera comata* 103. 2, *Piper macrophyllum* 88. 1, *Comocladia integrifolia* 222. 1, *Heteranthera limosa* 140. 1, *Ficus Martinicensis* 223, *Eleocharis interstincta* 81. 3, *Fimbristylis ferruginea* 77. 2, *F. spadicæ* 76, *Abutilon monostachya* 79. 2, *Cyperus odoratus* 74. 1, *C. strigosus* 74. 2. 3, *C. ligularis* 9, *Mariscus aphyllus* 81. 2, *Paspalum paniculatum* 72. 2, *Digitaria linearis* 70. 3, *Panicum glutinosum* 71. 3, *P. capillare* 72. 3, *P. clandestinum* 80, *P. brevifolium* 72. 3, *Melica papilionacea* 64. 1, *Poa glutinosa* 71. 2, *Eleusine virgata* 70. 2, *Anatherum bicornis* 15, *Erianthus alopecuroides* 70. 1, *Andropogon Virginicus* 68. 2, *Chloris cruciata* 69. 1, *C. polydactyla* 65. 2, *Aristida Adscensionis* 2. 5, *Globularia longifolia* 5. 3, *Hedyotis rupestris* 202. 1, *Catesbaea parviflora* 207. 1, *Ernodea littoralis* 189. 1. 2, *Wallenia laurifolia* 145. 2, *Buddleia Americana* 173. 1, *Pavetta pentandra* 202. 2, *Cissus trifoliata* 144. 2, *Fagara pterota* 162. 1, *Ammania latifolia* 7. 4, *Cuscuta Americana* 128. 4, *Tournefortia cymosa* 212. 2, *T. suffruticosa* 162. 4, *Lisianthus longifolius* 101. 1, *Ipomaea parviflora* 97. 1, *I. violacea* 98. 1, *Lobelia longiflora* 101. 2, *Psychotria myrtiphyllum* 209. 2, *Ardisia tinifolia* 205. 2, *Chiococca racemosa* 188. 3, *Hamelia ventricosa* 183. 2, *Conocarpus erectus* 161. 2, *C. racemosus* 187. 1, *Bauhinia succulenta* 204. 1, *Cestrum vespertinum* 204. 2, *Jacquinia amillaris* 190. 2, *Ehretia tinifolia* 203. 1, *Bumelia salicifolia* 206. 2, *Ayenia pusilla* 132. 2, *Celosia nitida* 91. 1, *Echites suberecta* 130. 2, *E. umbellata* 131. 2, *Tabernaemontana laurifolia* 186, *Sarcostemma Swartzianum* 131. 1, *Spathelia simplex* 171, *Staphylea Occidentalis* 220. 1, *Turnera ulmifolia* 127. 4. 5, *T. pumila* 127. 6, *T. cistoides* 127. 7, *Tillandsia tenuifolia* 122. 1, *T. recurvata* 121. 1, *Campelia Zanonii* 147. 1, *Loranthus Occidentalis* 200. 2, *Ornithopche coninta* 208. 1, *Caesalpinia vesicaria* 181. 2. 3, *Petaloma myrtilloides* 187. 3, *Trichilia hirta* 220. 1, *T. spondioides* 210. 2, *Tribulus maximus* 132. 1, *Melastoma argenteum* 196. 1, *Casearia parviflora* 211. 2, *Bucida buceras* 189. 3, *Malpighia coriacea* 163. 1, *Banisteria fulgens* 162. 2, *Rubus Jamaicensis* 213. 1, *Clusia flava* 200. 1, *Clematis dioica* 128. 1, *Teucrium betonicum* 3. 3, *Gesneria acutis* 102. 1, *G. tomentosa* 104. 2, *Citharexylon caudatum* 206. 3. 4, *Lantana stricta* 195. 4, *Stemodia maritima* 110. 2, *S. duran-*

tifolia 124. 2, *Lippia cymosa* 174. 3, 4, *Blechum Brownei* 109. 1, *Ruellia paniculata* 100. 2, *R. tuberosa* 95. 1, *Volkameria aculeata* 166. 2. 3, *Cleome polygama* 124. 1, *C. procumbens* 123. 1, *Melochia tomentosa* 138. 2. 3, *M. nodiflora* 235. 2, *Sida ciliaris* 137. 2, *S. viscosa* 139. 4, *S. altheaefolia* 136. 2, *Malachra capitata* 137. 1, *Urena Americana* 11. 2, *Hibiscus clypeatus* 135. 1, *Pavonia racemosa* 139. 2, *Polygala diversifolia* 170. 2, *Crotalaria lotifolia* 176. 1. 2, *Phaseolus lathyroides* 116. 1, *P. sphaerospermus* 117. 1-3, *Dolichos ensiformis* 114. 1, *D. minimus* 115. 1, *Galactia pendula* 114. 4, *Ornithopus tetraphyllus* 116. 3, *Aeschynomene Americana* 118. 3, *Stylosanthes procumbens* 119. 2, *S. viscosa* 119. 1, *Lavenia decumbens* 155. 2, *Eupatorium villosum* 161. 2, *Calea Jamaicensis* 151. 3, *C. lobata* 152. 4, *Conyza purpurascens* 152. 1, *Erigeron Jamaicense* 152. 3, *Pectis linifolia* 149. 3, *Synedrella nodiflora* 154. 4, *Chrysanthellum procumbens* 155. 1, *Coreopsis reptans* 154. 2. 3, *Elephantopus Carolinianus* 156. 1, *E. spicatus* 150. 3. 4, *E. angustifolius* 148. 4, *Rolandra argentea* 7. 3, *Satyrion plantagineum* 147. 2, *Dendrobium sanguineum* 121. 2, *Oncidium variegatum* 148. 2, *Aristolochia odoratissima* 104. 1, *Scleria flagellum* 77. 1, *Tragia volubilis* 82. 1, *Argythamnia candicans* 86. 3, *Boehmeria cylindrica* 82. 2; *Urtica grandifolia*, *parietaria*, *nummularifolia*, and *microphylla* 83. 2 to 131. 4; *Pharus latifolius* 73. 2, *Begonia acutifolia* 127. 1, *Acideton urens* 83. 1, *Fuglans baccata* 157. 1; *Croton lineare*, *glabellum*, *chamaedrifolium*, and *phyllanthus* 82. 3 to 174. 1. 2; *Viscum? verticillatum* 201. 2, *V. opuntioides* 201. 1, *Schaefferia completa* 209. 1, *Xanthoxylon emarginatum* 168. 4, *Picramnia anti-desma* 209. 2, *Iresine elatior* 90. 2, *Excoecaria glandulosa* 158. 2, *Inga vera* 183. 1, *Mimosa viva* 182. 7, *Hemionitis rufa* 45. 1; *Polypodium trapezoides*, *serrulatum*, and *asplenoides* 36. 1 to 43. 2; *Aspidium mucronatum*, *invisum*, and *patens*, 36. 4 to 52. 1; *Asplenium proliferum*, *auritum*, and *cuneatum* 26. 1 to 46. 2; *Pteris heterophylla* 53. 1, *Caenopteris rhizophylla* 52. 3, *Diplazium juglandifolium* 37, *Adiantum serrulatum* 35. 2, *Davallia aculeata* 61, *Dicksonia cicutaria* 57. 1. 2, *Trichomanes muscoides* 27. 1, *Lygodium volubile* 46. 1, *Onoclea sorbifolia* 38,* *Polygonum* (. . .) *scandens* 90 f.

* *Jussiaea erecta* of Tropical and Subtropical America. Tetrapetalous with a "napiformis" root (Pers.): observed by Sloane pl. 11 in the West Indies — (Spreng.), also by Swartz (A. Dec.), and known to grow in Demarara (Dec. prodr.). Farther North, observed by Pursh from the Dismal swamp to Carolina; and by Nuttall, on the Arkansas.

Asclepias Curassavica of Tropical America. An orange-flowered milkweed, observed by Sloane ii. pl. 129, — and Swartz, in the West Indies; by myself, in clearings and waste ground in Southern Brazil; is regarded by Gardner as indigenous, growing throughout Tropical America as far as the point of Florida (Chapm.); and from Negroes using the pulverized dried root as an emetic, is called "wild ipecacuanha" (Don). Transported to Europe, is described by Hermann parad. 36, Miller, and Dillenius: and by European colonists was carried to the environs of Bombay, observed by Graham "in gardens pretty common, flowers in the rains," and "almost naturalized;" to Ceylon, naturalized there according to Gardner (hort. soc. iv. 40); to Burmah, "exotic" there according to Mason; to the environs of Canton (Beechey, and Hook.); and to the Taheitian Islands (Lay and Collie, and A. Dec.).

Hyptis capitata of Tropical America. A shrubby Labiate, observed by Sloane i. pl. 109, — Jacquin rar. i. pl. 114, and Swartz, on Hayti and Jamaica; by myself, in Southern Brazil; and known to grow in Demarara, Panama, and Mexico (Benth.). By European colonists, was carried Westward across the Pacific to the Philippines, occurring according to Bentham around Manila (A. Dec.); and observed by myself on both Luzon and Mindanao.

Clethra tinifolia of the mountains of Eastern Tropical America. Observed by Sloane ii. pl. 198, — Browne pl. 21, and Swartz ii. 845, on the mountains of Jamaica (Pers.): known to grow also on the mountains around Rio Janeiro in Southern Brazil (Dunal, and A. Dec.).

Stachytarpha Jamaicensis of Tropical America. A tall weed, its bruised leaves applied in Brazil to ulcers, and then called "urgerao" or "jarbao" (Lindl.): observed by Sloane pl. 107, — and Jacquin obs. iv. pl. 85, in the West Indies, growing according to Chapman as far as the point of Florida; and observed by myself abounding in the outskirts of Rio Janeiro. Westward, by Polynesians may have been carried to the islands of the Pacific, observed by myself naturalized on the Hawaiian Islands, and planted by the natives on Tongatabu. Eastward, through European colonists was carried across the Atlantic to Equatorial Africa (Benth. fl. Nigr.); to Hindustan, observed by Graham "common about Bombay during the rains," by myself in gardens there, and "S. Indica" (regarded as not distinct) by Nimmo in the Southern Concan (see A. Dec.).

Priva lappulacea of Tropical America. A weed, observed by Sloane i. pl. 110, — Houstoun, Loefling 194, and Jacquin obs. i. pl. 84, in the West Indies, growing according to Chapman as far as the point of Florida; by myself, in waste ground in Brazil, and Peru; and farther West on Taheiti, brought there by European colonists.

Lagetta Lintearia of the mountains of the West Indies and Mexico. The lace-bark, a small tree

1, *Hyptis radiata* i. 109. f. 2, *Bignonia (Tecoma) stans* ii. p. 63, *Iresine celosioides* i. pl. 90. — He published an account of his Voyage "in 1707-27."

Mollugo nudicaulis of Tropical America? An herb observed by Sloane pl. 129, — and Plumier pl. 21, in the West Indies, also by Swartz, who termed it "pharnaceum spathulatum" (A. Dec.). Eastward, has been observed in Senegal (fl. Nigr. 104 to 225): and by Wallich, and Wight prodr. 43, in cultivated ground in Hindustan and Burmah.

Crotalaria incana of Tropical America. A Leguminous annual, observed by Sloane pl. 179, — and Jacquin obs. iv. pl. 82, in the West Indies, and known to grow from Mexico to Peru and Brazil (Cav. iv. pl. 322, and Benth.). Eastward, observed on the opposite shore of Equatorial Africa (fl. Nigr.); and about 1822 carried to Ceylon, found there by Gardner a weed spreading in all directions (bot. mag. 1848), by Edgeworth in the Doab springing up spontaneously, but by Wight in peninsular Hindustan only under cultivation (A. Dec.).

Desmodium tortuosum of Equatorial Africa. A shrubby Leguminous plant through European colonists carried to the West Indies, and observed by Sloane pl. 116, — and Macfadyen, on Jamaica, often in cultivated ground (A. Dec.); by Swartz, on other West India Islands (Steud.); and by Humboldt and Bonpland, along the Magdalena (Kunth). Eastward, is known to grow on the Cape Verd Islands, and from Senegal to Abyssinia (Webb in fl. Nigr. 122).

Cassia obtusifolia of Equatorial Africa. A roughish annual, through European colonists carried to America, and observed by Sloane ii. 47 in the West Indies; — by Chapman, "waste places, Florida to North Carolina, and westward;" known to occur also on Cuba (Pers.), and in South America (Vogel, and A. Dec.). Eastward, is known to grow on the Cape Verd Islands (Webb), in the sands of Senegal (Perr. and Guill.), and in Guinea (Benth. fl. Nigr.).

Amblogyna polygonoides of Tropical America. A prostrate Amaranthaceous plant observed by Sloane pl. 92 in the West Indies — (Spreng.); by Nuttall, around New Orleans; by Chapman, "South Florida." Transported to Europe, is termed "*ilicebrum polygonoides*" by Miller, is described also by Hermann par. 17 (Spreng.), Moench, and Willdenow pl. 6; escaping from gardens, even at Dresden, but not naturalized in Europe (Reich., Koch, and A. Dec.); occurs also in Equatorial Africa (Moquin); Ceylon (Pers.), and Hindustan, having according to Piddington a Sanscrit name.

Lippia asperifolia of Tropical America. Observed by Sloane 108 f. 2 in Tropical America — (Willd.), and known to grow from Venezuela to the La Plata (H. and B., and A. Dec.). Transported to Europe is termed "*verbena globifera*" by Linnæus — (Steud.), "*zapania odoratissima*" by Scopoli, and "*z. odorata*" in Persoon (Steud.). By European colonists was carried to Eastern Austral Africa (A. Dec.), and to Zanzibar (Boj.).

Croton eluteria of the West Indies. A small tree observed by Sloane ii. pl. 174,* — and Swartz ii. 1183, in the West Indies, the "chacrilla" or "ilateria" of the Bahamas as appears from Catesby ii. 46; yielding the *cascarilla* bark of commerce (Woodv. suppl. pl. 211, and Wright). ascertained by Pereira to come principally from the Bahamas. *Cascarilla* is regarded by Lindley as "a most valuable

remarkable for its inner lace-like bark separating into linen-like folds that will even bear washing: observed by Sloane ii. pl. 168, — and Browne pl. 31, on Jamaica; by Swartz ii. 680, on other West India Islands.

Pisonia aculeata of Tropical America. Arborescent observed by Sloane ii. pl. 167. — and Plumier, in the West Indies, growing according to Chapman from the point of Florida, and according to Choisy as far as Brazil. By European colonists, was carried Westward across the Pacific to the Philippines, observed in certain localities by Blanco, and called in Tagalo "digguit digguit," in Ylocano "puruquit;" to the Moluccas (Choisy); to Timor (Decaisne); to Hindustan (Roxb., and Graham); where, as appears from A. Decandolle, it has acquired native names; but was probably carried Eastward to the Mauritius Islands, observed by Bojer "naturalized."

* *Croton cascarilla* of the West Indies. A bush called on Jamaica *wild rosemary*, observed by Sloane i. pl. 86, — and Jacquin pl. 162, in the West Indies; known to be frequent on various islands, as on Hayti, and erroneously supposed to yield cascarilla (Lindl.). From transported specimens, described by Linnæus, and Willdenow.

Cyperus elegans of Tropical America. Observed by Sloane pl. 75 in the West Indies. — and known to Kunth only from America. Through European colonists carried across the Atlantic, and possibly Eastward to Equatorial Africa (Benth. fl. Nigr.), and Asia (A. Dec.).

Sporobolus Indicus of Tropical America. A grass observed by Sloane pl. 73 in the West Indies; — by Michaux, in Carolina and Florida; by Elliot, in South Carolina; by N. A. Ware, in Florida; by Chapman, "waste places, Florida to North Carolina;" by Nuttall, on the Mississippi to New Orleans; by Baldwin, on Bermuda; and known to occur also in Australia (Kunth). From transported specimens, is described by Linnæus, and Beauvois.

bitter, aromatic, tonic stimulant;" and under the name of "kedré ambar" was seen by Rouyer in the drug-shops of Egypt.

Maranta arundinacea of Tropical America. A Scitamineous herb called *arrowroot*, observed by Sloane i. pl. 149 in the West Indies, —but according to Lindley brought to Jamaica from Barbadoes; observed by N. A. Ware as far as 28° in Florida, on the St. John's river near Lake George (Nutt.). Clearly by European colonists was carried to Bermuda, arrowroot forming there an article of export; to Burmah, "several years ago by" O'Riley, and according to Mason v. 507 "beginning to be largely cultivated" Its tubers according to Lindley "yield the Arrowroot of commerce, one of the lightest and most nutritious of vegetable aliments." (See *Tacca pinnatifida*.)

Manisuris granularis of Equatorial Africa. A weedy grass, observed by Sloane i. pl. 80 in the West Indies, —also by Swartz; and according to Kunth, occurring also in Guayana, Cumana, and Mexico: observed by Michaux on the sea coast of Carolina and Georgia; by Elliot, near Charleston, probably introduced; by Chapman, "fields and pastures, Florida to South Carolina," "introduced." Eastward, is known to grow in Equatorial Africa along the Atlantic (Benth. fl. Nigr.); was observed by Grant, a weed at "2° N." on the Nile; is known to grow also on Madagascar (A. Juss., and A. Dec.); was observed by Graham near Bombay, by Roxburgh cor. ii. pl. 118 in Eastern Hindustan; and according to Sweet, and Kunth, occurs in the East Indies as far as China.

"1688, Jan. 4th," Dampier arriving in Australia. The natives there using a piece of the "rind" of a tree for a "girdle, and a handful of long grass" for a covering, making "wares of stone to take small fish," but having "no houses;" and he was unable to discover how they procure fire.

Among plants met with by Dampier in Australia, *Banksia integrifolia* iv. 128, *Metrosideros hispida* iv. 128, * *Kennedia prostrata* iv. 127, *Aster glandulosus* iv. 127, *Casuarina distyla* or *quadrivalvis* iv. 127, *Fucus pilularia* 125, and in other countries visited by him, *Lobelia arborea* 125, *Solanum ferox* 126, *Eriocaula minor* iii. 157. pl. 3, *Diplolaena* . . . iii. 110. pl. 3, and *Bombax erianthus* i. 177 — have been determined from his published figures (Spreng. gesch.).

On reaching Austral Africa, Dampier describes the Hottentots as having had *sheep* and *bullocks* before the arrival of the Dutch; celebrating the time of new and full moon by "mirth and nocturnal pastimes," singing and clapping of hands (derived from Arabs?); possessing a few earthen pots for boiling victuals; and as much infested with lice.

"Dec. 8th" (Nicol.), abdication of James II. in favour of his daughter Mary and her husband William III., as rulers of United Britain. — They were proclaimed on the following "Feb. 16th" (Blair, and Holmes).

"The same year" (coll. hist. iii. 259, and Holmes), building at Boston of the first episcopal church in Massachusetts, a wooden edifice called "king's chapel" — The existing stone edifice (according to the same authorities) was commenced in "1749" by governor Shirley.

"1689, April 18th" (Chalm., and Holmes), the people of the surrounding country pouring into Boston, and in the uprising, Governor Andros with "about fifty" other persons seized and imprisoned. The former magistrates were reinstated; a general assembly meeting "May 22d," voted "to resume the government according to charter rights;" on the "24th," the former governor and magistrates consented to resume authority until there could be an orderly settlement; and on the "29th," William and Mary were formally proclaimed: application was then made, for authority to continue the government according to the old charter until a new one could be settled; and the request was granted. In Rhode Island, the people on hearing of the imprisonment of Andros, held a meeting and voted to resume their charter; and accordingly reinstated the former general officers.

"July 26th" (Charlev., and Holmes), the French settlement at Montreal burned, and the colonists "a thousand" in number massacred by "twelve hundred" aborigines; belonging to the federated tribes called the "Five nations."

"In this year" (Klapr. mem. i. 2 to 79), first treaty between Russia and China. Concluded by Golowin at Nertchinsk, and fixing the boundary East of the mouth of Great Gerbitsi and on the left of the Amoor, where a stone pillar was erected.

* *Pedilanthus tithymaloides* of Australia? The *few bush* or *slipper plant*, called in the environs of Bombay "thor" (Grah.), was observed by Dampier 126 — (Spreng.). By European colonists was carried to Hindustan, observed there by Ainslie ii. 99; by Graham around Bombay "common in almost every garden, as edging to walks;" and according to Mason v. 491 "is as abundant as a wild plant" in "the neighborhood of Calcutta," and "is seen in cultivation occasionally" in Burmah. Transported to Europe, is described by Plukenet alm. pl. 230, Commelyn hort. i. pl. 15, and Miller. Farther West, was observed by Jacquin amer. pl. 92 in the West Indies; is known to occur there seemingly wild in stony places near the sea (Pers.); and according to Lindley is employed medicinally at Curaçao.

"In this year" (Sieb. elucid. Vries 54), the existence of Kamtchatka first made known to the Russians; — and in "1697" an ostroch or fort founded by some Cossacks on the Kamtchatka river.

"The same year" (Spreng.), Cavallini publishing his *Pugil. Melit.* (plants of Malta), enumerating *Conyza rupestris*.

"1690 A. D." (. . . Smith, Hutch., and Holmes), inroads by French from Canada with aboriginals into the settlements in New York and New England, and French privateers from Acadie committing depredations; a fleet of "eight small vessels with seven or eight hundred men" under Sir William Phips, sailed "April 28th," and took possession of the whole Northern coast as far as Port Royal, which he captured. The colonists next contemplating the reduction of Canada, Phips made his appearance before Quebec "Oct. 5th" with a larger fleet; but the army marching in co-operation against Montreal having turned back, the fleet was also compelled to retire. For payment of the troops, the Massachusetts government issued bills of credit: being the first *paper money* in the colonies.

"The same year" (Z. Macy in coll. hist. iii. 157, and Holmes), beginning of the *whale-fishery* from Nantucket; in boats from the shore, under instructions from Ichabod Paddock, who came from Cape Cod. — In "1715" (account of 1785, hist. coll.), there were "six sloops, thirty-eight tons burden" employed.

By William III., a large body of French protestants sent to Virginia, and lands allotted them on James river: while others purchased land in Carolina, and settled on the Santee, and some in Charleston (Hewet 103, and Holmes).

"In this year" (Herm. parad. 24), Oldenland returning from Austral Africa, having met with *Ixia crocata* afr. 32.

Asclepias (Gomphocarpus) fruticosa of Austral Africa. A *milkweed* brought by Oldenland from Austral Africa — (Herm. parad. 24): observed by Bojer in the neighbouring Tropical portion of East Africa and on Madagascar, and naturalized on the Mauritius Islands. After its introduction into Europe, described by Plukenet alm. pl. 138, Miller, and Linnæus; and observed by Delile in Egypt, in a single garden, but some years later was found by Clot-Bey a more general favourite.

"In this year" (Spreng.), Plumier arriving at Hayti in the West Indies, meeting with — (or on his second visit "in 1693" and third "in 1695") *Utricularia foliosa* ic. Burm. 165. f. 2; *Piper aduncum*, *reticulatum*, *decumanum*, *umbellatum*, *obtusifolium*, *acuminatum*, *distachyum*, *maculosum*, *trifolium*, and *rotundifolium* amer. 66 to 77; *Peperomia pellucida* am. 72, *P. quadrifolia* ic. Burm. 242, *Hippocratea volubilis* ic. Burm. 88, *Comocladia ilicifolia* ic. B. 118. 1, *Moraea plicata* ic. B. 46. 2, *Exacum verticillatum* 81. 2; *Cissus sycioides*, *cordifolia*, and *microcarpa* 259. 2-4; *Pothos acaulis*, *lanceolatus*, *macrophyllus*, *palmatus*, *crenatus*, and *cordatus* am. 57 to 65 and ic. B. 38-9; *Rivina octandra* ic. B. 241, *Ilex cuneifolia* ic. B. 118. 2; *Tournefortia hirsutissima*, *foetidissima*, *humilis*, and *serrata* ic. B. 209-28; *Theophrasta Americana* ic. B. 226; *Convolvulus macrorhizus*, *macrocarpus*, *corymbosus*, *verticillatus*, *acetosaefolius*, and *umbellatus* ic. B. 89 to 94 and am. 102-5; *Ipomaea umbellata*, *digitata*, *hederaefolia*, and *solanifolia* ic. B. 92. 1 to 94. 1; *Rondeletia Americana* 141. 1, *Belonia aspera* 47, *Coffea Occidentalis* 156, *Hamelia chrysantha* 218. 1, *H. patens* 218. 2, *Erithalis fruticosa* 249. 2, *Brossaea coccinea* 64. 2, *Nicotiana? urens* 211, *Solanum polyacanthum* 224. 1, *Ardisia serrulata* 80, *Strumpfia maritima* 251. 1, *Rauwolfia nitida* 236. 1, *R. canescens* 236. 2, *Echites asperuginis* 26, *E. biflora* 96, *Cameraria latifolia* 72. 1, *C. angustifolia* 72. 2, *Tabernaemontana citrifolia* 248. 2, *Gonolobus crispiflorus* 216. 1, *Asclepias nivea* 30, *Alternanthera frutescens* 21. 2, *Rhus molopium* 61, *Aralia arborea* 148, *Bromelia lingulata* 64, *Pitcairnia latifolia* 62; *Tillandsia lingulata*, *serrata*, *paniculata*, and *monostachya* 64 to 257; *Tradescantia geniculata* 116. 2, *Loranthus Americanus* 166. 1, *Alisma flava* 115, *Dracontium pertusum* am. 56, *Fuchsia triphylla* ic. B. 133. 1, *Coccoloba excoriata* 146. 1, *Paullinia Curassavica* 111. 1, *P. cururu* 111. 2, *Serjania sinuata* 113. 2, *Celtis micrantha* 206. 1, *Bauhinia aculeata* 44. 1, *B. porrecta* 44. 2, *Cassia planisiliqua* 77, *C. biflora* 78. 1, *Cassipoua crista* 68, *Jussiaea hirta* 174. 2, *J. obtusata* 275. 1, *Melastoma splendens* 140, *Samyda serrulata* 146. 2; *Mulpighia urens*, *aquifolia*, and *coccifera* 167. 1 to 168. 2; *Banisteria dichotoma*, *coerulea*, *purpurea*, and *angulosa* 13-15 and am. 92; *Tetrapteris citrifolia* ic. B. 16, *Oxalis Plumieri* 213. 1, *Rhipsalis parasitica* 197. 2, *Opuntia moniliformis* 198, *Cactus paniculatus* 192, *C. glomeratus* 201. 1, *Myrtus virgultuosa* 208. 1, *M. coriacea* 208. 2, *Eugenia angustifolia* 207. 2, *Margravia umbellata* 173, *Capparis amplissima* 73. 2, *Muntingia calabura* 203, *Sloanea dentata* 244, *Mentzelia aspera* 174. 1, *Corchorus hirsutus* 104, *C. siliculosus* 103. 1, *C. hirtus* 103. 2, *Talauma Plumieri* 161, *Anona Asiatica* 143. 2, *Clusia alba* 87. 1, *C. venosa* 87. 2, *Gerardia tuberosa* 75. 2; *Gesneria humilis*, *grandis*, and *craniolaria* 134-7; *Besleria melittaeifolia*, *lutea*, and *cristata* 48-50; *Brunfelsia Americana* 65; *Bignonia stans*, *Acuinocialis*, *microphylla*, *paniculata*, *staminea*, *longissima*, *crucigera*, and *unguis* 54 to 94; *Lantana trifolia* ic. B. 70, *L. odorata* 71. 2, *Hosta coerulea* 106. 1, *Buchnera elongata* 17, *Ruellia coccinea* 43. 1, *Burleria solanifolia* 43. 2, *Oreidea spinosa* 256, *Columnea scandens* 89. 1; *Passiflora rotundifolia*, *heterophylla*, *pallida*, *serrata*, *suberosa*, *rubra*,

and *multiflora* 79 to 139 and am. 79-90; *Murucua ocellata* am. 87, *Sida nudiflora* ic. B. 3, *S. Americana* ic. B. 2, *S. hederæfolia* 169. 3, *Hibiscus trilobus* 159, *H. unilateralis* 160. 1, *Pavonia spinifex* 1, *P. coccinea* 169. 2, *Morisonia Americana* 203, *Polygala penæa* 214. 1, *Securidaca volubilis* 247. 1, *S. virgata* 248. 1, *Pterocarpus lunatus* 201. 2, *Rudolphia peltata* 102. 1, *Piscidia erythrina* 233. 1, *Teramnus volubilis*, 221, *Dolichos articulatus* 222, *Dolichos tuberosus* 220, *Clitoria Plumieri* 108, *Coronilla scandens* 107. 3, *Aeschynomene sensitiva* 149. 2, *Tephrosia toxicaria* 135, *Ascyrum hypericoides* 152. 1; *Eupatorium sinuatum*, *sophiaefolium*, *macrophyllum*, and *repandum* 128. 1 to 130. 1; *Conyza odorata*, *alopecuroides*, and *virgata* 97 to 98. 2; *Vernonia arborescens* 130. 2, *Chaptalia dentata* 40. 2, *Leeria nultans* 41. 1, *Inula aestuans* 41. 2, *I. primulaefolia* 40. 1, *Pectis punctata* 86. 1, *P. humifusa* 95. 2, *P. ciliaris* 151. 2, *Verbesina gigantea* 51, *V. fruticosa* 52, *Wedelia carnosa* 107. 2, *Coreopsis chrysantha* 53. 1, *C. coronata* 53. 2; *Neottia lanceolata*, *quadridentata*, and *elata* 181. 2 to 190; *Brassavola cucullata* 179. 1, *Isochilus linearis* 182. 1; *Epidendrum coccineum*, *juncifolium*, *altum*, *ciliare*, *secundum*, *cochleatum*, and *punctatum* 179. 2 to 189; *Dendrobium polystachyon* 185. 1, *Stelis ophioglossoides* 176. 3; *Aristolochia bilabata*, *peltata*, *punctata*, and *bilobata* 32. 1 to amer. 106; *Anguria trifoliata* amer. 99, *A. trilobata* ic. B. 22, *A. pedata* 23, *Dorstenia caulescens* 120. 1, *Urtica ciliaris* 120. 2, *Sagittaria lancifolia* 116. 1, *Begonia macrophylla* 45. 1, *B. rotundifolia* 45. 1, *Arum hederaceum* amer. 55, *Caladium auritum* 58, *C. pinnatifidum* 51. b. 53, *Pinus Occidentalis* ic. B. 240. 1, *C. citrifolium* 240. 2, *C. palustre* 239. 1, *Sapium ilicifolium* 171. 1, *Trichosanthes amara* amer. 100, *Bryonia Americana* ic. B. 66. 1, *B. racemosa* 97, *Trophis Americana* 67, *Viscum buxifolium* 258. 3, *V. flavens* 258. 4, *Rajania hastata* amer. 98, *R. cordata* ic. B. 55. 1, *R. quinquefolia* 55. 2, *Dioscorea altissima* 117. 2, *D. piperifolia* 117. 1; *Inga circinalis*, *latifolia*, and *tergemina* 5 to 10. 1; *Acacia latisiliqua*, *tamarindifolia*, *ceratonia*, and *muricata* 6 to 11; *Acrostichum citrifolium*, *longifolium*, *villosum*, *muscosum*, *crinitum*, *peltatum*, *trifoliatum*, *alienum*, *cruciatum*, *calomelanos*, *chrysophyllum*, and *acuminatum* 40 to 135; *Hemionitis lanceolata* 127; *Polypodium piloselloides*, *serpens*, *heterophyllum*, *lanceolatum*, *crassifolium*, *phyllitidis*, *repens*, *comosum*, *trifurcatum*, *asplenifolium*, *suspensum*, and *fabelliforme*, *incisum*, *otites*, *pectinatum*, *taxifolium*, *struthionis*, *squamatum*, *aureum*, *crispatum*, *loriceum*, *dulce*, *crenatum*, *fasciale*, *tenuifolium*, and *cultratum* 76 to 138; *Aspidium Martincense*, *articulatum*, *triangulum*, *semicordatum*, *exaltatum*, *cordifolium*, *nymphale*, and *villosum* 27 to 145; *Asplenium serratum*, *bifolium*, *obtusifolium*, *pumilum*, *salicifolium*, *cultrifolium*, *dentatum*, *striatum*, and *squamosum* 18 to 124; *Diplazium undulosum* 107, *Caenopteris cicutaria* 48, *Lonchitis repens* 12, *L. aurita* 17, *L. hirsuta* 20; *Pteris lanceolata*, *tricuspidata*, *furcata*, *grandifolia*, *stipularis*, *mutilata*, *aculeata*, *caudata*, and *trichomanoides* 5 to 141; *Vittaria lineata* 143, *Blechnum Occidentale* 62, *Adiantum aculeatum* 94, *A. trapeziforme* 95, *Cheilanthes microphylla* 58; *Davallia Domingensis*, *clavata*, and *trifoliata* 7 to 101; *Cyathea arborea*, *commutata*, *aspera*, and *horrida* 1 to 14; *Trichomanes membranaceum*, *pyxidiferum*, *alatum*, and *scandens* 50 to 101; *Hymenophyllum hirsutum*, and *sericeum* 50 to 73; *Osmunda hirta*, *phyllitidis*, *cervina*, *bipinnata*, *adiantifolia*, *verticillata*, *filiculæfolia*, and *hirsuta* 57 to 162; *Mertensia furcata* 28, *Danaea alata* 109, *D. nodosa* 108, *Botrychium Virginicum* 159, *Psilotum triquetrum* 170, *Ophioglossum palmatum* 163, *O. reticulatum* 164; *Lycopodium linifolium*, *rigidum*, *stoloniferum*, *thyoides*, and *acerosum* 43 to 166; *Plumiera obtusa*,* *Abutilon crispum* ic. pl. 25, *A. Americanum* ic. pl. 2 (Linn. sp. 963).

Alalachra radiata of Western Equatorial Africa. A Malvaceous plant, through European colonists carried across the Atlantic: observed by Plumier 19 on Hayti, — and by Aublet in Guayana (A. Dec.). Eastward, known to grow in Equatorial Africa (R. Brown cong. 59).

* *Duranta Plumieri* of the West Indies. Verbenaceous and arborescent with long spreading branches, observed by Plumier 79 — (Spreng.), and Jacquin amer. pl. 176, in the West Indies; and according to Chapman grows as far North as the point of Florida. Transported to Europe, is described by Linnæus; and was observed by myself flourishing in the open air on Madeira.

Petiveria alliacea of the West Indies. The *guinea-hen weed* is a small Phytolaccoid bush, observed by Plumier gen. pl. 219, — P. Browne, Jacquin amer. 201, and Schomburgh, in the West Indies, excessively acid in all its parts, used by the Negroes medicinally and to procure abortion, and its root as a remedy for toothache. Transported to Europe, is described by Linnæus holm. 1744 pl. 7, and Trew and Ehret pl. 67.

Allamanda cathartica of Eastern Equatorial America. An Apocynoid woody climber with large yellow flowers, observed by Plumier pl. 29 in the West Indies — (Spreng.); by Aublet i. pl. 106 in Guayana and termed "orelia grandiflora;" known to grow also in "Brazil, especially near the coast" (Lindl.). By European colonists was carried to Hindustan, observed by Ainslie mat. ind. 2. 9, by Graham "common in gardens" at Bombay, by Gardner escaping from cultivation on Ceylon, by Mason "exotic" in Burmah and called "pha-young-ban." Employed medicinally according to Lindley as "a valuable cathartic," but in over doses "is violently emetic and purgative."

Triumfetta lappula of Western Equatorial Africa. A Tiliaceous weed through European colonists carried to the West Indies : observed there by Plumier pl. 255, — and Macfadyen 110 ; also to Brazil, and Bermuda (Pers.). Eastward, known to grow in Equatorial Africa (fl. Nigr., and A. Dec.).

Desmodium incanum of Equatorial Africa. A Leguminous plant, through European colonists carried to the West Indies, observed there by Plumier pl. 149 — (Pers.), and Swartz ; by Macfadyen, frequent in pastures and along roadsides on Jamaica (A. Dec.). Eastward, known to grow in Equatorial Africa and perhaps wild also on the Mauritius Islands (Dec. prodr., and fl. Nigr.).

Parkinsonia aculeata of Tropical Africa? A small ornamental tree, observed in the West Indies by Plumier pl. 3 — (Spreng.), and Jacquin amer. pl. 129 ; by Browne, brought to Jamaica from the neighbouring continent ; where however according to Kunth, its names indicate a foreign origin (A. Dec.). Eastward, was cultivated in Senegal in "1816," and has since become naturalized on the Wallo plains (Perrott. and Le Pr.) : was observed by myself under cultivation in Yemen ; appears to have been only recently carried to Hindustan, where it is "now almost naturalized" being "common about Bombay," but seems devoid of a native name (Pidd, and Moon) ; is enumerated by Mason as "exotic" in Burmah. Clearly by European colonists, was carried to the Mauritius Islands, where it was observed by Bojer only under cultivation.

Ecastaphyllum Brownei of Tropical America. Observed in the West Indies by Plumier 246. 2 — (Spreng.), and Browne pl. 32, and known to grow along the shore as far as Brazil — (Pers., and A. Dec.). Occurring also on the African coast at Senegal and Guinea (Dec., and fl. Nigr.), probably transported by the ocean currents.

Oldenlandia corymbosa of Tropical America. Observed by Plumier 212. 1 in the West Indies — (Spreng.), by Berlandier in Mexico ; and known to grow in Jamaica and Cayenne (herb. Dec.). Probably by European colonists carried to the Moluccas (herb. Dec.), and across the Atlantic to Senegal and Guinea (fl. Nigr., and A. Dec.).

"In this year" (Spreng., and Winckl.), after his Prodrum. "in 1689," Magnol publishing his Hort. Monsp., enumerating *Loniceræ Pyrenæica* 209, *Saxifraga hirsuta* 87, *Arenaria laricifolia* 11, *Garidella nigellastrum* 143, *Ononis tridentata* 16, *O. crispæ* 17, *Astragalus Cralensis* 27, *Chrysanthemum graminifolium* 21, *C. Monspeliense* 21, *Verbesina alata* 40, *Polypodium leptophyllum* 5, and *Davallia Canariensis* (of Madeira), *Saxifraga umbrosa* pl. 8. — He died "in 1715."

"In this year" (J. E. Smith, and Spreng.), Ray publishing his Synops. Brit., enumerating* *Cerastium semidecandrum* pl. 15. 1, *Pinguicula villosa* hist. i 752, *Subularia aquatica* syn. iii. 307, *Festuca uniglumis* 17. 2, *Trisetum pubescens* 21. 2, *Anthericum serotinum* 17. 1, *Sedum Angli-*

* *Barbarea præcox* of Siberia. Called *Belleisle cress* (Prior), and already in Britain in the days of Ray syn. 297 ; — regarded by Watson as exotic and only naturalized : known to grow spontaneously on the neighbouring portion of the continent from France to Sweden (Pers., Fries, and A. Dec.) ; and observed by Gmelin in Siberia (Steud.). By European colonists, was carried to Northeast America, where it continues sparingly cultivated in our Northern, and according to A. Gray in our Middle States, "becoming spontaneous farther South ;" to the Mauritius Islands, where it continues to be regularly cultivated and is distinguished as *early winter-cress* (Boj. ; see B. vulgaris).

Bidens cernua of Northeast America. A species of *bur-marigold*, transported to and naturalized in Europe before the days of Ray syn. 187 ; — termed "*bidens radiata*" by Thuillier ; and known to occur throughout middle Europe as far as Sweden (Linn., fl. Dan. pl. 312, Curt. lond. pl. , Engl. bot. pl. 1114, Willd., Pers., and Wats.). Westward, is known to grow throughout Canada from Quebec to the Saskatchewan (Hook.), and from "New England to Wisconsin" (A. Gray) ; observed by myself from 43° along the Atlantic, on the marshy border of slow-moving water, and often in wet places by the roadside ; by Torrey, to 41°, and by Conrad to 40° ; by Schweinitz, at 36° in Upper Carolina ; and by Short, in Kentucky.

Selaginella selaginoides of Northern climates. A *club-moss* termed "*selaginoides foliis spinosis*" by Ray angl. iii. 106, — "*muscus terrestris repens clavis singularibus foliosis erectis*" by Scheuchzer it. pl. 6, and known to grow throughout Northern Europe (Dill. musc. pl. 88) ; observed by Linnæus in Lapland, and Sweden as far as Upland. Westward, by Pursh in New Hampshire ; and according to A. Gray, grows in "wet places," "Michigan, Lake Superior and northward, pretty rare."

Lycopodium inundatum of Northern climates. A *club-moss* termed "*muscus terrestris repens clavis singularibus foliosis erectis*" by Ray angl. iii. 108, — "*l. palustre repens clava singulari*" by Vaillant paris. pl. 16, and known to grow throughout Northern and middle Europe (Dill. musc. pl. 62) ; observed by Linnæus in Sweden. Westward, by myself in bogs from 47° on the Lower St. Lawrence to North Conway and 42° along the Atlantic ; rarer perhaps in the Interior, known to A. Gray in central New York as growing in "sandy bogs, northward, rare."

cum 12. 2, *Euphorbia Portlandica* 24. 6, *Astragalus hypoglottis* 12. 3, *Trifolium striatum* 13. 3, and *Gastrum rufescens* 1. 1, *Pyrola minor* angl. iii. p. 363.

Sagina erecta of Northern Europe. A vernal annual described by Ray 15. 4—(Spreng.); termed “*moenchia quaternella*” by Ehrhart; observed by Moench in Germany; by Baumgarten, in Transylvania (Steud.); and known to grow in Britain and France (Eng. bot. pl. 609, and Lam. fl. fr.). By European colonists, was carried to Northeast America, has been found “near Baltimore, in dry ground” (A. Gray).

Chenopodium serotinum of the Uralian plains. An annual termed “*blitum ficus folio*” by Ray angl. iii. p. 155—(Linn.): observed by Pallas trav. i. 53 along the Volga; known to grow also in Siberia, and Westward occurring as far as Britain, France, and Spain (Pers.).

Phleum arenarium of the seashore of Europe and the Mediterranean countries. Termed “*gramen typhinum maritimum minus*” by Ray angl. iii. 398,—and Plukenet alm. pl. 33 (Linn.), “*gramen spicatum maritimum minimum spica cylindracea*” by Tournefort inst. 520, and known to grow along the Atlantic shore of Europe (Engl. bot. pl. 222, and Pers.): observed by Linnæus in Sweden as far as Scania; by Desfontaines i. 61, in the maritime sand of Barbary; by Sibthorp, frequent around the Greek islands.

“In this year” (append. Sibth., and Spreng.), Rivinus publishing his *Introd. in rem. herb.*, and his *Monop.*, enumerating *Salvia virgata*, *Teucrium campanulatum*, *T. Orientale*, and *Linaria Chalepensis*.

“Sept. 23d” (Thunb., and Spreng.), after visiting Persia in “1683,” and proceeding by way of the Persian Gulf in “1689,” Kaempfer arriving in Japan, meeting with *Ficus pumila* am. 805, *F. erecta* pl. 4, *Skimmia Japonica* pl. 5, *Weigelia Japonica* pl. 45, *Aralia Japonica* pl. 10, *Daphne odora* pl. 16, *Hydrangea hortensis* am. 854, *Convallaria Japonica* am. 824, *Phytolacca octandra* am. 829, *Magnolia kobus* pl. 42, *M. obovata* pl. 43. 44, *Bignonia grandiflora* pl. 21, *Clerodendron trichotomum* pl. 22, *Dolichos cultratus* pl. 25, *D. incurvus* pl. 39, *D. angularis* pl. 40, *Citrus trifoliata* am. 802, *Aster hispidus* pl. 29, *Inula Japonica* pl. 30, *Vanilla angustifolia* am. 869 f. 1, *Aerides arachnites* 869 f. 2, *Dendrobium moniliforme* am. 865, *Aristolochia Kaempferi* pl. 49, *Quercus glauca* pl. 17, *Dioscorea quinqueloba* pl. 15, *Taxus macrophylla* pl. 24, and *Pteris piloselloides*.—Leaving “in 1692,” he published his *Amoen. exot.* “in 1712,” and died “in 1716.”

“Dec. 23d” (Humb. cosm. ii. and iv.), Uranus seen by Flamstead, but not recognized as a planet.

“1691 A. D.” (art de verif.), Suliman III. succeeded by Achmed II. or Achmet II., twenty-second Turkish sultan.

“The same year” (Pauth. 437), expedition of the emperor Khang-hi, accompanied by the Jesuit missionary P. Gerbillon, into the country of the Kalkas or Eleuths. P. de Mailla and other Jesuit missionaries, were employed by Khang-hi in constructing by the European method maps of the different provinces of China.

“In this year” (J. E. Smith, and Spreng.), Rivinus publishing his *Tetrap.*, enumerating *Hedysarum flexuosum*;—“in 1699,” his *Pentap.*; and died “in 1725.”

“In this year” (J. E. Smith, and Spreng.), Plukenet publishing his *Phytogr.*, enumerating* *Prunus Sinensis* pl. 11. f. 4, *Kosteletzkya Virginica* 6. f. 4, *Senecio hieracifolius* 112. f. 1.—The work was completed “in 1693.”

Corchorus acutangulus of Tropical Africa. A Tiliaceous esculent called in Bengalee “tittapat” (Roxb., and A. Dec.); from transported specimens described by Plukenet phyt. pl. 44,—and Lamarck (Pers.). Through European colonists was carried to the West Indies, where according to

* *Quercus agrifolia* of California. An oak, from transported specimens termed “*ilex foliis agrifolii Americana*” by Plukenet phyt.—(Brendel in Am. nat. May 1870). Westward, observed by Nee p. 271 on the Pacific shore of North America (Pers.).

Sicyos angulatus of Japan? The one-seeded cucumber, herbaceous and climbing, called in Japan “tamatsagori” (Thunb.), and known there as early probably as this date: transported to Europe, is described by Plukenet phyt. 26. f. 1,—and Hermann parad. pl. 133. Westward, has been observed by myself in New England only as a garden weed; but according to A. Gray, grows on “river-banks” in central New York: was observed by Pursh from Canada to Carolina; by Elliot, in the upper district of Carolina and Georgia; by Chapman, “river-banks, Florida, and northward;” by Short, in Kentucky; by Baldwin, on the Missouri (Torr.); by Nuttall, on the Arkansas; and according to Hooker, grows from Kettle falls along the Columbia to its mouth. Farther West, was observed by myself naturalized on the Hawaiian Islands, around native villages in New Zealand and boiled for greens, and in wild situations on the Upper Hunter in Australia, possibly introduced by Papuans: by Thunberg, around Nagasaki in Japan.

Hughes 197 it is eaten by Negroes. Eastward, has been observed in Guinea (Benth. fl. Nigr.); by Graham, in the environs of Bombay, "common in the rains;" and by Roxburgh, as far as Eastern Hindustan.

Aldrovanda vesiculosa of Hindustan? Termed "lenticula palustris indica fol. semirotundis binis capillamentis ad imum barbatis" by Plukenet alm. pl. 41. f. 6— (Pers.). Probably exotic in Europe, but observed by Allioni at Candia and Viverone in Piedmont, by Bertoloni from Piedmont to Bologna and in Bientina lake near Pisa, by Maratti in the Pontine marshes near Rome, by Pourret from Arles and Montpellier to the baths of Molight in the Eastern Pyrenees, and by Besser in the Pinsk marsh in Lithuania (A. Dec.).

"1692, March 20th" (Pauth. p. 445), in China, at the end of "twenty-two years," the prohibition against attending Christian churches removed by the emperor Khang-hi.

"May 14th" (Hutch., and Holmes), arrival at Boston of Sir William Phips as governor, bringing a new charter for Massachusetts. By which, the power of the governor was increased, at the expense of some of the privileges of the colonists, and the boundaries of the province were enlarged so as to include Nova Scotia. Rhode Island and Connecticut were however allowed to resume their old charters.

"The same year" (Hutch., and Holmes), the witchcraft delusion at Salem and in the vicinity; and nineteen persons executed. One of the accused, Giles Cory, refusing to plead, was pressed to death:—"the only instance" of the enforcement of "this barbarous punishment" in New England. The proceedings at Salem evidently connected with similar witchcraft trials in Suffolk, England, published in 1684: but after the first year, no one appears to have been executed.

"June 7th" (univ. hist. xli. 364, and Holmes), a severe earthquake at Jamaica; and "in the space of three minutes," nine tenths of the city of Port Royal inundated, "two thousand" persons perishing.

In this year (Spreng.), Volckamer writing his Flor. Norimb., enumerating *Aizoon Canariense* 236, *Mesembryanthemum difforme* 165, *Stapelia hirsuta* 30, *Dracocephalum Canariense* 145, *D. canescens* 353, *Hermannia scabra* 24, *Colutea herbacea* 118, *Chrysocoma coma-aurea* 148, *Gnaphalium fœtidum* 194, *G. helianthemifolium* 194, *Senecio elegans* 225, *S. rigidus* 225, *Aster rubricaulis* 50, *A. angustifolius* 50, *Arctotis hypochondriaca* 224, *Osteospermum spinescens* 105, *Othonna abrotanifolia* 225, and *O. parviflora* 226.—He died "in 1693," and his Flor. was published "in 1700."

Mesembryanthemum crystallinum of Austral Africa. Transported to Europe, described by Volckamer 166— (Spreng.), Dillenius elth. pl. 130, and Linnæus: known to occur about Athens (Pers.), and observed by Sibthorp, and Chaubard, around the acropolis; by Delile, springing up spontaneously at Alexandria. Is said to have been seen by Thunberg in Austral Africa.

"1693 A. D." (Stiles, Humph., and Holmes), the episcopal church introduced into the province of New York by Governor Fletcher; and an Act passed by the provincial assembly for settling and maintaining a ministry.—Nothing was done in pursuance of the Act until 1696, when Trinity church was built in New York city.

"The same year" (Colden 150, and Holmes), arrival at Montreal of "two hundred canoes" laden with furs, accumulated at Missilimakinak; the route having been interrupted for several years by the confederate tribes called the "Five nations."

"The same year" (Kobell ii.), "after a violent eruption of its volcano," sinking beneath the waves of one of the Molucca Islands named "Sarca."

"At this time" (Spreng.), Geor. Ios. Kamel at Manila, sending to Ray and Petiver plants of the Philippines, including *Hibiscus lampas*, *Bradleya Philippensis*, *Stylcoryna racemosa*, and *Columbia serratifolia*.

"In this year" (Pursh, and Spreng.), Plumier, having commenced his Plant. amer., making a Second visit to the West Indies, meeting with * *Acrostichum aurum* am. pl. 7, *Pteris pedata* am. pl. 34, *Lobelia Cliffortiana* spec. v. 235. f. 2, *Phoradendron purpureum* spec. 258. f. 3.—He made a Third visit "in 1695," published his Nov. gen. "in 1703," died "in 1704," and ten fascic. of his Plant. amer. were published by Burmann "in 1755-60."

"1694 A. D." (Charlev., and Holmes), Fort Nelson, a fur-trading post on Hudson's Bay, captured by the French; and garrisoned by them.—After two years, the fort was re-captured by the English.

* *Dieffenbachia seguina* of the West Indies. The *dumb cane*, Araceous though five or six feet high and palm-like, was observed by Plumier amer. 60— (Spreng.), and Jacquin amer. pl. 229 in the West Indies: the root if chewed producing a dangerous swelling of the tongue, and said to produce dumbness if merely applied to the lips, the stem according to Browne employed to bring sugar to a good grain (Lindl.). Transported to Europe, is termed "caladium seguinum" by Linnæus; is described also by Ventenat, and Hooker exot. pl. 1.

"In this year" (Linn. fl. suec.), Olaus Bromelius publishing his *Chloris Gothica*, an account of the plants around Gothoburg . . . — He died "in 1705" (Spreng.).

At this time (J. E. Smith, and Spreng.), Hermann writing his *Parad.*, enumerating* *Holosteum cordatum* par. 11, *Amaryllis equestris* 194, *A. longifolia* 195, *Albuca minor* 209, *Tiarella cordifolia* 130, *Silene viridiflora* 199, *Cereus lanuginosus* 115, *Geum Virginicum* 111, *Hyssopus scrophulariæ-folius* 106, *Marrubium cinereum* 200, *Antirrhinum triornithophorum* 377, *Scrophularia frutescens* 377, *Hesperis lacera* 193, *Passiflora hirsuta* 176, *Hieracium Pyrenaicum* 184, *Serratula nudicaulis* 190, *Aster dumosus* 95, *A. Novæ Angliæ* 98, *A. undulatus* 96, *Solidago flexicaulis* 244, *S. minuta* 245, *S. rigida* 243, *Coreopsis alba* 124, *Centaurea napifolia* 189, *C. Tingitana* 163, *Cucumis Africanus* 134, *Eryngium foetidum* pl. 237, *Asclepias purpurascens* 33. — He died "in 1695," and his *Parad.* was published by Wm. Sherard "in 1705."

Rosa cinnamomea of the Atlas mountains. Its bark brown-bay or chestnut colour, and hence perhaps the name (Pers.). Termed "*r. majalis*" by Hermann diss. de rosa p. 8, — described also by Reynier in act. laus. i. 68, Linnæus, Ehrhart, Retz. scand., and fl. Dan. pl. 868 and 1214: according to Watson cyb. i. 359, not really naturalized in Britain (A. Dec.): perhaps exotic also in Switzerland and other parts of Europe. In its wild state, observed by Desfontaines i. 400 on the Atlas mountains (Pers.).

"Dec. 28th" (Nicol.), death of queen Mary, leaving her husband William III. sole ruler of United Britain.

"In this year" (Winckl.), after his *Plant. vern.* "in 1688," Rudolph Jacob Camerarius publishing his *Epist. de sexu plant.* — He published other papers "until 1721, in which year" he died. His *Opuscul. botan.* were collected and republished "in 1797."

"1695 A. D." (art de verif.), Achmed II. succeeded by Mustafa II., twenty-third Turkish sultan.

"In this year" (Linn. fl. lapp. præf.), Olaus Rudbeck the younger visiting Lapland, meeting with † *Andromeda hypnoides* 97, *Tussilago frigida*, *Carex atrata* elys. i. pl. 23.

* *Tribulus cistoides* of the West Indies. Decumbent and belonging to a Desert tribe, the Zygophyllaceæ: transported to Europe, described by Hermann parad. 236 — (Spreng.), and Plukenet alm. pl. 67 (Pers.). Westward, was observed by Jacquin, and Maycock, in the West Indies, and is known to grow from "Key West" at the point of Florida (Chapm.) to Curaçao (A. Dec.). Farther West, was carried by ocean-currents, or possibly by Polynesians, to Malden Island in the Pacific (J. D. Hook.): and to the Hawaiian Islands, observed there by Lay and Collie, by myself in a few Desert spots, but chiefly in the Desert outskirts of Honolulu.

Capraria biflora of Tropical America. Transported to Europe, is described by Hermann parad. 110 — (Linn. sp.). Observed in the West Indies by Jacquin amer. pl. 115, and Browne, near dwellings and employed as a substitute for tea (A. Dec.); known to grow also at the Southern extreme of Florida (Torr., and Chapm.), and in Mexico, Peru (R. and Pav.), and Brazil (Benth.). By European colonists, was carried to Equatorial Africa, observed at Cape coast in Guinea (fl. Nigr.).

Passiflora foetida of Tropical America. Known to grow wild from Dominica to Cuaçao and Brazil (Pers., Gardn., and A. Dec.). Transported to Europe, is described by Hermann parad. 173 — (Spreng.), Plukenet alm. pl. 104, and Cavanilles x. pl. 289. Eastward, was introduced by Moon "in 1824" into Ceylon, where it was found by Gardner (bot. mag. for 1848) a very frequent weed: by European colonists also, was carried to Bombay, observed by Graham "in gardens, not common;" and to Burmah (Mason).

Amaryllis belladonna of Tropical America. Received from the West Indies and termed "*lilium bella donna*" by Hermann parad. pl. 194; — described also by Seba i. pl. 17, and Linnæus; and observed by myself, naturalized throughout Madeira, even in wild woodland situations. By European colonists also, recently introduced into Hindustan (Graham). Said to grow wild on Barbadoes and other West India Islands, and in Surinam (Pers.).

† *Lychnis alpina* of the Arctic region and alpine summits farther South. Observed by O. Rudbeck jun. 98 in Lapland; — by Fries, in Finland, Sweden, and Norway; and known to grow as far as the mountains of Scotland and Wales (fl. Dan. pl. 65), also on the Pyrenees (A. Dec.) and Swiss Alps (Hall. i. pl. 7), on the Northern portion of the Ural mountains as well as around Lake Baikal and in Daouria (Ledeb. i. 329). Westward, was observed by Hooker on Iceland, and received from Labrador; is known to grow in Greenland and on Melville Island (Wats.).

Phyllodoce coerulea of the Arctic region and mountain-summits farther South. A low yew-leaved shrub observed by O. Rudbeck jun. 97 in Lapland; — by Gmelin, in Siberia as far as Kamtschatka, and received from the American coast; known to grow also on the Altaian mountains (A. Dec.), in one locality in Perth county in Scotland (Bab.), and near Bagnères de Luchon in the Pyrenees (Munby). Westward, was observed by Crantz in Greenland (Hook.); was received by Pursh from

"1696 A. D." (Anders. ii. 625, and Holmes), by the English parliament, an Act prohibiting the export of goods from the colonies to "Ireland or Scotland, without being first landed in England, and having also paid duties there; under forfeiture of ship and cargo." — In regard to Scotland, the prohibition after ten years was rendered void by the Union.

"November" (Humb. cosm. v.), the island of St. Paul discovered by Vlaming.

"In this year" (Chalm., and Holmes), the city of New York containing "five hundred and ninety-four houses, and six thousand inhabitants:" the shipping consisting of "forty ships, sixty-two sloops, and sixty boats." The aboriginals of New England maintained among themselves no less than "thirty" churches (Rawson, Stiles, and Holmes).

"In this year" (Spreng.), Cupani publishing his Hort. Cathol., enumerating * *Tordylium humile* 200, *Silene glutinosa* 110, *Linaria reflexa* 214, and *Seriola urens* 95. — He died in "1711," and his Pamphyt. Sicul. was published in "1713."

"In this year" (Spreng.), Plukenet publishing his Almagest, enumerating "quercus Americana rubris venis" (*Q. coccinea*), "q. castaneæ folio" (*Q. prinus*) figured, "q. pumila castaneæ folio Virginienensis" † (*chinguapin oak Q. pumila*, Brendel in Am. Nat. for May 1870), *Coldenia procumbens* pl. 64. f. 6, *Smilax tamnoides* 111. f. 1 and 3, *Iris cristata* 196. f. 6, *Woodwardia Virginica* 179. f. 2, *Phacelia parviflora* 245. f. 5, *Lysimachia heterophylla* 333. f. 1, *Stylisma evolutoideus* 166. f. 4, *Phlox subulata* 98. 2, *Cicuta maculata* 76. f. 1, *Hypoxis erecta* 315. f. 2, *Funcus polycephalus* 92. f. 9, *Cassia* (*Chamaecrista*) *nictitans* 314. f. 5, *Crataegus coccinea* 46. f. 4, *Scutellaria pilosa* 313. f. 4, *Draba incana* 42. f. 1, *Melothria pendula* 85. f. 5, *Passiflora peltata* 210. f. 4, *Kuhnia eupatorioides* 87. f. 2, *Pluchea bifrons* 87. 4, *Solidago latifolia* 235. f. 4, *Sericocarpus solidaginicus* 79. f. 2 ("Conyza linifolia" of Linn.), *Aster tenuifolius* 78. f. 5, *Cornus florida* 20. f. 3, "frutex virginianus triolius" *Ptelea trifoliata* 159, *Oldenlandia glomerata* 74. f. 5, *Ampelopsis bipinnata* 412. f. 2, *Claytonia Virginica* 102. f. 3, *Saururus cernuus* 117. f. 4, *Rhexia Virginica* 202. f. 8, *Kalmia latifolia* 379. 6, *Clethra alnifolia* 115. f. 1, "sanicula virginiana alba" 59. f. 1 *Saxifraga Pennsylvanica*, *Iris verna* 196. f. 6, "polygala rubra virginiana spica parva compacta" 300 *Polygala viridescens* ("P. Nuttallii" of Carey), "cicer astragaloides virginianus hirsutis pubescens floribus amplis subrubentibus" 23. f. 2 *Tephrosia Virginiana*; "hypericum virginianum frutescens pilosissimum" alm. 245. f. 6 *H. villosum* ("Ascyrum" of Linn., and "H. pilosum" of Walt.); "sonchus elatus s. dendroides virginianus, ari in modum articulatis foliis, ramosissimus, floribus luteis parvis pentapetalis" 317. f. 2 *Nabalus altissimus*; "eupatoria

Labrador; and was observed by Peck, and myself, on the summits of the White mountains of New England.

Salix myrsinites of the Arctic region and alpine summits farther South. Observed by O. Rudbeck jun. 340 in Lapland; — known to grow in Scandinavia (fl. Dan. pl. 1054, and Fries), on the mountains of Scotland (Bab.), the Pyrenees (Benth.), the Swiss Alps (Vill. iii. pl. 50, and A. Dec.), and on the Altaian mountains (Ledeb.). Westward, was observed by Hooker on Iceland, and received from Arctic America and the Rocky mountains (A. Dec.); was received by Pursh from Labrador; and is known to grow in Greenland (Wats.).

* *Lathyrus odoratus* of Ceylon. First cultivated by Cupani at Panormus in Sicily — (Spreng.); described also by Commelyn hort. Amst. ii. 80; cultivated in gardens, and called in Britain *sweet pea* (Prior). From Europe, carried by colonists to Northeast America, where it continues a favourite garden flower. Received by Linnæus from Ceylon.

† *Rhus venenata* of Northeast America. The *poison sumach*, a tall smooth shrub, transported to Europe described by Plukenet alm. pl. 145. — Miller, Dillenius elth. pl. 292, and Linnæus. Westward, the "poison-wood tree" was seen by Paul Dudley in New England about 1723 (phil. trans. xxxi. 135, and Tuckerm. arch. Am.): *R. venenata* was observed by Michaux from Canada to Carolina; by myself, in swamps from 44° 30' throughout New England; by Elliot, rare in the low country as far as Savannah; by Baldwin, as far as 31°; by Croom, to 30° 30'; by Chapman, "Florida to Mississippi;" and by Nuttall, on the Arkansas.

Helonias bullata of the Marginal alluvial of Northeast America. Transported to Europe, described by Plukenet alm. pl. 174. f. 5. — (Linn. sp. pl.), Trew (Spreng.), Miller pl. 272; continues under cultivation as a garden flower. Westward, was observed by Michaux wild "in marshes in Pennsylvania and Maryland" (Pers.); by Pursh, from New Jersey to Virginia.

Eragrostis ciliaris of Tropical America? Transported to Europe, and described by Plukenet pl. 190 — (Spreng.), Linnæus, and Jacquin coll. ii. p. 338. Westward, was observed by Swartz in sterile or cultivated places in the West Indies; by Chapman, in "waste places and along roads, Florida to South Carolina." On the Atlantic side of Equatorial Africa, is known to grow in Guinea, and on the Niger and Congo (R. Brown, Benth., and A. Dec.): and farther East, was observed by Roxburgh, and Graham, in Hindustan.

virginiana serratulæ noveboracensis latioribus foliis" 280. f. 6 *Vernonia præalta* ("V. altissima" of Nutt.); *Mikania scandens* 163. f. 3, *Conoclinium cælestinum* 394. f. 4, "gnaphalium plantaginis folio virginianum" 348. f. 9 *Antennaria plantaginifolia*, "aster americanus latifolius albus caule ad summum brachiato" 79. f. 1 *Diplopappus cornifolius*, *Viola pedata* 114. f. 7, *Parthenium hysterophorus*, *Dioscorea villosa* 375. f. 5, *Menispermum Canadense* 36. f. 2.

Corydalis lutea of the West Mediterranean countries. Described by Plukenet alm. pl. 90, — termed "fumaria lutea" by Linnæus, and known to grow wild in Mauritania, Italy (Pers.), and Illyria (A. Dec.); observed by Allioni 1084 in Piedmont. In Britain, first seen escaped from cultivation by Withering, and again occurred "in 1798" (Engl. bot. pl. 588); occurs also on old walls near Caen (Lecl. fl. calvad.), and near Paris and Tournay (Lestib. bot. belg.); but seems unknown outside of gardens in Ireland and Southwestern France (A. Dec.).

Cyperus haspan of Hindustan. Transported to Europe, and described by Plukenet alm. pl. 192, — and Rottboell pl. 6 (Pers., and Spreng.). Received from Egypt by Valliant (Del.); and according to Persoon growing in Aethiopia. Eastward, was observed by Graham in the environs of Bombay, and by Roxburgh i. p. 210 in other parts of Hindustan.

"1697, Sept. 11th" (Blair, and Holmes), invasion of the New England colonies, which had been ordered by the French king Louis XIV., prevented by the signing of a treaty of peace at Ryswic.

"The same year" (narrat.), in journeying from Aleppo to Jerusalem, Maundrell proceeded along the seashore as far as Acre. His narrative contains many judicious observations on the antiquities met with, and the sites of ancient towns.

"In this year" (Spreng.), J. Commelyn publishing his Hort. Amst., enumerating * *Salvia Africana* ii. 91, *S. aurea* ii. 92, *Rivina laevis* i. 96, *Cephalaria rigida* ii. 54, *Echium fruticosum* ii. 54, *Convolvulus Canariensis* ii. 51, *Campanula Capensis* ii. 35, *C. rigidula* ii. 37, *Roella ciliata* ii. 39, *Solanum aggregatum* ii. 96, *Varronia alba* i. 80, *Sideroxylum melanophleum* i. 109, *Rhamnus colubrinus* i. 90, *Phytica ericoides* ii. 1, *Bubon gummiifer* ii. 58, *Rhus tomentosa* i. 92, *R. lucida* i. 93, *Amaryllis Zeylanica* i. 37, *Sansevieria Guineensis* ii. 20, *Aletris fragrans* ii. 4, *Aloe picta, sinuata, retusa, plicatilis, lingua, verrucosa*, and *margaritifera* i. 48 to ii. 10, *Furcraea gigantea* ii. 18, *Melicocca bijuga* i. 94, *Zizyphus iguanea* i. 73, *Cassia Javanicus* i. 111, *Royena glabra* i. 65, *R. lucida* i. 96, *Malpighia glabra* i. 75, *Oxalis incarnata* i. 22, *Talinum anacampseros* ii. 89, *T. fruticosum* i. 4, *Euphorbia cotinifolia* i. 15, *Sempervivum Canariense* ii. 95, *Pereskia aculeata* i. 70, *Tetragonia fruticosa* ii. 103, *Spiraea opulifolia* i. 87, *Grewia Occidentalis* i. 85, *Sideritis candicans* ii. 99, *Bystropogon Canariense* ii. 65, *Selago corymbosa* ii. 40, *Lantana mista* i. 78, *Maulea cheiranthus* ii. 42, *Hebenstreitia dentata* ii. 109, *Hermannia alnifolia* ii. 78, *Pelargonium auritum, rapaceum, and lobatum* ii. 61-3, *Polygala myrtifolia* i. 46, *P. stipulacea* ii. 97, *Psoralea bracteata* ii. 106, *Lotus jacobæus* ii. 83, *Indigofera lotoides* ii. 84, *Hypericum floribundum* ii. 68, *Chrysocoma cernua* ii. 45, *C. ciliaris* ii. 48, *Athanasia pubescens, trifurcata*, and *crithmifolia* ii. 47-50, *Tanacetum suffruticosum* ii. 100, *Aster fruticosus* ii. 27, *Berckheya setosa* ii. 28, *Calendula nudicaulis* ii. 33, *C. graminifolia* ii. 34, *Arctotis aspera* ii. 22, *Othonna pectinata, coronopifolia*, and *frutescens* ii. 69-74, *Hippia frutescens* ii. 101, *Myrica quercifolia* ii. 81, *Zamia debilis* i. 58, *Cluytia daphnoides* ii. 2, *Stilbe pinastra* ii. 110, *Mimosa casta* i. 28, *Desmanthus punctatus* i. 31, *Sapindus saponaria* i. 94. — He died in "1698," and the publication was completed in "1702."

"In this year" (J. E. Smith, and Spreng.), Boccone publishing his Mus., enumerating † *Veronica acinifolia* pl. 9, *Panicum hirtellum* 55, *Rottboella monandra* 57, *Triticum unilaterale* 57, *Scabiosa Pyrenaica* 6, *Galium Bocconi* 101, *G. aristatum* 75, *Rubia Bocconi* 75, *Anchusa undulata* 77, *Lobelia Laurentia* 27, *Viola nummulariaefolia* 127, *Lahaya corymbosa* 39, *Eryngium dilatatum* 71, *Angelica Razoulii* 99, *Seseli rigidum* 76, *Statice bellidifolia* 103, *Linum verticillatum* 42, *Rumex multifidus* 126, *R. luxurians* 126, *R. amplexicaulis* 126, *Epilobium alpestre* 5. 16, *Galenia Africana* 110, *Polygonum alpinum* 27. 83, *Gypsophila altissima* 5, *Silene mollissima* 118, *S. Vallesia* 54, *Helianthemum squamatum* 64, *Teucrium multiflorum, rotundifolium*, and *buxifolium* 61-117, *Nepeta violacea* 36, *N. lanata* 36, *Sideritis incana* 67, *Lamium rugosum* 23, *Stachys Palastina* 109, *S. maritima* 127, *Marrubium supinum, crispum*, and *Hispanicum* 69-122, *Thymus Patavinus, piperella*, and *cephalotes*

* *Tetragonia herbacea* of Austral Africa. Transported to Europe is described by Commelyn hort. ii. pl. 102, — Miller pl. 263, and Linnæus. Known to grow wild in Austral Africa (Pers.).

Calla (Zantedeschia) Æthiopica of Austral Africa. Transported to Europe is described by Commelyn hort. i. 50 — (Spreng.), and Linnæus. By European colonists also, carried to the Mauritius Islands, and cultivated there (Boj.).

† *Leonurus marrubiastrum* of Europe. Described by Boccone mus. 98 — (Spreng.), Schreber, and Moench (Steud.); and known to occur in Germany and Java (Jacq. austr. v. pl. 405, Host, and Pers.). By European colonists was carried to Northeast America, observed according to A. Gray along "road-sides, Pennsylvania, rare."

43-117, *Euphrasia minima* 60, *E. longiflora* 63, *Antirrhinum molle* 41, *Scrophularia trifoliata* 60, *Digitalis obscura* 98, *Alyssum halimifolium* 39, *A. saxatile* 93, *Biscutella sempervirens* 122, *Sisymbrium Valentinum* 80, *Erysimum Bocconi* 111, *Erodium malopoides* 89, *E. chamaedrioides* 128, *Corydalis enneaphylla* 73, *Hieracium prunellaefolium, montanum, and molle* 24-113, *Apargia taraxaci* 106, *Serratula coronata* 37, *S. humilis* 109, *Gnaphalium supinum* 109, *Inula bifrons* 121, *Chrysanthemum Bocconi* 98, *Centaurea uniflora* 2, and *Pistacia trifolia* 93. — He died "in 1704."

Cherophyllum aromaticum of Eastern Europe and the adjoining portion of Asia. Described by Boccone mus. ii. pl. 19, — and known to grow in Silesia, Lusatia, and Misnia (Jacq. austr. pl. 150, and Pers.): observed by Fleischer fl. 115 as far West as Livonia; by Sibthorp, in shaded situations on the Bithynian Olympus. In Britain, was found by G. Don "about 1831" between Arbroath and Forfar, clearly exotic, but has perhaps become naturalized (Wats., Bab., and A. Dec.).

Achillea (Ptarmica) alpina of Arctic Asia and mountain-summits farther South. Described by Boccone mus. pl. 101, — and known to grow on the Swiss Alps (Pers.), but according to A. Decandolle only above Airolo on the Saint-Gothard Pass. Eastward, is known to grow throughout Arctic Siberia, and on the Altaian mountains (Ledeb., and Dec.).

Echium maritimum of the West Mediterranean countries. Described by Boccone mus. ii. pl. 78, — and Tournefort inst. 136; and known to grow wild on the seashore of Italy and Sicily. By European colonists, was carried to Austral America, where it has become abundantly naturalized around Montevideo (A. St. Hil., and A. Dec.).

"1698, Aug. 19th" (Blair), signing of the First treaty of partition: dividing Poland and giving rise to the new German kingdom of Prussia.

"The same year" (Stiles, and Holmes), under instructions from the commissioners for propagating the gospel, the aboriginals in different parts of Massachusetts visited this year by Rev. Grindal Rawson and Rev. Samuel Danforth, and found to number "about four thousand." Mary Cushman who "came over in the first shipe liveing this present year" (inscript. on Bradford's Ms. hist. Plimouth Plantation). — I therefore writing in 1872 have seen persons who may have seen acquaintances of the first settlers of New England; and in this manner, twenty-five individuals would easily span the one hundred and eighty-five generations from the time of Adam.

"In this year" (Krapf trav. 521-9), Mombasa, Zanzibar, and Keelwah captured by a fleet under Sultan Seif, son of Seif bin Malik, Mozambique besieged, and Portuguese power extinguished along the East African coast from Cape Gardafui to Cape Delgado.

About this time (see Phil. trans. xxi. 255, and Spreng), Jacob Cunningham visiting Ascension Island, finding its flora to consist of only "five" plants, *Ipomoea pes-caprae* (growing on the seashore throughout the Tropics), *Dombeya erythroxylon* (attributed to St. Helena), *Euphorbia chamaesyce* (attributed to Southern Europe, Mesopotamia, and Siberia), *E. organoides* (not known elsewhere), and *Aristida Adscensionis* (seen by Forskal in Yemen). — Two additional plants have been found there by Osbeck, and subsequent observers, *Sherardia fruticosa* (not known elsewhere), and *Hedyotis Adscensionis* (not known elsewhere. See A. Dec. g. bot. 1281).

J. Cunningham resided as surgeon at Amoy and Chusan in China, — and has given an account of the plants growing there in Phil. trans. xxiii. 280-6 (Spreng).

"1698 to 1699 A. D." (Churchill coll.), in sailing along "the easternmost part of New Guinea," a Strait discovered by Dampier; separating an island called by him "New Britain."

"1699 A. D." (Charlev., and Holmes), under instructions from Louis XIV., claiming the whole territory of Louisiana, a fort built by M. d'Iberville between the mouths of the Mississippi and the Mobile river. In all this immense territory along the Mississippi, there were besides only a few straggling houses of Canadian French settled among the Illinois: and the object of the new movement was, To open communication with Canada, hem in the English colonies, and thus engross the trade of the aboriginal tribes (Anders. ii. 642. Du Pratz i. 8, and univ. hist. xl. 282).

"The same year" (Anders. ii. 644, and Holmes), in England, on complaint that *woolen manufactures* of the colonies in North America began to be exported to foreign markets, both by sea and land, a law prohibiting this.

"Aug. 6th" (narrat. and Murdoch hist. Nov. Scot. i. 539), Dièreville, "employed to obtain plants for the Royal garden," sailing from Rochelle. After "fifty-four days" he arrived at Chibouctou, and continuing visited Port Royal and St. John, meeting with "*viola acadensis folio longo sinuata*" *Viola lanceolata*. — He left "Oct. 6th 1700," and returning to France published an account of his Voyage "in 1708."

"1700 A. D." (Blair), "New Style" adopted by the Dutch and the Protestants of Germany: "omitting the last eleven days of February."

"The same year" (Blair), Second treaty of the Partition of Poland: Frederic now becoming king of Prussia. Charles XII. ruling Sweden.

"In this year" (Mather magnal. i. 31, and Holmes), Boston containing "more than seven thou-

sand" inhabitants, and above "a thousand houses." The White inhabitants of Carolina amounting to "five thousand five hundred" (Drayton). Building at Newport of the meeting house of the Friends or Quakers (Adams 188).

Gleditschia triacanthos of the Mississippi and its tributaries. A large Acacia-like tree, remarkable for its branching thorns, transported to and first cultivated in Britain in this year — (Loudon); described also by Duhamel i pl. 105; and according to Clot-Bey recently introduced into the gardens of Egypt. Westward, was observed by F. A. Michaux from 40° on the Susquehanna throughout the Western States; by myself, wild on the Lower Ohio; by Long's Expedition ii., as far North as 41° on the Mississippi; by Nuttall, on the Arkansas; by Darby, in Opelousas; by Chapman, "Florida to Mississippi, and northward;" and is termed "g. meliloba" by Walter (Steud.).

"In this year" (Spreng. and Winckl.), Plukenet publishing his Mantiss., enumerating *Allosorus atropurpureus* pl. 349. f. 1, *Phlox Carolina* 348. f. 4, *Oenothera linearis* 426. f. 6, *Andromeda Mariana*, *Heterotheca scabra* 340. f. 1. n. 5, *Cypripedium parviflorum* 418. f. 2, *Calystegia paradoxa* 54, *Nolina Georgiana* 342. f. 1, *Azalea nudiflora* 49, *Rhexia Mariana* 428. f. 1, *Andromeda Mariana* 448, *Polygala sanguinea* 437. f. 5, "orobus virginianus foliis fulva lanugine incanis foliorum nervo in spinam abeunte" 142 *Tephrosia spicata*, *Sericocarpus conyzoides* 29 ("conyza asteroides" of Linn.), *Chrysopsis Mariana* 340. f. 1, *Coreopsis verticillata* 344. f. 4, "viola virginiana platani fere foliis parvis et incanis" 187 *Viola palmata*, *Panax trifolium* 435. f. 7.

In this year (Fontenelle elege), after his first work "Elemens de Botanique" published in "1694," Tournefort issuing a second edition under the title "Institutiones rei herbariæ," enumerating "sanicula canadensis amplissimum laciniato folio" inst. 326 *Sanicula Canadensis*, "onagra angustifolia caule rubro flore minore" 302 *Oenothera fruticosa* (Linn. sp. pl.), "vitis idæa canadensis pyrolæ folio" 608 *Gaultheria procumbens*. "astragalus canadensis flore viridi flavescente" 416 *Astragalus Canadensis*, "a. alpinus procerior alopecuroides" 416 *A. alopecuroides*, "rapuntium canadense pumilum linariæ folio" 164 *Lobelia Kalmii*, "ascyrum erectum salicis folio magno flore" 256 *Hypericum pyramidatum* (Willd.).

Arenaria ciliata of Subarctic climates. Termed "alsine alpina serpylli folio multicaulis et multiflora" by Tournefort inst. 243 — (J. E. Smith); known to grow in Lapland and Finland (fl. Dan. pl. 346, Fries, and Ledeb.), in Northwest Ireland (Bab., and Wats.), on the Pyrenees (herb. Dec.), on the Jura and Swiss Alps (Pers., and A. Dec.), on the Carpathians (Hook.); and observed by Sibthorp on the rocks of Cyprus and the mountains of Crete. Westward, by Hooker on Iceland, and by Sabine in Greenland. (See *A. ligericina*.)

Alyssum minimum of the Mediterranean countries and Siberia. Allied to *A. maritimum*, but annual and the stamens all dentate; possibly the species described by Tournefort inst. 217: — known to grow in Spain and Siberia; and observed by Sibthorp, and Chaubard, on the seashore of Greece and the Greek islands.

Trifolium incarnatum of the Mediterranean countries. A showy annual called in English gardens *crimson clover* (Prior), termed "t. spica rotunda rubra" by Tournefort inst. 405, and known to grow in moist meads in France, Italy, Switzerland, and Carinthia (Sturm, and Pers.); observed by Sibthorp on mount Athos, by Chaubard in the lower portion of the Peloponnesus. Regarded as exotic in Britain, maintained there by the continued importation of seed for cultivation (Wats., and A. Dec.).

Cytisus sessilifolius of the Mediterranean countries. Termed "c. glabris foliis subrotundis pediculis brevissimis" by Tournefort inst. 648, — "majerella" by Micheli (Targ.), and known to grow in Southern France and Italy (Pers.); observed by Sibthorp, and Chaubard, from the Peloponnesus to the Greek islands; by Pallas trav. i. 235, near Samara on the Lower Volga.

Epilobium alpinum of the Arctic region and mountains farther South. Termed "chamænerion alpinum minus brunellæ foliis" by Tournefort inst. 303, — "c. alpinum alsines foliis" by Scheuchzer alp. 132, "e. anagallidifolium" by Lamarck; known to grow in Lapland and on the Alps and Pyrenees (fl. Dan. pl. 322, Pers., and Dec.), also in Northern Asia (Wats.): was observed by Linnæus on the mountains of Lapland; by Lightfoot pl. 10, in Scotland; by Haller 409, in Switzerland; by Chaubard on the upper portion of Taygetus, by Sibthorp on the summit of Bithynian Olympus. Westward, by Hooker in Iceland, and received by him from the Rocky mountains and 56° on the Northwest coast; was observed by Colm. in Labrador (Pursh); and is known to grow in Greenland and Alaska (Wats.).

Linaria supina of Western Europe. Termed "l. pumila supina lutea" by Tournefort inst. 170, — "antirrhinum supinum grandiflorum" by Lapeyrouse, "a. dubium" by Villars, "l. pyrenaica" by Decandolle, and known to occur on walls and in sandy soil in France, Spain, and Italy (Pers.): observed by Sibthorp around Constantinople. In Britain found since 1843 near Plymouth (Bab. 2d edit.), also near Poole in Dorset, near Newcastle, and in two localities in Cornwall (Wats.), but regarded by A. Decandolle as exotic.

Linaria simplex of Europe and the adjoining portion of Asia. Annual, termed "l. quadrifolia

lutea” by Tournefort inst. 170, — “*a. arvense* var.” by Linnæus, “*a. parviflorum*” by Jacquin rar. iii. pl. 499, and known to grow in Spain, Southeastern France, Algeria, Syria, Persia, and around the Caspian (A. Dec.): was observed by Gussone in Sicily; by Sibthorp, in maritime sands along the Black Sea; by Ledebour, in the Crimea. In Britain, is once mentioned by Babington in his first edition, but is omitted in his second (A. Dec.).

Amaranthus hypochondriacus of Mexico? Called in English gardens *prince's feather* (Prior), termed “*a. sylvestris maximus novæ Angliæ spicis purpureis*” by Tournefort inst. 235, — and received by Linnæus from Virginia; but is known to A. Gray only as “rarely spontaneous around gardens.” Eastward, was observed by Forskal, and Sibthorp, at Constantinople; by Pollini, and Cesati, naturalized in Lombardy; by Reichenbach, tending to become naturalized in Saxony (A. Dec.).*

Helleborine cordigera of the Mediterranean countries. Termed “*orchis montana italica flore ferrugineo lingua oblonga*” by Tournefort inst. 434; — described also by Rudbeck elys. ii. pl. 204, and Petiver gaz. pl. 128; and known to grow in Barbary, Southern Europe and the East (Pers.); observed by Sibthorp, and Chaubard, in mountainous situations from the Peloponnesus to Constantinople.

Ornithogalum arvense of Eastern Europe and the adjoining portion of Asia. Termed “*o. angustifolium bulliferum*” by Tournefort inst. 379: — observed by Persoon (Ulst. ann. xi. pl. 1) in cultivated ground in France; by Sibthorp, and Chaubard, from the Peloponnesus to Caria and Cyprus; and is known to grow on the Taurian mountains (Bieb.).

Allium montanum of Asia Minor and Greece. Termed “*a. montanum radice oblonga*” by Tournefort inst. 384: — and observed by Sibthorp, and Chaubard, from the Peloponnesus to the Bithynian Olympus.

Carex remota of Europe and Northern Asia. A woodland sedge termed “*cyperoides angustifolium spicis sessilibus in foliorum alis*” by Tournefort inst. 430, — and known to grow in moist woods throughout middle Europe (Engl. bot. pl. 832, Pers., and Wats.), also as far as Iberia (Bieb.); was observed by Decandolle in France; by Savi, on the Apennines; by Sibthorp, from the Peloponnesus to Constantinople; by Thunberg, on Nippon in Japan. (Is attributed by Pursh to the Alleghany mountains of Pennsylvania, and by Watson to British America, probably through mistake.)

Carex depauperata of Europe and the adjoining portion of Asia. A woodland sedge termed “*cyperoides vesicarium humile locustis rarioribus*” by Tournefort inst. 530, — “*carex ventricosa*” by Curtis Lond. vi. pl. 68; and known to grow throughout middle Europe (Engl. bot. pl. 1098, and Willd. iv. 278); observed by Sibthorp in woods in the Peloponnesus.

“March 9th” (Tourn. voy. 4). departure of Tournefort on his way to Crete, Greece, and Armenia. He met with *Borago Orientalis* ii. 13, *Echium Orientale* ii. 107, *Morina Persica* ii. 120, *Campanula laciniata* i. 99, *C. heterophylla* ii. 154, *Verbascum pinnatifidum* i. 128, *V. Osbeckii* ii. 83, *Laserpitium ferulaceum* ii. 121, *Daphne Pontica* ii. 83, *Saxifraga cymbalaria* ii. 148, *Silene viscosa* ii. 148, *S. bupleuroides* ii. 154, *Calligonum polygonoides* ii. 147, *Papaver Orientale* ii. 118, *Rhinanthus Orientalis* ii. 126, *Lepidium lyratum* ii. 141, *Vesicaria reticulata* ii. 109, *Lunaria Graeca* i. 92, *Hedysarum cornutum* ii. 108, *Hypericum Orientale* ii. 97, *Scorzonera elongata* i. 86, *Aristolochia hirta* i. 147, — and returned in “May 1702.”

Dodartia Orientalis of the Uralian plains. An Antirrhinoid plant observed by Tournefort trav. pl. about mount Ararat; — by Pallas i. 437 in journeying Eastward, first met with on the Yaik; known to grow also in Tartary (Pers.).

Polygonum Orientale of Brazil? Observed by Tournefort trav. iii. 171 in gardens at Tiflis in Georgia; — by Forskal, in gardens at Constantinople, and by Delile in gardens at Cairo. Described by C. Commelyn, and soon becoming frequent in the gardens of Europe (Pers.); and by European colonists carried to Northeast America, where it is cultivated for ornament under the name of *prince's feather*, and is sometimes found growing spontaneously (A. Gray, and Chapm.). Eastward from Egypt, is enumerated by Taberd dict. p. 633 as called “*trai-ngai-ba*” in Cochinchina, and used there medicinally: but according to Thunberg, was brought by the Portuguese to Japan, and is called at Nagasaki by the Portuguese name “*paute cobra*.” As observed by myself in Brazil, the plant seemed to harmonize with the surrounding vegetation.

Vaccinium arctostaphylos of Madeira? A stout-stemmed shrub, tall as a man, observed by Tournefort trav. iii. pl. 67 near Tripoli on the Black Sea, and termed “*vitis idaea orientalis maxima cerasi folio flore variegato*” cor. 42. — (If however, as would seem from Persoon, the same species grows on Madeira, it is probably the Madeira species introduced.)

* *Briza minor* of Europe and the adjoining portion of Asia. Termed “*gramen paniculatum minus locustis magnis tremulis*” by Tournefort inst. 523; — described also by Scheuchzer gram. pl. 4, and known to grow throughout Europe. By European colonists, was carried to Austral Africa (Pers.); and to Southwest Australia, where it has become naturalized (Drummond, and A. Dec.).

One hundred and eightieth generation. Jan. 1st, 1701, mostly beyond youth: the Greek writers Elias Meniates d. 1714, Meletius of Athens d. 1728, Alexander Mavrocordatus d. 1719: the Slavonic writers, Glück of Livonia, Kirsha Danilof, and Paul Ritter: other writers, N. Boileau Despreaux; Humphry Prideaux; John George Grævius; P. Bayle; Gilbert Burnet; Vincent de Filicaia; Nicholas Malebranche; Henry Dodwell; James Gronovius; William Lloyd; madame Dacier; Fénelon; Godfrey Wm. Leibnitz; Daniel Huet; John Flamstead; Andrew Dacier; J. Vincent Gravina; Richard Bentley; Joseph Addison; sir Richard Steele; Matthew Prior; John Hardouin; John Le Clerc; James Lenfant; abbé Vertot; John Friend; Bernard de Montfaucon; Samuel Clarke; J. Albertus Fabricius; John Arbuthnot; and cardinal Polignac: the Orientalists, Galland, Renaudot: the microscopic observer Antonius Van Leeuwenhoek d. 1723: the botanists, Sam. Dale d. 1739, Gurth. Christ. Schélhammer d. 1716, Guid. Crescent. Fagon d. 1718, Io. Gottfr. Olearius d. 1711, Petr. Hottonus, Alex. Christ. Gakenholz, Io. Henr. Burkhard d. 1738, Christian Knaut d. 1716, Franc. Petit, Sam. Morlandus, Stephan. Franc. Geoffroy d. 1731, Patrick Blair, Mart. Dan. Johrenius d. 1718, Abrah. Rehfeld, David Wipacher, H. I. Meyenberg, C. H. Erndtel d. 1734, Hellwing d. 1748, Ant. Tita, and Aegid. de Koker: the publishers, Awnsham and John Churchill: the painters, Godfrey Kneller, Carlo Cignani d. 1719: the engraver, Gerard Edelinck d. 1707.

"The same year" (Humphreys' hist. account 41, and Holmes), in England, the Society for propagating the Gospel in foreign parts established. Acting it would seem, chiefly to extend the Episcopal Church (see 1706). By the secretary, Rev. Dr. Humphreys, the population of the English colonies in North America estimated on inquiry at "two hundred and sixty-two thousand."

"Aug. 27th" (encycl. meth., and Holmes), at Madrid, signing of a treaty between the two kings "très-chrétien et catholique," establishing the Assiente; a French company for transporting Negroes into the Spanish settlements in America.

"In this year" (Linn. fl. suec. p. x), Olaus Rudbeck jun., "from 1690" professor of Botany at Upsal, publishing the second volume of his *Campi Elysii*, enumerating *Narcissus trilobus* 61. f. 3; — the first volume, containing the grasses, was published "in 1702." He died "in 1740" (Spreng.).

"1702, March 8th" (Nicol.), William III. succeeded by Anne, now queen of united Britain.

"The same year" (Blair), in Europe, general war against France and Spain. — This continued twelve years, until the Treaty of Baden.

"In this year" (Spreng.), Io. Iac. Scheuchzer, a brother of Ioan., visiting the alpine region of Switzerland, meeting with *Poa supina* vi. pl. 17, *Phyteuma Scheuchzeri* 460, *P. ovata* 518, *Funcus Jacquini* i. pl. 5. f. 2, and *Achillea moschata* ii. pl. 21. f. 3. — He continued his excursions "until 1711," published an account of them "in 1723," and died "in 1733."

Poa laxa of the Arctic region and mountain summits farther South. A grass distinguished from *P. alpina* by fewer florets and a creeping root (Pers.); observed by Scheuchzer it. vi. 457 pl. 6 on the Swiss Alps, — also by Haenke sudet. 118; known to grow in Spitzbergen, Lapland, and on the mountains of Scotland and Germany (Sabine, and Hook); observed by Chaubard on the mountains of Arcadia in the Peloponnesus. Westward, is known to grow in Greenland (Sabine, and Wats.); observed by Nuttall, and myself, in the alpine region of the White mountains; and according to A. Gray grows also on the "alpine mountain-tops of Maine," and "Northern New York, and high northward."

"In this year" (Linn. sp.), Petiver publishing his *Gazoph. naturæ*, enumerating *Cornucopiae cucullatum* gaz. pl. 73, *Protea nana* gaz. 25. 7, *P. Levisanus* gaz. 5. 7, *Polypreum procumbens* gaz. 5. 6, *Blaeria ericoides* gaz. 2. 10, *Spigelia anthelmia* gaz. 59. 10, *Cassine maurocena* gaz. 57. 4, *Crassula subulata* gaz. 57. 4, *Eucomis nana* gaz. 85. 6, *Loranthus scurrula* gaz. 63. 8, *Phyllodoce Daboeci* gaz. 27. 4, *Erica corifolia* gaz. 3. 7, *Euphorbia pilulifera* gaz. 80. 14; *Mesembryanthemum geniculiflorum*, *corniculatum*, and *emarginatum* gaz. 77. 3 to 78. 3; *Ranunculus nodiflorus* gaz. 24. 9, *Hyobanche sanguinea* gaz. 37. 4, *Hermannia althaeifolia* gaz. 43. 2, *Passiflora pedata* gaz. 114. 4; *Pelargonium angulosum*, *vitifolium*, and *trifidum* gaz. 84. 5–11, *Crotalaria biflora* gaz. 30. 10, *Hallia sororia* gaz. 32. 1, *Hedysarum bupleurifolium* gaz. 11. 12, *H. nummularifolium* gaz. 26. 4, *H. vaginale* gaz. 26. 1, *Lespedeza latibrosa* gaz. 30. 11, *Indigofera depressa* gaz. 83. 9, *Athanasia punctata* gaz. 81. 6, *A. parviflora* gaz. 34. 1; *Gnaphalium fasciculatum*, *fastigiatum*, and *spicatum* gaz. 7. 3 to 82. 6; *Stoebe plumosa*, *cinerea*, and *jusca* gaz. 3. 9 to 5. 4; *Helleborine oxyglottis* gaz. 128. 5, *Sagittaria trifolia* gaz. 19. 3, *Sapium sebiferum* gaz. 34. 3, *Dioscorea oppositifolia* gaz. 31. 6; *Acrostichum speciosum*, and *inequale* gaz. 61. 5 and 49. 4; *Polypodium stigmosum* gaz. 61. 4, *Adiantum Philippense* gaz. 4. 4, *Cheilanthes suaveolens* gaz. 73. 4, *Schizaea dichotoma* gaz. 70. 12, *Lygodium circinnatum* gaz. 64. 10.

"1703 A. D." (art de verif.), Mustafa II. succeeded by Achmed III., twenty-fourth Turkish sultan. Coins issued at Cairo by Achmed III., are figured in Marcel p. 225.

"The same year" (Spreng.), Augustin. Lippi sent into Abyssinia, meeting with *Heliotropium eriocarpum*, *Adonis marginata*, *Cochlearia Nilotica*, *Artemisia Lippii*, and *Inula crispa*. — He was slain in the following year.

"In this year" (Spreng.), Caspar Commelyn publishing his *Praelud. botan.*, enumerating *Phyllica cordata* 12, *P. pubescens* 13; *Diosma oppositifolia*, *rubra*, and *hirsuta* 1-3; *Asclepias undulata*, and *crispa* 16-17; *Aloe arachnoides*, *rhodacantha*, *brevifolia*, *Apicra viscosa*, *spiralis*, *tricolor*, *imbricata*, and *patula* 20-32; *Agave vivipara* 15; *Euphorbia mamillaris*, *Commelyni*, and *clava*, 7-9; *Pelargonium pinnatum*, *pelatum*, and *acetosum* 2-4.

Pelargonium zonale of Austral Africa. Described by C. Commelyn prael. 1 — (Spreng.), and "in 1710" introduced into England (Ait.); figured by Cavanilles iv. pl. 98; frequent in gardens, and from the black band around the centre of the leaf, a white margin being sometimes substituted, called in French "geranier à bandes" *banded geranium*: enumerated by Clot-Bey as recently introduced into the gardens of Egypt.

Aloe Commelyni of Austral Africa. Transported to Europe is described by C. Commelyn prael. 24 (Spreng.). In Austral Africa, said to be collected with *A. arborescens* and *A. mitraeformis* for preparing *Cape aloes* — (Lindl.).

Aloe spicata of Austral Africa. Growing in the Interior, and the principal source of *Cape aloes*, — according to Thunberg diss. 2 (Pers., and Lindl.).

"In this year" (Fontenelle elege, and Spreng.), Tournefort publishing his *Corollarium inst. r. h.*, enumerating *Convolvulus lanatus* p. 2, *Phyteuma limonifolia* 4, *Campanula heterophylla* 4, *C. collina* 4, *C. Ruthenica* 5, *Galium capillare* 5, *G. coronatum* 5, *Hyoscyamus Orientalis* 6, *Primula longifolia* 6; *Asperula lutea*, *incana*, and *nitida* 6; *Crucianella glomerata* 6; *Valeriana macrophylla*, *cardamines*, and *caespitosa* 7; *Anchusa parviflora*, *rosea*, and *lutea* 7; *Onosma erecta*, *Orientalis*, and *sericea* 7-8; *Symphytum Tauricum* 8, *Plumbago lapathifolia* 8, *Lysimachia anagalloides* 8, *Veronica amoena* 8, *Verbascum auriculatum* 9, *V. plicatum* 9; *Scrophularia bicolor*, and *minima* 10; *Euphrasia glutinosa* 10, *Orobancha arvensis* 11, *Phlomis lunariaefolia* 11; *Salvia crassifolia*, and *argentea* 11; *Dentaria quinquefolia* 17, *Paris incompleta* 18, *Arenaria holostea* 18, *Cerastium macranthum* 20, *Potentilla bifurca* 22, *Ammi acaule* 22, *Tragium peregrinum* 22, *Astrantia heterophylla* 23, *Smyrniolum apiifolium* 23; *Heracleum Pyrenaicum*, and *apsinthifolium* 23; *Sium Graecum*, *Ferula meoides*; *Cachrys microcarpa*; *Scandix grandiflora*; *Eryngium multifidum*, and *parviflorum*.

Lythrum virgatum of Eastern Europe and the adjoining portion of Asia. Termed "*salicaria orientalis salicis folio acutissimo et glabro*" by Tournefort cor. 18; — observed by Sibthorp in the environs of Constantinople; by Jacquin pl. 7, in Austria; by Pallas trav. i. 52, along the Volga; and is known to grow in Tartary and Siberia (Pers.).

Rhagadiolus Koelpiniae of the East Mediterranean countries. An annual termed "*rh. creticus minor capsulis echinatis*" by Tournefort cor. 36; — observed by Sibthorp on Cyprus; by Pallas v. 340 to 511, on mount Bogdo-Oola on the Lower Volga.

Symphytum a. ferrugineum of the Tauro-Caspian countries. Observed and distinguished by Tournefort cor. 8 — (Spreng.), and Bieberstein. In Britain, has made its appearance in three separate localities (Wats. cyb. ii. 279 to iii. 486), with some prospect of becoming naturalized (see A. Dec.).

Asphodelus Creticus of the mountains of Crete and the Peloponnesus. Termed "*a. creticus luteus serotinus patulus folio aspero*" by Tournefort cor. 25; — observed by Sibthorp on the loftier mountains of Crete, by Chaubard in the upper region of Taygetus.

A selection of plants from Tournefort's herbarium, figured by Aubriet and described in the *Coroll.* (has been published by Desfontaines), containing *Ophrys mammosa*, *iricolor*, *villosa*, *umbilicata*, and *densiflora* ann. mus. x. pl. 11-16; *Aristolochia Cretica*, and *lutea* 18-19; *Phelypaea Tournefortii* 21, *Teucrium microphyllum* 22, *Nepeta melissaeifolia* 23, *Sideritis rosea* 24, *Stachys spinulosa* 25, *Dracocephalum lamiiifolium* 26, *Heliotropium villosum* 33; *Cynoglossum glastifolium*, *stamineum*, and *lanatum* 35-7; *Linaria grandiflora*, and *corifolia* xi. 2-3; *Verbascum betonicaefolium* 4, *Phyteuma lanceolata* 5; *Campanula ptarmicifolia*, *pauiflora*, *calaminthifolia*, *stricta*, *parviflora*, *corymbosa*, *pelviformis*, and *tubulosa* 6-17; *Lactuca Cretica* 19, *Tanacetum incanum* 21, *Anacyclus Creticus* 22, *Inula conyzoides* 23, *Scabiosa micrantha* 25, *Valeriana sisymbriifolia* 30, *Ranunculus grandiflorus* 31, *Papaver floribundum* 33, *Hesperis pinnatifida* 34; *Alyssum densiflorum*, *samolifolium*, and *paniculatum* 35-7, *Draba Pontica* 38, *Thlaspi cordatum* 39, *Hypericum ciliatum* 39, *Ruta parviflora* 42, *Silene spergulaefolia* 43, *Lychnis variegata* 44, *Cotyledon parviflora* 42, *Crassula crenata* 46, *Pyrus parviflora* xii. 4, *Crataegus Cretica* 5, *Rubus sanctus* 6, *Lathyrus purpureus* 7, *Orobis laxiflorus* 8, *O. croceus* 9, *Vicia variegata* 12, *Hedysarum radiatum* 13, *Euphorbia biglandulosa* 14, *E. denticulata* 15, and *E. valerianaefolia* 16.

Specularia pentagonia of . . . Described by Tournefort cor. — (ann. mus. xi. pl. 18, Spreng.); termed "*campanula minor arvensis seu viola pentagonia*" by Forskal, as observed near Marseilles, observed there also by Kralik (Godron, and A. Dec.); described by Linnæus, and L'Heritier, as received from Thrace (Pers.). Attributed by A. Decandolle to America, but seems unknown in at least North America.

"1704, Feb. 29th, about two hours before day" (Williams, Hutch., and Holmes), Deerfield in Massachusetts surprised by three hundred French and aborigines under Hertel de Rouville. The town was burned, "forty-seven" of the inhabitants were slain, and "about one hundred" were carried captive to Quebec.

"July 24th" (Blair), Gibraltar captured by the English under admiral Rook.

"In this year" (Winckl.), Bosmann publishing his account of Guinea.

"In this year" (Winckl.), after his *Stirp cur. extra britan.* "in 1694," Ray publishing the Third volume of his *Hist. plant.*, enumerating *Cineraria amelloides* suppl. 158, *Gazania rigens* s. 182, *Othonna cheirifolia* s. 167. — He died "in 1705."

"1705 A. D." (Talvi ii. 1), at St. Petersburg, through the influence of Peter the Great, printing of the first *Russian newspaper*. Russian was also made the language of public business and of the courts of justice: and the emperor further modified the form of certain Slavonic letters. — Which modifications continue in use in Russia to the present day.

"December" (Pauth. 445), in the dispute between the Jesuit and Dominican missionaries on the translation of certain Chinese words, Khang-hi having decided in favour of the Jesuits, and the pope in favour of the Dominicans, the arrival of a legate at Peking, To adjust the differences. — In the following year, an edict by Khang-hi, Excluding European missionaries from China, without a license; procurable only by approving the doctrine of Confucius.

"In this year" (Spreng., and Winckl.), Plukenet publishing his *Amalthæum*, enumerating in this or his previous works *Linociera compacta* pl. 224. f. 2, *L. coliniifolia* 241-14, *Veronica Virginica* 70. 2, *V. tenella* 233. 4, *Gratiola hyssopifolia* 193. 1, *Elytraria crenata* 438. 1, *Justicia stricta* 279. 7, *J. pedunculosa* 423. 5, *J. hyssopifolia* 280. 1, *Stachytarpha prismatica* 321. 1, *S. orubica* 327. 7, *Tanonea spinosa* 234. 4, *Cunila Mariana* 344. 1, *Blephilia ciliata* 164. 3, *Monarda punctata* 24. 1, *Salvia Canariensis* 301. 2, *Boerhaavia hirsuta* 113. 7, *B. scandens* 226. 7, *Fraxinus lentiscifolia* 182. 4, *Gunnera perpensa* 18. 2, *Ixia corymbosa* 275. 1, *I. erecta* 310. 1, *Glaucolus galeatus* 224. 8, *Aristea cyanea* 299. 5, *Commelyna Virginica* 174. 4, *C. Bengalensis*, *C. nudiflora* 27. 4, *Ficus pedunculata* 178. 4, *Dulichium spathaceum* 301. 1, *Scirpus minimus* 300. 3, *S. mucronatus* 40. 3, *S. pungens* 40. 1, *Fimbristylis dichotoma* 119. 3, *Machaerina restioides* 192. 5, *Cyperus arenarius* 300. 7, *C. tenellus* 300. 4. 5, *C. polystachyos* 416. 6, *C. iria* 191. 7, *C. pumilus* 191. 8, *C. squarrosus* 397. 2, *Mariscus ovalaris* 91. 4, *M. retrofractus* 415. 4, *M. panicus* 91. 3, *Fuirena glomerata* 417. 6, *Panicum brizoides* 191. 5. 1, *Eragrostis tenella* 300. 2, *Festuca bromoides* 33. 10, *F. capillata* 190. 2, *Paspalum dissectum* 350. 2, *Alopecurus Indicus* 92. 5, *Uniola paniculata* 32. 6, *Dactylis spicata* 190. 6, *Aristida hystrix* 191. 3, *Andropogon arundinaceus* 32. 1, *Heteropogon contortus* 191. 5, *Chloris petraea* 245. 1, *Triticum Polonicum* 231. 6, *Eriocaulon quinqueangulare* 221. 7, *Mollugo oppositifolia* 75. 6, *M. stricta* 256. 2; *Protea cyanoides*, *serraria*, *conocarpa*, *argentea*, *hypophylla*, *cucullata*, and *saligna* 200. 2 to 440. 3; *Globularia bisnagarica* 58. 5, *Cephalanthus Occidentalis* 77. 4, *Spermacoce tenuior* 136. 4, *Mitchella repens* 444. 2, *Callicarpa Americana* 136. 3, *Penaea sarcocolla* 446. 6, *Buddleia Occidentalis* 210. 1, *Sebaea aurea* 275. 3, *S. cordata* 275. 4, *Cissus quadrangularis* 210. 6, *C. acida* 152. 2, *Fagara tragodes* 107. 4, *Ludwigia alternifolia* 412. 1, *Ammannia baccifera* 136. 2, *Cometes alterniflora* 380. 4, *Tournefortia gnaphalodes* 193. 5, *T. volubilis* 235. 6, *Dodecatheon integrifolium* 79. 6, *Lysimachia stricta* 428. 4, *Gouania Domingensis* 201. 6, *Ipomoea sagittata* 85. 3, *I. tuberosa* 267. 6; *Convolvulus tenellus*, *tomentosus*, *vitifolius*, and *quinquefolius* 25. 3 to 167. 6; *Dentella repens* 356. 5, *Triosteum angustifolium* 104. 2, *Physalis Curasavica* 111. 5, *Solanum mammosum* 226. 1, *S. Virginianum* 62. 3, *Cestrum laurifolium* 95. 1, *C. nocturnum* 64. 3, *Cordia collococca* 158. 1, *Varronia lineata* 328. 5, *V. salvifolia* 221. 3, *Zizyphus lineatus* 122. 4, *Z. napeca* 216. 6; *Phyllica plumosa*, and *acerosa* 342. 1 to 445. 1; *Corymbium glabrum* 272. 4, *C. scabrum* 272. 5, *Ceanothus intermedius* 28. 6, *C. Africanus* 126. 1, *Celastrus lucidus* 80. 4, *C. bulbatus* 28. 5, *C. pyracanthus* 126. 2; *Diosma cupressina*, *ericoides*, *pubescens*, and *cistoides* 279. 2 to 411. 3; *Brunia lanuginosa* 318. 4, *Celosia Monsoniae* 357. 4, *C. nodiflora* 133. 2, *Achyranthus brachiata* 334. 2, *Desmochaeta micrantha* 82, *Comandra umbellata* 342. 4, *Randia latifolia* 97. 6, *Amsonia latifolia* 115. 3, *Cynanchum pilosum* 359. 2, *Asclepias pubescens* 139. 1, *A. verticillata* 336. 4, *Microlooma lineare* 335. 1, *Gentiana ochroleuca* 186. 1, *Eryngium Virginicum* 396. 3, *Trachymene incisae* 454. 6, *Agasyllis galbanum* 12. 2, *Rhus villosa* 219. 8, *R. angustifolia* 219. 6, *Viburnum prunifolium* 46. 2, *Pharvacium glomeratum* 331. 3, *P. albens* 304. 4, *P. distichum* 130. 6, *Sarothra gentianoides* 342. 2, *Statice diffusa* 42. 5, *Drosophyllum Lusitanicum* 117. 2, *Crassula flava* 314. 2, *C. gentianoides* 415. 6, *Mahernia verticillata* 344. 4, *Bromelia pinguin* 258. 4, *Asparagus retrofractus* 375. 3, *A. Asiaticus* 15. 4, *A. Capensis* 78. 3, *Aletris farinosa* 437. 2, *Funcus nodosus* 92. 9, *Melanthium Virginicum* 434. 8, *Trillium sessile* 111. 6, *Xerophyllum setifolium* 342. 3, *Disandra prostrata* 257. 5, *Septas Capensis* 340. 4, *Osbeckia Zeylanica* 173. 4, *Oenothera sinuata* 203. 3, *Gaura biennis* 428. 2, *Dodonaea viscosa* 447. 5, *Valentia ilicifolia* 196. 3; *Erica planifolia*, *bruniades*, *apsynthioides*, *gnaphalodes*, and *Plukenetii* 344. 2 to 347. 6; *Gnidia oppositifolia* 323. 7, *Polygonum tomentosum* 210. 7, *P. perfoliatum* 398. 1, *Coccocha pubescens* 222. 8, *C. punctata* 237. 4, *Serjania triternata* 168. 5, *Sapindus rigidus*

217. 7, *Forskolea tenacissima* 275. 6, *Cyclopia genistoides* 413. 5, *Podalyria myrtillifolia* 185. 2, *Grimaldia assurgens* 314. 5, *Guaiacum sanctum* 94. 4, *Zygophyllum morgsana* 429. 4, *Melastoma hirta*, *discolor*, and *acinodendron* 159. 1 to 265. 4; *Chinaphila maculata* 349. 5, *Trianthema monogyna* 95. 4, *Gypsophila prostrata* 75. 2, *Silene Virginica* 203. 1, *Arenaria graminifolia* 7. 3, *Malpighia puniceifolia* 157. 4, *Erythroxylon sideroxyloides* 442. 3, *Suriana maritima* 241. 5; *Oxalis violacea*, *versicolor*, *hirta*, and *tomentosa* 102. 4 to 450. 6; *Crataeva gynandra* 147. 6, *Litsaea trinervia* 381. 2, *Talinum triangulare* 105. 6, *Triumfetta Bartramia* 41. 5; *Euphorbia cereiformis*, *hystrix*, *corollata*, *microphylla*, and *satureioides* 113. 2 to 446. 3; *Cactus phyllanthoides* 247. 5, *Prunus capulin* 158. 4, *Crataegus crusgalli* 46. 1, *C. parvifolia* 100. 1, *Glinus dictamnoides* 356. 6, *Capparis sepiaria* 338. 1, *C. cynophallophora* 172. 4, *Cimicifuga racemosa* 383. 3; *Cistus lacrypes*, and *polifolius* 84. 6 and 23. 6; *Corchorus fascicularis* 439. 6, *Arungana mollusca* 241. 3, *Xylopia glabra* 238. 4, *Thalictrum anemoides* 106. 4, *Clematis Virginiana* 379. 4, *C. ochroleuca* 379. 4, *Knorallonia vesicatoria* 95. 2, *Brasenia peltata* 349. 3, *Clusia rosea* 157. 2, *Teucrium Japonicum* 441. 2, *Sideritis Canariensis* 322. 4, *Stachys Aethiopica* 315. 3, *Marrubium Africanum* 306. 2, *Phryma leptostachya* 380. 8, *Rhinanthus Stachensis* 310. 2; *Gerardia delphinifolia*, *tenuifolia*, and *quercifolia* 12. 4 to 389. 3; *Scrophularia scorodonia* 59. 5, *Hemimeris montana* 331. 3, *H. diffusa* 320. 5, *Bignonia leucoxydon* 200. 4, *Citharexylon cinereum* 162. 1, *Crescentia cucurbitina* 171. 2, *Lantana involucrata* 114. 5, *L. aculeata* 233. 5, *Manulea tomentosa* 319. 2, *Buchnera Asiatica* 305. 3, *Schwalbea Americana* 348. 8, *Barleria hystrix* 119. 5, *Bontia daphnoides* 209. 3, *Blepharis boerhaaviaefolia* 99. 3, *Cardamine Virginica* 101. 4, *C. Africana* 101. 5, *Heliophila integrifolia* 432. 2, *Arabis Canadensis* 86. 8, *A. reptans* 51. 5, *A. runcinata* 206. 3, *Cleome tenella* 224. 3, *Waltheria Americana* 150. 6, *W. angustifolia* 150. 5, *Melochia concatenata* 9. 5; *Passiflora laurifolia*, *minima*, and *hibiscifolia* 210. 3 to 212. 1; *Erodium maritimum* 31. 4, *Pelargonium betulinum* 415. 3; *Sida Capensis*, *humilis*, *rotundifolia*, and *periplocifolia* 9. 3 to 356. 1; *Malva Gangetica*, *fragrans*, *parviflora*, and *Hispanica* 44. 2 to 431. 5; *Lavatera triloba* 8. 3, *Gossypium hirsutum* 299. 1; *Hibiscus hastatus*, *hirtus*, *Aethiopicus*; *Pavonia Zeylanica* 125. 3, *Fumaria vesicaria* 335. 3, *Polygala Heisteria* 229. 5, *Piscidia Carthagenensis* 214. 4, *Borbonia trinervia* 297. 4, *B. lanceolata* 297. 3; *Aspalathus capitata*, *astroites*, *thymifolia*, *ericaefolia*, *uniflora*, *araneosa*, *Indica*, *quinquefolia*, and *callosa* 201. 2 to 414. 4; *Crotalaria imbricata* 388. 3, *C. la. rigata* 277. 2, *Dolichos scarabaeoides* 52. 3, *Orobis Pyrenaicus* 210. 2, *Lathyrus clymenum* 114. 6, *Vicia sylvatica* 71. 1, *V. casubica* 72. 2, *V. peregrina* 233. 6, *Cytisus foliolosus* 277. 6, *Hedysarum spinosissimum* 50. 2, *Desmodium viridiflorum* 308. 5, *D. paniculatum* 432. 6, *Lespedeza capitata* 433. 3, *Zornia Zeylonensis* 102. 1, *Z. pulchella* 433. 7, *Indigofera psoraleoides* 320. 3, *I. cytisoides* 185. 3; *Tephrosia villosa*, *colutea*, and *argentea* 52. 1 to 166. 3; *Trifolium glomeratum* 113. 5, *Lotus Craticus* 43. 1, *Hypericum ericoides* 93. 5, *H. simplex* *amalth.* 421. 3 (Nutt.), *Ethulia divaricata* 21. 9, *Ageratum ciliare* 81. 4, *Pteronia camphorata* 345. 5, *Artemisia Chinensis* 353. 5; *Gnaphalium cephalotes*, *atavergens*, *teretifolium*, *cylindricum*, *felinum*, *cymosum*, *odoratissimum*, *squarrosus*, *nodiflorum*, and *Indicum* 173. 6 to 410. 2; *Coniza bifoliata* 177. 1, *Tussilago Japonica* 390. 6, *Senecio grandiflorus* 422. 5, *S. uniflorus* 39. 7, *Aster tenellus*, *Solidago odora* 116. 6, *S. bicolor* 114. 8, *Inula squarrosa* 16. 1, *I. avomaria* 326. 1, *Arnica crocea* 343. 7, *Leysera callicornia* 350. 1, *Chrysanthemum procumbens* 430. 3, *C. frutescens* 272. 6, *Cotula anthemoides* 274. 6, *C. tanacetifolia* 430. 7, *Anthemis cota* 17. 5, *Phaethusa Americana* 342. 6, *Buphthalmum durum* 21. 3, *Helianthus giganteus* 159. 5, *Ruabeckia triloba* 22. 2, *Coreopsis tenuifolia* 344. 3, *Gorteria personata* 273. 6, *Berkheya incana* 273. 5, *B. ciliaris* 354. 3, *Arctotis paradoxo* 312. 5, *A. pilifera* 276. 2, *Osteospermum polygaloides* 382. 2, *Sphaeranthus Africanus* 108. 7, *Arethusa bulbosa* 348. 6, *Pogonia parviflora* 348. 1, *P. verticillata* 348. 3, *P. ophioglossoides* 93. 2, *Malaxis paludosa* 247. 2, *Corallorhiza odontorrhiza* 211. 1. 2, *Podostemon ceratophyllum* 138. 1, *Carex folliculata* 419. 1, *Tragia iuens* 107. 6, *Ambrosia paniculata* 10. 5, *Ostrya Virginica* 156. 1, *Arum dracontium* 271. 2, *Belis jaculifolia* 351. 1, *Croton sidaefolium* 220. 5, *C. spinosum* 108. 3, *Sapium aucuparium* 229. 8, *Phyllanthus dumosus* 183. 4, *P. falcatus* 247. 4, *Bradleya Sinica* 368. 1, *Anthospermum Aethiopicum* 183. 1, *A. ciliare* 344. 7, *Montinia acris* 333. 3, *Myrica Aethiopica* 48. 8, *M. serrata* 424. 3; *Xanthoxylon clava-Herculis* 239. 4, *N. juglandifolium*, *rhoifolium*, and *aromaticum* 239. 4 to 392. 2; *Margaritaria nobilis* 176. 4, *Menispermum Canadense* 36. 2, *Cocculus Plukenetii* 345. 2; *Cliffortia ruscifolia*, *strobilifera*, and *trifoliata* 275. 2 to 319. 4; *Juniperus Barbadensis* 197. 4, *Inga microphylla* 1. 6, *I. marginata* 141. 2, *I. nodosa* 211. 5, *Acacia cineraria* 2. 1, *A. reticulata* 123. 2, *A. tamariscina* 329. 3; *Acrostichum sorbifolium*, *bifurcatum*, *alcicorne*, and *vellem* 281. 4 to 429. 2; *Polypodium hexagonopterum* 284. 2, *P. scolopendroides*, *reptans*, *dissimile*, *phymatodes*, *griseum*, *arvenicum*, *sanctum*, *effusum*, and *speluncae* 89. 5 to 404. 1. 5; *Aspidium trifoliatum*, *unitum*, *coriandrifolium*, *cicutarium*, *montanum*, *lobatum*, and *falcatum* 89. 3 to 405. 1; *Asplenium furcatum* 123. 6; *Pteris arguta*, *biaurita*, and *pedata* 286. 5 to 407. 2; *Blechnum Australe* 89. 7, *Adiantum reniforme*, *pumilum*, *denticulatum*, *radiatum*, *Aethiopicum*, *ten rum*, and *pallens* 124. 2 to 403. 2; *Dorvallia tenuifolia* 4. 1, *Dicksonia apiifolia* 282. 1, *Hymenophyllum Tunbrigense* 3. 5, *Schizaea pectinata* 95. 7, *Osmunda spectabilis* 181. 4, *Botrychium dissectum* 427. 5, *Todea Africana* 427. 5, *Mohria*

thurifraga 350. 10; *Lycopodium curvatum*, *cernuum*, *bryopteris*, and *canaliculatum* 47. 9 to 453. 8, *Eriocaulon decangulare* amalth. pl. 409. f. 5, *Ribes oxyacanthoides* amalth. 212. — He died "in 1706."

Elsholtzia cristata of the mountains of Siberia and Central Asia as far as Hindustan and Lake Baical. A Labiate plant described by Plukenet amalth. 430. 1 *—(Spreng.); termed "*mentha patrina*" by Pallas (Steud.), and apparently from the commencement of the present century occurring in Russia, mentioned by Hoeft as "spontaneous," by Ledebour as "subspontaneous" (A. Dec.): of late years has extended itself into cultivated land in Germany (Koch) and Sweden (Fries), was already naturalized in Germany "in 1830" (Reich.), and about 1823-8 escaped from gardens in Sweden (Wahl.); "in 1850," had extended itself around Angers (Leroy). From "English seeds" was introduced into the environs of Bombay (Gibs., and Graham).

Carex piluliferu of Europe and the adjoining portion of Asia. Described by Plukenet amalth. 91. 8 — (Spreng.), termed "cyperoides alpinum saxatile capillaceo folio caule rotundo triquetro spica seminali nigricante plerumque unica" by Micheli pl. 32 (Linn.), and known to grow from Sweden throughout middle Europe (fl. Dan. pl. 1048, Engl. bot. pl. 885, and Pers.): observed by Linnæus as far as Upsal; by Sibthorp, in the environs of Constantinople.

"In 1705-6" (Pers., and Spreng.), Tournefort in Mem. acad. par. distinguishing by well-defined characters several genera of plants, including *Diervilla*. — He died "Dec. 28th, 1708" (Fonten.).

"1706 A. D." (Humphreys. and Holmes), in South Carolina, an Act of assembly, establishing religious worship according to the Church of England. The province was divided into ten parishes, in each of which a church was built; and the clergymen were all supplied by the British Society for propagating the Gospel.

"July 22d" (Blair), signing of the Union between England and Scotland.

"In this year" (Spreng.), C. Commelyn publishing his Hort. rar. Amst., enumerating† *Chironia baccifera* rar. 9, *C. frutescens* 8, *Mahernia pinnata* 7, *Crinum erubescens* 15; *Aloe echinata*, and *variegata*, *Apicra albicans* 46-8; *Zygophyllum sessilifolium* 10, *Cotyledon spuria* 10, *Spielmannia Africana* 6, *Melianthus comosus* 6, *Cacalia ficoides* 40, *Athanasia dentata* 41, *Senecio ilicifolius* 42, *Centaurea glastifolia* 39; *Arctotis acaulis*, and *calendulacea* 35-6, and *Momordica operculata* 22. — Completed "in 1715;" he died "in 1731."

Lamium multifidum of the Uralian plains. From transported specimens described by C. Commelyn rar. pl. 26 — (Pers.): observed by Pallas trav. i. 257 wild on the Lower Volga.

"1707 A. D." (Marcel p. 221), in Egypt, a change in internal affairs: the authority of the pasha from Constantinople becoming chiefly nominal, giving place to that of the schekh-el-beled, Ismael-Bey. — Who from this time really conducted the administration; and transmitted the charge to his successors in the office.

"The same year" (Maunder), death of Aurungzebe. War ensued, for the succession, between his sons; and Mausum gaining the ascendancy, became emperor of Northern Hindustan under the name of Bahader Shah.

"1708, Aug. 29th, about break of day" (Charlev., Hutch., and Holmes), Haverhill on the Merrimack river surprised by "about two hundred" aboriginals under French officers. The town was plundered and several of the houses burned; the clergyman, "captain of the town," and "thirty or forty other persons were killed; and many" were taken prisoners.

"The same year" (Steinschneid. iii. 30), the peculiar disease of the hair termed "*plica Polonica*," described by Tobias Cohen.

* *Hyptis suaveolens* of Tropical America. Known to grow wild there (Pers., and A. Dec.). Transported to Europe is described by Plukenet amalth. 306. 3 — (Spreng.), Aiton, and L'Heritier: by European colonists also, was carried across the Pacific to the Philippines, Moluccas, Hindustan (Benth.), and Java (Zoll.).

Utricularia minor of Northern Europe and America. Described by Plukenet amalth. pl. 99. f. 9 — (Spreng.); observed by Hayne pl. 6 in Germany (Pers.), by Decandolle in France, and known to grow from Sweden to Ireland and Switzerland (Wats., and A. Dec.). Westward, growing according to Pursh in New Jersey; and according to A. Gray, from Watertown in "N. New York to Wisconsin, and northward."

† *Quamoclit coccinea* of the West Indies and neighbouring portion of North America. A scarlet-flowered Convolvulaceous twiner, transported to Europe, described by C. Commelyn rar. pl. 11, — Linnæus, and Jacquin rar. pl. 35: by European colonists also, carried to Java and Bombay (Choisy, and A. Dec.); observed at Bombay by Graham "in gardens pretty common," by Roxburgh, in Eastern Hindustan. Westward, is known to grow in the West Indies (Pers.); was observed by Nuttall on the Arkansas; according to A. Gray, is naturalized on "river-banks, etc., Ohio, Virginia, and southward;" and according to Chapman, occurs in "cultivated ground, in the middle and upper districts" (of Georgia and Carolina), the flowers "sometimes yellowish."

"In this year" (append. Sibth., and Winckler), Scheuchzer publishing his *Prodrom. agrostograph. Helvet.**

"The same year" (Spreng.), arrival in Southern Arabia of Mervellius and Lalande. — They remained until "1713."

"1709, July 24th" (Forster voy. 44, and Holmes), arrival in California of Captain Trondad, a Frenchman, in the first ship that crossed the Pacific in a high Northern latitude.

"In this year" (Spreng.), after visiting the East "in 1700" and the West Indies "in 1703," Feuillée from Brazil sailing around Cape Horn to Chili and Lima, meeting with *Drymis Winteri* i. pl. 6. f. 1, *Fuchsia macrostema* iii. pl. 47, *Gratiola Peruviana* ii. 17, *Sarmienta repens* ii. 34, *Calceolaria pinnata* ii. 7, *C. salicifolia* ii. 7. 1, *Acaena argentea* ii. 41. 1, *Guccina avellana* iii. 34, *Buddleia globosa* iii. 38, *Cynoglossum Limense* iii. 49, *Lobelia tupa* iii. 29, *Nicotiana paniculata* iii. 10, *Solanum chenopodioides* iii. 24, *S. quercifolium* iii. 15, *S. muricatum* iii. 26, *Lycopersicum Peruvianum* i. 25. 1, *Witheringia montana* i. 46, *Anagallis alternifolia* i. 26. 3, *Viola capillaris* iii. 28, *Nertera depressa* i. 44, *Cestrum auriculatum* i. 20. 2, *Hydrocotyle citriodora* i. 1. 2, *Oenothera tenuifolia* i. 33. 2, *Conanthera bifolia* i. 3. 1, *Herreria stellata* iii. 7, *Phalangium coeruleum* iii. 8, *P. ecremorrhizum* i. 21. 1, *Amaryllis tubiflora* i. 20. 1, *A. Chilensis* i. 21. 3, *A. flammea* i. 20. 3, *A. bicolor* i. 21. 2, *Alstroemeria pelegrina* iii. 5, *A. salsilla* iii. 6, *Pitcairnia coarctata* i. 39. 2, *Tropaeolum peregrinum* iii. 42, *Chlora sessilis* iii. 14. 2, *Cassia stipulacea* i. 42, *Jussiaea Peruviana* iii. 9, *Oxalis rosea* iii. 23, *O. conorhiza* iii. 24, *O. megalorhiza* iii. 25, *Euphorbia laurifolia* iii. 2, *E. portulacoides* iii. 3, *Salpiglossis sinuata* iii. 21, *Eugenia buxifolia* i. 31. 2, *Draccephalum chamaedryoides* i. 1, *Bignonia radiata* iii. 22, *Loasa acanthifolia* iii. 43, *Xuaresia biflora* iii. 48, *Verbena chamaedrifolia* i. 25. 3, *Cristaria betonicaefolia* i. 27. 1, *Ferraria ixioidea* i. 3. 1, *Passiflora titiaefolia* iii. 12, *P. punctata* iii. 11, *Polygala thesioides* iii. 13, *Psoralea glandulosa* i. 3. 2, *Cephalophora glauca* i. 45. 2, *Flaveria eupatorioides* iii. 14. 2, *Baccharis vvaefolia* iii. 37, *Neottia diuretica* iii. 17, *Cymbidium virescens* iii. 19, *C. luteum* iii. 20, *Inga ingoides* i. 19, and *Azolla Magellanica* i. 35 † — He returned to Marseilles "in 1711," published his *Obs. côtes or. Am. Merid.* "in 1714-25," visiting the Canary Islands "in 1724," and died "in 1732."

* *Agrostis alpina* of Subarctic climates and mountain-summits farther South. A grass described by Scheuchzer *prodr.* pl. 4, — and Leysser 34, and known to grow on the mountains of Saxony and Switzerland (Pers.): observed by Decandolle on the Swiss Alps; by Allioni 2161 on rocks in Piedmont and termed "a. rupestris" (Steud.). Westward, was received by Collins from Labrador; observed by myself on the summits of the White mountains of New England; grows on "mountain-tops, Maine to New York" (A. Gray), and on "high mountains of North Carolina" (Chapm.).

† *Galinsoga parviflora* of the Andes from Mexico to Chili. Described by Feuillée iii. pl. 32 — (Spreng.); noted in Peru for its vulnerary and antiscorbutic properties; observed there by Ruiz and Pavon (Pers.); known to grow also in Chili, New Granada, and Mexico (A. Dec.). As transported to Europe, described by Cavanilles iii. pl. 282; cultivated in a garden in Germany in "1800" (Roth *catal.*), had escaped from cultivation near Memel and Osterode in "1807," spreading into Courland and Lithuania and various parts of Germany as far as the Rhine (Reichenb., and Döll): also by European colonists, was carried to Northeast America, where it made its appearance in "waste places, Cambridge, Mass., New York, and Philadelphia" (A. Gray) prior at least to 1859.

Madia sativa of California? An herb called by the Chilians "madi," and oil procured from its seeds (Molin.): observed by Feuillée in Chili: — by Molina, two species, one of them cultivated and the other wild; by myself, two varieties or possibly species frequent and seemingly wild in the environs of Valparaiso and Santiago.

Madia mellosa of . . . A third species, its leaves viscous and amplexicaul, observed by Molina in Chili.

Mimulus luteus of Northwest America. Observed by Feuillée ii. pl. 34 in Peru — (Pers.): known to occur throughout Chili (Benth.), and observed by myself on the river bank of the Maipo above Santiago. In the Northern Hemisphere, was received by Pallas from Northwest America; was observed by Chamisso on Unalascha; and by Lewis and Clarke, on the North branch of the Columbia (Pursh). Transported to our Atlantic States, was cultivated as a garden-flower; and in 1812 was carried to Europe, where it has become naturalized in various localities from Britain to middle Europe (Newman, Godron, and A. Dec.).

Nicandra physalodes of Peru. An annual, two to three feet high with solitary pale blue flowers, observed by Feuillée iii. pl. 16 in Peru — (Spreng.); by Ruiz and Pavon ii. pl. 186, in waste places and cultivated ground around Lima (Pers.); by Jacquin *obs.* iv. pl. 98, in the West Indies; by Chapman, in "waste and cultivated ground, introduced" in our Southern States; by myself as far as 43° in New England, a weed possibly brought by the natives. Transported to Europe, is described by

Brugmansia candida of Peru. A shrub with large white trumpet-shaped odorous flowers, called "floripondio" in Chili, and observed there by Feuillée iii. pl. 46, — and Molina; in Peru, by Ruiz and Pavon ii. pl. 128; and farther North, by Humboldt and Bonpland. As transported to Europe, described by Linnæus, and Persoon; and farther East, enumerated by Graham as introduced in 1837 by the way of Egypt into Hindustan. By European colonists also, carried to Northeast America, where it continues frequent in greenhouses.

"1710, Oct. 2d" (Hutch. ii. 180, and Holmes). Port Royal in Nova Scotia captured by an English fleet, in part fitted out from New England; and the name changed to Annapolis.

In this year (app. Sibth., and Spreng.), Cupani writing his *Panphyton Sicul.*, enumerating *Calamagrostis Plinii* pl. 8, *Linaria pilosa* 24, *Ophrys ciliata* 28, *Orchis ornithis* 29, *O. lactea* 35, *Gnaphalium nodiflorum* 36, *Raphanus cheiranthifolius* 71, *Tolpis quadristata* 118, *Crepis Taurinensis* 120, *C. leontodontoides* 121, *Hypochaeris Sicula* 122, *Lapsana virgata* 127, *Hieracium bractiolatum* 137, *H. crinitum* 144, and *Silene Sicula* 144. — He died "in 1711," his work was published "in 1713," and a Second edition by Bonanni "in 1719."

Orchis ensifolia of the Mediterranean countries. Observed by Cupani panph. pl. 29 in Sicily — (Spreng.), by Villars in Dauphiny, — by Lamarck fl. fr. also in France and termed "o. laxiflora;" by Chaubard, in the Peloponnesus.

Ophrys speculum of the Mediterranean countries. Described by Cupani panph. pl. 28 — (Spreng.), and Link; observed by Bivona i. 60 in Sicily and termed "o. ciliata;" by Gittard, in the Peloponnesus (Chaub.).

Ophrys picta of the Mediterranean countries. Described by Cupani panph. pl. 37 — (Spreng.), and Link; known to grow in Portugal (Pers.); observed by Chaubard in the Peloponnesus; by Steven, and Bieberstein, as far as the Caspian.

"In this year" (Spreng.), Herm. Boerhaave publishing his first *Index Hort. Lugd.*, enumerating * *Salvia pinnata* i. p. 167, *Fedia vesicaria* i. 75, *Conium Africanum* i. 63, *Statice Tatarica* i. 76, *Chrysanthemum Orientale* i. 110, and *Senecio dentatus* i. 99.

"1711 A. D." (Winckl.). In or about this year Vaillant publishing descriptions of plants, including *Aster macrophyllus* act. 583, "aster canadensis humilior salicis minoris folio" act. 584 *A. tardiflorus*?

"1712, A. D." (Hewet, and Holmes), in Northern Carolina, conspiracy of the Tuscaroras and other aboriginal tribes for exterminating the White settlers. Of these, "one hundred and thirty-seven" were surprised and killed about Roanoke; but some escaping, the news spread, a force was raised and the Tuscaroras were totally defeated. The remnant of the tribe abandoned the country, and proceeding North to the "Five nations," was received by them as a Sixth confederate tribe.

"In this year" (Spreng.). Catesby visiting Virginia, meeting with "q. humilis salicis folio brevior" (*Q. cinerea*), "q. Marilandica" i. 19 (*black-jack oak Q. nigra*), "q. folio non serrato" i. 20 (*Q. aquatica*), "q. esculi divisura" i. 23 (*Q. Catesbaei*, Brendel in Am. Nat. for 1870); *Dodecatheon Meadia* app. 1, *Nyssa denticulata* i. 60, *Gleditschia monosperma* i. 43, *Lilium Catesbaei* ii. 58, *Trillium cernuum* i. 45, *Acer dasycarpum* i. 62, *Rhododendron maximum* app. 17. f. 2, *Andromeda arborea* i. 71, *A. Catesbaei* ii. 43, *Halesia tetraptera* i. 64, *Philadelphus inodorus* ii. 84, *Calycanthus floridus* i. 46, *Magnolia tripetala* ii. 61, *M. acuminata* app. 15, *Fothergilla alnifolia* i. 66, *Orobanche Americana* i. 36, *Stewartia malachodendron* app. 13, *Robinia hispida* app. 20, *Pogonia divaricata* i. 58, *Smilax laurifolia* i. 15, *S. tamnoides* i. 52, "smilax non spinosa baccis rubris" ii. pl. 84, *S. lanceolata*, *Cocculus Carolinus* i. 51, *Lilium Pennsylvanicum* iii. pl. 8, *Tetranthera geniculata* ii. 28, *Xanthoxylum Carolinianum* i. pl. 26 (Linn. sp. pl.).

At this time (Charlev. ii. 427, and Holmes), the whole province of Louisiana containing "but twenty-eight French families;" one half of the population being either traders or workmen.

"The same year" (= "1707 + 5 years" of Maunder), end of the reign of Bahader Shah. "About this time" (Maunder), a firman or grant obtained by the British East India Company; exempting their goods of export and import from duties.

"1712 to 1713 A. D." (Spreng.), Frezier visiting the Straits of Magellan, Chili, and Lima. — He published his *Relat.* in "1717," and died in "1773."

Adanson, and Gærtner ii. pl. 131; has been found spreading spontaneously in Germany (Burkh., and A. Dec.), in Lithuania, and around Caucasus (Ledeb.); also in Western Hindustan, around Dapooree (Lush, and Graham); and on Ceylon, where it has been introduced since 1823 (Gardner).

* *Euxolus lividus* of Tropical and Subtropical America. Transported to Europe is described by Boerhaave lugd. i. p. 97 — (Linn. sp. pl.). Westward. was observed by Clayton in Virginia (Gron. 116); by Chapman, from "South Florida to South Carolina;" and known to grow abundantly around Bahía (Moq.). Probably by European colonists carried to China, observed by Hinds at Hong-kong, by Roxburgh 2d edit iii. 605 under cultivation in Bengal (A. Dec.).

"1713, March 30th" (Blair, Anders. iii. 50, and Holmes), signing of the treaty of Utrecht: France ceding to Britain the island of St Christopher, Nova Scotia, Newfoundland, and the Bay and Straits of Hudson. On the news reaching New England, the aborigines on the Eastern frontier sued for and obtained peace. The French perceiving that the island of Cape Breton was not expressly mentioned, formed a settlement there in "August," and claimed to be its first inhabitants.

"The same year" (Krashenin. hist., and Bickmore), Kunashir, the twentieth Kurile island from the continent, reached by a Cossack.

"In this year" (Pall. trav. ii. 524), by the Swedish officials in Tobolsk, a school established and instruction given in Latin, French, German, geometry, geography, and drawing. — Its reputation soon became widely extended, but in consequence of the Treaty of Neustadt the strangers withdrew.

"1714, Aug. 1st" (Nicol), Anne succeeded by George, now king of United Britain.

"The same year" (Keith 173, univ. hist. xli. 549, and Holmes), the Alleghany mountains crossed by Alexander Spotswood, lieutenant governor of Virginia. The country beyond as far as the Mississippi, though traversed by the French, having been concealed from the knowledge of the English.

"In this year" (Winckl.), De la Loubere publishing his Descript. Siam.

"1715, March 6th" (Salmon chron. hist., and Holmes), the *aurora borealis* first seen in England, from "evening to near 3 o'clock in the morning, to the great consternation of the people."

"The same year" (Nicol.), Louis XIV. succeeded by Louis XV., as king of France.

"The same year" (Hewet i. 228, and Holmes), in Southern Carolina, general conspiracy among the Yamassees and other aboriginal tribes for exterminating the White settlers. Of these, "ninety" were surprised and slain in and around Pocotaligo; war followed in all directions; but the Yamassees were finally defeated, and the remnant of the tribe found refuge in the Spanish territory of Florida.

A Catalogue of the Beaufort garden, in the handwriting of Sloane, contains *Mesembryanthemum albidum*, *scalpiatum*, *pugioniforme*, *noctiflorum*, *spinosum*, *muricatum*, *aciniaciforme*, *tuberosum*, *perfoliatum*, *micans*, and *hispidum*. — Sloane died "in 1753" (Spreng. gesch. ii. 83-115).

"In this year" (J. E. Smith, and Spreng.), Garidel publishing his *Plantes d'Aix*, enumerating *Euphrasia viscosa* pl. 80, and *Iberis linifolia* 105. — He died in "1737."

"1716 A. D." (Salmon chron. hist., and Holmes), sailing of two French ships from the river Mississippi; being the first that carried away merchandize from the colony in Louisiana.

"In this year" (Linn. fl. suec.), Linder publishing his *Flora Wiksbergensis*. — He died "in 1724" (Spreng.).

"In this year" (Spreng.), Anton. Danty d'Isnard publishing his memoir on *Celastrus scandens*: — "in 1717," on *Lamium orvala*, and *L. Garganicum*: "in 1719," on *Centaurea Isnardi*, and *C. Lippii*: "in 1720," on *Euphorbia cereiformis*, and *E. anacantha*: and "in 1724," on *Sisymbrium supinum*.

"In this year" (Spreng.), Bradley publishing his *Plant. Succul.*, enumerating *Crassula tetragona* v. pl. 11, *Cereus hexagonus* i. 1; *Mesembryanthemum caninum*, *tortuosum*, *calamiforme*, *pugioniforme*, *dolabriforme*, *tenuifolium*, *splendens*, *micans*, *spinosum*, *crassifolium*, *glaucum*, *uncinatum*, *albidum*, *perfoliatum*, and *falcatum*. — The publication was completed in "1727," and he died in "1732."

At this time (Spreng.), Maria S. Merian writing her *Insects of Surinam*, describing among plants *Costus Merianæ* pl. 36, *Cassia bicapsularis* 58, *Mutlera moniliformis* 35, and *Genipa Merianæ* 43. — She died in "1717," and her work was published in "1726."

"1717 A. D." (Charlev., Du Pratz, and Holmes), on the Lower Mississippi, founding of the city of New Orleans. The commerce of Massachusetts, of Boston and Salem, at this time employing "four hundred and ninety-two ships," measuring "twenty-five thousand four hundred and six tons," and manned by "three thousand four hundred and ninety-three" seamen (Hutch. ii. 111).

"The same year" (Pauth. 447), the emperor Khang-hi warned by a travelled mandarin against the enterprising character of Europeans, their formidable ships armed with cannon, and especially against the Dutch.

In this year (Spreng.), Petiver continuing his descriptions of plants, including *Chionanthus Virginica* hort. sicc. 241, *Isolepis supina* phil. trans. 282. 1253, *I. Antarctica* p. t. 282. 1261, *Cyperus exaltatus* mus. 539, *Galium saxatile* herb. 30. 6, *Chenopodium ficifolium* herb. 8. 3, *Atriplex littoralis* herb. 7. 4, *Erica glutinosa* mus. 161, *Sibthorpia Europæa* herb. 6. 11, *Arabis hispidia* herb. 50. 3, *Solidago Cambrica* herb. 16. 11, "clitorius marianus trifolius subtus glaucus" *Clitoria Mariana* sicc. v. 243 (Pers.), *Stylosanthes elatior* sicc. 84, "gramen pratense majus virginianum" *Tricuspis seslerioides* mus. 239, "phaseolus marianus scandens floribus comosis" mus. 453 *Galactia comosa* ("Glycine" of Linn., and "Galactia mollis" of Mx.), *Helianthus angustifolius* mus. 103. — He died "in 1718," and a collected edition of his works was published "in 1764."

"In this and the following year" (Spreng.), Schober following the banks of the Volga and shore of the Caspian as far as Hyrcania or Northwestern Persia.

"1718 A. D." (univ. hist. xli. 336, and Holmes), New Providence, one of the Bahama Islands,

having become the resort of pirates, seized by an English fleet under Woods Rogers; and comparative security extended to the commerce of the West Indies. — In the following year, an attack by a Spanish fleet from Havanna, was repelled (Hewet i. 243, and Ramsay i. 5.).

"In this year" (Spreng., and Winckler), Henr. Bern. Ruppian publishing his *Flor. Jenensis*, enumerating *Senecio sylvaticus*. — He died "in 1719."

Charophyllum aurum of the mountains of middle Europe. Observed by Ruppian iii. pl. 5 in the environs of Jena, — and known to grow from Switzerland nearly as far as Belgium (Jacq. austr. pl. 64, Pers., and A. Dec.). In Britain, escaped from cultivation was found "in 1809 or a little earlier" between Arbroath and Montrose, and near Edinburgh (Engl. bot. pl. 2103), is mentioned by Hooker "in 1821" as still existing in Scotland, but has since disappeared.

"1719 A. D." (Smith 191, and Holmes), a Presbyterian church first founded in New York.

"Dec. 17th" (Trumbull, coll. hist. ii. 14, and Holmes), the *aurora borealis* first seen in New England; beginning "about 8 o'clock in the evening," and filling the country with alarm.

"In this year" (J. E. Smith, and Spreng.), Scheuchzer publishing his *Agrostographia*, enumerating *Scirpus campestris* pl. 7. f. 19, *S. baeothryon* 7. 21, *Eriophorum Scheuchzeri* app. pl. 7, *Holcus mollis* 4. 25, *Festuca rubra* 6. 9, *F. pratensis* 4. 6, *Bromus Ligusticus* 6. 13, *B. squarrosus* 5. 11, *B. giganteus* 5. 17, *Avena versicolor* app. 3. 3, *Calamagrostis speciosa* 3. 11, *Elymus Europaeus* 1. 1, *Luzula spadiacea* 6. 3, *Carex Davalliana* 11. 9. 10, *C. foetida* app. 4. 3, *C. cuneata* 11. 7, *C. lobata* 11. 8, *C. alba* 10. 4. 5, *C. clandestina* 10. 1, *C. collina* 10. 8. 9, *C. brachystachys* 10. 7, *C. limosa* 10. 15, *C. filiformis* 10. 11, and *Restio triticeus* 7. 15. 16. — He died "in 1737."

Eragrostis pilosa of Central Asia. An annual grass described by Scheuchzer agrost. pl. 4 — (Spreng.), Linnæus, Dubois, Pallas, Suter, Villars, and Beauvois (Steud.); known to occur in Italy and Carniola (Pers.), also in Tauria and Siberia (Kunth); and observed by Delile growing spontaneously near Cairo. By European colonists carried to Northeast America, was observed by Torrey as far North as 41°; by myself, near Philadelphia; by Muhlenberg, in Pennsylvania and New Jersey, and received from Illinois; and according to A. Gray, is "naturalized" in "sandy or gravelly waste places, S. New England to Illinois, and southward."

Elymus crinitus of the Mediterranean countries. An annual grass described by Scheuchzer agrost. 20, — Schreber ii. pl. 24, and Pallas: observed by Buxbaum cent. i. pl. 52, and Sibthorp, around Smyrna; by Forskal, near Constantinople; by D'Urville, on the island of Milo; and is termed "hordeum crinitum" by Desfontaines (Steud.).

"In this year" (Spreng.), Jos. Monti publishing his *Prodr. stirp. bonon.*, enumerating *Cyperus Monti*.

In this year (= seven years after his arrival in Virginia, Spreng.), Catesby visiting Carolina, Florida, and the Bahama Islands, meeting with *Fraxinus Caroliniana* i. 80, *Catesbaea spinosa* ii. 100, *Ipomoea Carolina* ii. 19, *Gardenia clusiaefolia* i. 59, *Vinca lutea* ii. 53, *Rhus elegans* app. 4, *Amyris elemifera* ii. 33,* *Silene Catesbaei* ii. 43, *Magnolia grandiflora* ii. 80, *Anona glabra* ii. 64, *Crescentia jasminoides* i. 59, *Tecoma pentaphylla* i. 3, *Jacaranda Caroliniana* i. 42, *Erythrina herbacea* ii. 49, *Epidendrum nocturnum* ii. 68, *Phoradendron rubrum* ii. 81, *Smilax aristolochiaefolia* i. 47, *Acacia glauca* ii. 42, *Convolvulus sagittifolius* i. 35, *Laurus (Persea) Catesbyana* ii. 28, *Symplocos tinctoria* i. p. 54. And as appears from his herbarium, *Clematis Catesbyana*, *C. ovata*, *Seymeria cassioides*, *S. pectinata*, *Ambrosia hispida*, *Lysimachia lanceolata*. — He returned to Europe "in 1722-6," published his *Nat. hist. Car.* "in 1731-43," and died "in 1749."

"1720 A. D." (Hewet i. 290, and Holmes), through the action of the people of Carolina, the charter of the proprietary government annulled: leaving themselves under the immediate protection of the British crown.

"The same year" (Spreng.), Messerschmid on his way to Tobolsk.†

* *Amyris toxifera* of Florida and the West Indies. A shrub or small tree called in South Florida *torch-wood* (Chapm.): described by Catesby i. pl. 40 — (Pers.); observed by N. A. Ware in Florida; and known to grow in the West Indies (Dec.). Transported to Europe, is termed "*toxicodendrum pinnatum*" by Miller (Steud.).

† *Astragalus melilotoides* of the Mongolian plains. Observed by Messerschmid — (Amm. 119 n. 157), and Gmelin iv. 38 u. 51, in Siberia; by Pallas iv. 370 to 713, on the Upper Selenga.

Trifolium hedysaroides of the Mongolian plains. Suffruticose, observed by Messerschmid 1724 — (Amm. 154), and Gmelin fl. 31 n. 39, in Siberia; by Pallas iv. 379 to 715, on the Upper Selenga.

Campanula verticillata of Daouria. Observed by Messerschmid — (Amm. 18), and Sokolof, in Daouria (Pall. trav. iv. 610 to 690).

Potentilla geoides of Siberia. Observed by Messerschmid hodeget., — and Pallas iv. 698, in Siberia.

According to a Japanese account written in this year (Klapr. addit. to San-kokf p. 197), people of the two Aino villages of Kousouri and Atskesi on the East side of Yeso voyaging once a year to the island of Rakko sima to procure "rakko" or *sea-otter*; and the natives being much dreaded, only the strongest and boldest men are selected for the expedition: the distance is unknown, but a person who resided "three" years there, represents Rakko sima (Aleutian Islands?) as very remote: no native has ever visited Yeso, nor has a Japanese ever visited Rakko sima.

In this year (Spreng.), Vaillant writing his Bot. Paris, enumerating* *Eriophorum gracile* pl. 17. 2, *Aira aquatica* 17. 7, *Agilops triuncialis* 17. 1, *Exacum pusillum* 6. 2, *Alsine segetalis* 3. 3, *Juncus tenaxia* 20. 1, *Elatine triandra* 2. 1, *Silene Gallica* 16. 12, *Aspidium regium* 9. 1, *Riccia glauca* 19. 1, and *R. fluitans* 19. 3. — He died "in 1721," and the work with plates by Aubriet was published "in 1727."

Tillæa Vaillantii of the Mediterranean countries. A diminutive annual observed by Vaillant pl. 10 in the environs of Paris; — by Brotero, in Portugal (Steud.); by Moris, on Sardinia: by Gussone, on Sicily and Lampedusa; and received by A. Richard from the margin of a mountain-pool near Adowa in Abyssinia (A. Dec.).

"In this year" (Spreng.), Herm. Boerhaave publishing his Second Index Hort. Lugd., enumerating *Aulax pinifolia* ii. p. 123, *Leucadendron argenteum* ii. 195, *L. Levisanum* ii. 202, *L. squarrosum* ii. 197; *Protea cynaroides, speciosa, melaleuca, lepidocarpum, longifolia, mellifera, scolymus, acaulis, longiflora*, and *repens* ii. 183-99; *Leucospermum conocarpum* ii. 196, *L. hypophyllum* ii. 198, *Minctes hirta* ii. 194, *M. cucullata* ii. 206, *M. Hartogii* ii. 205, *Gasteria carinata* ii. 131, *Apicra arachnoides* ii. 131, *Bumelia lycioides* ii. 263 (Linn. sp. pl.), "phaseolus americanus supra et infra terram fructus gerens" ii. 28 *Amphicarpea monoica*. — He died "in 1738."

"In this year" (Spreng.), after his Compend. "in 1718," Pontedera publishing his Anthologia. — He died "in 1758."

"1721 A. D." (Pauth. 447), arrival at Pekin of another legate from the pope. He was received by Khang-hi in a friendly manner, and assured that there was "union among the missionaries." But a decree was issued, Prohibiting Europeans, "since they could not understand the language," from preaching their religion in China.

"The same year" (Hutch., coll. hist., and Holmes), the *small pox* making havoc in Boston and the neighbourhood, by advice from Rev. Cotton Mather, *inoculation* was introduced by Dr. Zabdiel Boylston; who had the courage to begin with his own family, and meeting with success, continued the practice amid violent opposition. About "three hundred" persons were inoculated, but of these "it is impossible to determine the number which died."

At this time (biogr. univers.), A. G. Barcia writing. — He brought his work down "to 1722."

"In this year" (Spreng.), after residing for eighteen years as consul at Smyrna, William Sherard returning to England.

"In this year" (Spreng., and Winckl.), Buxbaum publishing his Enum. plant. Hal.

Chenopodium urbicum of Europe and the adjoining portion of Asia. Described by Buxbaum enum. — (Spreng.): known to grow in waste places in France and middle Europe as far as Denmark (flor. Dan. pl. 1148, Engl. bot. pl. 717, Lam. fl. fr., and Pers.). Eastward, was observed by Sibthorp, and Chaubard, in cultivated ground in Southern Greece and around Constantinople. By European colonists, was carried to Northeast America, where it was observed by Muhlenberg (Moq.), and according to A. Gray is "not rare eastward, naturalized."

"In this year" (Winckl.), Rzacynski publishing his Hist. nat. Polon Lithuan.

"1722, Dec. 20th" (Chinese chron. table, and Pauth. 438), death of Khang-hi, "three hundred and first emperor from the year 'kia-tse' of Hoang-ti" (according to his own reckoning in his will). He was succeeded by his "fourth son" Young-tching, of the same Twenty-fourth dynasty.

* *Erythraea ramosissima* of Western Europe. Observed by Vaillant pl. 6 around Paris, — by Schmidt i. n. 131 in Bohemia (Pers.), by Villars in Dauphiny, and by Pollini near Verona (Steud.); termed "e. palustris" by Schrader, "gentiana palustris" by Lamarck, "chironia pulchella" by Smith and Deslongchamps, and "hippocentaurea pulchella" by Schultes (Steud.). Westward, was observed by Pursh on the seashore of New Jersey and termed "exacum pulchellum;" but is regarded by A. Gray as "naturalized" only, occurring in "wet or shady places, Long Island to E. Virginia, scarce."

Sagina Linnaei of Subarctic climates. Termed "*alsine tenuifolia pedunc. fl. longiss.*" by Vaillant paris. 8, — "*spergula saginoides*" by Linnaeus; observed also by Sauvages montp. 142 in France; and known to grow from Spitzbergen and Lapland to the mountains of Switzerland (Wats.), also in Siberia (Gmelin), and on Caucasus and the Altaian mountains (Ledeb.). Westward, was observed by Hooker on Iceland, and received from Greenland; by Parry, in Arctic America; by Menzies, in Northwest America; by Chamisso, at Escholtz Bay as well as on Unalashka, and St. Paul's Island.

In the "Ten precepts," attributed to the emperor Young-tching, *gambling* is forbidden; and homicide even in a *duel*, is regarded as deserving death.

"1723 A. D." (Colden's map, Smith, and Holmes), at Albany, the Nicariagas of Missilimakinak by their own desire, formally received by the "Six nations" as a Seventh confederate tribe.

"In this year" (J. E. Smith, and Spreng.), Tilli publishing his Cat. hort. Pisan., enumerating *Luzula spicata* 91, *Knautia Propontica* 48, *Rumex Aegyptiacus* 37. f. 1, *Medeola angustifolia* 12. 2, *Eugenia uniflora* 44, *Antirrhinum cirrhosum* 38. 2, *Pelargonium fulgidum* 26, *Malva Sherardiana* 35. 2, *Phaca Gerardi* 14. 1, *P. alpina* 14. 2, *Anthemis alpina* 19. 1, *Centaurea cichoracea*, 27, *Zamia pungens* 45, *Acacia pedunculata* 1. 2, and *Woodwardia radicans*?

"1724 A. D." (Charlev. ii. 376, and Holmes), hostilities on the Eastern frontier of New England; the Abenakis being jealous of the extension of settlements, and favouring French interests through the influence of the Jesuit missionary P. Rallè residing at Norridgewog. After the destruction of the town of Berwick, an expedition was sent against Norridgewog, and during the capture Rallè and "about eighty" natives were slain. He left a manuscript dictionary of the *Norridgewog language* of "above five hundred" quarto pages, which was deposited in the library of Harvard college.

"The same year" (Adams, and Holmes), at Ephrata in Pennsylvania, the sect of Dunkers founded by a German colonist.

"In this year" (Winckl.), Valentyn publishing his account of the East Indies. — The fifth and last volume was issued "in 1726."

"1725, Jan. 21st" (Pall. trav. iv. 396), a severe *earthquake* experienced by Messerschmid at Tchitinsk in Siberia, not far from the Selenga. — Returning, Messerschmid wrote the first history of Siberia, died "in 1730," and the plants he collected were published by Io. Ammon.

"In this year" (Nicol.), Peter the Great succeeded by Catharine; now empress of Russia. "June 11th," George succeeded by George II., now king of United Britain.

"Aug. 20th, 12th of George I." (Hutch. ii. 3, Dougl. i. 380, Brit. emp. 352, and Holmes), date of an explanatory charter, issued on the complaint of governor Shute of Massachusetts against Acts of the Legislature; relating especially to the "king's woods," the forts, and forces. — The additional charter was accepted on the following "Jan. 15th" by the Massachusetts Legislature.

"In this year" (Stirling, and W. W. Hunter), Muhammad Taki appointed deputy-governor of Orissa. — His oppressions induced the priests of Jagannath to flee across the Chilka Lake, taking the image with them.

"In this year" (Spreng.), after his *Generat. fung.* "in 1714," Ludw. Ferdin. Marsigli publishing his *Hist. phys. de la mer.* — He died "in 1730."

Sterculia plataniifolia of the mountains of Yemen. A large tree called there "kulham" (Forsk.); and from transported specimens termed "firmiana" by Marsili — (Pers.), "f. chinensis" by Medicus and "hibiscus simplex" by Linnæus (Steud.); was cultivated in England in 1757 (Ait.). Eastward, was observed by Clot-Bey in the gardens of Egypt; and by Forskal p. 96, wild among the mountains of Yemen. Is however by Medicus, and Persoon, attributed to China and Japan.

About this time (Spreng, and Winckl.), Buxbaum visiting Constantinople and Asia Minor as far as Armenia and Iberia, meeting with *Salicornia strobilacea* cent. i. pl. 10. f. 2, *Corispermum pungens* iii. 56, *Veronica gentianoides* i. 35, *V. biloba* i. 36, *V. Orientalis* i. 38, *V. pectinata* i. 39. 1, *V. cymbalaria* i. 39. 2, *V. filiformis* i. 40. 1, *V. parvifolia* i. 41. 2, *V. peduncularis* i. 41. f. 1, *Ziziphora serpyllacea* iii. 51. 2, *Valeriana alliariaefolia* ii. 11, *Cyperus hamulosus* iv. 60. 1, *Aegilops squarrosa* i. 50. 1, *Bromus alopecuroides* v. 38. 1, *B. inermis* v. 40. 2, *B. lanceolatus* v. app. 19, *B. confertus* iv. 54. 1, *Polycnemum oppositifolium* i. 31. 1, *P. sclerospermum* v. 58, *P. malacophyllum* i. 17. 2, *Crucianella molluginoides* ii. 30. 1, *Galium cucullaria* i. 19. 2, *Symphytum Orientale* v. 68, *Lycopsis obtusifolia* ii. 13. 2, *Moltkia coerulea* ii. 14, *Campanula lamifolia* v. 18, *Salsola glauca* i. 13, *S. rigida* i. 14. 1, *S. crassa* i. 14. 2, *S. vermiculata* iii. 11. 2, *S. foliosa* i. 19. 1, *Kochia prostrata* i. 15, *K. hyssopifolia* i. 15, *K. sedoides* iii. 49, *Statice acerosa* ii. 10, *Linum luteolum* v. 59, *Evolvulus linifolius* ii. 30. 3, *Allium Sibericum* iv. 45, *Asphodelus prolifer* ii. 36. 2, *Atraphaxis spinosa* i. 30, *Sophora alopecuroides* iii. 46, *Ruta villosa* ii. 28. 1, *Reaumuria hypericoides* ii. 35, *Saxifraga hederacea* ii. 45. 2, *Sedum spurium* v. 61. 2, *Silene fimbriata* iii. 57, *Euphorbia tuberosa* ii. 23, *E. micrantha* ii. 25, *Lythrum acuminatum* i. 47. 1, *Potentilla pimpinelloides* i. 48, *Trollius patulus* i. 22, *Nepeta Mussini* iii. 50. 1, *Murrubium Astrakanicum* iii. 50. 2, *Dracocephalum Altaicum* i. 7, *Rhinanthus trifidus* i. 8, *Antirrhinum glaucum* iv. 37, *Orobanche alba* iii. 2, *O. coerulea* iii. 1. 2, *Celsia betonicaefolia* i. 21, *Isatis Armeniaca* i. 4, *Clypeola lasiocarpa* i. 2. 2, *Pugionium cornutum* i. 9. 1, *Lepidium vesicarium* i. 26, *Thlaspi Buxbaumii* i. 2. 1, *Cheiranthus cuspidatus* ii. 33. 1, *Hesperis cretacea* ii. 32. 1, *Arabis aspera* ii. 33. 2, *Raphanus Tauricus* iii. 73, *Cleome ornithopodioides* i. 9. 2, *Erodium oxyrrhinchum* ii. 48. 1, *Polygala supina* iii. 70. 2, *P. bracteolata* iii. 71, *Orobis hirsutus* iii. 41, *O. sessilifolius* ii. 38, *Lathyrus incurvus* ii. 44, *Vicia Bithynica* ii. 45. 2, *Coronilla Cappadocica* ii. 40. 2, *Hedysarum circinnatum* ii. 42, *Astragalus varius* iii. 37, *A. brachycarpus* iii. 38. 1, *A. galegiformis* iii. 40, *Oxytro-*

pis lunata iii. 36. 2, *Scorzonera graminifolia* ii. 21, *Lactuca sonchifolia* v. app. 36, *Chrysanthemum carneum* ii. 20, *Achillea filicifolia* ii. 19, *Centaurea nitens* ii. 15. 1, *C. balsamita* pl. 16, *Aristolochia Pontica* i. 45, *Carex Buxbaumii* iv. 59, *C. secalina* i. 54, *Smilax excelsa* i. 27.

Astragalus contortuplicatus of the Uralian plains. Termed "*a. repens siliquis undulatis*" by Buxbaum cent. iii. pl. 39:—observed by Sibthorp on Cyprus and the plains of Asia Minor; by Gmelin iv. pl. 28, and Pallas i. 224 to v. 325, on the Lower Volga.

Veronica Buxbaumii of middle Asia. Termed "*v. flosculis oblongis pediculis insidentibus chamaedrys folio major*" by Buxbaum cent. i. pl. 40,—and has since extended itself in cultivated ground into middle and Northern Europe; was observed by Sibthorp pl. 8 in the environs of Constantinople, by Chaubard in cultivated ground in the Peloponnesus; by Tenore, in Italy; by Martens and Koch in Germany, by Lejeune in Belgium, by Fries in Denmark and the neighbouring portion of Sweden, is known to occur in the Calvados, has become naturalized within the present century in the environs of Geneva, and since "1829" has become known in Britain (A. Dec.) By European colonists, was carried to Northeast America, observed in Milton near Boston (D. Murray), and in "waste grounds, Philadelphia, rare" (A. Gray).

Corispermum hyssoptifolium of the Uralian plains. An annual observed by Buxbaum cent. iii. pl. 55—(Pers.): by Sibthorp, along the Black Sea in the maritime sands of Thrace; by Pallas trav. i. 53, along the Volga. And perhaps the same species by Lewis and Clark, Nuttall, and E. James along the Missouri as far as the Platte and by Nuttall along the Arkansas.

Salicornia Caspia of the shores of the Caspian. Described by Buxbaum cent. i. pl. 10;—observed by Pallas trav. i. 676 at the mouth of the Yaik.

Ornithogalum nanum of the East Mediterranean countries. Termed "*o. humifusum floribus umbellatis albis*" by Buxbaum ii. pl. 37:—observed by Sibthorp, and Chaubard, from the Peloponnesus to the Dardanelles.

"1726 A. D." (Hutch. ii. 316, and Holmes), treaty of peace with the aboriginal tribes on the Eastern frontier of New England.—"A long peace" followed: and the "treaty has been applauded as the most judicious which has ever been made with the Indians."

"1727, Oct. 21st" (Klapr. mem. i. 59), a treaty concluded between Russia and China:—and in conformity in the following year, the first Russian guard-house established at Kiakhta, now the frontier trading-city.

"Oct. 29th, about 10 h. 40 min. p.m." (Hutch. ii. 326, and Holmes), in a very clear and serene sky, with "perfect calm and tranquillity," a severe *earthquake*; lasting about two minutes, and extending from the river Delaware to the Kennebeck. Stone walls and the tops of several chimneys were shaken down. On the same day, many buildings thrown down on the island of Martinico; where the earthquake continued, with very short intervals, eleven hours (univ. hist. xli. 230).

"The same year" (coll. hist. v. 206, and Holmes), death of John Thomas, an aboriginal aged "one hundred and ten." He refused, early in life, to join the Pequods against the colonists; was among the first who joined the church, when it was gathered by Eliot at Natick; and continued exemplary through life.

"In this year" (Spreng.), Threlkeld publishing his *Stirp. Hibern.*—He died in "1728."

"1728, July 14th" (transl. with Du Halde), after journeying from Tobolsk to Okhotski and thence by sea, ascertaining that the Kuriles "burn their dead," while the Kamtchatkans "throw them in the woods to be devoured by dogs," Bering sailing from Kamtchatka river. Following the coast Eastward, he met eight men in a leathern boat who called themselves "Tzukchi;" and "Aug. 10th" discovered an island, which from the day he named "St. Laurence." Continuing along the land to "Lat. 67° 18'," on the "15th" he turned back; having unawares passed through the straits—which afterwards received his name.

His companion Steller found the Ainos of the Southern point of Kamtchatka* counting with their fingers and toes and having no name for numbers beyond "two hundred," having no idea of the art of writing but making notches to assist the memory, employing besides for the same purpose knots

* *Gymnandra borealis* of Arctic Asia and America. Observed by Steller from the Lower Lena to Kamtchatka—and on Bering's Island; by Pallas iv. 43 to 682 in the alpine region of Daouria; by Soujef, at the mouth of the Obi (Pall.). Westward, was received by Pursh from the mouth of the Columbia.

Geum anemonoides of Kamtchatka. Observed by Steller,—and to the time of Pallas iv. 699 not found beyond the limits of Kamtchatka. Termed "*dryas pentapetala*" by Linnæus, "*anemone pusilla*" by Gaertner nov. comment. petrop. xiv. 1. pl. 19 (Pall.); not found in Kamtchatka by Chamisso, but observed by Merk on the Kurile Islands and the Northwest coast of America, and by Egede pl. 2 in Greenland (Pursh).

in leather thongs (the quippus) like the Chinese and natives of South America. He made a vocabulary of the language — (given by Klaproth transl. San-kokf).

"The same year" (univ. hist. xli. 208, and Holmes), the Negroes imported in three years into Barbadoes, Jamaica, and Antigua, ascertained on parliamentary inquiry to number "forty-two thousand."

"The same year" (Hewet 317, and Holmes), *yellow fever* in Charleston sweeping off multitudes of the inhabitants. "The physicians knew not how to treat the disease, which was as unknown as it was fatal;" and the planters suffered no one to carry in supplies, "lest the disorder should be brought into the country."

"The same year" (Spreng., and Winckl.), after residing in the West Indies, as related in his *Voyag. Amer.* "in 1722," Labat publishing his *Afr. Occid.* — He died "in 1738."

"In this year" (Spreng.), Franz Balth. Lindern publishing his *Tournefortius alsat.*, enumerating *Lindernia pyxillaria* p. 156, and *Nyagrum dentatum* 94. — He published his *Hort. alsat.* "in 1747."

At this time (Spreng., and Winckler), Zannichelli writing his *Plant. Venez.* — He died "in 1729," and his *Opuscul. bot.* were published "in 1730."

"In this year" (Spreng., and Winckl.), Buxbaum publishing his *Cent. plant.*, enumerating* *Erica abietina* iv. 41, *Sigesbeckia Orientalis* iii. 52, *Satyrium cucullatum* iii. 8, *S. coriifolium* v. 10, *Corycium crispum* v. 11, *C. vestitum* v. 12, *Pterygodium catholicum* v. 21, and in *Act. i. pl. 8. f. 1* *Andromeda* (*Cassandra*) *caliculata*. — He died "in 1730," *Cent. iv.* was published "in 1733," and the fifth and last "in 1740."

"In this year" (Spreng. gesch. ii. 223), John Martyn publishing his *Plant. rar.*, enumerating† *Parietaria polygonoides* p. 8, *Phlox Carolina* 10, *Gronovia scandens* 40, *Crassula scabra* 24, *Pancreatium Caribaeum* 27, *Baptisia alba* 44, *Cassia ligustrina* 21, *Mesembryanthemum felinum* 30, *Antirrhinum triste* 35. f. 2, *Martynia diandra* 42; *Passiflora serratifolia*, *cuprea*, *holosericea*, and *lunata* 37-56; *Erodium Chium* 4, *E. laciniatum* 19; *Pelargonium inquinans*, *papilionaceum*, and *cucullatum* 3-28; *Aster grandiflorus* 19, *Solidago altissima* 14, *Helianthus atrorubens* 20, *Coreopsis lanceolata* 26, *Millera quinqueflora* 41, *M. biflora* 47, and *Croton lobatum* 46: — the fifth dec. "in 1732;" he died "in 1768."

Amaranthus cruentus of China. Called by the Greeks "vltō kökinō" (Forsk.), from transported specimens described by Martyn cent. vi. pl. 6 — (Linn. sp.); observed by Forskal at Constantinople and termed "a. ruber foliis subtus rubris spicis erectis;" cultivated in gardens, and has become naturalized in various parts of France (A. Dec.). Eastward, was observed by Moon under cultivation on Ceylon; by Roxburgh, under cultivation in Bengal; by Blanco, on the Philippines; and is known to occur in China (Pers.). By European colonists was carried to America, received by Linnæus from the Bahamas, observed by Maycock on Barbadoes, and by A. Gray "in gardens, etc." in our Northern States.

"In this year" (Spreng., and Pursh), Sherard, continuing his correspondence and receiving plants from John Bartram in the environs of Philadelphia, *Oldenlandia glomerata* (Pursh 745), from Tilden at Hudson's Bay. — He died before the close of the year, leaving the most extensive collection of dried plants at that time in existence, including "twelve thousand" species.

"1729, May" (Hewet, and Holmes), the titles and interest of the proprietors of Carolina purchased and surrendered to George II. The province was now divided into two distinct governments, called North and South Carolina.

Returning from Davis Straits (hist. coll. i. p. 233) along the Labrador coast, Capt. Henry Atkins

* *Lachenalia tricolor* of Austral Africa. Transported to Europe, described by Buxbaum cent. iii. 20 — (Spreng.), Jacquin rar. pl. 61, and the younger Linnæus. In its wild state, known to grow in Austral Africa (Pers.).

† *Modiola Caroliniana* of the Alluvial margin of Northeast America. A humble Malvaceous annual, transported to Europe, described by Martyn plant. rar. 34 — (Spreng.), Dillenius elth pl. 4, and Cavanilles ii. pl. 15 (Pers.); has become a weed in cultivated ground around Sorèze (Godron, and A. Dec.). Westward, was observed by Michaux in Virginia and Carolina (as far North therefore as 37°); by Elliot, in cultivated ground in South Carolina; by Croom, as far as 30° 30'; by Chapman, "waste places, Florida to North Carolina, and westward."

Bletia verecunda of Florida and the West Indies. An orchid, transported to Europe, described by Martyn 50 — (Spreng.), Miller dict. pl. 145, and Jacquin rar. iii. pl. 602. Westward, observed by Browne on Jamaica, the cornus "bitterish and attended by a clamminess that leaves a light prickly warmth behind it, but this wears off soon," and "when dried it may be used with great propriety as a stomachic" (Lindl.); by Swartz, also in the West Indies; by Michaux, on the Bahamas; by Chapman, "open pine barrens, Middle and East Florida; was received also from Florida by Nuttall (Ell.).

"in Lat. 53° 40' or thereabouts" descried "twelve canoes with as many" natives proceeding to an island not far off, and following in his ship anchored there. On landing, the natives "by their actions shewed signs of fear and amazement;" but advancing alone "without anything in his hands," he was suffered to come near, and after a time succeeded in making them comprehend, that he wished to exchange different articles for whalebone. The natives were dressed, "some in seal skins," but chiefly in "beaver coats" of "many pieces sewed together, being the best patches in the skin;" demonstrating absence of traffic with any civilized people, not even with the Canadian French, nor with the Hudson Bay factories. Their canoes "were made of bark and whalebone, strongly sewed together, covered with seal skin, payed over with a dark sort of gum" (. . .). The natives "were well made, and strong, very fat and full of blood;" their "limbs well proportioned, their complexion a dark red, their hair black, short, and straight, having no beard nor any hair but on their heads. Their behaviour very lively and cheerful; their language guttural and dissonant; their arms were bows and arrows, some of bone and some of wood; their arrows feathered and barbed; they sling their darts through a piece of ivory, made square and fastened to the palms of their hands. Capt. Atkins conceives them to be a very cunning, subtle people, who could easily apprehend his meaning, when he made signs to them, but took no notice of his speaking to them." Proceeding along the coast, he "found the country full of woods, alder" (*Alnus incana*), "yew" (*Abies balsamea*?), "birch" (*Betula papyracea*, of large size, since the canoes were in part made of bark), "and witch-hazel, a light fine wood for shipbuilding" (*Ulmus Americana*?); "also fine large pines for ship masts, of a much finer grain than in New England" (*Pinus resinosa*). — Capt. Prebble "in 1753" carried with him a young Frenchman, in hopes that some native "might be found who understood the French language," but no one "took more notice of it than of the English; a plain proof these people had never left their own country to trade with the French."

"Nov. 28th" (Charlev., Du Pratz, and Holmes), on the Mississippi, conspiracy of the Natchez tribe to massacre the French colonists: and at a signal, "two hundred" Frenchmen killed, and the women, children, and Negroes captured. Of all the settlers at the trading post, "not more than twenty French, and five or six Negroes escaped." — The following year, the Natchez tribe were all captured by the French, the individuals were subjected to solitary imprisonment, and were afterwards transported as slaves to Hayti.

"In this year" (J. E. Smith, and Spreng.), Micheli publishing his Nov. gen. — He died "in 1737."

Najas tetrasperma of Italy. An aquatic annual observed by Micheli pl. 8. f. 1 in the waters of Italy — (Pers.).

Carex divulsa of Europe and the adjoining portion of Asia. A woodland sedge described by Micheli pl. 33, — and known to grow from Sweden to the Mediterranean (Engl. bot. pl. 629, Pers., and Wats.): observed by Sibthorp, and Chaubard, from the Peloponnesus to Constantinople.

"1730 A. D." (art de verif.), Achmed III. succeeded by Mahmood, twenty-fifth Turkish sultan. Coins issued at Cairo by Mahmood, are figured in Marcel p. 229.

"In this year" (Levcchine kirgh. ii. 3 to iii. 6), voluntary submission to the empress Anne of the Kirghiz-Kazaks around the Aral Sea. — The movement though but partial tended greatly to promote their prosperity, by inducing peace with Siberian tribes under the dominion of Russia; traffic commenced in "1736," and though carried on by barter or direct exchanges, soon became very extensive.

"In this year" (Winckl.), Hans Egede publishing his account of Greenland, enumerating *Dryas tenella* pl. B. f. 3 (Ph.).

"1731 A. D." (Hewet ii. 11, and Holmes), arrival in South Carolina of governor Robert Johnson, commissioned by the king; and *bills of credit* continued by the Legislature. The rate of exchange rose in consequence to "seven hundred per cent" or seven for one; — where it continued "with little variation upward of forty years."

In New England, there were now "six furnaces for hollow ware, and nineteen forges" (Douglass i. 109, and Holmes).

"Nov. 30th" (Pauth. 449), at Pekin, the severest *earthquake* ever experienced there; and "in less than a minute," more "than a hundred thousand persons buried under the ruins of buildings."

"The same year" (Targ.), date of the manuscript *Viridarium botanicum Italo-Hyspanum*, in which are enumerated "ficoide" *Mesembryanthemum linguiforme*.

"1732, Jan. 11th" (Blair), Pragmatic Sanction confirmed by the Diet.

"In this year" (Linn. fl. suec.), Olaus Celsius publishing his Plants growing around Upsal; — his Auct. Upland. "in 1740," and first investigated the mosses and minute plants of Sweden. He published the first volume of his Hierobotanicon "in 1745," the second "in 1747," and died "in 1756" (Spreng.).

"In this year" (Spreng., and Winckl.), after his Plant. Giss. "in 1718," his Third edition of Ray's Synopsis "in 1724" (A. Dec. g. b. 645-59), Dillenius publishing his Hort. Eltham., enumer-

ating *Canna glauca* pl. 59, *Salvia Mexicana* 254, *Commelina erecta* 88, *Phlox paniculata* 166 f. 203, *P. glaberrima* 166. f. 202, *Ipomaea glaucifolia* 87. f. 101, *I. tenuifolia* 318. f. 414, *Ipomopsis elegans* 241, *Symphoricarpos vulgaris* 278, *Triosteum perfoliatum* 293, *Physalis pruinosa* 9, *P. viscosa* 10, *Solanum Campechiense* 268, *S. Bonariense* 272, *Cestrum diurnum* 154, *Jacquinia rusciflora* 123, *Patagonula Americana* 226, *Sideroxylum inerme* 265, *Achyranthus radicans* of Cav. 7, *Cynanchum suberosum* 229, *Gomphrena perennis* 20. f. 22, *Phyllis nobla* 299, *Portulacaria Afra* 101; *Crassula cultrata*, *ciliata*, *nudicaulis*, and *pellucida* 97 to 100 f. 119, *Haemanthus puniceus* 140, *Pancratium Mexicanum* 222, *Eucomis regia* 92. 93, *Anthericum frutescens* 231, *A. aloides* 232. f. 300, *Atraphaxis undulata* 32, *Rumex dentatus* 158. f. 191, *Oenothera mollissima* 219, *Saxifraga Groenlandica* 253. f. 329, *Silene cerastoides* 309. f. 397, *S. Anglica* 309. f. 398, *S. pendula* 312, *S. antirrhina* 313, *S. rubella* 314. f. 406, *S. inaperta* 315. f. 407, *Cotyledon hemisphaerica* 95. f. 111, *Sedum Hispanicum* 256. f. 332, *Oxalis Dillenii* 221, *Cerastium perfoliatum* 217, *Opuntia tuna* 295. f. 380; *Mesembryanthemum latum*, *obliquum*, *longum*, *rostratum*, *bellidiflorum*, *stipulaceum*, *loreum*, *verruculatum*, *glomeratum*, *serratum*, *scabrum*, *bracteatum*, and *filamentosum* 183 to 293; *Aizoon Hispanicum* 117, *Rosa pendulina* 245. f. 317, *Helianthemum surreianum* 145. f. 172, *H. marifolium* 145. f. 173, *Clematis crispa* 73, *C. Orientalis* 119, *Ajuga Orientalis* 53, *Trichostema brachiata* 285, *Lantana melissaeifolia* 57. f. 56, *Verbena Bonariensis* 300, *Priva Mexicana* 302, *Ruellia clandestina* 248, *R. strepens* 249, *Lepidium Bonariense* 286, *Iberis Gibraltarica* 287, *Sisymbrium bursifolium* 148. f. 177, *S. Monense* 111, *Hermannia lavandulifolia* 147, *Passiflora vespertilio* 137; *Pelargonium hybridum*, *carnosum*, and *odoratissimum* 131; *Geranium Bohemicum* 133, *Sida Dilleniana* 2, *S. Occidentalis* 6, *S. alnifolia* 172. f. 211, *Malva abutiloides* 1, *M. virgata* 169. f. 206, *M. grossularifolia* 169. f. 207, *Hibiscus ficulneus* 157, *Baptisia perfoliata* 102. f. 122, *Phaseolus helvolus* 233. f. 100, *P. vexillatus* 234, *P. alatus* 235. f. 303, *Rhynchosia tomentosa* 26. f. 29, *Clitoria Virginiana* 76, *Hedysarum maculatum* 141, *Lespedeza repens* 142, *Vernonia glauca* 262 ("V. oligophylla" of Mx.), *Cirsium altissimum* 69, *Bidens nodiflora* 44, *Melananthera hastata* 46. f. 54, *Cacalia papillaris* 55, *Chrysocoma scabra* 88. f. 103, *Artemisia tenuifolia* 33; *Gnaphalium rutilans*, *undulatum* 107. f. 127 to 109. f. 132, *Helichrysum retortum* 322, *Erigeron Carolinianum* 306, *E. Bonariense* 257, *Pluchea camphorata* 88. f. 104, *P. fetida* 89. f. 105; *Senecio pseudo-china*, *hastatus*, *halimifolius*, and *coriaceus* 104 to 258. f. 335; *Aster foliolosus* 35, *A. multiflorus* 36. f. 40, *Euthamia lanceolata* 306. f. 394, *Solidago aspera* 305. f. 392, *S. rugosa* 308. 396, *Tetragonotheca helianthoides* 283, *Tagetes minuta* 280, *Silphium asteriscus* 37, *Othonna arborescens* 103, *Bryonia ficifolia* 50, *Cliffortia ilicifolia** 31, *Iris Virginica* 155. f. 188, *Liatris pycnostachya* 72. f. 83, 253. f. 328, *Ipomoea commutata* 84. f. 98, *Dipteracanthus biflorus* 331; "hedysarum trifolium scandens folio longiore splendente" 143. f. 170 *Galactia volubilis* ("Hedysarum" of Linn, "G. pilosum" of Ell.); "aster ericoides dumosus" 36. f. 40 *Aster ericoides*, "a. ericoides meliloti agriæ umbone" 35. f. 39 *A. miser*.

"In this year" (fl. Suec. p. v, and Spreng.), after his Hort. Upland. "in 1731," Linnæus visiting Lapland, meeting with *Campanula uniflora* pl. 9. f. 5. 6, *Luzula pallescens* 10. 2, *Andromeda (Castiopoë) hypnoides* 1. 3, *Saxifraga rivularis* 2. 7, *Lychnis apetala* 12. 1, *Ranunculus pygmaeus* 3. 3, *Pedicularis Lapponica*† 3. 4, *P. flammea* 4. 2, *Salix glauca* 7. 5, *S. lanata* 7. 7, *S. nigricans* 8. f. c,

* *Roubieva multifida* of Austral America A Salsolaceous plant, transported to Europe, described by Dillenius pl. 66 — (Pers.), and termed "chenopodium multifidum" by Linnæus: recently, observed in Greece (Gittard, and Chaubard). Sicily, Spain, Portugal and Southern France (Gussone, Moq., and A. Dec.): and in 1850, by J. Carey in the streets of the city of New York. In the Southern Hemisphere, known to grow along the Lower La Plata (Pers.); and according to A. Decandolle, occurs also in Brazil and Peru.

Alternanthera achyrantha of Brazil. A prostrate Amaranthaceous plant, transported to Europe, described by Dillenius i. pl. 8, — termed "illecebrum achyrantha" and "achyranthes repens" by Linnæus, and has become naturalized; occurring abundantly near Cadiz, and in streets of towns on the Canary Islands (Webb, and A. Dec.). Westward, is known to grow wild along the Atlantic shore of Tropical America, extending also a little farther South (Moq.): was observed by Walter in South Carolina; by Elliot, near Charleston, and in Georgia; by Chapman, "along roads and places much trodden, Florida to South Carolina."

† *Diapensia Lapponica* of the Arctic region. Observed by Linnæus on moss-covered stones throughout the mountains of Lapland. — Westward, by . . . in Labrador (Collins); by Lapylæie, in Newfoundland; by Peck, Oakes and myself, scattered over the alpine region of the White mountains; is known to grow on the Adirondack mountains of Northern New York (A. Gray); was observed by Parry, rare in Arctic America; by Chamisso, on St. Lawrence Island in the North Pacific.

Saxifraga cernua of the Arctic region and alpine summits farther South. Observed by Linnæus

S. phyllifolia 8. f. d., *S. tenuifolia* 8. f. e., *S. hastata* 8. f. g. m., *S. Lapponum* 8. f. t., *S. obtusifolia* 8. f. u., *Cetraria nivalis* 11. f. 1, *Parmelia centrifuga* 11. 2, *Peltidea crocea* 11. f. 3, *Baeomyces deformis* 11. f. 5, also *Aira Bottnica* n. 49.

Stellaria cerastoides of the Arctic region and mountains farther South. Observed by Linnæus in Lapland; — by Haller, and Decandolle on the Swiss Alps; by Sibthorp, on the Bithynian Olympus; by Pallas, in Verchoturia; and known to grow in Ireland and on the Pyrenees (fl. Dan. pl. 92, Villars iii. pl. 46, Hook., and Wats.). Westward, was observed by Sabine in Iceland and Greenland (Hook.).

"The same year" (Anders., and Holmes), a charter granted by George II. for the territory beyond the Savannah river, extending "westward in direct lines to the South Seas." In his honour, the new territory received the name of "Georgia."

Salem in Massachusetts containing "five hundred and twenty houses, five thousand inhabitants;" and the neighbouring town of Marblehead employing "in the codfishery about one hundred and twenty schooners of about fifty tons burden, and about a thousand seamen" (Brit. emp. ii. 35, and Holmes).

In this year (Spreng.), Houstoun continuing his figures and descriptions of plants observed on Cuba, Jamaica, and around Vera Cruz, *Dicliptera scorpioides* pl. 1, *Cordia gerascanthus* 6, *Richardia scabra* 9, *Petrea volubilis* 11, *Lippia Americana* 12, *Jatropha herbacea* 15, *Melochia depressa* ms., *Inula satureioides* 19, *Clomenoclema aurantia* 18, *Melampodium Americanum* 21, *Croton argentum* 22, *Salix Houstoniana* at Vera Cruz, *Mitrcola sessilifolia* ms. pl. (Linn. sp. pl.), *Schrankia aculeata* 25, *Desmanthus plenus* 23, and *Acacia filicina* 26. — He died in Mexico "in 1733." and his Reliq. was published "in 1781."

"In this year" (Spreng.), Gerber following the banks of the Don and Volga. — He died "in 1743."

"In this year" (Spreng.), Heinzelmann visiting the Ural, the country around Orenburg, and a portion of Tartary.

"1733. Feb. 1st" (univ. hist. xl. 440, and Holmes), founding by James Oglethorpe of the city of Savannah; near the aboriginal village of Yamacraw. "Before June 9th," a treaty of peace was concluded there with the powerful tribe of the Creeks.

"The same year" (coll. hist. iii. 273, and Holmes), the first lodge of Freemasons holden in Boston.

"The same year" (Raynal v. 486, and Holmes), the uninhabited island of Santa Cruz in the West Indies, purchased of France by Frederick V. of Denmark. A fortress soon afterwards built on the island by the Danes.

"In or about this year" (Kobell iv.), the peculiar metal *cobalt*, obtained by Brandt.

One hundred and eighty-first generation. May 1st, 1734, mostly beyond youth: the Greek writers, Vitzentus Cornarus d. after 1737, Theophilus Corydaleus d. 1744: the Slavonic writers, Antiochus Kantemir, Michael Lomonosof, J. Raitch, and Dosithei Obradovitch: other writers, Jonathan Swift: Edmund Halley; Alexander Pope; Charles Kollin; abbé du Bos; Bernard de Fontenelle; Colin Maclaurin; James Thomson; Henry Fielding; Charles de Secondat; baron Montesquieu; G. Frederick Handell; James Bradley; Conyers Middleton; Jacques Cassini; Benjamin Robins; Bernard de Belidor; N. Louis de la Caille; Edward Young: the zoologists J. A. Peyssonel, Joh. Steph. Guettard, Petrus Artedi d. 1735: the botanists, Io. Philippus Breynius d. 1764, Anton. Jussieu d. 1758, Claud. Joseph Geoffroy d. 1752, Renat. Ant. Reaumur d. 1757, Iac. Logan, Io. Ern. Hebenstreit d. 1757, Io. Iac. Lerche d. 1780, Io. Blackstone d. 1753, Carol. Deering d. 1749, Ionas Ramus, Io. H. Heucherus d. 1747, A. Vater d. 1751, Laur. Heisterus d. 1758, Io. Gul. Weinmann, Io. H. Kniphof d. 1762, Isaac Rand, Stephen Hales d. 1761, Io. Wolff. Wedel d. 1757, Ev. Iac. Wachendorf d. 1758,

pl. 2. f. 4 in Lapland, — by Soujef at 67° on the Oby (Pall.), and known to grow as far as Daouria and Kamtchatka (Ledeb.); also on the Breadalbane mountains in Scotland (Bab., and Wats.), at some isolated points on the Swiss and Styrian Alps (Koch), and on mountain-summits in Transylvania (Baumg., and A. Dec.). Westward, was observed by Sabine in Greenland, and received by Hooker from Spitzbergen, Melville Island and the Arctic shore of North America, the Rocky mountains and Kotzebue Sound.

Juncus arcticus of Arctic Europe and Asia, and alpine summits farther South. Observed by Linnæus n. 116 in Lapland — (Spreng.); distinguished by Willdenow, and known to grow in Scandinavia (Fries), Northern Russia and Siberia to the vicinity of Lake Baikal (Ledeb.); also on the Pyrenees (Benth.), and Swiss Alps (Koch, and A. Dec.). Regarded by Ledebour as perhaps growing at Sitka, but not certainly found on Iceland.

Alsine biflora of Arctic Europe and Asia and alpine summits farther South. Observed by Linnæus 158 in Lapland — (Oeder fl. Dan. pl. 12, and Swartz); known to grow also on the mountains of Norway and Sweden (Fries), the Northern portion of the Ural mountains and of Siberia and on the Altaian mountains (Ledeb.). Farther South, has been found in a single district in Switzerland, near the perpetual snow at Bex and Fouly (Koch, and A. Dec.).

Io. Th. Gleditsch d. 1786, Jos. Ginnani d. 1753, Car. Alston d. 1760, J. B. R. P. Desportes d. 1748, C. F. Kuhn d. 1761, M. Fabregou, F. Valle, Io. Browal d. 1755; Joh. Mar. Schiera: the painter William Hogarth d. 1764.

"In this year" (Stirling, and W. W. Hunter), death of Muhammad Taki, deputy-governor of Orissa. He was succeeded by Murshid Kuli Khan, who induced the priests of Jagannath to return with the image, its absence seriously affecting the revenue.

The following plants observed by Messerschmid and Heinzelmänn, *Veronica Siberica* pl. 4, *Patri-nia Siberica* 3, *Hypocoum erectum* 9, *Rhamnus Davuricus* 33, *Gentiana aquatica* 1. f. 2, *Statice aurea* 18. f. 2, *Sibbaldia erecta* 15, *Stellera chamaejasme* 2, *Sedum aizoon* 11, *Potentilla verticillaris* 16, *Ranunculus salsuginosus* 13. 2, *Isopyrum fumarioides* 12, *Cymbaria Davurica* 1, *Corydalis Siberica* 20, *Orobis lathyroides* 7. f. 2, *Oxytropis lanata* 19. f. 1, *O. myriophylla* 19. f. 2, *Cineraria Siberica* 24, *Artemisia annua* 23, *Cypripedium guttatum* 22, *C. macranthos* 21, *Urtica cannabina* 25, and *Ephedra monostachya* 26—(or some perhaps by Gmelin), published by J. Amman stirp. rar. "in 1739."

Messerschmidia arguzia of the Uralian and Mongolian plains. Among the plants described by J. Amman p. 19—(Spreng.): observed by Gmelin trav. ii. pl. 27 in Daouria (Pers.); by Pallas trav. i. 576, as far West as the Yaik.

Leonurus Sibericus of the Uralian and Tartarian plains. Described by J. Amman pl. 8;—observed by Pallas trav. i. on the Lower Volga; and known to grow in Siberia and China. By European colonists, was carried to Brazil, "seeds accidentally brought from China" (Ildef. Gómez); and "thirty years" afterwards was found by Gardner naturalized throughout, as far as his journeys extended (Hook. journ. bot. i. 183).

Caragana frutescens of the Uralian plains. A yellow-flowered leguminous shrub or small tree, described by Amman ruthen. 283,—and Linnæus; observed by Pallas i. 154 at 55° on the Volga; known to grow also in Siberia and Tartary (Pers.).

"In this year" (Spreng.), Gmelin on his way to East Siberia, meeting with (or seen by his predecessors, Schober, Messerschmid, Gerber, Heinzelmänn) *Polycnemum Sibericum* iii. pl. 23. f. 1, *Patri-nia rupestris* iii. 24, *Iris humilis* i. 5. 1, *Stipa Siberica* i. 22, *Elymus Sibericus* i. 28, *Agropyrum imbricatum* i. 23, *Scabiosa Ucrainica* ii. 87, *S. Issetensis* ii. 88, *Pulmonaria Siberica* iv. 39, *Androsace Gmelini* iv. 43. 1, *Phlox Siberica* iv. 46. 2, *Campanula grandiflora* iii. 28, *C. Siberica* iii. 29, *C. punctata* iii. 30, *C. Gmelini* iv. 33, *Viola uniflora* iv. 48. 5, *V. Gmeliniana* iv. 49. 2, *Chenopodium aristatum* iii. 15. 1, *Atriplex Tatarica* iii. 14. 1, *Salsola ericoides* iii. 21. 1. 19. 1, *S. verrucosa* iii. 21. 2, *Swertia dichotoma* iv. 53. 1, *Halenia corniculata* iv. 53. 3, *Gentiana dichotoma* iv. 51. b., *G. adscendens* iv. 51. f. a., *G. macrophylla* iv. 52, *Ligusticum Sibericum* i. 40. 2, *L. vaginatum* iv. 44, *Heracleum Sibericum* i. 50, *Anthriscus nemorosa* i. 49. a., *Peucedanum Issetense* i. 42, *P. album* i. 41, *Viburnum Davuricum* iii. 25, *Statice suffruticosa* ii. 88. 2. 3, *S. Gmelini* ii. 90, *S. speciosa* ii. 91. 1, *S. spicata* ii. 91. 2, *Allium ramosum* i. 11. 1, *A. lineare* i. 13. 14, *A. tenuissimum* i. 15. 3, *A. Stellerianum* i. 16. 1. 2, *A. Caucasicum* i. 10, *Smilacina trifolia* i. 6, *Juncus Bottnicus* i. 17. 2, *Melanthium Sibericum* i. 8, *Erica bryantha* iv. 57. 3, *E. Stelleriana* iv. 57. 2, *Polygonum ocreatum* iii. 8, *P. sericeum* iii. 9. 2, *Saxifraga bronchialis* iv. 65. 2, *Mitella nuda* iv. 68. 2, *Sedum hybridum* iv. 67. 1, *Cerastium maximum* iv. 62. 2, *Peganum Dauricum* iv. 68. 1, *Euphorbia procera* ii. 94, *Potentilla grandiflora* iii. 35. 1, *P. stipularis* iii. 37. 2, *P. agrimonoides* iii. 38, *Paeonia tenuifolia* iv. 73, *Delphinium grandiflorum* iv. 78, *D. exaltatum* iv. 79, *D. hybridum* iv. 76, *D. crassifolium* iv. 79, *D. urceolatum* iv. 80, *Cinici-fuga foetida* iv. 70, *Ranunculus Hyperboreus* iv. 83, *Nepeta multifida* iii. 55, *Dracocephalum pinna-tum* iii. 52, *D. nutans* iii. 49, *D. thymiflorum* iii. 50, *Scutellaria pallida* iii. 58, *Bartsia pallida* iii. 42, *Pedicularis euphrasiodes* iii. 43, *P. resupinata* iii. 44, *P. uncinata* iii. 45, *P. elata* iii. p. 211, *Draba repens* iii. 56. 2, *Cardamine macrophylla* iii. 62, *Sisymbrium integrifolium* iii. 63, *Arabis pendula* iii. 60, *Geranium Sibericum* iii. 67, *Corydalis paeoniaefolia* iv. 34, *Polygala Siberica* iv. 32, *Orobis angustifolius* iv. 5, *Lathyrus pifisiformis* iv. 1, *Vicia biennis* iv. 2, *Hedysarum alpinum* iv. 10, *H. argenteum* iv. 13, *H. sericeum* iv. 31, *Astragalus adsurgens* iv. 15, *A. uliginosus* iv. 17. 18, *A. Laxmanni* iv. 19, *A. pauciflorus* iv. 26. 1, *A. Baicalensis* iv. 26. 2, *A. longiflorus* iv. 27, *Oxytropis ambigua* iv. 30, *O. leptophylla* iv. 24. b., *Trigonella Ruthenica* iv. 8, *Scorzonera angustifolia* ii. 1, *Sonchus Sibericus* ii. 3, *Hieracium croceum* ii. 8. 1, *H. Gmelini* ii. 8. 2, *H. lyratum* ii. 9, *Saussurea salicifolia* ii. 27, *S. multiflora* ii. 28, *Serratula centauroides* ii. 17, *S. polyclonos* ii. 16, *Cirsium cernuum* ii. 19, *C. Gme-lini* ii. 25, *Rhaponticum uniflorum* ii. 38, *Cacalia hastata* ii. 66, *Tanacetum Sibericum* ii. 65. 2, *Artemisia integrifolia* ii. 48. 1. 2, *A. nitrosa* ii. 50. 1, *A. Lercheana* ii. 2. 3, *A. anethifolia* ii. 54, *A. palustris* ii. 55, *A. laciniata* ii. 57, *A. inodora* ii. 63. 1, *Erigeron gramineum* ii. 76. 2, *Tussilago anandria* ii. 67. 1. 68. 1, *T. lyrata* ii. 67. 2, *T. lacvigata* ii. 69, *Cineraria glauca* ii. 74, *Chrysanthemum bipinna-tum* ii. 85. 1, *C. millefoliatum* ii. 86. 1, *C. achilleaefolium* ii. 86. 2, *C. Arcticum* ii. 84, *Achillea im-patiens* ii. 83. 1, *A. Gerberi* ii. 83. 2, *A. filicifolia* ii. 19, *Centaurea radiata* ii. 47. 1, *C. Ruthenica* ii. 41, *C. ovina* ii. 43, *C. maculata* ii. 44. 1. 2, *C. trichocephala* ii. 45. 1. 2, *Orchis cucullata* i. 3. 2, *O. fuscescens* i. 4. 2, *Limodorum epigonium* i. 2. 2, *Axyris amarantoides* iii. 2. 3, *A. hybrida* iii. 4. 1,

A. prostrata iii. 4. 2, *Salix rhamnifolia* i. 35. 4, and *S. berberifolia* i. 35. 3, *Euphorbia pilosa* ii. 93. — He returned "in 1743," commenced his Flor. Sib. "in 1747," died "in 1755," and the publication was completed "in 1769."

Potentilla nivea of Arctic and Subarctic climates. Observed by Gmelin iii. pl. 36 throughout Siberia; — by Pallas, on the Yablonoi mountains; by Fries, in Lapland; by Gunner, in Norway; by Ledebour, on Caucasus; and is known to grow on the Alps from the Tyrol to Dauphiny (Koch, and A. Dec.). Westward, was observed by Sabine on Spitzbergen and in Greenland, and according to Hooker grows on Melville Island and in Labrador, and from Carlton House to the Rocky Mountains and Arctic Sea.

Potentilla strigosa of Northern Asia and America. Observed by Gmelin iii. pl. 34, — Pallas, in Siberia; growing throughout, according to Ledebour. Farther East, is known to grow from Kotzebue's Sound to the Rocky Mountains, and from Bear Lake to the Saskatchewan (Hook.) and Missouri (Pursh); was observed by Michaux in Eastern Canada; by C. J. Sprague at Cape Elizabeth, and by Robbins as far as 43° at the Isle of Shoals (A. Gray); is termed "*p. Pennsylvanica*" by Linnæus, but notwithstanding the name seems unknown within the limits of Pennsylvania. Transported to Europe, was already naturalized in "1812" in the environs of Paris, and has been found by Cosson on the summit of the Serra de Segura in Spain (A. Dec.).

Spiræa sorbifolia of East Siberia. An ornamental shrub observed by Gmelin on the Yenisei, Lena, and beyond Lake Baikal; — by Pallas, in Daouria; and known to grow as far as Kamtchatka (Pers.). Received by Pursh from the Northwest coast of America, but has not certainly been found there. By European colonists was carried to Northeast America, where it continues frequent in gardens (A. Gray).

Betula fruticosa of East Siberia. A clustered arborescent shrub observed by Gmelin i. pl. 36. f. 2 in Siberia; — by Pallas iv. 720, abounding in cold subalpine situations in East Siberia, especially around Lake Baikal. Westward, has been found in Germany (Schränk, and Pers.).

Artemisia sericea of Siberia. Observed there by Gmelin ii. pl. 64; — by Pallas trav. ii. 406, near Tcheliabinsk.

Aster bifidus of the Uralian plains. Observed by Gmelin trav. in Siberia — (Steud.); by Pallas i. III, at 55° on the Volga.

Serratula cyanoides of the Uralian plains. Observed by Gmelin ii. pl. 15 in Siberia; — by Pallas trav. i. 60, along the Volga; and known to grow as far West as Germany (Pollich, Spreng. fl. pl. 11, and Pers.).

Centaurea Siberica of the Uralian plains. Observed by Gmelin ii. pl. 42 in Siberia; — by Pall. trav. i. 64, along the Volga.

Iris salsa of Siberia. Observed by Gmelin i. 31. n. 30 in Siberia; — by Pallas iii. 132 to 483, in low saline plains along the Irtych beyond Omsk.

"In this year" (Spreng.), Seba commencing the publication of his Thesaurus, enumerating *Blaeria glabella* i. pl. 20. f. 1; *Erica urceolaris, baccans, Sebana, capitata, nigrita, tenuifolia, calycina, and curviflora* i. 2. 1 to ii. 20 1; *Gnidia pinifolia* ii. 32. 5, *Podalyria calypttrata* ii. 99. 3, *Oxalis grandiflora* i. 22. 10, *Mesembryanthemum pomeridianum* i. 19 5, *Pelargonium melananthum* i. 18. 4, *Rafnia amplexicaulis* i. 24. 5, *Liparia villosa* i. 24 1. 2, *Syncarpha gnaphaloides* ii. 66, *Helichrysum speciosissimum* ii. 43. 6, *Matricaria Capensis* i. 16. 2, *Osmites asteriscoides* i. 16. 4, *O. camphorina* i. 90. 2, and *Adiantum lanceum* ii. 64. 7. 6. — He died "in 1736," and the fourth volume was published "in 1765."

"1735, May" (Belknap ii. 118, Webster pest. i. 234, and Holmes), an epidemic disease which obtained the name of throat distemper (*diphtheria*) making its first appearance at Kingston in New Hampshire; where of the first forty attacked, none recovered. In "August," it reached Exeter; and in "September," Boston; — and continued its ravages until the end of the next summer: "one hundred and fourteen" persons dying in Boston; and in New Hampshire, "not less than one thousand," of whom "nine hundred were under twenty years of age," for the disease "chiefly affected children." Westward, the disease was two years in reaching the Hudson; but kept on "with some interruptions, until it spread over all the colonies."

"In this year" (Winckl.), Linnæus publishing his *Systema Naturæ*, enumerating "*gnaphalium foliis decurrentibus obtusis mucronatis*" *Gnaphalium obtusifolium* ("G. decurrens" amer. auth.).

"In this year" (Spreng.), August Friedr. Walther publishing his Design. plant. hort., enumerating* *Silene gigantea* pl. 11, *Erioccephalus Africanus* 1, and *Bosca yermavora* 10: — he died "in 1746."

* *Lysimachia ciliata* of Northeast America. Transported to Europe is described by Walther pl. 12 — (Ph.): has become naturalized near Limbourg, observed from 1811–22 (Lejolis rev. fl. Spa, 1824); and from 1843, naturalized in various parts of Britain. Westward, was observed by Drummond from

"1736 A. D. = 1st year of Kien-loung" or Khian-loung, "of the Tai-thsing" or Twenty-fourth dynasty (Chinese chron. table, and Pauth.).

"The same year" (Spreng.), visit of Maupertuis to the Arctic Circle. And of Bouguer and Condamine to the plateau of Quito, to measure a degree of Latitude under the Equator — (Humb. cosm. v.).

"In this year" (Spreng.), Joh. Georg Siegesbek publishing at Riga his *Primit. flor. petropol.*; — "in 1737," his *Epicris. in Linnaei syst. plant.*

Hypericum Aegyptiacum of the East Mediterranean countries. Discovered in this year by Granger in Syria or Cyprus — (Del.); subsequently observed by Guerin on maritime rocks of the Peloponnesus. From transported specimens described by Linnæus, but notwithstanding the name has not been observed in Egypt.

"1737 A. D." (Smith 427, and Holmes), *earthquake* in New Jersey. Severe enough to cause "bricks to fall from the chimnies," and excite "great consternation:" yet doing "little actual injury."

"In this year" (Pritzel), John Brickell publishing his *Natural history of North Carolina*.

"In this year" (J. E. Smith), Elizabeth Blackwell publishing her *Herbal*.

"In this year" (Spreng., and Winckl.), after his *Fund. bot.* "in 1736," Linnæus publishing his *Crit. bot.*, in which an *improved nomenclature*, adding a generic to the specific name, is proposed: an arrangement in structural groups greatly facilitating inquiry into the Order of Nature.

"In this year" (Spreng., and Winckl.), Linnæus publishing his *Hort. Cliffort.*, enumerating* *Bauhinia divaricata* 15, *Heliocarpus Americanus* 16, *Browallia elata* 17, *Gloxinia maculata* 18, *Amorpha fruticosa* 19, *Dalea Cliffortiana* 22, *Kiggelaria Africana* 29, and *Cliffortia ternata* 32 (Spreng.); *Monarda didyma* 495, *Diodia Virginica* 493, *Burmanniea biflora* 128, *Wistaria frutescens* 361, *Arum (Peltandra) Virginicum* 434.

"1738 A. D." (Hewet ii. 67, and Holmes), among the Negroes in South Carolina, amounting to "forty thousand," an insurrection excited by Spaniards of St. Augustine; who promised an asylum from slavery in Florida. A party commenced marching Southwest, committing outrages on the way; but through want of military skill, were intercepted and defeated.

In Jamaica, escaped Negroes having intrenched themselves in the mountains, a treaty was made by governor Trelawney: Allowing them "fifteen hundred acres of land," with "liberty to hunt" near the settlements; on condition, that they should obey the governor's orders, assist in defending the island, and deliver up all fugitive Negroes

"Nov. 7th" (Blair), signing of the treaty of Vienna: Ceding Lorraine to France, Tuscany to the Lorraine family, and confirming Naples to Don Carlos.

"In this year" (J. E. Smith, and Spreng.), publication of the plants collected by Thomas Shaw in Barbary and the Levant, including *Telephium oppositifolium* n. 572, *Sedum coeruleum* 550, *Fagonia Arabica* 229, *Ranunculus spicatus* 149, *Psychine stylosa* 91, *Biscutella montana* 583, *Turritis pubescens* 228, *Cleome Arabica* 557, *Erodium guttatum* 260, *Prenanthes sarmentosa* 146, and *Centaurea acaulis* 342.

"In this year" (Linn. sp. pl., and Winckl.), after his *Thesaur. Ceilan.* "in 1737" Ioan Burmann publishing the plants Hartog caused to be collected in Austral Africa, under the title of *Rar. Afr.*, enumerating *Sebaea albens*, pl. 74. f. 4, *Exacum hyssopifolium* 74. 3, *Struthiola longiflora* 47. 1, *S. angustifolia* 47. 3, *Lobelia lutea* 39. 1, *L. hirsuta* 40. 2, *Cyphia bulbosa* 38. 1, *Rhamnus prinoides* 88; *Phyllica stipularis*, *buxifolia*, and *capitata* 43. 2 to 44. 3; *Plectronia ventosa* 94; *Diosma uniflora*, and *pulchella* 46. 2-3; *Gomphocarpus arborescens* 13, *Stapelia mamillaris* 11, *Rhus rosmarinifolia*

54° near Fort Cumberland; by myself, from 45° to 40° along the Atlantic; by Michaux, in Connecticut and New York; by Schweinitz, at 36° in Upper Carolina; by Short, in Kentucky; by Beck, on the Mississippi near St. Louis; by Nuttall, on the Arkansas; by E. James, as far as its sources within the Rocky Mountains.

* *Lobelia inflata* of Northeast America. Annual with small blue flowers, and called *Indian tobacco*; transported to Europe, described by Linnæus *hort. cliff.* 500 — Westward, was observed in Virginia by Clayton (Gron. 134); in New England by Cutler, who first brought its medicinal properties into notice, and named it *emetic-weed* (*acad. Amer. i.*, and *Tuckerm. arch. Am. iv.* 191); by Pursh, from Canada to Carolina; by myself, from 45° to 40° along the Atlantic, in sunny situations, and multiplying in clearings and fallow ground; by Schweinitz, at 36° in Upper Carolina; by Elliot, in the upper country of Carolina and Georgia; by Short, near Lexington in Kentucky. Is enumerated by Lindley as "an acrid narcotic, and most powerful emetic."

91. 1, *Arctopus echinatus* 1, *Drosera Capensis* 75. 1, *Crassula columnaris* ix. 2, *C. alternifolia* 24. 1, *Daphne squarrosa* 49. 1, *Gnuidia sericea* 49. 2; *Passerina capitata, ciliata, and uniflora* 47. 1. 2 to 48. 3; *Zygophyllum spinosum* 2. 2; *Colytalon caryophyllacea, fascicularis, mucronata, tuberculosa, papillaris, and unguata* 17 to 22. 1; *Griidum tenuifolium* 53; *Oxalis polyphylla, flava, rubella, caprina, Burmanni, and pectinata* 27. 1 to 30. 1; *Knoveltonia gracilis* 51, *K. hirsuta* 52. *Selago rapunculoides* 42. 1. *S. spuria* 42. 3, *Nemesia biornis* 75. 3, *Halleria elliptica* 89. 1, *H. lucida* 89. 2, *Hebenstreitia ciliata* 41. 1, *Erinus fragrans* 49. 4, *E. Africanus* 50. 1, *Manulea villosa* 50. 2; *Pelargonium bifolium, longifolium, ferulaceum, and ramosissimum* 32. 2 to 36. 1; *Monsonia tenuifolia* 34. 1, *Aitonia Capensis* 21. 2, *Geranium spinosum* 31. *Polygala umbellata* 73. 5, *Pentzia flabelliformis* 68. 3; *Gnaphalium mucronatum, coronatum, grandiflorum, petiolatum, maritimum, auriculatum, discolor, stellatum, imbricatum, and notatum* 66. 3 to 80. 3; *Helichrysum paniculatum, spinosum, and canescens* 67. 1 to 68. 1; *Arnica Tabularis, gerbera, and perfoliata* 55 to 56. 2; *Arctotis anthemoides, dentata, and palacea* 63. 2 to 65. 1; *Osteospermum ciliatum, pisiferum, and ilicifolium* 61. 1 to 62; *Othonna denticulata* 59, *Stoebe gnaphalodes* 77. 1, *Euclea racemosa* 84. 2, and *Hermas depauperata* 71. 2. — He completed the work "in 1739;" and died "in 1780" (Spreng.).

"1739 A. D." (univ. hist. xl. 462, an l Postlethwayt i. 360), treaty of commissioner Ogleshorpe with the Chickasaws and Creeks: Declaring the right of these tribes to the territory as far South as the St. John's river and Apalache Bay, excluding Spanish settlers therefrom, and confirming the grant to the English of the land along the coast from the Savannah river to the St. John's.

"Oct. 23d" (Raynal v. 90, Hewet, and Holmes), difficulties having arisen in regard to the suppression of contraband trade, war declared by Britain against Spain.

"In this year" (Spreng.), after his *Iter alpin.* "in 1731." Method. "in 1736," Haller publishing his *Iter Helvet.*, enumerating *Saxifraga muscoides* i. pl. 1.

"In this year" (Winckl.). Gronovius publishing his *Flor. Virg.*, descriptions of plants observed by Clayton in Virginia, including "*quercus rubra seu hispanica*" (*Q. falcata*, Brendel in Amer. Nat. for 1870), *Cynthia dandelion* 114, *C. Virginica* 113, *Gratiola Virginica*, *Cynoglossum Virginicum* 19, *Asclepias rubra* 27, *Tofieldia pubens*, *Eriocaulon gnaphalodes*, *Panicum dichotomum*, *Hypericum prolificum*, — the work was completed "in 1743;" Gronovius issued a second edition "in 1762," and died in the same year. *Tipularia discolor*, *Asclepias phytolacoides*, *Utricularia subulata*, *U. gibba*, *Schollera graminea*, *Fimbristylis cylindrica*, *Scirpus (Trichostylis) autumnalis*, *Stipa avenacea* 138, *Erianthus saccharoides* 133, *Holcus? striatus*, *Osmunda interrupta*, *Plantago Caroliniana* 753, *Centaurella Virginica*, *Lycopsis Virginica* 140, *Sabbatia paniculata*, *Andromeda (Leucothoe) racemosa*, *Sedum ternatum*, *Ilysanthes gratioloidea* 3, *Cardamine rhomboidea* 99, *Lobelia Claytoni* 135, *Phaseolus perennis* (Ph.), *Psoralea melilotoides* n. 103, *Arnica Claytoni* 37, *Erigeron verum*, *Platanthera blephariglossis* n. 560, *P. bracteata* 136, *Goodvera? obsoleta* 137, *Pontederica pubera* 137, *Liparis liliifolia* n. 138-40, *Thaspium trifoliatum* 43, *Liburnum acerifolium* 47, *Sedum pulchellum* 71, *Jeffersonia diphylla* 81, *Thalictrum dioicum* 85. "*draba caule nudo foliis hispidis*" *Draba Caroliniana* 98, *Sisymbrium canescens* p. 100, *Aeschynomene hispida* p. 109, *Arnica nudicaulis* p. 126, *Lippia lanceolata* 7, *Lycopus Virginicus* 8, *Rhynchospora glomerata* 131, *Eleocharis capitata* 12, *Panicum virginicum* 133, *Brizopyrum spicatum* Clavt. 507, *Spartina cynosuroides* 134, *Gymnostichum hystrix*, *Anychia Canadensis* 14, *Ammannia ramosior* Clavt. 774. "*saginae affinis planta minima floribus albis*" Clavt. mss. 649 *Centaurella Virginica* (verna Mx.), *Calystegia spithamea* 141, *Polemonium reptans* 22, *Sabbatia chloroides* 27, *Itea Virginica* 143, *Galax aphylla* 25, *Zizia integerrima* 148, *Liburnum nudum* 33, *Rumex verticillatus* 39, *Sagittaria subulata* 153, *Direa palustris* 155, *Hydrangea vulgaris* 50, *Saxifraga Virginica* 160, *Penthorum sedoides* 51, *Nesaea verticillata* 52, *Lythrum lineare* 162, *Euphorbia ipecacuanhae* 58. "*mespilus inermis foliis oblongis integris acuminatis serratis parvis utrinque viridibus*" 163 *Crataegus viridis* ("C. arborescens" of Ell.?), "*lythrum foliis petiolatis*" 52 *Cuphea viscosissima*, *Linaria Canadensis* 67, *Buchnera Americana* 74, *Arabis lyrata* 99, *Galactia glabella* 82, *Desmodium nudiflorum* 107, *Lespedeza hirta* 108, *L. violacea*, 108, *Trifolium reflexum* ii. n. 110; "*h. floribus digynis foliis ovatis sessilibus*" 112 *Ascyrum mutilum* ("A. stans" of Mx.), "*h. floribus digynis foliis linearibus*" 88 *Ascyrum setosum* ("A. crux-Andree" of Am. auct.), *A. crux-Andree* 113 ("A. amplexicaule of Mx.); "*sonchus pedunculis hispidis floribus racemosis foliis runcinatis*" 115 *Mulgedium macrophyllum* ("Sonchus Canadensis" of Linn. and "m. acuminatum" of Dec.); *Hieracium Gronovii* 114; *Krigia Virginica* 60; "*baccharis foliis lanceolatis serrato-dentatis corymbis foliosis*" 121 *Pluchea Marylandica*; *Aster color* 123, *Verbesina Virginica* 128, *Erigeron verum* 124, *Viola primulifolia* 135, *Orchis spectabilis* 136, *Urtica (Pilea) pumila* 114, "*juglans alba fructu ovato compresso profunde insculpto durissimo cavitate intus minima*" 190 *Carya sulcata*, *Populus heterophylla* 194, *Helenias (Chamaelirium) luteum* 158, *Andropogon? nutans* 133, "*aira calycibus trivalvibus trifloris*" 136 *Uniola gracilis*, "*aira panicula oblonga floribus muticis hermaphrodito masculoque calycibus diphyllis*" 135 *Eatonia striata* ("aira obtusata" of Mx.).

Sporobolus Virginicus of the shores of Tropical and Subtropical America. A grass observed by Clayton 507 on the sandy seashore of Virginia; — and according to Chapman, growing in “saline marshes and banks along the coast, Florida to North Carolina:” known to grow also on the seashore of Brazil (Nees), Cumana, the West Indies, Mexico, Peru as far as Callao, and on the Hawaiian Islands (Kunth); observed by myself in a natural salt-marsh on Maui. Eastward from America, probably by ocean-currents carried to Equatorial Africa, observed from Cape Verd to Saint-Thomas (Benth. fl. Nigr.); to Austral Africa (Kunth, and Meyer); and even to Australia (R. Brown, Kunth, and A. Dec.).

“1740 A. D.” (univ. hist. xli. 429, Thompson seas. sum. 1040, and Holmes), unsuccessful expedition under admiral Vernon against the Spanish settlement at Carthage.

“The same year” (Hewet ii. 167, and Holmes), first visit of rev. George Whitefield to America. Where, near Savannah, he founded an orphan house.

“The same year” (Nicol.), Frederic William succeeded by Frederic II. the Great, as king of Prussia.

“The same year” (Kobell iv.), by Kaim, *manganese* shown to be a metal.

In this year (see Spreng.), after his Stirp. rar. Ruthen. “in 1739,” Joh. Ammann continuing his descriptions of plants, including *Betula nana* (act. ix. pl. 14, Ph.). — He died “in 1741.”

Rheum undulatum of the Altaian mountains. A kind of *rhubarb* received by Ammann from China, — produced also from seeds presented “about 1750” by a Tartarian merchant (Lindl.); but according to Pallas trav. iii. 225, an Altaian peak, in sight from Schlangenbergl, is called “Révenno-vaia-Sopka” from *R. undulatum* growing on it abundantly: *R. undulatum* was also pointed out by a Cossack to Georgi as the true rhubarb, but its root has not been found by Guibourt to possess the requisite qualities, and its cultivation in Russia and France is discontinued (Lindl.).

Xylosteum Tartaricum of the Uralian plains. An ornamental shrub described by Ammann ruth. 184 — (Linn. hort. ups.): observed by Pallas along the Volga nearly as far West as Moscow. By European colonists was carried to Northeast America, where it continues frequent in gardens (A. Gray).

“In the time of Teraraku (great grandfather of Pomare,” the chief seen by us at the Bay of Islands, Hale ethnogr. Expl. Exp. 146, and Races of man iv. 4), the “kumara” (*Batatas edulis*) *sweet potato*, brought to New Zealand in a “canoe formed of separate pieces” by Pani and his sister Hinakakirangi of Hawaiki (Savaii). The account is confirmed by the construction of the canoe, peculiar to the Samoan Islands; by the slender finger-rooted variety, seen by us only in the two localities, and which a separate tradition made “the only kind formerly known in New Zealand.”

“1741 A. D.” (encycl. method., and Holmes), in Paraguay, the colonies formed by the Jesuit missionaries now extending “about six hundred leagues,” and containing “one hundred and twenty-one thousand one hundred and sixty-one” aboriginals.

“The same year” (Adams relig. 466, and Holmes), Bethlehem in Pennsylvania founded by Moravians or United Brethren; abandoning Savannah, on account of military service being required of them.

“In this year” (Linn. sp. pl.) N. American plants published in Act. Ups. p. 81, including *Proserpinaca palustris*.

“In this year” (Spreng.), Steller visiting Bering’s Island, meeting with “two hundred and eleven” plants, including *Tiarella trifoliata*, *Dielytra cucullaria*, *Pteris pedata*, and *Lycopodium rupestre*. He also visited the neighbouring American coast and the Fox Islands, — and returning, died “in 1746.”

“In this year” (Spreng.), Barrere publishing his Guayan. Plant.: — he died in “1755.”

Sida linifolia of Western Equatorial Africa. Known to grow in dry sandy situations in Senegal (Perr. and Rich. fl. Seneg. 72, and A. Dec.), and in Guinea (fl. Nigr.). Probably by European colonists carried across the Atlantic; observed in Guayana by Barrere aeq. 72, — and Aublet (Pers.); known to occur also on Hayti and in Peru (Cav., and Dec. prodr.).

“In this year” (Pursh, and Spreng.), Dillenius publishing his Hist. musc., enumerating * *Selaginella apus* pl. 64. f. 3, *Lycopodium lucidulum* pl. 56. f. 2; — he died “in 1747.”

“1742 A. D.” (Adams lett. xvii, and Holmes), in Boston, Faneuil hall erected and presented to the town by Peter Faneuil. Who died just at the time of its completion.

“In this year” (J. E. Smith, Spreng., and Winckl.), Haller publishing his Enum. plant. Helv.

* *Lycopodium Carolinianum* of Northeast America. From transported specimens described by Dillenius pl. 62. f. 5: — growing according to A. Gray in “wet pine barrens, New Jersey to Virginia, and southward:” observed by myself at 40° in peninsular New Jersey, and I think also at 42° 30' in bogs near Salem; by Chapman, in “low pine barrens, Florida, and northward.”

Orchis pallens of middle and Eastern Europe. Observed by Haller 1281 pl. 30 in Switzerland, — by Decandolle in France, by Jacquin pl. 45 in Austria, and by Chaubard in the Peloponnesus.

Spiranthes aestivalis of Europe? Observed by Haller in Switzerland, — and known to grow in wet meads throughout middle Europe (Dec. fl. fr., and Pers.): observed by Chaubard in the Peloponnesus. Possibly by European colonists transported from one continent to the other, observed by Michaux in Northeast America, by Oakes in Western New England, by Torrey in Northern New York, and according to A. Gray is "not rare."

About this time (Spreng. and Winckl.), John Mitchell of Virginia describing new genera of plants in the Act. nat. cur. viii. app. 187, including "malachodendron" 16 *Stewartia pentagyna* (Willd.).

"1743 A. D." (encycl. method., and Holmes), discovery of the water-communication between the Upper Orinoco and the Amazon rivers.

"In this year" (Linn. sp. pl., and Winckl.), Colden in New York State, meeting with *Utricularia sessilifolia*, *Gentiana crinita* fl. noveb. n. 50 (Willd.). The plants sent to Linnæus were published in Act. Ups. from this year — to "1750," and the Flor. noveb. remains unpublished in the Banksian library.

"In this year" (J. E. Smith, and Spreng.), Pococke publishing an account of his travels in the East; — the second volume in "1745."

Colutea Pocockii of the East Mediterranean countries. A flowering shrub — described by Miller pl. 100, termed "c. haleppica" by Lamarck, and brought from the vicinity of Aleppo: observed by Decaisne on mount Sinai, and known to grow abundantly on the mountains of Alyssinia (A. Dec.).

"In this year" (Spreng., and Winckl.), Krascheninikow returning from Siberia with Gmelin, having met with *Lilium Kamtchaticum*, *Spiraea Kamtchatica*, *Rhododendron Kamtchaticum*, *Alysum hyperboreum* (from Northwest America, Act. petrop. 1747. and Linn. sp. pl.). — He died "in 1754," his account of Kamtchatka and the Kurile Islands was published in Russian "in 1755," and an English translation "in 1764."

In this year (introd.), Loureiro, by his own account, arriving in Anam or Cochinchina, — where he remained "thirty-six" years, and in "1779" reached Canton in China. After "three years," he sailed for home, stopping on the way "three months" at Mozambique. His Flor. Coch. was completed in "1788" (ded.), and was published at Lisbon in "1790."

Calamus scipionum of Sumatra. Described by Loureiro, and furnishing the walking-sticks of great strength called *Malacca canes*: — these though exported from Malacca, are according to Griffith brought from Siak on the opposite Sumatran coast (Royle, and Drur.).

"1744 A. D. = 9th year of Kien-loung" (Chinese chron. table), beginning of the Seventy-fourth cycle.

"March 29th" (Hutch. ii. 4, and Holmes), war declared by Britain against France and Spain. Before the news reached Boston, Canso was captured by the French governor of Cape Breton, and Nova Scotia endangered.

"In this year" (Ph. 323), Linnæus publishing descriptions of plants in Act. upsal.

"The same year" (Spreng.), Charlevoix publishing his history of the French colonies in North America. — He died "in 1761."

"In this year" (Spreng., and Humb. cosm. v.), Condamine from Quito proceeding down the Amazon and reaching Cayenne. — He published an account of his travels "in 1745" (Winckl.).

Hevea Guianensis of Eastern Equatorial America. A forest tree, with milky sap condensing into *caoutchouc* or *india-rubber*; observed by Condamine on the Lower Amazon — (Winckler), and by Aublet ii. pl. 3315 in Guayana: the product has become a well known article of commerce, exported in the form of bottles (Lindl.) and articles not solid. By European colonists, the tree was carried to the West Indies (Desc.); and from transported specimens is termed "poa seringá" in act. par. 1751 pl. 20. "jatropa elastica" by Linnæus the younger suppl. 422, "siphonia cahuchu" by Willdenow iv. 567, "s. elastica" by Persoon.

"In this year" (Winckl.), Bergen publishing his Hort. med. viadrin. — He died "in 1759."

Phaseolus lunatus of Hindustan. Termed "p. benghalensis scandens siliqua acinaciformi semine ovato compresso striato" by Bergen 99 — (Linn. sp. pl.); described also by Houttuyn viii. pl. 63. f. 1 (Pers.); observed by Wight 749 in peninsular Hindustan, by Lush at Dapooree near Bombay (Graham). Westward, is known to occur in Senegal and Guinea (R. Brown cong. p. 59, fl. Nigr., and A. Dec.). Farther West, in Guayana, the West Indies, and Mexico (Dec. prodr.); cultivated by the colonists of Northeast America under the name of *Lima bean*, but so far as Brackenridge and myself could ascertain, seems unknown in Peru; its pods according to Darlington are not eaten.

"In this year" (Linn. fl. suec.), J. Leche publishing his Floræ Scaniæ primitivæ.

"In this year" (Spreng.), John Wilson publishing his Synopsis of British plants.

"1745, June 16th" (univ. hist. xli. 33, and Holmes), capture of Lou'sbourg and the island of Cape Breton by an expedition chiefly fitted out by the colonists of New England.

"The same year" (Hewet ii. 138 and 191, Drayton 127, and Holmes), the cultivation of *indigo* introduced from the French West Indies into South Carolina. — Where, aided after three years by a bounty from the British government, the product increased to "two hundred and sixteen thousand nine hundred and twenty-four pounds" for 1754. At a later period the cultivation declined, and at length was abandoned; though (according to Chapman) both *I. tinctoria* and *I. anil* continue to grow as weeds in waste places.

Leucas Martinicensis of Tropical Asia and Africa. By European colonists, carried to the West Indies as early at least as this year: — observed there by Jacquin amer., and Swartz prodr. 88; and known to occur also in Brazil (Benth.). Eastward, is frequent and to all appearance indigenous in Equatorial Africa (A. Dec.); was received by Bentham from peninsular Hindustan; and is enumerated by Mason among the indigenous plants of Burmah.

"The same year" (Nicol.), Charles VII. succeeded by a daughter of Charles VI., Maria Teresa; becoming with Francis joint rulers over Germany and Italy.

"The same year" (Spreng.), arrival of Ternström at Pulo Condor: where he died before the end of the year.

"In this year" (Spreng.), publication of the Roman. agri of Sabbati.

"In this year" (append. Sibth., and Spreng.), Seguier publishing his Plant. Veron., — completed "in 1754."

"In this year" (Linn. sp. pl.), Le Monier publishing his Cat. plant. alvern. — He died "in 1799."

"In this year" (Spreng.), Linnæus publishing his Oelanska, and Flor. suec., enumerating * *Draba nemorosa*, *Artemisia rupestris*, *Lathyrus heterophyllus*, *Carex loliacea* ii. n. 840.

"1746, Oct. 28th" (univ. hist. xxxix. 178, encycl. method., biblioth. Amer. 129, and Holmes), the great earthquake desolating Lima. Its seaport Callao was overwhelmed by an ocean wave, and of "three thousand" inhabitants, only one person escaped. In all "twelve thousand" persons perished: and "the concussions continued, with short intervals, four months." — I found the two monuments in the form of a cross and without inscriptions: one, behind rebuilt Callao and half a mile inland, said to mark the spot to which a Spanish frigate was carried; and the other, half way to Lima, said to mark the limit of the inundation.

"1747 A. D." (Pauth. 452), five Spanish Dominican missionaries detected in the province of Foukian, condemned to be beheaded, and the sentence approved by the emperor Kien-loung.

"In this year" (J. E. Smith, and Spreng.), Linnæus publishing his Wastgotha res., and Flor. Zeylan.

"The same year" (Spreng.), Joseph Jussieu travelling on the Upper La Plata. — He reached Lima "in 1750."

"The same year" (Spreng.), the Swedish traveller Kalm arriving in the Delaware, meeting with here and on his journey to Canada *Vaccinium Canadense*, *Sabbatia gracilis*, *S. angularis*, *Viburnum lentago*, *Rubus hispida*, *Digitaria filiformis*, *Panicum clandestinum*, *Bromus ciliatus*, *B. Kalmii*, *Phlox maculata* ii. 222, *Halenia deflexa*, *Gentiana quinqueflora*, *Trientalis Americana* i. 138, *Betula pumila* i. 138, *Cinna arundinacea*, *Prinos glaber*, *Vaccinium ligustrinum*, *Polygonella articulata*, *Dalibarda repens*, *Nuphar Kalmianum*, *Galium trifidum*, *Hypericum Kalmianum*, † *Hieracium paniculatum*, *Erigeron Philadelphicum*, *Senecio Canadensis*, *Aster laevis*, *Viola Canadensis*, *Carex squar-*

* *Tillæa aquatica* of Northern Europe. A diminutive annual observed by Linnæus in Sweden, in depressed situations subject to inundation; — known to grow also in Norway, and as far as Germany (Pers., and Dec.); and Westward, observed by Hooker on Iceland.

† *Hypericum Canadense* of Northeast America. Observed by Kalm in Canada — (Linn. sp. pl.); by Michaux, from Hudson's Bay to Pennsylvania and on the Alleghanies of Carolina; by Oakes and myself, frequent around the base of the White mountains, stem slightly geniculate at base with narrow-elliptic leaves, growing on the upland, taller and more obtrusive than the usual form, and seems perennial?: received by Hooker from Newfoundland, Canada, and as far as Lake Winnipeg; observed by Pursh from Canada to Carolina; by Elliot in South Carolina; by Nuttall on the Arkansas; and according to Decandolle grows as far as Mexico. The smaller form observed by myself from 44° to 40° along the Atlantic.

Polygonum Pennsylvanicum of Northeast America. Observed by Kalm in Pennsylvania — (Linn. sp. pl.); by myself, from 43° along the Atlantic, larger and the flowers more showy than in *P. persicaria*, but occurring in the same situations and hardly having an indigenous aspect; by A. Gray, in "moist soil in open waste places, common;" by Muhlenberg, in Pennsylvania, and received from Illinois; by Beck, on the Mississippi at St. Louis; by Elliot, in South Carolina; by Chapman, in "wet places, Georgia."

rosa, *Urtica capitata*, *Shepherdia Canadensis*, *Smilax rotundifolia*, *Acer striatum*, *Aspidium Noveboracense*, *A. marginale*, *Trisetum Pennsylvanicum* ("T. palustre" of Tor.?). — He returned at the end of two years, published an account of his travels "in 1753-61," and died "in 1779."

"1748, Oct. 7th" (Blair, and Holmes), at Aix la Chapelle, signing of a treaty of peace between France and Britain: by which, Cape Breton was restored to France.

The currencies in the American colonies now much depreciated; especially in New England, where the rate of Exchange was eleven for one (Minot i. 146, and Holmes). — Soon afterwards, an Act of parliament restraining *bills of credit* in the colonies, and prohibiting making these bills "a legal tender for the payment of debts."

"The same year" (Maunder). Al Mulck, "nizam" or ruler of the Deccan, succeeded by his son Nazir Jung. Whose elder brother being excluded, war ensued; in which the residents of the British and French East India Companies engaged, taking opposite sides; the British being led by a writer, Clive.

"In this year" (Winckler), G. Juan and Ant. Ulloa publishing their Viage to Chili, Peru, and Juan Fernandez.

"In this year" (Spreng.), Linnæus publishing his Hort. Upsal., enumerating *Crassula verticillaris*, *Cacalia suaveolens* 254.

"1749 A. D." (univ. hist. xl. 194, and Holmes). Acadie having been by the late treaty confirmed to Britain, its name now changed to "Nova Scotia," and the city of "Halifax" was founded.

"In this year" (Linn. fl. suec.), Eberh. Rosen publishing his Observ. Botanicae.

"The same year" (Spreng.), arrival of Hasselquist in the East. — He died in "1752," and his Flor. Palest. was published by Linnæus in "1756"

"The same year" (Spreng.), arrival of Adanson in Senegal. — He returned "in 1753," and published his Seneg. "in 1757."

"In this year" (Linn. sp. pl., and Winckl.), Dalibard publishing his Flor. parisiense.

"In this year" (J. E. Smith ed. fl. lapp. 88), Larsius Montin visiting Lapland, meeting with *Juncus biglumis*.

"In this year" (title-pages), Linnæus publishing the First volume of the Amoen. acad., enumerating *Viola Canadensis* 159 (Willd.), — the Second "in 1762."

"In this year" (Linn. sp. pl.), Haller publishing his Hort. Goetting.

Reseda odorata of the North African Desert. Called in Britain *mignonette*, in France "reseda" (Prior), in Italy "amoretti d'Egitto" or "amorino d'Egitto" (Targ.); described by Haller hort. goett. 95. — Miller pl. 217 (Spreng.); termed "r. Egyptiaca" in Flor. palest. (Linn. amœn. acad. iv. 457); known to grow in Syria and Barbary, and observed by Delile in gardens at Alexandria. Transported to Europe (Curt. mag. pl. 29, and Pers.) and Northeast America, has become a favourite garden plant on account of the agreeable odour of its flowers.

"1750 A. D." (Minot i. 130, and Holmes), the policy of the British government now tending towards encouraging the production of raw materials in the colonies, and discouraging or even prohibiting manufactures.

"Feb. 28th" (Blair), the interest on the English funds reduced to three per cent.

"In this year" (Winckl.), after his Cat. hort. med. Viadrin. "in 1744," Pet. Imman. Hartmann publishing his Flora Francofurtana.

"In this year" (Winckl.), letter professedly from Emmanuel, a youth of fifteen years, to his father Albert v. Haller, containing objections to the new Classification proposed by Linnæus.

Crepis setosa of the mountains of Switzerland and the Tyrol. Observed by the younger Haller on mount St. Bernard and the Rhaetian Alps — (see Pers.); by Carl Chr. Gmelin in the environs of Baden; and known to occur in cultivated ground in Pannonia, Croatia, Slavonia, and Banatus (Waldst. and Kitaib. i. pl. 43, Pers., and Steud.). In Britain, introduced among imported seeds since 1843, has made its appearance in the Isle of Wight and in Scotland (Lab., Bromf., and A. Dec.).

"In this year" (Spreng.), Georg Rud. Bohmer publishing his Flor. lips. indig. — He died "in 1803."

"In this year" (J. E. Smith, and Spreng.), Trew publishing his Plant. Select. (the figures by Ehret), enumerating his Plant. Rar. "in 1763," died "in 1769," and the last three volumes of his Plant. Select. were published by Vogel "in 1773."

As early as this year (see Spreng., and Winckl.), John Bartram journeying from Philadelphia to Lake Ontario, meeting with here and on his visit to Florida * *Azalea arborecens* (Pursh), *Gymno-*

* *Rosa laevigata* of China. Known to grow there (Nutt., Red., and A. Dec.). And said to have been introduced by John Bartram into Charleston — (Baldw. rel. 100); observed by Michaux in Georgia; — by Chapman, "common in cultivation;" and by myself near Charleston, climbing among planted trees from trunk to trunk. Eastward, is termed "r. sinica" in European gardens, "r. nivea" by Decandolle, "r. Macartnea" by Dumont de Courset ed. 1 (Steud.); and "R. Sinica, scandent with ternate leaves," was observed by Lush at Dapooree in Hindustan (Graham).

cladus Canadensis, *Illicium Floridanum*, *Boltonia asteroides*. — He published an account of the excursion "in 1751," and died "in 1777" (Holmes).

"The same year" (Spreng.), Toren arriving in Malabar. — Where he remained until "1753."

"The same year" (Spreng.), Griffith Hughes publishing his history of Barbadoes.

Perhaps "about ninety years ago" (see Hale ethnogr. Expl. Exp. p. 148), Chatham Island colonized by New Zealanders; in canoes driven out to sea from the East Cape of New Zealand. — Additional emigrants from New Zealand "have lately been carried thither by trading vessels."

"1751 A. D." (Crawfurd vii. 11), by the Spanish colonists at Manila, an expedition sent against Sulu: war declared, and a Second expedition disgracefully beaten.

"April 4th" (trav. p. 20, 33, to 375), Bossu by the way of Cape François arriving at the mouths of the Mississippi. Leaving New Orleans "Aug. 20th" he proceeded up the river to the Illinois, meeting with vines climbing high *Vitis riparia* 349, "jalap" 353 *Ipomæa Michauxii*. — After visiting New Orleans and France "in 1757," he returned to the Mississippi "Aug. 12th 1758," he ascended the Alabama as high as the junction of the Tombigbee, meeting with the "battledoe" common about Mobile 347 *Nyssa candicans*, and was in New Orleans "June 1st, 1762."

"July 12th" (trav. transl. by J. R. Forster), Osbeck arriving "in sight of the East part of Java."

"Aug. 22d," he was "off Macao" in China. — He published his Trav. in "1765."

"In this year" (title-pages), Schmiedel publishing Gesner's botanical works. — The second volume "in 1771," and he died "in 1783."

"In this year" (Linn. sp. pl.), F. Sauvages publishing his Flor. monspel. — He died "in 1767."

"1752, Jan. 1st" (Blair, Holmes, and Nicol. 38), New year's day by act of parliament, instead of the ensuing "March 25th." New Style was at the same time adopted; by deducting from this year "eleven days," calling what would have been the "3d of September, the 14th."

"In this year" (Spreng., and Pritzel), after his first edition "in 1731," Second "in 1732," Third "in 1737," Fourth "in 1741," Fifth "in 1747," Philip Miller publishing the Sixth edition of his Gardeners' Dictionary, enumerating *Ixia grandiflora*, *bulbifera*, *flexuosa* pl. 156. f. 2 to 239. 2; *Gladiolus recurvus*, *strictus*, and *Milleri* 40 to 235. 2; *Antholyza cunonia* 113, *Moraea iridioides* 239. 1, *Iris ochroleuca* 154, *Verbascum Boerhaavii* 273, *Nicotiana pusilla* 185. 2, *Physalis arborescens* 206. 2, *Tetragonia decumbens* n. 3 and ic. 263. 1, *Phlomis Nissolii* 204, *Calendula fruticosa* 283, *Tilia pubescens* n. 4, *Solidago pilosa*, *S. elliptica*, *Populus angulata* * n. 5.

"June 20th" (Hewet ii. 43, and Holmes), the charter of Georgia surrendered to the king: removing the prohibition of Negroes, and enabling settlers to acquire larger tracts of land.

"The same year" (coll. hist. iv. 216, and Holmes), the *small pox* in Boston, where of "five thousand five hundred and forty-four" persons attacked, "five hundred and fourteen" died; while of "two thousand one hundred and nine" *inoculated*, only "thirty-one" died.

"The same year" (life of Frankl. 118, and Holmes), at Philadelphia, the identity of *electricity* with lightning demonstrated by Franklin; by constructing and experimenting with an electrical kite.

"In this year" (Spreng.), Pontoppidan publishing his Norw., including the plants collected by Lange. — He died in "1764."

"1753 A. D." (W. W. Hunter), Marhattas under a Muslim chief acquire possession of Orissa.

"In this year" (Marshall i. 375, univ. hist., and Holmes), the Ohio company surveying lands granted as part of Virginia as far as the Falls of the Ohio; the country on this river claimed by the French of Canada: who built a fort at Presqu'isle on Lake Erie; another, about "fifteen miles south" on a tributary of the Alleghany; a third, at the mouth of this tributary; and a fourth, at the mouth of the Wabache.

"In this year" (Smith ed. fl. lapp. 238), Solander visiting Lapland, meeting with *Apargia taraxaci*.

"In this year" (J. E. Smith, and Spreng.), Linnæus publishing his Sp. Plant., enumerating "seven thousand three hundred plants," including *Allium striatum* (Ph.), *Hydrastis Canadensis*, *Ricotia Aegyptiaca* i. p. 656.

"1754, April 17th" (Blair, Minot, and Holmes), war between France and England initiated by French Canadians capturing from the Ohio company an unfinished fort on the Monongahela. "June

* *Populus tacamahaca* of Canada. A lofty tree called *tacamahac*, from transported specimens described by Miller — (Steud.). In its wild state, was observed by F. A. Michaux from 49° to 47°, and rare on Lake Champlain; by myself, from 47° to 43° along the Atlantic; by Longs' Expedition ii. 81, from Lake Superior to Pembina and Lake Winnipeg (Schw.); by Drummond, near the Rocky mountains; and according to A. Gray, grows from "N. New England to Wisconsin, and northward," its "large buds varnished with a fragrant resinous matter." Transported to Europe, is described by Miller, and Linnæus.

1st" (Blair), "Mr. Washington intercepts a small body of French." Continuing his advance toward the junction, where the French were building Fort Du Quesne (univ. hist. xl. 198, Marshall, and Holmes), Washington was met by a superior force, and on "July 4th," compelled to capitulate.

The British government having ordered the dislodging of the French from the Ohio, and recommended Union among the colonies for defence: a plan of Union drawn up by Franklin was on the same "July 4th" adopted in convention; the Connecticut delegates alone dissenting. The proposed plan was however rejected by the colonial Legislatures, as giving "too much power to the representative of the king;" and by the king's council, as giving "too much power to the representatives of the people" (Minot i. 9, and Holmes).

"The same year" (Inman), a trading-post established by the French on the Mississippi above the mouth of the Ohio, and called "St. Louis." The origin of the city of St. Louis.

"The same year" (Spreng.), Jacquin arriving in the West Indies; * — he returned "in 1759," published his Select "in 1763," and Obs. "in 1764-71."

Triumfetta rhombollica of Western Equatorial Africa. Known to be frequent in Guinea and on the neighbouring island of Saint Thomas (fl. Nigr., and A. Dec.). By European colonists, carried to the West Indies, where it was observed by Jacquin amer. pl. 90, — and Swartz fl. ind. occ., in "pratis fruticulosus," and from its adhering fruit called "cousin" by the French.

"The same year" (art de verif.), Mahmood succeeded by Osman II. or Othman II., twenty-sixth Turkish sultan.

"In this year" (Linn. sp. pl.), Linnæus publishing his Genera plantarum.

"In or about this year" (Kobell iv.), the peculiar metal *nickel*, discovered by Cronstedt.

"1755, July 6th" (Blair, and Holmes), defeat on the Monongahela of the British and colonial forces under Braddock, by the French from Fort Du Quesne.

"Nov. 1st" (Blair), severe *earthquake*, destroying Lisbon, and felt over a great part of the surface of the Globe.

"Nov. 18th, a little after 4 o'clock, in a serene and pleasant night" (mem. Amer. acad. i. 271, and Holmes), the severest *earthquake* experienced in New England. Continuing in Boston "nearly four and a half minutes;" during which time, "about one hundred chimneys were in a manner levelled with the roofs of the houses; and about fifteen hundred, shattered and thrown down in part;" the ends of about twelve or fifteen brick buildings were thrown down from the top to the eaves of the houses; and on new ground, some of the streets were almost covered with fallen bricks. The course was nearly from Northwest to Southeast, "at least one thousand miles, and perhaps many more," the width from Southwest to Northeast being from Chesapeake Bay to Halifax "about eight hundred miles." In the West Indies "about 2 p. m.," the "sea withdrew from the harbour of St. Martin, leaving" dry vessels that had been anchored in "three or four fathom," and after a long interval returned "six feet higher than usual;" but there was no earthquake shock.

"In this year" (Spreng.), Jenkinson publishing his British plants.

"In this year" (append. Sibth.), Duhamel publishing his *Traité des Arbres*, enumerating *Andromeda nitida*, *Gymnocladus Canadensis* i. 103, *Calycanthus laevigatus*; and in Sem. app. pl. 27. f. 2 *Rhodora Canadensis* (Linn. sp. pl.), — his *Physiq. des Arbres* "in 1758," and died "in 1782" (Spreng.).

At this time (J. E. Smith, and Spreng.), Loeffling writing his Res. on Cumana, Guiana, and Spain; — he died "in 1756," his Res. were published "in 1758," and the flor. Hispan. by Linnæus.

"In this year" (J. E. Smith, and Spreng.), Allioni publishing his Rar. Pedem.

* *Trichilia trifoliata* of the Northern extreme of South America. A bush or small tree, observed by Jacquin amer. pl. 123 in dry grassy places in Curacao, called by the Dutch colonists "kerseboom," by the Spanish "ceraso macho," a decoction of the roots used among the slaves to procure abortion, — observed also in the West Indies by Loeffling 188 (Linn. sp. pl., Vahl symb. i. p. 31, and Lindl.).

Telanthera frutescens of the shores of Tropical America. An Amaranthaceous plant observed by Jacquin in the West Indies — (Steud.), received by L'Heritier pl. 37 from Lima (Pers.), known to grow also at Guyaquil, and frequent in America (Moq.). By European colonists, was carried across the Pacific to Manila (Moq.); and to the Mauritius Islands, observed by Commerson (A. Dec.).

Cyperus vegetus of the West Indies and neighbouring portion of North America. Observed by Jacquin in the West Indies — (Steud.); by Baldwin, in East Florida; by Walter, on the Santee; by Elliot, from Savannah to Charleston; and known to grow in "low pine barrens" as far as North Carolina (Chapm.). Transported to Europe, is described by Roth, Willdenow, Lamarck, and Moench; and has become naturalized around Bayonne and Bordeaux (Godron, and A. Dec.).

At this time (Spreng.), Patrick Browne writing his Civil and natural history of Jamaica,* enumerating *Rubia Brownei*, *Hypoxis decumbens* 195. — The work was published "in 1756."

"1756, June 15th" (Maunder), capture of Calcutta and the English factory there by Surajah Dowla, nabob of Bengal, Bahar, and Orissa. Of the captured English, "one hundred and forty-six were confined for the night" in the Blackhole; a room "twenty feet square," constructed under their own supervision "for a place of confinement;" in the morning, "only twenty-three were taken out alive."

"Aug 13th and 14th" (Holmes), capture of the forts at Oswego, on the Southern shore of Lake Ontario, by Canadian French under Montcalm. The forts, which had excited the jealousy of the confederate tribes called the "Six nations," were at once demolished. In the Southern provinces (Hewet ii. 205, and Holmes), a fort built in this year on Tennessee river "above five hundred miles" from Charleston, and called "Fort Loudon."

"In this year" (Linn. sp. pl.), Linnæus publishing the Third volume of Amoen. acad., enumerating *Agave Virginica* p. 22.

"In this year" (Spreng.), Russel publishing his Nat. Hist. of Aleppo. — He died in "1768," and a Second edition was published by Solander "in 1794" (append. Sibth.).

"1757 A. D." (art de verif.), Osman II. succeeded by Mustafa III., twenty-seventh Turkish sultan. Coins issued at Cairo by Mustafa III., are figured in Marcel p. 239.

"In this year" (Spreng.), Joh. Gottfr. Zinn publishing his Cat. hort. et agri gottingens.

"At this time" (Europ. settlements ii. 29 to 38, and Holmes), the whole colony of Louisiana containing "not more than ten thousand" Whites and Negroes; the inhabitants of Montreal "about five thousand."

"1758, July 26th" (Blair, and Holmes), Louisbourg and the island of Cape Breton again captured by British and colonial forces. "Aug. 27th" (. . . univ. hist., and Holmes), Fort Frontenac on Lake Ontario captured from the French; and "Nov. 25th," Fort Du Quesne captured, and the name changed in honour of the English minister to "Pittsburg."

"1759, Sept. 13th" (Blair, and Holmes), capture of Quebec by the British and colonial forces under Wolfe; bringing French power in Canada to a close. — The final surrender of Canada took place on "Sept. 8th, 1760" (univ. hist., and Holmes).

"Sept. 29th" (Kobell ii.), at Jorullo in Interior Mexico, a new mountain, "fifteen hundred and eighty feet above the plain," rising out of a fissure.

"In this year" (Winckl.), Venegas publishing his Nat. and civil hist. Californ.

"In this year" (Winckl.), Arduino publishing his Animadvers. bot., enumerating "vena di Tartaria" *Avena Orientalis*. — He published a second volume "in 1764."

"In this year" (Spreng., and Winckl.), after his Prim. flor. butisbac. "in 1743," Phil. Conr. Fabricius publishing his Hort. med. helmstadt, enumerating *Decumaria barbara* (Linn. sp. 1663): — he died "in 1774."

"1760, Oct. 25th" (Nicol.), George II. succeeded by George III., now British king.

"In this year" (Spreng.), John Hill publishing his Flora britann.

"At this time" (Holmes), New England estimated by Stiles 142, to contain very nearly "five hundred and one thousand nine hundred and nine" inhabitants.

"In this year" (Winckl.), Mariti visiting Cyprus, and Palestine, meeting with "galetti" *Lathyrus articulatus*. — He returned "in 1768."

"In this year" (Winckl., and Spreng.), after his Meth. "in 1754," Scopoli publishing his Flor. Carniol., enumerating *Carex capillaris*; a second edition "in 1772;" his Fund. "in 1783."

Ophrys andraganthis of the East Mediterranean countries. Observed by Scopoli in Carniolia; — by Chaubard, in the Peloponnesus.

Carex agastachys of Europe and the adjoining portion of Asia. Termed "c. maxima" by Scopoli, as observed in Carniolia, — "c. agastachys" by the younger Linnæus suppl. 414, described also by Goodenough, and known to grow throughout middle Europe (Curt. lond. iii. pl. 63, and Pers.); was observed by Sibthorp, on mount Athos, by Chaubard in the subalpine region of the Peloponnesus.

* *Crotalaria Brownei* of Jamaica. Known to grow wild there — (Gardn.), and described by Bertero (A. Dec.). By European colonists, was carried about 1822 to Ceylon, where it was found by Gardner (bot. mag. for 1848) a frequent weed, spreading in every direction.

Hyptis pectinata of Tropical America. Observed by Browne 259 on Jamaica — (Linn. sp. 799). Transported to Europe, is described by L'Heritier (Pers.): by European colonists also, was carried across the Pacific to the Marian Islands and Madras, and by way of the Atlantic to Guinea, Port Natal, Madagascar, Abyssinia, and Fazokel (Benth., and A. Dec.).

"In this year" (Linn. sp. pl.), Linnæus publishing the Fifth volume of his *Amoen. acad.*, enumerating *Paspalum distichum*.

"In this year" (Spreng., and Pritzel), after his Seventh edition "in 1759," Miller publishing figures of plants adapted to his Gardener's dictionary, including *Pinus inops*, *P. variabilis*, *Xanthoxylum fraxineum*, *Phlox divaricata* 203. f. 1, *Physalis lanceolata*, *Crataegus cordata* 179, *Coreopsis aurea* (Ph.), *Martynia proboscidea* 286, *Hypericum monogynum* 151. f. 2, *Vitex incisa* 275. f. 1. 2, *Bauhinia aurita* 41. t. 61, *Ornithogalum thyrsoides* 128. t. 192, *Anthericum elatum* 38. t. 56, *Rheum compactum* pl. 218, *Phytolacca icosandra* 138. t. 207, *Triumfetta annua* 199. t. 29, *Pyrus prunifolia* 180. t. 269.

Heliotropium Peruvianum of Western Peru. The *heliotrope* of the gardens, a low shrub, is described by Miller pl. 143 — (Linn. sp. pl.), and is known to grow wild in Peru (Pers.). Transported to Europe and to Northeast America, has become a favourite in gardens on account of its fragrance.

"1761, March 12th, between two and three in the morning" (mem. Amer. acad. i. 278, and Holmes), two shocks of an *earthquake* felt throughout New England. "Nov. 1st," another earthquake felt in Boston and the neighbouring towns.

"The same year" (Holmes note to 1732), the *transit of Venus* observed at the Cape of Good Hope.

"In this year" (præf. 9. and flor. lii to 2), Forskal at Marseilles, on his way to Malta and Constantinople, where he arrived in August. He reached Alexandria in the beginning of October, and proceeding to Rosetta and up the Nile to Cairo remained in Egypt — "nearly a year."

"The same year" (= A. H. 1139," W. G. Browne in Walp. trav.), the art of printing introduced into Turkey. — After two years, an Arabo-Turkish lexicon, and a History of the Turkish maritime wars, were issued from the press; and during successive years until "1777" (= A. H. 1155"), fourteen additional works.

"In this year" (Spreng.), Fr. Wilh. von Leysser publishing his *Flor. halens.*, enumerating *Astrutium palustre* (Steud.); — "in 1783" a second edition; "in 1806" tentam. nov.; "in 1807" his Mantissa; "in 1811" a second Mantissa, and died "in 1815."

"In this year" (J. E. Smith, and Spreng.), Louis Gerard publishing his *Flor. Galloprov.*

As early as this year (Act. angl. li, and Linn. sp. pl.), Garden in Carolina sending plants to Linnæus, including *Bumelia tenax*, *Cyrtilla racemiflora* (mant. 50), *Halesia diptera*.

"In this year" (Linn. sp. pl.), after his *Flor. geldrica* "in 1757," Gorter publishing his *Flor. ingræica*: — his *Flor. belgica* "in 1767" (Winckl.); and died "in 1783."

In this year (J. E. Smith, and Spreng.), Oeder editing the first volume of the *Flor. Dan.†*

"1762 A. D." (Proud, and Holmes note to 1732), two ingenious mathematicians returning from observing the transit of Venus, employed by the inhabitants of Southern Pennsylvania to mark out the boundary separating Maryland.

"The same year" (Nicol. f, accession of Peter III. as emperor of Russia. Before the close of the year, he was succeeded by Catharine II.

"May 23d" (Blair), war declared by Portugal against Spain.

"In this year" (Linn. sp. pl., and Winckl.), Gouan publishing his *Hort. monspeliens*, enumerating *Silphium perfoliatum* 462.

"June 27th" (Blair), St. John's in Newfoundland captured by the French; and "Sept. 18th," recaptured by the English.

In the West Indies, Martinico, Granada, St. Lucia, St. Vincent, and the other French possessions in the Caribbee chain of islands, all captured by the combined British and colonial forces (univ. hist., and Holmes). "Aug. 12th," Havana was captured. but on "Nov. 3d," preliminary articles of peace were signed at Paris. — By a treaty signed on the following "Feb. 10th," the French pos-

* *Juncus Gerardi* of the seashore of Northeast America. A rush described by Gerard — (Loisel.), and termed "j. Boethnicus" by Wahlenberg. Westward, along our Atlantic coast is called *black grass*, and has been observed by myself forming beds or patches in salt marshes from Lat. 43°; by Torrey, as far as 41°; by A. Gray, in "salt marshes, common along the coast from New Jersey northward;" by Baldwin at 31° in Florida, and was received by Muhlenberg from Georgia and New Jersey, but I was assured by Dr. Emerson that seed imported from the Northward is sown in the salt marshes along Delaware Bay. Allied to *J. bulbosus*, but may prove distinct.

† *Carex Oederi* of Northern and middle Europe. A low sedge — described by Ehrhart, Schkuhr 67. t. F. f. 26, and Host i. pl. 65: known to grow in moist ground in Northern and middle Europe (Pers.). By European colonists, was carried to Northeast America, observed by myself only in grass-grown clearings in the environs of Salem, Mass.

sessions East of the Mississippi were ceded to Britain, except only the islets of St. Pierre and Miquelon, ceded to France as a fishing station; Guadaloupe, Marigalante, Desirade, and Martinico were restored to France; and Havana, to Spain.

"In this year" (Spreng.), Hudson publishing his *Flora anglica*, enumerating * *Arabis stricta*:—"in 1778," a second edition; and died "in 1793."

"In this year" (Linn. sp. pl. i. 202, suppl. Sibth., and Winckl.), Linnæus the younger publishing his first decade of *Plant. rar. hort. upsal.*;—the second "in 1763."

Lithospermum dispernum of the Uralian plains. An annual described by Linnæus the younger dec. i. pl. 7,—cultivated also in the Oxford botanic garden (J. E. Smith) In its wild state, observed by Hawkins on mount Ossa in Thessaly (Sibth.); by Pallas v. 337 to 497, on the Lower Volga.

In the Introduction to the Second edition of his *Species Plantarum* Linnæus states that he had travelled over the mountains of Lapland, all Sweden, and a part of Norway, Denmark, Germany, Holland, England, and France: and that by his persuasion his pupils had visited and examined other countries, as Kalm, Canada; Hasselquist, Egypt; Osbeck, China; Toren, Surat; Solander, England; Alstrœmer, Southern Europe; Martin, Spitzbergen; Pontin, Malabar; Kæhler, Italy; Forskal, the East; Lœffing, Spain; and Montin, Lapland.

Among botanical friends who had sent from various countries seeds or dried plants, he enumerates B. Jussieu, Royen, J. Gesner, Wachendorf, Sibthorp, Monti, Gleditsch, Krascheninikoff, Minuart, Velez, Kleinhoff, Ortega, Ellis, Seguier, Allioni, Zinn, Gouan, Gerard, Munchhausen, Bielke, Rathgeb, Demidoff, Collinson, Braad, Clifford, Lagerström, Gronovius, Gmelin, Burmann, and Sauvages.

And of botanical writers who maintain or have in some instances adopted his system of arranging and describing, Gorter, Jacquin, Colden, Hill, Hudson, Dalibard, Kramer, Leyser, Meese, Le Monier, Guettard, Haller, and Scopoli.

"Sept. 1st" (introd.) Linnæus publishing a Second edition of his *Sp. Plant.*, enumerating† "fifteen hundred" additional plants=8800 species: including *Platanthera hyperborea*, *Danthonia spicata* 119, *Anemone Pennsylvanica*, *Aconitum uncinatum*, *Hydrophyllum Canadense* 208, *Chamaenerium latifolium*, *Baptisia coerulea*, *Arenaria (Moeringia) lateriflora*, *Pedicularis Canadensis*, *Elephantopus tomentosus*, *Croton glandulosus*, *Chrysosplenium Americanum*, "gentiana ciliata Canadæ montibus" *G. detonsa*, *Silphium laciniatum* (sent by Collinson), *Polymnia Canadensis* amoen. acad. iii. 1. f. 5, *Taxus Canadensis*, *Uniola latifolia* (Muhl. in reliq. Baldw. 96).

Silene Italica of the Mediterranean countries. Termed "cucubalus italicus" by Linnæus sp. plant. 593,—"*viscago clavata*" by Moench, and known to grow in Italy and Southern France (Jacq. obs. iv. pl. 79, Pers., and A. Dec.): observed by Grenier and Godron as far North as Lyons; by Villars, in Dauphiny; by Sibthorp, in the Peloponnesus. In Britain, has escaped from cultivation, and "from 1825" has continued on the sea-cliffs at Dover (Engl. bot. pl. 2748, and Bab.).

Phytolacca dioica of Tropical America? Transported to Europe, and brought by Alstrœmer from the Madrid garden to Linnæus sp. pl.;—cultivated in England by Miller "in 1768;" described also by L'Heritier stirp. i. pl. 70; and enumerated by Clot-Bey and Figari as recently introduced and becoming very large in Egypt.

"In this year" (append Sibth.), Henr. Joh. Nep. Crantz publishing his *Stirp. austriac.*;—the third fascic. and Umbellif. emend. "in 1767;" the sixth and Crucif. emend. "in 1769;" and died "in 1799" (Spreng.).

"In this year" (Spreng.), Aublet arriving in Guayana, meeting with *Nectris equatica*.

Coumarouna odorata of Eastern Equatorial America. The *tonka bean*, a Leguminous tree,

* *Sagina subulata* of Subarctic climates. Termed "*s. pergula laricina*" by Hudson,—and in fl. Dan. (Swartz act. holm. 1789 pl. 1. f. 3, and Steud.); known to grow from Sweden to Switzerland (Wats.); was observed by Curtis near London, and by Brotero in Portugal (Steud.). Westward, was received by Hooker from 56° on the Rocky mountains

† *Amaranthus flavus* of Eastern Asia. Received by Linnæus sp. 1406 from "India"—(Willd. pl. 3. f. 6, and Pers.); by Moquin, from Nepal, apparently a garden specimen (A. Dec.). Probably by European colonists carried to Brazil (see Moq.).

Spiranthes cernua of North America. This spiral-flowering Orchid, described from transported specimens by Linnæus sp. 1340—has reached without human intervention the Southern extreme of Ireland; found there in 1810, and again in 1843 (Bab., and Power). Westward, is known to grow from Newfoundland to the Pacific, at the mouth of the Columbia (A. Dec.); was observed by Michaux from Hudson Bay to Carolina; by myself, in bogs and marshes from 45° throughout New England; by Schweinitz, at 36° in Upper Carolina; by Elliot, in South Carolina; by Baldwin to 31°; by N. A. Ware, in Florida; by Chapman, "Florida to Mississippi;" by Short, in Kentucky.

observed by Aublet iii. pl. 296 in the Guayana forest, — its fragrant seeds well known in commerce (Pers.). By European colonists, was carried to the West Indies (Descourt.); and recently to Egypt, observed there in gardens by Clot-Bey.

"In this year" (Spreng.), Quer y Martinez publishing his *Flor. Hispan.* — He died "in 1764," and two volumes were published by Ortega "in 1778."

"At the close of December" (flor. p. lxxxvi), Forskal from Suez arriving at Lohaja in Yemen. — Journeying inland, he died at Taes "in the beginning of June 1763."

Trianthema crystallina of the Arabian and Abyssinian Desert. The *ice-plant* observed by Forskal p. 69 at Dahi in the Arabian Desert and termed "*papularia crystallina*;" — by Speke, in the opposite Somali country, and by Grant as far as "18° 45'" on the Nile, sheep said to fatten on it. Transported to Europe, is described by Vahl; and from Europe was carried to Northeast America, where it continues under cultivation in vases.

Malva montana of the mountains of Yemen. Called there "hörod," and observed by Forskal p. 124 in the middle mountain-region near Hadie. — Transported to Europe, was termed "*m. nicaeensis*" by Allioni as observed in Piedmont, "*m. setosa*" by Moench (Cav. ii. pl. 25. Pers., and Steud.): in Britain, has recently been observed in a single locality, near the Botanic garden at Chelsea (Wats. cyb. iii. 329, and A. Dec.).

"1763 A. D." (Blair), the expulsion of the Jesuits from France completed.

"The same year" (Spreng.), Bougainville sailing for Brazil and the Falkland Islands, accompanied by Pernetty. — An account of the Voyage was published by Pernetty in "1770."

"In this year" (J. E. Smith, and Spreng.), Linnæus the younger publishing his second Decad., enumerating *Zinnia multiflora* pl. 12.

"In this year" (Spreng.), Vitalian Donati, after publishing his *Hist. nat. adriat.* "in 1750" and making important collections in Syria and Egypt, shipwrecked on his return and assassinated.

"In this year" (Spreng.), Adanson publishing his *Fam. plant.*, enumerating *Brunnichia cirrhosa*. — He died "in 1806."

"1764 A. D." (Spreng.), König arriving in Iceland.

"The same year" (coll. hist., and Holmes), disappearance of the *blue fish*, *Temnodon* from the waters around Nantucket, after abounding there from the first settlement by the English.*

"In this year" (title-page), Linnæus publishing the Third volume of the *Amoen. acad.*, enumerating *Lechea major* p. 11. f. 4.

"1765, Jan. 10th" (Holmes), by the British parliament, an act requiring stamps on all papers legal and mercantile throughout the American colonies. The act, except in Canada, Nova Scotia, and some of the West India islands, was everywhere resisted; and a congress meeting at New York "on the first Tuesday in October," consisting of delegates from Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, and South Carolina, declared: The colonists entitled to all the rights and liberties of British subjects, among which was the exclusive power to tax themselves. — The view of the colonists was supported in Parliament by Pitt, admitting that "taxation and representation are inseparable;" and on the following "March 18th," the act was repealed.

"In this year" (. . . Spreng.), Wulff publishing his *Flor. Boruss.*

"The same year" (J. W. Rosse), "the sovereign rights of the duke of Athol in the Isle of Man," purchased by the British parliament.

"The same year" (Blair, and Maunder), Bengal finally acquired by the British East India Company: and "May 3d," landing of Clive, appointed "commander-in-chief, president, and governor."

Cocculus palmatus of Mozambique. A vine called there "*kalumb*," growing in the forest: the root imported into Malabar and Ceylon as early as this year, and called in Tamul "*columboo vayr*," in Cingalese "*kalamboo khoo*" — (Thunb. trav. iv. p. 185, Fortin, and Ainsl. mat. ind.). The living plant carried by Capt. W. F. W. Owen to the Mauritius Islands, and observed there under cultivation by Bojer. From transported specimens, described by Lamarck enc. iv. p. 99, and Hooker bot. mag.

* *Eriocaulon septangulare* of Northeast America. Having without human intervention reached the European coast, discovered in this year on Skye, West of Scotland, — afterwards in abundance in Western Ireland (Hook., and A. Dec.), and termed "*nasmythia articulata*" by Hudson: was ascertained by Lightfoot to be an *Eriocaulon*, by Withering to be an undescribed species (Steud.): and has received the English name of *pipewort* (Prior). Westward, was observed by Lapylaie in Newfoundland; by myself, in shallow water and on exposed mud from 48° on the Saguenay throughout New England; by Torrey, to 41° on the Hudson; by Pursh, from Canada to New Jersey; and according to A. Gray, grows from "Pennsylvania to Michigan;" according to Hooker, as far as the Saskatchewan.

pl. 2970. According to Pereira, and Lindley, *calumba* root "is a valuable and excellent tonic, having aromatic qualities, but mucilaginous and not acting as a stimulant."

"The same year" (Spreng.), Byron among the "Friendly" Islands (consisting of the Tongan and neighbouring groups).

"1765 to 1766 A. D." (Spreng.), Ekeberg visiting China. — He made a Second visit "in 1770," and published his Itin. in "1773."

"1766 A. D." (append. Sibth.), Linnæus publishing the Twelfth edition of his *Systema Naturæ*.

In or about this year (Pall. trav. i. 705 to 752 and ii. 547), A. Rinder residing as a physician at Orenbourg.

Cynoglossum Rinderi of the Uralian plains. A vernal and remarkable species observed by Rinder in two localities in the environs of Orenbourg; — by Pallas i. 310, as far West as the Kinel affluent of the Volga.

Ornithogalum bulbiferum of the Uralian plains. Observed by Rinder in the environs of Orenbourg; — by Sokolof, on the Lower Yaik and along the Caspian (Pall. ii. 547).

"In this year" (Willd.), Schwenk publishing his Hort. med. hag.

Schwenkia Americana of Tropical America. Known only in cultivated ground and waste places in Northeast Brazil (A. Dec.) and other parts of Tropical America (H. and B., and Steud.). Received from America by Schwenk 328. pl. 1. — Probably by European colonists, carried to Equatorial Africa, known to occur in Senegambia and Guinea (R. Brown cong., and Benth. fl. Nigr.).

"In this year" (Spreng.), Peter Jonas Bergius publishing his Proteac. (stockh. acad. 316).

"In this year" (Spreng.), Carteret sailing among the "Friendly" Islands.

"The same year" (coll. hist. vi. 239, and Holmes), a Marine society formed in Salem, New England: — Incorporated "in 1771." And "in 1799," the East India Marine society of Salem formed.

"In this year" (Humb. cosm. ii.), different kinds of gas or unmixed air recognized by Black and Cavendish; and "fixed air" (carbonic acid) and "combustible air" (hydrogen) shown to be distinct aeriform substances.

"1767, March 31st" (Blair), expulsion of the Jesuits from Spain; and "Nov. 21st," from Naples.

"July" (Gordon, and Holmes), Parliament persisting in taxing the colonies, and receiving news, that New York had refused to provide for troops; an act passed, "restraining the assembly of New York," until compliance. The colonists now became alarmed, jealous of ulterior designs; and "Letters from a Farmer" made their appearance, demonstrating the danger of a small tax, as establishing a precedent.

One hundred and eighty-second generation. Sept. 1st, 1767, mostly beyond youth: the Greek writers Regas of Velestinus d. 1798, Nicephorus Theotokes d. 1800: other writers, Mendelssohn; Jao de Sousa; Von Wisin; Neledinsky-Meletzky: the zoölogists, H. B. Saussure d. 1799, Carolus Bonnet d. 1793, Bonavent. Corti, Turb. Needham d. 1781: the botanists, C. G. Ludwig d. 1773, Io. Gesner d. 1790, Io. Ern. Steiff, P. D. Giseke, Iac. Wernischek, N. Jos. Necker, F. van Berkhey, D. S. A. Buttner d. 1768, J. Ph. Ruling, Ios. Theoph. Kölreuter d. 1799, William Watson, Phil. Fermin, C. G. Dalberg, F. X. Wulffen d. 1804, Iac. Christ. Schaffer d. 1790, Io. Iac. Ritter d. 1784, Theoph. Barckhausen, P. H. G. Mohring d. 1792, C. L. Willich, F. G. Weis, Io. F. C. Grimm, S. G. Wilcke, C. E. Weigel, A. B. Kolpin, H. G. comes Mattuscha d. 1779, G. G. Reyger d. 1788, W. Lachenal and Ach. Mieg, B. Dubourg, F. Descurain, A. L. Latourette, Ant. Battarra d. 1789, F. Bassi d. 1774, Geo. Tycho Holm., Io. Strom, Io. S. Leinker, C. L. Roloff, Mich. Matth. Ludloff, Io. Marsilius, A. J. G. C. Batsch d. 1802, James Bolton, Ioan. Hedwig d. 1799, Nicolaas Meerburgh, John Stackhouse, F. H. Wiggers, William Woodville: the painter Antonio Raphael Mengs d. 1779: the engraver Raphael Morghen b. 1755.

"In this year" (Spreng., and Winckl.), Petrus Poivre publishing his Voyage d'un philosophe. He established a botanic garden on the Mauritius Islands, — and continued prefect of those islands and the Seychelles "until 1775."

"In this year" (Spreng.), Mich. Grubb publishing his Descript. plant. e capite bonae spei.

"In this year" (. . . Spreng.), Gunner publishing his Flor. Norv., enumerating *Ledum latifolium* n. 1067 (Willd.), — completed "in 1772;" he died "in 1773."

"In this year" (append. Sibth., and Spreng.), Linnæus publishing his Mantissa,* enumerating

* *Sagina apetala* of Northern Europe. An annual described by Linnæus — (Steud.); known to grow in sandy soil in Britain (Curt. pl. 14), and France (Lam., and Pers.). By European colonists was carried to Northeast America, observed by A. Gray in "sandy fields, New York to Pennsylvania, rare" and "adventive" only.

Senebiera didyma of the Andes and vicinity throughout North and South America. A small prostrate Cruciferous annual, transported to Europe, described by Linnæus mant. 92; — termed

Verbena Aubletia 88, *Aster (Galatella) hyssopifolia* p. 114, *Muhlenbergia Mexicana* 31, *Koenigia Islandica* 35; *Bumelia decandra* 48 ("Sideroxylon" of Linn. and "B. oblongifolia" of Nutt.) received by Munchhausen from N. America.

"In this year" (Spreng.), Linnæus the younger publishing his Fascic. plant. rar., describing *Raphanus caudatus*, *Silphium terebinthaceum*.

"The same year" (Spreng.), Wallis among the "Friendly" Islands.

"The same year = 32d of Kien-loung" (Amyot, and Pauth. 269), under his direction, the Chinese chronological table compiled and published; together with the Li-tai-ki-sse, a collection of annals from the time of Yao. Kien-loung also caused to be published a Chinese and Mantchou dictionary, including words invented by himself for ideas wanting in Mantchou.

"1768, Feb. 11th" (Gordon, and Holmes), a circular letter addressed by the Legislature of Massachusetts to the other colonies. The British ministry taking umbrage, Lord Hillsborough wrote, requiring the rescinding of the resolution. The Assembly, declaring "the right of the subject, jointly or severally, to petition the king for the redress of grievances," voted not to rescind; and on the following day, "Aug. 4th," was dissolved by Governor Bernard. "Sept. 28th to Nov. 10th" (Adams lett. i, and Holmes), arrival in Boston of "four thousand" troops, to protect the revenue officers in collecting the new duties.

"The same year" (Marcel), war between Russia and Turkey declared, and Egypt called upon to furnish "twelve thousand men." An attempt by the sultan to get rid of Ali-Bey having failed, the Memluk chieftain now declared himself independent; — and held possession of Egypt about four years. Coins issued by Ali-Bey, are figured in Marcel p. 335.

"July 14th" (tr.iv. i. 21), Pallas leaving Moscow. Journeying Eastward along the Volga, he reached Sinbirsk "Sept. 22d."

"In this year" (append. Sibth., Spreng., and Winckl.), Haller publishing his Hist. stirp. Helvet. indig., enumerating "twenty-four hundred and eighty-six" species, among them *Veronica fruticosa* pl. 16, *Aretia Helvetica* 11, *A. alpina* 11, *Arenaria multicaulis* 17, *Saxifraga mutata* 16, *Pedicularis recutita* 8. 2, *P. gyroflexa* 11, *Oxytropis campestris* 13, *O. Uralensis* 14, *Inula Vaillantii* 2, and *Cirsium spinosissimum*. — He published his Nomenclat. "in 1769," and died "in 1777."

"The same year" (Spreng.), S. T. Gmelin voyaging on the Caspian, from Astracan along the coast of Ghilan and Masanderan, provinces of Persia. — His Reise were published "1770-84."

"The same year" (Spreng.), Bougainville among the "Friendly" Islands: accompanied by Commerson — who died "in 1773."

"The same year" (second edit.), end of the chronicle of Blair.

"In this year" (Spreng., and Winckl.), Giov. Targioni-Tozzetti publishing his Relaz. viag. Tosc. — The work was completed "in 1779," and he died "in 1782."

"In this year" (. . . Winckler), Labillardière visiting Syria, — where he remained "until 1787." His Icon. Plant. Syr. were published "in 1791-1812."

Periploca angustifolia of the Atlas mountains. Observed by Labillardière icon. ii. pl. 7 in Syria, — by Desfontaines i. 209 on mount Atlas (Pers.). According to Gussone has not crossed from Favignano to Maritimo, islands only two leagues apart (A. Dec.).

Helichrysum frigidum of mountain-summits in Syria and Corsica. Observed by Labillardière pl. 4 on Lebanon: — elsewhere known to grow only on Corsica (Pers., and A. Dec.).

"*lepidium anglicum*" by Hudson "in 1778," as found naturalized in Britain; occurring also in waste ground in Sweden (Fries), Italy (Scop., and Savi) Southwestern France (A. Dec.), Spain (Boiss.); and by European colonists carried to St. Helena (Wats.), and Port Jackson in Australia (R. Brown, and Nutt.). Westward, is known to grow in Brazil (A. Dec.), Buenos Ayres, and Chili (Hook.); by Humboldt and Bonpland, on the Equatorial Andes at the elevation of "1350" (Kunth); by Nuttall, to all appearance indigenous along the Missouri and Mississippi: but has become a weed in our Atlantic States, from Virginia Southward (A. Gray); on the Santee before the days of Walter, and Michaux (Steud., and Ell.); was observed by Chapman, in "waste places, Florida to North Carolina;" by Drummond, around New Orleans.

Gentiana Pyrenaica of the Pyrenees, Carpathians, and Caucasus. Described by Linnæus mant. 55, — and Gouan illustr. vii. pl. 2: known to grow on the Pyrenees above "4800 feet," on mount Berzsowa in Hungary, and on Caucasus, but seems unknown in Switzerland (A. Dec.).

Terminalia angustifolia of the Malayan Archipelago. From transported specimens described by Linnæus mant. 297, — and Jacquin hort. iii. pl. 100, and Gærtner ii. pl. 127. Eastward, observed in the countries on the Indian Ocean by Commerson (Steud.); according to Royle, a milky juice flows from the stem and concretes into a fragrant substance resembling benzoin, and in the Mauritius used in churches as a kind of incense (Lindl.). The tree has recently been introduced by Nimmo into Hindustan (Graham. See *Styrax benzoin*).

"In this year" (append. Sibth., and Spreng.), Miller publishing the Eighth edition of his Gardener's dictionary, enumerating *Berberis Canadensis*. — He died "in 1771."

"In this year" (Spreng.), after his Geran. in "1759," N. L. Burmann publishing his Flor. Indica, enumerating plants collected by Outgaerden, Pryon, Lor. Garcin., and others, as *Cotula minima*, *Thuya cupressoides*. — He published also Prodr. flor. Capens.; and died in "1793."

"In this year" (Winckler), James Bruce visiting Abyssinia, — where he remained "until 1772."

"1769, Feb. 9th" (Gordon, and Holmes), in an address to the king by both houses of Parliament, a proposal to bring persons accused of treason into Britain for trial. Massachusetts having now no Assembly; resolves by the Virginia Legislature "May 16th," That "it is lawful to procure the concurrence" of other colonies in "praying the royal interposition in favour" of violated rights: and that all trials for crime committed in a colony, "ought to be in and before his majesty's courts within said colony." On the following day, the Virginia Assembly was dissolved by Governor Botetourt. "In October," the North Carolina Legislature adopting similar resolutions, was dissolved by Governor Tryon. A Non-importation agreement soon afterwards became general.

Previous perhaps to his voyage with Cook, Solander describing *Vaccinium vacillans*, *Andromeda speciosa*.

"The same year" (Spreng., and D'avezac in rec. voy. et mem. iv.), Cook on his First voyage in company with Banks and Solander, traversing the Pacific Ocean discovered Anaa or Chain coral-land, and farther West the two high islands of Tetouroa and Maouroa. — He reached New Zealand "in 1770," and after visiting Australia and New Guinea arrived home "in 1771."

"In this year" (Spreng., and Winckler), Erich Laxmann, residing at Kolywan, publishing his letter on Siberia. — He died "in 1796."

"April 15th" (trav. i. 224), Pallas at Samara on the Volga in 53°, the ice entirely gone, and the country covered with flowers, including *Ornithogalum minimum*, *Fritillaria Pyrenaica*, *Tulipa sylvestris*, *Iris pumila*, *Valeriana bulbosa*, *Pedicularis comosa*, *Astragalus Uralensis*, *A. tragacanthoides*, *Viola odorata*, and most abundant of all *Pulsatilla patens*: on the heights were growing *Clematis erecta*, *Salvia nemorosa*, *S. nutans*, *Phlomis herba-venti*, *Dracopcephalum thymiflorum*, *D. Sibericum*, *Nepeta violacea*, *Hedysarum onobrychis*, *Astragalus pilosus*, *A. grandiflorus*, *Centaurea Ruthenica*, *Inula hirta*, and most abundant of all *Onosma echioides*. "May 2d," leaving Samara, Pallas continued along the Volga, meeting with *Agropyrum prostratum*, *Cheiranthus taraxacifolius*, and on "the 30th" returned to Samara. "June 16th," he proceeded Eastward up the Samara river, meeting with "planta salsa ambigui generis" (. . .), *Erysimum cornutum*, and "July 1st" reached Orenbourg in "51° 46'" on the Yaik. "Aug. 22d," Pallas at Gourief on the Yaik near the Caspian, meeting with in the environs *Hesperis Tartarica*, *Polycnemum monandrum*, *P. oppositifolium*, *Salicornia strobilacea*, *Salsola arbuscula*, *Serratula Caspica*, *Lycoperdon herculeum* a foot high around the Inderskoi salt lake. Leaving Gourief "on the 31st," he reached Jaitzkoi on the Yaik "Sept. 17th," Sakmarskoi on the Orenbourg route "on the 28th," and continued through the Baschkir country to Oufa "Oct. 2d."

"July 24th" (append. Pall. v. 484), Lepechin arriving at Zarizyn on the Lower Volga. — He published the first volume of his travels in Russia "in 1774," and the third "in 1783" (Spreng., and Winckl.).

"The same year" (Humb. iii. 8), colonization of North California by the Spanish; who established missions at Monterey and San Francisco.*

"In this year" (J. E. Smith, Spreng., and Winckl.), after his Icon. "in 1766," Schreber publishing the First volume of his Gram., — his Flor. Lips. "in 1771," Verticil. unilab. "in 1774."

Carex intermedia of Europe and the adjoining portion of Asia. Described by Schreber and termed "c. disticha" — (Pers.); known to grow in meads and marshes from Sweden and Russia to the Mediterranean (Engl. bot. pl. 2040, Thuill., Pers., and Wats.); observed by Decandolle in France; by Sibthorp, and Chaubard, frequent in the Peloponnesus.

Carex præcox of Europe and the adjoining portion of Asia. A low vernal sedge described by Schreber, — and known to grow in open woods from Sweden and Russia throughout middle Europe (Engl. bot. pl. 1099, Jacq. aust. pl. 446, Pers., and Wats.); observed by Sibthorp on the mountains around Athens. By European colonists, was carried to Northeast America, observed by myself naturalized on hills around Salem, Mass., and flowering before the development of leaves on the overhanging trees; by Schweinitz, near Bethlehem, Penns.

* *Vitis Californica* of North California. A wild vine, yielding grapes "assez grandes, mais très aigres," was found by the first Spanish colonists — (Humb. iii. 8): doubtless the species observed by myself, festooning trees along the Sacramento, the fruit rather small, pleasant to the taste, but leaving behind an unusual sense of tartness.

"1769 to 1770 A. D." (Spreng.), arrival of Mariti in the East.—He remained there "eight" years.

"1770, March 5th" (Gordon, and Holmes), in Boston after an affray, the soldiers insulted, and one on receiving a blow fired at the aggressor; a single discharge from six others followed, and of the citizens three were killed and five dangerously wounded. "April 12th," the repeal of the new duties signed by the king: reserving that on tea, to keep up the claim of sovereignty; in effect, leaving the cause of contention between the two countries in full force. An act had been passed by Parliament, "For securing the dependence of America on Great Britain."

"May 16" (trav. ii. 19), leaving Oufa, Pallas proceeded among the Ural mountains and through the Baschkir country to Kaslinskoi, "June 17th:" he here took the main route, reached Ekaterinbourg "in 56° 40'" on the "23d." and "July 4th" the Toura tributary of the Obi in the Vogoul country. Pallas ii. 364 found the *Vogouls* small in stature and effeminate, having very little beard (*Mongolian*), and somewhat resembling the Calmucs but whiter; living in the forest, altogether by hunting and chiefly on the *elk*, having a very few *dogs*, and *cows* kept around their cabins, but no other domestic animals; each community having enclosures miles in diameter; those dwelling along rivers capturing fish and making canoes either of the trunk of a tree or of birch bark; they never eat salt, enjoy excellent health, and use no medicines; their language seems related to the Finnish; all profess themselves Christians, but they have secret rites, sacrifices to idols, invoke particular divinities, and have retained much of their ancient religious views. Returning as far as Tcheliabinsk "Aug. 4th," after various excursions he left "Dec. 16th," and on the "20th" reached Tobolsk on the Irtych "in 58° 12'."

Nicetas Sokolof, sent in the early spring to the Caspian, rejoined Pallas at Tcheliabinsk "in September," having met with *Onosma divaricata*, *Salsola laniflora*, *Amaryllis Caspica*, *Cheiranthus tomentosus*, *Astragalus caudatus*, and *Scorzonera pusilla*.

"The same year" (Pauth. 453), the Tourgaouts withdrawing from Russian rule on the Volga, after reaching the Ili, asked and obtained protection from the Chinese emperor Kien-loung.

"The same year" (Pauth. 32), eleven years after the death of P. Gaubil, his translation of the Chou-King published by De Guignes at Paris.

"In this year" (Pers.), Ellis describing plants in Act. angl. ix, including *Dionæa muscipula*.—He died "in 1776."

"In this year" (Spreng.), Desportes publishing his *Maladies de St. Dom.*

"In this year" (J. E. Smith ed. fl. lapp.), Chr. Friis Rottboll describing plants in Act. Hafn. x., among others *Stellaria humifusa* pl. 4.

"In this year" (J. E. Smith, and Spreng.), Jacquin publishing his Hort. Vindobon.,—completed "in 1776,"—enumerating *Geum album* ii. pl. 175.

Convolvulus farinosus of Madeira. Transported to Europe, described by Jacquin hort. vind. i. pl. 35,—and Linnæus mant. ii. 203: said by Sibthorp to occur along hedges and in cultivated ground in Myia, Livadia, and the Peloponnesus, but there is no specimen in his herbarium (Lindl.).

"In this year" (Spreng.), Davides Cranz publishing his Hist. Groenl., enumerating "eighty-two" phanerog. plants.

"In this year" (Winckl.), after the Second volume, Oeder publishing the Third volume of the Flor. dan., enumerating * *Draba nivalis* pl. 142. — He now retired from the editorship, and died "in 1791."

"In this year" (Spreng.), Thunberg on his way to Austral Africa.†

* *Utricularia intermedia* of Western Europe. Described by Oeder fl. Dan. pl. 128 — (Pers.); observed by Hayne pl. 5 in Germany; by Thuillier, near Paris; and known to grow also in Britain (A. Dec.).

† *Oxalis cernua* of Austral Africa. Observed there by Thunberg pl. 2 (Pers.). Transported to Europe, has become naturalized in Spain, Sardinia, Sicily, Malta, Algeria, and from "1826" at Gibraltar (A. Dec.).

Gnaphalium undulatum of Austral Africa. Observed there by Thunberg 151 (Pers.). Transported to Europe, is described by the younger Linnæus suppl. 363; and has been observed by Lejolis for several years naturalized in the environs of Cherbourg (A. Dec.).

Solanum Capense of Austral Africa. Observed there by Thunberg (Steud.), and from transported specimens described by the younger Linnæus suppl. 147. By J. Drummond in 1829 introduced into Southwest Australia, and observed by him "ten years" afterwards completely naturalized (Hook. journ. bot. for 1840, and A. Dec.).

Stenotaphrum dimidiatum of the Atlantic shore of Tropical and Subtropical Africa. A maritime grass observed in Austral Africa by Thunberg, and Drège (A. Dec.); and known to grow as far as Saint-Thomas and Guinea (Kunth, and Benth. fl. Nigr.). By ocean currents transported across the

Juncus pygmaeus of Europe and the adjoining portion of Asia. A rush described by Thunberg (Steud.): observed by Thuillier in wet places in the environs of Paris (Pers.); by D'Urville in beds of torrents on the island of Milo (Chaub.).

"In this year" (Spreng.), Peter Jos. Buc'hoz publishing his *Traité hist. plant. Lorraine*, also his *Dict. plant. de la France*.

"In this year" (Winckl.), Joh. Andr. Murray publishing his *Prodrom. stirp. gottingens.*; * and about this time (comm. goet. vii), describing *Euphorbia cyathophora* pl. 1.

"1771, March" (trav. iii. 6), Pallas, proposing to visit East Siberia, joined by Georgi and Falk at Tcheliabinsk. Leaving "April 16th," he proceeded Eastward, and "May 16th" reached Omsk on the Irtych. Leaving on the "22d," meeting with *Sisymbrium salsuginosum*, *Convolvulus spinosus*, *Astragalus ammodytes*, *Thlaspi ceratocarpum*, *Allium coeruleum*, and "June 27th" reached the Schoulba at the commencement of the Altaian mountains. Leaving the vicinity "July 17th," he soon reached a tributary of the Obi and continued Eastward, meeting with *Silene Altaica*, *Berberis Siberica*, *Cardamine nivalis* from the mountain-summits, reached Tomsk "Sept. 9th," and on the "30th" Iourbinskaia or Kemson on the Yenisei. Near Abakansk were *inscriptions*, older apparently than the Conquest of this portion of Siberia and mostly Mongol, two only being in the Tartar language. "Oct. 10th" he reached Krasnoïarsk on the Yenesei, where he passed the winter.

"March 8th" (Pall. trav. iv. 16), under instructions from Pallas, Soujef leaving Tobolsk on the frozen Irtych on his way to the Arctic Ocean. After "two hundred and sixty verstes" at Demianskoïiam the Tartar villages ceased, and the Russian villages were soon intermingled with those of the Ostiaks, professed Christians as far as Berezof, "five degrees North of Tobolsk" and where *dog-sledges* were in use as well as *reindeer*. Leaving "June 11th" in a large canoe, on the "14th" he arrived at Obdorskoi, "in 67°" and the last place held by the Russians. Leaving by canoe "July 1st," he landed on the "3d" and proceeded North with reindeer, meeting with *Sedum quadrifidum*, *Acetosa acetosella*, *Andromeda (Cassiope) hypnoides*, *Chrysosplenium alternifolium*, *Sisymbrium sophia*, *Artemisia borealis*, and *Lycopodium complanatum*; on the "14th" he saw the Arctic Ocean, and journeying Westward, reached the Gulf on the "25th;" on the "28th," he commenced his return.

"In this year" (Spreng.), Vandelli residing at Rio Janeiro publishing a few Brazilian plants.

"In this year" (Spreng.), Duroi publishing his Harbk., enumerating of North American plants, *Quercus palustris* pin oak (Brendel in Am. Nat. for 1870), *Acer spicatum*.

"In this year" (title-page), Forster publishing his Catalogue of N. Amer. plants, enumerating *Elatine Americana*, *Parietaria debilis* (Chapm.).

"In this year" (append. Sibth., and Spreng.), Linnæus publishing his Second Mantissa, enumerating *Muhlenbergia Mexicana* 31, *Rhynchospora fusca* (Steud.), *Ipomoea dissecta* (Steud.), *Saxifraga Siberica* (Pers.): †—afterwards turned his attention to Surinam plants; and died "Jan. 10th, 1778."

"In this year" (biblioth. Amer. 165, and Holmes), publication of "Considerations on the expediency of admitting representatives from the American colonies into the British house of Commons."

Avena strigosa of the Tauro-Caspian countries. A grass in this year first observed in Germany (Schreb. fl. lips.),—"in 1779" by Retz in Sweden, and "in the same year" by Withering in Britain; has since become a weed in cultivated ground from Russia to Portugal (Brot., and A. Dec.): was observed by C. A. Meyer to all appearance wild in meads near the Caspian, between Sallian and Lenkoran.

"The same year" (Spreng., and Winckl.), voyage of Sonnerat from the Mauritius Islands to the Seychelles and Malayan Archipelago.—He published his *Voy.* "in 1776," and died "in 1781."

"In this year" (Spreng.), Oeder succeeded by O. F. Muller as editor of the *Flor. Dan.* who published the fourth volume,— "in 1782" (Winckl.), the fifth volume, and died "in 1784."

Atlantic, and probably Westward: observed by Baldwin on Flores, Bermuda, also at Bahia, and from Rio Janeiro to the mouth of the La Plata; by Chapman, "along the coast, Florida to South Carolina;" by Le Conte, in Georgia (Collins); by Walter, and Elliot, near salt water as far as the Santee.

* *Rumex conglomeratus* of Northern Europe. A dock distinguished by Murray;—termed "r. nemolapathum" by Linnæus jun., "r. divaricatus" by Thuillier, "r. paludosus" by Aiton (Steud.); known to grow in moist shaded situations and along streams in middle Europe (Pers.): observed by Pollich, Moench, Roth, and Sprengel, in Germany; by Thuillier, near Paris. By European colonists was carried to Northeast America, occurring according to A. Gray in "moist places, sparingly introduced, naturalized."

† *Euxolus deflexus* of . . . Having the aspect of *E. viridis*, but the stems prostrate, and distinguished by Linnæus—(Willd. pl. 10. f. 20, Pers., and Steud.). By European colonists carried to Northeast America, occurring in "waste places, Albany, New York, etc." (Raf., and A. Gray).

"1772, March 22d" (Pall. iv. 134), Falk having commenced his return to St. Petersburg, and Georgi remaining behind at Irkutsk, Pallas continuing his journey crossed Lake Baical on the ice on the "23d," and "April 6th" reached Kiakta. Leaving on the "9th," he returned down the Selenga as far as Oudinsk, and on the "27th" proceeded Eastward, meeting with *Lycopodium rupestre*, and reached the waters of the Ingoda tributary of the Amour "May 9th." He now entered Daouria, meeting with *Myosotis rupestris*, *M. pectinata*, *Cotyledon malacophyllum*, *Astragalus leptophyllus*, *A. dalguricus*, *A. muricatus*, *Phaca salsula*, *Pedicularis flava*, *Spiraea thalictrifolia*, *Phlox Siberica*, *Sagittaria alpina*, *Iris ventricosa*, and turning back at Tchindantourouk, left Daouria "June 12th." Continuing Westward, on the "20th" he reached Selenginsk, and on the "25th" Kiakta, observing on the Upper Selenga *Hypecoum erectum*, *Anchusa saxatilis*, *Convolvulus rupestris*, *Astragalus polyphyllus*, *A. oxyphyllus*, *A. laguroides*, *A. (Oxytropis) ampullatus*, *Artemisia pectinata*, *Pedicularis striata*, and returning reached Lake Baical "July 7th." From Irkutsk on the "22d" he continued Westward, and "Aug. 1st" reached Krasnoïarsk. Leaving on the "19th" for the Upper Yenisei, he reached the waters of the Abakan "Sept 5th," and on the "6th" the frontier of Mongolia at Taschtypkaja Derevna: returning, meeting with *Sedum populifolium*, he reached Krasnoïarsk on the "23d."

Sokolof, left behind in Daouria (Pall. trav. iv. 607), meeting with *Phyllanthus ramiflorus*, *Pedicularis myriophylla*, *P. spicata*, *Primula nivalis*, *Galega Daurica*, and returning, joined Pallas at Krasnoïarsk.

"In this year" (Nicol.), Third partition of Poland.

"In this year" (Lindl. med. 408), *Cinchona* forests discovered by Mutis around the city of Santa Fé de Bogotá, the attention of Government directed to the fact, and specimens sent to Linnæus. — He continued to reside there and established a Botanical garden, published memoirs "in 1784" and "1792," and died "in 1809" (Spreng.).

"The same year" (encyclop. meth., and Holmes), severe earthquake in Guatemala: destroying the city of that name, with "eight thousand families."

"Nov. 2d" (rec. Bost., and Holmes), on motion of Samuel Adams in town meeting at Boston, a committee of twenty-one citizens appointed: To correspond with their brethren in the province, state their grievances, and publish an account of their proceedings. — This committee of Correspondence proved "the basis of the subsequent union of the colonies."

"In this year" (Spreng.), Sparmann in Austral Africa on the arrival of Cook — on his Second voyage, now accompanied by Forster.

"In this year" (D'avezac in rec. voy. et mem. iv), in the Pacific, a low island called by the natives Topatuetota, in "Lat. 17° 15' Long. 236° 2'," discovered by the captain of the Spanish frigate Aguila; also a low island called by the natives Eruo, in "Lat. 17° 30' Long. 234° 15'." — The first-named island was visited by Cook in the following year and called by him Resolution.

"In this year = beginning of the years an-yei" (transl. Klapp. 239), Rinsifée, or Fajasi Sivei holding an interview with a Japanese of Matsmeye, from whom he learned many particulars respecting the Ainos of Yeso — His work, containing besides an account of Corea and the Loo Choo Islands and entitled San-kokf-tsou-ran-to-sets, was published in "1785," and has been translated by Klaproth into French (Orient. transl. lond., and Siebold educ. Vries p. 4).

The Ainos of Yeso are described in the San-kokf as unacquainted with writing, agriculture, the use of money, and the art of procuring iron and copper from their mines; do not capture whales, and have an account of a sea-monster called "okime" large enough to swallow a whale (the kraken of the Norwegians); have no knowledge of chronology, social laws, nor of the use of wealth, but think only of eating and sleeping with their wives, are in the same condition as people were at the beginning of the world, before thousands of years with religion and commerce gradually brought on civilization: they do not voluntarily dwell with Japanese; all have a healthy aspect; dip new-born infants in the sea; the men are occupied in hunting and fishing, and in general have great bodily strength, the women cutting firewood and doing all the work of the household; no one knows precisely his own age: they make coarse cloth of fibrous plants and bark of trees, but embroider with thread elegantly; wear no covering on the head, and go barefoot even in frost and snow; intermarry with their nearest relations, to keep the family distinct, and those possessing the means marry four to eight wives, each one of whom has a separate house; conceal in the mountains and set a high value on sword-hilts and other antiquities inherited from their ancestors; place their dead in a large chest together with the utensils used by the deceased, and for special honour erect a post five feet high and suspend his sabre, but never wear signs of mourning; their houses have but a single apartment, in which the whole family sleep and eat together, there being no distinction of master and servant; a cage containing an owl (*Strix flammea*) is often alongside, for the sake of feathers for their arrows; they have an instrument of iron called "kouwasaki," or "kwasaki," consisting of a ring having two branches in the form of a swallow's tail and a little bell suspended by a short chain from each branch, regarded as sacred, used when making prayers and sacrifices for recovery from illness, and in general kept concealed in the ground; the people are very stupid, though maintaining an

excellent character; have neither king, princes, nor lords, but in each hamlet the most respectable old man is the chief and has charge of public affairs.

"In this year" (Spreng., and Winckl.), Joh. Fr. Gmelin publishing his *Stirp. Tubing. indigen.* — He died "in 1802."

"In this year" (Spreng., and Winckl.), Joh. Jac. Reichard publishing his *Flor. Moeno-Francof.* — The publication was completed "in 1778," and he died "in 1789."

"In this year" (Pursh), G. Wolffg-Knorr publishing his *Thesaur. rei. herb.*

About this time ("Jan. 7th 1811 — near forty years," lett. to Baldwin reliq. 15 to 181), after returning from the University of Halle "in 1770," Henry Muhlenberg of Pennsylvania at the age of nineteen turning his attention to Botany.

"In this year" (Pritzel), Schreber publishing the Second volume of his *Gram.*, enumerating *Muhlenbergia diffusa* n. 103 (Willd.), *Brachyelytrum aristatum*, *Trichodium laxiflorum*, — completed "in 1779:" the Third volume was issued "in 1810," the year in which he died

"1773, March" (Holmes), a committee of Correspondence appointed by the Virginia Legislature: To extend communications beyond the province to the sister colonies. On the arrival of ships laden with tea: at Charleston, the tea was stored where it could not be used; at Philadelphia and New York, the ships were sent back; and at Boston, after vain attempts to send back the ships, persons in disguise forced an entrance and threw the tea into the harbour.

"April," Wm. Bartram (according to his own account) leaving Philadelphia on his journey South, as far as Florida, meeting with *Kalmia hirsuta*, *Scutellaria serrata*, *S. canescens*, *Salvia azurea*, *Calamintha grandiflora*, *Sabbatia stellaris*, *S. calycosa*, *Ixia coelestina*, *Lycium Carolinianum* trav. 59, *Azalea calendulacea* p. 321, *Oenothera grandiflora* (Ph.), *Clethra acuminata*, *Hydrangea quercifolia*, *Chrysobalanus oblongifolius*, *Illicium parviflorum*, *Magnolia pyramidata*, *Gerardia? cuneifolia*, *Hibiscus incanus*, *Liatris graminifolia*, *L. heterophylla*, *L. gracilis*, *L. pauciflora*, *Actinosperrum angustifolium*, *Actinomeris alata*, *Coreopsis acuta*, *C. angustifolia*, *Rudbeckia discolor*, *Helianthus radula*, *Berlandiera tomentosa*, *Myrica inodora*, *Asimina grandiflora* and *A. pygmaea*, both on the South side of the Alatomaha (B. r. 332); *Mylocaryum ligustrinum* near Savannah p. 31; *Pinckneya pubens* near Fort Barrington on the Darien road p. 16 with *Gordonia pubescens* (B. r. 333); *Hypericum aureum* ("frondosum" of Mx., B. r. 107), *Satureja? rigida* (B. r. 281).

"April 21st" (trav. iv. 56), Pallas on his return from Siberia leaving Sarapoul for the South, to observe the vernal plants between the Yaik and Lower Volga; "May 8th," he crossed the Samara, continuing South along the Yaik, meeting with *Cachrys odontalgica*, *Polycnemum sclerospermum*, and on the "23d" reached Soundaef. Leaving the Yaik on the "24th," and proceeding Southeast, he entered the Naryn Desert "in 49°" on the "31st," meeting with *Spartium aphyllum*, *Delphinium puniceum*, *Anabasis monandra*, *Ornithogalum circinnatum*, "June 8th" came in sight of the Volga, and on the "11th" reached Astrakan; where he met Gmelin jun. preparing for his second visit to Persia. Leaving on the "16th," he returned along the Volga and on the "25th" reached the Moravian settlement of Sarepta, in existence "eight years," and "twenty-two versts" beyond at Zarizyn passed the month of July. Leaving "Aug. 4th" he continued up the Volga as far as Saratof, and returned to Zarizyn on the "28th," to pass the winter.

Soujef among the Inderski mountains meeting with *Molucella tuberosa*, *Plantago minuta*, *Bunias Tartarica*, *Leontice vesicaria*, and *Amaryllis Tartarica*, rejoining Pallas "May 23d" at Soundaef.

"The same year" (Pemberton ms., Morse geogr. i. 122, and Holmes), the settlement of Kentucky commenced by Daniel Boone and family, with five other families, and forty men from Powell's Valley. Said to be in violation of a government treaty with the aborigines.

"Between sixty and seventy years" before our visit to the Pacific (Hale ethnogr. Expl. Exp. p. 140), Temoe or Crescent Island, a coral-islet "about thirty miles" Southeast of Mangareva, peopled by Mangarevan fugitives "on rafts;" the drifting, it should be observed, being directly against the trade wind. — After many years, Catholic missionaries arrived at Mangareva: through whom the fugitives were brought back to their homes.

"In this year" (J. E. Smith, and Spreng.), after his *Flor. Monsp.* "in 1765," Gouan publishing his *Illustr. of rare plants growing on the Pyrenees*, including *Seseli elatum*.

"In this year" (Spreng., and Winckl.), Chr. Friis Rottböll publishing the *thesaurus Tranqueb.* of J. G. König. — König's *Scitamin.* were published in Retz. Obs.; and he died "in 1785."

"In this year" (J. E. Smith, and Spreng.), Jacquin publishing his *Flor. Austriac.*, enumerating *Arenaria fasciculata* ii. pl. 182, *Hieracium molle* pl. 119. — Completed, with his *Hort. Vindobon.* "in 1776."

"In this year" (Spreng., and Winckl.), Tobias Konr. Hoppe publishing his *Flor. Gera esculent.*

"1774, towards the end of winter" (Pall. v. 362), leaving Pallas at Zarizyn on the Volga, Georgi returning by the way of Kasan to Moscow. — "In the following year" (Spreng., and Winckl.), he published the travels of Falk and himself from Orenburg to Lake Baical and Daouria.

"March 7th" (Holmes), news of the destruction of the tea communicated in a message from the king to both houses of Parliament. An Act was at once passed, Closing the port of Boston. Another Act followed, For "better regulating the government of Massachusetts:" and "May 13th," Thomas Gage, commander in chief of the royal forces in North America, was appointed governor of Massachusetts.

"June 7th" (Holmes), meeting of the Massachusetts Legislature at Salem; having been removed there by General Gage. A resolution was adopted, Recommending the appointment of committees from the several colonies, to consult together on the present state of affairs. Accordingly on "Sept. 4th," committees from eleven colonies made their appearance at Philadelphia; on the following day, formed themselves into a Congress, and elected Peyton Randolph of Virginia president; and after a session of "eight weeks" dissolved, Recommending however, that another Congress be held in the following year, "should events make their meeting necessary." On "Sept. 1st," general and governor Gage seized the powder in the arsenal at Charlestown: military preparations were now made by the colonists; and "toward the close of the year," news arrived of the prohibition of the export of military stores from Britain.

"Towards the middle of March" (Pall. v. 315), spring opening at Zarizyn on the Volga, and Pallas observing the vernal plants, including *Tulipa biflora*, and *T. sylvestris*: leaving "April 24th" for the ruined city on the Aktouba, and continuing beyond, meeting with *Echinosperrum minimum*, *Erysimum polyceratum*, on the "28th" he reached the lake and hill of Bogdo-Oola, held sacred by the Calmucks. After a second visit "May 21st," he returned to Zarizyn, took final leave "June 4th," and "July 3d" arrived at Moscow.

"April 6th" (J. Roberts in hist. coll. iv. 240), Hood's Island in the Marquesas Group discovered by Cook, its native name not given. Forster accompanying him meeting with * *Dichondra repens*. — Arriving home, he published his Charac. gen. "in 1776," Discov. in North "in 1786." G. Forster, who accompanied his father on Cook's Second Voyage, — published his own account in "1784," Plant. Escul. ins. austr. in "1786," and died in "1794."

"Aug. 9th" (Humb. iii. 8), Nootka Sound in Northwest America discovered and entered by Juan Perez.

"In this year" (Winckl.), J. A. Murray publishing his Systema vegetabil., enumerating *Spiraea lobata*.

"The same year" (art de verif.). Mustafa III. succeeded by Abd-el-Hamid, twenty-eighth Turkish sultan. Coins issued at Cairo by Abd-el-Hamid, are figured in Marvel p. 249.

"The same year" (Nicol.), Louis XV. succeeded by Louis XVI., now king of France.

"In this year" (A. de J. gen. plant., and Winckler), Bernard de Jussieu publishing his Methodus, establishing in the Royal gardens of Paris an arrangement of plants according to Natural Orders. — He died "Nov. 6th 1776."

"The same year" (Kobell iv.), re-discovery by Priestly of oxygen gas — Leading to the recognition of many of its compounds, and the reconstruction of the science of Chemistry by Lavoisier.

"Sept. 20th" (D'avezac in rec. voy. et mem. iv.), Andia y Varela with two ships sailing from Callao Westward. "Oct. 30th," he discovered a low island in "Lat. 17° 20' Long. 238° 58'" and named it San-Narcisso; "Nov. 1st," a low island called by the natives Noaroa, in "Lat. 17° 44' Long. 236° 49'"; on the "6th," a high island Matea, in "Lat. 16° 50' Long. 230° 6'"; on the "7th," a high island called by the natives Maitia, in "Lat. 17° 44' Long. 229° 34'"; and on the "8th," arrived in sight of Taheiti.

"1775, Feb. 26th" (Stiles, and Holmes), troops on their way through Salem to seize military stores, prevented at a bridge, "on the opposite side of which colonel Pickering had mustered thirty or forty men" and raised the draw: (the road being private property, the troops had not the right to pass. Rev. Dr. Barnard, interceding with the British commander to prevent firing, at length hit upon an argument that had weight: saying substantially, This crowd around your troops is as you see unarmed, but all know where to get muskets in a very few moments, and how to use them. C. P. can recollect when every citizen of the military age who did not parade in the militia kept a musket with accoutrements for inspection).

* *Gentiana montana* of the mountains of Tasmania and New Zealand. Observed by Forster prod. 133 in New Zealand; — known to grow also on mountain-summits in Tasmania and the neighbouring portion of Australia (Griseb., and A. Dec.).

Tephrosia piscatoria of Mexico. Observed by Forster among the Tropical islands of the Pacific — (Steud.); by myself, introduced throughout by Polynesians, from the Hawaiian Islands and Metia to the Feejeean Islands. Eastward, was observed by Barclay at Realejo on the Pacific coast of Tropical America (Benth. bot. Sulph., and A. Dec.). From transported specimens, described by Aiton (Pers.).

"April 19th" (Stiles, and Holmes), troops on their way to seize military stores meeting armed militia at Lexington, fired on them (initiating open war. At Concord the troops were fired upon, but accomplished their mission, and the distance being too great for a circuit, were obliged to turn their backs, and were harassed on the way as though in retreat. The approach to Charlestown led among thousands of resident militia-men, but they were withheld by their commander, perhaps on account of the naval threat, To bombard Boston. C. P.).

"May 10th" (Stiles, and Holmes), Ticonderoga and Crown Point, posts commanding Lakes George and Champlain, seized by colonists under Ethan Allen.

"June 16th," (the British troops being prevented from making excursions into the country, a party of colonists set out on this evening to throw up intrenchments on Bunker hill; a plan that might not have led to immediate collision. But the commander Col. Prescott had more serious thoughts, and passing Bunker hill threw up earthworks on a lower eminence much nearer Boston. In the morning, the British commander surprised made an inconsiderate attack, and though the works after much bloodshed and repeated checks were carried, the British empire in America was virtually at an end. C. P.).

The Second Congress meeting, bills of credit for "three millions of dollars" were issued, with "twelve confederated colonies" pledged for their redemption. Union being especially desirable, New England officers were excluded, and George Washington elected commander in chief. He joined the army in Cambridge "July 2d;" and on the "20th," the adhesion of Georgia was received by Congress (Stiles, and Holmes).

Not later than this date (see Spreng.), Hill kew. 57. pl. 5 describing "*carthamus laevis*" *Stokesia cyanea* of Carolina. He died before the close of the year.

"The same year" (Humb. iii. 8), in Northwest America, the mouth of the Columbia river discovered by Quadra.

"The same year" (Pauth. 454), the Miao-tseu, wild mountain tribes of Sse-tchouan in Western China, subdued by the emperor Kien-Loung.

"In this year" (Winckl.), Joh. Dan. Leers publishing his Flor. Herbornensis, enumerating *Carex stellulata*.

"In this year" (Winckl.), F. A. Scholler publishing his Flor. Barbyensis. — He died "in 1815."

"Aug. 14th" (trav., and flor. Jap.), Thunberg arriving in Japan, landing at Nagasaki.* — He left "in 1776."

"1776, March 17th" (Holmes), Boston evacuated by the British army. Washington next proceeded to New York city, where he established his head quarters "April 14th." The British government employing foreign mercenaries against the colonists; a pamphlet by Thomas Paine, entitled "Common Sense."

Thus far the colonists had been fighting for their rights as Englishmen, but the question of conciliation arising and Parliament being distrusted, the subject of Independence was introduced on "June 7th" into Congress. On "July 4th," the Declaration of Independence was adopted almost unanimously (see Holmes).

The colonial army having been driven from Long Island, Washington was compelled to withdraw from New York: which city was occupied by the British "Sept. 15th," and was held by them as a base of operations. "Oct. 4th," articles of "confederation and perpetual union between the United States of America" were signed by all the delegates in Congress: but the colonial army retreating Southward, the vicinity of Philadelphia soon became the seat of war; and "Dec. 12th," Congress adjourned to Baltimore. "Dec. 25th," Washington turning upon his assailants, captured a body of about a thousand Hessians at Trenton: which revived the drooping spirits of the country (Holmes).

By the Second census of Massachusetts (coll. hist. iv. 198, and Holmes 1784), the number of Whites ascertained to be "three hundred and forty-three thousand eight hundred and forty-five;" and of Blacks, "five thousand two hundred and forty-nine."

"In this year" (J. E. Smith, and Spreng.), Pollich publishing his Plant. Palatin. — The publication was completed in "1777," and he died in "1780."

Trifolium elegans of the Mediterranean countries. Annual, termed "*t. hybridum*" by Pollich, — Roth, and Desfontaines, "*t. isthmocarpum*" by Brotero (Steud.): observed by Savi pl. 1 around Pisa in Italy (Pers.); by Sibthorp, and Chaubard, in the meads of the Peloponnesus. Regarded as exotic in Britain, maintained there by the continued importation of seed for cultivation (Wats., and A. Dec.); in Sweden (Chaub.) also doubtless exotic.

* *Pinus parviflora* of Japan and the Kurile Islands. Much resembling and mistaken for *P. cembra* by Thunberg, — distinguished by Siebold as observed on Japan and the Kurile Islands (Endl. conif. 143, and A. Dec.).

"In this year" (Pursh), J. F. Miller publishing Coloured plates of Plants and animals: — the 60th and last "in 1794."

"In this year" (Spreng., and Winckl.), Rottboll publishing the Surinam plants of Rolandr. and Caraib. of Rohr, including *Schoenus setaceus* pl. 21. f. 2.

"In this year" (Willd.) Murray in Comm. goett. describing *Lonicera parviflora* pl. 3. — He died "in 1791."

"In this year" (Spreng.), William Withering publishing his Botan. arrangement of veg. naturally growing in Great Britain. — He died "in 1799," and a fifth edition was issued "in 1812."

"1777, in the spring" (Holmes), arrival of arms and ammunition from France; brought in part in a twenty-four gun ship. The British army driven back, and after attempting to bring on a general engagement, withdrawing from New Jersey; the commander sent a large force by sea into the Chesapeake to the head of tide-water in Elk river, and advancing Northward, obtained possession of Philadelphia "Sept. 27th." In the North at Saratoga "Oct. 17th," surrender of Burgoyne with his army of nearly six thousand men to the colonists.

"The same year" (Williams 230, and Holmes), the Declaration of independence having left the settlers on the New Hampshire grants in a difficult position, they, through a convention of town-representatives, declared their district a distinct State: the origin of the State of Vermont.

"In this year" (Spreng.), Lightfoot publishing his Flora Scotica, enumerating *Carex pauciflora*.

Carex incurva of Northern Europe and mountains farther South. A sedge observed by Lightfoot in Scotland: — known to grow also in Norway and on the mountains of Switzerland (Engl. bot. pl. 97, Pers., and A. Dec.); observed by Allioni ii. pl. 92 in Piedmont; by Sibthorp, on the mountains of Crete.

"In this year" (Pritzel, and Winckl.), Wangenheim with Hessian troops arriving in North America, meeting with *Kalmia glauca*, *Gaylussacia resinosa*. — Returning "in 1780," he published his Nordamer. trees and shrubs "in 1781," another edition "in 1787."

"In this year" (J. E. Smith, and Spreng.), Curtis publishing his Flor. Lond.

"In this year" (Spreng.), Robson publishing his Flor. Brit.

"In this year" (Spreng., and Winckl.), Moench publishing his Plant. indig. Hassiæ.

"In this year" (Spreng.), Houttuyn publishing his Plant. Ind., Cap., and Japan, — completed "in 1788."

"In this year" (Pursh i. 301), Bergius publishing descriptions of plants in Act. petropol., including *Leuophyllum buxifolium* pl. 3. f. 2. — He died "in 1790" (Spreng.).

"1778, Feb. 6th" (Holmes), by Louis XVI. of France, treaties of amity, commerce, and alliance with the colonies; through their commissioners, Franklin, Silas Deane, and Arthur Lee. On receiving the news, Philadelphia was evacuated "June 18th" by the British; who decided to concentrate their forces in the harbour and city of New York. After "July 5th," arrival on the coast of a French fleet under D'Estaing: the depth of water not admitting his ships of the line into the harbour of New York, he proceeded to Newport, occupied by the British, and reached the offing "July 25th." Incursions during the Summer along the Florida frontier; and the British turning their attention to the South, on "Dec. 29th" captured Savannah.

As early as this year (), Vahl describing plants in Act. soc. nat. Haf. ii. p. 13.*

"In this year" (Spreng.), Ortega publishing two volumes of Quer's Flor. Hispan., — completed "in 1784."

"In this year" (A. Dec. g. b. 738), Lamarck publishing his Flor. Franc.

"1779, Oct. 9th" (Holmes), by the colonists and the French fleet under D'Estaing, unsuccessful assault on Savannah. After which D'Estaing and the fleet left the coast.

"In this year" (Winckl.), after a first edition "in 1774," A. Joh. Retzius publishing a Second edition of his Obs. botan., also his Flor. scandinav. prodr.

Veratrum sabadilla of Mexico and the West Indies. Described by Retz obs. i. 31, and known to furnish the *sabadilla* or *cevadilla* seeds used as an anthelmintic and to destroy pediculi, — but of late imported chiefly for manufacturing veratria; an active and dangerous local stimulant, employed as a substitute for colchicum (Descourtilz ann. linn. par. 1824. and Lindl.).

Helonias? officinalis of Eastern Mexico. — Observed there by Schiede and Deppe, and ascertained by them to furnish at least a portion of the sabadilla seeds of commerce (Schlecht. linn. vi. 45, Don edinb. phil. journ. 1832, and Lindl.).

* *Carex maritima* of the shores of the North Atlantic. Described by Vahl act. haf. ii. 13 — and in fl. Dan. pl. 703, also by Schkuhr t. W. f. 74: known to grow on the seashore of Norway (Pers.). Westward, was received by Hooker from Hudson Bay and Fort Cumberland; was observed by myself in salt marshes around Salem, Mass.

"In this year" (Spreng., and Winckl.), Dombey in Peru, making with Ruiz and Pavon* botanical investigations:—they remained "until 1788," the Flor. Peruv. prodrom. was published "in 1794," and Dombey died "in 1795."

"In this year" (Winckl.), Thom. Forrest publishing his Voyage to New Guinea and the Moluccas.

"1780 A. D." (Holmes), news of the departure of the French fleet having reached New York an expedition fitted out by the British, who on "May 12th" captured the city of Charleston. On or about Sept. 23d, treachery detected in a colonial general on the Hudson, and the intended surrender prevented.

"The same year" (Pauth. 458), by the Chinese emperor Kien-loung, an extensive diverting canal constructed, to control the inundations of the Hoang-ho.

"In this year" (Spreng.), Ant. Turra publishing his Flor. ital. prodr.

At this time (Spreng., and Winckler), Guldensadt writing an account of his travels in Georgia, Mingrelia, and throughout Caucasus.—He died "in 1781," and his travels were published "in 1787-91."

"1781 A. D." (Holmes), the British forces advancing Northward, opposed by a colonial army under Greene: and after the battle of Guilford "March 15th," Cornwallis marched Eastward to Wilmington, and thence Northward, reaching Petersburg in Virginia "May 20th." Receiving instructions to secure a station for line-of-battle ships, and Portsmouth and Hampton roads having been pronounced unfit, Cornwallis transferred his army increased to "seven thousand" men to Yorktown; and commenced fortifying. A French fleet of "twenty-eight sail of the line" under De Grasse arriving soon afterwards, blocked York river and landed troops; reinforcing La Fayette, who was in command of the colonial army in the vicinity. "Sept. 5th," a British fleet of "twenty sail of the line" attempted relief; but "eight" more line-of-battle ships joining the French, the British admiral concluded to withdraw. On hearing of the state of affairs, Washington abandoning all other plans, sent "twelve thousand" men, the main body of his army, by way of Philadelphia South; and following himself, "Sept. 14th" reached the vicinity of Yorktown. "Oct. 19th," surrender of Cornwallis, with the invested land and naval forces: regarded as the closing event of the war.

"May 9th" (Holmes), by Don Galvez, Spanish governor of Louisiana, Pensacola captured from the British; and soon afterwards, the whole province of West Florida.

"In this year" (Winckl.), Felix de Azara visiting Austral America, — remaining "until 1801."

"May 13th" (Phil. trans. lxxi, and Humb. cosm. iv.), the planet Uranus discovered by Herschel. It had been seen previously by Flamstead "in 1690," and Tobias Mayer "in 1756;" and Herschel himself—for a time supposed it to be a comet. Its six satellites, by an exception almost perpendicular to the ecliptic, were discovered by Herschel at different times from "Jan. 11th, 1787" to "March 26th, 1794."

"In this year" (J. E. Smith, and Spreng.), Linnæus the younger publishing his Suppl., enumerating† *Forstera muscifolia*, *Ranunculus Pennsylvanicus*, *Cyperus distans*, *Rottboellia dimidiata*, *Hydrocotyle ranunculoides*, *Arbutus laurifolia*, *Cornus alternifolia* 125.—He died in "1783."

Euphatis ensifolia of Europe and the adjoining portion of Asia. Termed "*serapias xiphophyllum*" by Linnæus jun. suppl. 404,—"*s. ensifolia*" in the 14th edit. by Murray, and known to grow from Denmark throughout middle Europe (Ehrh., fl. Dan. pl. 506, Engl. bot. pl. 494, and Pers.): observed by Sibthorp, and Chaubard, in woods from the Peloponnesus to the Bithynian Olympus.

Utricularia stellaris of Tropical and Austral Africa? Received by Linnæus jun. suppl. 86 from the rice-fields and deeper water in Hindustan (Pers.); observed by Graham "floating in tanks" in the environs of Bombay; by Roxburgh cor. ii. pl. 180, in Bengal. Westward, was received by A. Decandolle prodr. viii. 4 from the Mauritius Islands, Madagascar, Austral Africa, and Senegambia.

"In this year" (append. Sibth., and Winckl.), Jacquin publishing the Second and concluding volume of his Miscell. austr., and commencing his Icon. rar., enumerating *Paspalum stoloniferum* ic. rar. 302, *Glottidium Floridanum* ic. rar. i. 48, *Artemisia biennis* i. r. i. 172, *Helenium quadridentatum* i. r. 593, *Rudbeckia amplexifolia* i. i. iii. 592, *Croton argyranthemum* i. r. iii. 621, *Euphorbia cyathophora*, *Wulfenia Carinthiaca* ii. 8. f. 1 and ic. rar. i. pl. 2.

* *Cuscuta corymbosa* of Chili and Peru. Observed by Ruiz and Pavon in Peru, but in cultivated ground, especially among crops of *Medicago sativa* (Pers.). Transported together to Europe in "1840" (Choisy), it has continued to make its appearance wherever the mixed seed is sown; but like other species of *Cuscuta*, does not quit its sustaining plant, nor become truly naturalized (Engelman, and A. Dec.).

† *Carex heleonastes* of Arctic Europe and the mountain-summits of Switzerland. Described by Linnæus jun. suppl. 414, Ehrhart (A. Dec.), and Schkuhr pl. 51. f. 97, and known to grow in the marshes of Sweden (Pers.); also on the Swiss Alps (A. Dec.).

Latania Borbonica of the Mauritius Islands. Received from the Isle of Bourbon, and described by Jacquin frag. i. pl. 11, — and Lamarck enc. iii. 411 (Pers.): observed by Bojer around dwellings and along the margin of the forest on the Mauritius Islands. By European colonists, was carried to Northeast America, where it has become frequent in greenhouses: was observed by myself in Egypt, in the Botanical Garden near Cairo, doubtless derived from Europe.

Pleurogyne Carinthiaca of Switzerland and the Altaian mountains. An annual termed "swertia carinthiaca" by Jacquin misc. ii. pl. 6 as observed on the Salsburg and Carinthian Alps (Pers.); known to grow also in the Saas valley in Valais, and on the Altaian mountains (Griseb., and A. Dec.).

"1782. March 4th" (Holmes), by the English Commons resolved, "That the house would consider as enemies to his majesty and the country, all those who should advise or attempt the farther prosecution of offensive war on the continent of North America."

"April 12th" (Holmes), the French fleet under De Grasse defeated in the West Indies by the British fleet under Rodney.

"In this year" (Winckl.), Hacquet publishing his *Plant. alpin. Carniol.* — He died "in 1814."

"In this year" (Durand in Am. phil. trans.), André Michaux exploring the Persian provinces on the Tigris and Euphrates. — He returned to France "in 1785."

"In this year" (Winckl.), Molina publishing his *Storia nat. del Chili*.*

"April 19th" (Holmes), the colonies acknowledged an independent nation by Holland: and "Oct. 8th," a treaty of amity and commerce concluded.

"Nov. 30th" (Holmes), the independence of the colonies acknowledged by Britain, and a treaty of peace concluded: to take effect when peace should be declared between Britain and France.

"1783 A. D." (Holmes), treaties of amity and commerce: with Denmark "Feb. 15th;" with Spain "in March;" with Sweden "in April;" with Russia "in July;" and "Sept. 23d," signing of the Definitive treaty of peace between Britain and the now independent States.

"In the summer" (Amer. acad. sc. i. 401), Manasseh Cutler at Ipswich in Eastern Massachusetts, meeting with "goldenpert" *Gratiola aurea*, "pigeon-berry bush" *Cornus stolonifera*, "trailing cockspur" *Galium triflorum*, "upright cockspur" *G. circæzans*, "water violet" *Hottonia inflata*, "water parsnip" *Sium lineare*, "white pepperbush" *Andromeda (Lyonia) ligustrina*, "cow-wheat" *Melampyrum Americanum*, "yellow succory" *Hieracium Canadense*, "star thistle" *Cirsium pumilum*, "yellow thistle" *C. horridulum*, "meadow sunflower" *Bidens chrysanthemoides*, "lady's plume" *Platanthera fimbriata*, "moneywort" *Asclepias obtusifolia*, "quaffidilla" *Clintonia borealis*, "sugar maple" *Acer nigrum*; — and soon afterwards, as appears from his unpublished manuscripts (examined by Russell and Tuckerman), "anonymos yellow sandbind" *Hudsonia tomentosa*, "campanula humida" *Campanula aparinoides*, and "anomalos" *Microstylis ophioglossoides*.

"Nov. 3d" (Holmes), disbanding of the American army. "Nov. 25th," evacuation of New York city by the British troops: and shortly afterwards, surrender by Washington of his commission, to Congress at Annapolis.

"Nov. 29th" (Holmes), an earthquake, distinctly perceived from New Hampshire to Pennsylvania.

"In this year" (Winckl.), Swartz visiting the West Indies.† — He remained "until 1787," and published his *Prodr. Ind. Occ.* "in 1788."

"In this year" (J. F. Wats.), publication in London of the "History of Sumatra" by William Marsden.

"1784, Feb. 22d" (Felt ann. Salem), sailing from New York of a ship under Capt. John Green

* *Flourensia thurifera* of Chili. A shrub called by Molina "thuraria," from yielding incense, — observed by myself in the environs of Valparaiso, Helianthus-like except in being woody.

† *Euphorbia punicea* of Jamaica. A thick-stemmed shrub with large scarlet leaves around the flowers, described by Swartz — (Steud.), Jacquin rar. iii. pl. 484, and Descourtiz pl. "E. Poinsettii" brought from Mexico by Poinsett about 1833?, and soon becoming a favourite in greenhouses, introduced even into the gardens of Burmah (Mason v. p. 421), may be compared.

Jussiaena acuminata of Equatorial Africa. Known to grow from Guinea to the island of Saint-Thomas (Benth. fl. Nigr.). Probably by European colonists carried across the Atlantic to the West Indies, where it was observed in moist places by Swartz (A. Dec.).

Laurus montana of the mountains of the West Indian archipelago. Observed by Swartz on the lofty mountains of Jamaica, a tree closely resembling *L. camphora* (Pers.).

Panicum jumentorum of . . . Observed by Swartz prodr. p. 24 under cultivation in the West Indies for feeding cattle, and called *Guinea grass* from its alleged place of origin — (Pers.). Eastward from Africa, is enumerated by Mason v. p. 477 as "exotic" in Burmah and "grown by a few Europeans," but called by the Sgau Karens "nau-ka-thau-hau." As transported to Europe, is described by Lamarck (Steud.).

for Canton; a "new branch of trade." The "first appearance of an Anglo-American trader in the ports of India in" this year, is regarded by Crawford ix. 3. p. 250 as "the true era of the commencement of fair and legitimate commerce between India and the civilized nations of the West." A ship under Capt. Jonathan Ingersoll sailed from Salem "Nov. 27th" for the Cape of Good Hope, — and for the ensuing forty years, American commerce with the Indian Seas was chiefly carried on from Salem.

"The same year" (coll. hist. iv. 199, and Holmes), by the Third census of Massachusetts, the number of Whites ascertained to be "three hundred and fifty-three thousand one hundred and thirty-three;" and of Blacks, "four thousand three hundred and seventy-seven."

"In this year" (Dallet 13), Christianity first introduced into Corea, chiefly through the philosophical inquiries of Ni Tek-tso or Piek-i, who persuaded his friend Ni Seng-houn-i, one of the ambassadors to Pekin, to procure there the books of the Christians. On arriving at Pekin, Seng-houn-i visited one of the four Catholic churches, was baptized, and before the close of the year returned with the books in question to Corea.

"In this year" (J. E. Smith), L'Heritier publishing his Stirp. Nov., enumerating * *Aristolochia sipho*, *Ribes prostratum* i. 3, *Rhamnus alnifolius* p. 5, *Siegesbeckia flosculosa* pl. 19, — completed "in 1785;" his Geran., "in 1787-8."

Aloysia citridora of Austral America. A shrub transported to Europe and described by Ortega, and L'Heritier i. pl. 11, — (Pers.): enumerated by Clot-Bey as recently introduced into the gardens of Egypt. By European colonists also, carried to Hindustan, where it was observed by Law "in gardens at Belgaum and Dharwar," thriving "luxuriantly," and "much esteemed for the delightful fragrance of its leaves" (Graham); to Burmah, enumerated as "exotic" by Mason; and to Northeast America, where it has become frequent in greenhouses. In its wild state, was seen by Dombey in Chili; by Humboldt and Bonpland; and is said to grow also in Buenos Ayres (Pers.).

As early as this year (Baldw. rel. 146), Fraser visiting the mountains of Carolina, meeting with *Collinsonia ovalis*, *Ceratiola ericoides*, *Carex Fraseri*, *Trichodium perennans*, *Panicum striatum*, *Stipa stricta*, *Spermacoce involucreta*, *Ilex laxiflora*, *Lonicera flava*, *Ribes resinsum*, *Oenothera Fraseri*, *Vaccinium crassifolium*, *Liatris cylindrica*, *Abies Fraseri*. — His plants were communicated to and described by his friend Walter.

"The same year" (Spreng, and Winckl.), Pallas publishing his Flor. Ross., enumerating *Crataegus glandulosa* i. pl. 11, *Spiraea betulaeifolia* i. pl. 16, — completed "in 1788."

Ornithogalum fimbriatum of the East Mediterranean countries. Described by Pallas (in n. act. Petrop. x. 309), as received from Tauria — (Pers.): observed by Chaubard in the Peloponnesus.

"1785 A. D." (Holmes), treaty of amity and commerce with Prussia, signed by the American plenipotentiaries at their respective places of residence; by Franklin at Passy "July 9th," Thomas Jefferson at Paris "July 28th;" and John Adams at London "Aug. 5th."

"In this year" (Pursh), Moench publishing his Ausland. baume, enumerating *Aesculus flava*, *Crataegus flava*. — He died "in 1805" (Spreng.).

"In this year" (Darl., and Brendel in Am. Nat. for 1870), Humphrey Marshall of Philadelphia publishing his Arbust. Amer., enumerating *Salix humilis*, *S. sericea*, *Zanthorhiza apiifolia*, *Quercus prinoides*, *Lonicera grata*, *Euonymus atropurpureus* 76, *Viburnum molle*, *Rhus aromatica*.

As early as this year (. . .), Walter in South Carolina meeting with *Quercus lyrata*, *Trip-lasis purpurea*, *Polygala polygama*, *Schrankia uncinata*, *Diodia teres*, *Lobelia glandulosa*, *Ilex myrtifolia*, *I. dahoon*, *I. decidua*, *Styrax grandifolium*, *S. laeve*, *Utricularia inflata*, *U. purpurea*, *Gratiola pilosa*, *Gerardia setacea*, *Stachys hyssopifolia*, *Sabbatia lanceolata*, *Gentiana angustifolia*, *Forsteronia difformis*, *Asclepias pauperula*, *Gonolobus hirsutus*, *G. macrophyllus*, *Asarum arifolium*, *Laurus (Benzoin) melissaefolium*, *Phoradendron flavescens*, *Acalypha Caroliniana*, *Phyllanthus Carolinensis*, *Aplectrum hyemale*, *Aletris aurea*, *Smilax Walteri*, *Helonias (Amianthium) muscaetoxicum*, *Xyris Caroliniana*, *Eriocaulon (Lachnocaulon) villosum*, *Trichodium elatum*, *Muhlenbergia capillaris*, *Ctenium aromaticum*, *Leptochloa mucronata*, *Festuca tenella*; *Andropogon macrourus*, *dissitiflorus*; *Cyperus flavicomus*, *Trautvetteria palmata*, *Ranunculus pusillus*, *Delphinium azureum*, *Hibiscus*

* *Eupatorium ayapana* of Eastern Equatorial America. Growing on the right bank of the Amazons, and employed as an antidote against the bite of venomous serpents and insects; commended for this purpose by L'Heritier, — said to be also a powerful sudorific and alexipharmic (Vahl symb. iii. p. 97. Vent. malm. pl. 3, Trattenick pl. 16, Pers., and Lindl.). By European colonists, carried to the Philippines, where it is mentioned by Blanco as recently introduced, easily cultivated, and called "ayapana" in Tagalo; also to Hindustan, where it was observed in gardens around Bombay by Lush, and Graham; and to the Mauritius Islands, where the leaves are used as a substitute for tea (Grah.).

militaris, *Rubus cuneifolius*, *Lachnanthes tinctoria*, *Micranthemum orbiculatum*, *Gratiola quadridentata*, *Elytraria virgata*, *Justicia humilis*, *Pinguicula elatior*, *P. lutea*, *Utricularia fibrosa*, *U. biflora*, *Collinsonia praecox*, *C. scrotilina*, *Scleria reticularis*, *Mariscus maculatus*, *Fimbristylis castanea*, *Alopecurus aristulatus*; *Paspalum serotinum*, *setaceum*, *Aristida oligantha*, *Stipa Virginica*, *Eragrostis pectinacea*, *Oxybaphus albidus* 84, *Frasera Carolinensis* 88, *Galium purpureum* 87, *Hedyotis rotundifolia* 86, *Ammania humilis* 88, *Cornus stricta* 88, *Jussieuia decurrens* 89; *Ludwigia hirsuta*, *linearis*, *virgata*, *capitata*, *arcuata*, *glandulosa*, *mollis*; *Planera aquatica* 230, *Limnanthemum trachyspermum* 109, *Bumelia lanuginosa*, *Frangula Caroliniana*, *Amsonia ciliata*, *Hydrolea Caroliniana*, *Dichondra Carolinensis*, *Eryngium virgatum*, *Hydrocotyle repanda*, *Discopleura capillacea*, *Leptocaulis divaricatus*, *Tiedemannia Carolinensis* 113, *Viburnum obovatum*, *Prinos ambiguus*, *Urnularia flava*, *Dioscorea quaternata*, *Aesculus parviflora*, *Rhexia glabella*, *R. lutea*, *Acer barbatum*, *Polygonum hirsutum*, *Myriophyllum scabratum*, *M. heterophyllum*, *Andromeda ferruginea*, *Baptisia lanceolata*, *B. villosa*, *Hydrangea nivea*, *Silene Pennsylvanica*, *Alsine squarrosa*, *A. glabra*, *Crataegus apiifolia*, *Calycanthus glaucus*, *Helianthemum Carolinianum*, *Sarracenia rubra*, *S. variolaris*, *Nuphar sagittifolia*, *Clematis holosericea*, *C. reticulata*, *Anemone Caroliniana*, *Stachys hyssopifolia*, *Pycnanthemum clinopodioides*, *Macbridea Caroliniana*, *Herpestis nigrescens*, *Lobelia glandulosa*, *Hibiscus coccineus*, *H. aculeatus*, *Petalostemum corymbosum*, *Polygala cymosa*, *P. grandiflora*, *Amorpha herbacea*, *Crotalaria ovalis*, *Phaseolus diversifolius*, *Vicia Caroliniana*, *Trifolium Carolinianum*, *Zornia tetraphylla*, *Indigofera Caroliniana*, *Lupinus villosus* 180, *Pyrrhopappus Carolinianus*, *Nabalus virgatus*, *Cirsium muticum*, *Liatris pilosa*, *L. elegans*, *L. paniculata*, *L. odoratissima*, *Carphephorus tomentosus*, *C. bellidifolius*, *Vernonia angustifolia*, *Eupatorium faniculaceum*, *E. teucrifolium*, *E. cuneifolium*, *Sclerolepis verticillata*; *Marshallia lanceolata*, *latifolia*, *angustifolia*; *Pterocaulon pycnostachyum*, *Chrysopsis graminifolia*, *Sericocarpus tortifolius*, *Aster squarrosus*, *A. Carolinianus*, *Eclipta procumbens*, *Actinomeris alba*, *Coreopsis senifolia*, *gladiata*, *Galardia bicolor*, *Chaptalia integrifolia*, *Silphium compositum*, *Iva imbricata*, *Croton maritimum*. — His Flor. carolin. bears the date "1787" on the title-page (A. Dec. 710), and according to his own account he was residing on the banks of the Santee "Dec. 30th" of that year.

"In this year" (Spreng.), J. L. M. Poiret travelling in Barbary. — He returned "in 1786," and published an account of his travels "in 1789."

"In this year" (append. Sibth., and Spreng.), Allioni publishing his Flor. Pedem.,* enumerating *Equisetum variegatum* (Bory). — He published auct. Pedem. "in 1789," and died "in 1804."

Carex tripartita of the mountains of middle Europe. Observed by Allioni pl. 92 in Piedmont, — termed "c. lobata" by Schkuhr 28. t. D. f. 18, and known to grow on the Swiss Alps (Pers.); and received by Link from the Peloponnesus (Chaub.).

"In this year" (J. E. Smith præf. v). Sibthorp in company with Ferdinand Bauer arriving in Greece: — he returned "in 1787." From a Second visit he returned "in 1795," and died shortly afterwards. His Flor. Græc. prodr. was published by J. E. Smith "in 1806."

Dianthus tripunctatus of the East Mediterranean countries. An annual observed by Sibthorp on Cyprus; — by Gussone, frequent in Calabria as far as the Western shore, but unknown in Sicily (A. Dec.).

Sternbergia citrina of Greece. Observed by Sibthorp pl. 311, — and Chaubard, in the Peloponnesus.

Allium margaritaceum of Asia Minor and Greece. Observed by Sibthorp pl. 315, — Link, and Chaubard, frequent from the Peloponnesus to Cyprus, Bithynia, and mount Athos.

Allium staticiforme of the Greek islands. Observed by Sibthorp pl. 320 on Cimolo.

Allium pilosum of Greece. Observed by Sibthorp pl. 321 on Cimolo.

Allium junceum of Cyprus. Observed there by Sibthorp pl. 322.

Allium ambiguum of Italy. Observed by Sibthorp pl. 327 in Italy; also by Gawler — (in Curt. mag. pl. 978); by Laterrade 383, in the environs of Bordeaux. Transported to Britain, has made its appearance since "1837" in various localities (Engl. bot. 2803, Bab., and Wats.), probably escaped from gardens (A. Dec.).

1786 A. D. (Durand, in Am. phil. trans.), after landing at New York "Oct. 1st in the previous

* *Carex bicolor* of Arctic Europe and the alpine summits of Switzerland. Observed by Allioni on mount Cenis, — described also by Schkuhr f. 181 (Pers.) and Balbis (Steud.); growing also according to Wahlenberg fl. ii. 615 in Lapland, but rare (A. Dec.).

Elyna spicata of Arctic Europe and the alpine summits of Switzerland. Observed by Allioni pl. 92 in Piedmont, — termed "carex myosuroides" by Villars pl. 6, "cobresia scirpina" by Willdenow, and known to grow in the alpine portion of Switzerland (Pers., and A. Dec.). Farther North, observed by Wahlenberg in the Scandinavian peninsula (Steud.); and by Hooker on Iceland.

year," and leaving Paul Saulnier to form a nursery in the neighbouring portion of New Jersey, Michaux at Charleston and now fairly commencing his exploration of the forests of Northeast America, meeting with *Clematis cylindrica*, *Cissus cordata*, *Gaylussacia brachycera*, *Vaccinium? erythrocarpon*, *Menziesia globularis*, *Centunculus lanceolatus*, *Utricularia cornuta*, *Verbena angustifolia*, *Pycnanthemum montanum*, *Centaurella paniculata*, *Forestiera acuminata*, *Acnida (Montelia) rusocarpa*, *Sagittaria natans*, *Platanthera cristata*, *Smilax tamnifolia*, *Trillium grandiflorum*, *T. erythrocarpum*, *T. pusillum*, *Uvularia puberula*, *Streptopus roseus*, *S. (Prosartes) lanuginosus*, *Zygadenus glaberrimus*, *Veratrum parviflorum*, *Tradescantia rosea*, *Mayaca Michauxii*, *Xyris brevifolia*, *Eriocaulon (Pæpalanthus) flavidus*; *Aristida stricta, dichotoma*; *Spartina juncea*, *Paspalum laeve*, *Panicum anceps*, *P. proliferum*, *Erianthus brevibarbe*; *Andropogon scoparius, ternarius*; *Cyperus virens*, *C. Michauxianus*, *Eleocharis quadrangulata*, *E. tuberculosa*, *Trichophorum lineatum*, *Fuirena squarrosa*, *Rhynchospora longirostris*, *R. inexpansa*; *Scleria triglomerata, pauciflora, verticillata, Caroliniana, ciliata*; *Delphinium tricornis*, *Cimicifuga Americana*, *Magnolia cordata*, *Asimina parviflora*, *Diphylleia cymosa*, *Cardamine rotundifolia*, *Viola rotundifolia*, *V. hastata*, *Helianthemum corymbosum*, *Lechea thymifolia*, *Parnassia Caroliniana*, *Hypericum angulosum*, *Elodea petiolata*, *Claytonia Caroliniana*, *Blephilia hirsuta*, *Valeriana pauciflora*, *Commelina angustifolia*, *Kyllingia pumila*, *Rhynchospora sparsa, micrantha, fascicularis, distans, capitellata, ciliata*; *Zizania (Hydrochloa) fluitans*, *Sporobolus junceus*, *Antheanthia villosa (Aulaxanthus El.)*; *Panicum Michauxii, nitidum, scoparium, ramulosum, pubescens, melicarium, debile*; *Paspalum digitaria, plicatum*; *Gymnopogon racemosus*, *Lygodium palmatum*, *Asplenium montanum* ii. 265, *Stipulicida setacea*, *Lechea tenuifolia* i. 77, *Proserpinaca pectinata* i. 76, *Plantago interrupta* i. 94; *Galium uniflorum, hispidulum*; *Houstonia serpyllifolia*, *Cornus asperifolia*, *Pachysandra procumbens*, *Phacelia fimbriata*, *Lysimachia angustifolia*, *Phlox reptans*, *Azalea canescens*, *Bumelia reclinata*, *Campanula flexuosa*, *C. divaricata*, *Ribes (Grossularia) rotundifolia*, *Rhamnus minutiflorus*, *Paronychia herniarioides*, *P. argyrocoma*, *Heuchera villosa*, *Crantzia lineata*, *Thaspium barbinode*, *Viburnum pubescens*, *Rhus pumila*, *Crotonopsis argentea*, *Schisandra coccinea*, *Allium mutabile*, *Clintonia umbellata*, *Juncus? repens*, *Helonias (Amianthium) angustifolium*, *Triglochin triandrum*, *Rhexia ciliata*, *Gaura angustifolia*, *Menziesia globularis*, *Polygonum hydropiperoides*, *Eriogonum tomentosum*, *Pilea tenuifolia*, *Vaccinium arboreum*, *V. galezans*, *V. myrsinites*, *Kalmia cuneata*, *Rhododendron punctatum*, *R. Catawbiense*, *Cassia linearis*, *C. (Chamaecrista) fasciculata*, *Thermopsis mollis*, *Saxifraga leucanthemifolia*, *Alsine Michauxii*,* *Diamorpha pusilla*, *Sedum telephioides*, *Crataegus spathulata*, *Rosa setigera*, *Geum geniculatum*, *G. radiatum*, *Sagittaria graminea*, *Verbena angustifolia*, *Herpestis amplexicaulis*, *Dipteracanthus humistratus*, *Dentaria laciniata*, *Cardamine spathulata*, *Lobelia amœna*, *L. puberula*, *Polygala setacea*, *Crotalaria parviflora*, *Astragalus glaber*, *A. villosus*, *Psoralea canescens*, *P. lupinellus*, *Lespedeza procumbens*, *Desmodium glabellum*, *D. ciliare*, *D. acuminatum*, *D. lineatum*, *D. rotundifolium*, *Tephrosia hispidula*, *Nabalus crepidineus*, *Lactuca? graminifolia* ("flos purple," Chapm.), *Hieracium scabrum*, *Eupatorium serotinum*, *Bigelowia nudata*, *Hymenopappus scabiosæus*, *Baccharis angustifolia*, *B. glomeruliflora*, *Senecio tomentosus*, *Euthamia tenuifolia*, *Solidago virgata*, *pauciflosculosa, glomerata*; *Diplopappus amygdalinus*, *Aster surculosus*, *A. acuminatus*, *Boltonia glastifolia*; *Coreopsis latifolia, trichosperma*; *Helianthus tomentosus*, *Gymnadenia tridentata*, *Habenaria quinqueseta*, *Euphorbia pubentissima*, *Stillingia ligustrina*. — "1787, May 6th," he was with his son exploring the sources of the Keovee river.

"In this year" (Holmes), by the Legislature of Massachusetts, an act establishing a mint; for coining gold, silver, and copper.

Discontent among the people on account of the heavy taxation, decay of trade, large amount of private indebtedness, and a desire prevailing for a paper-money system, the courts of justice obstructed in various parts of Massachusetts; especially after the proclamation by the governor "Sept. 2d." —

* *Arenaria lanuginosa* of Carolina and the Lower Mississippi. Observed by Michaux in Carolina, and termed "*spergulastrum lanuginosum*;" — by Elliot "*arenaria diffusa*;" by Nuttall "*stellaria elongata*," and observed in Carolina, Georgia, and Arkansas; by N. A. Ware, in Florida; by Chapman, on "shady banks, Florida to North Carolina and westward."

Jussiaea grandiflora of Carolina and Georgia. Discovered in Georgia by Michaux; — known to grow in "South Carolina and westward" (Ell., and Chapm.), and observed by Nuttall near Savannah. Transported to Europe, escaped from cultivation in "1838," and has since become abundant in certain localities in Southern France though not as yet producing seeds (A. Dec.).

Paspalum digitaria of Carolina and Florida. Discovered by Michaux; — and known to grow along the Atlantic from Lat. 37° (Pursh) to Florida and Westward (Ell., and Chapm.). By Bosc, was carried in "1802" to Bordeaux, and has since become naturalized in the Southwestern portion of France (A. Dec.); also by European colonists, was carried to Brazil and the Mauritius Islands (Kunth).

On the following "Jan. 25th," Shepard, commanding the State forces at Springfield, discovering a body of "eleven hundred" insurgents under Daniel Shays advancing towards the arsenal, gave warning, That if they approached nearer they would be fired upon: the insurgents replying, "That is all we want," continued to advance against firing over their heads; but at length received a volley, and in spite of the efforts of their leader, retreated precipitately. By Lincoln, the State commander in chief, the main body of the insurgents was surprised and dispersed Feb. 4th; many seeking refuge in the surrounding States.

"The same year" (Nicol.), Frederic II. the Great succeeded by Frederic William II., fourth king of Prussia.

"The same year" (Kobell ii.), by Lord Dundonald, first experiments on the illuminating power of the carburetted hydrogen of coal. — After three years or thereabouts, *gas-lighting* was rendered practicable and profitable by Murdoch: but more than twenty years elapsed before the lighting of streets was effected.

"In this year" (Spreng.), Joh. Sim. Kerner publishing his Flor. stuttgartard.

"In this year" (J. E. Smith), Villars publishing his Plant. Dauph.

"In this year" (Winckl.), Vahl publishing the Sixth volume of the Flor. dan., — the Seventh "in 1794."

"In this year" (Pursh), C. Fr. Rottböll publishing his Icon. rar. plant., enumerating *Cyperus kyllingaeoides* pl. 4. f. 5, *C. autumnalis* pl. 17. f. 3. — He continued publishing until his death "in 1797."

"In this year" (append. Sibth., and Winckl.), Jacquin publishing his Collect., and continuing his Icon. rar., enumerating * *Plantago Patagonica* ic. ii. pl. 306: — the third and concluding volume of his Icon. rar. "in 1793," and the concluding volume of his Collect. "in 1796."

"1787 A. D." (Holmes), government by a Congress proving inefficient: ordinances being disregarded, many States neglecting or refusing to furnish their quotas of expenditure, treaties with foreign nations being in some States openly violated, and the danger of insurrections being now manifest, a convention of all the States except Rhode Island assembled in "May" at Philadelphia; and "Sept. 17th," unanimously agreed on a federal constitution. In accordance with the prescribed plan of action, Congress "Oct. 4th" unanimously resolved, "eleven States being present," That the new constitution be transmitted to the State legislatures, to be submitted to conventions chosen by the people.

"The same year" (Drayton iv. 155, and Holmes), by the Legislature of South Carolina, the Western territory of that State toward the Mississippi ceded to the general government. Baltimore at this time containing "one thousand nine hundred and fifty-nine houses."

"Aug. 11th" (Sieb. elucid. Vries p. 72), the strait separating Yeso from Krafto (Saghalien), discovered by Lapeyrouse.

"In this year" (Winckl.), David Heinrich Hoppe publishing his Ectyp. plant. Ratisb.,† — the eighth volume "in 1793."

As early as this year (see Ph. and Winckl.), Retz publishing the fourth volume of his Obs. botan., enumerating *Pedicularis Groenlandica* n. 760: the sixth and last volume "in 1791."

"In this year" (Winckl., and append. Sibth.), Ehrhart publishing his Beitr., enumerating *Equisetum pratense*, *Carex choraorhiza*, *Cornus paniculata* (Pursh), — the Seventh fascic. "in 1792;" died "in 1795."

As early as this year (see Spreng., and Winckl.), Scopoli writing his Del. insubr. — He died "in 1788."

"In this year" (J. E. Smith, and Spreng.), Curtis publishing the first volume of his Bot. Mag. — He completed fourteen volumes; died in "1799," and the work was continued by Sims as far as the forty-second volume inclusive.

"In this year" (Winckl.), J. Dav. Schöpf publishing his Mat. med. amer.; — "in 1788," his travels in North America.

* *Euxolus caudatus* of Western Equatorial Africa. Received from Guinea, and termed "chenopodium caudatum" and "c. Guineense" by Jacquin rar. ii. pl. 344. 345. — and col. ii. 325 (Pers.). By European colonists, was carried to Tropical America, Bengal, Java, and Australia (Moq., and A. Dec.).

† *Braya alpina* of the Arctic region and alpine summits farther South. Observed by Hoppe on the Carinthian Alps — (Koch, and A. Dec.); by Fries 29, in Lapland only. Westward, according to Hooker, growing on the Rocky mountains from 57° to 52°

Luzula glabrata of Arctic Europe and the mountains of Switzerland. Observed by Hoppe, — and Rostkow, on the Salzburg Alps (Pers.); termed "j. intermedius" by Host, "j. montanus" by Lamarck; observed by Mougeot on the Vosges; by Lecoq and Lamotte, on the mountains of Auvergne: growing also according to A. Decandolle in Arctic Europe.

"1788 A. D." (Holmes), at Cairo in Egypt, death of the American traveller Ledyard.

"In this year" (Winckl.), Timm publishing his *Flor. megapol. prodr.**

"In this year" (Pers. i. 501), Swartz publishing descriptions of Scandinavian plants in *N. act. holm.*; — "in 1791," his *Obs. botan.*

"In this year" (Pursh), L'Heritier publishing his *Sert. anglicum* † and monogr. *Cornus*, enumerating *Cornus circinata* pl. 3, *Abronia umbellata* pl. —.

"In this year" (Pursh), . . . Gmelin publishing his edition of the *Syst. Nat.*, enumerating *Mitreola petiolata* 443: — completed "in 1793."

"In this year" (Durand), Michaux with his son journeying in Florida, meeting with *Befaria racemosa* (Pers., and Baldw. 336), *Styrax pulverulentum*, *Forestiera porulosa*, *Pinguicula pumila*, *Vaginarina Richardi*, *Paspalum Floridanum*, *Tripsacum cylindricum*, *Blechnum serrulatum*, *Hedyotis angustifolia*, *Ceanothus microphyllus*, *Cyrilla Antillana*, *Xanthoxylum tricarpum*, *Phalangium croceum*, *Sabal serrulata*, *Schenocaulon gracile*, *Vaccinium nitidum*, *Sarracenia psittacina*, *Hibiscus grandiflorus*, *Petalostemum carneum*, *Aeschynomene viscidula*, *Leptopoda fimbriata*, *Lepachys pinnata*.

"In this year" (append. Sibth.), Roth publishing his *Tent. Flor. Germ.*

"In this year" (Spreng.), Pet. Rem. Willemet, accompanying an embassy to Tippoo Saib, visiting Mauritius Island. — He died at Seringapatan "in 1790," and his *Herb. maurit.* was published "in 1796."

"In this year" (J. E. Smith, and Winckl.), Gærtner publishing his *Fruct. plant.*, ‡ — He died "in 1791," and the publication was completed "in the same year."

"1789 A. D." (Holmes), the necessity of an efficient government being generally felt and acknowledged, the constitution, notwithstanding diversities of opinion, was acceded to by eleven States: and on "March 3d," delegates assembled at New York opened the votes for president, and found Washington unanimously elected. "April 30th," he was inaugurated in that city, and the new government organized: and Alex. Hamilton appointed first secretary of treasury. "May 29th," Rhode Island "adopted the federal constitution, and was annexed to the Union."

"May 5th" (Maunder), assembling by Louis XVI. of France of the states-general, "consisting of nobles, clergy, and others." Discovering the situation of the country and feeling their power, the members bound themselves by oath, not "to separate until the constitution of the kingdom, and the regeneration of public order, were established and fixed on a solid basis." July "12th," tumult at Paris, in consequence of the removal of Necker, and interference of the military with some demonstrations of disapprobation: "July 14th," the Bastille attacked and captured by the populace. "Aug. 1st," the new constitution before the National Assembly: after being discussed and adopted, it was accepted by the king.

"The same year" (art de verif.), Abd-el-Hamid succeeded by Selim III., twenty-ninth Turkish sultan. Coins issued at Cairo by Selim III. are figured in Marcel p. 249.

"In this year" (J. E. Smith), Aiton publishing his *Hort. Kewensis*, enumerating *Andromeda (Leucothoe) axillaris*, *Mertensia paniculata* i. 181, *Corallophiza innata*, *Allium tricoccum*, *Viola striata*, *Agrimonia parviflora*, *Potentilla tridentata*, *Mimulus alatus* ii. 361, *Nardosmia palmata* iii. pl. 11; *Solidago serotina*, *gigantea*, *nemorialis*, *arguta*, *petiolaris*, *stricta*, *mul. iradiata* iii. p. 211-3; *Aster paludosus* iii. p. 201, *A. salicifolius*, *spectabilis*, *aestivus*, *corymbosus*, *radula*; *Betula excelsa*, *Pinus Banksiana*, *P. serotina*, *Collinsonia scabriscula* i. 47, *Asclepias parviflora* i. 307, *Adlumia cirrhosa* iii. 1, *Epidendrum conopseum* (Steud.).

"In this year" (append. Sibth., and Winckl.), A. L. Jussieu publishing his *Gen. plant.*

"In this year" (Winckl.), Saint-Amans publishing his *Voyage dans les Pyrénées*.

* *Calamagrostis stricta* of Subarctic climates. A grass observed by Timm. in Roth n. beytr. i. 118 near Mecklenburg in Germany — (Pers.); known to grow from Lapland and Russia to Switzerland. And Westward, in Greenland, and in British and Russian America (Wats.); observed by myself on the alpine summits of the White mountains, having a contracted spiciform panicle and long acuminate glumes (agreeing entirely with a specimen from the mountains of Europe marked "C. epigeios").

† *Zephyranthes tubispatha* of Austral America. Transported to Europe is described by L'Heritier *sert. angl.* 9. — By European colonists also, carried to Hindustan; and "from Dr. Carey's garden at Serampore," introduced by Mason v. 431 prior to 1851 into the gardens of Burmah. Known to grow wild in Buenos Ayres (Pers.).

‡ *Eucalyptus gummifera* of Australia. Described by Gærtner — (Steud.), and J. E. Smith *soc. linn.* 284; observed in Australia by White *trav. pl.* (Pers.). By European colonists, carried to Hindustan, and according to Drury growing at Ootacamund.

Tulipa oculus-solis of the East Mediterranean countries. Observed by Saint-Amans naturalized around Montpellier — (A. Dec.); by Gittard, seemingly wild on the hill-sides between Arcadia and Philiatra in the Peloponnesus (Chaub.).

"In this year" (Winckl.), C. L. Hablizl publishing an account of the Taurian countries on the West side of the Caspian, enumerating *Scrophularia rupestris* (Steud.).

"In this year" (fl. Græc. append.), J. E. Smith publishing his Icon. Ined.*

As early perhaps as this year (see Durand in Am. phil. trans.), Michaux from Charleston making more extended journeys West and North, as far as Illinois, Canada, Lake Mistassiny, and the Southern extreme of Hudson's Bay, meeting with *Allosorus gracilis*, *Cheilanthes tomentosa*, *C. vestita* ii. 270. *Asplenium thelypteroides*, *Sitotobium punctilobulum*, *Nephrodium acrostichoides*, *Leersia lenticularis*, *Vilfa aspera*, *Muhlenbergia glomerata*, *Calamagrostis Canadensis*, *Oryzopsis asperifolia*, *O. juncea*, *Aristida ramosissima*, *Spartina fluviatilis*, *Bouteloua curtipendula*, *Diplachne fascicularis*, *Graphophorum melicoides*, *Diarrhena Americana*, *Glyceria Canadensis*, *Eragrostis reptans*, *Avenastrum striatum*, *Equisetum scirpoides*, *Carex scirpoides*, *polytrichoides*, *vulpinoidea*, *lagopodioides*, *lenticularis*, *miliaris paupercula*, *triceps*, *flexuosa*, *lanuginosa*, *striata*, *striatula*, *intumescens*, *rostrata*, *subulata*, *oligosperma*; *Magnolia macrophylla*, *Stylophorum diphyllum*, *Leavenworthia uniflora*, *Draba arabisans*, *Hypericum dolabriforme*, *H. nudiflorum*, *H. sphaerocarpon*, *Alsine patula*, *Stellaria pubera*, *Callirrhoe alcaoides*, *Desmanthus brachylobus*, *Najas flexilis*, *Pinguicula acutifolia*, *Forestiera ligustrina*, *Heteranthera acuta*, *Sparganium angustifolium*, *Oxybaphus nyctagineus* i. 100. *Plantago cordata* i. 94. *Galium asprellum*, i. 78. *Spermacoce glabra* i. 82. *Lithospermum angustifolium*, *L. latifolium*, *Onosmodium Carolinianum*, *Hydrophyllum appendiculatum*, *Phacelia bipinnatifida*, *Primula Mistassinica*, *Ipomoea ciliolata*, *Pyxidanthera barbulate*, *Xylosteum ciliatum*, *X. villosum*, *Ribes* (*Grossularia*) *lacustre*, *Gonolobus laevis*, *Gentiana puberula*, *G. acuta*, *Erigenia bulbosa*,† *Viburnum lantanoides*, *Cycloloma platyphyllum*, *Juncus marginatus*, *J. acuminatus*, *Luzula melanocarpa*, *Tofieldia glutinosa*, *Polygonum ramosissimum*, *P. tenu.*, *P. (Helxine) cilinode*, *Vaccinium cæspitosum*, *Pyrola chlorantha*, *Rubus pistillatus*, *Waldsteinia fragarioides*, *Calamelissa glabella*, *Verbena bracteosa*, *V. stricta*, *Conoclea multifida*, *Herpestis rotundifolia*, *Gerardia auriculata*, *Pedicularis lanceolata*, *Echinocystis lobata*, *Petalostemum candidum*, *P. violaceum*, *Astragalus secundus*, *Nabalus asper*, *N. racemosus*, *Artemisia Canadensis*, *A. caudata*, *Bellis integrifolia*, *Ceanothus divaricatus*, *Aster uniflorus*, *A. sericeus*, *Boebera glandulosa*, *Actinomeris helianthoides*, *Coreopsis aristosa*, *Helianthus mollis*, *Rudbeckia subtomentosa*, *Silphium integrifolium*, *Ambrosia bidentata*, *Listera convallarioides*, *Croton capitatum*, *Tragia macrocarpa*, *Euphorbia dentata*, *E. mercurialina*, *Salix candida*, *Populus grandidentata*; *Quercus imbricaria*, *macrocarpa*, *castanea*; *Dalea alopecuroides* pl. 38 (Nutt.), *Lycopodium lucidulum* (Willd.). — After travelling more than three thousand miles he sailed for Europe, and reached Paris "Dec. 26th 1796." Joining Baudin's expedition "in

* *Ehretia panicca* of Austral Africa. Known to grow wild there. Transported to Europe, is described by J. E. Smith i. pl. 9, and Lamarck enc. ii. p. 347 — (Pers.); and prior to 1848 had become naturalized around Portici (Parlat., and A. Dec.).

† *Ligusticum actæae-folium* of the Atlantic shore of North America. Observed by Michaux at Tadousac on the Lower St. Lawrence — (Hook.); by myself, among the sea rocks of the Northern portion of Massachusetts Bay, the flowers greenish; termed by Nuttall "angelica peregrina."

Hieracium nudicaule of Canada. Allied to *H. venosum*, but having larger flowers and the leaves not veined: — described by Michaux; and observed by myself near Quebec.

Anacharis Canadensis of Northeast America. Discovered by Michaux in the waters of the St. Lawrence, — and observed by A. Gray (probably in Western New York) in "slow streams and ponds common;" but not seen by myself in New England, its Northern limit along the Atlantic being perhaps 41°; observed by myself as far South as 39°, by Pursh in Virginia, by Curtis in North Carolina and Cherokee (Chapm.); and Westward, by Nuttall in Arkansas. Transported to Europe, was first observed in Britain "in 1842," and has since become widely extended, multiplying by division, the flowers being all female (A. Dec.).

Glyceria nervata of Northeast America. Discovered there by Michaux: — observed by myself in wet ground along the Atlantic from Lat. 46° near Montreal to 39° beyond Philadelphia, by Schweinitz at 36° in North Carolina, by Chapman in West Florida; and by Short, in Kentucky. Transported to Europe, has become naturalized prior to "1853" at Mendon near Paris (J. Gay, and A. Dec.).

Trisetum molle of Northeast America. Much resembling *T. subspicatum*: observed by Michaux in Canada — (Kunth): by myself, from 48° on the Lower St. Lawrence to 42° 30' near Salem; growing according to A. Gray on "mountains and rocky river-banks, N. New England to Wisconsin, and northward;" according to Chapman, on the "mountains of North Carolina."

1801," he left at Mauritius Island; and after "six months," proceeded to Madagascar, where he established a botanic garden at Tamatave and died at the "end of December 1803." His Flor. bor. am. was published in this year by L. C. Richard at Paris.

"In this year" (J. E. Smith), Lamarck publishing his Dict. encycl. bot.* enumerating *Panicum agrostoides*, *Carex crinita*, *C. plantaginea*, *C. Pennsylvanica*, *Coreopsis delphinifolia* ii. p. 108.

Piddingtonia nummularia of the mountains of Eastern Asia. A creeping Lobeliad described by Lamarck enc. iii. 589. — In its wild state known to grow only in Nepal and on Java (Pers., and A. Dec.).

Boerhaavia paniculata of Equatorial Africa? Received from Guinea by Bentham fl. Nigr. p. 495. Described from American specimens by Lamarck, — and Richard (Steud.), and regarded by Choisy as an American species. By European colonists was carried from one continent to the other (A. Dec.).

Lipocarpha argentea of Equatorial Africa and Madagascar. A Cyperaceous plant received from Senegal by Lamarck, — and known to grow in other parts of Equatorial Africa and in Madagascar (Ad. Juss). Probably by European colonists, carried Eastward, and to Tropical America (R. Brown cong., and A. Dec.).

"The same year" (Brendel in Am. Nat. for 1870), in the expedition of Malaspina, Née visiting South America; also Mexico, where he met with *Quercus cirinata*, *magnoliaefolia*, *microphylla*, *splendens*, *acutifolia*, *elliptica*, *castanea*, *candicans*, *tomentosa*.† — Leaving Mexico, he continued Westward to the islands of the Pacific, until "1794."

Dahlia variabilis of Mexico. Known to grow wild there (Pers.); and in this year, received at Madrid (Cav. ic. i. pl. 80 and iii. pl. 265): soon becoming a favourite flower in the gardens of Europe, and by way of France according to Clot-Bey was introduced into Egypt: by European colonists also, was carried to Hindustan, "several varieties" observed "in gardens" there by Graham; to Burmah, "exotic" there according to Mason; and to Northeast America, where it continues under cultivation for ornament.

"1790 A. D." (Holmes), by census, the United States found to contain "three million nine hundred twenty-nine thousand three hundred and twenty-six" inhabitants: including "six hundred ninety-five thousand six hundred and fifty-five" slaves.

"In this year" (Spreng.), Ludw. Castiglione publishing an account of his travels in North America, containing a List of plants.

The aboriginals of Surinam, described by G. H. Apthorp (hist. coll. i. p. 61) as "a harmless friendly set of beings," in "general short of stature, but remarkably well made, of a light copper color" (Mongolians), "straight black hair, without beards, high cheek bones, and broad shoulders;" both "men and women go naked;" the women wearing "ornaments of silver, etc.," in "their ears, noses, and hair:" one tribe "tye the lower part of the leg of the female children, when young, with a cord bound very tight for the breadth of six inches about the ankle, which cord is never afterwards taken off but to put on a new one; by this means the flesh which should otherwise grow on that part of the leg increases the calf to a great size and leaves the bone below nearly bare." The language "appears to be very soft." They manufacture "a few articles, such as very fine cotton hammocks, earthen water pots, baskets, a red or yellow dye called roucaù (. . .), and some other trifles, all which they bring to town and exchange for such articles as they stand in need of. They paint themselves red, and some are curiously figured with black. Their food consists chiefly of fish, and crabs, and *cassava*, of which they plant great quantities, and this is almost the only produce they attend to." Though not "absolutely wandering tribes," their huts, "merely a few cross sticks covered with branches" to keep out the rain and sun, are frequently abandoned "if they see occasion, and" they "establish themselves elsewhere. They do not shun the Whites, and have been serviceable against the run-away Negroes."

"In this year" (append. Sibth.), J. E. Smith commencing the "English Botany," the figures by Sowerby, — completed in "thirty-six volumes in 1814."

"In this year" (Winckl.), Thuillier publishing his Flor. des environs de Paris, enumerating *Carex teretiuscula*.

* *Carex Virginiana* of Northeast America. A sedge forming hassocks or large projecting tufts in marshes subject to overflow, and wounding the fingers if handled incautiously: from transported specimens termed "*c. stricta*" by Lamarck, — "*c. Virginiana*" by J. E. Smith in Rees cycl.: observed by myself from 43° to 39° along the Atlantic; by J. Carey, "very common" (A. Gray); by Muhlenberg, in Pennsylvania and Virginia; by Schweinitz, to 36° in North Carolina; by Elliot, in upper Carolina; and according to Torrey, grows from Canada to Georgia.

† *Quercus lobata* of California. Specimens procured and described by Née.

"In this year" (append. Sibth., and Winckl.), Martin Vahl publishing his *Symbol. bot.**

Thalia dealbata of Carolina and the Lower Mississippi. Discovered by J. Millington in the "impenetrable swamps of" South Carolina (Roscoe act. linn. viii. 340, and Ph.), and "in this year" according to John Fraser pl. (Pritzel): observed by Leconte in Southern Georgia; by Baldwin, at the mouth of the Satilla; by Nuttall, on the Arkansas, as far North as Lat. 35°. Transported to Europe, is termed "*Peronia stricta*" by Laroche. (Red., Poir., and Steud.); was sent by Delile from the Montpellier garden to Egypt, observed by Clot-Bey among other aquatic plants.

"1791 A. D." (Holmes), by act of Congress, Vermont, which during the war had assumed a provincial government, admitted into the Union as the fourteenth State.

"The same year" (Holmes), by the British parliament, the province of Quebec divided into Upper and Lower Canada.

"April 19th to 21st" (hist. coll. ii. p. 20), by Capt. Joseph Ingraham on his way to Northwest America, seven islands discovered in continuation of the Marquesas Northward to within 8° 3' of the Equator. The natives resembled those of the Marquesas, "except one young man, who had his hair stained white at the ends, as is common at the Sandwich Islands." Opye, a Sandwich islander on board, returning after twenty months absence at New York and Boston, was unable to understand the language of the Marquesas.

"The same year" (Kobell iv.), *galvanism* discovered by Galvani. — And shown not long afterwards by Volta to be an electrical phenomenon.

"In this year" (suppl. Sibth.), publication of the first volume of the Transactions of the Linnæan Society of London.

As early as this year (Willd. sp. pl. ii. 311), Curtis mag. 352 describing *Oenothera purpurea* of Northwest America.

"In this year" (Winckl.), P. K. A. Schousboe Danish consul in Morocco. — He continued until "1793," and commenced publishing his researches "in 1800."

"In this year" (J. E. Smith), after his Monadelph. diss. "in 1790," Cavanilles publishing his Icon. Plant. enumerating † *Madia viscosa* iii. pl. 298. — The sixth and concluding volume in "1801."

"In this year" (Spreng.), Lamarck publishing his Illustr. gen. plant.; — completed in nine hundred plates "in 1800."

"In this year" (Willd.), Thaddeus Haenke publishing an account of his excursion to the Riesengebirge. — His observations in North and South America, the Ladrone or Marian Islands and the Philippines, were published by Presl "in 1830-6" (Pritzel).

"In this year" (Pursh), J. E. Smith publishing his Spicileg. bot., enumerating *Hypoxis juncea* pl. 16.

"In this year" (Winckl.), La Billardiére sailing with D'Entrecasteaux in search of La Perouse.‡

"In this year" (J. E. Smith), Salisbury publishing his Icon. Rar., enumerating *Canna flaccida* pl. 2 (Willd.), — his Hort. Allerton "in 1796," and Nymphaeae in Sims ann. bot. ii.

"1792. April 17th" (art de verif.). Vancouver arriving by way of the Hawaiian Islands in Northwest America, near Cape Mendocino in "N. Lat. 40° 19'," and turning Northward Menzies accompanying him and meeting with *Menziesia ferruginea*, *M. empetriformis*, *Myginda myrsinites*, *Arbutus Menziesii*, *A. tomentosa*, *Vaccinium obtusum*, *Saxifraga pectinata*, *Tiarella Menziesii*, *Mitella grandiflora*, *Spiraea capitata*, *Rubus pedatus*, *R. stellatus*, *Lupinus Nootkatensis*; *Ribes laxiflorum*, *speciosum*, *Menziesii*; *Quercus Garryana* (Brendel).

"In this year" (Jap. mann. 272), Laxmann in a Russian ship at Matsmai, bringing shipwrecked Japanese. He was formally thanked, but informed, That "if the Russians ever again landed" at any port except Nagasaki, "they would be made prisoners."

"June 1st" (Holmes). Kentucky admitted into the Union as the fifteenth State. The revenues of the United States for this year, estimated at "three million seven hundred thousand dollars:" and

* *Carex VahlII* of Arctic Europe and the alpine summits of Switzerland. Termed "c. alpina" in fl. Dan. pl. 403 (Pers.), but distinguished by Schkuhr, and known to grow in Lapland (Pers.); also on the alpine portion of Switzerland (A. Dec.).

† *Chenopodium fatidum* of Mexico. Known to occur there (Moq.). Transported to Europe, is described by Cavanilles, — Schrader, Lagasca, and Schultes (Steud.): probably by European colonists, carried to Buenos-Ayres, Austral Africa, and Abyssinia (Moq., and A. Dec.).

‡ *Eucalyptus globulus* of Australia. Observed there by La Billardiére. — Introduced into Hindustan and at Ootacamund attained nine feet in girth in eighteen years, has spread rapidly on the Neilgherries and other high lands and has "become naturalised" as low down as "three thousand or four thousand feet" (Drur.). By European colonists also was carried to the Mediterranean countries, and has become acclimatized in Algeria, Spain, Corsica, and Southern France.

the tonnage of vessels paying duty during the year ending "Sept. 30th," including coasting and fishing vessels, amounted to "eight hundred thousand two hundred and sixty-one" tons; of which "five hundred forty-nine thousand two hundred and seventy-nine," were owned exclusively in the United States (Coxe).

"The same year" (Nicol.), Leopold II. succeeded by Francis II., forty-third emperor of Germany and Italy.

"Sept. 23d" (Maunder), at Paris, the new constitution set aside and a so-called "republican" government instituted.

"In this year" (append. Sibth.), publication of the first volume of the Act. soc. nat. paris.

Nardosmia fragrans of Dauphiny and the Pyrenees. Termed "tussilago fragrans" by Villars act. soc. nat. par. i. pl. 12, — and soon afterwards cultivated in gardens for its fragrance (Pers.). In Britain has escaped from cultivation in four or five localities, and according to Watson seems naturalized (A. Dec.).

As early as this year (Pers. i. p. 55, and Pritzel 417), J. B. Leblond in Cayenne, meeting with *Commelyna Cayennensis*, *Cyperus brizaeus*. — A Catalogue of plants sent by him published in Soc. d'hist. nat. de Paris i. 105-14.

"In this year" (soc. linn. lond. ii. and iii.), memoir by Goodenough and Woodward on *Carex* sp., enumerating *C. vulgaris*, — a second memoir read "in 1795."

Carex stricta of Europe and the adjoining portion of Asia. Described by Goodenough, — and Schkuhr 60 pl. v. f. 73: known to grow in marshes from Sweden and Russia throughout middle Europe (Engl. bot. pl. 914, Thuill., Pers., and Wats.): observed by Sibthorp frequent in the marshes of the Peloponnesus.

Carex rigida of Northern Europe and the adjoining portion of Asia. Described by Goodenough (soc. linn. ii. pl. 22) as observed on the mountains of Scotland: — described also by Schkuhr 56 pl. u. f. 71 (Pers.); and the species figured in Engl. bot. pl. 2407 was observed by Sibthorp in the open country around Constantinople. Westward, *C. rigida* was observed by Hooker in Iceland; and according to J. Carey grows on "alpine summits of the mountains of Northern New England and New York, and high northward" (A. Gray).

Carex fulva of Europe and Northeast America. Described by Goodenough, — and known to grow in meads and on mountains throughout middle Europe (Schkuhr t. T. f. 67, Host i. pl. 77, and Pers.): observed by Chaubard in moist places in the Peloponnesus. Westward, was received by Goodenough from Newfoundland (Hook.); was observed by B. D. Greene on the border of a lake at Tewksbury in Eastern Massachusetts (J. Carey).

"In this year" (Spreng.), after his Baiersch. flor. "in 1789," Franz von Paula Schrank publishing Primit. flor. salisburg.

"In this year" (Winckl.), Moritz Balthas. Borckhausen publishing his Nov. meth. plant. germ. — A second edition was published "in 1809," after his death.

Atriplex nitens of Eastern Europe and the adjoining portion of Asia. A large species termed "a. viridis" by Ehrhart, "a. sagittata" by Borckhausen (Schkr.), and known to occur along hedges in Germany (Hoffm., and Pers.). In Britain, found adventive on the isle of Wight (Bromf., and A. Dec.).

"In this year" (Spreng., and Winckl.), G. A. Olivier travelling in Persia.

"1793, Jan. 21st" (Maunder), Louis XVI. of France beheaded; "Oct. 16th," his wife Marie Antoinette beheaded. The European governments having armed against France, and civil war breaking out at home, the so-called "reign of terror;" during which, the guillotine was kept in constant action.

"April 29th" (Holmes), proclamation of neutrality by president Washington.

"The same year" (Nicol.), Fourth partition of Poland.

"In this year" (Winckl.), Uster publishing his Neuen Ann. Bot., — continued "until 1801."

Ornithogalum spathaceum of Eastern Europe and the adjoining portion of Asia. Described by Hayne in Ust. n. bot. annal 15, — termed "o. Haynii" by Roth, and known to occur around Hamburg and in the duchy of Oldenburg (Pers.): observed by Sibthorp near Abydos on the Dardanelles, and on Cyprus.

"In this year" (Winckl. 379), J. E. Smith publishing his Specimen of the botany of New Holland.*

"The same year" (Pauth. 463), arrival at Pekin of the first English ambassador, Macartney. An account of the proceedings and the journey through China, is given by G. Staunton; and among the plants collected were *Penthorum Chincense* (Pursh 323).

* *Eucalyptus robusta* of Australia. Received by J. E. Smith soc. linn. iii. 283 (Pers.). By European colonists, carried to Hindustan; and according to Drury growing at Ootacamund.

"End of July" (Walp. trav. 169), arrival of W. G. Browne in Dar-Fur, accompanying the Soudan caravan. He was detained in the country—until "the spring of 1796," when he was allowed to depart with a return caravan for Siout.

"1793-4 A. D." (Mann), Vancouver re-visiting the Hawaiian Islands, where Menzies "made large and valuable collections, mostly on Hawaii."

"1794, March" (Holmes), by Congress, acts passed: To provide a naval armament; and For fortifying and garrisoning the principal ports in the United States. "July," insurrection in Western Pennsylvania; the insurgents surrendering in "October," on the approach of a body of fifteen hundred militia. "Nov. 19th," treaty with Britain of amity, commerce, and navigation, signed at London by John Jay on the part of the United States.

"July 28th" (Maunder), Robespierre, member of an executive committee, beheaded; and comparative quiet restored. The constitution of "the third year" was soon afterwards put in force; a "directory" of five persons having the executive power.

"In this year" (Spreng.), Adrian Hardy Haworth * publishing his Obs. on *Mesembryanthemum*; — "in 1812," his Synops. plant. succulent.

"In this year" (Spreng.), after his letters from Sicily and Turkey in "1779-84," Domenico Sestini publishing his Viagg. da Bucharest à Constantinople.

"In this year" (title page, and Winckler), Ottav. Targioni-Tozzetti publishing his Institut. botan.; — "in 1809," his Dict. botan. nom. vulg., a second edition "in 1825," and died "in 1829."

"The same year" (Maunder), the Dutch driven out of Ceylon by the English. — The island was afterwards confirmed to Britain by the treaty at Amiens.

"Dec. 23d" (Dallet 70 to 136), first entrance of a Catholic priest into Corea, a Chinese called P. Jacques Tsiou. He entered clandestinely at midnight, and for assisting on this occasion, Paul Ioun in the following year was put to death.

"1795 A. D." (Maunder), in the beginning of this year, the French armies in general successful on the land had not only repelled invasion, but were in possession of the Austrian Netherlands, Holland, part of Germany as far as the Rhine, and Savoy.

"The same year" (Pauth. 463), arrival at Pekin of an ambassador from the Dutch East India company. An account of the proceedings and journey, is given by Van Braam.

"The same year" (Nicol.), Fifth partition of Poland.

"The same year" (Kobell ii.), by A. Sennefelder at Munich first experiments in *lithography*; with "Solenhofen or Killheimer" calcareous slate from the neighbourhood. — The material has proved the best anywhere discovered to the present day, and is exported to all parts of the civilized world.

"In this year" (Winckl.), Santi publishing his Viagg. al Montamiata; — the third and concluding volume "in 1806."

Allium album of Italy and Greece. Described by Santi — (Chaub.) ; observed by Sibthorp pl. 325 in Italy, and termed "a. lacteum;" by Chaubard, in the Peloponnesus.

"In this year" (append. Sibth.), Retz publishing a Second edition of his Flor. Scand. prodr., enumerating *Saxifraga triuspidata*, *Alsine Groenlandica* n. 552; — his Flor. oeconon. succ. "in 1806;" Fl. Virgil, "in 1809;" and died "in 1821."

"In this year" (J. E. Smith, and Spreng.), P. P. Lapeyrouse publishing his Flor. pyr. illustr., — the fourth and last volume "in 1801," and his Hist. abrég. plant. pyren. "in 1813."

"In this year" (Winckl.), Roxburgh publishing his Plants of Coromandel, † — completed "in 1819."

"1796 A. D." (Holmes), Tennessee admitted into the Union as the sixteenth State.

"Feb. 8th, first day" of the Chinese year (Pauth. 463), abdication of Kien-loung in favour of his son Kia-king, now three hundred and fourth Chinese emperor.

"April" (Maunder), the Austrians and Piedmontese defeated by Bonaparte; a young man just appointed commander of the French army in Italy.

"The same year" (Kobell ii.), in the North Pacific among the Aleutian Islands, rising of a new volcanic island out of the sea. — After a while, it gradually sunk down and disappeared.

* *Yucca recurvifolia* of Carolina and Florida. Introduced "in 1794" into Britain, — and described by Haworth, and Salisbury par. lond. 31 (Loud. encycl. plant.) Westward, observed by Leconte in Lower Georgia; by Nuttall, "in sandy fields, North Carolina."

† *Indigofera cœrulea* of Eastern Hindustan. Discovered by Roxburgh, cultivated by him and found to yield quantities of the most beautiful light *indigo* — (A. Dec., and Drur.).

Pyrrhtrum Indicum of Eastern Asia. Observed by Roxburgh iii. p. 436 in Eastern Hindustan; — and at Bombay, by Nimmo (Graham). Farther East, the *Indian feverfew* is enumerated by Mason v. 432 and 789 as "exotic" in Burmah, "often seen in gardens in" the city of Maulmain. By European colonists, carried to the Mauritius Islands and cultivated in gardens (Boj.); and to Europe, Sims bot. mag. pl. 1521.

"The same year" (Nicol.), Catharine II. succeeded by Paul, now Russian emperor.

"In this year" (Spreng.), Karl Gottl. Rafn publishing his *Flor. Dan. and Holstein*;—the second and concluding volume "in 1800."

"The same year" (Holmes), by Benjamin Thompson of Massachusetts or count Rumford of Munich, a donation of "five thousand" dollars to the American academy of sciences: the interest to be given as a premium every second year, for the most important discovery or improvement relating to heat and light. This being confined to America: while (as appears from other authorities), a like sum was given for the same purpose to a Society in Britain.

"In this year" (Winckl.), F. A. Marschall von Bieberstein visiting the countries along the Western shore of the Caspian, meeting with . . . (Willd. iii. 274).—He made subsequent visits "in 1798, 1802 and 1805," published his *Flor. taur.-caucas.* "in 1808," completed with a supplement "in 1819," and died "in 1826."

"In this year" (Spreng. gesch.), Jo. Aloys. Froelich publishing his *Gentian. libell.*, enumerating *Gentiana linearis* 37. n. 11.

"In this year" (Spreng.), Francis Masson publishing his *Stapel. nov.*

In this year (Act. linn. soc. vi. pl. 28), Forster describing *Solea concolor* of North America (Ph.).—He died "in 1798."

"In this year" (Willd.), James Donn publishing his *Cat. hort. cantabrig.**

"In this year" (Spreng.), Lamarck completing the Fourth volume of his *Dict. encycl. bot.*, enumerating *Hypericum fasciculatum* iv. 153, *H. galioides* iv. 154.

Momordica Senegalensis of Tropical Western Africa. Known to grow wild from Senegal to Guinea (Pers., and A. Dec.). Transported to Europe is described by Lamarck enc. iv. 239.—By European colonists, transported also to Brazil, where it continues to occur near dwellings, following the footsteps of man (M. A. de Caza, and A. St. Hilaire).

"1797, Feb. 4th" (Cavanilles, and Humb. cosm. v.), *earthquake* destroying the city of Riobamba on the Andes, and in the course of a few minutes more than twenty thousand of its inhabitants. The columns of smoke of the volcano of Pasto, at least 200 miles distant, disappeared on the same morning, and never reappeared.

"In this year" (append. Sibth.), Roth publishing his *Catalect. Botan.*

Erysimum virgatum of the mountains of Western Europe. Described by Roth cat. i. 75—(A. Dec.): observed by Brotero i. 575 in Portugal; by Schleicher, in Switzerland (Pers.). Transported to Britain, has been found adventive, springing up spontaneously (Wats. cyb. iii. 384).

"April 17th" (præf), after his *Amaranth.* "in 1790," C. L. Willdenow publishing the First volume of his *Species plantarum*, enumerating among botanical friends who had contributed dried specimens Günther, Hedwig, Hayne, Humboldt, Isert, Klein, Panzer, Pohl, Reiner, Roth, Rottler, Rudolphi, Schmidt, Schrader, Timm, Trattinick, Usteri, Vahl: and among plants describing *Muhlenbergia Willdenovii*, *Calamagrostis confinis* (Steud.), *Elymus striatus*, *Rhynchospora cymosa*, *Eleocharis obtusa* (Steud.), *Leersia Virginica*, *Ceratochloa unioides* "festuca" of W. (Baldw. rel. 106-12); North American plants, communicated perhaps in all instances by Muhlenberg.

"July 7th" (Holmes), a system of predatory violence under the authority of the French government continuing, an act passed: To declare the treaties heretofore concluded with France, no longer obligatory on the United States.

"In this year" (Jap. mann. 268), first appearance of an American ship in Japan, the *Eliza* of New York, Capt. Stewart, hired by the Dutch authorities at Batavia in consequence of the war: the Japanese officials were sorely perplexed by the crew speaking English, but at length convinced that they were not "real English," the *Eliza* was admitted "as a Dutch ship."—Capt. Stewart afterwards attempted unsuccessfully to open direct trade with Japan.

"The same year" (Nicol.), Frederic William II. succeeded by Frederic William III., fifth king of Prussia.

"In this year" (append. Sibth.), Jacquin publishing his *Hort. schoenbr.*, enumerating *Asclepias quadrifolia*.

"In this year" (Winckl.), Host publishing his *Synops. plant. austr.*;—and "in 1827-31," his *Flor. austr.*

* *Claytonia perfoliata* of Northwest America. Growing according to Hooker from the mouth of the Columbia to the Rocky mountains. Probably as a potherb transported to Mexico and Cuba (Dec.), and thence to Europe, where it is described by James Donn hort. cantab. p. 25,—(Willd.); is termed "*limnia perfoliata*" by Haworth (Steud.), and of late years escaping from cultivation has become naturalized around London: "in 1852," was observed by Corder at Amptill, at a long distance from any garden; and "in 1853," was found at Weybridge and at Clapham (phytol. 485 to 982, and A. Dec.). Was seen in Cuba by Humboldt and Bonpland, and termed "*c. Cubensis*."

Euphorbia salicifolia of Central and Eastern Europe. Distinguished by Host syn. 267 as observed in Austria, — and known to grow as far as Central and Eastern France (A. Dec.); observed by Waldstein and Kitaibel pl. 55 in Hungary (Pers.). In Britain, has maintained itself more than forty years on a point of Scotland, but does not appear to spread around (Lawson, and A. Dec.). “*E. agraria*” of Bieberstein as well as “*E. segetalis*” of Pallas are regarded as not distinct (Steud.).

“In this year” (Winckl.), A. B. Lambert publishing his gen. Cinchona.

In this year (Spreng., and Pers. ii. p. 272), Poiret preparing the fifth volume of the Dict. encycl. bot., enumerating *Polygala ramosa*, *Aristida purpurascens*, *Ranunculus recurvatus*, *Smilacina ciliata*, *Erigeron? longifolium* viii. p. 480. — The concluding volume was issued “in 1808.”

“In this year” (Act. linn. soc. vii. 96), Rudge publishing descriptions of Carices, including *Carex ovata*.

“In this year” (Pursh), John Abbot publishing his Lepidopt. insects of Georgia.

“In this year” (J. E. Smith), Andrews publishing his Bot. Repos, * enumerating *Gentiana Andrewsii*, — completed in ten volumes.

“The same year” (Kobell iv.), after discovering the peculiar metal *chromium*, its presence in an ore of iron in sufficient quantity to be of use in the arts, ascertained by Vauquelin.

“The same year” (Hale ethnogr. Expl. Exp. p. 145). Searle Island in the Paumotuian coral-archipelago discovered by Wilson; and found deserted, though there were traces of its having been visited. — “Thirty years later,” a scanty population was found on the island by Beechey: and this continued when visited by our expedition in 1839.

“1798, June” (Holmes), an act, To authorize the defence of merchant vessels of the United States against French depredations. And “July 13th,” by President Adams, Washington appointed commander in chief of the defensive army: the appointment was accepted.

“In this year” (Spreng.), L. A. G. Bosc residing in Charleston; examining especially the grasses and fungi, and meeting with *Hydrocharis (Limnobium) spongia*, *Panizum autumnale*, *Drosera capillaris* (Baldw. 75), *Phalaris intermedia* (Baldw. 141. and Chapm.).

In this year (Act. linn. soc. viii. 303), Salisbury describing *Trollius laxus* of North America (Ph.).

“July 1st” (Thiers, and Ryme), after overthrowing the independence of Malta, landing of Bonaparte with a French army near Alexandria. Obtaining possession, — the French held Egypt more than three years.

“Aug. 1st” (Maunder), naval combat in the Bay of Aboukir; the French fleet defeated by the English under Nelson.

“In this year” (J. E. Smith), Desfontaines publishing his Flor. Atlant. — The work was completed “in 1800” (Winckl.).

Arabis albida of mountain-summits around the Mediterranean. Observed by Desfontaines on Atlas and termed “*turritis verna*” — (Boissier); by Lemann, on Madeira; by Webb, between “seven and nine thousand feet” on the Canaries; by Gussone, on Sicily; by Ledebour, in the Crimea, and on Caucasus and the Talush mountains; was received by A. Richard from the elevation of “ten thousand feet” in Abyssinia, agreeing with fig. 71 in Jacquin f. ecloge (A. Dec.).

Orchis longicornis of the Mediterranean countries. Observed by Desfontaines pl. 246 in shaded situations in Algeria — (Pers.); by Sibthorp, in the Peloponnesus.

Juncus Fontanesii of the Mediterranean countries. A rush — distinguished by Gay: observed by Chaubard in the Peloponnesus.

Carex distachya of the Mediterranean countries. Observed by Desfontaines atl. pl. 2 in Barbary; — by Chaubard, in grassy places in the Peloponnesus; known to grow also on the Alps at Salsburg (Schkuhr 36. t. 6. f. 33. and Pers.).

“In this year” (Winckl.), A. F. Link and Hoffmannsegg visiting Spain and Portugal. — They published their Flor. portugaise “in 1809–14.”

Ophrys bombylifera of the Mediterranean countries. Described by Link, — and known to grow in Portugal (Pers.): observed by Chaubard in the Peloponnesus.

“In this year” (Spreng.), Gaetano Savi publishing his Flor. pisan.; — “in 1808–15,” his Botan. etrusc.

Not later than this year (see Spreng.), Hamilton-Buchanan accompanying the embassy of Symes to Ava.

* *Acacia longifolia* of Australia. Known to grow wild there (A. Dec.). Transported to Europe, is described by Andrews pl. 20, — Willdenow, Poiret, and Ventenat pl. 6 (Pers., and Steud.). By European colonists was carried to St. Helena, where it has become abundantly naturalized (Seeman).

Acacia stricta of Australia. Transported to Europe, described by Andrews pl. 53, — and Desfontaines (Pers., and Steud.). By European colonists, was carried to Hindustan, where it continues “thickly sown and planted in the neighbourhood of Ootacamund” for firewood (Morgan, and Drury).

Torenia parviflora of Madagascar and the Mauritius Islands. Observed by Hamilton-Buchanan in Southern Hindustan — (Benth.), and known to occur also in Burmah (herb. Dec.). Westward, is termed "nortenia Thouarsii" by Cham. and Schlecht. as growing on Madagascar and the Mauritius Islands. By European colonists, was carried to Brazil and Guayana (A. Dec.).

"In this year" (Pursh), Jacquin publishing the Third volume of his Hort. Schoenbr., enumerating *Cyperus speciosus*.

"In this year" (W. sp. pl. iv. 183), Willdenow describing plants in Act. berol., including *Chara foliolosa* from Muhlenberg.

Najas Indica of Hindustan. Received from Tranquebar and described in this year by Willdenow act. berol. i. f. 3: — growing also according to Bory on the Mauritius Islands (Kunth enum. iii. 114, and A. Dec.).

"In this year" (Spreng.), Joh. Christoph Wendland publishing his *Ericarum* icon., — the seventeenth and last fascic. "in 1806."

"1799, Feb. 10th" (Holmes), the French frigate *Insurgente* of "forty-four" guns, captured by the Constellation under Truxton. The American navy in this year consisting of "forty-two vessels, carrying nine hundred and fifty guns."

"Aug. 29th" (Nicol.), death in France of the captive pope Pius VI. He was succeeded at Rome by Pius VII., ninety-seventh pope.

Euphorbia calandulifolia of Discovered by Delile, occurring as a weed in cultivated fields near Cairo. — Its native country remains unascertained.

"Oct. 13th" (Maunder), arrival from Egypt of Bonaparte at Frejus in France. "Nov 9th," he drove out the Legislature at the point of the bayonet, and abolished the constitution "of the third year." The Directory was declared extinct, and a new constitution formed, vesting the executive power in three consuls: Bonaparte was made first consul.

"In this year" (Spreng.), Jak. Sturm publishing his *Deutschlands flora*.

"In this year" (title-page), Willdenow publishing the Second volume of his *Sp. plant*.

Nov. 10th (. . .), meteoric shower witnessed by Humboldt and Bonpland shortly after their arrival on the Northern coast of South America. In traversing this portion of the continent from the Orinoco to the Magdalena, they met with *Quercus Humboldtii*, and *Q. Tolimensis*, in New Granada* (Brendel).

"Dec. 14th" (Holmes), death of Washington.

"1800 A. D." (Holmes), removal of the seat of government into a slave State, to Washington city on the Potomac. The more prominent Northerners now took one another out of the way, and their places were filled by slaveholders, and Emancipation was effectually arrested.

"The same year" (Holmes), *vaccination* introduced into America by Benjamin Waterhouse of Cambridge.

"In this year" (suppl. Sibth.), J. E. Smith publishing his *Flora Britannica*.† And as early perhaps wrongly including among British plants *Salix petiolaris*.

* *Mikania guaco* of the banks of the Magdalena. An herbaceous vine, regarded as a remedy for the bites of venomous serpents; observed by Humboldt and Bonpland æq. ii. pl. 105 in hot damp places along the Magdalena — (Steud., and Lindl.).

Nelsonia canescens of Equatorial Africa. An Acanthaceous plant observed by Humboldt and Bonpland in Tropical America (Steud.). Known to grow at Fazohkel and in other parts of Equatorial Africa — (Nees in Dec. prodr. xi). Occurring also in Australia; but probably by European colonists carried to the West Indies and Columbia (H. and Bonpl. and A. Dec.).

Telanthera maritima of the shores of Tropical America. Observed there by Humboldt and Bonpland (Steud.); — known to grow in the West Indies and Brazil (A. Dec.), and in "South Florida" (Chapm.). From transported specimens, described by Willdenow (Steud.). Occurring also on the opposite African coast, at Oware (Moq.), and in Guinea (fl. Nigr.), probably transported by the ocean currents.

Iresine aggregata of the shores of Tropical America. Observed there by Humboldt and Bonpland (Steud.); — known to grow from Cuba to Bahia (A. Dec.), and from transported specimens described by Willdenow (Steud.). Occurring also on the opposite African coast, in Senegambia (A. Dec.), probably transported by the ocean currents.

† *Rosa micrantha* of Western Europe. The small-flowered sweet-briar distinguished by Smith on account of its deciduous calyx-lobes. By European colonists was carried to Northeast America, — has been found in "Eastern New England, naturalized" (A. Gray).

Carex lævigata of Western Europe. Observed by Smith iii. 1005, in Britain; — described also by Schkuhr t. 2. f. 83, t. Bbb. f. 116, t. Sss. f. 162; and known to grow in marshes in middle Europe (Pers.). Westward, was received by Dewey from Massachusetts and termed "c. Greeniana," is enumerated by J. Carey as "introduced?"

In this year (Act. linn. soc. x.), Lambert pl. 6 describing *Pentstemon frutescens* of North America.

"In this year" (Winckl.), J. C. Schleicher publishing his Plant. Helvet.*

"In this year" (title-page), Willdenow publishing the Third volume of his Sp. plant., enumerating *Arabis laciniata* (Muhl. in litt.), *Polygala paucifolia* (Muhl.), *Lathyrus myrtifolius* (M.), *L. venosus* (M.), *Vicia Americana* (M.), *Desmodium cuspidatum* (M.), *D. glutinosum* (M.), *Cirsium discolor* (M.), *Bidens connata* (M.), *Cacalia reniformis* (M.), *Eupatorium pubescens* (M.), *Aster prenanthoides* (M.), *Solidago patula* (M.), *S. ulmifolia* (M.). "erigeron nervosum" (*Chrysopsis graminifolia*).

Medicago denticulata of the West Mediterranean countries. An annual described by Willdenow, — and known to grow in Southern Europe (Pers.): observed by Savi in Italy (Steud.). By European colonists was carried to Northeast America, "sparingly introduced into New England etc." (A. Gray).

"In this year" (J. E. Smith), after his Hist. Salic. in "1785-91," Hoffmann publishing his Deutschl. Flora; — "in 1816," a second edition of his Gen. umbellif.

"In this year" (append. Sibth., and Winckl.), after his Tabl. regne veg. "in 1794," Ventenat publishing his Hort. Cels.

"In this year" (Winckl.), Georg Wahlenberg visiting Lapland,† — and subsequently in the summers of "1802, 1807, and 1810."

As early probably as this year (see Baldw. rel. 117-72), Brickell in Georgia meeting with *Prinos coriaceus*, and corresponding with Muhlenberg.

At this time (= "1816 — about 16 yrs." of Baldw. 344), John Fraser at Savannah, meeting with *Chamaerops hystrix*. — He sailed from Charleston in June 1817 (B. 190).

One hundred and eighty-third generation. Jan. 1st, 1801, mostly beyond youth: the Greek writer, Zalikoglous; the lexicographer, Eugenius of Bulgaria d. 1806: other writers, G. Gallesio; J. J. Schmidt; Dobrovsky; Hugi: the French writers, De Sacy, Solvyns, Amedée Jaubert, Roux: the English writers, John Webb, Terrick Hamilton: the Slavonic writers, Gabriel Dershafin, Nicholas Karamzin, Ivan Dmitrief, Timkofsky, Hyacinth Bitchourin, Igumnof of Irkutsk, Giganof, Volkof, Shishkof, Vuk Stephanovitch Karadshitch, and Kopitar: the botanists, J. Dickson, L. W. Dillwyn, E. J. C. Esper, J. L. Knapp, Burchell, Carmichael, H. F. Colebrooke, Correa de Serra, Benj. Delessert, N. A. Desvaux, J. P. R. Draparnaud, Jonas Dryander d. 1811, Leo Dufour, F. E. L. Fischer, G. Koch, C. F. B. Mirbel, Mocino and Sessè, Wm. Roscoe, Henr. Salt, I. C. Savigny, Schoubert, D. F. L. de Schlechtendal, Chr. Fried. Schumacher, Chr. Fr. Schwaegrichen, Aug. Friedr. Schweigger, N. C. Seringe, Joh. Sievers, Chr. Sigis. Sonnini, Caspar Sternberg, Georg. Adol. Suckow, Rob. Teesdal, Joh. V. Thompson, Andr. Thouin, L. C. Treviranus, Fr. Sigism. Voight, Wormskiold, Zeyher, Att. Zuccagni, Vinc. de Cervantes, Gustav. Schuebler, and Jos. Woods: the painter D. Wilkie b. 1785.

"On the same day" (Humb. cosm. iv.), an asteroid or minor planet discovered by Piazzi and named Ceres; — a second asteroid, Pallas, was discovered by Olbers "March 28th, 1802;" a third, Juno, by Harding "Sept. 1st, 1804;" and a fourth, Vesta, by Olbers "March 29th, 1807."

"Apr. 8th" (Dallet 121 to 135). First persecution of Christians in Corea. Seng-houn-i and six others put to death. "On the 25th," five more were put to death.

"In this year" (Ph.), Kostkow publishing his diss. de Junc., enumerating *Juncus setaceus* 13. pl. 1. f. 2.

"In this year" (Pers., and Ph.), Willdenow in Act. nat. cur. berlin. iii. describing *Floerkea proserpinacoides*, of Northeast America.

"In this year" (Spreng.), Guillemeau publishing his Calendrier de flore des environs de Niort.

"In this year" (append. Sibth., and Winckl.), Chr. Schkuhr publishing his descript. Caric.‡

* *Alsine stricta* of Arctic Europe and Asia and alpine summits farther South. Observed by Schleicher on the Swiss Alps; — known to grow on the Jura and Eastern Alps (Koch, and A. Dec.), in a single locality in the county of Durham in Britain (Bab., and Wats.), in Norway, Sweden, Lapland (Swartz, Wahl., and Fries), and in Arctic Russia and Siberia to beyond Lake Baikal (Ledeb.).

† *Carex lagopina* of Arctic Europe and the alpine summits of Switzerland. Observed by Wahlenberg among the mountains of Lapland; — known to grow also on the Swiss Alps (A. Dec.).

‡ *Carex ustulata* of Arctic Europe and the alpine summits of Switzerland. Termed "c. atro-fusca" by Schkuhr — (Pers.); observed by Wahlenberg in Scandinavia, and known to grow in the alpine portion of Switzerland (A. Dec.).

Carex Personii of Arctic Europe and the alpine summits of Switzerland. Distinguished by Schkuhr 206, — and Sieber; observed by Fries in Scandinavia and termed "c. vitilis;" known to grow also on the Swiss Alps (A. Dec.).

Cobresia caricina of Arctic Europe and the alpine summits of Switzerland. Described by Schkuhr f. 161 — (Willd.), and known to grow on mount Cenis (Pers.); also in the Scandinavian peninsula (A. Dec.).

enumerating *Carex Willdenovii*, *C. bromoides*, *Muhlenbergii*, *rosea*, *scoparia*, *festucea*, *straminea*, *tetanica*, *conoidea*, *grisea*, *oligocarpa*, *umbellata*, *miliacea*, *pubescens*, *trichocarpa*, *vestita*, *hystericina*, *tentaculata*, *lupulina*, *bullata*, *retroflexa*, *virescens*, *granularis*, *pedunculata* f. 131 (Willd.), *stipata*, *sparganoides*, *varia*, *cephalophora* f. 133 (Willd.), *lagopodioides* f. 177 (Willd.), *lacustris* f. 152 (Willd.), — “in 1806,” his *Enchirid. Botan.*; and died “in 1811.”

“The same year” (Nicol.), Paul succeeded by Alexander, now Russian emperor.

“In this year” (Miller ii. 485, and Holmes), “about two hundred” newspapers printed in the United States.

“In this year” (Winckl.), Bory Saint-Vincent sailing with Baudin to the Canary Islands and Mauritius.

“1802, March 27th” (Maunder), signing of the treaty of Amiens. And about this time or shortly afterwards, agreement between Bonaparte and the pope, for “the establishment of the free exercise of the Catholic religion” in France.

“In this year” (Winckl., Ph.), Ventenat describing plants in *Mem. de l'Inst.*, including *Tilia heterophylla*.

“April 28th” (Holmes), by act of Congress, Ohio admitted into the Union as the seventeenth State. Washington city at this time containing “four thousand three hundred and fifty” inhabitants.

“In this year” (Ph. pref. p. viii to xiii), John Lyon, leaving the charge of the Woodlands garden at Philadelphia, but continuing his explorations, chiefly Southward along the Alleghanies, meeting with *Rhamnus lanceolatus*, *Collinsonia anisata*, *Houstonia tenella*, *Urtica chamaedroides*, *Hamamelis macrophylla*, *Euonymus angustifolius*, *Ceropegia palustris*, *Amsonia salicifolia*, *Heuchera caulescens*, *Drosera brevifolia*, *Prinos coriaceus*, *Andromeda floribunda*, *Calycocarpum Lyoni*, *Chelone Lyoni*, *Sida* ? *hispida*, *Helianthus longifolius*, *Veratrum* (*Stenanthium*) *angustifolium*, *Aristolochia tomentosa*. — He published a Catalogue “in 1812” (Ph. 730), and died among the Alleghanies before 1817 (Nutt.).

“In this year” (pref. v.), after landing at Baltimore “in 1799,” visiting Muhlenberg, and Marshall, Pursh succeeding to the charge of the Woodlands garden at Philadelphia, finding the “collection particularly valuable for furnishing” “a general knowledge of the plants of that country,” and during his stay, — until the end of 1804 he “received and collected plants from all parts of North America,” probably at no great distance meeting with *Talinum teretifolium*, *Desmodium strictum*, *Panicum depauperatum*, *Scirpus debilis*, *Cerastium tenuifolium*, *Sagittaria heterophylla*.

“July 14th” (Durand in *Am. phil. trans.*), F. A. Michaux leaving Pittsburgh for Wheeling, where he purchased a canoe and descended the Ohio as far as the site of Maysville; and leaving Lexington “Aug. 10th” continued by land to Nashville, and Eastward all the way to Charleston, meeting with *Cladrastis lutea*, *Carya aquatica*, *C. myristicaformis*.

“July 20th” (Holmes), Louisiana ceded by Spain back to France.

“In this year” (Spreng.), Dawson Turner publishing his *Synops. brit. fuci*; — “in 1807-11,” his *Hist. of fuci*.

“In this year” (J. E. Smith, and Spreng.), Redouté publishing his *Liliac.*, — completed “in 1815.”

“In this year” (Pers. syn. ii. 345), Decandolle publishing his *Astragalogia*; — “in 1805” (A. Dec. g. b. 737), his *Flor. Franc.*

“In this year” (Spreng, and Winckl.), J. R. Suter publishing his *Flor. Helvet.*

“In this year” (J. E. Smith), Waldstein and Kitaibel publishing their *Plant. Hungar.*, — completed in “1812.”

Atriplex microsperma of Eastern Europe and the adjoining portion of Asia. An annual observed by Waldstein and Kitaibel in Hungary. — In Britain, has been found springing up spontaneously, but is clearly exotic (Bab., Wats., and A. Dec.).

“In this year” (Pritzcl), Thomas Horsfield in Java: — he resided there “until 1818,” and his *Plant. Javan. rar.* was published “in 1838-44.”

“1803 A. D.” (W. W. Hunter), the Marhattas expelled, Orissa occupied by the British, and the temple of Jagannath placed under their protection.

“In this year” (Spreng.), Leschenault leaving Baudin’s expedition at Timor. — He proceeded thence to Madura and Java, and returning reached Philadelphia “in 1806,” and France “in 1807.”

“In this and the preceding year” (Winckl.), Antonio Bertoloni observing the plants of the environs of Genoa. — He published his *Plantae Genuenses* “in 1804,” the third and last Decas of his *Rar. Liguriæ plant.* “in 1810,” his *Flor. Ital.* “in 1833-46,” and his *Florul. Guatimal.* “in 1840.”

“*Festuca Ligustica* of Italy. Observed by Bertoloni in Italy, — by Gussone about Naples and in pasture-land in Sicily especially along the sea (A. Dec. 707 and 1356).”

“In this year” (Winckl.), Lambert publishing his monogr. *Pin. enumerating Pinus pungens.*

"March" (Nouv. Esp.), Humboldt and Bonpland arriving in Mexico, meeting with* *Quercus confertifolia*, *crassifolia*, *crassipes*, *depressa*, *lanceolata*, *laurina*, *obtusata*, *pulchella*, *repanda*, *reticulata*, *Xalapensis* (Brendel), *Lobelia fulgens*.

"In this year" (title-page), after his *Fragm. nat. hist. Penns.* "in 1799," Benjamin S. Barton publishing his *Elements of Botany*.

"In this year" (Ph), Willdenow publishing his *Hort. berolin*, enumerating *Polygonatum giganteum* 45.

"In this year" (Pers. ii. p. 542), returning from Lapland, Wahlenberg publishing descriptions of Carices in *Act. holm.*, including *Carex salina*, *aquatilis*, *tenuiflora*, *livida*.

"In this year" (Winckl.), Ventenat publishing his *Hort. malmis.*, enumerating *Parnassia asarifolia*, *Tilia heterophylla*, *Tiarella bitermata*:—"in 1808" his *Decas gen. nov.*, and died before the close of the year.

"In this year" (append. Sibth.), publication of the first volume of the *Ann. mus. d'hist. nat.*

About this time (Pers. i. p. 88, and Winckl.), Poiteau visiting Hayti:† writing also his monogr. *Hypt.* (ann. mus. ined. to iv., and Pers. ii. p. 120).

Hyptis atrorubens of Tropical America. Known to grow wild in Cayenne (Pers.); and from transported specimens described by Poiteau.—By European colonists, was carried across the Atlantic to Sierra Leone (Benth., and fl. Nigr.).

Hyptis brevipes of Tropical America. Known to grow wild there (A. Dec.). Described by Poiteau.—By European colonists, was carried across the Pacific to the Philippines (Benth.), Celebes, Bouton near Pulo-Penang (herb. Dec.), Java (Zoll.), and across the Atlantic to Fernando Po (fl. Nigr.).

"In this year" (Pursh), after his *Astragal*. "in 1800," Pallas publishing his *Illustr. plant.*

"April 30th" (Holmes), through president Jefferson, Louisiana purchased of the French republic for "fifteen million dollars."

"In this year" (J. E. Smith), publication of the *Annal. du Mus.*;—continued in twenty volumes.

"1804 Jan. 1st." (Maunder), the French troops having finally abandoned Hayti, accession of Dessalines to the supreme authority, under the title of "emperor."

"The same year = 9th" of the emperor Kia-king (Pauth. 488), beginning of the seventy-fifth Chinese cycle.

"In this year" (app. Sibth., and Winckl.), Brotero publishing his *Flor. Lusitan.*‡

"In this year" (Winckl.), Aubert du Petit-Thouars publishing his *Gen. nov. Maurit. et Madagasc.*;—"in 1811," his *Melang. bot. et voy.*

"In this year" (Winckl.), A. Afzelius publishing his *Plant. Guineens.*

"In this year" (Winckl.), Palisot de Beauvois publishing his *Flor. d'Oware et de Benin*,—completed "in 1807."

Coleus? Africanus of Western Equatorial Africa. Observed there by Beauvois (A. Dec.), and known to be frequent from Guinea to the island of Saint-Thomas (fl. Nigr.). By European colonists, was carried to Brazil, observed near Bahia by Gardner, and Blanchet.

As early as this year (Willd. sp. pl. iii. p. 2035), *Aster sagittifolius* observed or received by Wedemeyer from North America.

"In this year" (Winckl.), Lewis and Clark ascending the Missouri, on their way overland to the Pacific, meeting with *Veronica reniformis*, *Salvia trichostemoides*, *Airoopsis brevifolia*, *Festuca spicata*, *Oxybaphus ovatus*, *Sweetia fastigiata*, *Elaeagnus argentea*, *Shepherdia argentea*, *Phacelia linearis*, *Ipomopsis aggregata*, *Ceanothus sanguineus*, *Eritillaria pudica*, *Lilium umbellatum*, *Oenothera caespitosa*, *Fussia subacaulis*, *Bartonia ornata*, *Atriplex canescens*, *Linaria tenella*, *Mimulus Lewisii*, *Atalanta serrulata*, *Malva coccinea*, *Amorpha microphylla*, *Lupinus pusillus*; *Psoralea tenuiflora*,

* *Cosmos caudatus* of Mexico. Observed there by Humboldt and Bonpland—(A. Dec.). By European colonists was carried to Ceylon about 1822, observed by Gardner a frequent weed, spreading in all directions (bot. mag. for 1848).

† *Hyptis spicata* of Tropical America. Observed by Poiteau on Hayti;—by N. A. Ware, in Southern Florida (Nutt.); and by myself, along roadsides in Brazil and in the outskirts of Rio Janeiro. Clearly by European colonists, was carried across the Pacific to the Marian Islands and the Philippines (Benth.), was observed by myself on Mindanao.

‡ *Soliva nasturtiifolia* of the Lower La Plata. Known to grow in the district around Buenos-Ayres (A. Dec.). Transported to Europe, observed by Brotero naturalized in Portugal and termed "hippia stolonifera" (Pers., and R. Brown); termed "gymnostyles nasturtiifolia" by A. L. Jussieu in ann. mus. iv. pl. 61. f. 2—(Pers., and Winckler). Also by European colonists was carried to Northeast America, observed by Nuttall in the outskirts of Charleston.

lanceolata, *argophylla*; *Chrysocoma graveolens*, *C. nauseosa*; *Artemisia gnaphalodes*, *cernua*, *Columbiensis*; *Brachyris sarothra*, *Aster canescens*, *Grindelia squarrosa*, *Amellus?* *spinulosus*, *Diotis lanata*, *Euphorbia marginata*, *Astragalus tenellus*, *Polygala alba* (Ph. 750),—and beyond the Rocky mountains, on the waters of the Columbia, *Phacelia heterophylla*, *Phlox speciosa*, *Lonicera ciliosa*, *Ribes viscosissimum*, *R. sanguineum*, *R. aureum*, *Frangula alnifolia*, *Claytonia lanceolata*, *C. alsinoides*, *Berberis nervosa*, *Zygadenus elegans*, *Trillium petiolatum*, *Clarkia pulchella*, *Polygonum bistortoides*, *Vaccinium ovatum*, *Cerastium elongatum*, *Sedum stenopetalum*, *Purshia tridentata*, *Spiraea discolor*, *Geum ciliatum*, *Clematis hirsutissima*, *Scutellaria angustifolia*, *Gerardia?* *fruticosa*, *Bartsia tenuifolia*, *Dentaria tenella*, *Lupinus argenteus*, *L. sericeus*, *Astragalus Missouriensis*, *Trifolium microcephalum*, *T. macrocephalum*, *Matricaria discoidea*, *Erigeron?* *compositum*, *Trichophyllum lanatum*, *Buphthalmum?* *sagittatum*, *Galardia aristata*.—They returned “in 1806.”

“In this year” (append. Sibth., and Winckl.), Martin Vahl publishing his Enum. plant., including *Fimbristylis laxa*; *Scirpus polyphyllus* (“*brunneus*” of Muhl., A. Gray).—He died before the close of the year,—and the publication was completed “in 1806.”

“May 1st” (Maunder, and Nicol), shortly after the seizure and execution of the duke d’Enghien, a motion in the Tribunate for conferring on Bonaparte the rank of emperor, with hereditary succession. The decree was adopted by the Senate. And “Dec. 2d,” pope Pius VII. having come to Paris, anointed the new emperor; who placed the crown upon his own head.

“In this year” (Winckl.), Rebutisch publishing his Prodr. flor. neomarch.;—“in 1805,” his Plant. berolin.

“The same year” (Hale ethnogr. Expl. Exp. 173), Langsdorff with Krusenstern at the Nukuhivan or Marquesas Islands.

“Oct. 7th” (Jap. mann. 274), Krusenstern off Nagasaki bringing a Russian ambassador, count Resanoff. After entering the port, fears of connivance between the Russians and Dutch arose among the Japanese, and on the arrival of a commissioner from Yedo, diplomatic intercourse was refused.

“In the beginning of 1805” (pref. p. ix), Pursh journeying through Maryland and along the Alleghanies of Virginia and Carolina, “returning late in the autumn through the lower countries along the sea-coast,” meeting with *Heuchera pubescens*, *H. hispida*, *Phacelia Purshii*, *Euphorbia obtusata*, *Lophiola aurea*, *Schizaea pusilla*, *Eragrostis Purshii*, *Amphicarpum Purshii*, *Dicliptera brachiata*, *Cyperus poaeformis*, *Woodwardia thylypteroides*, *Exacum pulchellum*, *Ceanothus perennis*, *Impatiens pallida*, *Prinos lanceolatus*, *Saxifraga erosa*, *Silene ovata*, *Agrimonia suaveolens*, *Scutellaria nervosa*, *Dielytra eximia*, *Aster flexuosus*, *A. reticulatus*.

“In this year” (Pers. ii. p. 403, and Winckl.), after his Gen. plant. “in 1802,” Leopold Trattcnik publishing his Thesaur. botan.,—the 80th and last coloured plate “in 1819:” his Gen. nov. plant. “in 1825.”

“Oct. 21st” (Maunder), naval combat of Trafalgar; the French and Spanish fleets “nearly annihilated” by the English under Nelson. “Nov. 13th,” Vienna occupied by the French.

“In this year” (Spreng.), Thonning and Palisot de Beauvois publishing their Flore d’Oware et de Benin,—completed “in 1810.”

“In this year” (title-page), publication of Vol. i. of the Persoon Synopsis Plantarum;—“in 1807,” the second and concluding volume, completing the enumeration of nearly “twenty-two thousand” species (Spreng.).

“In this year” (title-page), Willdenow publishing the Fourth volume of his Sp. plant., enumerating* *Platanthera fissa* labell. “*laciniis cuneiformibus dentatis*” (Muhl.), *Cypripedium candidum* (Muhl.), *Carex digitalis*, *Scleria verticillata* (Muhl.), *Salix longifolia* (Muhl.), *Andropogon furcatus* (Muhl.), *Hierochloa alpina* (Swartz in litt.), *Parietaria Pensylvanica* (Muhl.).

“In this year” (Spreng.), Erich Acharius publishing his Methodus lichenum;—“in 1810,” his Lichenograph. univers.; and “in 1814,” his Synops. method. lichenum.

“In this year” (Spreng.), J. V. F. Lamouroux publishing Dissertations sur espèces de Fucus.

“In this year” (Spreng.), J. B. von Albertini and L. D. von Schweinitz publishing their Conspect. fung. niesk.

“In this year” (A. Gray man. bot. p. 552), Mar. Lagasca publishing descriptions of grasses, including *Bouteloua hirsuta*.

“1806 A. D.” (Jap. mann. 281), under instructions from the repelled ambassador Resanoff, two Russian officers landing upon Saghalien, belonging to Japan, plundering villages and carrying off many of the natives. The Japanese government was utterly confounded, but the only immediate result was

* *Acacia mollissima* of Australia. From transported specimens described by Willdenow (Steud.). By European colonists was carried to Hindustan, where it is “thickly sown and planted in the neighbourhood of Ootacamund” for firewood, but its bark “is useful for tanning, and a tar has been obtained from the wood” (Morgan, and Drury).

the degradation of the prince of Matsmai, judged incapable of protecting his subjects, and the conversion of his principality with Yezo and the Kuriles into an imperial province.

"In this year" (Klapr. mem. ii. 299), Klaproth at Irkoutsk in Siberia.

"In this year" (suppl. Sibth.), Bivona Bernardi publishing his *Cent. Plant. Sic.*; — his *Monogr. Tolpid.* "in 1809."

Carex serrulata of the Mediterranean countries. Observed by Bivona in Sicily: — by Chaubard, in the subalpine portion of the Peloponnesus.

Orchis Brancifortii of the Mediterranean countries. Observed by Bivona in Sicily; — by Tenore, in Italy and termed "o. quadripunctata," by Chaubard on the flanks of Taygetus in the Peloponnesus.

Orchis longibracteata of the Mediterranean countries. Observed by Bivona pl. 4 in Sicily; — by Chaubard in the Peloponnesus.

Feb. 8th (Durand in *Am. phil. trans.*), F. A. Michaux on his way to America captured by a British ship, but allowed to go on shore at Bermuda. He reached Maine towards the end of May, and his Notice of Bermuda was published at Paris before the close of the year (Winckl.).

"July 12th" (Nicol.), through the emperor Napoleon, the Confederation of the Rhine: Francis II. ceasing to be emperor of Germany and Italy; but becoming Austrian emperor, with the succession made hereditary.

"Oct. 25th" (Maunder), Berlin occupied by the French under Napoleon. "Dec. 24th," war carried by the French beyond the Vistula into Eastern Prussia.

As early as this year (Pers., and Winckl.), Heinrich Gustav. Floerke publishing descriptions of plants: — "in 1809-15," his *Lichen. Germ.*; and died "in 1835."

Pedicularis asplenifolia of alpine summits from Austria to the Himalaya and Northwest America. Observed by Floerke on the Salsburg Alps (bot. zeit. pl., Willd., and Pers.), and known to grow on the Himalaya (Benth.), but not found in the intervening country (A. Dec.). Farther East, observed by Mertens around Norton Sound.

"In this year" (append. Sibth.), after the first volume "in 1805." Sims and König publishing the Second volume of their *Annals of Botany*,* enumerating *Atragene Americana*, *Silene regia*.

"In this year" (Winckl.), Swartz publishing his *Synops. filicum*, enumerating *Woodsia obtusa* (Willd.): — his *Summ. veg. scand.* "in 1814," and died "in 1818."

"In this year" (Winckl.), H. A. Schrader publishing his *Flor. German.* — He died "in 1836."

"In this year" (Spreng.), Edw. Rudge publishing his *Plant. guian. rar.*

As early as this year (Pers. ii. p. 301), Turpin visiting Hayti, meeting with *Glycine lignosa*.

"In this year" (A. Dec. p. 717), Shecutt publishing his *Flor. Carol.*

In this year (Pursh pref. p. xii). Aloysius Enslen in Georgia and Lower Louisiana, meeting with † *Lythrum alatum*, *Iris cuprea*, *Centaurilla aestivalis*, *Rhexia stricta*, *Helianthemum rosmarinifolium*, *Dipteracanthus ciliatus*, *Tephrosia chrysophylla*, *Silphium laciniatum*.

"In this year" (pref. p. ix), Pursh journeying across Pennsylvania to Lake Ontario and the mountains of New Hampshire, "returning as before by the sea-coast," meeting with ‡ *Ranunculus cymbalaria*, *Viola rostrata*, *V. clandestina*, *Prinos laciniatus*, *Lysimachia longifolia*, *Acerates viridiflora*, *Salix angustata*, *S. pedicellaris*, *Platanthera orbiculata*, *Cyperus inflexus*, *Panicum depauperatum*, *P. elongatum*, *Galium micranthum*, *Saxifraga pusilla*, *Allium triflorum*.

"1807, June" (Maunder), an American ship of war fired into by a British ship of superior force, and after striking her flag, searched for deserters; and four men carried away. — The affair led first to an embargo, and eventually to war.

"The same year" (), Selim III. succeeded by Mustafa IV., thirtieth Turkish sultan. The English in this year (Clot-Bey, and others) took possession of Alexandria: but after about six months, were compelled to re-embark.

* *Nymphæa ampla* of the West Indies and neighbouring portion of Tropical America. Described by Salisbury in *ann. bot.* ii. 69 (Steud.). Known to grow wild on Hayti, Jamaica, around Vera Cruz, and in Guayana (*Dec. syst.* ii. 54. and A. Dec.).

† *Sagina decumbens* of Carolina and the Lower Mississippi. Observed by Enslen in Carolina (Ph., and Wats.); termed "spergula decumbens" by Elliot; observed by Chapman, in "damp cultivated ground, common:" was received by Torrey and Gray from Louisiana. Eastward, is termed "s. Eliottii" by Fenzl, though according to Decandolle, and A. Decandolle, occurring in middle Europe.

‡ *Potentilla arguta* of Northeast America. Observed by Pursh in Canada and along the Susquehanna in Pennsylvania, and termed "geum agrimonoides;" — by Bigelow, near Boston, and termed "Boottia;" by myself, near Salem, the flowers white: its Southern limit may thus be placed at about 41° 30'.

"Nov. 9th" (Maunder), in consequence of French invasion, sailing of the royal family of Portugal for Brazil.

"The same year" (. . .), by Fulton, the steam engine successfully applied to navigation. F. A. Michaux, taking passage in the boat on its return voyage down the Hudson, continued Southward through the Atlantic States as far as Georgia, — and after nearly three years stay left America "in 1809" (Durand in Am. phil. trans.).

"In this year" (Winckl.), A. L. Jussieu publishing memoirs on *Dicliptera*,* *Curanga*, *Hydrophyton*, and *Physkium*.

"1808 A. D." (Maunder, and Nicol.), Charles II. of Spain succeeded by Ferdinand VII. ; who before the close of the year was superseded by Joseph Bonaparte, a brother of Napoleon.

"The same year" (. . .), Mustafa IV. succeeded by Mahmood II., thirty-first Turkish sultan.

"In this year" (Jap. mann. 232), Capt. Pellew in a British armed ship, looking for Dutch vessels, arriving off Nagasaki seized the Dutch boat and entered the port without ceremony ; and not finding the expected vessels, again retired. The affair caused the suicide of several Japanese officials, and instilled among the people hatred of the English.

As early as this year (Pursh pref. xiv to p. 228, and Baldw. p. 329-32), John Leconte residing thirty-nine miles South of Savannah, meeting with *Gerardia aphylla* (Baldw. 155), *Utricularia striata*.

"April" (biogr. not., and pref. p. vii), Nuttall landing at Philadelphia, and on the following day mistaking a Smilax for a passion-flower his attention was directed to Botany. Before the close of the season, he made an excursion in the Delaware peninsula as far as Dagsborough and Lewiston, meeting with *Lobelia paludosa*, *Gymnopogon brevifolius* (A. Gray).

"In this year" (Spreng.), Turpin and Poiteau publishing their Flore des environs de Paris, — the seventh and last number "in 1809."

"In this year" (Spreng.), Pieri publishing his Corcir. flor. cent. i.

"In this year" (Spreng.), F. R. de Tussac publishing his Flor. des antilles, — completed "in 1811."

"In this year" (Spreng.), Claude Louis Richard publishing his Analyse du fruit.

"1809, March 13th" (Nicol. p. 207), decree of Napoleon uniting the Roman States to the French empire : and "July 5th or 6th," pope Pius VII. taken prisoner.

"July 5th and 6th" (Maunder), the Austrians defeated at Wagram by the French under Napoleon. Followed by the dissolution of his marriage with Josephine in "December," — marrying afterwards in "April" Maria Louisa, daughter of the Austrian emperor.

"In this year" (Spreng.), F. Batard publishing his Flor. de Maine et Loire ; — "in 1812," a Supplement.

"In this year" (Winckl.), Willdenow publishing his Enum. plant. hort. berol., including *Philadelphus grandiflorus*, *Gillenia stipulacea*, *Corydalis aurea*, *Aster simplex* : "Nov. 21st" (præf.), the Fifth volume of his Sp. plant., comprising Equisetac., Lycopodiace., and ferns. — He died "in 1812."

In this year (. . .), having made the acquaintance of Dr. B. S. Barton who had conceived the idea that there must be many unknown plants "in the country beyond Lake Superior," Nuttall in company with John Bradbury ascending the Missouri from St. Louis to and beyond the Mandan villages, meeting with *Ranunculus Puṛshii*, *Linum rigidum*, *Psoralea argophylla*, *Geum triflorum*, *Androsace Occidentalis*, *Hedeoma hispida*, *Cheilanthes dealbata*, *Batschia longiflora*, *Bumelia serrata*, *Solanum* (*Nycterium*) *heterandrum*, *Viola Nuttallii*, *Evolvulus Nuttallii*, *Cymopterus acaulis*, *Suaeda depressa*, *Gamassia Nuttallii*, *Yucca angustifolia*, *Gaura coccinea*, *Oenothera albicaulis* (Nutt.), *Oe. pinnatifida*, *Eriogonum sericeum*, *E. pauciflorum*, *Bartonia nuda*, *Hyssopus foeniculum*, *Hedeoma hispida*, *Vesicaria argentea*, *Polanisia graveolens*, *Dalea aurea*, *D. laxiflora*, *Petalostemum gracile*, *Amorpha canescens*, *Lathyrus decaphyllus*, *Psoralea cuspidata*, *Orobis longifolius*, *Glycyrrhiza lepidota*, *Hosackia sericea*, *Mulgedium pulchellum*, *Troximum glaucum*, *T. cuspidatum*, *Hymenopappus tenuifolius*, *Artemisia longifolia*, *A. Ludoviciana*, *Iva axillaris*, *Erigeron pumilum*, *Actinella acaulis*, *Amellus* ? *villosus*, *Rudbeckia columnaris*, *Oxybaphus angustifolius*, *Pulmonaria lanceolata*, *Myosotis glomerata*, *Seseli divaricatum*, *Rumex venosus*, *Cactus viviparus* ; *Pentstemon cristatum*, *erianthera*, *angustifolium*, *granatiflorum* ; *Castilleja sessili ora*, *Stanleya pinnatifida*, *Astragalus carnosus*, *A. racemosus*, *Phaca triphylla*, *Oxytropis Lamberti*, *Prenanthes juncea* ; Poly-

* *Dicliptera ciliaris* of Madagascar. Known to grow there in arid situations (A. Dec.) ; and from transported specimens described by A. L. Jussieu in ann. mus. ix. (Winckl.). Occurs also in Guayana and at Pernambuco and Bahia (Nees in Dec. prodr.), probably carried by European colonists.

cnemum Americanum, *Crypsis*? *squarrosa*, *Sesleria*? *dactyloides*, *Bouteloua oligostachya*, *Lepturus*? *paniculatus*.

"1810, in the spring" (gen. i. 219 to ii. 142), after visiting Prairie du Chien on the Mississippi, Fox river, Green Bay on Lake Michigan, and Michilimakinak, Nuttall near the confluence of Huron river with Lake Erie, meeting with *Iris lacustris* near Michilimakinak.

As early as this year (Baldw. reliq. p. 50-79), Stephen Elliot near Waynesboro', Georgia, meeting with *Elliotia racemosa*, *Galactia Elliottii* (B. r. 211), *Baldwinia uniflora* (B. r. 307).

"Oct. 24th" (Nicol.), mental aberration of George III. of England, and his eldest son George appointed regent or acting king.

"As early as this year" (Winckl.), Steven publishing descriptions of plants of Southern Russia and Caucasus in Acad. St. Petersburg iii and soc. nat. Mosc. ii to ix.

Allium guttatum of Eastern Europe and the adjoining portion of Asia. A rare species observed by Steven in the countries about the Black Sea;—by Chaubard, only on the summit of mount Diaforti in the Peloponnesus.

"In this year" (Winckl.), I. F. Lehmann publishing his Flor. Wirceburg;—"in 1815," the Second volume with a supplement.

Echinoppermum deflexum of Eastern Europe. Observed and distinguished by Lehmann;—observed also by Wahlenberg (Steud.). In Britain, made its appearance "in 1846" in a locality not far from a garden (Wats. cyl. iii. 365), and is regarded by A. Decandolle as adventive only.

"In this year" (Winckl.), Goran Wahlenberg making his fourth visit to Lapland.—He published his Flor. lappon. "in 1812."

"In this year" (A. Dec. g. b. 800), Decandolle at Montpellier,—where he continued to reside until "1816."

Onopordum virens of the West Mediterranean countries. A thistle observed by Decandolle frequent around Montpellier—(A. Dec.).

Myriophyllum alternifolium of the West Mediterranean countries. Distinguished by Decandolle;—observed by Gussone on Sicily, by Moris on Sardinia (A. Dec.). Probably by European colonists carried to the Azores, received from those islands by Watson (lond. journ. bot. vi. 382).

"In this year" (append. Sibth.), by William Townsend Aiton, a Second edition of Aiton's Hortus kewensis, in which are enumerated *Cypripedium arutinum*:—the fifth and concluding volume "in 1813."

"In this year" (Spreng., and Winckl.), Robert Brown publishing his Prodr. flor. N. Holl.

"1811 A. D." (Clot-Bey and others), the breaking of Memluk power by the French having brought into Egypt an army of four thousand Albanians, their chieftain Mohammed Ali acquired prominence; and "March 11th" extinguished the remnant of Memluk aristocracy.—Mohammed Ali made himself virtually independent; and even threatened Constantinople, twice rendering European interference indispensable.

"In this year" (Spreng., and Winckl.), death of Pallas, leaving in his herbarium *Trillium Camtschaticum* (obovatum of Pursh), *Epilobium luteum*, *Potentilla villosa*, *Cheiranthus Pallasii*, *Dicentra tenuifolia*.

"July 4th" (Kobell ii.), among the Azores, a new volcanic island rising out of the sea, to the height of "seven hundred" feet: but during the "six months" following, gradually settled down and disappeared.

"In this year" (. . . Winckl.), W. J. Hooker publishing his Travels in Iceland.

"In this year" (Winckl.), Michele Tenore publishing his Flor. Neapolitan.—The fifth volume was issued "in 1838."

Lamium flexuosum of Italy and Sicily. A woodland species observed by Tenore in Southern Italy,—by Gussone around Naples as well as in Sicily (A. Dec. 707 and 1358).

"In the autumn" (Ph. pref. and i. p. 71), after a visit to the West Indies "in 1810," Pursh landing at Wiscasset in Maine, and journeying South called on Peck in Cambridge, collected plants "in Monmouth county, New Jersey," and before the close of the year sailed from New York for England.

"In this year" (Spreng.), Jos. Franz von Jacquin publishing his Ecl. plant. rar., completed "in 1816."

Not later than this year (Pursh i. 310), Nelson on the Northwest coast of America, meeting with *Saxifraga serpyllifolia*, *S. setigera*, *Arenaria macrocarpa*, *Senecio cymbalaria*, *Aster peregrinus*, *Salix obovata*.

"In this year" (Winckl.), after his Etrennes de Flore "in 1804," Gaudin publishing his Agrostolog. Helvet.;*—"in 1828-33," his Flor. Helvet. in vii vols.

* *Oxytropis Lapponica* of Arctic Europe and the alpine portion of Switzerland. Described by Gaudin.—and rare in Switzerland, growing according to Koch on the Alps of Valais, and found by Moritzi at l'Albula in the Grisons (A. Dec.): is rare also in the Scandinavian peninsula and in Lapland (Fries); and according to Ledebour seems unknown in Siberia.

In this year (reliq. Baldw. 25 to 79), Muhlenberg at Lancaster Penns., meeting with or receiving from correspondents *Scirpus planifolius* 26, *Oryzopsis melanocarpa* 45, having completed his Catalogue N. Am. plants, in which are enumerated *Ranunculus fascicularis*, *Trifolium stoloniferum*, *Desmodium humifusum*, *Hydrocotyle interrupta*, *Xylosteum oblongifolium*, *Solidago squarrosa*, *Gentiana alba*, *Smilax hispida*, *Festuca? nutans*, *Eleocharis tenuis*, *Aesculus glabra*, *Epilobium coloratum*, *Acerates connivens* (Baldw. rel. 107); *Scirpus atrovirens* ("exaltatus" of Ph., B. r. 289); — the work was published "in 1813" (Winckl.).

"Apr. 8th to Nov. 4th" (reliq. 25 to 51), William Baldwin at Wilmington Del. sending plants to Muhlenberg, including *Cerastium oblongifolium* 26.

"In this year" (Sieb. eluc. Vries 50, and Jap. mann. 282), Golownin in a Russian frigate exploring the Japanese seas, but landing on the Kurile island Kunashir, was surprised, overpowered, and with his officers and boat's crew made prisoners. They were conveyed bound to Matsmai, — and detained "nearly two years" until the arrival of a satisfactory disavowal of the Saghalien incursion.

"1812 A. D." (Inman), Louisiana, with restricted boundaries, admitted into the Union as a State.

"Apr. 20th" (reliq. 53-75), after landing at Charleston in the beginning of December 1811, and visiting Savannah, Baldwin at the "Creek Agency on Flint river" in "Lat. 32° 39'" at the foot of the Alleghanies, meeting with *Silene Baldwinii* 73, *Waldsteinia lobata* 93, *Rumex (Acetosella) hastatulus* 147: after visiting Coweta town on the Chatahoochee, he returned to Savannah, and "May 30th" reached his station at St. Mary's where he met with *Eleocharis (Chatocyperus) Baldwinii* 341, *Eryngium aromaticum*, 203, *Palafoxia integrifolia* 335, — and in the two following years *Gratiola subulata* 117, *Gymnadenia nivea* 117, *Eryngium Baldwinii* 154, *Erianthus strictus* 335, *Psoralea virgata* 337, *Xyris Baldwinii* 337, "x. cylindrica" white-flowered 210 to 337 *X. torta?*, *Panicum viscidum* 207, *Salvia (Dicerandra) linearifolia* 280, *Rhynchospora Elliottii* 285, *Dichromena latifolia* (Chapm.).

At this time (Baldw. 52 to 153), Oemler at Savannah, sending plants to Muhlenberg, and Elliot, including *Collinsonia verticillata*, *Coreopsis Oemleri*.

As early as this year (see Pursh), Colmaster at Labrador, meeting with *Potentilla emarginata*, *Artemisia spithamea*, *Arnica plantaginea*, *Platanthera dilatata*.

"In this year" (Pritzell, and Lindl.), after his Botanico-med. brasil. "in 1803," Gomez publishing in acad. Lisb. ii. 23 a memoir on certain plants.*

"June 18th" (Maunder), act of the American congress, declaring war against Britain.

"Aug. 17th" (Maunder), capture of Smolensko; followed by the battle at Borodino, and the entrance of the French army into Moscow. The city was burned by its inhabitants, and "Oct. 19th" the French army commenced their retreat; but through the want of supplies, the severity of the winter, length of the journey, and the pursuing Russians, was almost annihilated before reaching Saxony.

"In this year" (Spreng.), Palisot de Beauvois publishing his Agrostographie, enumerating *Triplasis Americana* (Chapm.). — He died "in 1820."

"1813, February" (Maunder), manifesto of the emperor Alexander at the head of his army in Poland; serving as a basis for the coalition of other European powers against Napoleon. Prussia joined at once, and was followed by Austria; and "Oct. 18th" at Leipsic, the French, abandoned in the midst of battle by the Saxon troops, were defeated. After another defeat "Oct. 30th" at Hanau, the French were driven across the Rhine; the pursuing army following them into France.

"In this year" (A. Dec. 627, and Winckl.), Hugh Davies publishing his "Welsh botanology;" a flora of Anglesey, with Welsh names of the plants.

"In this year" (Spreng.), C. S. Kunth publishing his Flor. berolin.

"In this year" (Spreng.), Mich. Fel. Dunal publishing his Hist. des Solanum.

"The same year" (Pauth. 3), under the editorship of the younger De Guignes, publication at Paris of the first Chinese dictionary for the use of Europeans.

"In this year" (J. F. Wats.), Whitelaw Ainslie at Madras publishing his "Materia medica of Hindoostan."

"In this year" (Pursh p. 735), publication of Fraser's Catalogue, including plants collected by Nuttall on the Missouri.

* *Mikania opifera* of Brazil. A climbing plant called there "erva da cobra," employed externally and internally in cases of bites of venomous serpents, and said to effect a cure by its powerful diuretic action — (Mart. trav. i. 327, and Lindl.).

Tristegis glutinosa of Southern Brazil. A grass called "capim gordura" that extended itself from "17° 40' S." into the province of Minas Geraes a few years before the visit of A. Saint-Hilaire, taking possession of the soil wherever an isolated forest in the midst of the plains "campos" is burned (ann. sc. nat. xxiv. 76, and A. Dec.).

At this time (Ph. ii. 609), G. Anderson engaged in examining and cultivating *willows*, and assisting Pursh in his arrangement of the N. American species, contributing in addition *Salix uvav-ursi*, *cordifolia*, *planifolia*. — Pursh at this time describing plants from various herbaria in London, from the Banksian herbarium *Arenaria Labradorica* ("thymifolia"), *Potentilla dissecta*, *Draba glabella*, *Tussilago sagittata*, *Chrysopsis falcata*, *C. gossypina*, *Aster graminifolius*, *Coreopsis aspera*, *Silphium elatum*, *S. reticulatum*, *Platanthera rotundifolia*, *P. obtusata*, *Salix vestita*. — He published his Flor. am. sept. "in 1814" (title-page).

"In this year" (Baldw. reliq. 114), Zaccheus Collins exploring peninsular New Jersey meeting with *Gymnadenia flav-a* (Nutt. gen.).

"1814, March 31st" (Maunder and Nicol.), entrance of the allied armies and sovereigns into Paris: Napoleon was exiled, and succeeded in France by Louis XVIII.; pope Pius VII. was restored to his dominions, as also Ferdinand VII. of Spain."

"In this year" (Spreng.), Georg Wahlenberg publishing his Flor. carpath.

"In this year" (Baldw. rel. 146, 68-71), Van Vleck at Salem in North Carolina, corresponding with Muhlenberg; and his companion Schweinitz with Leconte.

"1815, Jan. 8th" (Inman), attack by the British on New Orleans repelled by the Americans under Jackson. News soon arrived of the conclusion of peace on the preceding "Dec. 24th" at Ghent.

"March 1st" (Maunder), return of Napoleon from Elba to France. "June 18th, Sunday," Napoleon defeated at Waterloo; and soon afterwards, exiled to St. Helena.

"The same year" (Nicol.), Alexander now "king of Poland," thus uniting Poland with Russia.

"In this year" (Dallet 273), Second persecution of Christians in Corea.

"The same year" (Maunder), by the English, a missionary station first established in New Zealand.

In this year (Winckl.), Muhlenberg writing his Descript. gram., enumerating † *Cyperus erythrorhizos*, *Hemicarpha subsquarrosa*, *Cladium mariscoides*; *Carex decomposita*, *foenea*, *polymorpha*; *Vilfa vaginiflora*, *Eragrostis?* *uniflora*, *Muhlenbergia sobolifera*, *M. sylvatica*, *Eatonia Pennsylvanica*, *Poa brevifolia*, *P. flexuosa*, *Panicum microcarpon*, *P. verrucosum*, *Glyceria obtusa*, *Cyperus dentatus*. — He died "before the close of the year," leaving in his herbarium specimens of *Boehmeria aconitifolia*, *Alnus maritima*, *Polytaenia tenuifolia*. — His Descript. gram. was published "in 1817."

In the autumn (Baldw. rel. 184), Nuttall visiting Savannah, and continuing his explorations as far as Natchez and New Orleans (gen. p. 57), meeting with *Aristida tuberculosa*, *Danthonia sericea*.

"October" (title-page and pref.), William P. C. Barton publishing his Flor. Philadelph. prodr., a catalogue of plants "collected since the month of April, 1811."

"1816 A. D." (Inman), the territory of Indiana admitted into the Union as a State.

"June 10th" (Humb. cosm. iv. p. 145), *eclipse*, remarkable for the disappearance of the disk of the moon, which was not visible from London even with telescopes. (Probably the one witnessed by myself while a boy at Salem: the moon rose eclipsed, and the assembled company were looking for it in vain, when suddenly a bright star made its appearance several degrees above the horizon, the moon's disk emerging.)

"Aug. 27th" (Maunder), Algiers attacked by an English fleet under Exmouth; partially destroyed; and on Sept. 1st, all the Christian slaves released.

"In this year" (Spreng., and Winckl.), after his Flor. Lips. "in 1790," J. C. G. Baumgarten publishing his Stirp. Transilvan.

"In this year" (Winckl.), Auguste Saint-Hilaire visiting Brazil. — He remained there and in Paraguay "until 1822," and returning, published his Plant. usuelles Bras. "in 1824," and Flor. Bras. "in 1825-32."

* *Xanthium macrocarpum* of North America. Transported to Europe, and from this year naturalized in Languedoc — (Dec. fl. fr. suppl. 356); extending thence into Piedmont and Lombardy (Moretti, and Balb.), and observed by Ledebour rare in Southeastern Russia. Westward, observed by myself wild along the banks of the Ohio; by Berlandier in Mexico; and the *Xanthium* "four feet high" seen by Chapman in or near Florida, may be compared. *X. macrocarpum* according to A. Decandolle was observed by Dombey in Peru, and occurs also at Buenos-Ayres.

† *Juncus Muhlenbergii* of Northeast America. The "juncus no 15" of Muhlenberg gram., — named by Sprengel, is probably the "j. dichotomus" observed by Elliot in South Carolina, or "j. viviparus" observed by Conrad in peninsular New Jersey, as well as by myself frequent in the environs of Salem: according to A. Gray, it grows in "Canada," and from "Northern New England to Virginia, and southward," and perhaps in Wisconsin.

"Dec. 6th" (reliq. 174-86 and 343), after visiting the Bermudas in "May 1815," Baldwin "in a packet from St. Mary's" arriving at Fernandina, and proceeding farther South in Florida, meeting with *Stellaria prostrata* 192, *Xyris fimbriata* 210, — and on another excursion in the following year as far as New Smyrna.

"1817 A. D." (Inman), the territory of Mississippi divided, and its Western portion admitted into the Union as the State of Mississippi.

"In this year" (Spreng.), Joh. Jak. Römer and Jos. Aug. Schultes publishing their *Systema vegetabil.*

"In this year" (Spreng.), Karl Ad. Agardh publishing his *Synops. algar. scan.*

"The same year" (Hale ethnogr. Expl. Exp. p. 119), Kadu, a native of Ulea in the Carolines, found by Kotzebue upon Aur in the Radack coral-archipelago; having "been driven in a canoe with three" companions "nearly fifteen hundred miles due east." Chamisso* accompanying Kotzebue to Oahu late in this as well as in the preceding year (Mann).

At this time (Nutt. gen. 35, and B. r. 292), Isaac Cleaver in the environs of Philadelphia, meeting with *Cyperus Cleaveri*.

"In this year" (reliq. Baldw. 202-48), Stephen Elliot publishing the first four numbers of his sketch bot. S. Carol. and Georgia, enumerating in these and the succeeding numbers *Desmodium rigidum*, *Ludwigia sphaerocarpa*, *Schweinitzia odorata*, *Sabbatia brachiata*, *Aristida gracilis*, *Paspalum fluitans*, *Panicum amarum*, *Andropogon argenteus*, *Carex comosa*, *Nabalus Frazeri*, *Diplopappus obovatus*, *Boltonia diffusa*, *Utricularia bipartita*, *Eragrostis conferta*, *E. nitida*, *Tricuspis ambigua*, *Festuca parviflora*: — his Second and concluding volume "in 1824."

"To this year" (title-page), Nuttall's *Genera and Catalogue of the species of N. American plants* extends, including *Anychia capillacea*. — The work was published "in 1818."

"In this year" (Winckl.), Martius travelling in Brazil. — He remained "until 1820," and commenced publishing his *Palms* "in 1823," and *Flor. Brazil* "in 1829."

"1818 A. D." (Inman), the territory of Illinois admitted into the Union as the "twenty-second" State.

"In this year" (Pritzel), Conrad Loddiges publishing his *Botanical Cabinet*, coloured plates of plants — "two thousand" in all down to the Twentieth volume "in 1833."

"In this year" (Winckl.), Bonpland appointed professor at Paraguay: † — he proceeded there "in 1820."

"In this year" (Winckl.), Wallich at Calcutta publishing his *Rar. plant. Ind.* — His *Plant. asiat. rar.* was published in London "in 1830-2."

"Oct. 9th" (Maunder), evacuation of French territory determined on by the congress at Aix-la-Chapelle; and before the close of the year, the foreign troops withdrawn.

"1819, June 11th" (B. r. 252 to 321), after visiting Rio Janeiro and the La Plata "Jan. 29th to May 4th, 1818," St. Salvador "May 29th to June 5th," Margarita "23-5th," Baldwin at St. Louis on Long's Expedition, meeting with *Astragalus Mexicanus*. He died "Sept. 1st" at Franklin; — and a portion of his Botanical correspondence was published by Darlington "in 1843."

"August" (Humb. cosm. iv), the return of a comet after a short period of revolution, "1204 days" only, ascertained by Encke. — Five other interior comets, those of Biela, Faye, De Vico, Brorsen, and D'Arrest, were discovered "between 1826 and 1851."

"August" (Mann), Gaudichaud accompanying Freycinet to the Hawaiian Islands. — He made a second visit in "1836."

"Dec. 17th" (Maunder), after a victory over the Spaniards by Bolivar dictator of Venezuela, union with New Grenada under the name of Colombia.

"In this year" (biogr. mem.), Nuttall travelling from the Mississippi along the Arkansas river, to Salt Lake river and across to the confluence of the Kiameska and Red river, meeting with ‡ *Phacelia glabra*, *P. hirsuta*. — Returning, he reached New Orleans "Feb. 18th, 1820."

* *Escholtzia Californica* of North California. Discovered there by Chamisso. — Transported to Europe and already naturalized around Angers in "1850" (A. Dec.)

† *Osbeckia princeps* of the Cape Verd Islands. Observed by Bonpland pl. in Brazil; — but according to Naudin fl. Nigr. 130, brought there by imported Negroes (A. Dec.).

‡ *Coreopsis tinctoria* of the unwooded central and Western portion of North America. Discovered by Nuttall far up the Arkansas. — From seeds brought by him, cultivated, soon becoming a favourite garden flower; was observed by myself in 1838 in Brazil, at the window of a dwelling in the midst of the gorgeous vegetation investing the Organ Mountains; about the same time by Graham in Hindustan, "common in gardens" and found by Law "almost naturalized about Belgium."

In this year, William Oakes in college at Cambridge, devoted to Botany.*

At this time (Nutt. gen.), Zaccheus Collins continuing his explorations of peninsular New Jersey and the environs of Philadelphia.†

Before the Expedition of Ismael Pasha up the Nile, the king of Sennar held dominion over Nubia as low down as Wadi Halfa (Leps. eg. and sin. 176).

"In this year" (Spreng. comm. Diosc. iii. 84), P. della Cella publishing his Travels from Tripoli to the frontier of Egypt.

"In this year" (Winckl.), Dumont d'Urville visiting the Greek islands and the shores of the Black Sea. — He published his Enum. of observed plants "in 1822."

"1819-20" (. . .), Edwin James, having succeeded Baldwin, accompanying Long's Expedition from Missouri to the Rocky Mountains, meeting with *Quercus undulata* (Brendel), *Mimulus Jamesii*.

"1820, Sept. 2d" (Pauth. 469), death of Kia-king, "of the Tai-thsing" or Twenty-fourth dynasty. He was succeeded by Tao-kouang, three hundred and fifth Chinese emperor.

"The same year" (Inman), the district of Maine detached from the jurisdiction of Massachusetts and admitted into the Union as a State: the territories of Arkansas and Alabama also admitted into the Union as States.

"In this year" (Levchine kirgh. i. 6), mission of Meyendorf from Orenbourg to Boukhara, accompanied by the naturalists Pander and Eversmann. — A second excursion into the region around the Aral Sea was made by Eversmann in "1825."

"In this year" (Winckl.), J. G. Chr. Lehmann publishing his monogr. Spiræa, — completed "in 1835." He published his Cycad. "in 1834," and Plant. Preissianæ "in 1844-7."

"In this year" (Winckl.), Karl Joh. Hartmann publishing his Handbok i Skandnaviens Flora; — a Second edition "in 1832," Third "in 1838," and a later one "in 1849" (A. Dec. 706).

"1821 A. D." (Inman), the territory of Florida ceded by Spain to the United States. In the U. S. congress, the Missouri compromise: establishing beyond the Mississippi Lat. 36° 30' as the Northern boundary of slave labor, but admitting territory with a strip extending below this line, as the State of Missouri.

"March 7th" (Maunder), proclamation of Ypsilanti at Jassy in Moldavia, foreshadowing the rising of the Greeks against the Turkish government. "March 23d," outbreak at Calavrita in the Peloponnesus, and "eighty Turks made prisoners." A collision "on the same day" at Patras.

"In this year" (Burnouf introd. 1 to 4), by B. H. Hodgson, English resident at Kathmandu in Nepal, discovery of numerous Buddhist works written in the Sanscrit language; the source of the Buddhist sacred books existing in translations throughout Thibet Mongolia and China. — In "1824," he commenced sending copies of these Sanscrit writings to Calcutta, transmitted some to London in "1830," and some to Paris in "1837."

"In this year" (A. Dec. g. b. 1032), Bacle in Senegal. — He afterwards visited Montevideo and Buenos Ayres.

Schultesia stenophylla of Tropical America. By European colonists, carried across the Atlantic to Senegal, observed there by Bacle near Fel da Terra — (herb. Dec.). Westward, known to grow wild from Mexico and the West Indies to Guayana and Brazil (Mart., Griseb., and A. Dec.).

"In this year" (title-page), Descourtilz publishing his Flor. med. Antill., — continued in . . . volumes.

"In this year" (Pritzel), after his Muscor. propag. "in 1818," T. F. L. Nees von Esenbeck publishing his Plant. officinales.

"The same year" (title-page), Steudel publishing his Nomenclator Botanicus, an alphabetical list of the genera and species of plants.

At this time (Winckl.), commencing "in 1814," Elias Fr. Fries continuing his Novit. fl. suec.,‡

* *Hypericum Oakesii* of Northeast America. Upright, a foot or more high, resembling *H. Canadense*, but with ovate pointed five-nerved leaves: — mentioned to me by Oakes on my first acquaintance in 1823, and observed by myself from 45° on Mount Desert to 38° in the Delaware peninsula; by Nuttall, along the Arkansas, marked as undescribed but not named. (See *H. quinquenervium*).

† *Scirpus (Isolopus?) subterminalis*. An aquatic, its terete rush-like pointed stem rising obliquely out of the water, accompanied by tuft of slender floating fronds: — observed or received by Collins from Quaker-bridge in New Jersey; — described by Torrey; and observed by myself in Pleasant lake in Wenham, where of late years I have looked for it in vain: grows also according to A. Gray in "Michigan, and westward."

‡ *Medicago sylvestris* of . . . Distinguished by Fries — (A. Dec.): regarded as exotic in Britain, maintained only by the continual importation of seed for cultivation (Wats., and A. Dec.).

— completed “in 1823;” he published his Flor. scan. “in 1835,” and Summ. veg. scand. “in 1846,” and died in his “84th year, Feb. 8th, 1878” (Boston Journal for March 9th).

“The same year” (Buns. v. 7. 1), deciphering of hieroglyphic characters by Champollion.

“1822, Jan. 27th” (Maunder, and Brewster’s cycl.), the independence of Greece proclaimed by a congress assembled at Argos. “April 23d,” the Greek island of Scio visited by a Turkish fleet and all the inhabitants massacred.

“Oct. 12th” (Maunder), the prince-regent of Portugal “proclaimed constitutional emperor of Brazil:” thus separating the two countries. — The measure was afterwards formally recognized by the home government.

“In this year” (Winckl., and Lenz), Pollini publishing his flora of Verona.

“In this year” (A. Dec. 635), P. F. Bernard publishing a prospectus of his “Tableau de la vegetation du Jura.”

“1823 A. D.” (Maunder), entrance of Bolivar, now president of Colombia, into Peru; and with his assistance, the Spaniards repelled and the independence of the country established.

In this year, Benjamin D. Greene at Tewksbury in Massachusetts, near Billerica, meeting with* *Utricularia resupinata*.

“In this year” (Winckl.), after his Herbarium flor. martinicens. “in 1822,” Franz. Willh. Sieber publishing his travels in Crete.

“In this year” (Pritzel), after his Synops. gen. gram. “in 1820,” Trinius publishing his Species gram.: — the Third and last volume “in 1836.”

“The same year” (Kobell iv.), *pack-fong*, a metallic alloy long known in China and consisting of nickel, copper, and zinc, first manufactured in Europe: — and under the name of “German silver” sold extensively.

“In this year” (Winckl.), Ph. Fr. von Siebold visiting Japan; † — he remained “until 1830;” and returning, published his Flor. Japon. “in 1835–44.”

“1824, May” (Mason iii. 60), the first English war with Burmah. — Ending “Feb. 1826,” in the capture of Pagan and the cession of the provinces of Aracan and Tenasserim.

“In this year” (Winckl.), Viviani publishing his Flor. Lyb. spec.

“In this year” (title-page), Decandolle publishing the First volume of his Prodr. syst. veg.

“In this year” (A. Dec. p. 716), after his first edition in “1814,” Bigelow publishing a second edition of his Flor. Bostoniens., enumerating *Salicornia mucronata*, *Ceanothus ovalis*, *Myriophyllum tenellum*, *Spiranthes gracilis*.

In this year, after an excursion in 1823 with Wm. Oakes, diverting my attention from Entomology, my first botanical discovery.‡

In this year, Henry Little and Benjamin D. Greene visiting the White mountains, meeting with *Cinna pendula*, etc.; and on the alpine portion, § *Salix phylicifolia* (S. pumila of Nuttall), *Nabalus nanus*, *N. Bootii*.

* *Juncus militaris* of Northeast America. A large aquatic species growing upright in water a foot or more deep, distinguished as early as this year by B. D. Greene, observed at Tewksbury and communicated to Bigelow; — by myself, in lakes around Salem; but according to A. Gray, growing also from “Plymouth, Massachusetts” to the “pine barrens of New Jersey, and southward.”

† *Pinus Koraiensis* of Japan and Kamchatka. Observed by Siebold — (Endl. conif. 143, and A. Dec.).

‡ *Sparganium eurycarpum*. Observed by myself in the extensive marsh between Ipswich river and Wenham swamp: communicated to Nuttall, and notwithstanding its different foliage, did not attract his attention, its numerous male capitula small and caducous, falling almost as soon as gathered: — the species remained unnoticed until taken up by Engelmann, but according to A. Gray is “common northward and especially westward.”

Carex exilis. Previously observed in the marshes around Lake Wenham and its outlet, but I supposed it might prove a species common to Europe. Specimens were taken by Oakes to Dewey, who recognized it as a distinct species, and named it.

Hypericum ellipticum. Observed by myself in the marsh between Ipswich river and Wenham swamp, — and subsequently as far as 40° along the Atlantic: distinguished by Hooker, as found from Lake Huron to 54° on the Saskatchewan; and recently observed by myself near Quebec.

§ *Calamagrostis Pickeringii*. Observed on the alpine portion and distinguished by Little; specimens shown me, — and in the following year, observed not infrequent there by myself.

Aira triflora. Observed on the alpine portion, and the three florets pointed out to me by Little: — in the following year observed there by myself, often but not always three-flowered, but further examination is required to determine whether it is distinct from *A. flexuosa*.

In this year, Nuttall visiting the White mountains, meeting with "in Maine" *Subularia aquatica*,* *Panicum xanthophyllum*; and on the alpine portion of the mountains, *Potentilla frigida*, *Gnaphalium supinum*, a diminutive and very beautiful species of *Chara*, and *Salix repens*.

"Dec. 9th" (Markh., and Maund.), the Spaniards defeated at Ayachuco, and Upper Peru detached from Buenos Ayres and rendered independent. — Bolivar visiting the country in the following year, by request of the people drew up a constitution: and the new republic received the name of Bolivia.

"1825 A. D." (Nicol.), Alexander succeeded by Nicolas, now Russian emperor.

"In this year" (J. F. Wats.), David Don in London, publishing his "Prodromus Floræ Nepalensis."

"The same year" (Mann), after visiting Brazil and Chili, Macrae in the Hawaiian Islands.†

"In this year" (Winckl.), Belanger and Bory de Saint-Vincent sailing to the East Indies. — They returned "in 1829."

"In this year" (Winckl., and title-page), after his Hist. rei herb. "in 1807-8," Umbellif. "in 1813," Geschichte der Botanik "in 1817-8," Kurt Sprengel publishing a Sixteenth edition of the Systema Vegetab., — "in 1828," the fourth volume; "in 1829" his comm. Diosc.; and died "in 1833."

In this year, Oakes and myself visiting the White mountains, meeting with *Pyrola minor*, *Ribes rubrum*, *Glyceria elongata*, *Alnus crispa*, *Amelanchier oligocarpa*, *Carex scabrata*, *Milium glaucum* of Nuttall, *Platanthera obtusata*, and on the alpine portion *Calamagrostis stricta*?, *Holcus atropurpureus* (Aira of authors), *Viola palustris*, *Fucus filiformis*, *Saxifraga rivularis*, *Silene acaulis*, *Arnica mollis*, *Salix herbacea*, and *Veronica alpina*. — In the following year in October, after meeting with *Polygonum Carey*, I removed to Philadelphia.

"In this year" (Pritzel), Dumont d'Urville publishing his Flor. malouin. (Falkland Islands). — He commanded the Astrolabe in her voyage in the Pacific and towards the South Pole "in 1837-40."

"1826 A. D." (Winckl.), K. A. Meyer and Alexander von Bunge visiting the Altaian mountains and Soongaro-Kirghiz steppe.

"The same year" (Levchine kirgh. i. 6 note), Ledebour visiting the Kirghiz-Kazak country in the vicinity of Fort Zmieïnogorskaia: and Meyer at Lake Nor-Zaïcan, the source of the Irtisch.‡

"In this year" (Winckl.), A. Risso publishing his Hist. Nat. product. Nice.

"In this year" (Winckl.), Gussone publishing his Plant. rar. Samn., — "in 1827-8" Flor. Sic. prodrom., and "in 1842 5" Flor. Sic. synops.

Wahlenbergia nutabunda of Sardinia and Southern Italy. Observed by Gussone frequent in Calabria as far as the Western shore, but unknown on Sicily, — known to grow on Sardinia (A. Dec. 707).

"In this year" (Winckl.), Meisner publishing his Polygon. prodr.

"In this year" (Winckl.), Cassini publishing his Opuscul. Phytol., § — completed "in 1834."

"In this year" (Winckl.), Decandolle publishing the Second volume of his Prodr. syst. veg. — He died "in 1841."

Schrankia leptocarpa of Tropical America. Described by Decandolle prodr., and known to grow on Hayti and in North and South Brazil (Benth.). Probably by European colonists, carried to Guinea (fl. Nigr., and A. Dec.).

Lay and Collie on Beechey's voyage "1825-28" meeting with in Mexico *Quercus aristata*; in California *Q. Douglasii* and *Q. densiflora* (Brendel).

"In this year" (Mann), Gaudichaud re-visiting the Hawaiian Islands, now in the Bonite.

"1827, Aug. 16th" (Maunder), treaty between Britain, France, and Russia for closing the war in

* *Geum nudum*. Coarser and more leafy than *G. Virginianum*, with minute linear greenish petals: named by Nuttall, but not described; observed by him, — and myself on the flanks of the White mountains; afterwards by myself near Salem.

† *Ambrosia tenuifolia* of "South America." From transported specimens described by Sprengel — (A. Dec.). Observed by Godron for more than ten years at Cette, about a vine planted on ship's ballast.

‡ *Myrsine dependens* of the mountains of Caraccas and Peru. Described by Sprengel, — known to grow on the Silla de Caraccas and the mountains of Peru, but has not been found on intervening mountains (A. Dec.).

§ *Impatiens parviflora* of the Altaian mountains. Described by Ledebour. — Transported to Europe, became a weed in a garden at Geneva from "1831," extending into the vicinity, and reaching Dresden prior to "1851" (Burkh., and A. Dec.).

§ *Helichrysum fatidum* of Austral Africa. Transported to Europe, described by Cassini; — and for several years observed by Lejolis naturalized in the environs of Cherbourg (A. Dec.).

Greece, presented to the Turkish government. The intervention was rejected, and the Greeks having re-commenced hostilities, the Turko-Egyptian fleet entered the Bay of Navarino "Sept. 9th;" a British fleet arrived on the "13th," and on the "22d" was joined by a French, also by a Russian fleet. Hostilities continuing notwithstanding a promise of cessation, the Turko-Egyptian fleet was attacked and destroyed.

"In this year" (Dallet 314), Third persecution of Christians in Corea.

"In this year" (Winckl.), Gius. Hiacintho Moris, professor at Turin, publishing his *Stirp. Sard. elench.*,—the third fascic. "in 1829;" and his *Flora Sardoia* "in 1837-43."

"In this year" (Winckl.), Ed. Poeppig visiting South America.—He travelled in Chili, Peru, and on the Amazons "until 1832." and published his *Nov. gen. Plant.* "in 1835-45."

"In this year" (Pritzel), J. Velloso de Miranda publishing his *Flor. fluminens. icon.*

"1828 A. D." (Winckl.), Blume publishing portions of his *Flor. Javæ*.*

As early as this year (R. Brown prod. suppl. 1830, and Winckl. 380), Cunningham in Australia.†

"In this year" (Winckl.), after his *Flor. Gallica* "in 1806," Loiseleur-Deslongchamps publishing his *Flore generale de la France*.

Valerianella carinata of the West Mediterranean countries. Distinguished by Loiseleur,—and observed by Gussone syn. in grassy pasture-land in Sicily. In Britain has been found springing up spontaneously in some ten different counties (Wats. cyb. iii. 534, and A. Dec.).

"1829 A. D." (Maunder), the pacification of Greece finally agreed on: Greece to pay an annual tribute and enjoy "qualified independence" under Turkish sovereignty, but to be governed by a hereditary Christian prince of the family of neither of the allied powers. "July 23d," address of Capo d'Istrias, president of Greece; giving an account of his measures and the state of the country, before the fourth national assembly, called by him at Argos.

"The same year" (. . .), the steam-engine successfully applied to land-transportation; on a *rail-road* at Liverpool, England.

As early as this year (Brendel), Schiede and Deppe in Mexico, meeting with *Quercus calophylla*, *polymorpha*, *laurifolia*, and *germana* (publ. in Linnæa for 1830).

"In this year" (Pritzel), after his *Etudes cryptogam.* "in 1815," Lapylaie publishing his *Flor. Newf. and isles Saint-Pierre and Miclou*.

"In this year" (A. Gray), Dr. Robbins examining the plants growing around Uxbridge and in other portions of New England, meeting with *Astragalus Robbinsii*, *Potamogeton Robbinsii*, *Eleocharis Robbinsii*.

"1830, March" (am. sylv.), Nuttall journeying in the Southern States as far as West Florida.

"June 14th" (Maunder), landing of French troops before Algiers. The city captured "July 5th;"—and with the country around, held to the present day.

"July" (Kobell ii.), rising of a new volcanic island out of the sea Southwest of Sicily. As in other instances, the new island after a while settled down and disappeared.

"In this year" (Winckl.), publication by Delile of the plants collected by Leon de Laborde in Arabia Petraea.

"July 30th" (Maunder), after three days fighting in the streets of Paris, Charles X. compelled to abdicate. He was succeeded by Louis Philippe, of the Orleans branch of the Bourbon family.

"In this year" (Winckl.), Lindley publishing his *Orchidac.*—the Seventh volume "in 1840."

Ophrys atrata of the East Mediterranean countries. From transported specimens, described by Lindley:—observed by Chaubard in the Peloponnesus.

"In this year" (Humb. cosm. v.), journey of Fuss from Lake Baikal to Pekin; where he established a magnetic and meteorological observatory, in an old monastery that from the reign of Peter the Great had been inhabited from time to time by monks of the Greek church.—Observations were continued "ten years" by Kovanko.

"In this year" (title-page), Ernst H. F. Meyer publishing his *Plant. Labrador*.

"1831 A. D." (Maunder), Capo d'Istria, president of Greece, assassinated.

* *Lobelia succulentu* of Java. Described by Blume, and seen by him indigenous in Java.—Farther North, enumerated by Mason v. 433 and 785 as "exotic" in Burmah, and called by the English *Nilgherry grass*: but in Hindustan, according to Wight, "a small cespitose species much cultivated" in vases.

† *Castanospermum Australe* of Subtropical Eastern Australia. An elegant pinnate-leaved Leguminous tree, a hundred feet high, its seeds edible either crude or roasted:—observed by Cunningham at Moreton Bay (Hook. bot. misc. i. pl. 51). "About thirty years ago" according to Drury was introduced into Hindustan, its wood is used for barrel staves, and "there are several large trees in the Lalbagh at Bangalore" (Cleghorn).

"In this year" (Pritzel), George Don publishing his *Hist. plant. or Gardener's Dictionary*: — the Fourth and last volume "in 1838."

"In this year" (Humb. cosm. v.), Faraday's induction-currents. "The great discovery of the *development of light* by magnets."

"In this year" (Winckl.), Bunge publishing the plants observed in Northern China.

"In this year" (Mann), Meyen accompanying Wendt to the Hawaiian Islands — After his death, descriptions of plants observed by him were published in *Act. Acad. Caes.* in "1843."

"1832 A. D." (Gliddon), first voyage of a British steamer on the Red Sea: initiating *ocean steam-navigation*. A change in international relations — tending to restore Egypt to her ancient position as the World's thoroughfare; the natural centre of the routes of intercourse by land and sea.

About this time also (Clot-Bey), by Ibrahim Pacha, a *botanic garden* under European superintendence established on Rhoda Islet near Cairo: in effect, extending to Egypt the European system of procuring and introducing newly discovered plants. The history of plants known to the Egyptians properly closes here: — the botanic garden already at the time of my visit, containing many species not mentioned in these pages.

"In this year" (Winckl.), publication of the *Plant. rar.* collected by Bertero in Chili; — and "in 1835," of those found on Juan Fernandez.

"Aug. 30th" (Maunder), Otho, a younger son of the king of Bavaria, having signified his acceptance, proclaimed in Nauplia king of Greece

"In this year" (biogr. mem. Nutt.), N. Wyeth returning from his expedition to and beyond the Rocky mountains, and his plants placed in the hands of Nuttall for publication.

"1833 A. D." (Maunder), an English "sub-governor" sent from Australia to reside in New Zealand: — this continued until "1840," when New Zealand was "constituted a colony dependent on" Australia, a governor appointed, also a commission "to inquire into the validity of all claims to land" purchased by adventurers from the natives.

"The same year" (. . .), arrival at Calcutta of a ship laden with ice, sent by Frederic Tudor from Boston in New England. The commencement of the *ice trade* of traffic by sea in ice.

"In this year" (Winckl.), F. E. L. von Fischer and C. A. Meyer publishing *Pars prodr. flor. ross.**

"The same year" (Mann), Douglas in Northwest America, and in "the 1st week" arriving at the Hawaiian Islands, — where he met a violent death on the following "12th of May."

"In this year" (Pritzel), H. B. Croom and H. Loomis publishing their *Catalogue* of plants observed in the neighbourhood of Newbern. — Removing to Florida, Croom met with . . . : and after his death, a Second edition of the *Catalogue* was published by Torrey "in 1837."

Collomia grandiflora of Northwest America. Discovered there by Douglas. — Transported to Europe, escaped from cultivation several years prior to 1850 near Erfurt, as well as near Schleiden on the Roer (A. Dec.).

Navarretia heterophylla of California. An annual, transported to Europe, described by Bentham, and observed by A. Decandolle g. b. 798 for ten or fifteen years a weed in the botanic garden at Geneva, but had not extended beyond its walls.

"1834 A. D. = 31st year of the Seventy-fifth Chinese cycle" (Pauth. 27 and 488), Tao-kouang reigning.

One hundred and eighty-fourth generation. May 1st, 1834, mostly beyond youth: the Jewish writer Steinschneider: the Greek writer A. G. Paspatis: the Italian writer Ant. Targioni: the French writers, S. Munk, the archæologist Mariette: the German writers, Carolus Mueller, F. Von Kobell, Bernays, Zunz, Boeckh: the English writers, George Williams, W. S. W. Vaux, Henry Fynes Clinton, John F. W. Herschel the astronomer, Martin Joseph Routh, Edward Robinson, Talvi, Thomas Wright, J. Gardner, Wilkinson, Samuel Birch, Perring, R. S. Poole: the Slavonic writers, Alexander Pushkin, Ivan Krylof, Sreznefski, Grigoryef, Khanikof, and Kasembeg: the botanists, Moritzi, Schouw, C. S. Rafinesque Schmaltz: the painter Horace Vernet b. 1789.

"In this year" (Humb. cosm. v., and Winckl.), after publishing his researches in the Crimea and Caucasus "in 1815," Parrot visiting mount Ararat, and the summit for the first time reached.

* *Amsinckia intermedia* of Chili. Annual and Boragineous, described by Fischer and Meyer, — and known to grow wild in Chili (A. Dec.). About 1841, transported apparently with seeds of Madia, made its appearance along a canal leading into the Garonne, continued there until "1847," and transferred into a garden at Cepet has become a weed (Lagrèze-Fossat).

"In this year" (Winckl.), Friedrich Link publishing his *Symbol. Flor. Græc.* (Linnaea ix.).

"Sept. 3d" (biogr. mem., and am. sylv.), after leaving Independence on the Missouri "Apr. 28th," Nuttall and Townsend coming in sight of the Columbia, and at the "close of September" reaching Fort Vancouver.

"In this year" (Winckl.), Charles C. Babington publishing his *Flor. Bathon.*; — "in 1839," Primit. *Flor. Sarn.*; "in 1841," veg. Hebrid.

"1835, Jan. 5th" (biogr. mem. and am. sylv.), Nuttall from Oregon arriving at Oahu, one of the Hawaiian Islands. Leaving Townsend, he proceeded to California, and reached Monterey in "March," continued his researches as far as Santa Barbara in "about 34," — and returned by sea, arriving at Boston in the "beginning of October, 1835." He died "Sept. 10th, 1859."

At this time (. . .) Pitcher examining the plants growing around Lake Huron and on the Arkansas, meeting with *Cirsium Pitcheri*.

"In this year" (Pritzel), E. H. F. Meyer publishing *Botanical observations of J. F. Drège*, who had spent "eight years" in Austral Africa. — Drège published his *Catalogue of the dried plants* "in 1837-40."

"1836, Jan. 12th, towards midnight" (Dallet ii. 92), Pierre-Philibert Maubant passing the Chinese custom-house at Pien-men. Continuing Eastward, he succeeded in entering Corea. The pioneer of the French missionaries.

In this year (A. Dec. g. b. 761), Bojer at the Mauritius Islands writing his *Hort. Mauriti.*, — published in "1837."

The following plants enumerated by Bojer as growing on the lofty mountains of the Comoro Islands: *Waltheria debilis*, biennial; *Plectranthus ternatus*, perennial.

And on the lofty mountains of the Mauritius Islands: *Dombeya ferruginea*, a shrub; *D. punctata*, also a shrub; *Trochetia Candolleana*, a shrub; *Toddalia angustifolia*, suffruticose; *Distephanius populifolius*, a Conyzoid shrub; *Psiadia linearifolia*; *Monarrhenus rufescens*, a shrub; *Cylindrocline Commersonii*, a shrub; *Gnaphalium cæspitosum*, *G. multicaule*, and *G. yuccæfolium*, all suffruticose; *G. arnicoides*, annual, growing also on Madagascar; *Senecio cernuus*, and *S. cacalioides*? annuals; *S. penicillatus*, suffruticose; *S. pollicaris*, perennial; *Campanula ensifolia*, perennial; *Andromeda salicifolia*, and *A. buxifolia*, shrubs; *Salaxis arborescens*, and *S. abietina*, shrubs; *S. montana*, suffruticose; *Rochelia Borbonica*, annual; *Nuxia verticillata*, a shrub; *Plectranthus Mauritianus*, perennial; *Fusticia (Hypoestis) serpens*, perennial; *Sapium obtusifolium*, a bush; *Monimia ovalifolia*, a shrub; *Boehmeria urticæfolia*, a shrub; *Bulbophyllum pusillum*, an epidendric Orchideous plant; *hypoxis angustifolia*, perennial; *Piper portulacoides*, perennial, epidendric.

"In this year" (Brendl.), Hartweg arriving in Mexico, meeting with *Quercus barbinervis*, *glabrescens*, *Grahami*, *Skinneri*, *Sonomensis*, *dysochylla*, *Benthani*, *Tlapahuensis*, *laeta* (publ. by Bentham). — He remained until "1840."

"At the same time" (Brendel), Galeotti and Ghiesbreght in Mexico, meeting with *Quercus lanigera*, *lutescens*, *Ghiesbreghtii*, *nitens*, *insignis*, *rugulosa*, *glaucoidea*, *callosa* (publ. bull. acad. Brux. for 1843).

In this year (. . .), Short in Kentucky,* meeting with *Brachychaeta cordata*, *Vesicaria Shortii*, *Ludwigia polycarpa*, *Thaspium pinnatifidum*.

"In this year" (Pritzel), after his *Synops. Asterum* "in 1818," *Agrostolog. brasil.* "in 1829," *Gen. and sp. Asterearum* "in 1832," C. G. Nees von Esenbeck publishing his *Systema Laurinarum*.

"In this year" (Pritzel), after his *Gram. sicul.* "in 1818," *Symbol. botan.* "in 1832-3," Presl publishing his *Prodr. monog. Lobeliac.* : — his *Suppl. pteridograph.* "in 1845."

"1837, in the beginning of the year" (Pauth. 472), publication in European gazettes of the proclamation of Tao-kouang: Forbidding the preaching of Christianity in China. The concluding event in Pauthier's historical description of China: — though the work itself was issued two years later at Paris.

"July" (Jap. mann. 271), sailing from Macao of Dr. Parker and Rev. Charles Gutzlaff in a missionary vessel, carrying home "some shipwrecked Japanese:" but approaching forbidden ports, were fired upon, and returned to Macao.

"The same year" (Inman), the territory of Michigan admitted into the Union as the "twenty-sixth" State.†

* *Zygadenus leimanthoides* of the alluvial border of Northeast America. In or about this year, specimens brought "from New Jersey" found by Durand in the Philadelphia market and shown me: — afterwards, the plant was found by Knieskern growing in New Jersey, and was received by A. Gray from "Virginia, and southward."

† *Quercus corrugata* of Guatemala. Transported to Europe is described by Hooker icon. — (Brendel).

"In this year" (A. Dec. p. 716), after his first edition in "1826," Darlington publishing a second edition of his Flor. W. Chest., enumerating *Euphorbia Darlingtonii*.

In this year, Engelmann in Northeast America, meeting with *Isocetes riparia*.

"The same year" (Hale ethnogr. Expl. Exp. p. 190), at Banabe or Ascension Island, "a man who had been drifted thither in a canoe" from "Maraki" (one of the Tarawan coral-islands) informed Maigret, that "his people were accustomed to make a sweet drink called takarave, unlike any thing to be found at Ascension." This, according to Hale, "is a beverage made of the sweet juice drawn from the spathe of the *cocoa-nut* tree."

"In this year" (title-page), Blanco publishing at Manila his Flor. Filipin.

"In this year" (Winckl.), Edmond Boissier travelling in Southern Spain. — He published his Plant. Nov. "in 1838," and Voyage Botan. "in 1839-45."

"1838, June 20th" (second edit. pref. and 354), end of the chronicle of N. Harris Nicolas.

"In this year" (Pritzel), Ramon de la Sagra publishing the Botanical part of his Hist. cub. : — it was left incomplete by A. Richard "in 1842."

"In this year" (title-page and pref.), Lindley publishing his Flor. Med.

"1839 A. D." (Clot-Bey and others), Mahmood II. succeeded by Abd-el-Medjid, thirty-second Turkish sultan.

"The same year" (. . .), the art of *photography* discovered by Daguerre. — Specimens of the art, "daguerrotypes," first seen by myself on the arrival of the Vincennes at Singapore.

"In this year" (Dallet ii. 131), Fourth persecution of Christians in Corea.

"In this year" (Winckl.), A. H. R. Grisebach publishing his monogr. Gentian., and visiting Roumelia and Bithynia as far as Broussa. — He published his Spic. flor. Rumel. "in 1843-5."

Limnanthemum Forbesianum of Mozambique. Received by Grisebach from Mozambique, and from Ceylon — (A. Dec.).

"In this year" (Pref.), Graham publishing his Plants of Bombay. He died "May 28th," and from the "two hundredth page" the publication was completed by Nimmo.

"1840 A. D." (Kobell iv.), the art of *electrotyping* discovered by Jacobi.

"In this year" (A. Dec. 800, and Winckl.), after residing at Montpellier "in 1827," Moquin-Tandon publishing his monogr. Chenopod.

"1841 A. D." (Brendel in Am. Nat. 1870), Liebmann arriving in Mexico, meeting with *Quercus Oaxacana*. — He remained until "1843."

In this year (see A. Gray man. 2d ed. 176), Sullivant at Columbus on the Ohio, meeting with *Asclepias Sullivanti*, *Eleocharis compressa*, *Carex Sullivanti*, *Arabis patens*.

"1842 A. D." (Dallet ii. 256), the Opium war carried on by the English against China. The city of Nang-king was captured, and by the treaty of "Aug. 29th" the isle of Hong-kong ceded. The Chinese for the first time undergoing humiliation before Europeans.

"In this year" (Pritzel), Loddiges and sons publishing the Orchideæ in their collection, "1654 species."

"December" (Bonom. Nin. i. 2), excavations on the site of Nineveh commenced by Botta; appointed by the French government consular agent at Mosul.*

"1843, May 19th," and "about the same time" that the site of Lake Moeris was discovered by Linant, Lepsius (eg. and sin. p. 14) encamped among the ruins of the Labyrinth. Continuing up the Nile, Lepsius 268 ascertained, that "a great part of the population of Thebes still" remains *Coptic*. Ascending beyond Philæ, he describes Korusco as "an Arabian place in the centre of the land of Nubians," and inhabited by "Ababde" (judging apparently by the language, the *Ababde* being an Ethiopian tribe speaking the Arabic language), p. 127. The *Nubian language* is described by him as having "no accordance" with the Egyptian, nor with Semitic languages, in the "grammatical forms" and "radical words;" having terms for "God, spirit, slave," but the numbers above twenty are borrowed from the Arabic; as also the terms for "time, year, month, day, hour, servant, friend, enemy, temple, to pray, believe, read, and every thing connected with house-building and navigation," p. 128. — In Upper Nubia, Taiba was found inhabited only by Fukara, a kind of priest, who read, write, and the chief is believed in like a prophet; they call themselves "Arakin," and are probably of "Arab race," p. 187. The *Nuba languages* (spoken by a Negro tribe) are described as "partly related to the Berber," p. 209. But the *Kongara language* of Dar Fur was "quite different from the Nubian," and presented "strong analogy with South African languages" (belongs therefore to the Negro class of languages), p. 234. Returning down the Nile and proceeding Eastward to Sinai and Palestine, Lepsius found "the pascha of Jerusalem at war with Hebron," p. 334: the *Samaritans*

* *Euphorbia Bojori* of Madagascar. An ornamental scarlet-flowered species, transported to Europe, and described by Hooker. — By European colonists also, introduced into the gardens of Burmah, where it has become frequent (Mason v. 421 and 762).

reduced to "about one hundred and fifty" persons; who hold "no communication with Jews, Christians, or Mahommedans," and continue to "annually offer up a sheep on Mount Garazim:" the "ornamental part" of the ruins at Balbeck, is pronounced by him "heavy, overloaded, and some in a very barbarous taste," p. 346.

"Sept. 15th" (Mauder), bloodless uprising in Greece: effecting the removal of foreigners from high official station.

"In this year" (A. Dec. g. plant. 672, and Winckl.), Babington publishing his Manual of British botany.*

"1844 A. D." (Dallet ii. 266), André Kim from China travelling across Mandshuria to the Northern frontier of Corea. He ascertained that the Mandshus extend very little beyond "Lat. 46°," and are bounded on the North by two small States of Ou-kin, and Tu-pi-latse or Fish-skin Tartars; on the West, by the river Soungari and the Stone barrier.

"In this year" (title-page and pref.), W. Smith publishing his Dict. Greek and Roman Biogr., — completed in "1849."

"In this year" (Winckl.), Louis Pfeiffer publishing on the plants of Hesse in Germany; † — "in 1847," his Flor. niederhess.

"1845 A. D." (Inman), by act of Congress, Texas annexed to the Union as a State: the territories of Florida and Iowa, also admitted as States. — The act was not accepted by the people of Iowa, until "1849."

"In this year" (Winckl.), C. L. Gay publishing his Hist. fisic. Chile.

"In this year" (Pritzel), after his Lasiopetal. monogr. "in 1821," and other memoirs down to "1842," Jacques Gay publishing his Holost. monogr.

"In this year" (Winckl.), F. I. Ruprecht publishing his Flores Samojed.

"Dec. 8th" (Humb. cosm. iv.), after an interval of "thirty-eight" years without planetary discoveries, a fifth asteroid found by Hencke, and named Astrea.

"1846 A. D." (Inman), through the action of the U. S. government, our first aggressive foreign war. Against Mexico; the collision between military forces taking place "May 7th" at Palo Alto, East of the Rio Grande.

"Sept. 23d" (Humb. cosm. iv.), the planet Neptune discovered by Galle, whose attention had been directed to its vicinity by the calculations of Leverrier. — A satellite was discovered by Lassell as early as "Aug. 6th, 1847."

"Sept. 30th," in Boston, W. T. G. Morton dentist, having a refractory patient, called on Charles T. Jackson physician and chemist, and was advised to try ether — (Atlant. monthly, 1868). The incident led to the demonstration, that inhaling ether induces insensibility to pain during surgical operations. Verified shortly afterwards at the Massachusetts hospital.

"In this year" (Winckl.), after his Outlines geogr. distr. Brit. plants, H. C. Watson publishing his Cybele Britan.

"1848 A. D." (Inman), the territory of Wisconsin admitted into the Union as a State.

"In this year" (dedicat.), A. Gray publishing his flor. Northern U. States, enumerating *Nasturtium lacustre*.

"1849 A. D." (Troyon 85), by Boucher de Perthes, publication of his discovery near Abbeville in France of ancient relics; some of them belonging to the Stone period.

"1850, Aug. 26th" (Inman), passage by the U. S. congress of a fugitive slave law: and "Sept. 7th," California admitted into the Union as a State.

"1851 A. D." (title-page), Rev. Francis Mason at Tavoy publishing his flor. Burman.

"In this year" (Mann), Remy visiting the Hawaiian Islands. — He remained until "1855."

"In this year" (Winckl.), after his revis. Anemon. "in 1842," Pritzel publishing his Thesaurus lit. botan.

"1852, Feb. 12th" (Mason iii. 61). Second English war with Burmah. — Ending "June 20th, 1853" in the deposition of the reigning monarch; the East India Company virtually acquiring control of the country; though a native king remains on the throne.

"In the winter of 1853 to 1854" (Troyon pref.), on the margin of Lake Zurich, discovery by Ferd. Keller of the remains of a lacustrine village belonging to prehistoric times, to the Stone period.

* *Cuscuta trifolii* of . . . Observed in Britain and distinguished by Babington; — but according to Bromfield iii. 563 seems adventive, multiplying at times and becoming scarce, as though liable to disappear (A. Dec.).

† *Cuscuta Hassiaca* of Eastern Europe. A species of *dodder* observed in Hesse and distinguished by Pfeiffer. — In Britain, introduced among plants raised for cattle-feed, but continues confined to cultivated or artificial meads (A. Dec.).

— The beginning of researches which have led to similar discoveries at the bottom of most of the Swiss lakes.

"1854, Sept. 3d" (Sieb. elucid. Vries p. 69), during the Crimean war, Urup supposed to be a Russian island, taken possession of by two French frigates. The Russian ambassador Putiatine happening to be in Japan, where he had proposed the cession of Urup to Russia, the consent of the Japanese government was now obtained, — and in accordance therewith, a treaty was soon framed (see 1856).

Hardly later than this year (A. Dec. g. b. 1009), Lecoq and Lamotte publishing their Cat. plant. centr.*

"In this year" (title-page), Winckler publishing his Botanical writers.

1854-5 (Inman). act of Congress for organizing the territories of Kansas and Nebraska.

"1855 A. D." (title-page and pref.), Alphonse Decandolle publishing his Geogr. Bot.

"1856 A. D." (Sieb. p. 70, and journ. St. Petersburg. 28th Apr. 1857), by treaty, the boundary between Russia and Japan to be in future between Yeterop and Urup: Urup with the Northern Kurils to belong to Russia, and the large island of Krafu (Saghalien) to be neutral ground.

"July and September" (Humb. cosm. v.), the mountain chain of the Kuen-lun, stretching East and West, reached and traversed by the brothers Hermann and Robert Schlagintweit; journeying from Ladak over the Karakorum pass "18,304 feet" in elevation.

"In this year" (Troyon pref.), publication by Wilde of his Researches, "commenced in 1836," on the crannoges or lake-dwellings of the ancient Irish.

"1859, August" (Boston Transcript for July 28th, 1871), oil having been remarked for many years floating in small patches down Oil Creek, a tributary of the Alleghany in Pennsylvania, boring undertaken by one of the inhabitants, Drake, residing there, and at the depth of "seven hundred feet" the source of supply reached. The commencement of traffic in *petroleum*.

"In this year" (title-page), A. Gray publishing a revised edition of his Flor. North. U. States.

"1860, Oct. 13th" (Dallet ii. 463), Peking captured by the combined forces of the English and French. A panic prevailed in consequence throughout Corea, but gradually subsided, — and after about a year the persecutions against Christians recommenced.

"November" (Dallet hist. Cor. p. ii.), territory in Mandshuria, extending along the Pacific as far South as the Corean frontier and the mouth of the Tou-man-kang in 41° 50', ceded by China to Russia.

"In this year" (title-page, and pref.), Chapman publishing his Flor. South. U. States.

"1861, March 20th, a quarter to eight p.m." (letter in Boston Journal of May 6th), severe *earthquake* felt throughout Chili; and East of the Andes, in "about six seconds" levelling the city of Mendoza containing "more than twelve thousand" inhabitants, leaving "not a house" standing.

"April 12th" (Bemis in Boston Advertiser of May 3d, 1865). Fort Sumter in Charleston harbour assailed by the populace; and on the "14th," captured.

"April 15th," letter from Lyons, British minister at Washington, announcing the intention of President Lincoln "to adopt coercive measures against the South." The letter was "received in London, April 30th" (parliam. blue b. i. p. 19, and Bemis).

Aroused from bed at "two a.m." and informed of the call for troops, Capt. Dyke of Stoneham reported at "half past nine" at Boston, with his company full and "fully equipped." At "half past five" in the evening, the Sixth regiment left Boston: and April 19th, not "forty-eight" hours from his midnight summons, Capt. Dyke was lying wounded in Baltimore, more than four hundred miles from home (Boston Journal of April 24th).

"April 19th," proclamation by President Lincoln, announcing the intention of blockading the ports of seven States, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas.

"April 27th," a second proclamation; including with the above North Carolina and Virginia, they having in the interval joined the insurrection. The blockade was actually established "April 30th" in the Chesapeake; off Charleston, "May 13th;" off Mobile, "May 27th;" and off the mouths of the Mississippi, "May 28th" (Bemis).

"April 20th" (Boston Traveller of May 8th, and other newspapers), *balloon-voyage* of T. S. C. Lowe from Cincinnati to Pea Ridge district in South Carolina, more than a thousand miles, in "nine hours."

"April 22d," letter from minister Lyons at Washington, communicating the blockade proclamation. The letter was received in London "May 10th" (parliam. blue b. i. 23, London Times of March 22d, 1865, and Bemis).

* *Arenaria ligericina* of France. Observed by Lecoq and Lamotte 104 on the mountains of Central France — (A. Dec.; see A. ciliata).

"May 6th" (Hansard, and Bemis), by the British government, announcement in parliament of the intention of recognizing the slaveholding insurgents as a belligerent power. "May 13th," the proclamation to that effect issued, declaring that "hostilities have unhappily commenced," and enjoining neutrality. "In the evening," after the issuing of the proclamation, minister Adams of the new administration at Washington landed in England (Bemis). Representations were made through the British minister at Paris, that the insurgents should be "invested with all the rights and prerogatives of a belligerent;" and at the end of "a month," the French proclamation was issued (parliam. blue b. iii. p. 1, and Bemis).

In this year's Report on the Harvard Library, John L. Sibley states: "The demand for materials to be converted into *paper* has increased enormously within a few years. Junk dealers and tinmen penetrate every part of New England in search of rags, and latterly they have commenced purchasing books and pamphlets, for this purpose. Ninety-eight tons of books and pamphlets were ground up in only one of the paper mills in Massachusetts in one year."

"June 25th" (Boston newspaper), Abd-el-Medjid succeeded by Abd-el Aziz Khan, thirty-third Turkish sultan.

"July 13th" (opin. judges Nelson and others, Bemis), hostilities at length resolved upon by the American government, and civil war recognized by act of Congress.

"1862, March 10th" (Boston Journal of March 15th), *revolution in naval warfare* initiated by a combat between iron-clads: the ram Merrimac defeated on the Lower Chesapeake by the Monitor; a revolving sea-turret invented and constructed by Ericsson.

"1863, Jan. 1st," proclamation by president Lincoln, Freeing the slaves in the revolted States.

A New Englander according to governor Andrew (Boston Journal of Jan. 9th) is "not unfrequently an expert in divers callings. In the winter he cuts ice" for "Calcutta, and he goes fishing in the summer on the Banks of Newfoundland. He carries on his father's homestead in the growing season, and makes boots for Boston market in the intervals of farming." He "goes to college for his own education, and teaches school himself in the college vacation." He "scours the Pacific in a New Bedford whaler while he is young and fond of adventure, and settles down at last the keeper of a country store:" manufactures "plows and reapers in Massachusetts, and puts his earnings into railroads in Michigan, Iowa, and Wisconsin."

About the beginning of this year (Lond. Times quoted in Boston Journ. Feb. 10th), Egypt, after furnishing troops in Eastern wars for more than five thousand years, first sending soldiers to America. The French transport *Seine*, having landed "a body of troops for Cochin China," received on board through the connivance of the viceroy "four or five hundred" of his Negro soldiers to be employed in the war in Mexico. — Four years later, arrival home "of the Egyptian battalion which has been fighting" in Mexico, "reduced in numbers from seven hundred to three hundred and fifty, all the men remaining decorated with "French and Mexican orders" (Bost. Transcr. July 12th, 1867).

Before the close of the year (Dicey in Nineteenth Cent. mag. for 1877), Said Pasha succeeded by Ismail Pasha as viceroy of Egypt. — He continues ruling in the present year 1878, and is called "the Khedive."

"The same year" (Boston Journal of May 4th), in return for a patent medicine "largely sold in Egypt," arrival in Boston of a cargo of rags; consisting in great part of mummy-rags, now used "for paper stock."

"In this year" (title-page), Prior publishing his Popular names of British plants.

"1864, May 5th" (Grant's report), Bermuda Hundred and City Point, at the junction of the Appomattox and James rivers, occupied by an army under Gen. B. F. Butler.

The same year (journ. Bost. soc. nat. hist.), *emery* discovered in America by C. T. Jackson; in an extensive vein or bed, at Chester in Western Massachusetts.

"1865, Feb. 1st" (Grant's report), Gen. W. T. Sherman with an army, having traversed Georgia from Atlanta to Savannah, now turned Northeast, continuing by land through the Carolinas.

"April 9th" (Grant's report), surrender to Gen. U. S. Grant of the insurgent army driven from Richmond: followed by the surrender of the insurgent forces everywhere, virtually closing the war.

April 14th, Friday, about 10 p.m. (Stanton offic. account), assassination of president Lincoln.

"1866, Jan. 30th at 3½ p.m.," full moon at New York; the succeeding full moon to take place "March 1st about 7 a.m.," leaving the intervening month of February without a full moon (N. Y. Evening Post of Feb. 24th).

"In this year" (Dallet hist. Cor. p. lxii to cv), severe persecution of Christians in Corea, Pourthié and other French missionaries put to death; and their manuscript writings, including a Corean-Chinese-Latin dictionary by Pourthié, a Chinese-Corean-French dictionary by Daveluy, and a Latin-Corean dictionary by Petitnicolas, seized and burned — A Corean grammar and dictionary, compiled subsequently by Ridet assisted by native Christians, was ready for publication in 1874.

"Before the close of the year" (Dallet p. cxcii), French intervention to punish the murder and

prevent a repetition, but the Expedition failed, the cause was ruined, and thousands of Christians were put to death.

"1867, Sept. 3d" (Bost. Advert. for Sept.), at Carmathen, opening of "the Eisteddfod or national festival of Wales; a procession marching to a field where a Druidical circle is formed, a huge stone in the centre. A proclamation in Welsh is then made," announcing to the assembled bards that "judgment will be pronounced upon all works of genius submitted for adjudication."

"1869, Nov. 16th" (letter from Port Said in Bost. Adv.), opening of the Suez canal. For the passage of large ships.

1870, Sept. 20th (Atlant. telegr. to Boston gazettes), the Prussian army having arrived before Paris, the Italian forces of king Victor Emmanuel enter Rome and the political or temporal power of the Papacy brought to an end.

† "1872, Nov. 27th" (Bost. Journ. for Feb. 1st, 1873), Capt. O. Owen of the British barque Samuel, in Lat. $20^{\circ} 57' 5''$ Long. $1^{\circ} 14' W.$, remarked "innumerable *meteors* of various magnitude and brilliancy shooting with great rapidity to the South-East and South-Sou'-West; three or four would start nearly together from the same spot, making their first appearance generally in the zenith and after leaving a tail of about 15° or 20° in length would disappear. Their motion was so swift that the exact point or constellation in the heavens where they first appeared and where they disappeared could not be ascertained with precision. An attempt was made to count them, but as they appeared in different quarters at the same moment, this was found impossible, but by a rough estimate there were from seventy to eighty per minute: continued from a little after 8 p.m. until midnight. Few were seen after that hour."

- Zethus, colleague of Amphion in ruling Boeotian Thebes, 154.
- Zeuxis of Heraclea, Greek painter, 299.
- Zeyathura, king of Toungoo in Burmah, 844.
- Zeyher, botanist, 1052.
- Zeyneddin, Memluk sultan of Egypt, 787.
- Zibeon, 106.
- Zillah, wife of Lamech, 3.
- Zimri, king of Israel, 192.
- Zin-qua, twenty-ninth daïro of Japan, 576, 580.
- Zinn, Io. Gottfr., German botanist, 1023, 1025.
- Zio-meï, thirty-fifth daïro of Japan, 600, 603.
- Zohair, Arab poet, 597.
- Zoilus, Greek grammarian, 325.
- Zonaras, Joannes, Greek historian, 684.
- Zopyrus, Greek poet, 239.
- Zopyrus, Greek medical writer, 434.
- Zoroaster, king of Bactria, 84, 95.
- Zoroaster of Proconnesus, or Zaravast, prophet of the Persians, 252.
- Zosimus, thirty-ninth bishop of Rome, 562, 564.
- Zosimus Panopolitanus, 566.
- Zoskales, or Zahekale, Abyssinian king, 503, 517.
- Zuccagni, Attil., botanist, 1052.
- Zuheyr, Arab poet, 571.
- Zunz, German hebraist, 1066.
- Zwinger, Theod., botanist, 897.
- Zwinglius, earliest Orthodox theologian, 863.

INDEX TO NAMES OF PLANTS, ETC.

THE NAMES OF PLANTS AND OF VEGETABLE PRODUCTS ARE PRINTED IN ITALICS.

- AARON'S ROD, 303.
 Ababdeh, Ethiopian tribe, 1068.
 Abbassid family, in Egypt, 747.
 Abenauis, abor. N. Am. tribe, 1007.
Abies alba, 875, 920.
 alkokiana, 621.
 balsamea, 875, 920, 935, 940, 942, 965.
 bifida, 621.
 Canadensis, *hemlock*, 809, 874-75, 928.
 Douglassii, 830.
 excelsa, 134, 367, 451.
 Fraseri, 1039.
 Menziesii, 582.
 Mertensiana, 582.
 nigra, 809, 866, 874-75, 924, 929, 935, 940.
 picea, 123, 451.
 thuga, 621.
 Vitchii, 621.
 yessoensis, 418.
Abildgaardia monostachya, 982.
 Aboriginal Americans, 708, 767, 803, 926, 944, 953-956, 970, 972, 992, 1003-4.
 Aborigines, a people of Italy, of Greek origin, 132, 154, 157.
Abronia arenaria, 582.
 umbellata, 1043.
Abrus precatorius, 373.
Absinth, 99.
 Abu Simbel, in Egypt, 129, 131.
